John Bunyan, in his "Holy War," represents Diabolus and his forces holding a council of war as to the best time and place for attacking the "City of Mansoul." The council over, he says the forces were drawn up before "Ear-gate," and an ambuscade was laid for "Captain Resistance," who was expected to be brave in defending the city. The giant Diabolus then sounded his trumpet at Ear-gate, demanding an audience with the chief of the city. Thereupon Lords "Innocent" and "Will-be-will," "Mr. Recorder" and "Captain Resistance" came down to the walls to inquire into matters. Diabolus then addressed them at some length, specially speaking against their King—denying the truthfulness of His words and the kindness of His rule—and intimating how freedom and knowledge may be obtained by the inmates of "Mansoul," if they would disregard their King. Just then, whilst Diabolus was speaking, an arrow from the ambuscade mortally wounded Captain Resistance. He fell dead, and from that moment the residents had no heart to resist.

Thus, by the first and easy attack at the Ear-gate, the city was conquered. The application of the allegory is easily discerned.

It was by Satan's lying speech entering the ear of our mother—Eve, that sin and sorrow and death entered our world. Throughout all ages since, the Prince of Darkness has made free and easy use of this avenue to men's hearts. Now he has tried to gain the soul of the child by whispering in the ear some false or foul words; then he has won the emotions and faculties of the youth in his teens by the narrative of some cruel or vicious plot. Now he has besieged and carried the fortress of the heart of the man in life's prime, by plausible representations of worldly honour and fashion; then he has captured and retained the aged by utterances which have fed his personal vanity and fostered forgetfulness of the future. Now he has enslaved the poor by accustoming the ear to oaths and curses and lies; then he has enthralled the rich by the fashionable gossip of the higher circles. Now he has subjugated the ignorant by suggesting difficulties they were unable to solve; then he has vanquished the learned by specious conclusions from imperfectly understood data.

Now he comes to Ear-gate with somewhat that will arouse the passions of envy and hatred, then with a stimulus to carnal lusts. Now he feeds the flame of ambition; then he reduces to the weak cowardice of fear. Now he starts a doubt concerning things Divine; then he developes that doubt into a full-blown heresy. Now he drops an inuendo which affects a fellow man's character; then he wholly ruins by loud and long repetition of unfounded lies. Now he quotes Scripture with a view to mislead in duty; then he pours utter contempt upon the Holy Book from which he has before so greedily quoted. Thus has Beelzebub in various manners used the ear of man, and too often, alas! has succeeded in making it his willing vassal.

But God has not forsaken the ears of men. It would almost seem as if the sense of hearing was the *last* of which the Infinite would deprive man. When He visited Mephibosheth, He made him lame, but not deaf. When He would mark Zacharias with His displeasure, because he would not believe His word, He smote him dumb, but not deaf. When Saul, on the way to Damascus, was stopped by Divine interposition, God struck him blind, but not deaf.

The Almighty left these men free to hear His word, and hearing, thereby live. The one could not move in life's highway with the facility common to his race, but hearing the voice of the Lord, he might spiritually run the way of Heaven's commandments. The other, as priest, may no longer be able to officiate for the people, but with ear attentive to the utterances of the Head of the Church, he might present for himself a more acceptable offering.

Saul could no longer see where the subject of his cruelty journeyed, but, hearing of the love of Jesus, he was deprived of his hatred to the gospel, and brought to follow Him whom he persecuted. He who can neither see, nor speak, nor walk, God would have hear. He says to the entire race of man: "He that hath ears to hear, let him hear!" And it is within the power of the human will to frustrate the efforts of the arch-fiend, and listen to the voice of Heaven.

Carefully searching Scripture, we discover divers descriptions of human ears, but each points to the freedom of the owner of the ears. We read of "uncircumcised" ears, "heavy" or dull ears, "stopped" ears, "uncovered" ears, "opened" ears. These conditions cannot be acquired without the knowledge and consent of the individual. Hence the use or misuse of our hearing faculties rests with us. We each have the power to take in truth or error, food or poison, pleasure or pain, life or death, at these little ear-gates. Hence Jesus said, "Take heed how ye hear." It is as though He had said to His early followers, and through them to us, "Men and brethren, My kingdom of light, and the devil's kingdom of darkness, will both be extended by an appeal to your audible faculties. There will be teachers of truth and teachers of error. Hence I say unto you, take heed what and how ye hear, for with yourself reposes the solemn responsibility of determining *what* to hear and how to listen."

Very diversified are the hearers in all assemblies, whether literary, scientific, political, or religious. The diversities are so numerous, that it is difficult to classify them. Some, however, are conspicuous in most audiences.

There is the *ignorant* hearer; who knows so little about the subject upon which the speaker treats, that he mistakes the speaker's object, does not know the meaning of his words, and loses the entire force of his illustrations. There is the *fastidious* hearer; who cannot endure anything that is not complimentary and pleasant—like the patron of a church living, who, having presented an excellent minister, returned home after hearing the new rector's first sermon, and said, "Here is gratitude indeed, after my kindness to that man! The return he makes, when he gets into the pulpit, is to tell us that we are *all* great sinners, and must repent. He says our good works go for nothing. Bah! such a sermon will do very well for a penitentiary, or for Newgate, but not for a genteel and respectable audience."

Then there is the *prejudiced* hearer; who enters the presence of the speaker with his mind clad in armour. He repeats to himself, "Can any good thing come out of Nazareth?" He has some dislike to the speaker or to his theme, and it is therefore morally impossible that he can be benefited. There is the *critical* hearer; who, forgetting, if he ever knew, that it is the eye and the ear for *excellencies* that constitute the real critic, sets himself to the malignant work of discovering faults and detecting flaws. There is the *inattentive* hearer; who sits down before a preacher or lecturer as though the speaker's object was simply to fill up a given time by the exercise of his vocal powers, and the hearer's object simply to be known as having sat out the performance. There is the *forgetful* hearer; who rises from his seat when the address is ended with the air of a man who says, "I'm glad that is done," and, with an audible sigh, dismisses for ever all further thought of what he has heard. There is the *presumptuous* hearer; who feels deeply when a faithful portrayal of sin is set before him, or the excellency of the Saviour is exalted; who will even weep, and sigh, and resolve, but will go out and, like Samson, shake himself, and return again to his cups and evil companions. There is the *dead* hearer; who sits week after week under the sound of the most solemn warnings, invitations, and promises, and is unmoved. He resembles the wall against which the child throws a ball. The message rebounds, leaving his heart as hard as the nether millstone. There is the *sleepy* hearer; who, when the text is announced, settles himself into the most comfortable attitude, and then seems to say, "Now talk me to sleep." The sermon to him is a lullaby.

But there are hearers of a very different order—the very reverse of those mentioned. There are *affectionate* hearers, who love the Author of the message, the substance of the

message, and the deliverer of the same. Love helps their memory, so that they will never be forgetful hearers. Love directs their emotions, so that they will never be fastidious, prejudiced, or hypercritical. There are *anxious* hearers; men and women who say, "I will hear what God the Lord will speak." They hunger for more knowledge of the Divine mind. They thirst for God. They appropriate to themselves the truths they hear, and, like the bees, return to their homes laden with the sweets their minds have gathered. And there are the *practical* hearers; those who no sooner discern the right than they resolve to follow it—no sooner learn their duty than they discharge it. Antony had such when he delivered his famed oration. The Roman soldiers, under the influence of that speech, hastened to avenge the death of Cæsar. A minister once preached upon the sin of using dishonest weights and measures. An old woman in the congregation listened very attentively to the discourse, and when, shortly afterwards, the pastor called upon her, she alluded to the sermon. The minister asked what she remembered of the discourse. The poor woman complained much of her memory; "but," said she, "one thing I remembered—I remembered to burn my bushel." That was a *practical* hearer.

Now, of the different kinds of hearers enumerated, you will discern that there are far more hearers open to condemnation than commendation. In comparison with the numbers who listen from year's end to year's end to the preached gospel, there are but few good hearers. Indeed, Jesus knew this when He spake the parable of the sower. He represents the same sower, with the same seed, but the seed only yielding a harvest in *one* instance out of *four*. There was but one sort of good ground. There were four kinds of hearers; of these three were naught, and one only fruitful. There is always a disposition to shift the burden from ourselves, and lay it at the door of others. Hence it is very customary to complain of the preacher. You hear men and women going up and down the world, and expressing themselves very freely about the pulpit, but not for a moment complaining of the pew. They say, "We are not fed." "We do not feel we derive any profit under the ministrations." They never look to themselves, and inquire whether any fault lies in their hearing. How can a man be "fed," when, from *prejudice*, he declines to partake of the viands of his host? How can he be "fed," when his *fastidiousness* allows him only to pick out a currant here and a raisin there? How can he be "fed," when his *critical* spirit wastes all the feeding time in a searching examination of the plates and dishes on which the viands are served? How can he be "fed," when by *inattention* the dishes are removed before he has participated? How can he be "fed" when, bringing a diseased body and a morbid appetite to the feast, he digests not what he has received?

Is it the fault of the host that such men are lean, and poor, weak, miserable professors of religion? Jesus Christ, who knew what was in man, has exonerated the pulpit from the charge so feebly brought against it. It was the very same seed, that when it fell into good ground produced a hundred-fold, that falling in three other places was useless. It was no use the wayside, and the rocks, and the thorns talking together against the sower or the seed. "Do not you think the sower is lacking in energy?" croaked the "wayside." "Don't you think he wants more spirituality?" groaned the "rock." "Yes, but after all, I think the great lack is tenderness, love, and adaptability," murmured the "thorns." "Away with you all, you hypocritical grumblers," cried the good ground; "look at me—under the same sower, and by means of the same seed, I flourish and rejoice. The fault lies with yourselves." Such is the lesson of the parable; for Jesus says, the "good ground" represents "they who in an honest and good heart, having heard the word, keep it, and bring forth fruit with patience," and He adds immediately, "Take heed, therefore, how ye hear."

To all who attend our churches and chapels we would say: Hear with *preparation of spirit*. Remember that you ought to prepare for the sanctuary, as well as repair to it; you ought to be "in the spirit," as well as in your place, at the hour of devotions. Depend upon it, what is worth finding in the church is worth seeking in our chambers.

Hear with *personal application*. There is no difficulty in hearing for others. It is easier far to place burdens on other men's shoulders than carry them ourselves—pleasanter to convey a medicinal draft to another's lips than drink it ourselves. But it is by personal participation that we are made whole. Generosity is good; but that is generosity carried to a suicidal excess when you give one part of the homily to one person, and another part to another, and retain none of it for yourself. Hear with a *resolution to obey*.

Then let us use our ears prudently. There is much we ought not to hear, much we need not hear, and much which when heard should be allowed at once to slip out of our memories. Let the old saying be conspicuous to our minds,—"The tale-bearer and the tale-hearer should be hung up together: the one by the tongue and the other by the ear." But let our ears be ready, quick to receive all that is good, especially the tidings of Divine grace.

"NO HARPOONS."

A SAILOR who had just returned from a whaling voyage was taken by a friend to hear an eloquent preacher. When they came out of church the friend said, "Jack, wasn't that a fine sermon?"

"Yes, it was ship-shape; the water-lines were graceful; the masts raked just enough; the sails and rigging were all right; but I didn't see any harpoons. When a vessel goes on a whaling voyage, the main thing is to get whales. But they won't come to you because you have a fine ship. You must go after them, and harpoon them. Now it seems to me that a preacher is a whaleman. He is sent not to sail among the fish, but to catch them. Jesus said to His disciples, 'I will make you fishers of men.' How many such sermons as that would it take, do you think, to awaken a sinner, as the thousands under the eloquent preaching of Peter were awakened in the day of Pentecost, and to make them cry out, 'What must I do to be saved?'"

"But, Jack, people nowadays don't want to be harpooned. They want to be interested intellectually in the truth. They like to listen to such expositions and illustrations as the doctor gave us this morning. Did you not see how attentive they were? Surely it is a grand thing to attract such an audience to hear the gospel."

"To hear about the gospel, you mean. I don't object to the doctor's expositions and illustrations. As I said before, they were all ship-shape. But the trouble was, when he had sailed to the fishing-ground, and the whales were spouting around him, instead of manning his boats and trying to catch them, he made a polite bow, and said, 'I am glad to see so many whales. I hope that they admire my ship, and will come and spout around it again on its next voyage.' Do you think that the ship-owner in New Bedford would send such a captain to Behring Straits a second time? Now read the report in Acts, of Peter's first gospel sermon. He begins with an able exposition of the Old Testament prophecies in regard to the resurrection of Christ and the outpouring of the Spirit; and then, when he had gained the attention of the crowd, he charged home upon them with the words 'Jesus, whom ye have crucified.' That was hurling a harpoon. And we are told that it was effectual. 'They were pricked in their heart,' and the gospel catch that day was three thousand souls. No, no, a fishermen wants a good ship and good boats; and then he wants sharp harpoons, and the skill and courage to hurl them at just the right time. The harpoons ought to be polished, too; the more highly polished the better. But, after all, the harpooning is the main thing. If the whaleman fails in that, his whole voyage and venture are a failure, and I can't help thinking that it is so in preaching."

Jack was an old-fashioned tar. He did not appreciate the modern improvements. In some parts of the country the idea of preaching to save sinners is obsolete. The aim and effort is to attract congregations. The successful preacher is not the man who is instrumental in bringing men to Christ, but in bringing them into the congregation, and thus making it strong socially and financially.

The temptation to labour for congregations rather than for conversions is very insidious. Elders and trustees often join with Satan in presenting it to the minister. "We must fill the pews and the treasury," they cry. "We must not repel the impenitent by pricking them in their hearts." But God sends His ambassadors, not to prophecy sweet things, but to cry, "Except ye repent, ye shall all likewise perish." Brethren, don't go a-whaling without harpoons.

CHAPTERS FROM NATURE'S STORY-BOOK.

By Professor Haddon,

Author of "An Introduction to the Study of Embryology."

CHAPTER III.

STONE-LILIES, PAST AND PRESENT.

FAR away, at the bottom of the deep oceans, grow the lovely sea-lilies. Each consists of a feathery crown, surmounting a graceful jointed stalk. Some are of a beautiful grass-green colour, others, of a darker shade. Many are coloured dusky purple, while some have been found near New Guinea whose stems were almost white, and their crowns of a light yellow, or pale reddish orange. One would expect to find that these elegant forms, so quietly coloured, were as soft and delicate as the flowers which they irresistibly call to mind. A touch dispels this illusion. Instead of being supple and fleshy, the stem and arms are found to be strings of hard, chalky plates. The wonder now is, How is it that the stone-lilies, as they are also called, can appear so very graceful? Just as the links of a chain are stiff and hard; but the chain, as a whole, is flexible, and can be thrown into gentle curves; so the numerous plates which are found in the stem, and along each arm, of the sea-lily, are hinged together, and, as a whole, possess considerable power of movement.

The sea-lilies have no relations on land; all the animals which resemble them in any way are to be found in the sea. Nearly everybody has seen a starfish, or a sea-urchin. The former, with its round body and five long arms, is to be found on every coast; and the latter is also often cast up by the sea. Sometimes it is clothed with innumerable spines, resembling a rolled-up hedgehog; at other times the spines are all rubbed off, leaving an ivory-like casket with polished knobs.

Starfishes, sea-urchins, and sea-lilies belong to the group of prickly-skinned animals, or *Echinodermata*, as naturalists term them. The sea-cucumbers are also echinoderms, although they cannot be said to have prickly skins. They look like a sausage, covered with a thick, and usually warty, skin; but in the middle of the skin are numberless delicate, chalky plates, often full of holes, like pieces of perforated zinc. These chalky films represent the stony plates and spines which are so characteristic of the starfish, sea-urchins, and sea-lilies.

Although the different kinds of prickly-skinned animals seem so unlike one another, yet they are built upon the same general plan. In the centre of the under side of the body in a starfish is a mouth, which opens into the stomach. Closely surrounding the mouth is a tubular ring; from this five other tubes arise, one of which runs along beneath the skin on the under side of each arm. Similar tubes are found in sea-urchins and sea-cucumbers. A large number of root-like suckers are connected with the arm-tubes; and it is by means of these "tube feet," as they are called, that the animal walks. Some starfishes have more than five arms, in which case there is a radiating tube for each arm. The echinoderms are the only animals which possess this arrangement of tubes and suckers.

The sea-lilies, also, have a circular canal round their mouth, and a tube along each arm. These tubes eventually open into the circular canal. The tube-feet are simply sacs, without any suckers at their ends; they may even be absent altogether. It is quite clear that, as sea-lilies are fixed, they do not want tube-feet to walk about with. Starfishes and sea-urchins crawl about with their mouths downwards. The sea-lilies have their mouths upwards, so that a sea-lily is something like a starfish turned on its back, and stuck on the end of a jointed rod.

Thus the sea-lilies live, beautifying the silent depths of the ocean with their graceful

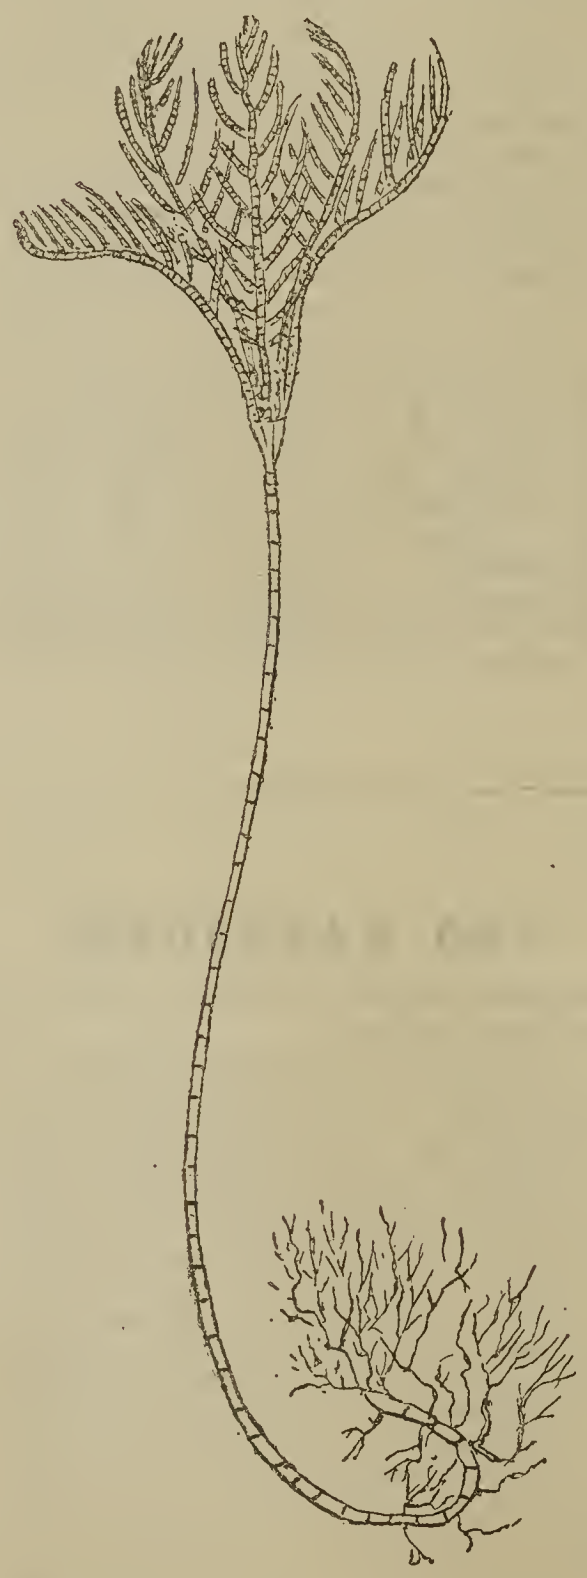

Fig. 1.
A living sea-lily (Rhizocrinus lofotensis) found off Norway and in the West Indies, at a depth of from 600 to 6,000 feet.

forms. Often clustered in myriads, they constitute veritable marine forests of miniature animated trees, among which small crabs, and other animals, climb and scramble like monkeys in a land forest, while, instead of gaily-decked birds, strange fish, with long teeth and goggle eyes, flit between the branches. When the sea-lilies die, their flesh decays away, leaving the stony plates, which form their skeleton. These remain behind, and become entombed in the chalky mud which is gradually accumulating at the bottom of the ocean. If the floor of the sea were raised so as to be dry land, and we could cut into the chalky soil thus brought to light, we should find the skeletons of the sea-lilies sometimes perfect, and looking almost as lovely in death as in life—sometimes broken, their numberless plates and joints being scattered far and wide.

This is no fancy picture. Go to the nearest museum in which there is a collection of fossils, and you will see slabs of rock containing the remains of stone-lilies, which grew at the bottom of the sea during earlier periods of the world's history. Some of these fossil remains are perfect; others are a mere heap of ruins. In many parts of the country, where limestone rocks occur, stones may be picked up, crowded with joints of the stems of stone-lilies; and they may also be seen in polished black or grey marble mantel-pieces.

The story of the rocks is a very wonderful one. We now know that time after time the floor of the sea rose above the level of the water and became dry land, while the ground we imagine to be so firm and solid sank beneath the waves. These changes probably occurred very slowly; and the inhabitants of the old sea, which was being converted into a land surface, migrated into the new ocean produced by the partial submergence of a former continent. Whilst this was taking place, the animals themselves gradually changed, but so slowly, that at any one time it would be difficult to point to much difference between them and their ancestors. As "many a mickle makes a muckle," so, after a lapse of a considerable period, it would be quite evident that a new race had appeared, preserving some of the characteristics of their fathers, but sufficiently different to be really distinct.

This is the explanation of the fact that we find each set of rocks, which together make up a large proportion of the crust of the earth, containing fossils, which are to a large extent peculiar to it, although they bear some resemblance to those found in the rocks which lie immediately above and below them. The fossils in the lower rocks are the remains of the ancestors of those which occur in the higher rocks; and these, in their turn, are the progenitors of the forms which are found in more recent geological formations. It is not so very remarkable that an individual should resemble in some respects both his grandparents and his grandchildren.

In many past periods the floor of the then existing oceans was densely covered in places with groves of stone-lilies, and in the more recent rocks, the stone-lilies, or rather their fossil remains, resemble the skeletons of those which are now living, but the resemblances are less apparent in the forms from the older rocks.

In the shallow water round our coasts—or for the matter of that, in all parts of the world—gay feather-stars may be dredged up or

they may be occasionally found in rock-pools at very low tides. They have a cup-shaped body, surrounded by ten feathery arms ; it is by means of these they swim, alternating their arms in graceful curves. When desirous of resting, they can cling to a support by the jointed claws which spring from the base of the stony cup. Like some tropical bird of gaudy plumage these feather-stars are brilliantly tinted with various shades of pink, or uniformly coloured with crimson,

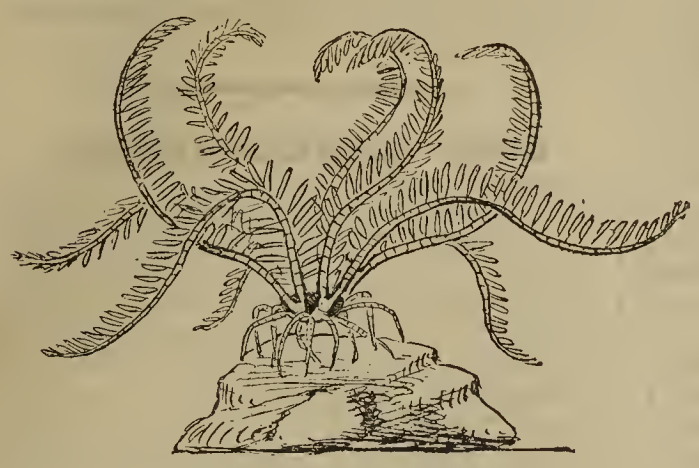

Fig. 2. *Feather Star.*

orange, or brown. One kind, like the blue macaw of South America, is said to be painted with mingled blue and yellow.

A superficial glance will suggest a resemblance between a feather-star and the crown of a sea-lily ; nor is the similarity deceptive, they are to all intents and purposes identical in structure. But this is not surprising, when we learn that the feather-star is really a stone-lily, which has swam away from its stalk.

The newly-hatched young of a feather-star is barrel-shaped. Within its ungainly body delicate plates are developed, which gradually foreshadow the form of a sea-lily. After a time the free-swimming embryo settles down on a piece of seaweed, and the skin contracts round the chalky plates. The baby feather-star now has the appearance depicted in Fig. 6. Soon the arms sprout out, and a miniature sea-lily is waving its graceful fronds, seeking for food. After living a few weeks in this stage, the cup with its arms separates from the stalk to live a free existence as a feather-star.

Feather-stars are also found as fossils in the rocks, but they were never so abundant as were the stone-lilies, and they are not found in the oldest rocks.

As the feather-star passes through a stalked stage when it is young, we are justified in assuming that the adult ancestors of feather-stars were once permanently fixed stone-lilies. Some of the descendants of the stone-lilies of bygone seas may still be found in the dark, deep, and tranquil seas far from the keen struggle for existence which occurs in shallow water. These hand down the traditions of the past ; while others, more ambitious and less conservative, departed from the customs of their ancestors, and assumed a free existence. The past, however, is always irrevocably bound up with the present, and the effects of the actions of forefathers are handed down from generation to generation. The feather-stars cannot escape from this all-reaching operation ; each in its temporary sea-lily stage recapitulates the adult condition of ancestors which became extinct ages ago.

MY WANDERING LAD.

By Mrs. Eva Travers Poole.

THE cottage door is open, and we may look within. It is evening, and the faint sweet scent of jasmine fills the air, as the warmth of the summer winds draws forth its fragrance, and that of the golden-horned honeysuckle which clambers over the house, and droops in graceful festoons around the porch. The drowsy hum of the bees, as they settle to sleep after the busy work of the day, and the distant lowing of cattle, and the tinkling of a solitary sheep-bell are the only sounds that break the silence.

Hark ! was that a sob—a woman's weeping ? Yes ; within the cottage sits a lonely figure, that of a woman prematurely bent and old—her dark locks early silvered by the frosts of sorrow, and a haunting patience in her weary eyes, that thrills you with an untold pity as you meet their gaze.

She sits with her hands crossed be-

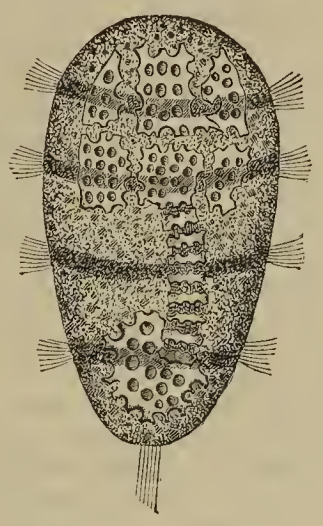

Fig. 3. *Embryo of Feather Star.*

fore her, in her old arm-chair, gazing wistfully out towards the low hills that lie beyond the silver river streak, and ever and again a mist of tears arises, passing across the faded splendour of her large, dark eyes, and blinds her—and she chokes down a sob.

Lying upon her lap is a little worn-out shoe, and a tiny crimson stocking. She does not touch them ; the listless hands lie by her side. She does not look at them, but out and away from them ; yet they have stirred her heart's sweetest, saddest memories, and the glare of dead hopes and joys has been re-opened to let spectres of the past glide forth to mock her misery.

"If I could hope," she murmurs, and her voice has the thrilling sadness of a requiem psalm in its cadences, "*if* I could hope—but how can I ?" "If I only knew the little feet that once followed mine, and pattered so prettily here and there, had tripped across the narrow severing line 'twixt death and life, and walked to-night the golden streets, I would be content—O God, content ! If I could know that little baby voice, whose prattle I loved to hear, and whose laughter filled our home with bird-like music, was even now swelling the music, far more sweet, that rings through heaven, I would be GLAD ! Oh, could I know my little lad of long ago was safe with God, 'twould ease my heart, when daylight dies, and all my cares are over, to look outward at the sinking sun, and to think to myself that *somewhere* behind the pearly gates, there dwelt my boy.

"If he were dead . I would not weep. These bitter tears should never stain the tiny shoe in which his tender feet once trod. I would bow me to the will of God, and never wish him back again ; I would be patient, knowing that each passing day brought me a life-mile nearer to my boy. But, oh ! to know he lives, and lives a *living death*,—to know those feet, once wax-like in their tenderness and purity, are black and rough with treading the path of sin, that they nightly cross vice-haunted thresholds, and walk in the ways of impurity boldly !

"Those baby hands, so dimpled and fair, that clasped my fingers and lay against my breast—that might have wrought for God, and for eternity — are stained and foul. They are red with the blood of unholy battles—they are strong in the cause of Satan. And the lips that I used to kiss and think so sweet, fresher than any garden rosebud in its dewy beauty, are defiled with oaths and imprecations, reeking with the odour of the wine-cup, burning with the insatiable thirst of the drunkard. Ah, me ! Would that he had died, as his eyes first opened on the light !"

Fig. 4.
Stalked larvæ of Feather Star. A. Quite young, before the opening of cup. B. Nearly mature, with five claws or cirri.

The evening shadows fall thick and fast ; night's deep silence enwraps all nature. The poor, broken mother-heart has wept out its sorrowful tale in the ears of God ; but *where* is her wandering boy ?

Let her cry ring out ! Let it pierce the heart like a sharp, swift sword ! Let it sound under the vaulted arches of heaven, and echo from pole to pole of earth, until *some* long-lost, sin-stained, soul-wrecked creature wakes to the consciousness of the Eternal mother-love, that follows his wandering feet as constantly as his own shadow, and by it is won back to repentance, and maybe to God.

"ALMOST."

ALMOST, — not quite; almost saved, —not quite ; almost persuaded, — not quite. Such was Felix ; he trembled under the Gospel, but was only almost saved. Such was Herod; he didmany things for John's sake, and heard him gladly, but his end, how terrible to think of. The conscience touched, but not the heart ; the feelings influenced, but the soul not born again.

There are multitudes in this condition,who have an outward respect for religion and religious teachers ; they give frequent attendance at places for worship, but are not children of God; they respect the form, but know nothing of the spirit and power.

"BETWEEN A BLESSING AND A PROMISE."

By HELEN MOORE.

THERE is something so cheering to one's heart when a bright, helpful thought comes to us in a letter! I believe I like it better than a spoken word, for the spoken word you may so soon forget, but the letter you have with you, and can go back to again and again, hearing your friend's voice in the cheering words with the glad, sweet ring about them, just as truly when twelve months have gone over your head, as on the very day the postman brought that letter to your door!

I think I am writing to-day for those who thankfully feel that they belong to Christ, but who know something also of a great, great longing that, as Christians, they may *grow*, and witness truly for Him; and a yearning that the life they live shall be spreading out and ever stretching forth towards God for more of conscious strength in and through Him, and deeper love towards His children in the world. And I think it may bring a glimmer of new joy into some "halting" lives, to hear that they have a friend who can sympathise very fully with these feelings of theirs, having gone through the same hungry longings for deeper spiritual life, as they have themselves.

A word in a friend's letter once came like a ray of beautiful sunlight to my heart! Yet the word was not my friend's, except as she quoted it for my help. I had written of the life which wanted to be quickened—of the poor, weak nature which needed to grow deeper and stronger; and then this dear Christian lady, with a loving insight into my need, and a sweet, glad reminder of just the very word of the "Master" Himself, put before me the old text,—

"Blessed are ye that hunger and thirst after righteousness; *for ye shall be filled;*" adding also this other word, which she said she had once heard in connection with the same subject,—

"Take courage, hungering ones, *for you stand between a Blessing and a Promise!*"

Will you read the words again, dear friends? They are ringing in my ears as brightly and as cheerily now as they did on the day I first read them.

"Take courage, hungering ones, *for you stand between a Blessing and a Promise!*"

What a splendid standing-ground that is! And it is our Saviour who has placed us there, so we know we are on a sure foundation. Do you ever take up some old verse, when a new thought has gathered about it, and find it come home to you in a way you never knew it do before? That is how it was with this verse on the day of which I am writing. "Blessed are ye that hunger and thirst after righteousness."

Oh, I feel so grateful to be able to put my finger upon it and say, "Here is a blessing for me; it is *mine!*" And, dear friends, the promises of Christ are not of much good to us if we only *fit them on to somebody else's need*, not our own. If we take them into our own hearts first, we prove them true, with a loving intensity which renders us more and more wishful to add the same joy to darker lives.

"You stand between a Blessing and a Promise." And it *is* a blessing; it is a glad and happy thing to hunger after righteousness. It is always good to be in such attitude as can most surely claim one of our dear Lord's precious promises! Did you ever think of that? It is just coming to Him, *with the very pledge in our hand*, of His loving fulfilment.

We want more "Christ-likeness" in our own souls—our own lives. Ah, yes! Then, if our hearts are true in the matter, we *must* come in for a share in the glad word, "Take courage, hungering ones, for you stand between a Blessing and a Promise."

It *is* true. I found it beautifully, joyfully true; for the "Master" Himself answers with the welcome cry, "*Ye shall be filled!*"

Do you say, "Is there no mistake in it?"

"Oh, no! There is no mistake, thank God! "Ye *shall* be filled." Nay, listen still! For while your silent, yearning prayer is going up on high, the very heart of Jesus speaks your own name, right into your waiting soul, as He says, "Ye *shall* be filled."

Ah, it is good indeed to find ourselves between a Blessing and a Promise. And Christ's promises always come to us linked with the power needed for their fulfilment. We must remember that.

We have not to stand idly by, and wait for the answer to our prayer. *That* is what I count as "*the heart not being true in the matter.*" If we hunger with a bodily hunger, we make great earnest effort towards the means of allaying the craving need; and if the soul hunger, must we not also be bringing ourselves, *our lives* into closer contact with *Christ's life?*

A hungry child gets as near as it can to the baker's shop, or the place where food is to be procured; and God's hungry children will do well to put *their* "waiting" lives just where Christ put His—*in the shelter of the Father's love, and in the patient, self-denying fulfilment of life's daily duties.*

Am I disappointing any one by saying this? Do I read on the trembling lip that this latter is just the *one* thing which seems most impossible. But, believe me, it is *not* impossible. You come to Jesus with your pleading cry of hunger, and while His voice is repeating, "*Ye shall be filled,*" His hand holds out to you the power and the strength in which you can straightway come into close contact with His life, so that yours (or rather, His life in you) may indeed grow.

Try it, friend! Come with your hungry cry to the Saviour—*come yet again;* and as you come, remember "you are standing between a Blessing and a Promise," a promise which *cannot* fail; and with this glad, beautiful earnest in your heart of the joy which *must* follow, *use the little life, which seems to you so poor and weak, in the patient service He has given you to do*, doing it bravely, faithfully, *for His sake*—only *that*,—just out of grateful love to Him; and you will surely find, by the peace in your own heart, how true was the Lord's own blessed promise, "*Ye shall be filled!*"

NOT A CLOUD.

A LIEUTENANT in an Iowa regiment, wounded by a ball in the shoulder, was brought into the hospital. At first, it was thought he would recover, but after a few days, he rapidly declined. Just before his death, a lady nurse said to him,—

"Lieutenant, you have but a few minutes to live. If you have any word to send to your wife and little one, you must speak it quickly."

He looked up at her, his face shining like an angel's, and said,—

"Tell my wife that there is not a cloud between me and Jesus."

SECOND SPELLING CHASE.

£1 : 1 : 0.

EXAMINERS' AWARD.

AT last! Our readers' patience and our own, well-nigh exhausted! We are prepared to announce in our next week's Number, our List of Prize and Certificate Winners. The results show great credit to a large number, who have only failed in one word each. As before, "WEBSTER" has been our Court of Appeal.

CRISP CORRESPONDENCE.

E.F.A.—In reply to the inquiry for publisher's name, etc. of "Scamp and I," this is published by Messrs. Shaw & Co., 48, Paternoster Row. There is a 3s. 6d. edition, also a 6d. The book can be obtained for 6d. of any bookseller.

A. W.—We are strongly of opinion that all travelling on Sunday should be avoided, unless in the case of extreme urgency, such as illness; secondly, your question as to dreams is speculative and unprofitable; thirdly, we are not able to insert the verses which you send.

Subscriber.—It is not within our sphere to reply to your inquiry; ask a doctor.

Easter.—We regret exceedingly that through a misprint you were unable to get the information desired. You will find full details about hospitals on page 99 of "OUR OWN GAZETTE" for 1885 (vol. ii.).

In reply to the inquiry where the lines—

"Forgiveness to the injured doth belong,
They ne'er forgive who do the wrong,"

may be found—they are in Dryden's "Conquest of Granada," Part II., Act I., Scene II.

Exodus.—Assisted passages to Queensland are granted to farm-labourers, gardeners, miners, navvies, and the like for £8 each. If a steady young man is not able to get this grant, the Colonial Emigration Society, 9, Adelphi Terrace, London, W.C., is sometimes able to give a small loan on condition that two good securities are found for its repayment at the end of twelve months; this loan, however, is only granted under exceptional circumstances. Further information can be obtained by application to Mrs. Blanchard, as above.

Tricycling to Profit.—One of our correspondents writes: "I have a tricycle, and it is quite a pleasure to turn little journeys into the country to a useful end. We leave a specimen copy of 'A. I.' and then sell a monthly part. This would make cycling more profitable if carried out on any scale; one goes out with an additional object, and the ride is all the more enjoyable in consequence." We suggest that many of our tricycling friends should note this hint; and we should be very glad to supply them with all the ammunition they may require, in the shape of specimen copies, gratis.

A. B. S.—We have ascertained that there is no Protestant Institution into which admission can be gained for any child by a collection of a large number of postage stamps.

"He shall be called a Nazarene" (Tau).—Christ is nowhere expressly so called in the Old Testament. But He is called Nêtser, a shoot or branch (Isa. xi. 1); and Nêtser is the proper Hebrew name of Nazareth—thus showing a prophetic correspondence between the place of His residence and the meaning of His name. Just as in Matthew i. 21–23 Jesus—Jehovah, Saviour—is declared to be the fulfilment of the prophecy, "They shall call His name Emmanuel—God with us." In both cases it is the meaning of the name, and not the actual name itself, that is referred to.

Model Husband and Wife Competition.—If R. C. C. and A. Palmer will send us their addresses, we shall be glad to send their certificates.

First Spelling Chase.—If E. Mason will send us her address, she will receive her certificate.

Annie wishes to know where she can obtain a book that will teach her to read music. She is anxious to learn, but unable to join a class. Does Annie refer to instrumental or vocal music? If the piano, any good tutor, such as Hamilton's or Hemy's will afford the necessary instruction; and for singing, Hullah's "Tonic Sol-fa Primer," or the "Collegiate" singing tutors will assist to a knowledge of sight reading; but the book has not yet been published that will adequately instruct without the aid of an instructor.

Chenopodium Bonus Henricus is the mercury goosefoot, or "Good King Henry." The latter is not a different plant, but all the same thing. It was formerly used in England as a vegetable in the place of spinach, and is still to be found on old castles, walls, etc., but its use as a vegetable has nearly died out.

QUESTIONS.

Can any one suggest a means of employment for a young man suffering from curvature of the spine, and who is thus unable to leave home, or from undertaking any work of a laborious kind. He is an excellent writer and clever at figures, but living in a village five miles from any town, there seems to be no sphere for his talent. We should be very glad to receive any suggestions that might be helpful to our correspondent.

C. H. would like to have an explanation of the difference between the word lucky and fortunate, and would like to know if there is such a thing as luck.

BUYING HOUSES TO PULL DOWN.

By Charles Ford.

PASSING through a London suburb, I chanced upon a cart standing at an open gateway, where building operations were going on, bearing this notice—"Houses bought to pull down." Here, thought I, is one of those "obscure" trades of which Dickens (as in doll-making, dust-collecting, and corn-extracting) made so much, and which are so often fraught with a deep human interest, and, as in this instance especially, with a profound suggestiveness to the young.

And the first thought suggested to me was that the character every one is daily forming, the manhood each is building, or *not* building, may be fitly compared to a house or dwelling, and constituting, so to speak, our mental and moral tabernacle, the inner sanctuary of the spirit, of which the corporeal "house we live in," the body, is the outer court. Must we not all have such a "house," such a compacted fabric of ideas, sentiments, feelings, and principles for the abode of character, as really as a physical body for the manifestation of the entire man, or a material structure for existence in a physical world? Good or bad, strong or weak, lofty or low, have we not all our *character*-dwellings, planned and constructed more or less by ourselves or others, built or bought?

A second thought this singular occupation called up was, that in order that this "spiritual house" may be truly our own, without which it cannot be really stable and useful, we must build it ourselves from its very foundation, with indestructible material, and according to a Divine plan. For if, instead of building, we buy, as many do, our mental and moral houses ready-made, we shall be certain to find them insecure, and requiring before long to be "pulled down." In short, we shall be "*buying houses to pull down*," which, however lucrative in the case of material structure, is ruinous in character-building, since these insecure borrowed dwellings must be continually replaced by stabler structures, unless we are content to be morally dwarfed and imperilled by their miserable dimensions and insecurity all our lives.

A third point impressed upon me was, that we cannot begin character and manhood building too soon; that life is so short at best, we have not a moment to spare; that though "buying houses" may not be a long process, *building* them (especially building them strongly and beautifully, as all characters should be built), takes time; and that unless, in some measure, we complete this work in early life, we shall be looking for a settled spiritual dwelling when we ought to be hard at work in it, helping others.

Here we see that the great evil of "buying" worthless mental tenements, of "buying houses to pull down," is not only that they are disappointing in themselves, but they impede the building up of true character until it is almost too late to begin, or, at least, to complete the task worthily. Some people seem to be looking for a material dwelling all their lives, and, in consequence, never settle anywhere, never fulfil any course of service for God and man. So some seem to be always looking in vain for a strong, thoroughly furnished manhood, and if they attempt to build it at all, begin building too late to mature character till life has passed its zenith.

Pursuing this train of thought, four kinds of "houses" rose up before my imagination as too often "bought" by the young and inexperienced only "to be pulled down," and thereupon I felt moved to warn them against having anything to do with—houses of cards, houses of idols, houses on sand, houses all basement, or of one storey.

Regarding these four kinds of character-*less* houses, as we may call them, the point to be chiefly noted is, that they are all alike destructive of genuine character-building; that they must be completely cleared away before any healthy manhood can be reared. This, evidently, cannot be, figuratively speaking, built of *cards*—of those vain expectations and unpractical schemes of life, in which too many of the young indulge.

Castles in the air are easily built, but they are not less easily destroyed, having even less reality than those temples of pasteboard, the uprearing of which, at one time, delighted childhood, but which a chance touch or puff of air, by displacing a single support, brought suddenly to ruin. All such unsubstantial structures, expend on them what we may—and not a little time and thought is often consumed in their fabrication—inevitably disappoint us when we try to *live* in them. Nothing but hard facts, like granite or sun-dried bricks, will do to build upon in this every-day practical world. All vain imaginings collapse and vanish at the first real strain of actual experience—they are but "houses to pull down."

Nor can character be housed and developed along with *idols*—built up of those exaggerated notions of men and things which the young too frequently entertain; exaggerations not only of what is possible to them, but of what is obtainable from life—from its thought, wealth, fame, pleasure. What empty houses, what comfortless dwellings these turn out to be, tested by the real needs of life and the capacities of the human spirit! How we seek rest in them, and find none! No; these idol temples are not *character* buildings. We may make earthly things contribute to the rearing of a spiritual temple, but we can never find—as the rich fool, in the parable, promised himself—in vaunted, but unsatisfying worldly goods, the home of our souls. Houses of *idols* are only houses to pull down.

Houses, too, built *on sand* will never do to live in. This would be perilous literally. How much more dangerous for the spirit to take up its abode in those sand-resting structures of scepticism and sophistry, that are always in the market, which are to be had so cheap and look so pretty, but have no solid foundation. Perhaps there are no mental and moral houses that are so fatally deceptive as these. Houses of *cards* and *idols* can delude none but the young, but these *sandy foundation* houses cheat even the intelligent and mature. Their defects, you see, are all hidden. Above they appear most "desirable residences." What can be more attractive than the delightful freedom of unbelief, and the manliness of bowing to nobody in heaven or earth,—owning no authority or will but our own?

Then no effort or solicitude is required to secure these specious dwellings. There they are, all ready—we cannot say "furnished," but, at any rate, "swept and garnished"; and as to furniture, well, it is astonishing what we can "evolve out of our own inner consciousness"—enough, some tell us, to dispense even with the Bible and God, to say nothing of the gospel. How many are led into purchasing these trumpery "houses on sand," surrendering for them their religious instincts, and violating their conscience and moral sense by the plausible talk of men who, having shunned the labour and struggle of building up a manly faith and religious character for themselves, endeavour to persuade others there is no such thing; that their own sandy structures are built on the rock of truth, and will outlast every storm. Alas, for those who are thus deceived! Let us not listen to these "blind leaders of the blind"; let us not be deceived by appearances, but look "under the surface," and then we shall see that these "houses," built on the shifting sands of human reasoning, instead of on God's eternal truth, can be no fit home for an immortal soul. They are simply "houses to pull down."

Lastly, houses spiritually all basement, or having but one storey, are unfit habitations for the inward man. We must not only build character securely and substantially, but loftily, allowing room for growth and expansion. The mental *bungaloes* some minds are content with are not worth having at a gift. They may serve for characters like "Feeble-mind," for the spiritually halt, lame, and blind, who dread mounting above the ground floor, or think one storey a perilous ascent, but they will never do for the spiritually robust, for "strong men," who "have all their senses exercised," and want to keep them so. No, for any fit habitation of character, we must look higher even than a single storey. We must dwell where we can breathe the mountain-air of truth, which is infinite, as the ether above us; dwell where we can catch glimpses of the unseen in God and nature, and where faith may have room to rise on the wings of contemplation and prayer.

We need not fear building too loftily, if we build on the true foundation—God's eternal truth, and Jesus Christ, its greatest embodiment. Let us not, as the ancients did, measure *truth* by our puny understandings, or we may well be content with any low-pitched shed or shanty for the housing of our souls. Truth is not just what we can comprehend, but all the facts of the universe and of revelation, and we must build loftily indeed to overtop these "houses" of commonplace thought and feeling, into which too many creep and lazily remain; they are but "houses to pull down."

Four essentials, I felt, as these cogitations drew to a close, mark true character-dwellings. They must be stable, individual, spacious, and complete. Character, to be true and reliable, must be built on the *one* foundation of Christian truth and faith—"for other foundation can no man lay than that is laid, which is Jesus Christ"; it must be our *own* building thereupon, not a purchased or borrowed structure of tradition or hearsay, tacked or tied on to us artificially, but, like the corporeal "house we live in," one growing with our growth and strengthening with our strength; it must be spacious, affording, as in a healthy material dwelling, "room and

verge enough" for full exercise of the entire man; and it should be complete, fitted, like the body, or a luxurious palace, for all the wants and capacities of its spiritual occupant,—"thoroughly *furnished* unto all good works."

Such is the ideal temple of human manhood. How shall we erect it? First and chief, by "building up ourselves on our most holy faith, praying in the Holy Ghost, keeping ourselves in the love of God." Secondly, by strenuous self-discipline. What examples lie before us in the character-temples of the past! We may not attract public attention to the "spiritual houses" we erect, like Howard, Wilberforce, Livingstone, Stanley the explorer, Abraham Lincoln, Garibaldi, Robert Moffat, and hundreds more in every section of the Church and every department of life, of which those above-named are but types; but if the same elements are embodied in our manhood, we shall be privileged, in some humbler sphere, to serve, as truly, God and man.

Alas! how many live long lives, and yet never rear any character God can use, or posterity revere, but seem ever to be "buying houses to pull down"! What contrasts in this respect, even among conspicuous men, history furnishes—between Luther and Burns, for instance, Byron and Sir Thomas More! Let it be rembered, we can only get out of life what we put into it; that character, like a house, is valuable according to the skill and cost expended on it; that it is only by strenuous work we can ever *build* a character that shall endure and excel; that—

> ". . . life is not as idle ore,
> But iron dug from central gloom,
> And heated hot with burning fears,
> And dipt in baths of hissing tears,
> And batter'd with the shocks of doom
> To shape and use."

THE NATURE OF GOD.

THE Nature of God is incomprehensible. Could infinite minds expect it to be otherwise? Sum up, if you can, all your ideas of infinite space, infinite duration, infinite knowledge and infinite power, and He in whom they all meet and harmoniously combine is God. The difficulty, the impossibility of comprehending the infinite is well expressed by the great Roman orator in the following incident: — Hiero, who was a king, once asked a philosopher, whose name was Simonides, "What, and like what, is God?" Simonides asked for one day to consider the question. The king inquired again next day, and was asked to allow two days for further consideration. After two days he repeated his question, and was this time asked to allow four days; and thus the plilosopher continued on each successive occasion to double the period required for thought. The king, at last, weary of delay, and curious to know the reason of it, inquired of the philosopher why he thus postponed his anwer. To whom Simonides replied, "The longer I consider it, the more obscure does the matter become." The incomprehensible nature of God is, however, no bar to our belief in His existence.—*Dr. Maguire.*

THE WORD "WIFE."

IT was Ruskin who pronounced the word "wife" one of the most beautiful and appropriate in the language. He described it as the great word with which the English and Latin languages conquered the French and Greek. "I hope," said he, "that the French will some day get a word for it instead of that *femme*." But what do you think it comes from? The great value of the Saxon words is, that they mean something. Wife means "weaver." You must either be house-wives or house-moths, remember that. In the deeper sense, you must either weave men's fortunes and embroider them, or feed upon and bring them to decay. Wherever a true wife comes, home is always around her. The stars may be over his head, the glow-worm in the night's cold grass may be the fire at his feet, but home is where she is, and for a noble woman it stretches far around her, better than houses ceiled with cedar or painted with vermillion—shedding its quiet light for those who else are homeless.

WORLDLY CONFORMITY.

THE Rev. Dr. James W. Alexander wrote to a friend: "As I grow older as a parent, my views are changing fast as to the degree of conformity to the world which we should allow to our children. I am horror-struck to count up the profligate children of pious persons, and even ministers.

"The door at which those influences enter, which countervail parental instruction and example, I am persuaded, is yielding to the ways of good society. By *dress*, *books*, *and amusements*, an atmosphere is formed which is not that of Christianity. More than ever do I feel that our families must stand in a kind but determined opposition to the fashions of the world, breasting the waves like the Eddystone lighthouse. And I have found nothing yet which requires more courage and independence than to rise a little, but decidedly, above the par of the religious world around us.

"Surely, the way in which we commonly go on is not the way of self-denial, and sacrifice, and cross-bearing, which the New Testament talks of. 'Then is the offence of the cross ceased.' Our slender influence on the circle of our friends is often to be traced to our leaving so little difference between us and them."

TALENT *VERSUS* TACT.

TALENT is power; tact is skill. Talent is weight; tact is momentum. Talent knows what to do; tact knows how to do it. Talent makes a man respectable! tact will make him respected. Talent is wealth; tact is ready money. Talent is *pleased* that it ought to have succeeded; tact is delighted that it *has* succeeded. Talent toils for a posterity which will never repay it; tact throws away no pains, but catches the passions of the passing hour. Talent builds for eternity; tact for a short lease, and gets good interest.

"The lore Christ studied were the Books of God without Him in Scripture, in Nature, and in Life; and the Book of God within Him, written on the fleshy table of the heart."

"I call the Book of Job, apart from all theories about it, one of the grandest things ever written with pen. . . . A noble book. All men's book. It is our first, oldest statement of the never-ending problem, man's destiny and God's ways with him here in this earth. , . . There is nothing written, I think, in the Bible or out of it, of equal literary merit."

A negro, wishing to give his countrymen an idea of a book, said, "My dear gode broders, I hab de plezzure to inform y'all dat reading is de power of hearing wid the eyes instead of de ears."

"Multifarious reading weakens the mind more than doing nothing, for it becomes a necessity at last, like smoking, and is an excuse for the mind to lie dormant, whilst thought is poured in, and runs through, a clear stream, over unproductive ground, on which not even mosses grow. It is the idlest of all idleness, and leaves more of impotency than any other."

THAT HOUSE IN LONDON.

By L. T. MEADE,

Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," "The O'Donnell's of Inchfawn,"

"A Band of Three," "Water Gipsies,"

"Your Brother and Mine," etc., etc.

CHAPTER XXXV.

IT is an awful moment in the history of any man or woman when he or she loses hope.

That moment came to Kate Graham as the train bore her swiftly through the night to Dover. That critical moment in her history arrived, and blotted out on the instant from her horizon sun, moon, and stars. She was in complete darkness.

She was a woman who had always clung to religion and made it her anchor; now religion afforded her no consolation. She did not even cry to the God whom she dearly loved and had always tried to follow; she simply bowed her head, and let the storm pass over her.

Had this state of things lasted long, her reason might have forsaken her; but mercifully the strain was not allowed to continue. Hope, it is true, had died, but something else came back to warm and revive her stricken heart. This something was love—the great, great love she bore to her husband. Whether he was guilty or innocent, whether he was strong or weak, whether he was high up as the angels, or low almost beneath humanity, she loved him.

The knowledge of his sin, the terrible rush of conviction which showed her he was guilty, did not stay her love. She was so pure-minded, so good herself, that she could not but hate the sin; but, oh! how tenderly, how truly she loved the sinner.

This knowledge, when it swept over her soul, brought a sudden sense of strength, and almost peace. It would have been so awful if the knowledge of his sin had killed her love; but it had not done so. She loved him deeply, dearly. Her love at this moment was her salvation.

The train drew rapidly near to its destination, and Mrs. Murray, who had been holding the sleeping baby in her arms, came up to Kate, and asked her a question.

"You will have some beef-jelly now, ma'am, before we go on board the boat? My dear lady, how very tired you look!"

"I am not so tired," she said. "I

"A picturesque-looking French lad, wearing a scarlet cap, entered the shop, and handed her a letter."

don't feel very weak. I will have some of the jelly, for I must keep up my strength."

Mrs. Murray gave her some, and a few moments later they arrived at Dover.

Then ensued the usual confusion, and soon afterwards the little party found themselves established in one of the most comfortable of the deck-cabins. Kate had plenty of money; they could secure all needful luxuries for their journey. The voyage was a rough one, for the night turned stormy. Kate was not ill, but the baby suffered and cried piteously.

"I hope he has not taken a chill," said Mrs. Murray; "it is bitterly cold. We must wrap him up well when we get to Calais. I hope, ma'am," she added, "you and baby will both have a good rest in Paris."

"No," said Kate, speaking suddenly, and with energy; "we are going right through. I don't intend to rest in Paris."

"But that won't be good for the baby, ma'am. If you don't think of yourself, you ought to give a thought to him, sweet lamb. He ought to have a night's rest, and a fresh supply of proper food."

"Give me the baby," said Kate suddenly. She looked long and very earnestly into the child's little face. "I think baby will be glad to do his duty," she said then, with a very queer light in her own eyes, as she returned him to Mrs. Murray.

The journey to Paris was found very long by the good nurse, although her mistress certainly gave her no trouble. Kate sat quite quiet in her corner, not speaking at all, scarcely moving.

She had by no means got back hope, but something else occupied all her mind and filled her whole horizon. Her husband had done what they said he had done; that story was true. She looked no longer at the pros and cons; she did not vex or weary herself any longer, weighing the chain of evidence for or against.

Just as positively as she had said yesterday, all through the long chain of contrary evidence, that he was innocent, did she now believe him guilty. Her dream, her terrible and vivid dream, had torn the veil from her eyes. There was no doubt of it; her Kenneth Graham was not a hero, but a weak, erring, and most sinful man.

He had done a mean thing—he was a thief; he had betrayed the most sacred trust; he had deceived her; he had lived for years on money which was not his. Ever since their marriage he had been thus guilty—he had set his feet steadily to walk downwards, from the very, very first.

Yes; it was all as plain as daylight—everything was accounted for now. He was a man without honour, without principle; therefore to be despised.

Oh, yes; but not by her. If all the rest of the world turned against him, she would be true. What use was a wife if she was not true? Had she not taken him for better and for worse? Of course she would not forsake him in his dark hour—the hour when his sin was discovered.

"Not only will I not forsake him," said the brave woman to herself; "not only will I show him that I love him as deeply as ever, but I must save him—I must save him from his terrible false self. God will show me how; my loving Heavenly Father will tell me how."

Then she began to pray—oh! such fervent prayers, and her tears fell, and the tight, tight band around her heart was loosened, and she was conscious of a sensation of great strength.

"I will save him," she said to herself. "God will be with me, and I know I shall succeed. He has fallen, but he shall arise yet; he shall come home to his Father. Yes; I will bring him—I will do this thing; God will give him to me. Oh! my beloved, did you think your own wife would turn away from you, because you were so weak, because you yielded to so terrible a temptation? How little you knew!"

As they got near Paris, Kate came to a sudden resolution. It would be better for her husband that Mrs. Murray should not be with them. She did not know how he was placed; she did not know how far he had transgressed the law, or in what absolute danger he might be; but she felt quite sure that he would be distressed by the presence of a third party; and she also knew that whatever steps it would be necessary for them to pursue, it would be best for them to be alone at first.

There are moments when a large-hearted and noble woman can be almost selfless. Kate absolutely forgot herself at this time—she was all Graham. She lived, and moved, and thought for him.

"I will take baby," she said. "I can be most tender with baby, and I understand him now. I believe, too, he will help me with his father, but it is wiser to leave Mrs. Murray behind. I must manage it somehow. I must think what is best to be done. There is one thing, I must tell my good faithful nurse nothing. If I did, she would insist on accompanying me."

Kate thought for a little, then, seeing that the nurse was asleep in the opposite corner of the carriage, she took out a pencil and sheet of paper, scribbled a few lines hastily, and taking out three £10 notes from her money, enclosed them in the paper, and fastened the whole in an envelope. Having done this, she woke the nurse.

"Nurse, I want you to amuse me a little. Tell me exactly over again how you manage baby. You know he is my one great object of interest, and when I am obliged to part with you, and get another nurse, I shall like to know exactly what to do."

"Dear heart, ma'am, don't you trouble about the child at the present moment," answered the sleepy nurse, rubbing her eyes.

"Oh, yes, Mrs. Murray, do be kind to me. I cannot sleep; do talk to me for a little about baby, and what he ought to have, and how you have managed other babies."

Mrs. Murray adored infants, and she quickly fell into the trap laid for her. She talked long, Kate plying her with leading questions.

Soon the young mother had heard again all that was necessary for her to know with regard to the management of an infant child.

"That's all, ma'am; no one ought to treat a baby any different," said the nurse in conclusion; "but my mind misgives me," she added, "that the little dear is not quite well. I fear much he has got a chill."

At another time this remark would have filled Kate's heart with the liveliest apprehensions, but now she scarcely felt even a pang of fear.

"God will help baby to do his duty," she murmured. At that instant her faith was very strong.

They got to Paris, and Kate had to put her plans into execution. Mrs. Murray did not understand a word of French, which fact was in Mrs. Graham's favour. She also remembered, to her satisfaction, that she had never told the good woman where they were going.

"Nurse," she said suddenly, when they had got rid of the custom-house officers, and were driving through the streets, "will you get down at that confectioner's, and buy different things which we may want for our journey. Here is money. Buy anything you please. Fill this basket."

"Shall I take baby, ma'am?"

"No; I will keep baby. I am going on to the nearest chemist's to get some of the medicine which you said would be good for him if his cold continued. Wait at the confectioner's until I return."

"We won't miss our train, ma'am?"

"Oh, no; I will see to that."

"Well, it's a queer, outlandish place," muttered the nurse to herself, "and no one speaking a word of English. How I can manage to buy things for my missus is more than I can tell; but I suppose I can point to them, and show the money. Dear, dear, I'd give a good deal to be at the other side of the Channel. It's awful to be in a country where one doesn't hear a single word one can understand."

"Don't keep me waiting long, ma'am," she said, as the cab drew up at a gay-looking confectioner's shop.

"Give me a kiss before you go, dear, kind, faithful friend," said Mrs. Graham, suddenly bending forward.

"There, my sweet lady, and don't you think I'm complaining of France, for I'd go the world over with you, dear."

Mrs. Murray entered the confectioner's shop, with difficulty made her purchases, and then waited impatiently for the return of her mistress and the baby.

She was becoming seriously uneasy, for nearly three-quarters of an hour had passed away, when a picturesque-looking French lad, wearing a scarlet cap, and whistling in a truly joyous manner, entered the shop, stared hard at her, volunteered a torrent of French, and finally seeing that she carried a basket, and could only nod desperately in reply, handed her a letter.

Mrs. Murray recognised the hand-writing, tore it open, and read the brief contents.

"DEAR FRIEND,—

"Baby and I must go on alone; it is best, and you will trust me enough not to ask me why. Get back to England, and forget everything about us, except that we loved you well. I enclose £30.

"Your faithful friend,

"KATE GRAHAM."

CHAPTER XXXVI.

THEY say when a good man falls, he falls indeed. Perhaps it is also true that when a man constitutionally brave yields to cowardice, he is a greater coward than another.

Such a thing had happened to Graham. He had been doing wrong for years, and braving it out; he had been running risks of all sorts without any particular terror of the consequences.

Never once had his nerve failed him, never once had his clear head refused to show him the most expedient path, until the day that Alexis had scornfully refused his offers of assistance. Alexis's manner then, his words of withering scorn, had discomposed him much. When he returned home, he had to own to himself that his nerves were affected.

He began to live on thorns; he began to long for a shelter and a safety; his admirable self-control was shaken; but it did not give way, not utterly, until the night when he left home.

On that night he was a coward indeed; the bare thought of Mrs. Carew caused him to shudder; the sight of Jonas sitting up in bed, and hurling curses and reproaches at him, was too horrible to dwell upon. He could not stay in the house with this pain. He must leave them—he must go away as quickly as possible.

He was not calm enough to reason out the case, as he would have done in quieter moments; he was not calm enough to remember that, sinner as he was, he ought not to forsake his wife in her weakness and helplessness. No, he could think of no one but himself—his miserable loss; and so he went away all alone, carrying with him a coward's heart.

He was a fine-looking man; he had an easy and pleasant address. The suffering he had gone through during the last few weeks had certainly aged him; the agony he had lived under, during the night on which he fled, had brought many white hairs to his head. Still, he looked young, and also interesting.

He dressed well, and carried himself well; and as he wandered restlessly about from place to place on the Continent, the usual remarks were made about him, and he was rather admired for keeping up the character of the morose Englishman.

Deeply as Graham had sinned, he knew perfectly that even now the law could not touch him; even now he had but to return the stolen money to Alexis—he had but to give up his wife's fortune, and, shorn and bereft, it is true, but still a free man, he could face the world.

Yes—but how? The prison walls, it is true, would not pen him in, but disgrace would encircle him like a prison.

Because of this thing he had done, no man who considered himself a gentleman would speak to him again. Because of this sin of his, even occupation would be denied him.

His partner, an honourable and most upright man, would request him to withdraw from the business his name even was ruining; no one else would give him a berth; he might have to beg, and doubtless even alms would be denied to him.

But terrible as this social death and ruin must be to one so proud, yet Kenneth thought that he could not have fled from his home on this account. No, no; he was a coward, but he might have borne that.

The agony of all agonies to him lay in the certain knowledge that his wife would scorn him—she who had loved him as noble, would hate him as base. This he could not bear.

So upset was he, that for a time he would not even write home; he could not eat; his nights were broken with horrible dreams. Suddenly one night a terrible idea seized him—his wife was very ill, and the doctor said she was dying of a broken heart.

The next day he wrote to her—to the post-office already mentioned—and gave her an address at Bordeaux where he might receive her reply. His letter was full of solicitude, anxiety, affection, but he said nothing about her joining him.

He posted this epistle, and then he counted the hours until a reply could reach him. He became really ill in this interval. Suppose Kate had already heard the worst; suppose she absolutely refused to have anything more to do with him! He saw now for the first time that his flight alone must proclaim him guilty before all the world. What a fool he had been to go away! Why had he not the courage to be at least true to his wretched self, and not to have left his home?

Kate was so honourable, she would not even touch such a being as he was. She would never again allow their innocent little child to look in his eyes and call him father.

Yes, certainly Kate was sure to know, sure to condemn, sure to loathe utterly. When the time at last was over, he went to the post-office and asked for his letter; a gentleman, whose appearance did not seem quite unfamiliar to him, entered the place at the same moment, and, standing by Graham's side, made a similar request.

Both these men looked outwardly cool and indifferent, and no one to watch him could have guessed that that rather sulky-looking Englishman was simply on the rack as he waited for his reply; nor, on the other hand, that the clergyman, whose eager eyes were all aglow with the fire of sympathy and love, scarcely looked for a letter at all, and, in any case, awaited one with indifference.

The clergyman received a packet of three or four. One solitary letter was put into Graham's hand. He recognised the handwriting, and exclaimed aloud, "Thank God."

The fervour of his remark caused his companion to turn and look at him. They mutually recognised each other; they had met before at Portland, on the day when Alexis was liberated.

"I am glad to see you," said Mr. Marshall, in his hearty tones.

The two men exchanged a few words, found that they were staying at the same hotel at Bordeaux, and finally Graham walked off to read his letter alone.

The relief this letter gave him he was never able to describe. His wife trusted him. She loved him, she was coming to him; as yet, as yet she knew nothing.

How glad he was. He felt young again, and happy. He flew back to the hotel, to secure at once the most comfortable rooms for Kate; he bustled about and gave his orders, and became on the instant a cheerful and agreeable man.

Hitherto he had absented himself from *table d'hôte*, but on this evening he was present, and he found himself, rather to his annoyance, although nothing could quite damp his spirits then, seated next to Marshall, the prison chaplain.

Naturally the two men began to talk; naturally also they referred to their last meeting. Marshall asked some questions about his prison *protégé*, Alexis. Kate's letter had so far brought back the tone and fibre to Graham's heart, that he was able to answer these questions without undue discomposure.

"I regret to say," he remarked, "that I could do nothing for the fellow. I was willing to aid and assist him, but he would not avail himself of my help."

"And yet you knew him long ago?" said the clergyman, darting a quick glance at Graham's face.

"That is so."

"Can you imagine any motive for such extraordinary conduct?"

Graham laughed uneasily.

"I can imagine plenty," he said. "Alexis was always an eccentric being."

Marshall muttered something under his beard.

"So you are, my good sir," he thought inwardly. "There is a mystery here, and I cannot get to the bottom of it."

Kenneth felt some of his former misery returning to him—he wished he had lied boldly to the clergyman; but with his wife's letter lying warm against his heart, he could not add to his sins, although he was by no means courageous enough to confess them.

After dinner, the two men strolled out together, and then Marshall made an observation.

"Forgive me—you don't look quite the same man whom I saw a few months ago at Portland."

Graham laughed.

"I have been ill," he said, "and had business worries."

"I hope you had good news in your letter this afternoon."

"Thank you, the best—my wife will join me here to-morrow."

"Do you make a long stay at Bordeaux?"

"I cannot tell you. Mrs. Graham has been ill. I shall take her about to the places which will best restore her. Stay at Bordeaux?—no, no, not likely; it is a horrible hole. We shall probably go to Pau from here. How I wish we could get a little way into the Pyrenees."

"The season is too early for that," answered Marshall.

"I fear it is. Have you got a long leave of absence from your unpleasant duties?"

"My duties are not unpleasant. I have had some seasons of success, and the service can never be irksome."

"The service?" echoed Graham.

"My Master's," answered the other, again favouring his companion with a quick, intense look. "I can stay away for a little longer, and may remain here; I do not know."

"I will wish you good-night now," said Graham.

He could scarcely tell himself why, but he had an aversion for Marshall, and also a magnetic drawing towards him. The rough-looking chaplain of the prison both repelled and attracted him.

"That man would think nothing of my story," he said to himself, as he laid his head on his pillow that night. "To Marshall, such a tale as mine would seem quite an every-day occurrence. Nay, to a prison chaplain, I have no doubt I should appear rather a good fellow than otherwise. I wonder what Marshall would say to me if I did confess—if I did get this cursed load off my mind. Ah—fate—he would bid me repent and take up the ways of righteousness. No, no, I am not quite so mean as that. I have forsaken God, and taken up the other side. I am not so mean as to turn back and offer Him the dregs. I am altogether unfit to enter the service. How Marshall's eyes glowed when he spoke of it, and how his voice rang when he said, 'My Master!' Curious! almost enough to make a fellow believe in the reality of a life of religion, and all that sort of thing. Well, well, I thought I believed in it once myself, but not for me now is either the belief or the comfort."

The next day, some time before the train was due, Graham might have been seen pacing up and down one of the dreary platforms of the great railway terminus.

Again he was all impatience and agitation. Kate had written to him lovingly, but during the interval between the sending of her letter and her arrival, she might have learned the truth; at any moment the truth might confront her, and then——! Suppose she did not come by this train?—suppose she sent him a telegram instead?—suppose she neither came nor sent him a message?—suppose, in future, she treated his sin, as it deserved, by utter silence and utter contempt?

How slowly the moments dragged themselves along! Would they never fly? Again he felt trembling and sick from agitation. Ah, the signal was up! What a

relief! He would soon now know the worst. His heart beat tumultuously.

As the train approached and drew up at the platform, the singing in his ears almost deafened him. He rushed forward—he peered wildly into carriage after carriage. No, no—not there—not there. Then she did know all—she had not come—she had cast him off for ever.

Suddenly a voice sounded in his ears—a sweet voice speaking the English tongue; he ran forward and clasped his wife's hand.

"Oh, my darling," he exclaimed, "this is relief—this is heaven!"

She looked up straight into his eyes, and then again he started back, stunned and sickened. She had come, but not in ignorance; she had come, knowing all; nothing else, nothing else could have brought such a look of pity into her eyes.

She looked like one almost risen up from the dead—so pallid, so weak, so suffering; and yet she looked like one who might have been in heaven itself, so angelic was that glance of pity and love which she gave him.

"Kenneth," said the gentle voice—"Kenneth, I have come alone, and I have brought baby. He is very, very ill. We must get some one to see him at once."

(*Continued—page* 513.)

TROUBLESOME COLONISTS.

By C. F. Gordon-Cumming.

Part I.

AMONG the many remarkable changes which have been wrought in various parts of the world by Anglo-Saxon enterprise, none is more striking than the wonderful alterations in the fauna and flora of New Zealand, where a kindly soil and climate have so generously welcomed every newcomer, whether animal or vegetable, that there is now nothing to indicate which are the original children of the soil, and which are the new-comers.

This, at least, is the case with regard to vegetation. Concerning animals, there is small difficulty in recognising the "adopted children," inasmuch as till our very recent colonization of those great isles, they were literally destitute of all animal life, except birds and insects, the only indigenous quadruped being a small rat. When Captain Cook first discovered the isles, there were also small dogs, which were offered in sacrifice to the gods; but it is believed that these were introduced by the Maoris, who had found their way there about five hundred years earlier. Captain Cook and his successors brought pigs and cattle, which, being turned adrift in the forests, and carefully preserved by royal edict, proved the progenitors of wild herds of these animals; and, in later years, diligent colonists have so effectually carried on their business as farmers, that New Zealand now owns about seven hundred thousand head of cattle, one hundred and sixty thousand horses, and fourteen million sheep, besides the American llama, and poultry of every description.

The Acclimatization Societies have, at the same time, introduced all manner of game—pheasants and partridges, black game, red grouse, quail, and hares. (The rabbits, which have become so grievous a plague, were imported by private individuals for domestic use.) The aforesaid societies have also done good work in stocking the rivers with excellent fish, as, strange to say, these fine streams were inhabited only by eels, and a few insignificant indigenous fishes. Now perch, tench, carp, and trout have been satisfactorily acclimatised, the latter being large and abundant. As yet, however, all efforts to acclimatise salmon have been unsuccessful, owing, it is believed, to the presence of the kawhai and other fierce carnivorous fish, which haunt the mouths of the rivers, and devour the young fish when on their way to the sea. Up to the present time, no salmon have been captured, though multitudes of young fish have been placed in the rivers; no less than twelve thousand baby American salmon having been turned out in one river, and fifteen thousand English salmon in some other streams.

"No one foresaw that the introduction of a few rabbits would prove a matter of absolute ruin."

In these various acclimatising experiments, the colonists have, at very severe cost, acquired much practical knowledge of the dangers attendant on all such efforts, in ignorance or neglect of Nature's intricate system of balancing reproductive and destructive forces. It was naturally supposed that to introduce things which in the old country were recognised as good, must necessarily prove beneficial. The possibility of having too much of some good things never suggested itself till too late.

For instance, what could be a more innocent reminder of home than to plant water-cresses for domestic use? Yet in an incredibly short space of time these were found to have multiplied myriad-fold, in crops so dense as to choke streams and rivers in the Southern Province. Both in Otago and Canterbury destructive floods, causing serious loss of life and property, are attributed solely to their increase, and thousands of pounds are annually expended in the endeavour to keep these too luxuriant watercresses within bounds.

Another plant, dear to the colonists as a fragrant memory of home, was the common sweet-briar. Who could have foreseen that the briar hedge, fraught with so many old associations, would shortly become a plant of such sturdy growth as to form a dense scrub, destroying large tracts of the richest grassy pastures, its thick, strong roots penetrating the soil to such a depth as to render its eradication well-nigh impossible?

As to the deliberate introduction of the common thistle, one might suppose that common sense would have forbidden so rash an act; but we must remember that we are speaking in full knowledge of the disastrous consequences, whereas the too zealous Scot who imported one tall purple thistle, saw therein only the old familiar emblem of his country; and when it reached Port Philip, in Australia, every Scotchman in the colony made a pilgrimage to the capital to do it homage. A great public dinner was given in its honour, and the precious plant occupied the post of honour on the table. Afterwards it was carefully planted in its new kingdom; and the Scotchmen in New Zealand soon followed the example of their neighbours in Victoria, and imported a thistle for themselves.

Now throughout Australasia, thousands of acres of the farmer's best land are completely overrun with this very undesirable crop, and enormous sums of money have been spent in fruitless attempts to eradicate the pest ; but the hardy invader holds his ground, and blooms as "fresh and fair," and, indeed, is very much handsomer than it ever was in its native land.

Happily, there is the consolation that good things grow equally luxuriantly, so that figs and peaches, apples, pears, apricots, and oranges yield such abundant crops as fill the new-comer with amazement.

But this vigorous growth of vegetation in the New World has been as nothing compared with the marvellous fecundity of animal life, and in the satisfaction of discovering how kindly all living creatures took to the new country, no one seems to have dreamt of the possibility that some might increase so rapidly as to prove a curse instead of a blessing. Soon the silent forests became musical with the melodious warblings of birds ; and no one could regret the multiplication of skylarks ; but when it came to that of sparrows, it was a more serious matter. In like manner, when the colonists first rejoiced in seeing their countless multitudes of sheep and oxen covering the hitherto desolate plains and hills, no one foresaw that the introduction of a few innocent rabbits would prove a matter of absolute ruin to many owners of large runs, and of serious loss to all ; and that these feeble folk, mighty in their unlimited capacity for multiplication, would so effectually ruin the pastures as to involve the starvation of the flocks.

Yet so it has proved. As regards the sparrow plague, it commenced with the importation of a company of fifty sparrows, which were carefully brought to South Australia in order that they and their descendants might devour the legions of grubs and insects which had rapidly increased since the introduction of European vegetables. But what was the dismay of the colonists when these acclimatised sparrows developed totally new habits in a country where there was no struggle for existence, comparatively few human beings to disturb them, and an unlimited supply of succulent vegetables and luscious fruits ! Straightway the sparrows entirely abandoned their insectivorous habits, and became strict vegetarians.

So rapid was their increase, that soon they were as the sands of the sea for multitude ; but instead of waging war on noxious insects, they left these to multiply, while devoting their whole attention to devouring all manner of farm and garden produce. The unfortunate cultivators, who had hoped to find in them useful helpers, were driven to despair. Guns, traps, and nets are all in vain : scarecrows and poisons are futile, and whole crops of peaches and plums, nectarines, figs, cherries, grapes, olives and loquats are consumed by these ravenous birds ; of cauliflowers and cabbage, young peas, wheat, barley and lucern grass they leave scarcely a vestige, and even the newly sown fields are cleared of seed ere it has time to sprout.

Now one of the most engrossing questions in South Australia is how to get rid of the sparrows, and a multitude of sufferers have appeared before a Special Commission to bear witness of their losses. One tells how he sowed his peas three times, and each time they were eaten by the sparrows. Another tells how in ten days they cleared his vineyard of a ton and a half of grapes, and stripped his fig trees, which had been loaded with fruit. A third had fifteen acres of lucern grass destroyed, and so the evidence goes on accumulating, and the vegetarian sparrow of the antipodes is proved to be a far worse foe to the cultivator than any caterpillars or blight.

For some years a Government reward has been offered of sixpence per dozen for sparrows' heads, and 2s. 6d. per hundred for sparrows' eggs ; but seeing how very few are the inhabitants of the vast extent of land wherein the sparrows may multiply and fatten, the prospects of exterminating them are small indeed.

ABOUT THE SWEATING SYSTEM.

By M. F. Billington.

WHEN the influential Commission of the House of Lords, now inquiring into the terrible features of latter day slavery, generally known under this grim term, began their investigations, the first point that they set themselves to resolve was, "What is meant by the designation of the Sweating System?" The admission that their lordships readily made, with a refreshing candour, is one that most people must share. But beyond a few very vague generalities and hazy ideas, scarce any one has any conception of the unhealthy development of modern labour, which is sapping the growth of normal conditions of work. It was my painful privilege recently to enjoy, or speaking more accurately, *not* to enjoy, opportunities of judging what sweating really means. By official favour, I saw it actually carried on at its best and its worst phases. I have been into the rooms, talked to the victims, and seen pay-books, and work, the results of the system.

Most of the readers of —"A. 1."— have a sufficient knowledge of the laws of Economics to understand that the more direct can be the intercourse between producer and consumer, so much the more advantageous it is to both parties. That there should be no intermediate agent is natural, and whatever is shown us by a simple fact of nature is right.

Now, the Sweating System interferes with that quite reasonable adjustment of the laws of supply and demand, and instead of allowing master and man to be in immediate communication, not one, or even two, but perhaps four or five middle-men and sub-contractors step in, and demand a share in the sum—too little, as a rule, at the best of times—that the master is ready to pay for his requirements. As no more money is to be got from the ostensible employer, these men who come in between, must, of necessity, wring their profits out of the unfortunate workman. We will suppose that Messrs. Jacob & Joseph, the great wholesale clothiers, of the Minories, have had a large contract order for Volunteers' jackets from the Cape of Good Hope. But the firm does not actually employ a single tailor directly. So they send to Mr. Isaacs, and say : "We want 100 coats made, and will pay 2s. 3d. each for them. If you won't take them at that, there are plenty who will." Isaacs takes them, though he is well aware that they cannot be made at that rate without defrauding some one. He, again, cannot produce them entirely. Possibly he stitches and presses them, and sub-lets the work again to Moses, who binds them, but cannot do the button-holes on his own premises. These some wretched woman undertakes, at 3d. a dozen, or even five a 1d., finding her own silk. But at each successive stage the contractor has kept back his share of profits, at the expense of the workman. It is no uncommon thing for a garment to pass through four or five sets of hands, and, bearing in mind the low initial rates of payment, it is obvious that the margin left for the actual workman or woman must be exceedingly narrow.

I have taken a coat as an illustration, as the system of sweating is typically associated with cheap tailoring more than with any other trade. But it is rife through almost all branches of manufacturing commerce. Even in so humble and ill-paid a work as that of match-box making, it exists. The Rev. W. Adamson, Vicar of Old Ford, stated in his evidence the other day, before the Royal Commission, that the low price of 2½d. *a gross* for making these boxes, *the workers finding their own paste*, was frequently "sweated" down to 1¾d. or 2d. the gross by unscrupulous "grinders of the faces of the poor." Let us hear what Mr. Lakeman, one of Her Majesty's Inspectors of Factories for East London, in his Report, just made to the Board of Trade, on the subject, has to say about the production of cheap fur capes and trimmings. "In the manufacture of rabbit skins into capes, we meet with insanitation, misery, and dirt. How ever women can be found who will work in such horrid places is difficult to imagine, unless we accept what, I fear, is too true—that 'necessity knows no laws.' A workshop has a bench, whereon the cutter shapes the skins ; a large coke fire dries wet skins, which are placed upon a board before it ; the smell from the dye is disagreeable, and the fluff from the skins is irritating ; the walls and ceilings are covered with dirt, the floor is strewn with fragments of fur, and heaps of the same are piled up in available corners. The occupier is a miserable old Jew, employing five women and four men, and one of the former says : 'I have been for years at this work. I work from 8 to 8, and earn 5s. a week—sometimes less. I have nothing to do for six months in the year.' The second answers : 'I make 6s. a week, and am bound to take what work I can get. I cannot afford to lose time in seeking for better employment. I find it hard work to live, and at times am nearly starving.'" But this case illustrates a point that is frequently overlooked—viz., that the sweater himself may be as pitiable a victim of this abnormal system as his hands. The combined wages of this man's staff amounted to £4 2s. 6d. a week. His gross earnings were £7 8s. 6d., leaving him a balance of £3 6s. od., out of which to meet rent, taxes,

fuel, etc. Now, that would be a fair living, did it last through the year, but it does not. There is in this, as in most trades, a long slack season, and few of the masters ever tide over without great distress and pawning of their goods. The cost of producing these capes is interesting: 3s. a dozen is paid for the labour of lining them, the material for lining costing 6s. The dyed skins are 4s. a dozen (strange that the more expensive material should go inside!), and the total cost is 17s. 6d. a dozen complete. They are then sold retail at 2s. 11d. to 3s. 11d. each; so that some very handsome profits are made upon them. Cheap imitation bear boas are made under similar circumstances from goat-skins, and one of the largest producers of these goods has his workshop in a loathsome garret, over a foul-smelling, filthy stable. Under conditions of dirt and horrors indescribable, these articles are produced at a cost of 13s. a dozen. On one occasion, when work was very slack, this man was obliged to part with a number to a large warehouse-man for 8s. a dozen, and he learnt by chance afterwards that the said warehouse-man had immediately disposed of them for 23s. a dozen!

Hood's terrible "Song of the Shirt" is just as applicable to the conditions under which these garments are manufactured, as it was on the day when he wrote it. Ah, my reader, I could take you direct to shops in the by streets of the East End, where shirts ready made to fit lads of 9 to 12 are sold for *five pence halfpenny and sixpence halfpenny each*, and men's shirts from *eleven pence halfpenny to thirteen pence each*. Deduct from those the value of the coarse materials, think of the numerous intermediate men that have made a profit, infinitesimal though it may have been, of it, and what do you think that your poor sister—for in Christ's name she is that—has been paid to make the garments? *One shilling a dozen*, the woman providing her own needles and thread, is the recognised rate in the trade for this lowest class of "slop shop" shirt. Even with a machine (which she must hire) the maximum that a woman can make at this is 6s. a week. In boots, again, the wages are cut down to absolute starvation point. The direst poverty it was ever my lot to see was that of a poor Polish Jew boot-finisher, in a Spitalfields attic, who received 2s. a dozen pairs for what is technically known as "finishing." In his broken English he explained that he had been at work the whole day, and must go on all through the night, to make enough to pay the rent of his miserable room. He was in a state of almost bewilderment and semi-dazedness, from want of food and long blank monotony of toil; and his is not an isolated or unusually bad case.

It may be asked, "What is the cause, then, of this widespread and ghastly misery? Is it worse now than it ever has been? Is it a new development of modern trade?" I fear that excessive competition has been its primary cause; and that has been produced by a variety of circumstances. Firstly, there is the agricultural depression, which has thrown large numbers out of employ in the rural districts, and that, added to the extraordinary magnetic attraction towards a town life, which is fast becoming almost a disease, has driven large numbers of unskilled workers up to the great centres, under the delusion that they will find immediate and remunerative employment. Not only do they fail to find profitable work for themselves, but they lower the wages of others, and cause overcrowding and misery. Then there is the complex question as to what best to do regarding the enormous influx of paupers and unskilled foreign immigrants, who arrive, misled by deceptive advertisements, upon our shores. It is easy to suggest checking them by the imposition of a poll tax, as has been done in the Australian Colonies towards the Chinese. Mr. Arnold White is strongly in favour of some such preventive measure. But in a free country like our own, and one which advocates the emigration of her own superfluous population, anything like that would be fraught with great difficulties. And lastly, it is useless to shut our eyes to the fact that over population, in London at least, is a main cause. Early and improvident marriages are at the root of a far larger proportion of the misery and distress around, than many are prepared to admit. It is no use to shut our eyes to the fact. Boys and girls under twenty are rushing into marriage, in Mr. Arnold White's expressive phrase, "within half a crown of destitution." Of the selfishness—the wickedness, I say—of bringing poor little children into this world, without a prospect of fulfilling the parental obligations towards them, they do not think. And so, a crowd of undergrown little half-starved beings flood our streets, and trouble alike the ratepayers, the philanthropist, and the statesman. And so, as each year sees these causes augmenting in force, matters must become worse. Legislation cannot raise wages, nor control prices. France gives us an instructive answer on this point, where the efforts to fix the prices of bread by municipal regulations have been nothing but a sorry failure. It has reached a point now at which it cries aloud for notice. It is no new thing, but is the result of many years of changing conditions of labour, not indeed come yet to a climax, but likely to present even worse features before that comes.

Not alone are these evils wrought by grasping, avaricious masters, or by the causes so briefly indicated. WE are partly responsible for them. Yes, we, the great outside public, are our brothers' keepers, and we have forgotten this most woefully. In the eager rush for bargains—to get the value of the very last farthing, or, as Mr. Walter Besant puts it, to impose upon our fellows the inexorable law of elevenpence-halfpenny—we have assisted in forcing prices down. If Smith starts a new shop at the corner, he makes his first bid for popular favour by underselling the old-established tradesmen. It may be that they have charged too highly for their wares, but it is more likely that Smith has bought his too cheaply. Therefore, if we join in the crowd of the bargain hunters, we are directly encouraging the production of goods at a rate below fair wages, and moreover, are placing a premium upon scamped, dishonest work. There lies under my hand as I write these words the price-list of an East End furniture retailer. I find him offering whatnots and cabinets at 5s. and 5s. 6d. each. I find him selling work-tables at 7s. 6d., and if the extra labour of inlaying, and adding a chessboard top be added, at 8s. Now, I forgive the poor widow who buys a shirt for her boy at 6½d. She is almost as poor as the maker. But I do not forgive the well-to-do middle class people who furnish their drawing-rooms at the price of human starvation. Honest labour and genuine material have a common-sense value. Any man or woman who gives one thought to their purchase must know that the worth of the first, and the price of the second, cannot *possibly* have been covered in such inadequate rates of payment. Therefore, every one of us has a moral responsibility in this matter. We cannot shirk it, we cannot evade before God our duty towards our neighbour. Sooner or later the Lord will avenge, for "Behold, the hire of the labourers who have reaped down your fields, which is of you kept back by fraud, crieth: and the cries of them which have reaped have entered into the ears of the Lord of Sabaoth."

BIBLE JOTTINGS.

Things that endure for ever.

His righteousness	Ps. 3. 3.
His praise	Ps. 3. 10.
His judgments	Ps. 119. 160.
His name	Ps. 135. 13.
His mercy	Ps. 118. 1.
His dominion	Ps. 145. 12.
His truth	Ps. 117. 2.
His words	1 Pet. 1. 25.
The righteousness of a good man	Ps. 112. 3–9.

"He being full of compassion."

Forgave	Ps. 78. 38.
Gave sight	Matt. 33. 34.
Cleansed	Mark 1. 41.
Healed	Matt. 14. 14.
Fed	Mark 8. 1.
Comforted	Luke 7. 13.
Taught	Mark 6. 34.
Commanded prayer	Matt. 9. 36.
Took not away His presence	2 Kings 13. 23.

Commit to God.

The keeping of our souls	1 Pet. 4. 19.
Our way	Ps. 37. 5.
Our works	Prov. 16. 3.
Our cause	Job 5. 8.
He is able to keep what is committed to Him	2 Tim. 1. 12.

"Hast thou an arm like God?" (Job 40. 9.)

Strong	Jer. 21. 5.
Mighty	Ps. 89. 13.
Holy	Ps. 98. 1.
Tender	Isa. 40. 11.
Glorious	Isa. 63. 12.
Strengthening	Ps. 89. 21.
Saving	Isa. 59. 16.
Redeeming	Ps. 77. 15.
Guiding	Isa. 63. 12.
Ruling	Isa. 40. 10.

Three kinds of people God will teach.

The man that feareth Him	Ps. 25. 12.
The meek	Ps. 25. 9.
Sinners	Ps. 25. 8.

HENCEFORTH.

What we are not to do.

There shall no more come to thee the unclean	Isa. 52. 1.
Walk not as other Gentiles	Eph. 4. 17.
Ye shall no more return that way	Deut. 17. 16.
Commit no more any such evil	Deut. 19. 20.
Not offer to other gods	2 Kings 5. 17.
Not to serve sin	Rom. 6. 6.
No more to be children tossed to and fro	Eph. 4. 14.

AN EVENING AT "THE BIRKBECK."

By A STUDENT.

I HAD been casting about for the best means of acquiring a more extended knowledge of a modern language, in which my school tuition had been of a most superficial nature, when a friend said to me one day, "Why not try the 'Birkbeck'"? Why not, thought I; and a brief perusal of the prospectus, setting forth enticingly the advantages of membership, decided me to enrol myself on the books of this well-known Institution.

On the first opportunity, therefore, I found my way to Holborn and down Fetter Lane, —a somewhat unsavoury thoroughfare—the redeeming feature of which are some old-fashioned, gable-roofed, projecting houses, which impart to the street a slight flavour of the antique. It so happened that the evening of my visit to the large and handsome edifice in Bream's Buildings, hard by the thoroughfare just named, was the opening night of a new session, and the outer swing doors of the Birkbeck Institution were having a lively time of it. I had heard that the Institution was a popular one, but I was not prepared for such a rush of knowledge-thirsty mortals as I encountered, even before proceeding farther than the large portrait medallion, inscribed, "George Birkbeck, M.D., Founder, 1823," which greets one from the farther wall of the entrance-hall.

I joined the throng, and ascended to the first floor, the large landing of which is flanked by the "Reading Room," "Magazine Room and Study," "Refreshment Room," and "Office and Library." This last apartment, which contains a circulating library of over 10,000 volumes, was besieged by an anxious crowd of would-be students, obtaining cards of membership, including admission to classes at fees which in many cases are almost nominal. After obtaining my ticket of membership, there was yet another process to be gone through, before I could be entered for the class I wished to join. A long table was placed on the landing, and here sat three officials busily occupied in dealing out class tickets to students, who "came round about" them "like bees," and in almost as great numbers.

It is some time before I can get attended to, and meanwhile I take a look round at my fellow-students. Assorted humanity they are, in truth! Youths and young men of the commercial class preponderate, but there is a sprinkling of the lank-haired, spectacled, student type. Older men are here, too, some grey and bald, yet quite as eager for instruction in their own particular subjects as the juveniles. One or two clerics swell the list, waiting, no doubt, to sit at the feet of some scientific Gamaliel. But the ladies, who should have been first mentioned, must by no means be omitted. Here are a few lasses, whose short frocks, and generally youthful appearance, proclaim them as being only fourteen or fifteen years of age. Then there are a number of damsels of the milliner class, who seem to be going in largely for drawing, singing, and languages; and a few older, more demure, and prim-looking ladies, of higher social status—governesses, no doubt—whose subjects of study are more severe, and include psychology, biology, chemistry, mathematics, and the like. A family group, consisting of a mother and two daughters, who, strangely enough, are all taking up the same branch of education, must complete our list of student-types.

At last my turn at the long table comes, and for a very modest sum (in addition to my subscription as member) I obtain a class ticket for a term's lessons.

Before me, on the wall, is a tabular statement, showing the various subjects of study, and the class-rooms, some twenty in number, in which they are taught. By its aid I find out my own particular class-room, and, arrived there, meet a crowd of some fifty students, waiting for the doors to open. Here again the sterner sex preponderates; there are not more than a dozen ladies, and these almost all young, one quite a child, whilst the men are of all ages from 15 to 50. Around the doors of the other class-rooms are similar knots of students.

The scheme of education is most comprehensive, and includes such uncommon branches of study as Arabic, Hindustani, Sanskrit, Hygiene, Histology, etc.

The class-room doors open at last, and we surge in. The room is large and well lighted. At the end is the professor's desk, and behind him a blackboard and other educational paraphernalia. We seat ourselves where we will, at the long baize-covered tables, and presently the professor, a pleasant-mannered little man, opens proceedings, in military fashion, by giving us each a number, which we repeat aloud after him. Then instruction proceeds, in the usual manner, for about an hour, during which the professor calls upon individuals to read to him in the language being studied. The pronunciation of some of our members, whose first essay it is, affords some amusement to the lighter spirits amongst us; but all passes off well, and having set us tasks for the following week, our instructor dismisses us in his genial way, and prepares to receive the members of a more advanced class, who have been waiting their turn outside, and are now eagerly taking our vacant places.

On our way down, some of us pause to study the various notices displayed on a red baize notice-board. Here are some of them. The first tells of the Birkbeck Debating Society, at whose meetings during the coming session are to be discussed such burning questions as Home Rule, Free Trade, Land Monopoly, Local Option, Perpetual Pensions, etc. The next notice is of the Literary Society, whose programme is both varied and interesting. Then there is the French Discussion Class, at which "La Question Irlandaise" is to be brought forward at an early date. Another handbill tells of the Sketching Club, which gives prizes to its most successful members. A Cycling Club is announced "for bi- and tri-cyclists," whose machines are accommodated in the lower regions of the Institution. With the Gymnastic Society, Volunteer Medical Staff Corps, and St. John's Ambulance Association, my list of notices must be concluded.

A boon to many of the poorer students is the register for the sale and purchase of second-hand text-books and scientific instruments.

But my exploration is not yet complete, and I turn in to the Reading Room, which at this time of the evening is crowded. It is a large room, and well lighted by numerous argand gas-burners. The walls are hung with maps and pictures, including a portrait of the late Duke of Albany, who was one of the Institution's best friends, and, as a tablet in the entrance-hall informs us, laid the foundation-stone of the new building on April 23rd, 1883. The list of daily and weekly papers, both English and foreign, in this room, is as comprehensive as one could wish, and the "periodical rack" includes many publications of the trade and specialist class. Light literature is not eschewed, though certain "Society" journals of the baser sort find here no place.

Adjoining is the "Magazine Room and Study," containing the reviews and monthly magazines, and in this room, where no conversation is allowed, students are diligently conning their lessons, and writing out exercises and notes. Having made a note of a few articles in the reviews for future study, I leave the studious ones, and make practical acquaintance with the Refreshment Room, where light refreshments are supplied at very moderate charges. No intoxicants are sold at the Birkbeck, nor is smoking allowed: these regulations are found to work well, and no complaints thereanent are ever heard.

Before quitting the building, let us take a peep at the Lecture Hall, where lectures, concerts, and entertainments take place weekly. This is a large, well-appointed hall, capable of seating some 1,200 persons. The seats in the auditorium are well arranged, and comprise an area and two galleries placed one over the other. The list of lecturers and reciters includes many well-known names, and at the concerts may be heard several leading artists. As members of the Institution have free admission to all these entertainments, there are a great many people who join for the sake of this advantage alone.

But it is now past ten o'clock, and though the Birkbeck keeps open its hospitable doors till 11 p.m., it is time to turn homewards. On the way my thoughts recur to the scenes of useful activity and cheerfulness just witnessed, and conclude with an aspiration, in which my readers will doubtless join:—

"STET FORTUNA DOMUS."

MY PROPERTY DOWN IN BLANKSHIRE.

BY GORDON STABLES.

M.D.-R.N. &c.

UNTIL my rich Indian uncle died and left me that plum—and a handsome one it was—very strange to say, I never had a twinge of rheumatism in my life. I had served my Queen and country faithfully and constantly for two and twenty years, during which time I had risen step by step, by slow but sure degrees, from a tiny midshipman of little over twelve, to a burly, hirsute commander, with three broad stripes on each sleeve, and a voice which could be heard—so they said—high over the howling of half a gale with a heavy sea.

"Nothing ever seems to ail you, sir," our junior surgeon used to say sometimes. "Wouldn't I like to have you on the list, just for once in a way. You haven't got such a thing as a spare tooth in your head, have you, sir?"

"Ha! young man," I would reply, "if you're getting rusty, like your old forceps, you must practise on the poor fellows aft, not on your commander."

Well, I loved the service, and was never more happy than when afloat. I did once, and only once, take a spell of six weeks' leave all in a lump. But "never no more" were the words I uttered, as I stepped on board my ship again.

On home stations an officer is entitled to six weeks a year, and I don't say I didn't take it, but it was in small doses—"little and often," as the doctor used to say.

The day I got the letter about that testamentary plum, I had to walk rapidly up and down the quarter-deck—we were lying at Portsmouth—for hours at a time, to work off my excitement. I did not fall asleep very soon that night either; I lay awake thinking. When I did doze off, it was only to dream, and the result of all this thinking and dreaming was, that next morning I found myself saying to myself, "Let me see now, was there not a grand-aunt of mine who was a martyr to rheumatism? Yes, I'm sure there was. And rheumatism runs in families. I'm sure that right knee of mine is in for it. I'll show it to the junior surgeon to-day."

Why the *junior* surgeon? it may be asked. Well, the senior was on leave. Lucky for me, perhaps!

"What do you think of it, doctor?" I asked, when Mr. S—— had made his examination.

"There doesn't seem to be very much the matter *as yet*," he replied, with emphasis on the last words, and a sly twinkle in his eyes. "I'll blister it, anyhow," he added, "and we'll see what we'll see. You don't mind me blistering it, do you, sir?"

"No, doctor; do your duty," I replied sternly.

"Good morning then, sir. Glad to have got you on the list at last."

This young medico and I were friendly, and as I used to chaff him, he never hesitated to have a sly joke at my expense.

Just three weeks after, I was in Haslar Hospital.

Now it was a time when reductions were being made in the service. Certain great men in office wanted to reduce expenditure, to lower the estimates, and make themselves correspondingly popular. Hence it came about that I was placed on half-pay. And when I thought about my plum, I was by no means sorry at the turn things had taken.

I gave a dinner to a select party of my messmates the very evening I left the hospital, and, of course, Mr. S—— was there.

"I'll keep my yacht, and have a nice house in the country," I remarked, as I lighted another cigar.

This was about one bell in the middle watch, or, to put it more poetically, it was near—

"The wee short 'oor ayont the twal."

Laugh at me if you please, but remember that I was only a plain old sea-dog, and that the sudden accession of a poor man to independence is somewhat upsetting.

"You'll be getting married now, I daresay," said Hartley of ours.

"Married! Why, I'm four and thirty. Besides, marriage isn't in my line. No! I never spent a shilling in a lottery in all my life, and I don't mean to begin now."

However, though I called myself old, it was simply because it suited me; and between you and me and the binnacle, I wasn't half such a bad-looking fellow.

I had not been three months on retired pay when the turning-point of my life took place. It was all very strange, as you must confess, when I relate the circumstances.

If I recollect rightly, it was in *The Field* one Saturday morning, while at breakfast, that I saw the following announcement:—

"Splendid old mansion, with twenty acres of delightfully timbered land, for immediate disposal. Owner going abroad. Enchanting views, fishing and shooting, etc.—Apply by letter to J.B., L——n Hotel."

"That will suit me precisely," I cried; "and if it is anything like the thing, and not an utter ruin, I'll purchase at once."

I wrote to my bankers, advising them that I might soon draw a cheque on them for many thousands, and I wrote to 'J.B.,' asking him to come and see me.

At the hour appointed a neat-looking private hansom drew up at the hall door of the house in which I had apartments, and a respectably dressed, somewhat portly middle-aged gentleman descended. He was shaved in the then prevailing service fashion, no moustache, a clean chin, and whiskers.

I liked his looks, and prevailed upon him to stop and dine.

He brought a bag from the hansom, gave his coachman some orders, and returned. He had already presented his card, which indicated him as a Mr. Morris, of the firm of Smith & Saddler.

"Very old firm," he explained; "the Smiths & Saddlers all dead and gone, years ago. But we must retain the name. That, you, as a business man, and a man of the world, will understand."

We got on very well together, Mr. Morris and I, and soon grew quite friendly.

In that bag were plans of many other

mansions for sale or to let, some belonging even to dukes. He hurried over these with only a few passing remarks.

"My head clerk," he said, smiling, "has an old eye for business. *He* stuffed those in the bag. Daresay he thought if one did not meet your views, another—— Ah! here we are, sir. This is a plan of the Marshdale estate, and Marshdale Towers. Several have already seen it, and all like the place. The price, too, is a mere bagatelle, but the owner must go abroad—indeed, between you and me, he wants the money."

I was charmed, delighted, and determined to run down with Mr. Morris next day to Blankshire, and view the property for myself.

"Before you decide to go, however," said Mr. Morris, "I must be candid, and tell you that the place has one drawback."

"Thank you, Mr. Morris. Be good enough to name it."

"The domestics all say it is haunted."

I laughed.

"An old sailor like me," I replied, "is but little likely to be frightened at ghosts."

"Well, I daresay it *is* all nonsense, but I was bound to tell you. Old Squire Silver is the soul of honour and fair play."

At Mr. Morris's chambers next morning I met an old gentleman, white as to beard, and bald as to head. He was standing with his back to the fire, and his coat-tails over his arms.

"Humph!" he said, as I was introduced, and he eyed me in a way that was anything but pleasant, through a pair of heavy gold spectacles.

"After my little place down in Blankshire, eh? Morris tell you about the haunted wing? Let us see you again if you think anything more about it? Morning to you."

I must say that I should have been considerably disappointed had the place been different from what the plans represented it, and I gave a sigh of relief when I stood in the park and beheld all the beauties around me.

It was the fall of the year; the broad avenue that led to the fine old Elizabethan mansion was bedded with brown leaves, and the leaves kept falling, falling, and the winds kept sighing and whispering through the lofty elms and limes.

A little old lady had come out of the lodge, and bobbed a curtsey to Mr. Morris.

"Which I'm glad to see ye back, sir, and will it be a chop or a steak, sir?"

"Nothing to-day, Mrs. Benson. Thank you."

Then he whispered something to her, which caused her to nod her old head and smile at me.

"Which Lizzie'll come in a minute sure-ly, sir."

Lizzie came running after us, and went on before, to open the great hall door."

"Oh! Lizzie, by-the-bye," said Mr. Morris, "here is a telegram. Do, like the nice pretty girl you are, run to the village with it, and wait for the answer. There is sixpence for yourself."

We were left alone to look at the house.

The rooms were beautifully and tastefully furnished. All would be removed soon after the house was let. So said Mr. Morris.

I took stock of carpets and curtains, and determined to have everything as similar as possible when I should be master.

The haunted rooms were even more elegantly draped and upholstered, and looked as if they had been but recently lived in. One in particular was a kind of a little old-fashioned snuggery. It looked as though the ghost was fond of its comforts, and even used to forty winks in the rocking-chair.

"Surely," I said, taking up a book, "the ghost does not read the latest novels?"

"All Squire Silver's eccentricity," said Mr. Morris, tapping his own brow,—"his extraordinary eccentricity. Had an idea, you know, that if he furnished these rooms in the modern style, that the apparition would desert them."

"I see," I said, "I see. Very strange, though!"

As we left the Hall and locked the door, up trotted Lizzie with the telegram. After a glance he handed it to me.

"General Baddenough will run down to-day."

"He is hot on it, I can see," said the bland Mr. Morris.

"Then," said I, taking a firm resolve, as I glanced back at the fine old mansion, "I'll cool him. Your hand, Mr. Morris, *I'm* the buyer."

There was a great deal of what I considered red tape to be gone through before I became the possessor of Marshdale Towers, but it was finished at last, and proud I was to bear away the parchments.

My cheque soon changed hands, and I do not like to think, even yet, what a hole it made in my little fortune.

I had determined to run down almost immediately, and go over my estate all by myself, but was summoned to the far north to see a sick brother. It was nearly a fortnight ere I got back.

"The old squire will have turned out both bag and baggage," I said to myself, as the train rattled me down to Blankshire one quiet Saturday evening.

Instead of going round by the lodge gate, I scrambled over the wire fence, and walked up through the park.

It was gloaming, neither light nor dark, and the house seemed very silent.

But, lo! as I looked towards the haunted wing, a figure appeared at one of the windows, and the blind was drawn down.

I am not easily frightened, but I own that a chilly creepy kind of feeling stole over me as I beheld the apparition.

I am a man of action, however. I let myself in with the key Morris had given me, and stole upstairs, and along the corridor on tiptoe. Yes, the ghost must be there, for a light streamed through the ventilator.

I opened the door quietly, suddenly, and certainly was not prepared for what I saw. It was the ghost—the ghost of a lovely, shapely girl, reclining, book in hand, on a couch of velvet! I am not usually of a very romantic nature, but this was an occasion calculated to animate a milestone. I stretched my arms towards the vision.

"Sweet spirit, hear my prayer."

That is what I said.

This is what the spirit did.

She sprang to the bell, and jerked, and jerked, and jerked, and at every jerk emitted a scream that might have awakened the dead.

In a moment two liveried servants and a shrieking maid rushed in.

"Seize him! seize him!" cried the spirit; "he is a dreadful madman!"

But I am six feet in my stockings, and not very easily overcome. Numbers did it at last, however. I was bound with ropes, carried downstairs, and tied to a hall chair.

A handsome old gentleman, whom the spirit called "Oh! papa, dear," appeared on the scene with a poker in his hand.

If the daughter was a ghost, there was something excessively substantial in every gesture of the ghost's papa.

I told him my story from beginning to end, for it had already dawned upon me that I had been vilely victimised.

My inquisitor was the real Squire Silver. He knew many men in the service with whom I was on terms of intimacy, and it ended in my being believed, unbound, and invited to dine.

Considering everything, I spent a very happy evening, and was back to town early next morning. Need I say that the birds had flown, and I have never heard of them since?

It was a very clever trick, and they have the credit—I the loss.

Yet not altogether, for my intimacy with Squire Silver soon ripened to real friendship, and with Ellen, his daughter, to something deeper. Ellen, my sweet spirit, has heard my prayer—she is now my wife.

The dear old squire has been gathered to his fathers, and I am master of Marshdale Towers.

"It looked as though the ghost was used to forty winks in the rocking-chair."

COMMUNION.

By the Rev. J. B. FIGGIS, M.A.

"Is thine heart right, as my heart is with thy heart? If it be, give me thine hand. And he gave him his hand; and he took him up to him into the chariot."—2 *Kings* 10. 15.

I AM asked to write some thoughts on Communion, and to tell how it may be maintained unbroken.

I do not know that I can answer that question more accurately than in the historical utterances of this verse.

A king appointed by God to avenge the blood of His saints was taking possession of his kingdom, and riding into his capital. On the way he met the chief of a band who lived in tents as perpetual strangers and sojourners. The king wanted to find how he was affected towards him. Was his heart right with him, as his with him? Was it loyal to his sovereign, as that sovereign to the subject? The Rechabite answered that it was. Then the king said, "Give me thy hand." He gave it, and his sovereign lifted him up to a seat beside him in the chariot. Even so, this day "the King Himself draws near"; His chariot, "paved with love," is drawn up in our path; His voice, "as the sound of many waters," is echoing in our ears, and His words to you and me are just these of this very different sovereign, "Is thy heart right as My heart is with thy heart?"

Communion, then, depends on right heartedness, and fellowship upon fidelity. Only if the heart be right, *i.e.*, loyal, and its loyalty, its integrity be maintained, is intercourse tolerable, or perhaps possible. Such is the doctrine of the passage as to human combination, and such is the doctrine of Scripture as to Divine communion.

The king, you observe, first states his own generous feeling, and then rightly requires a corresponding feeling towards him. "My heart is right with thy heart." That is the sovereign's declaration. "Is thine heart right with me?" That is his demand. Then follows the fellowship, the hand given, the hand grasped, the chariot mounted. Now we want these three stages too.

WE HAVE THE FIRST; GOD'S HEART IS RIGHT WITH OUR HEART. What a mercy! what a marvel that it is! That a Being so situated—high above all need—a Being so sinned against, a Being who sees what we would not for worlds show to other eyes, but what for worlds He cannot hide from His; that this Being, who knows our fickleness, our frowardness, our whole course of sin, should yet have not one recreant wish, not one cold thought, not one angry feeling towards us, is wonderful indeed. That He first loved us, so loved us "as to give His only begotten Son, that whosoever believeth in Him should not perish"; so loved us as to lay aside all His righteous wrath, and to offer to us mercy, boundless and infinite: and this not only to a bad world, but to a backsliding Church, so that, whatever we are and wherever we are, the King's heart is right towards our heart, is grace itself. He comes hither in the right spirit; do we? He has no bar to perfect communion; have we?

This is the first thing, this entrance into covenant by our King and our God. It is His solemn coronation vow, the foundation of all, the first thing for our union. But not the last. A covenant, like "a Mediator, is not of one." It takes two to make a quarrel, and it takes two to make a covenant; and the two must be right-hearted towards each other. Not only one of the two, not only the king, but the subject; not only God, but man. It is very well that God's heart is right with ours; we could do nothing if it were not. Had He not found out us, we could never have found out Him; had He not loved us, we could never have loved Him. But this, while the removal of all obstacles to communion, is not itself communion. It requires another thing before it can be that. IT REQUIRES THAT OUR HEART SHOULD BE RIGHT WITH GOD. I need not tell you that all enmity and wrath and malice toward God, all blaspheming of His love, and doubting His goodness, must be laid aside. I need not say that the apathy and indifference of hearts, hard enough in themselves, and further indurated by the world, must be laid aside. I need not remind you that to walk with God we must be agreed with God as to the great quarrel of our lives.

It is not so much that that comes to mind in this connection, I think, as what is so likely to come between Christians and Christ—sin, some little sin. That is how I apply the question, and a very searching question it is. Let it search you, I pray. Do not put it away from you. Do not refuse it attention. Christ comes *here*, as when with a scourge of small cords to the temple; Christ comes *home* to search the house, the heart, with candles; Christ comes to *the place of our occupation* to "sit as a refiner and purifier." He that has not renounced sin is still "in the gall of bitterness and the bond of iniquity," his heart not right with God; and even after such renunciation, when he goes forth, fair as the moon, if he go back, his soul shall suffer eclipse; and let him have a care lest the eclipse should be total. Do not shuffle and decline to answer. God give you grace to reply as Jonadab did; God give you a right to do so. But let there be reality here, intense reality. Do not give his answer, if it be not true.

The question then amounts to this, Christian, Is there nothing between? Has no coldness struck in, no cloud come up? I remember many people saying, when a great defaulter was detected in my boyhood, "I never liked him; he never looked one in the face." Now, can we look God to-day full in the face, and say without a quiver, "There is nothing kept back, Lord, Thou knowest; there is nothing done, Lord (willingly and habitually, at least), other than I really believe Thou wouldest have me to do; there is nothing left undone which I think Thou wishest me to do. Is there a difficult mission? yet, if it is mine, 'here am I, send me.' Is there a disagreeable message? yet, if Thou wouldest have me for messenger, I will go. I know I am a sinner, a miserable sinner. I know that my acts (especially in the motive and the manner) get flawed; but I do honestly know of nothing in my acts, in my creed, in my relationships, in anything, which God would have me do differently from that I am doing." Oh! when the King puts this question, as He may to-day when on your knees, what answer can you give? Happy, happy Jonadab, that could look his sovereign in the face, and could say, "It is; my heart is on the king's side, my whole heart. It is little, God knows, it is little; but it is loyal." So happy, happy Christian, who can look his King and his God in the face and answer, "It is." Yes, "happy is he who condemneth not himself in that thing which he alloweth."

And, believe me, that happiness may be ours. Be very sure it may. Do not suppose, because I probe and press, because I search here and try there, and use all means to find whether there are cobwebs in this corner, or creeping worms under that stone; because I try to deal with your conscience, and to bring you to own your sins if you are guilty; do not suppose that I therefore imply that you *must* be guilty. It is our privilege so "to walk" and "to please God." It is our privilege to have a "heart that condemns us not." It is our privilege to "know that we know Him," and that our "ways please the Lord."

How to reach, and how to maintain, this happy state of harmony with God is the great problem of Christian experience, and a difficult problem it is. Yet, let us be found "purifying our hearts by faith," clinging fast to the anchor of hope, and kindling to a flame each spark of love to Christ, and the problem will not be insoluble. Indeed, Faith, Hope, and Love will solve almost anything. But I cannot linger on this.

Now, suppose the inquiry answered, then the invitation comes. "If it be," *i.e.*, since it is, since you are a loyal man, leal-hearted and true; since you hold fast your integrity, and have let no one and nothing come between us; since all remains clear and right, "Give Me thine hand."

Only think of it,—

> "He, the everlasting God,
> Proclaims Himself my Friend."

He, the Infinite, offers fellowship to worms beneath His feet. "Give Me thine hand." Yet I hesitate, I fear, I tremble to take it.

> "I a poor worm, and He so high,
> The Lord of heaven, and earth, and sky."

Look again, look at that hand, I say. Is it not a hand human as Divine, marked with human tenderness, with here and there signs of human grief? What, not trust Him yet? Look still once more. Why, yes; there are nail prints in it. He died for me. Ah, I can take it now, I can trust Him now. God is in Christ, reconciling the world. I can be afraid no longer, I can hesitate no more; I come, I come.

"And he gave him his hand, and took him up into the chariot." So Jehu was king, and Jonadab was next unto him. So wherever my lord the king was, in life or in death, there would the servant be. And so we may be always with Jesus, everywhere *with Jesus*. We shall be, if we are every bit *for* Jesus.

So, if the chariot rolls into the battle, the captain goes as well as the soldier. If the chariot rolls into the city, the king goes as well as the subject, to make the journey easy. Yes, blessed Jesus, anywhere, everywhere, with Thee. "I can do all things through Christ which strengtheneth me." Only remember, "every one that hangs about the court doth not speak with the king."

Remember, as Gotthold says, that "just as in a circle what is nearest the centre is subject to least motion, so the closer the soul is to God, the less the movement and agitation to which it is exposed. So, of two friends round the same centre at different distances, the outer will have to pant and run far to accomplish his task, while a few yards will be enough for the one nearer."

Be you that nearer one, so near, so close that you need not stir; but that just where you are, you may find God, and have His hand, be at His side, and sit in His chariot in endeared, intense communion.

CHRISTIAN EVIDENCE COMPETITION.

£5 5s. 0d.

IN our last Number we announced this Competition. We have given a great amount of consideration to the subject, and it is undoubtedly one of the most important Competitions we have as yet had.

In order to interest a wide range of Competitors, we shall have two Divisions, classified as follows :—

Advanced Division.

Competitors will study "Row's Manual of Christian Evidences" (Hodder & Stoughton, Paternoster Row, E.C., 2s. 6d., Post Free), and will be required to answer 40 questions. Prizes : First prize, £2 2s. ; second prize, £1 1s.

Elementary Division.

Competitors will study "Whately's Christian Evidences" (Society for Promoting Christian Knowledge, 4d.), and will be required to answer 30 questions. Prizes : First prize, £1 1s. ; second prize, 10s. 6d. ; third prizes (two), 5s. each.

Intending Competitors may at once begin to study the above-named books. The questions will be printed in our Numbers for June 23rd and 30th. The Competition will be open for two months. All Papers must reach our office by August 31st.

The award of prizes will be based upon answers to a final test-paper, consisting of ten or twelve questions, which will be forwarded to the most successful Competitors, as soon as possible after the preliminary examination is completed.

RULES.

1. Competitors may select their own Division, but no Competitor may answer *both* sets of Questions.

2. Competitors in the Advanced Division may refer to the Questions whilst studying the Text-book ; but no reference is permitted to any book whatever, when once Competitors have begun to write their Paper of Answers.

3. Competitors in the Elementary Division will be allowed to refer to the Text-book when answering the Questions.

4. The Questions need not be written out on the Examination Paper ; but the number of each Question must be prefixed to the Answer. The Answers must be given in the order in which the Questions are set.

5. Competitors must write their name and address very clearly at the top of the first page of Answers.

6. Answers must be written on one side only of foolscap paper, and the sheets must be attached to each other at the top left-hand corner by means of a paper fastener.

7. The answer to any question may not exceed 300 words in length ; and credit will be given for brevity and clearness of expression, as well as for general neatness.

8. Although the Questions may be fully answered from a study of the given Text-books, Competitors are not restricted to those books.

9. Any inquiry must be accompanied by a stamped addressed envelope, and the envelope containing the inquiry must be endorsed outside, in large letters, "Query."

10. No MSS. can be returned to Competitors.

MORE THAN A FRIEND.

I WAS deeply interested in hearing of an incident that took place at a soldier's grave in one of the Southern States of America. A person was seen decking it with flowers ; and a stranger, observing him, asked, with a tone of sympathy, "If his son were buried there?" "No," was the reply. "A brother?" "No." "Some other relation?" "No." *Whose memory*, then, may I venture to ask, do you thus so sacredly and tenderly cherish?" Pausing a moment from emotion, he replied,—"When the war broke out, I was drafted for the army ; and as I was unable to procure a substitute, I prepared to go. Just as I was leaving home to report myself for duty, a young man whom I knew came to me, and said : 'You have a large family, whom your wife cannot support when you are gone. I am a single man, and have no one depending upon me—I will go for you.' He went. In the battle of Chickamauga the poor fellow was dangerously wounded, and was taken to the hospital. After a lingering illness, he died, and was buried here. Ever since his death I have wished to visit this place, and having saved sufficient funds, I arrived yesterday, and to-day have found his grave."

The touching story concluded, he planted the rest of the flowers. Then taking a rude board, he inserted it at the foot of the grave. On it were written these simple words, and no more—

"HE DIED FOR ME."

I know your heart will glow when you think of that noble fellow's generous, self-sacrificing love for his friend. Does it not glow when you think of One who died *for you?* Is *that* deed forgotten, and not one loving, grateful thought given to His dear memory? Yet, as truly as that generous soldier died to save his friend, so truly did Jesus die for you—yes, far more so. The soldier might have returned safe, but Jesus *knew* He went forth to death for you. And how have you treated Him?

He knew you did not love Him, nor care for your soul ; but He saw you would be lost, so He gave Himself up to suffer in your stead. And you have hardly thought of it ! You have shed no tears for Him, nor experienced one loving feeling.

Perhaps you think that because He was the Son of God, He could feel no pain or grief. Listen ! He says, "My soul is exceeding sorrowful, even unto death." "If it be possible, let this cup pass from Me : nevertheless, not as I will, but as Thou wilt." He died a most suffering, agonizing death, and a mocking crowd stood round Him.

"He who knew no sin" was then "made sin for us ;" "He bare our sins in His own body on the tree" ; and the Father hid His face from His own Son, when made a curse for us. It was this that broke His heart, and wrung from Him that cry of agony, "My God, My God, why hast *Thou* forsaken Me?"

It was thus He died, and died for *thee.*

"BUT AFTER THIS—?"

"I DON'T fear death."

Perhaps not. "Everyone dies."

Yes ; the Old Book says, "It is appointed unto man once to die, but *after this*, THE JUDGMENT." What about that? When all your life lies "naked and open" before the Judge, will you still "not fear"?

Think for a moment what it means not to die, but to *face a Holy God*, with no Mediator between. You dare not do it. Death may be easy, but after——?

Hear the gospel echoing, "No condemnation *to them which are in Christ Jesus.*" Have you sheltered beneath the blood of Jesus, who bore the punishment in your stead? If so, you need not fear death, nor the great hereafter. If not—how can you escape, if you neglect so great salvation? *Now* is the time ; to-morrow may be too late.

CHAPTERS FROM NATURE'S STORY-BOOK.

By Professor Haddon,

Author of "An Introduction to the Study of Embryology."

CHAPTER IV.

SLUGS AND SNAILS.

EVERYBODY has heard of Naples and its famous bay; writers, artists, and poets have vied with each other in giving their impressions of its loveliness. Those who love beautiful and interesting scenes can enjoy them, not only in Naples, but in the adjoining Bay of Baiæ, the Sorrento peninsula, and in the enchanting islands of Capri and Ischia. The museum, the ruins of Pompeii, which stand as a moral of human life, and the solemn temples of Pæstum, gleaming golden in the sunlight like a Titian landscape, deeply move those who strive to appreciate the life and art of the past. The student of human nature finds endless interest in the various peoples there collected together, and especially in the childlike, affectionate, superstitious, impetuous Neapolitan, with his double means of expression,—speech and gesture language,—and his varied noisy street cries, which are only hushed at night.

Not only mere tourists, or those interested in art and nature, but every year numerous zoologists find their way to Naples from almost every civilised country. For the Bay of Naples has long been known to teem with rare and lovely forms of life; and it is to study the structure, habits, and life-histories of these, that well-known naturalists come from all corners of the earth to make their investigations in what is known as the Zoological Station.

The Zoological Station of Naples is a fine building, situated in the beautiful public gardens, Villa Nazionale, which separate the Chiaja from the sea. It was built by the wise munificence of Dr. Anton Dohrn, who was assisted in various ways by the Italian and German Governments. Many countries of Europe subscribe a certain amount of money every year to the Zoological Station, and in return they have the privilege of allowing a naturalist to enjoy all the advantages of the institution—that is, he has a work-table, with all requisite staining and preserving fluids set apart for his use; also a number of small tanks, in which to keep marine animals alive. All the specimens he requires are brought to him daily, and he has a first-rate library at his disposal, and the run of the splendid aquarium, which occupies the lower portion of the building. The latter is also open to the public.

From this brief sketch it is easily seen that the zoologist who is fortunate enough to be able to go to Naples, and has a "table" at his disposal, has every advantage in his work, and in addition has a lovely place to study in, with plenty to interest him in his spare time. Two English institutions, the University of Cambridge and the British Association for the Advancement of Science, subscribe to Dr. Dohrn's Zoological Station. Some years ago I was fortunate enough to be able to occupy the "table" allocated to the University of Cambridge, and now I want you to accompany me in thought to the laboratory at the Zoological Station of Naples, and to follow me in my studies there.

One usually associates Naples with a bright sun, blue sky, and calm sea; but during my visit there was a long spell of bad weather, and for weeks the sky was grey, and the sea rough, with a continuance of south-westerly winds. This was very unpleasant, and prevented much from being done that was hoped to be accomplished; but "it is an ill wind which blows nobody any good," and the prevalent winds drove into the bay many creatures which float on the surface of the high seas, and consequently I was able to study some of them. Two of these, which are also occasionally driven on the western shores of the British Islands, will now occupy our attention.

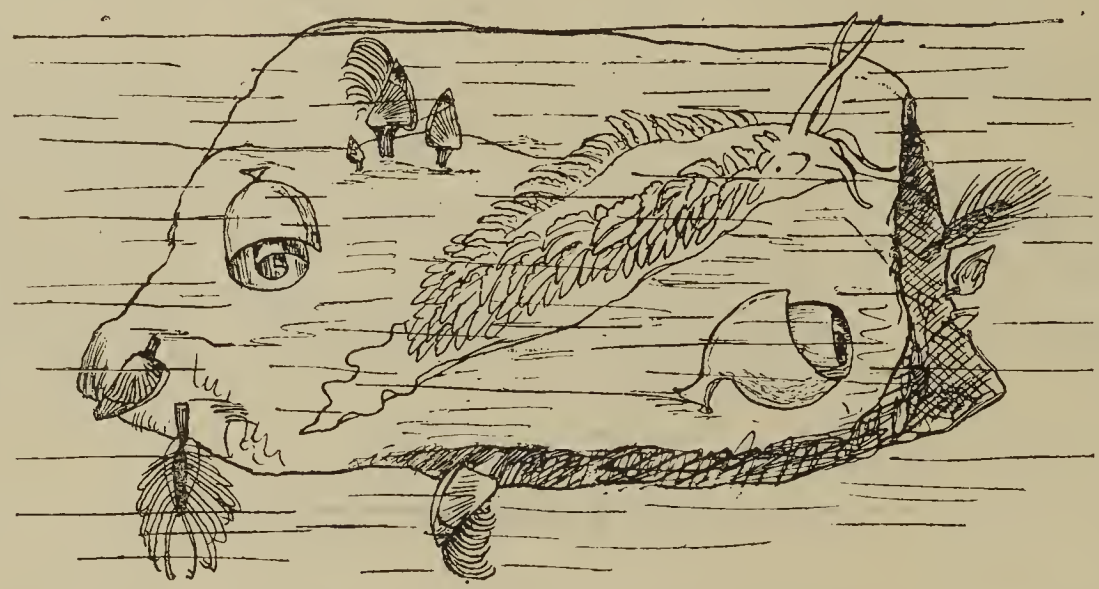

Fig. 1.

Sea-slug (Fiona nobilis), with two egg coils; and several Barnacles (Lepas pectinata).

On floating lumps of pumice, which one time had been ejected from Vesuvius, Etna, or Stromboli, we frequently find numerous specimens of a small barnacle, with delicate, rough, chalky plates, the numerous legs of the animal being rhythmically extended and withdrawn like a fairy hand. Often on the same lumps we find an elegant sea-slug, with four horns on its head and a fringe of thick brown finger-like processes down its sides, each papilla having a wavy band along its length. Most of the other sea-slugs browse upon different kinds of hydroids, but this kind evidently feeds upon the barnacles, and they in their turn on what they can catch in the sea as they float along. On the same piece of pumice are coils of jelly, of a delicate cream or pink colour, each supported on a little stalk; these are the egg coils of the slug, and each consists of a vast number of tiny eggs embedded in a coiled strap of jelly.

I will now snip off a piece of jelly from one of the coils, and put it on a small piece of glass. Placing it under the microscope, you will observe a number of oval lines. These are the contours of the delicate egg membrane, and within each is an egg. By taking pieces from numerous coils, we may examine different stages in the development of the slug. First, there is a round, simple egg; then the egg divides into two, each section again divides, and at last a flattened mass of cells is formed, not unlike a book in shape. The cells further sub-divide, and after several changes of form, a little embryo may be seen, like Fig. 2. You notice it is very lively, turning and twisting so fast that it is difficult to see it at all. At last it is still for a moment, and we make a sketch of it. Again it starts on its gyrations, and we have to wait for another pause.

By dint of patient waiting we are able to make out its structure. We find there is a somewhat shoe-shaped shell, quite colourless, and extremely thin. Above this is a heart-shaped flap, fringed with whip-like threads or cilia. It is these which cause the embryo to pirouet about; in the centre of the flap are two slowly waving cilia. In front of the flap is a rounded knob, which corresponds to the "foot" of other molluscs. It is covered with very small waving hairs, or cilia; on its under side is a flimsy plate, called the "operculum." Between the foot and the flap, or "velum," is the mouth, and through the transparent shell can be seen the digestive tube bent upon itself.

Now let us take a portion of another coil. We see a similar velum, but it is much more developed. The foot is larger, and a large eye-like spot is very visible. This is not an eye, but an ear. The "otocyst," as it is called, is a hollow sac containing a rounded ball, or "otolith," which vibrates in response to certain external movements. The shell, instead of being long, has grown in another direction, and is tall, and forms a lovely glassy case. You frighten the embryo, and it withdraws itself into its shell, and the

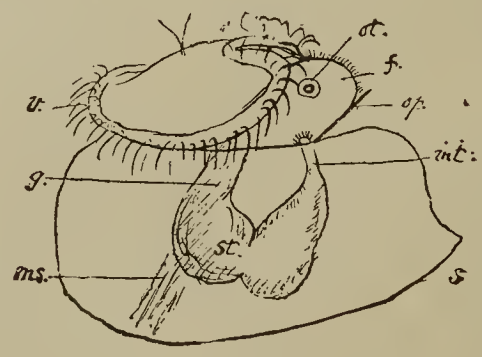

Fig. 2.

Early Veliger of Fiona: f., foot; g., gullet; int., intestine; ms., retractor muscle; op., operculum; ot, otocyst; s., shell; st., stomach; v., velum.

operculum closes the orifice like a lid. Fig. 3 B shows such an embryo nicely packed away. The fan-like lines in the first figures represent the muscle, by means of which the animal is retracted, and the operculum closed.

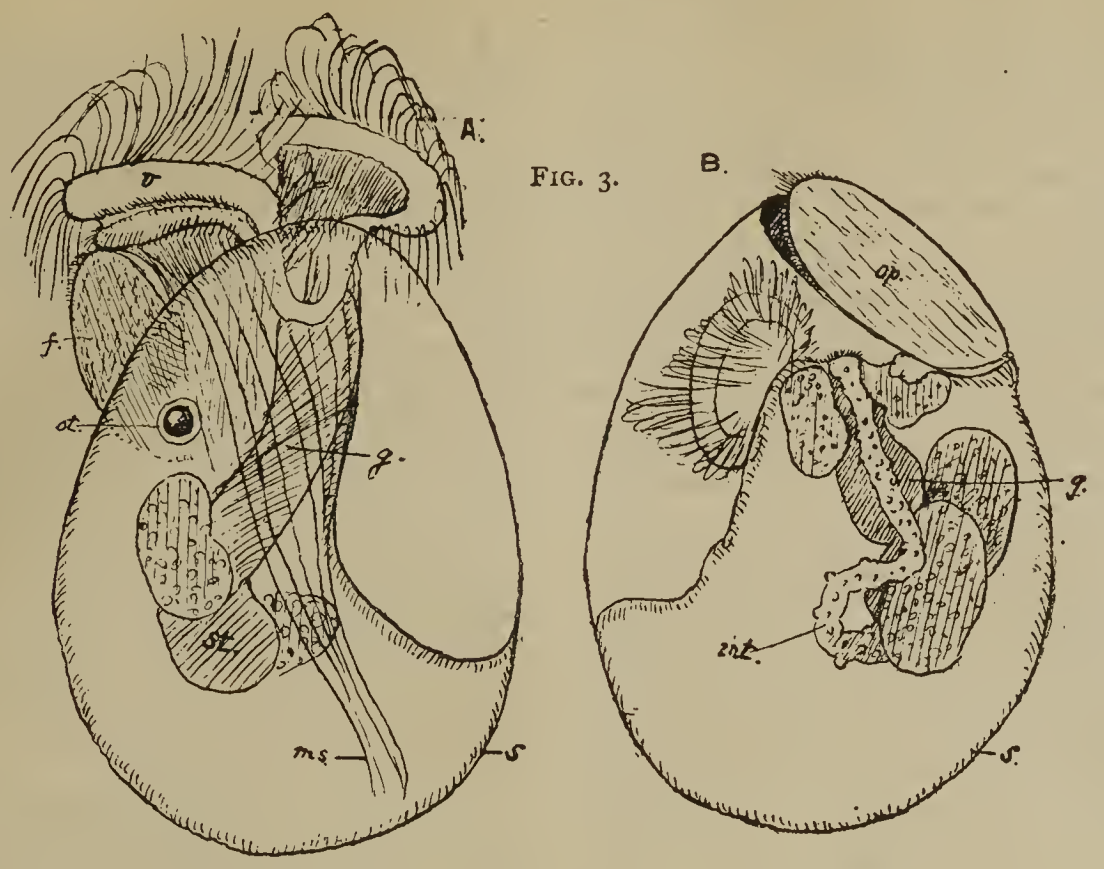

FIG. 3.

Late Veligers of Fiona. A., back view of extended embryo: f., foot; g., gullet; int., intestine; ms. retractor muscle; ot., otocyst with its otolith; s., shell; st., stomach; v., velum. B., embryo retracted within the shell.

Although I tried time after time, I was unable to keep the embryos longer than this stage; they all died, instead of transforming into a slug; but from what is known to occur in another sea-slug, we suppose that the embryo crawls out of its shell, and gradually assumes the form of the adult.

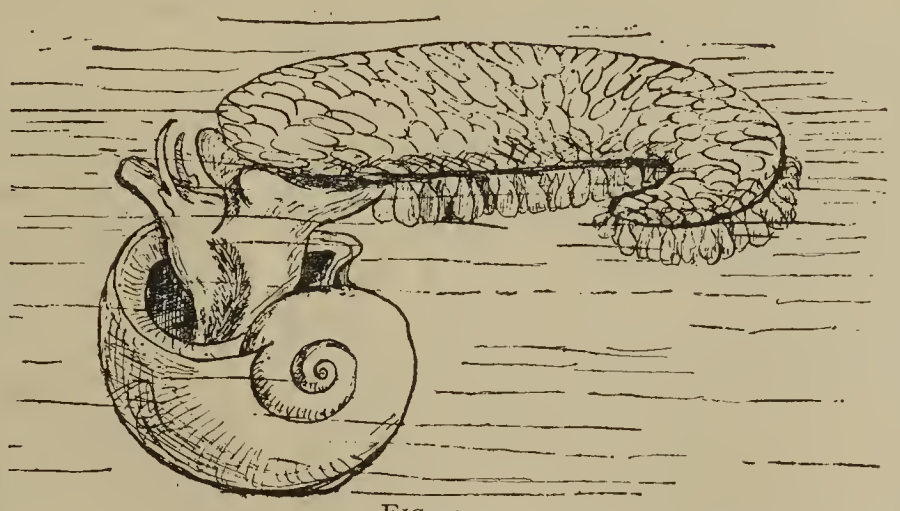

FIG. 4.

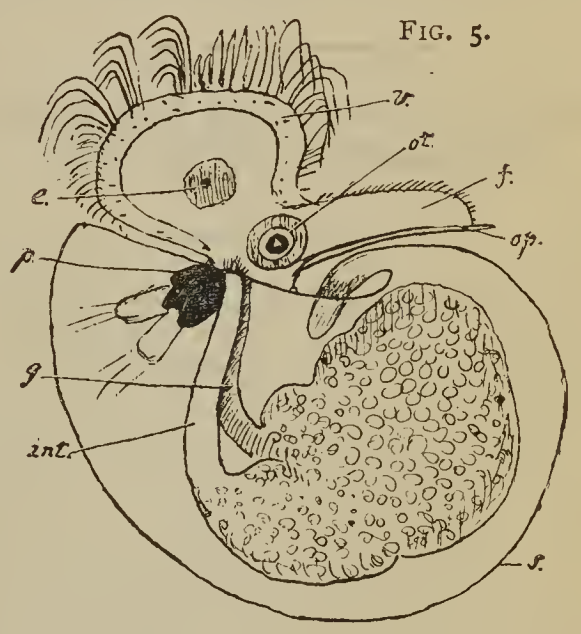

Purple Snail (Ianthina bicolor) with its raft and egg bags.

The second floating mollusc is the purple snail, or *Ianthina*. The kind we have before us is of a uniform delicate lilac. Although the shell is fragile, the animal is pretty solid, but it manages to float on the surface of the water by means of a wonderful raft which it makes for itself. The raft is usually somewhat curved, as in the figure, and is composed of a number of closely packed bladders. Let us detach a purple snail from its raft, and put it in a vessel of sea-water. It immediately sinks to the bottom, and then feebly lolls about, without the power of floating, or even of crawling up the sides of the vessel; consequently, as must often happen when the animal is torn from its raft by the lashing waves of a storm, it must inevitably sink down to the bottom of the sea, and then die. We will now pour away most of the water from the vessel, leaving barely enough to cover the shell. The snail immediately pushes the front part of its foot above the level of the water, and curves it over. As the under surface of the foot secretes a slimy fluid, which rapidly hardens, it will be evident that a little air will be enclosed by the foot, and then imprisoned in a bubble of slime. This is repeated, until a number of glassy bladders are formed, and at last there are sufficient of them to enable the shell to float. All through life the purple snail is continually adding new floats to its raft.

The mother snail has a large number of little pink bags hanging down from her raft. These are the capsules which contain the eggs. We will separate one of the capsules, and cut it open in a drop of water. Lo! a number of tiny reddish specks come tumbling out, and swim about in the miniature sea. On putting the glass slide with its drop of water under the microscope, we see a number of baby snails like that I have drawn in Fig. 5. Inhabiting a slightly coiled shell, tinted with delicate madder brown, is a little "embryo," not so very unlike that of the sea-slug we have first studied. There is the two-lobed velum, with its large waving cilia; in front of it the foot, with an operculum on its under side, although the adult has no operculum at all. At the base of the foot can be seen the otocyst, and within the velum is the brain and a developing eye. The digestive tube is bent upon itself, as in the other larvæ, but on the right side of the body is a large patch of a deep violet colour. Some other embryo sea-snails and slugs have a similar patch, often of a brilliant red colour. The significance of it is not yet known.

So far, we have learnt that the sea-slug and the purple snail both pass through a larval state, in which the animal is provided with a velum and a foot, and is protected by a shell, the mouth of which can be closed by an operculum; such an embryo is known as a "veliger." This holds good, more or less, for all the mollusca. Sometimes the velum is reduced in size, as, for example, in the embryo of the fresh-water snails, while in those of the land-snails and slugs it disappears altogether; but this is not to be wondered at, when we remember that the velum chiefly acts as a swimming organ, and enables the embryo to migrate to new localities, for the young mollusc is usually

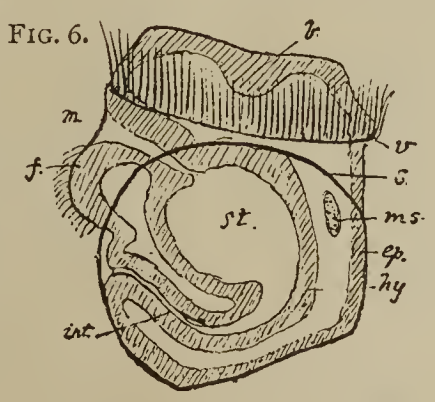

FIG. 5.

Veliger of Ianthina; e., eye spot on the brain; f., foot; g., gullet; int., intestine; p., violet pigment spot; op., operculum; ot. otocyst; s., shell; v., velum.

hatched in the veliger stage. As land-snails' eggs are laid in the ground, the velum cannot be used for swimming, and not being useful to the embryo, it has gradually disappeared altogether. The butterfly-snails, Pteropods, and the cuttle-fish group, Cephalopods, are now regarded as rather closely allied. The former are early hatched, and their veliger-larvæ have a large velum; but the embryo cuttle is burdened with a large mass of yolk, and is hatched quite late; so again we find the velum very much reduced.

FIG. 6.

Veliger of Oyster (Ostrea edulis); b., thickening of the Epiblast, which will form the brain; ep., epiblast; f., foot; hy., hypoblast; int., intestine; m., mouth; ms., muscle; s., shell; st., stomach; v., velum.

In all the molluscs I have mentioned, the foot is well developed in the embryo and in the adult. The slugs and snails crawl upon this "foot"; the purple snails use it to make a raft. The foot of the butterfly-snails forms the "wings," by means of which

the animal flits through the water like its aërial namesake. The foot of the embryo cuttle is distended with yolk, and is known as the "yolk sac"; later, part of it is prolonged to form the arms of the cuttle-fish. The foot of the bivalve molluscs is usually used for burrowing.

Whatever may be the condition of the adult, a shell is always present in the embryo; the only exception occurs in some of the cephalopods, but even here a shell sac is present, which corresponds with the place where a shell ought to be.

The shell of the bivalve mollusca is at first a single plate, like the early shell of snails, but the thick, chalky matter is only formed on the two sides of the animal, leaving a thin, flexible line down the middle of the back of the embryo; this afterwards forms the hinge area of the fully developed shell. Though an operculum may not be present in the mature state, it is usually, but not always, present in the veliger.

Although it may be very much modified in many respects, we have now come to see that the possession of a veliger larval stage is common to all mollusca, and, as a matter of fact, to no other animals.

SEPARATION FROM SIN AND SEPARATION UNTO GOD.

By WILLIAM GOURLAY.

IN order to apprehend truly our standing before God, we must recognise the double truth of justification and regeneration in Christ. God, as it were, looking upon the believer in Christ, sees on the one hand the precious blood, and on the other His own image.

As from the wounded side of the Saviour there came out blood and water, so here we have atonement and cleansing, blood and life, redemption and regeneration.

"In whom we have redemption through His blood, the forgiveness of sins, according to the riches of His grace" (Eph. 1. 7). "Giving thanks unto the Father, which hath made us meet to be partakers of the inheritance of the saints in light" (Col. 1. 12).

The believer in one body possesses two natures, the old man and the new, the flesh and the Spirit. These two are distinctly contrary the one to the other. "The flesh lusteth against the Spirit, and the Spirit against the flesh" (see Gal. 5. 17). The flesh is described in Scripture as hopelessly corrupt; its cure in the scheme of grace is not contemplated. It is declared to be incapable of improvement (Rom. 8.7, R.V.). God's method of dealing with it is indicated by such terms as "put off," "crucify," "mortify," etc. In the light of these expressions, we understand the force of the Master's words when He said to the most reputable Nicodemus, "Ye must be born again." Nothing short of a NEW CREATION will avail.

Notice particularly here, that the Spirit is the PROPER PERSONALITY of the Christian. Thus Paul writes in Rom. 7. 25, "I MYSELF with the mind serve the law of God." The flesh, on the other hand, is to be looked upon as an usurper and interloper, whose interference in the government of life is ILLEGAL, and which to allow would be criminal. A good king rules his country with a view to put down stealing and other crimes; and although he may have some bad subjects who delight in crime, he never identifies himself with them, but always with the lovers of right and justice. This is the rightful position the Christian should claim as regards the flesh; he should disavow it, and always rigorously repress its actings, he having received power to do so.

The question now presses, How is the power got whereby the Christian exercises dominion over the flesh? THIS IS THE KEY OF THE WHOLE POSITION.

This position once fully grasped, liberty and blessing follow. "Ye shall be free indeed." First, then, the believer is set legally free from sin by the death of Christ on the cross: our old man was crucified with Him (Rom. 6. 6). Sin in the flesh has been condemned and executed in the person of Jesus Christ. We have thus become dead to the law by the body of Christ. Our legal connection with original sin—*i.e.*, the flesh—is completely dissolved. Just as a woman whose husband is dead is quite free to put off her mourning and marry another man, so the Christian is free to reckon himself dead to sin (Rom. 6. 11; 7. 4).

Death does not, however, end the business. The Christian is made partaker of the life of Christ, and in the power of that life he may walk in triumph over all his spiritual foes. To illustrate: If a poor widow married a rich man, she would change her name first, and then live in good style on the strength of her husband's wealth. So Christians are called in the Scriptures "saints." No longer poor sinners; but, blessed with all spiritual blessings in Christ, they are rich indeed.

It is a sad fact so many Christians fail to see these truths. Many are mourning over the corruption of their nature—a most useless piece of business, seeing that God has condemned it to death, and provided us with a NEW SPIRIT; and at Christ's coming again a new creation body will be provided also (1 Cor. 15. 44). Hallelujah!

The fact is, that if a Christian is taken up crying over the sinfulness of the old man, God's plan of sanctification is frustrated. God does not propose to improve the old man, but He does propose that the Christian should have a holy walk with a holy God. Now, except the separation from the old man is clearly seen and rested on, the believer will be constantly crushed down by an overwhelming sense of the power of sin. His case will really appear hopeless to himself. Others may speak of sanctification as they please, but for his part sin and sinning will occupy the foreground. Many with such experience have told the writer, "We are always sinning."

Such an experience is clearly unscriptural, and virtually amounts to saying, "Sin has dominion over me"; whereas God has declared, "Sin shall not have dominion over you" (Rom. 6. 14). Indeed, a Christian without this deliverance is in much the same case as the Jew of old. There must be the same crushing sense of the impossibility of keeping the commandments, relieved only by a knowledge of forgiveness by looking at the sacrifice for sin.

Without this blessed truth of separation from the flesh, many texts of Scripture are simply unexplainable; notably, among others (Rom. 8, 2), "The Spirit of life in Christ Jesus hath made me free from the law of sin and death." Such a text can only be applicable to the Christian considered as the NEW MAN ONLY; and this is the consideration God gives him, and the footing upon which He holds converse with him, and calls him a SON.

In our next we hope to take up the second division—"Separation unto God."

(*Continued—page* 526.)

SECOND SPELLING CHASE.

PRIZES AND AWARDS.

EXAMINERS' AWARD.

AFTER heavy labour, and much careful inspection by our skilled Examiners, the results of our Second Spelling Chase Competition are announced herewith.

The Competition has been a huge success. Entries were made from all parts of the kingdom, and by every age and every class. Many have written to us, commenting on the marked value of such an exercise, which, while light and amusing on the surface, has underneath a vein of real instruction of a most practical kind. It is almost incredible the number of otherwise well-educated people who are unable to spell correctly.

When the results of our former Chase were published, one Competitor, who had "*only* eight mistakes," (!) complained grievously of non-success! It may interest our readers to know that the two Prize Winners were the only two whose paragraphs were absolutely correct, and without erasure from beginning to end, so that there was no question as to the award. Those "Very Highly Commended" had no actual mistake, but had erasures or corrections, some of which were not liked by the examiners.

As the Test Paragraph contained no words either abstruse or specially uncommon, we do not think we have been severe. We shall hope in future to continue, from time to time, Competitions of this novel and helpful nature, as they have proved so popular with our readers. Certificates of Merit are being forwarded to the successful Competitors.

Prize.

Miss Ellen Mogford, Greenwich.
W. J. Sanders, Strand, W.C.

The Prize of One Guinea has been equally divided between the above.

Very Highly Commended.

Hewitt, Alice M., Dublin.
Hodder, G., Lowestoft.
Howard, Mrs. J., Maidstone.
Hunt. C. W., Alresford.
Miller, G. S., Lowestoft.
Mindosa, J. G., Stockwell.
Odell, Kate, Liverpool.
Redwood, F. S., London.
Styles, E., West Dulwich.
Taylor, Arthur George, Highbury Park.
Watson, Ellen M., Sandown, I.W.

Highly Commended.

THE STORY OF JACQUES AND HIS SONG.

"MOURIR POUR LA PATRIE."

QUACK, quack, quack, went the ducks, paddling in the delicious coolness of the water, under osier shadows. Bowf, wowf, wowf, went Bruno, the old sheep-dog; and his barking came down in faint echoes to the farmhouse in the valley from the high fields where he was gathering together the frightened sheep for their shearing. A very hoarse bark had that dog Bruno, but it sounded soft when distance mellowed it, and it came down over meadow and orchard. Little Jacques heard it as he played in the farmyard. Mother Catherine heard it, as she pattered about in her sabots, washing linen out in the open air, with the sun shining on her white head-dress, and making her soapy arms flash back like silver. Father Gilles heard it, working away among the turnip furrows.

"Good!" said Père Gilles; "that goes well. Jean has arrived, then, among the *brebis*."

And, well conténted with himself and all the world, he whistled until all the valley resounded, and the blackbirds stood still and cocked their roguish heads on one side, with bright, questioning eyes. Who, then, of their number was whistling so gaily—"*Quand je pense à ma bien-aimée*"?

Little Jacques looked up from his playing; and now the blackbirds heard a shriller piping, that ran down all the keys of music. Little Jacques had taken up the song, and he fluted it forth with so many trills and quavers, and so much new melody added to it, that truly it was more like an operatic piece than a simple song of the people.

Père Gilles came down to the brookside, where his wife was washing; he had stopped his own whistling.

"*Voilà*, Catherine!" he said, "it is marvellous, that. Is it not that our boy will some day be a great musician?"

"It is necessary that our boy should work," said Mère Catherine shortly, shaking her head with an energy that made the handsome gold ear-rings tremble.

"He is our only one," said the farmer reflectively.

"The more need that he should not be an idler," said Mère Catherine. But for all that she listened too, and she said to herself, "He is a genius. Our Jacques' voice rises highest of all the choir on Sundays. But it is necessary, altogether necessary, for him to work; one must work in order to live."

"He will be a great man some day, that little one there, Mère Catherine," said the daughter of M. le Pasteur, as she passed on her way to the village. A very pleasant girl was Mlle. Marie, fresh as a rosebud, and with an air of the meadows about her.

Mère Catherine shook her head. "Bah! I would not have these notions enter his mind, mam'selle," she said.

"Listen!" exclaimed Mlle. Marie, her eyes, that were of the clearest blue, like veronicas, opening wide. "Ah, Mère Catherine, hear the boy! He sings now, and where shall one find so true a voice as that of the petit Jacques? Hark! '*Mourir pour la Patrie!*'"

Alas! *that* air, that air! Hush, little Jacques; do you hear no foreboding of discord, of sorrow ringing through its clear, passionate music?

But no; and Mlle. Marie's fresh young voice joins in, until the valley echoes to the notes of the boy and girl's voices, singing the old songs of France.

"*Ça!*" says the father blackbird. "This is extraordinary. One almost believes that one hears angels singing. That child there will astonish the world one day, I am sure of it."

The child, however, little Jacques, playing among the hayricks, was singing only from the joy of his heart in the fresh spring morning. His thoughts were not of fame, nor after-glory, but he sang as the birds. The orchard was in full blossom, the meadows were starred with flowers, and the hedges beautiful in their spring leafage. There was a sound of music everywhere—here in the tinkling water, there in the lark's glad melody far above the valley, over yonder in the plaintive bleating of the sheep and the lambs, and the happy lowing of contented cattle. So Jacques sang too. *Pourquoi non?*

"*Fi, donc, mon Jacques,*" said Mère Catherine, with a note of harshness in her voice. "See, there are the turnip fields that have not yet been weeded. Your father works there; go now, *petit*, and help him."

Jacques' happy brown eyes smiled up at his mother, his willing little hands were soon at work, and he sang still, in the gladness of his young heart. He sang now of the dear God who had made him so happy, of the loving Christ who was ever ready to listen to His little ones.

"*Voilà donc,*" said his mother, softening; "he is a good boy, Jacques. If he wishes it then—*eh bien*, why should not our boy learn to sing and play? Who knows, perhaps he may be a great *maître* one day; stranger things have happened. *We* shall lose him, Gilles and I" (here she sighed); "but one cannot have all."

So the little Jacques might go up to the church to learn the organ from Mlle. Marie. He was a happy, joyous-hearted child, and when his mother had until then said no, he had been content; but now, when *le bon Dieu* had given him the chance to learn, he rejoiced in it.

When the orchard-trees hung heavy with their ripe fruit, and the last load of golden corn was gathered in at La Roche, there was a new organist at the village church.

Listen. It was little Jacques.

The boy was a genius, said all the world. He must go up to the great Paris, in order one day to become a *maître*.

There was a moistness in the eyes of Mère Catherine, but the father said, "Do as you like, my boy; we have the means. If you will, you may be a great musician."

Jacques, however, had seen the tears in his mother's eyes. He was the only one she had; do you understand?

"Thanks, my father," he said quietly; "I will stay and study my music at home. Some day, perhaps, I will go, if the *bon Dieu* will have it so. But not yet."

The mother kissed her boy, blessing the gentle heart that would not hurt her, that he might become great.

So the years sped on, and every year made Jacques more and more clever. He was now twenty, and from far and near people came to hear the wonderful playing of the organist of La Roche, and the marvellous way in which he improvised.

It was in this year, too, that Jacques drew his number in the conscription. Père Gilles waited outside the doors of the Hotel de Ville at the neighbouring town to learn the news.

As soon as Jacques appeared, the poor father knew the worst. There was no need of Jacques to murmur "Twelve!" His face showed that he had drawn a very low number, and that he must go away from La Roche to where there was fighting and bloodshed. Ah me, there was many a broken-hearted parent in La Roche that day, from whom their brave young sons had been taken; but Jacques! to think that Jacques must go!

The blackbirds sat in the trees of the orchard, and put their heads on one side, asking the thrushes, "What is this? Our Jacques sings no longer."

And the robins hopped down, and looked in at the farmhouse windows, to learn what was the matter, but they arrived at no conclusion.

"Twit, twit," said the robins; "we saw only tears, and tears, and yet tears. But there is no singing."

Nevertheless, they heard one more song as Jacques marched away from the valley. M. le Pasteur heard it, young Madame Dupont (she who was once Mlle. Marie) heard it, and all the villagers heard the song, and wept.

"*Mourir pour la Patrie!*" sang Jacques, in a clear voice, that only trembled a little when he looked back, to see his mother kneeling with her face hidden in her hands.

That was the last time the blackbirds heard the voice of their little Jacques.

We had much fighting in those days; there was a deal of bloodshed before the end came. It was just before the affair of Sedan that he was killed. The Prussians had surprised a French division at night—you understand, and there was some confusion. Do you follow me? This is frequently the case when one is attacked at night.

There was fighting for some time. I think, on the whole, the Prussians had the advantage; they outnumbered us, you see. That was the ruin of us all along. Our soldiers were but men—heroes certainly, but only men, and they could not win against such terrible odds. Some of our regiments were mere skeletons. These men, the Prussians, they had no lack of numbers.

Our soldiers left their dead by heaps on the field that night. Ah me! La France could ill spare those sons of hers, most of whom were mere boys. They all lay there, friends and foes, with their faces turned up, cold and pale in the moonlight, and Jacques was among them. M. le Docteur Dupont found him there, lying across an Uhlan twice his own size, dead—quite dead, and with all his wounds in the front.

It was like when you see a thrush or a robin lying dead, a sweet singer with its song silenced for ever, only infinitely more sad, for Jacques was one whom God had made for

greater things than the birds. In all else it was precisely the same; he too was young, and joyous, and innocent, and he had lived and sung with his heart full of love for the great Father.

Sometimes one cannot understand these things, why God sends troubles upon troubles to those who seem least to deserve them, and why He lets men take innocent, unoffending lives, and leaves those to live who were better dead. And yet we know that His way is the best, for He is Love.

This is a very sad story. I cannot help it. If Jacques had not drawn the fatal number in the conscription, it might have been the story of a great musician, and bright with his triumphs. Yet that might not be.

The robins looked in at the farmhouse windows many times after that, but they saw no more tears, only a hard, stony grief, until M. le Pasteur came. M. le Pasteur had also lost a loved one in those wars, an only brother, and he could speak in sympathy.

After he spoke, the robins saw a woman weeping, and a trembling, white-haired man, aged before his time, who raised his hand, and reverently said, "The Lord gave, and the Lord hath taken away, blessed be the name of the Lord."

And that was the story of Jacques.

ONE SIN, OR ONE HUNDRED SINS.

ONE sin unforgiven shuts the sinner out of heaven, just as much as one hundred sins would do; and "all have *sinned*." It matters not the quantity or the quality, "all have alike come short."

The fruit tree is not a fruit tree because it bears fruit, but it bears fruit because it is a fruit tree. If it be an apple tree, it may be a barren apple tree, or it may be loaded with good apples. The nature of the tree is not altered by the number of apples it bears.

So it is with the human race. A man who says, "I am not a sinner, because I have not done many wrong things, nor any glaringly bad deeds," only shows his ignorance of his own heart. Man is born in sin, and commits sin because he is a sinner. The question of amount or kind of sin is quite a secondary consideration.

The thing required is, not the lessening of the supply, but the changing of the source. There must be an uprooting of nature, and an introduction of *something* that is contrary to it, a new creation, a being "born again."

The bramble has to be changed into the vine, before it can bring forth grapes. Grafting will affect the grafted branch, but it will not alter the trunk; regeneration alone accomplishes this change for fallen man. The new birth alters the springs and motive powers of life, creating anew the whole spirit, affections, and desires of the heart. Condemnation on account of sin is then entirely and for ever gone, because "The blood of Jesus Christ, God's Son, cleanseth from *all* sin." No matter, therefore, if the sinner has one or one thousand sins on his conscience, in either case his need is fully met by the atonement of Christ.

A SUBSTITUTE: WHAT IS IT?

A SUBSTITUTE is a person or thing that acts in the room or place of another. A man is drawn as a soldier in the conscription, but occasionally another stands in his place, and he himself is free. A person has to do a certain thing, but some one else does it for him, and in his stead. A man wants to get free from some duty or responsibility, and another takes his place and performs it for him. This is *substitution*, an occurrence daily taking place around us; one, indeed, that is recognised, acted on, and accepted by us all.

Now, God has substituted His own Son for us, in our place; has reckoned that we perform the act that His own Son has done.

Christ died for us, and instead of us. Christ bore all our sins for us, and instead of us. His word declares the whole world "guilty before God," and that "there is none righteous, no, not one." Sin brought condemnation, but "where sin abounded, grace did much more abound," and "while we were yet sinners, Christ died for us." He was "bruised for our iniquities," and thus became our SUBSTITUTE. This great, wondrous fact is interwoven throughout Scripture. All the Word of God points to the one offering that for ever takes away our sin. He, therefore, that believeth "hath everlasting life, and shall not come into condemnation." Blessed substitution!

"MILLIONS OF MONEY."

"OH! I would give millions of money if I only knew that I was saved." So said a man in a workhouse infirmary to a lady visitor.

You need not give millions of money; you can be saved now, and know it, without the expenditure of one single farthing. God does not want your gifts, but He does want your faith, your love, your trust. He has provided salvation for you. He would have you saved; and what is more, He would have you know that you are saved. Rejoice in the fact, and live every day conscious of the new life that is in you.

Millions of money could never repay Him the debt of love and gratitude that YOU owe Him; even if it would help, you have not millions to give. What will please Him better, will be the surrender of your heart, the ceasing from all doubt and fear, the laying of your whole self at the feet of Him who died to obtain salvation for you.

HAVE YOU INSURED YOUR LIFE?

IF not, why not? Life is very precarious, accidents or sudden illness carry people off at a moment's notice. None can be certain of how, when, or where they will pass into eternity.

If you have wife, children, or others dependent upon you, it is your duty to at once effect an insurance, make your will, and provide to the best of your ability for their necessities. But, above all, make sure of your own eternal welfare—insure yourself for heaven. Secure eternal life, that life which never dies, by at once accepting the offer of salvation made to every sinner who will shelter beneath the blood of Christ.

ONLY ONE SIN!

HOW many sins shut Adam out of Paradise? One, and only one; that one sin made him a sinner. We often make great mistakes in thinking that because we have done nothing outwardly wrong, been respectable, moral sort of people, therefore we are not sinners deserving the judgment of God against us.

As one murder makes a murderer, for which he is condemned to death, so it is not sins, but one sin, that makes a sinner. The apostle Paul puts it very plainly and clearly: "By one man, sin entered into the world;" "by one man's offence death reigned" (Rom. 5. 12, 17). In the Epistle of James we also read, "Whosoever shall keep the whole law, and yet offend in one point, is guilty of all." The one not kept taints the whole, for the law is broken. For the well-being of social life, morality is excellent; but before God moral and immoral, stand guilty. Adam was disobedient; so is every one who rejects God's Son.

God has "now commanded men everywhere to repent" (Acts 17. 30). "This is His commandment, That we should believe on the name of His Son Jesus Christ, and love one another" (1 John 3. 23). Every one, therefore, that falls short of this is in exactly the same position and condition as Adam,—a transgressor of the law, with the curse of the law resting upon him.

Can any other result be expected than that God will sooner or later assert His authority, rise up, and punish the disobedient?

MY DEBT.

I OWE £50; my creditor demands his money at once; I have not five pence wherewith to pay him. What am I to do?

If I borrow, it is only transferring the debt, and postponing the obligation. I want to get free from it. My case is desperate. What *can* I do? In the midst of my distress my creditor, knowing my helplessness, comes to me and says,—

"I have cancelled that debt. I have wiped it out! I have paid it myself!"

What a merciful deliverance! What a great relief! There is no need of borrowing now; no necessity for part payment. I am entirely freed; the debt is all done with for ever!

There is a great debt of sin, which we have all incurred, and are wholly unable to pay. God gave up His Son to meet that debt; Christ Jesus has paid it for us; our full deliverance only waits until we are *willing* to accept this blood-bought freedom.

THAT HOUSE IN LONDON.

By L. T. MEADE,

Author of "Scamp and I," "A Knight of To-day," "Great St. Benedict's," "The O'Donnell's of Inchfawn," "A Band of Three," "Water Gipsies," "Your Brother and Mine," etc., etc.

CHAPTER XXXVII.

WHEN Kate had said those few words, she immediately turned her attention again to the baby; she allowed her husband to have the luggage collected; she gave no directions about it, nor said what she had brought, nor what she had left behind.

With some difficulty Kenneth secured his wife's belongings, and then put her and the baby into the most comfortable carriage he could find.

With an almost mechanical gesture she motioned him to sit by her side, but she did not offer again to take his hand, nor did she again glance at his face.

In a short time they arrived at the hotel, and a doctor was instantly summoned, to do what he could for the child. One glance was sufficient to show him that the little spirit would not long remain in its beautiful earthly tenement.

"He is dying. I know that," said Kate, looking quietly, and without any apparent emotion at the doctor.

She spoke in French, and he answered briefly in that tongue.

"The baby's hours are numbered."

"Will he suffer?" inquired the mother.

"No; he is unconscious now; his suffering is already at an end; the spirit of baby is even now at the gates of paradise."

"That is good," said Kate, with a smile, and she bent down and kissed the little waxen face. She held the baby in her arms all night, and in the morning, just when the day was breaking, his gentle breath ceased, and the beautiful angel spirit, which had so often looked at her out of his lovely eyes, during the two months of his little life, had gone back to the God who gave it.

"Kenneth, come here. I do not hear him breathe," said the mother.

Kenneth went over, bent down, and laid his ear against the little mouth, which was slightly open, and wore a seraphic smile.

"Kate, my darling, how can I tell you?" he said.

"'I did not do it,' he said; 'but I was tempted to, mightily tempted to.'"

"Are you afraid?" she answered, gently. "Baby is in the best place—on the bosom of his God."

"Don't, Kate, don't; this will break your loving mother's heart."

"No, my dear; this knowledge will give my weak heart strength. Kenneth, our baby—our little child—has gone in through the gates of paradise; we have got to follow him; we have got to follow him—you and I, beloved, both of us."

"Kate, you kill me," said the wretched man. His composure gave way; it gave way completely at the sight of her calm, and the wonderful heavenly smile on the dead baby's face.

Kenneth Graham grovelled at his wife's feet; he laid his head against her knees, and great sobs shook his frame.

For a minute or two Kate looked at him in silence; then, kissing the baby's waxen little face very tenderly, she rose softly and laid her little dead treasure on the bed.

"Heart of my heart," she murmured, "I knew you would do your duty, and through your death bring your father home."

Then she went back to her husband, and, kneeling down by his side, put her arms round his neck.

"Cry here, Ken, here, with your head against my breast. I know everything, and God knows everything, and I have a kind of feeling that baby knew everything; and just as God and baby have forgiven you, so do I forgive. Poor Ken, take the comfort of it; you have sinned, but there is full forgiveness."

"You are killing me, Kate," repeated Graham; "your goodness is killing me; the thought of the smile on the baby's face has broken my heart."

Then she answered him again — low, tender words, full of courage and hope; her strength and her calm were wonderful; her faith for the time being was so vivid, so splendid, that it carried her above the petty limitations of time and space.

The gates of heaven, which had opened wide to receive the baby, had let out some of the glory, and it still seemed to surround the mother, so that just now she scarcely appeared to feel the parting.

The agony would all come by-and-by—the reaction must set in; but for the time she so surely felt the Divine strength, that her words and her influence were all powerful.

"Kate, you make religion a grand thing, a real thing," said Graham at last. "You can give up your child without one murmuring word, and you can speak of hope and love to a fellow like me. I thank your—God that He has made you, Kate."

"Your God, too, husband—your God, who loves you; you are not the first son who has gone astray, not the first whom the Divine Father has welcomed back with rejoicing."

Thus she talked to him until his strength and courage returned, and the husband and wife sat down, hand in hand, to face the future in the room where the baby had died.

CHAPTER XXXVIII.

It is one thing to feel inspired by a sudden resolution,—to feel the glow of strong impulse in the right direction, to say to oneself, "Through this grave and gate of death itself I will pass to the resurrection of better things, I will pass from the old life to the new"; but it is another thing to keep to this resolve when the rosy glow of sudden enthusiasm has faded, and when the narrow, narrow, uphill path reveals itself shorn of rosy glow, bristling with thorns, white with dust, marked with the deep ruts of difficulty, almost of despair. Then the cowardly heart looks back longingly at the easy, down-hill way on which it has travelled so long; the weakened will declines to make the necessary effort to rise; the thought of the tremendous strain of the daily and hourly endeavour overwhelms the trembling soul that has turned again towards its God.

On the night of her baby's death, Kate Graham had gone down on her knees and thanked God that He had heard her prayer—the baby was taken, and had, indeed, with those little hands, that smile on the pure young face, drawn his father back to the feet of the God he had so long forsaken.

"No baby ever before did so great a work," thought the self-forgetful mother; "no baby ever before was so honoured; any mother would give him up for the earth-life when he had done this for her." But as the days wore on, and the beautiful little face was shut away from her for all time, and she began to realise how empty her arms were, and how sore her heart really was, she also knew that Kenneth's first step in the right direction was, perhaps, his easiest one, that the fight before him was so terrible, that even yet the victory might not be his.

Graham was sorry at last—sorry not only because of the inconvenience and misery which his sin had caused, but sorry because of the sin itself. But though he had reached this stage, it took him a long, long time, it caused him hours of agony, in which he sometimes feared he might even lose his reason, to ascend to the next. "The wages of sin is death." Graham had earned these wages, but he did not want to accept the pay. The death of his good name, the death of his reputation, the death of all his wealth and importance, the death of every ambition he had ever clung to, brought him untold agony. He fought against these deaths, which must take place within him and around him; he fought against them with bated breath and anguished brow; he hated to pay the price.

God, however, said to him: "There is no getting away from this fact—as you sow, so shall you reap; there is forgiveness with Me, but it only comes through the valley of humiliation."

Graham said nothing, as these thoughts haunted him day and night; but he became once again very morose and gloomy, and forgot that God had indeed dealt mercifully with him, when He had not, as the price of sin, added to all the other deaths that of his wife's love.

The man was standing now between two roads, and he often felt as if he must break away from the detaining hand of God, as if he must plunge once more into the broad paths of sin and wickedness, and lose his last chance of peace and hope and heaven.

They had been a week at Bordeaux, and neither husband nor wife had spoken once of going away. Kate was full of intense anxiety—places mattered nothing to her now—she was tremblingly eager to know whether her husband would lose or win in this great fight. She dared not speak to him, however; she was terribly afraid of saying the wrong word.

Marshall, who had known of the baby's death, and who had, indeed, at Graham's request, read the funeral service over the little one, also remained on at Bordeaux. He did not care for the place, but had a kind of idea that he might be wanted; he had too large an experience of the dark and sorrowful side of life not to see that these two young people, this husband and wife, were bowed almost to the earth with the weight of some terrible trouble.

"Doubtless a sin," he thought; "only the trouble caused by sin could make a man look as Graham looks."

He waited on, biding his time, feeling almost certain that he could help, and meanwhile praying a great deal for Graham.

One day he came upon him down by the quays. Graham had gone to the end of a pier, and was gazing moodily into the water. The tide was coming in, and he was leaning over a low parapet, gloomily watching the waves, his face white and despairing.

"I will go somewhere near," thought Marshall. "To watch the water like this, to look hungrily into its cool bosom, is a dangerous pastime for a man in Graham's state of mind."

Marshall very much disliked the idea of Graham supposing that he watched him or took any particular interest in him. With his immense experience he understood how distasteful such a proceeding would be to a man of Graham's temperament. It was therefore with great reluctance that he went on the pier and stood about twenty feet away from the despondent figure.

On hearing his footstep Graham turned and glanced at him; he did not speak, however, but resumed his gloomy gaze over the grey expanse of water.

Marshall came a step or two nearer, took off his hat, and looked with wonderfully luminous eyes, not at the water, but towards that point where sea and sky met. After an interval of about five minutes, Graham again turned his head and glanced at his companion.

"It is all right, Marshall," he said quietly; "I am not going to do it."

Marshall put on his hat.

"I have felt assured on that point for the last two minutes," he replied.

"What do you mean?"

"I mean that I was sure my prayer was answered."

"Oh, indeed! you troubled yourself to pray for a most worthless piece of humanity."

"There are no worthless pieces of humanity," retorted Marshall.

Graham smiled grimly.

"I forgot," he said; "you have looked at black sheep so long and steadily that you imagine you discover spots of white on them—a *fallacy*, Marshall; they are dyed irrevocably."

To this speech the prison chaplain made no answer. Graham had now left off gazing at the water, and was standing by Marshall's side.

"I did not do it," he said; "but I was tempted to, mightily tempted to. Come for a walk with me, Marshall."

The two men sauntered slowly off the pier.

"I can understand why you did not commit suicide," said Marshall in his deep voice. "You were tempted to get out of your misery by that coward's door; but strong hands kept you back."

"Hands! What do you mean?"

"Those of your wife and the dead baby."

"What do you know about my wife?"

"Nothing, except that I have seen her. I saw the dead baby too. I went into the room, and saw it covered with lilies; the baby now beholds the face of your Father and his; and Graham, happy man, I believe from the bottom of my soul that that wife of yours has also looked straight into the face

of her God. No, my good fellow, with such influences around you, you are safe enough, if you would but believe it."

"I can't take the next step," said Graham. "I can't; it is too horrible."

Marshall pressed his arm gently.

"I can believe in the hardness of the step," he said; "but not in the impossibility of your taking it."

"Ah, you don't know my story, nor me."

"I certainly don't know your story, although I can guess it. I know something about you."

"What do you know about me?"

"You are a proud man, and you have sinned beyond the sin of most."

Graham winced.

"Go on; what next?"

"God has pulled you up short, but you are afraid to repent."

"I? afraid? You use strong language, Marshall."

"Not stronger than the occasion warrants. At this moment you have a truly craven heart."

Graham withdrew his arm from his companion's.

"I think you forget yourself," he said with anger. "You have no right to speak to me like this. Do you not hesitate to insult me?"

"I don't insult you, Graham. My credential to speak to you has been given to me by my Master. I owe no fear to any man, but I do fear God. God has desired me to bring your soul to Him."

The two men were directing their steps towards the country; they had left the ugly houses and dull roar of traffic behind them, and were surrounded by the solitude of the starry heavens and windless earth; the night was coming on.

"I will tell you my story," said Graham, suddenly; "my wife knows everything. I did not tell her, she found it out. Now, will you listen?"

"With all my heart, and with all the intellect God has given me directed to help you."

"Thanks. I am drawn to you; I will make no reservations in a horrible story."

It was hours before the two men came back to the hotel; the evening had deepened into night, and Kate was sitting motionless in the room where her baby had died.

Her arms were very empty to-night; her heart ached terribly, but this room still savoured more or less of Paradise to her, and she felt more peaceful here than anywhere else.

About midnight the door was softly opened, and her husband came in. He came directly up to her, and taking her two hands, drew her from her chair to stand by his side.

"Kate, I know you have been praying for me."

"Why, of course, Ken;" and now she ventured to raise her eyes and look into his face. The moment she looked she gave a little joyful cry, and laid her head on his shoulder.

"Oh, Ken," she said, "I have not grown weary of praying."

"Nor your God of answering, my wife. He sent His angel to me to-night to deliver me."

"Yes?"

"Marshall has been speaking—there, I won't go into it—only I've resolved to take the next step."

"Yes, Kenneth."

"I am going back to England to-morrow. I had better go alone. Will you trust me away from you for a week?"

CHAPTER XXXIX.

GRAHAM's courage was red-hot; he would not wait for it to cool. He took the first train to Paris in the morning, and travelling right through, arrived in London exactly twenty-four hours after he left Bordeaux. He walked into his own house, or rather into the house that was his no longer, just as Alexis, fretful, pale, and weak, was sitting down to breakfast in the room which Kenneth had made beautiful.

Graham came boldly in, hardly answering the astonished parlour-maid's exclamations of pleasure, and eager inquiries for her mistress, hardly seeing Betty Carew as she ran from her place on the hearth-rug, where she had been attending to Alexis's comforts, to greet him.

He pushed the old woman aside, and walked straight up to the pale and wondering man, who rose in mingled fear and hate at his approach.

"I've a word or two to say to you, Alexis. Mrs. Carew, will you leave us alone?"

But Betty suddenly went down on her knees.

"No, no, master," she half screamed; "no, no, you have no love for him, and he is but weak. You had better let Betty Carew stay to see justice done; harm may happen if you have him all to yourself, for the Lord knows you two hate each other."

"Justice will be done, Mrs. Carew, and you need fear nothing. I have come prepared to do every justice, only I must see Mr. Alexis alone."

"Leave us, Betty," said Alexis, speaking for the first time; "you don't suppose I am such a coward as that."

Betty sighed, and walked out of the room without another word.

The moment she was gone, Graham, still standing, began to speak.

"I did you about as much harm as one man could do to another," he commenced.

"Ay, and I hated you for it," said Alexis.

"Doubtless; but let me finish my story. I have come to confess to you; let me finish my confession before you heap on me your abuse. Believe me, I shall take it patiently."

Alexis, who had half risen from his seat, sat down again now in sheer amazement, with his mouth slightly open.

"I was as base as I could be," continued Graham. "Your mother made a will, leaving me £30,000 and this house. She believed you dead, but was not so unmindful of you as not to make provision for you. She gave you to me as a sacred trust. She made no mention of you in the will, because a kind of intuition came over her that if you were indeed alive, you had got into trouble. She told me that if you were alive, you were to have half her money and this house, and these directions she put into a letter which she asked me to read, and which was alluded to in the will. The letter was given to my wife to take care of, on the express stipulation that she was never to open it until I gave her permission. She opened it at Bordeaux nearly a week ago, and I have brought it to you now, Alexis. Here it is; it is your mother's voice to you from the grave."

Graham put the letter into Alexis's hand, who received it limply, turned ghastly white, and laid it by his plate.

"The money your mother gave me," continued Graham, "made me immediately a prosperous man, but it did a great deal more than give me prosperity, it also enabled me to marry the woman I loved. Her circumstances were peculiar; she was tied down by an extraordinary will. Money was hers, but if she did not marry a man who brought in an equal share to meet her fortune, she must sacrifice all she possessed. I believe now she would have done this, but at the time I doubted it. She had three young sisters dependent on her, and she was ever one to put herself and her own feelings last. The night before our marriage you appeared. I need not go into what occurred at that interview; you know what I said, and how I fell. The fact is, I was just entering an earthly paradise, and I would not allow you to shut the door in my face. I entered my paradise through a grievous fall. After that my downward descent was swift enough. You know how I treated you not long after; you know how I turned your honest affection for me into hatred. We were old chums; I was truly worthy of the name. I think I have said all now, Alexis, except that of course I come with open hands to give you back your own. Have you a single word to say to me for the sake of the old, old days?"

For a full moment Alexis did not speak; then he raised an absolutely bloodless face, and fixed his sad-looking eyes on his companion. They sparkled now, and were the only things that seemed alive in his face.

"Yes," he said at last, slowly, his lips moving as if they were parched and dried, his words coming out with difficulty; "I have this to say, You treated me worse than a dog; I was bad before you crossed my path in your character of rich and prosperous man, but I am ten times worse now—that was your doing. This tardy reparation, this late repentance, does not make up to me for the past. I won't curse you again, but I have nothing else to say."

"Is that your very last word?" asked Graham, when the other had paused, and had sunk back exhausted in his seat. "I am going away; for the sake of old times, will you say nothing further?"

"As far as you are concerned, old times have ceased to affect me. My prayer is that you and I may never meet again. If there is any hope for me—if there is any chance at all of my becoming a good man in the future, it must be away from you, and apart from your presence. There, I have nothing further to add."

"I am punished," said Graham, speaking in a husky voice. "I deserve it. Good-bye, Alexis."

Alexis never moved his head, nor turned, as the other man went out of the room, passed through the hall, and left that London house, which had been in many ways his undoing, behind him for ever.

From his interview with Alexis, Graham went straight to his place of business, where he had a long talk with his partner, and there and then resigned his own partnership, and effectually severed his own connection with the business.

He told his story all over again to old, white-headed Mr. Martin, who listened in a kindlier spirit than Alexis had done.

"My wife wishes to resign all claim to her fortune," he said, in conclusion. "She is sorry for her sisters, but they are both now well educated, and can, if necessary, support themselves."

"And will be the happier for so doing," said old Mr. Martin.

"I believe you are right."

"And what will you and your wife do, Graham? It will be a strange change to you both to turn back now to the days of privation."

"Kate is not afraid," said Graham, and the first smile which any one had seen for weeks on his worn face, lit up his sunken eyes for a moment. "Where she leads, I follow."

CHAPTER XL.

THE writer of this story of a man's fall and repentance has but a few more words to add. Alexis, always weak, would remain so to the end of time. He took up his position as a man of means in the old house where his mother had lived and died. Once again the rooms, which had been brightened up by Kate's presence, resumed their old aspect of gloom. Betty Carew might have called each room now "a chamber of mourning," for no one was heard to laugh there, and no gay voices or cheerful sounds echoed on the stairs. Alexis, a pallid, sombre-looking man, required little attendance, and cared for no festivities; Betty had only one assistant to help her in her daily work. After her own fashion, no doubt, Mrs. Carew was happy, and she was often heard to say that her dear master's solemn visage was quite to her taste.

Alexis never spoke about his feelings, and what were his real thoughts, whether he still cherished a world of bitterness against Graham, or whether gentler feelings, memories of his mother and old childhood's days, came to soften him or not, no one could ever guess. He did go once or twice to Charing Cross Hospital to see Sister Lucilla, and came away from these interviews with a softened and happier expression of face; he also gave liberally to the support of the Hospital; but nothing seemed really to lift the black veil of despondency from this smitten heart, deeply seared with sin and sorrow.

Kate's sisters both found husbands, and Polly has grown more sensible, though not less beautiful, as years go by. Nellie has long ago developed into a very affectionate little wife and mother.

Far away, in the wilds of New Zealand, a noble-looking woman, with many threads of silver in her dark hair, and many lines round her still young face, may be seen day after day, from early morning to late night, helping, healing, and blessing all those with whom she comes in contact.

She has a grave smile and an encouraging word for every one; she is much beloved, and no one speaks of her as unhappy. Graham has found a new home for his wife and himself in this distant place, where they live forgotten by the world, but by no means unblessing it. Kenneth Graham looks much older than his years; his expression is slightly morose; he is considered an upright and a stern man, and it is only now and then, when he looks at his wife, that he smiles. He has never got over the scars of the battle through which he had so nearly lost his spiritual life; never again can he get back his lost youth and lost goodliness. Memory is as a shadow to him, and keeps away the full brightness of the sun; nevertheless, Graham has really repented, and his feet are going steadily uphill. Some day he will reach the summit, and see brightly, where clouds are not.

This couple, all-in-all to each other, have no children, although they now and then speak of a child who will meet them somewhere beyond the sunsets of time.

"Our child, who is drawing us towards heaven," Kate says, with that tender smile. "Oh, Ken, no one ever did so great a work before in so short a time."

Then Kenneth kisses his wife, and adds something in a whisper—words something like these,—

"You are better to me, beloved, than ten sons. Thank God, when He took the boy away, He left me the best wife in all the world!"

THE END.

LEAVES FROM THE LOG OF A GENTLEMAN GIPSY.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the Land Yacht 'Wanderer,' or Thirteen Hundred Miles in my Caravan," etc., etc.

LEAF I.

THE INTERVIEW.

"He journeyed on like errant-knight the while,
And sweetly the summer sun did smile
On mountain, moss, and moor."

SCENE.—*The "Wanderer" encamped in the corner of a cosy meadow, on the evening of a still, bright day in June. Hardly a cloud in the sky, scarcely a breath of wind, only just enough to rustle or whisper through the leaves of the giant elms that surrounded our bivouac. Glimpses of the country beyond, hills and woods, and a silver ribbon of a river meandering down the glen.*

The reader is supposed to be paying a visit to the caravan, and to interview her captain.

* * * *

"'MAY I have a look at the caravan?' did you say? With all the pleasure in the world, Madam, Miss, or Mr. My valet has just run round to the farm for the milk. He will be back presently, and will let down the steps, so that you can walk inside. Meanwhile a glance at the exterior may interest you. Glad to hear you say that you have often heard speak of the *Wanderer*.

"You will notice that she is a very long caravan, and of a good width; built of solid mahogany with gilt facings outside, and internally lined with maple. She is therefore double, with an air space of about two inches between her walls. Yes, this is an advantage; it keeps the carriage cooler in summer and warmer in winter, and it also deadens external sounds.

"Very nearly twenty feet long from coupé or verandah to the rear or stern. Well, it seems a heavy pull for two horses, but mine are powerful and willing. When they come to the foot of a hill, however high, they have sense enough to know there is a top to it somewhere up in the sky, and to that top they go. I have had the same honest, kindly horses for three years, and they have never once been sick or sorry. One thousand miles and over they dragged us last year, and thirteen hundred miles the year before, crossing the wild Grampian range of mountains, through many a dangerous pass, and over many a rugged spot.

"My rate of speed? Well, I think I do not do badly if I cover fifteen miles a day, or from that to twenty; but if I came to a quiet, delightful meadow like this, even at one twelfth mile, I should unlimber and stay for the night. As to speed, we canter or trot along good level roads, we walk down long hills, and up long hills, but steep, short pitches must be rushed at a gallop.

"You see the roller that hangs there? That is dragged behind the near wheel on long hills, so that if we have to stop to breathe the horses, the caravan rests on that; otherwise, its weight would drag the animals backwards, and a fatal accident would be inevitable.

"You see also the iron skid or shoe, and the loop of safety chain. Both are put on to lock our wheel before we commence the descent of a 'terrible hill.' Quite right, the skid alone locks the wheel, but over bumpy roads the wheel is liable to be thrown out of the skid; then, if it were not for the safety chain, the caravan would shoot forward over the horses, who would fall with broken necks.

"I consider twenty-five miles a long journey, but I've often had to do it—belated too, and in forest or moorland. When this happens, the poorest roadside inn seems a veritable palace when we reach it at last."

"In a case of this kind, would it not be well to bivouac by the roadside, hobble the horses, or turn them loose?"

"Not unless the necessity were very great indeed. The horses are our moving power, and we cannot be too good to them. If you were to go down yonder to the stables now, you would find my coachman, Bond, with his working clothes on, washing them from stem to stern. After their bath, they will be carefully fed on oats and chaff, and the bed of straw on which they will rest is at least a good foot thick."

"A merciful man is merciful to his beast."

"True enough, but no man could help liking my two horses. Polly Pea-blossom, by the way, is a mare, and I feel sure she is quite fond of Captain Cornflower, for although she will bite or kick him at every chance, in the stable, nevertheless, if he is taken away at any time—to get new shoes, for instance, Polly whines and cries, and is quite inconsolable. Just like the sex? Perhaps there is a good deal of human nature, or something akin to it, even in a horse.

"'The dog?' That is the champion Newfoundland, who is known by the name of Hurricane Bob. Pure black, you see, and straight-coated, with an immensity of bone and substance, and a wealth of raven hair. His original name was Robin, and the sobriquet 'Hurricane' got prefixed to the simple Bob, from a habit he had, when younger, of dashing in a wide circle round and round the paddock, like a hairy hurricane. Nothing

could you distinguish while Bob was making these circular tours, except a morsel of misty darkness, with two points of glancing light in it—his eyes—and a row of flashing teeth, for Bob would be laughing while he ran. He is the most faithful friend I ever had."

"Does Hurricane Bob sleep under the caravan all night?"

"Oh, no. Walk round to the front. You notice that the roof projects over the coupé, protecting the driver and all who sit or lie thereon. Well, an immense sheet of canvas is hung at night over the whole verandah. This gives me a small extra room, and forms Robert's bedroom, while I convert it into a bath-room in the morning. No, not a large, cumbersome bath—we begrudge every pound of extra weight—only a bucket of water and a huge sponge. There are several holes in the deck of the coupé, to enable any spilt water to run out.

"That is the driver's seat there, and it is also our corn-box; for we are obliged to carry oats, as we go into strange, outlandish places at times.

"There are drawers behind, you may notice, under the caravan, and also under the coupé. These are for brushes, tools, and odds and ends. Beneath, also, hang buckets, a meat-safe, an oil-can, a ladder, and a spade, without which accessories we could not take the road.

"Yes, the break is a very powerful one, and is worked from the front, after the plan of that in tramway cars.

"On the roof up there, beds and bedding are kept, and the coachman's boxes. They are out of sight, and out of the way, and out of the wet as well, being covered by Willesden canvas.

"My valet sleeps in the after-cabin of the caravan. The coachman finds his bed at the inn where the horses are put up.

"When any of my family are on board, the valet also sleeps on shore, and we have all the space to ourselves.

"We purchase farm produce by the way, and you would be astonished if you knew how little we pay. While in villages, people nearly always bring us gifts of fresh vegetables, flowers, and eggs. What a deal of genuine hospitality and kindness exists in the heart of the ordinary Briton! It has only to be tapped, and out it flows.

"Will the reader walk up? You first find yourself in the after-cabin, which opens on to the main saloon by means of folding-doors and curtains. This after-cabin is also the pantry and kitchen. Here are racks for plates, dishes, cups, saucers, glasses, etc. Above are enclosed shelves; by this is the filter. Even the dog gets filtered water. These rows of neat, white, scarlet braided pockets contain the towels, clean dusters, etc. At this side is the valet's little folding-table, his box, which forms a seat, and my marble lavatory, with pretty little oak-painted water tank and tap above it. And everything is in its place; we can find anything, even in the dark. The greatest regularity must prevail in a caravan, and cleanliness and beauty must everywhere reign supreme. Now I draw apart the folding-doors, and you are in the saloon. Sit down on the sofa—on which, by the way, my bed is made at night.

"In front of you is my table, above it the ebony book-case. The table and book-case are placed between the two large port windows. That is a harmonium. Both I and my valet are musicians, violinists, and there are times when we give real pleasure not only to ourselves, but to rustic crowds who gather round the caravan.

"There are brackets in the corners, fans, and hand-made ornamental pockets, curtains, and flowers—flowers everywhere.

"So there you have the Wanderer complete, outside and in.

"'Had pleasant weather?' Yes, all along on this tour (1887) for the last two months, during which we have covered ground to the extent of seven hundred miles. Now and then we have had a thunder-storm, with terrible downpours of rain, but this only cools the horses' hides, and makes them steam.

"'Delightful pitch this?' It is indeed! and it is level and hard, so the doors open easy, and the wheels do not sink. We dearly love to have the green grass under our feet, and will travel miles for the sake of a nice meadow. We would far sooner lie by the loneliest roadside, and often do, than bivouac in an inn yard. Besides, a pluck of greensward does not hurt the horses, and Hurricane Bob is never happy unless he has his nightly tumble on the grass, on his broad back, with his four heels pointing heavenward."

* * * *

The annual starting of the great caravan *Wanderer* from the little cosy Berkshire village from which she hails, is looked upon as one of the events of the early summer. All the long winter and spring she lies under a huge canvas-covered shed in the orchard.

When the days get fine, refitting commences; she is varnished and gilded and provisioned. Then the crimson and white valance is hung from the edge of the verandah roof, and sun curtains depend from this, making the coupé quite like the after-part of a beautiful gondola.

In autumn, all along on the telegraph wires yonder, six rows deep, and as close as they can comfortably sit, are thousands and thousands of martens. Every now and then, at some given signal, perhaps, they start on a flight round the country, almost darkening the air by reason of their numbers. They are preparing for their long journey over the ocean. These short flights are their trial trips.

It is somewhat similar with the *Wanderer*. We must take short tours, or trial trips, before starting for good, to see that we have forgotten nothing, and to prove whether everything is in good working order.

On these little voyages, two or even three of my bairnies, and sometimes mamma, accompany me, and I always think that light dresses, coloured parasols, and bright, happy, laughing faces greatly improve the verandah, to say nothing of the well-pleased coachman in his buttons and hat.

The very horses seem to know that there is a precious burden behind them, and toss their flower-bedecked heads with pleasure, while the clatter of their feet makes such merry music, that the little ones clap their hands and shout for very joy.

Burnham Church.

Middle Pond.

LEAF II.

BURNHAM BEECHES—THE VILLAGE OF BURNHAM—A QUIET, HAPPY SABBATH — TOWN AND COUNTRY COUSINS.

"Here each tree, by summer crowned,
Sheds its own rich twilight round;
And a spirit not its own,
O'er the greenwood now is thrown."

ONE of our preliminary tours led us away to Burnham Beeches, Bucks. On our road thither we stayed for a short time at the residence of an old friend of mine, who, strangely enough, but a few weeks before, seemed to me to have come back from the dead.

The story is worthy of being briefly related. Many years ago, when I was very young, there was built a huge and splendid ship of war, called the *Captain*. She was my beau-ideal of a man-of war, because, though a turret ship, and of course a steamer, she had a fine open deck above the turrets, and tall masts for sails.

I had, to my joy, then, a semi-official promise that I would be appointed to her,

and I was all the more pleased at the prospect, in that I heard my friend and shipmate, Arthur M——, was one of the engineers.

Much to my chagrin, however, I was left on shore. Well, we have all read of that terrible night, when the noble ship foundered at sea, and sank with over three hundred souls on board. Years rolled on, and I mourned for my friend as one dead. But one day last summer a card was brought to me,—

Arthur M——.

I staggered as if shot when I saw the owner. There he stood, smiling as of yore, his beard just lighted up with the tints of the autumn of life, but otherwise unchanged.

"Why," I gasped, "aren't you d—d—dead? Didn't you go down in the *Captain?*"

"Not a bit of it. It was my poor brother."

"But your name was taken out of the list."

"Yes, I left the British Navy, and got a Chinese appointment."

Right cordially did we shake hands then, and right cheerfully did we talk about the days of auld lang syne.

So narrow were the shady lanes that led towards this forest, the Burnham Beeches, that for two miles I trembled for fear of a repetition of an adventure I once had in Nottinghamshire, and which I shall relate in my next Leaf.

But the lanes got wider at last, and presently we found ourselves bivouacked on the green open sward, all among the beeches; with birds making such mad, melodious music, that every branchlet and bush seemed to conceal a songster. And whenever the blackbirds, thrushes, or bold, merry chaffinches permitted an interval of even a few seconds, it was filled up by the hum of the insects in the glad summer air.

Stretched on the shady side of the *Wanderer*, with Hurricane Bob for a pillow, I tried to read, but the book soon fell over my face, and in another moment I was in dreamland.

When I awoke, my little girl, laden with wild flowers, was kneeling beside me, and my pillow was sitting bolt upright, with his red ribbon of a tongue lolling out.

"Dinner is quite ready, sir," announced Wells.

He had been cooking by the roadside, and that fowl was done to a turn.

The beeches are very old, and hollowed and gnarled out of all shape.

The chief charms of this place are these weird-looking relics of a bye-gone age, that, whether in winter or in summer, are for ever whispering their story to the passing winds; the voices of the forest; the murmuring hum of insect life, and the bird songs. The robin trills its sweet wee "lilt" all the year round, and even when snow lies soft and thick on every tree, and covers all the upland commons, when every branch and twig seems coral and when forest glades look like fairy caves—even then the mavis may be heard singing, for well he knows that spring winds and spring sunshine will ere long banish all the snow.

Walking among the trees, over moss so soft that no footfall can be heard, one will often come across a patch of the feathers of the turtle-dove or cushat, many of them dabbled in blood, showing that the owl has been at his ghastly work while the dark mantle of night was spread over the woods. "Tu-whit, Tu-who-oo-oo!"

The nightingale comes in May, and soon the cuckoo may be seen flying low and swift, and sounding his monotonous chant. The chaffinch is a late bird, so is that little boy-persecutor mite of a creature, the yellow-hammer.

"Cheet-cheet-cheet-cheet-chee-ee-ee."

Not a long song, but a very sweet one, and he keeps it up, perched upon a thorn or stalk of wheat, till far into the autumn, while almost every other bird is dumb.

When we were in this forest the green sward was at its greenest and best, and the golden gorse was all in bloom, its delicious, indescribable perfume hanging everywhere in the air.

The village of Burnham itself is worth stopping to look at, so quaint, and queer, and old-fashioned is it.

We spent a quiet Sabbath, a day of rest and sweet calm, such as few save gentlemen-gipsies ever enjoy.

(*Continued—page* 532.)

TROUBLESOME COLONISTS.

By C. F. Gordon-Cumming.

Part II.

I HAVE already referred to some of the serious troubles entailed on the human colonists in Australia and New Zealand, by the injudicious introduction of animal and vegetable colonists, whose too exuberant vitality, under new conditions, has proved an almost unbearable nuisance. As prominent examples of these, I instanced the extraordinary increase of thistles, sweet-briar, water-cresses, and sparrows.

Next to these vexatious little feathered foes (and reserving the worst plague for the last), we come to those gentlest of furry creatures—the rabbits. It is little more than a quarter of a century since these were introduced into South Australia as table delicacies—a pleasant change from continual mutton; but so amazing has been their increase, that already many of the finest sheep-runs in Victoria have been entirely destroyed, the pastures have ceased to exist, the very roots of the grass being nibbled down by the hungry little rabbits, so that the few remaining inhabitants who, twenty years ago, could scarcely number their flocks by reason of their multitude, have actually now to import their mutton from more favoured runs.

The plague has spread northward to New South Wales, where it has already infected fully one-half of the colony; and it is estimated that the mere cost of attempting to prevent its further extension will amount to upwards of £2,000,000 a year! "Behold, how great a matter a little fire kindleth!"

From Tasmania and New Zealand comes this identical story, and in each case statistics prove that the great districts of which the rabbit legions have taken possession, have deteriorated to about one-quarter of their former value. As regards New Zealand, it is now about twenty years since a colonist brought seven rabbits from the old country to his new home at Invercargill in the Southern Isles, thinking what a boon it would prove to the colony could the bleak sand-hills along the coast be converted into a rabbit warren. In the first instance this answered capitally. Rabbit-shooting afforded excellent sport; and the new-comers were so welcome, that some more were imported to Otago.

Too soon, however, they were found to increase with such amazing velocity, that they not only cropped every blade of grass, but also devoured the roots which alone bound the light sand-hills, and prevented them from blowing over the richer districts inland, burying good soil beneath sand-drifts. As a matter of course, the rabbits very quickly abandoned the barren sand-hills, and sought pleasanter homes inland, where they soon overran vast tracts of the finest pastures, transforming the best sheep-runs into boundless rabbit warrens. Farmers now began to realise their danger, and commenced shooting and trapping in real earnest; but they very quickly discovered how much easier it is to start mischief than to check it.

For the human settlers are few and widely scattered, generally living eight or ten miles apart, and only requiring perhaps half a dozen men to herd flocks, ranging over fifty or sixty thousand acres; and what could such a handful of men do to check the increase of the rabbit legions, which are as the sand of the sea for multitude? They might spend their days and nights in ceaseless slaughter, but might as well try to sweep back the sea; the gentle foes still continue to multiply according to the ratio of geometrical increase, which very quickly runs up to a sum total which sounds almost incredible, but which may easily be proved by any one with a turn for arithmetical calculation.

In the first place, rabbits begin to breed when they are about six months old. In England, the wild rabbit generally breeds four times a year, producing from four to eight young at a birth. Tame rabbits breed six or seven times a year, and sometimes produce a dozen young. In the favourable climate of the South Seas, these prolific animals seem to have attained the latter average; and as all their descendants follow the example of their parents, it may easily be reckoned that any ancestral couple having attained the advanced age of four and a half years, may have the pleasure of finding themselves surrounded by a flourishing family of upwards of 1,270,000 of their direct descendants!

What could a few widely scattered shepherds do to resist the progress of this ubiquitous army of sappers and miners? In the first instance, the new demand produced

a new profession. A large body of men were organised as rabbit-catchers, and travelled all over the country with large packs of dogs, to worry, shoot, ferret, or trap as many rabbits as possible, their pay being at the rate of twopence per skin. It was found, however, that these strange dogs often worried the sheep, and, in any case, caused them serious disturbance. Moreover, the market for rabbit skins was soon so effectually glutted, that the price fell far below that paid to the trappers.

Enormous sums of money were spent on all manner of experiments, such as stopping the burrows with cotton-waste, saturated in bisulphide of carbon ; and when these failed, the farmers, in desperation, had recourse to wholesale poisoning, by means of grain saturated with phosphorus, and sprinkled broadcast over the rabbit-haunted land. How the sheep were prevented from sharing this fatal banquet I cannot understand, for it certainly seemed as though such a measure must prove the death-warrant of all grain-eating creatures, including the rare native birds. This mode of destruction proved so simple and cheap, that the sale of rabbit skins, even at a greatly reduced price, more than covered the expense incurred. Thus, in the year 1879, five million rabbit skins, valued at £46,759, were exported, and in 1880 upwards of seven million skins were sold for £66,976.

The rabbit plague has proved a good illustration of how truly "one man's poison is another man's meat," for while many sheep-farmers have been totally ruined, great companies have been formed, which make a goodly profit by preserving rabbit flesh for exportation. How these meat-preserving establishments can certainly discriminate between rabbits trapped and rabbits poisoned it is hard to tell ; but they profess to use only such animals as are brought in by their own rabbit-catchers.

In Australia, likewise, similar rabbit-preserving factories are reaping a magnificent harvest. The returns for one week showed that two establishments—one at Colac, the other at Camperdown—had received nearly 30,000 pairs of rabbits ! Pretty well for six days' trapping. Each of these factories gives remunerative employment to about four hundred men and boys ; and, indeed, so profitable has this industry proved, that there might very possibly be some temptation to stay the work of destruction so far short of extermination, that a reserve stock for breeding may survive. But in truth there is very small hope that these men's consciences will ever be put to such a test ; even if the millions can be exterminated, there will assuredly always survive at least as many as the patriarchal seven, who colonised the sandhills of Invercargill and Otago, and became the progenitors of this vast multitude.

Various experiments have been tried in order to acclimatise the natural foes of rabbits, such as cats, ferrets, stoats, and weasels, in the hope that these might, on their own account, carry on a ceaseless war, hunting their victims from hiding-places among rocks and scrub where no trapper could reach them, and which, moreover, would carry on the war all through the hot summer months, when dogs can scarcely be induced to work. The expense of these efforts has been great, and it does not appear that the result has equalled expectation. For instance, the first importation of 376 ferrets cost the country £1,777 ; but it was soon afterwards stated that neither in their rate of increase, nor in their power of destruction, could they ever hope to cope with the rabbits.

Stoats and weasels were next tried, and as Lincolnshire was found to be a favoured haunt of these little poachers, handbills were circulated offering five shillings per head for as many as could be captured alive. These were shipped off in successive vessels, and the details of their travelling expenses are interesting. In the first place, zinc-lined boxes were constructed, each to hold three animals. For one consignment of 158 stoats and weasels, it was necessary to ship 2,400 pigeons as daily food, on a voyage of forty days by a swift steamer. Then again, an enormous supply of Indian corn had to be carried for the maintenance of the pigeons ; so, by the time these various items of expense were added to the return journey of the collector, who travelled to the Antipodes and back in charge of this large family, the total cost must have been considerable.

Still greater pains were taken in order to secure the services of a large number of the Indian mongoose, which has done wonderfully good work in ridding the West Indian sugar plantations of a great plague of rats. The creature itself is about the size of a pole-cat, with sharp nose and long lean body ; his agility is something marvellous, as is also his detestation of everything of the nature of vermin. He only hunts by day, and in his wild state is so shy that there is no great danger of his becoming a serious foe to domestic poultry, which is a point of some anxiety to those who know how apt a tame mongoose is to prove troublesome in this respect. So the order was given that a multitude of mongooses should be captured in Bengal, and brought to New Zealand to wage war on the rabbits.

On some estates where rabbits have established themselves in very rocky ground, native cats, which partake somewhat of the nature of weasels, have been turned to good account, as for instance on a large estate in the Narrandera district, New South Wales, where about seven hundred healthy native cats were released. These had been collected from various districts, at a total cost of about £100, which is a smaller sum than the expenses of a single rabbit-catcher for a year. It was calculated that the outlay was repaid five times over within a twelvemonth. The place in which the cats were turned loose is one on which men cannot work satisfactorily, the ground being riddled with holes and covered with large rocks, affording perfect cover to the rabbits. Among these rocks the native cats took up their abode, but for some months they failed to make any visible reduction in the rabbit legions. They continued, however, to carry on an incessant warfare with such excellent result, that the besieged seemed to have thought it wiser to face the rabbit-catchers than the cats, for they fairly abandoned their stronghold, leaving the invaders in possession of this rocky region, whence they continue to assist the trappers by constant harassing raids on the fugitives.

Thus the warfare continues, and there is reason to hope that in some measure the rabbit plague can now be held in check. But as regards the ravages already committed, their extent might well be deemed incredible were it not for the clear statistics published by the Rabbit Nuisance Committee, which enumerates many sheep farmers who have been compelled to abandon pastures of 15,000 to 16,000 acres. Mr. R. Campbell stated that after spending £3,000 in one year in the endeavour to keep down the pest, he had been forced to abandon *two hundred and fifty thousand acres* which had previously pastured vast flocks, but which the rabbits had rendered worthless. Messrs. Cargill and Anderson told how one year they had spent large sums on the slaughter of 500,000 rabbits, and in the following spring their sheep-run was just as densely peopled as though not one had perished. Similar evidence is given by innumerable sufferers.

Sheep-runs which formerly furnished abundant pasture for 80,000 or 100,000 sheep were shown to be barely able to support 20,000 to 25,000.

So rapid was the deterioration of land, that whereas in 1878 the colony supported thirteen millions of sheep, in 1879 the total was reduced to eleven and a half millions. The loss on the export of wool and tallow was estimated at £500,000 per annum !

In 1884 the New Zealand Government estimated the direct annual loss to the colony from this cause at £1,649,000 ! As to indirect loss from depreciation in the value of property, this was stated to be beyond calculation, but the loss on public estate in the provinces of Otago and Southland alone, amounted to £3,000,000 ! Lands were put up to public auction for sale or rental, and runs which would previously have brought in a rental of £15,000 were let for terms of fifteen and twenty years at less than £400, while for vast tracts no offer could be obtained, solely on account of the ravages of the rabbits.

In short, Australasia has very good reason to regret the unhappy day when this feeble folk was brought from the far-distant British Isles to increase and multiply in those of the Southern Ocean.

These details of serious trouble arising from apparently trivial errors of judgment suggest one thought which it may be well for us each to think out for ourselves. Long years ago, in the land of Judea, King Solomon wrote of "The foxes, the little foxes that spoil the grapes"—words which have many a time been quoted in reference to what we call "little sins"—those oft-recurring small faults which we are apt to deem so trivial that we let them accumulate unheeded, till some day we realise that, like separate grains of sand in a sand-drift, they have become a definite evil which we may find it hard indeed to conquer.

"He that contemneth small things shall fall by little and little," said an old Hebrew writer. Keble reminds us that—

> "'Twas but a little sin
> We saw this morning enter in,
> And lo ! at eventide the world was drowned.

And Tennyson says,—

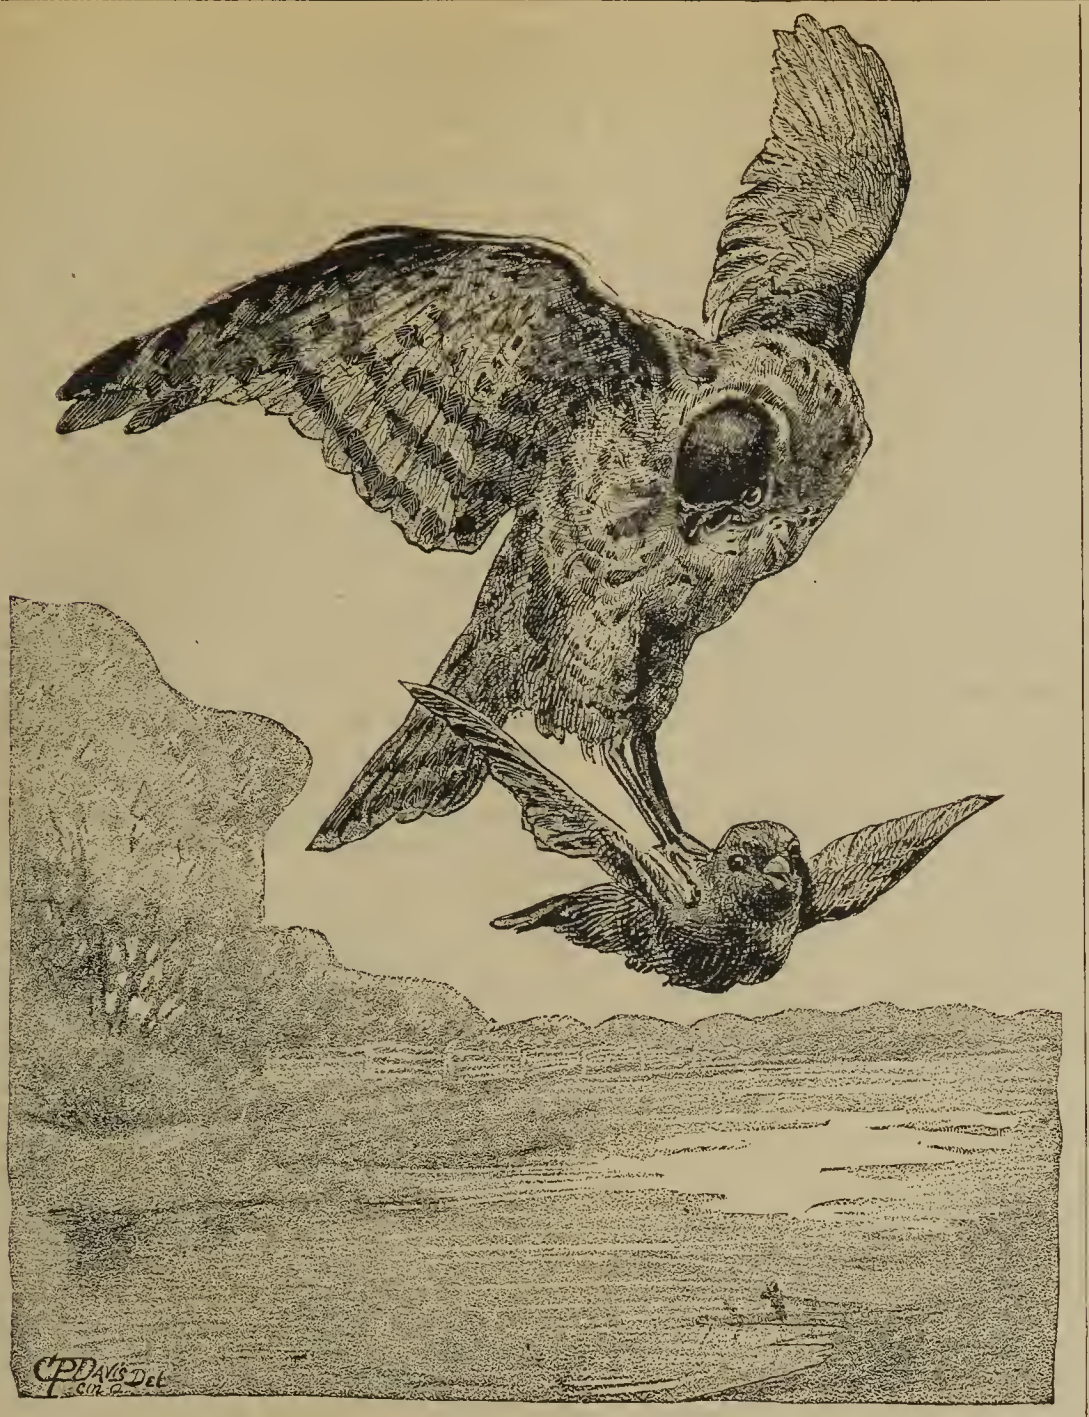
> "It is the little rift within the lute,
> That by-and-by will make the music mute,
> And ever widening, slowly silence all.
>
> The little rift within the lover's lute,
> Or little pitted speck in garner'd fruit,
> That rotting inward slowly moulders all."

Therefore let us lay to heart the lesson of New Zealand's troublesome colonists, and remembering the gigantic evil that has so quickly developed from the introduction of these gentle and apparently inoffensive "little foxes," let us each look vigilantly to the Vineyard of our own selves—body, soul, and spirit—lest perchance we may be harbouring any evil habits, as yet so small that we almost allow ourselves to believe them virtues, but which ere long may prove the bane of our lives, having outgrown all our power of control.

A PIRATE OF THE AIR.

"They were given full liberty."

DURING a ten-mile drive on a breezy day in August or September, through the wooded portions of Pennsylvania, an attentive observer can scarcely fail to notice one or more companies of American sparrow-hawks (*Tinnunculus sparverius*) holding high and noisy carnival about some lightning-blasted tree in the open forest or hilly pastures. At once the smallest and handsomest of American diurnal birds of prey, the sparrow-hawk is in many respects the most interesting, and, avoiding the thick woods, courting rather than shunning the society of man, it becomes one of the most familiar and easily observed of our native hawks.



Although the proper study of mankind is man, yet it may not be an unworthy prospect to turn our attention to the varying phases that make up an existence of a year—that great cycle in the brief life of a bird. Our little winged corsair is among the earliest arrivals of the spring migrants, contemporary with the blue-bird and the song-sparrow. At most times full of a restless grace and activity, the sparrow-hawk seems subdued on his first appearance. His rattling cry, so continuous during the fall, is then seldom heard ; and as we see him some frosty morning in March, when the keen air cuts like a knife, and the light snow crackles under foot, sitting on the topmost branch of some isolated tree, with feathers fluffled and head sunk down, we might fancy him thinking regretfully of the balmy airs and plentiful food of the southern clime he has so lately left, and despairingly conning his chances of making a living in this frigid place ; but not so. If, with cautious approach, or by means of a good opera-glass, we bring him within nearer view, we see his restless head constantly on the move, his tail jerking like a sandpiper's, and anon he darts like an arrow through a neighbouring thicket, to reappear a moment later with some luckless snow-bird, followed by the dismayed cries of its mates. It is only at this season and late in the fall, that the sparrow-hawk is very destructive to birds ; at other times it is content with grasshoppers and other large insects, resembling in this respect its European congener, the kestrel.

In early spring the rambler through woods and fields often finds scattered bunches of feathers, marking the place where a plump red-breasted robin, or sweet-voiced song-sparrow, has met his death in the grasp of this little free-booter. But the parental instinct is strong within him, and he soon selects a mate—if, indeed, he has not brought one with him—from the south. The new spouse is not equal to him in appearance. She is larger, more plainly coloured, with a certain high-shouldered look, which reminds one of a plain, robust, country woman, joined to a spruce city clerk. But monsieur is a good husband, as bird husbands go. Many are the little attentions paid his inamorata during the courtship and subsequently.

In early May the sparrow-hawks select the site of their future nest, usually in a hollow tree, but often in a deserted woodpecker's hole, or even in an old crow's nest. Madame does most of the work of fitting up the nest, which consists of a bed of small sticks and twigs, covered with a few branches of fibrous roots and moss. The eggs are generally four in number, larger than a pigeon's, nearly spherical in shape, and varying in colour from a yellowish buff to a pale reddish white, with spots and confluent blotches of reddish brown and chocolate. Their shells are thick, and quite rough to the touch. In about three weeks the young appear, helpless, fluffy little balls, with closed eyes and elongated beaks, covered with a soft white down, with the faintest possible tinge of pink, and looking delicately clean and pure.

"Holding high and noisy carnival."

"Made a stoop at an English sparrow."

Monsieur assists at times in the incubation, and cheerfully takes madame's place when, as she rarely does, she issues from her hole, to stretch her cramped wings by a rapid flight over hill and meadow, and also does the handsome by bringing her innumerable tidbits of food during her long confinement. Both observe considerable caution in returning to their nest from their foraging excursions, generally descending from a great height, or approaching furtively by numerous short flights from tree to tree. Their characteristic cry is seldom heard in the immediate vicinity of the nest, although at this season they are particularly noisy when at a distance from it.

The young grow rapidly, and soon lose their inviting appearance, and become great, ragged, voracious squabs, requiring the unremitting attentions of both parents to supply them with food. The female, owing to her greater size and strength, provides the major share, though the male works with right good will. Innumerable are the grasshoppers, beetles, mice, small animals, birds, and even reptiles, the busy parents capture for their hungry young, often carrying the food to the nest in their talons, but generally hastily swallowing it in the field, to be ejected, on their return, after the manner of most carnivorous birds.

By the end of June the young are nearly fledged, and have outgrown their home, and clamber and flutter to the higher branches of the tree. They are very noisy, and keep up a continual clamour for food, which the indefatigable parents use every exertion to supply.

During their first awkward attempts at flight, they frequently fall to the ground, and being unable to rise from it, are easily caught. Though showing the colour and markings of the adult, they have a ragged down still clinging to the tips of their feathers, pale grey eyes, and the general clumsy, loose-jointed appearance common to callow young; very different from the trim elegance which accompanies maturity.

As the young hawks gain strength and experience, they follow their parents in their quest for game, and soon begin to hunt for themselves. The elder birds, relieved from the care of maintaining their young, begin the annual moult, which is accomplished slowly and with great regularity, the wing and tail feathers being shed in pairs in such a manner that it does not interfere appreciably with their flight.

By the middle of August the moult is completed, and the hawks, old and young, are in the hey-day of their existence. The meadows are shorn of their verdure by the hand of the haymaker and harvester, or gnawed by the eager grazing of cattle. The insect and animal life, hidden by the bush growth of early summer, is bared to the searching eyes of our little falcons and their companion raptores. They live right royally on various kinds of grasshoppers and locusts, varying their diet by birds and mice, only when these can be casually secured with little trouble. It is true the young hawks will often dash after a passing sparrow, and follow his zigzag flight with very great energy for a short distance; but it seems to be done out of pure bravado, and is generally unsuccessful. Old and young keep together, affording a notable contrast to other birds of prey, and selecting a dead tree in some open place—preferably a close-cropped pasture—make it their daily rendezvous, returning to it and their other hunting-grounds with the greatest regularity at some particular hour of the day.

Their daily life at this period is soon told. As the rising sun gilds the higher branches of the trees, they emerge from the thick covert in which they have spent the night, and fly about the fields and pastures, keeping generally within sight of each other, minutely watching the ground beneath, and instantly pouncing upon any unsuspecting grasshopper they may chance to see. They often visit farmhouses and poultry-yards, perching on a fence or stake near it, inspecting things in general, but

"The small but pugnacious tyrant attacks the sparrow-hawk."

do little harm, except make a commotion among the fowls. When foraging in the fields, they perch on fences, stumps, and small trees, and keep up their characteristic jerking of the tail. The flight when feeding is rather low, and as they alight they sail up to the highest pinnacle, and strike upright with startling suddenness, their wings disappearing with the rapidity of thought.

When poised in the air, watching some object beneath, they beat their wings rapidly, and the final plunge is made with great quickness and ease. They often pursue and catch *cicadæ*, and large flying insects, in the air, grasping them in their claws, and transferring them to the beak without checking for a moment their speed. About ten o'clock, having satisfied their appetites, they repair to their adopted tree, and there, sitting at their ease, view with a not unfriendly eye the passing flocks of birds, occasionally indulging in a dash at some crow, or larger hawk, which may chance to come near, badgering and forcing him to beat a hasty retreat. The sparrow-hawk himself, in common with all other birds of prey, even the great eagles, is forced to keep a respectful distance from the fierce little king-bird (*Tyrranus carolinensis*). When that small but pugnacious tyrant attacks, the sparrow-hawk illustrates to perfection the adage, "Discretion is the better part of valour," by incontinently leaving.

In the fall, when our sparrow-hawks take to the thickets, to feed on migrating birds, they are much annoyed by the ubiquitous blue jays. Those mischievous mimics take the greatest delight in mobbing the hawk and imitating his cry in every imaginable key; but the sport is not always on one side. If the hawk can catch one of his tormentors off guard for an instant, the jay pays with his life for his temerity, while his companion jokers fly shrieking away.

But to return to our happy family, which we left sociably digesting their easily earned breakfasts. Be the day never so hot they will not seek shade, but sit panting, with open beaks and drooping wings, until the sun declines, and the calls of hunger warn them to look for the evening meal. But if the day should prove windy, they are all animation, and play about each other, rising and falling on the breeze with the utmost grace. Their flight at such times is very inspiring. At times they soar until almost lost to sight; then descend with considerable velocity, emitting their sharp cries, which sound very much like the syllables, "killick-kil-lick," rapidly repeated many times, with an *accclerando* movement.

While soaring they lack the willowy grace of the gulls, the grand sweep of the large birds of prey, or the buoyancy of the swallows; but have a poise and quick control of themselves that is beautiful to witness. In the afternoon they sally forth again in search of food, generally choosing a hunting-ground different from that of the morning, and continuing the quest until approaching darkness warns them to seek shelter in some thick-leafed pine or hemlock, not far from their former nesting-ground.

Although they have but few natural enemies, as autumn advances their numbers become thinned, for no gunner ever willingly loses a chance to shoot a "bullet-hawk," as the smaller *accipitrinæ* are called, under the idea that they are very destructive to young game. Thus the family parties become decimated and scattered.

After the first frosty nights, when the easily captured grasshoppers became scarce, the young sparrow-hawks have to work harder for their living, and may be seen beating the thickets and fields for larger prey. Great numbers of the Grass-finch (*Pooecetes gramineus*) fall victims to them now, but as it is an exceedingly common bird, and nearly destitute of song, we do not miss them much. The hawks, when pressed by hunger, become very daring, and during their impetuous pursuit of feathered prey, have often dashed through the window of residences, into greenhouses, and in one instance even into a railway car in motion. A fine specimen was brought to me a few months ago, that had crashed through the window of a furniture factory, while the works were in motion. He had made a stoop at an English sparrow, which eluded him by slipping through a slightly broken pane, while his more bulky pursuer was brought down by the shock. The hawk, though not at first appearing much injured, soon died, and forms the subject for the third illustration to this article.

At most times a wary bird, and quite diffident as to the near approach of the human biped, in autumn the hawks often slyly accompany the sportsman, and astonish him by a sudden onslaught on some of the finches and sparrows started by dog and man. At such times it requires no little quickness and skill to bring the marauder down.

The close family ties—that charming and unique feature of the halcyon days of summer—being now broken, the sparrow-hawks follow singly the great wave of bird migration southward, although many, in the latitude of Pennsylvania, linger through quite severe weather, and during mild winters the bird is far from uncommon. A curious modification of their habits is caused by the abundance of the imported English sparrows in our large cities. While in Philadelphia a few years ago I lodged at Sixteenth and Cherry Streets, opposite the Friend's Burial-Ground. A pair of sparrow-hawks visited almost daily the three or four elm trees that adorn that rather gloomy enclosure; they appeared with almost clock-like regularity about one p.m., high in the air above the Race Street houses, and descended to their perches with a rush, remaining an hour or two. They seldom failed to take toll from the plentiful and quarrelsome sparrows. At times they visited the dome of the Catholic Cathedral for the same purpose. This was kept up from the middle of December until the last of January, after which I suppose the pair left for more northern quarters.

Several species of the smaller owls are becoming common about large towns, since the introduction of the English sparrow. In the south the sparrow-hawks again become insectivorous, and remain so until the returning spring brings them back to their former haunts, which they apparently return to year after year.

The sparrow-hawk is easily tamed when taken young, and makes a beautiful and interesting pet if allowed his liberty. When caged they lose all activity, except for eating. Audubon, in his "Birds of North America," has a delightful account of the pranks of one which lived with him many months, enjoying the liberty of his yard, and affording much entertainment.

Eight years ago the writer placed a complement of four eggs of this bird in the nest of a domestic pigeon, which in due time hatched out her incongruous brood. One fell a victim to "science," in the form of a dissection; the others, two males and a female, were "raised by hand," being fed on finely chopped meat at first, and then grasshoppers. As they grew they were given full liberty, and became exceedingly tame, familiarly entering the house at any time. They were very voracious, accompanying the hay-wagons to the field, and devouring incredible numbers of grasshoppers as they were exposed under the newly-turned hay.

Although much of the time keeping the nesting robins and cat-birds in an uproar by the feints and mimic attacks, they were never known to injure anything but beetles and such "vermin." They were at times rather boisterous in their play, and on breezy days would ascend to an astonishing height, and sail about, executing many aërial manœuvres; but on holding up a grasshopper, accompanied by a loud whistle, a headlong race would ensue for possession of the dainty. As the season advanced, they were somewhat neglected, and made long excursions in the surrounding country in search of food. They returned at intervals, but finally disappeared one by one, victims, probably, to gunners, whom their unsuspecting ways did not lead them to fear.

The American sparrow-hawk, the subject of the foregoing sketch, occurs abundantly throughout temperate North America, and also Central America, to the Isthmus of Panama. In South America and the Antilles, it is replaced by the Isabelline and Cinnamon falcons, birds which have seemed to me in their native haunts to be much more sluggish in temperament. In Europe it very closely resembles the kestrel, though the merlin and hobby are nearly allied species. It is a great pity familiar American birds have not such euphonious names, instead of the poverty-stricken appellations by which they are designated. The adult male sparrow-hawk is about eleven inches in length, and has a spread of eighteen inches. The top of the head, with the exception of a patch the size of a quarter dollar, and the upper surface of the wings, is of a rich slaty blue. The wings are marked with many spots of black, and the primaries, or long quill feathers of the wing, are black, with white markings on their inner webs. The spot on the head, the back, and tail, are a beautiful, bright cinnamon colour, with black markings. The outer feathers of the tail are barred with black and white. At the end of the tail is a broad black band, terminated by a narrow white tip. The under surface is light rufous, with spots and dashes of black. The legs and cere, or waxy skin about the nostrils, are bright orange yellow. The tip is black, shading into slaty blue. The eyes are brilliant hazel, and the claws are black.

The female is larger, with a proportionately smaller head. Her entire upper surface is cinnamon-red, barred very regularly with black, except the wing-tips, which are black, as in the male, but barred with rufous instead of white. The patch on the head is less defined than in the male. The under surface is quite similar to the male, but more streaked and mottled. The bill, legs, and eyes, are the same as the male's. The fledged young come at once to the colours of the adult, which is rarely the case with birds of prey.

The days of falconry have long passed, but the hawk is still with birds as the leopard among beasts. To those who talk of the innocence of the lesser birds that contribute to their sustenance, I would say that the song-birds themselves are constantly engaged in the destruction of the myriad forms of insect life, and that life for life is but poetic justice, and a universal rule throughout all animated nature.

GLIMPSES FROM A GARDEN SEAT.

By TRACEY LAYARD ROBINSON, Author of "American Social Sketches."

IN the garden are several seats, some in most unusual and unexpected places.

There is one under the walnut tree on the lawn; another, just off the lawn, behind the big cherry tree; a third is quite hidden in a little nook under a laburnam tree by the long walk; still another is placed at the end of the long walk, and here, in early springtime, I sit sometimes. The air around me is filled with the scent of the violets, of which a great patch grow and blossom freely alongside. But these are not the only seats in the garden by any means. My favourite is in a somewhat curious place, close to the beehives—facing them, in fact—and the music of the busy honey-gatherers resounds from daybreak till sundown all round the spot.

I chose the position for several reasons. It is just hidden from the big front gates and approach to the house by a little hedge of laurels and bays, which, while they completely screen the seat from the view of visitors, are still sufficiently thin to allow of my seeing all who come to the house. The result is, that I am able to remain concealed or to come forward and receive the visitor, should he prove a welcome friend.

The surroundings of this seat are most truly delightful. Above my head wave the scented branches of some feathery larch firs, whose resinous odour is always most refreshing and sweet; while the long trailing tendrils of the honeysuckle, which grows in an almost wild state over the adjacent shrubs, are covered from spring till autumn with their perfumed blossoms, and fill the air with fragrance. Besides, although the aspect is directly south, and the sun shines all day upon my seat, the long weeping branches of the larches form a delicious shade, and their constant to-and-fro waving always makes a grateful and cooling breeze, from a sort of natural punkah.

With the perfume of the honeysuckle, and the resin odour of the firs, is mingled the scent of wallflowers, which grow in wild luxuriance on the bank below the shrubs, which themselves dispense a perfume very refreshing to the senses.

In front of me, separating my seat from the beehives, are four great beds of asparagus, amidst whose feathery fronds the bees do a tremendous lot of business, and seem to find a great deal of something they are fond of. To the right of the asparagus are several rows of raspberry canes, from whose green flowers the bees also appear to derive considerable satisfaction, if one may judge by the attention they pay to them.

This corner of the garden seems to have been specially designed for the bees—and for me. For the bees, because hereabouts are crowded all the flowers from which the little honey-makers sip the largest quantity of sweetstuff. There is a row of gigantic sunflowers, whose great blossoms seem inclined to break the stem, which bends beneath their weight. These sunflowers take no small part in the pleasure I derive from my rustic seat. They are the rendezvous of so many interesting little creatures, that I think one could easily sit ensconced behind the leafy screens of my shrubs for a whole day without tiring of watching the antics of some of the sunflowers' visitors.

A chapter might easily be devoted to them. Let me mention some. There comes along a funny little greyish-blue bird with a black poll, who swings from twig to twig of the overhanging larches with marvellous dexterity, and jumps from plant to plant without any apparent use of his wings; suddenly he makes a dart at a big sunflower, and, clinging to its centre with his claws, begins to tap at something invisible to me with his sharp, black beak. The bird is a tomtit, and, though I cannot see it, I know he has found some insect, probably an earwig, whose horny shell he is piercing and cracking, previous to making a dainty meal of its succulent interior.

A pretty butterfly comes gadding showily by, and thinks to sip just one drop of the honey that stands in great limpid globules on the flowers. She flits about from petal to petal, as though she would intensify her thirst, and thus increase the delight of slaking it, by gazing for a while upon the pellucid drops. She rises and falls almost as though wind-driven, she is so easy and full of grace. Alas! she is not destined to taste of the liquid mellifluence, for, see, a small brown bird, which for some time has been sitting quiet and watchful upon a bough of the cherry-plum tree, has darted forward with hawk-like speed, and, with one snap of his cruel beak, poor Miss Butterfly is cut in two parts, her tender body remaining in the beak of the fly-catcher, while her pretty wings flutter helplessly to the ground.

Then there are the big "bumble" bees, who seem to think sunflowers are their especial property, if one may judge by the noise they make, and the hurried, clumsy pushing and shoving they indulge in, to get their share of the luscious sweet. But the sunflowers are not only frequented by honey-loving insects and insect-loving birds; there comes a time when the seeds begin to form and ripen, and then arrive other birds—the chaffinch, the goldfinch, and the impudent sparrow.

So fond are these three species of the sunflower seeds, that one of either may be seen pecking at the fat grains at almost any time of the day; and very amusing is it to watch the conduct of the birds when one has succeeded in abstracting a grain. He will take his booty to the top of the wall, or down to the path, choosing a flat stone for his next operation, which consists of breaking the thick skin of the seed with his strong, sharp bill; and then what immense enjoyment there is in the fleshy pulp within!

On each side of the beehive-stand grow a clump of Canterbury bells; and these, too, are greatly in favour with the bees. It is quite funny to watch the little brown insects crawl up into the long blue tubes, remaining hidden for sometimes a minute or more at a time, and returning eventually with their legs heavily laden with the yellow fluid they have gathered for their winter store. What busy little fellows the bees are!

There is a large plum tree trained against the wall near the bees, on one of the branches of which a thrush this spring built its nest. So confident of protection was the bird, that he made no effort to hide his nest from his human friends, but left it quite exposed to all eyes. We watched the nest grow, so to speak, from a few dry pieces of grass to a complete bird's house; then four blue eggs appeared one after the other; lastly, the hen bird sat upon them, never offering to move, though we stood so close to look at her that we might easily have touched her with our hands.

Meanwhile her mate sat on the topmost twig of one of the larches and sang to her, to make the weary sitting time pass quickly. Then four little naked birdlings made their appearance; and how the two old parents did work to provide the great hungry yellow beaks with food! Alas! though their human neighbours loved them so well, and would not molest them, there was a deadly enemy near by, whose cruel nature only taught him to kill and to destroy.

One morning, as I passed the plum-tree, I missed the thrush's nest. Looking down, I saw it lying, torn and broken, at the foot of the tree, and beside it were four little half-fledged birds, all dead! A cat, in sheer wanton cruelty, had in one night undone the work of many weeks, and given bitter pain to the pretty, innocent creatures. If it had been done for the sake of food, I would have forgiven her; but no, there were my two thrushes, father and mother, on the wall beside the ruin of their work, and the little ones were lying dead below!

In the shrubbery by my side there is a curious bush, the like of which I have never seen elsewhere. It is a rose-bush whose blossoms are green! The original plant was given to my mother several years ago as a rarity, and truly it is the oddest of the rose species. I cannot veraciously call it pretty as a flower, and the bush itself is such a straggling thing as hardly to merit the title of beautiful; yet the scent of the green blossoms is sweet, and resembles, in a faint degree, that of the ordinary tea-rose variety. It is a very free bloomer, too; and I sometimes regret that it should be hidden away as it is amid the thickly growing shrubs.

Right alongside of my seat is a huge Scotch thistle, growing to a height of nearly six feet, and bearing a beautiful bluish-grey flower, the seeds of which are so much beloved by certain birds—notably the goldfinch—that they persistently dare to approach it, notwithstanding my presence, in order to obtain the food to which they are so partial. Indeed, I am often astonished at the fearless fashion in which the birds have come to regard my familiar fellowship. They seem to know perfectly well that they have nothing to be alarmed at in me, and that I love their frank, courageous intimacy.

And so, amid my bees and birds and flowers and shrubs, I often take my book or my writing-pad, and, seated on my pleasant, well-shaded, rustic seat, find food for reflection, and pass many happy hours in quiet solitude, which is no loneliness, after all; for every creature around me is my friend, and everything my eye falls upon tells me a story, or sings me a song of praise to the Maker who made all things well, and by whom nothing was made in vain.

CHAPTERS FROM NATURE'S STORY-BOOK

By Professor Haddon,
Author of "An Introduction to the Study of Embryology."

CHAPTER V.

A CRAB'S POOR RELATIONS.

THERE it scuttles! apparently like a good many other people, busy with an aimless activity. Mind how you catch him, for the crab has sharp nippers, and has courage enough to show fight against fearful odds. We have, however, no designs against the crab to-day; we merely want to examine the under side of its body. We are fortunate, for on our very first crab we find a yellowish bag packed away between its body and tail.

Skilful anatomists have found a bunch of root-like suckers, which arise from the stem

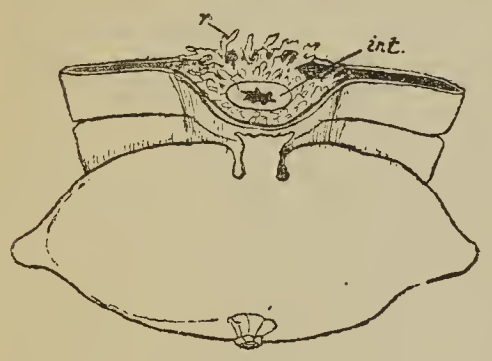


Fig. 1.
Adult Sacculina in position upon a detached tail of a Crab: int., intestine of the Crab; r., some of the roots of the Sacculina.

of the sac and enter into the body of the crab. These suckers branch again and again, and penetrate all over the crab, even into the feelers and eye-stalks. Here is a remarkable creature, a simple smooth sac with but a single orifice connected with a branching root, which penetrates the cavities of a crab's body, and surrounds all the organs of its unwilling host—no mouth, jaws, limbs, eyes, nor any other visible organ. To this anomalous animal, naturalists have given the appropriate name of *Sacculina*.

It is hardly too much to say that it would be impossible to determine the relationships of the sacculina by an examination of the adult animal. All the characters which distinguish molluscs, arthropods, vertebrates, and other groups, are here absent. Though the adult structure fails us, we have a clue left in its development; this we will now follow.

The young is hatched as a lively little oval embryo, with three pairs of limbs; shortly it changes its skin, and then it appears like the accompanying figure (2). The body is triangular, each corner of the triangle being prolonged into a couple of spines. There are three pairs of jointed limbs; the second and the third pair are divided, so that each limb has two swimming oars. Between the first pair of limbs is the large black eye, and below this is the brain. This nauplius larva, as it is termed, has no mouth and no digestive canal; it feeds upon the yolk which was stored up in the egg, and is still retained in its body.

On the morning of the fifth day after it is hatched, the nauplius casts its skin for the fourth and last time, and then it swims about, very different in appearance from its earlier condition. Its shape recalls that of a ham; the body is protected by a shell, which is continuous above, and which extends down the sides of the body in two flaps. The limbs project between the two valves of the shell; of these there are seven pairs; in front there is a pair of feelers, or antennæ, and at the posterior end of the body there are six pairs of swimming legs, each of which has two oars. There is also a little forked tail. As in the nauplius stage, there is a single median eye, but no mouth or digestive canal is present.

Swarming in myriads in our ponds and ditches, and also very abundant in the sea, are minute crustacea, which have a hinged bivalved shell, swimming feet, and a median eye. These

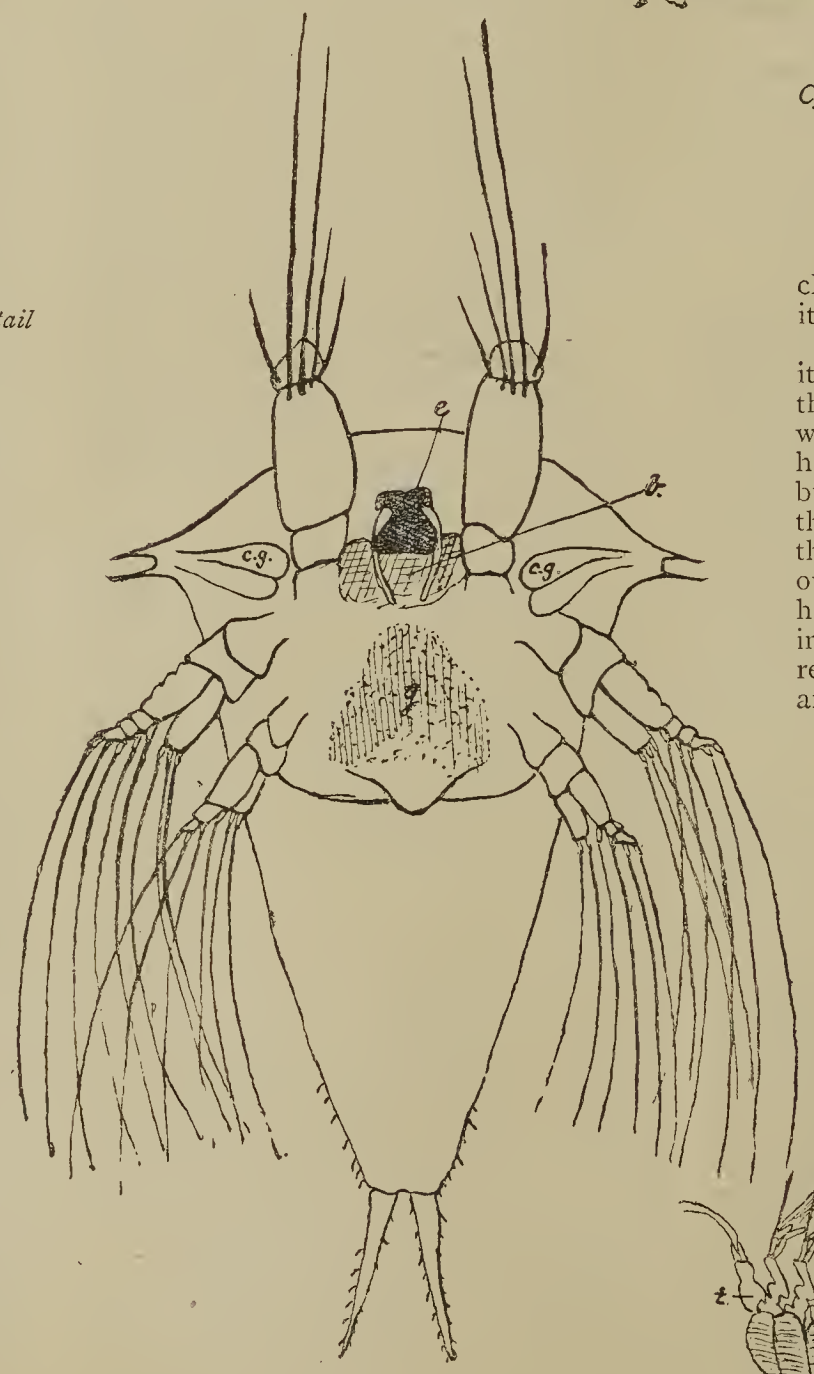

Fig. 2.
Nauplius larva of Sacculina, after the first moult, ventral view: b., brain; e., eye; c.g., germ-cells of future Sacculina.

are known as *Ostracoda;* Cypris is the name of the common fresh-water ostracod. From its superficial similarity to the latter, the larval sacculina at this stage is not inaptly called the "cypris larva."

After swimming about for at least three days, the cypris larva fixes itself by one of its antennæ, during the night, to small crabs $\frac{2}{16}$ to $\frac{15}{16}$ of an inch in length. The place of attachment is always at the soft skin round the base of a hair, either on the back or on the claws, it being especially partial to the hairs which grow on the flexible skin at the joints of the

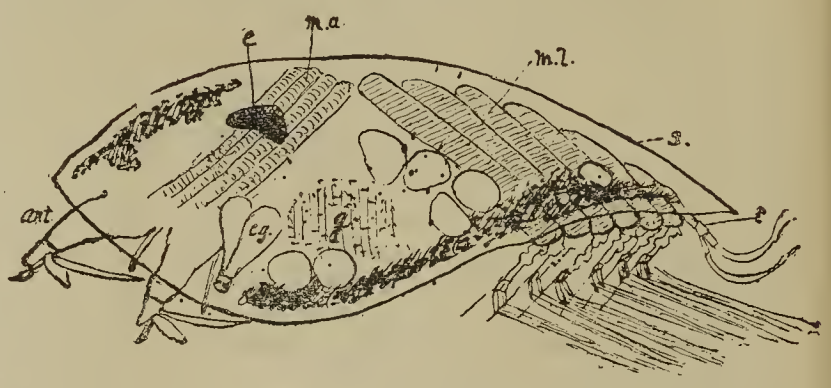

Fig. 3.
Cypris larva of Sacculina: ant., feelers or antennæ; c.g., glands; e., eye; g., germ-cells; m.a., muscles of antennæ; m.l., muscles of legs; s., shell; t., tail.

claws. The cypris larva never fixes itself on the under side of a crab.

The attached larva very soon casts its skin, and kicks off all its legs and the little tail; before the raw place, where the body joined the head, is healed up, some pigment, oil globules, and the eye (and brain, if there is one), are also rejected, so that eventually there is only a little oval sac fixed to the crab. A sharp hollow tube or dart is next formed in the sac; this passes down the remnant of the antenna by which the animal is attached, and by its growth

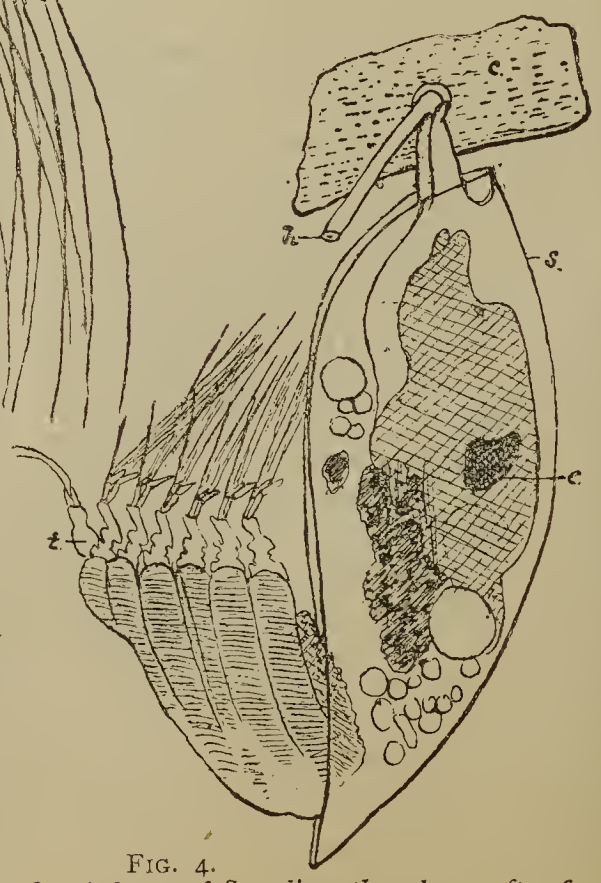

Fig. 4.
Cypris larva of Sacculina, three hours after fixation: c., shell of back of Crab; e., eye; h., hair of Crab; s., shell; t., tail.

perforates the thin skin of the crab. As soon as this is accomplished, all the soft matter inside the sac flows down the hollow dart into the body of the crab. Without going into further detail, it would suffice to say that this mass develops into a central rounded portion, from which numerous finely branched tubes

Final stage of fixed larva of Sacculina, on the third or fourth day after fixation: c., shell of Crab; d., hollow dart of larva of Sacculina, through which particles have just commenced to pass; e., cast-off eye; g., germ-cells; h., hairs of Crab; s., cast-off shell.

radiate. The former finds its way in time to the lower portion of the crab's body. As the rounded portion grows larger, it presses first upon the muscles on the under surface of the tail, and the pressure causes them to disappear; next the skin is attacked, and it succumbs; at last the flexible external crust yields, and the pouch-like portion of the sacculina projects upon the surface of the crab. One point is of great interest, and that is, that a new brain is developed from the outside skin of the sacculina. This is the only known instance of an animal losing its brain during its development, and then getting a new one. There is very good reason for believing that the external portion of the sacculina corresponds to the head only of the cypris larva; in other words, the adult animal consists only of a head.

Such is the marvellous history of the sacculina, as made known to us by the patience and skill of the French zoologist, M. Yves Delage.

Let me briefly recapitulate the life-history of the sacculina. The egg develops into a nauplius larva, the nauplius, by four successive changes of skin, is metamorphosed into a cypris larva. The cypris larva attaches itself to the upper surface of a crab, and degenerates into a bottle-shaped sac, after having deprived itself of its body, legs, eye, and other structures; in fact, only the head is left. A hollow dart is next developed, which perforates the skin of the crab, and what remains of the larva flows through this into the body-cavity of the crab. This forms a central capsule provided with branched roots; the latter surround all the tissues of the host, while the former migrates to the under-surface of the crab, and eventually makes its appearance externally.

However simple may be the structure of the adult sacculina, it has two larval stages, in which there is a shell, a brain, an eye, and jointed limbs. The latter alone proclaim it to belong to the jointed-footed animals or *arthropoda;* but we require more precise information than that.

The sacculina commences life as a nauplius. Here are the portraits of other nauplius larvæ, and the adult into which one of them will be metamorphosed.

A phyllopod, a cyclops, a barnacle, and a prawn. These are representatives of nearly all the great sub-divisions of the *Crustacea*, and it looks very much as if the nauplius was a recapitulation of an early ancestor of the group. At all events, from the fact of its having a nauplius larva, we are justified in placing sacculina amongst the *Crustacea*.

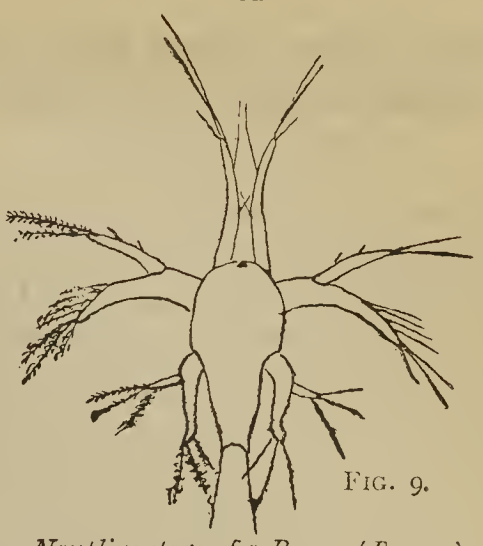

FIG. 9.

Nauplius stage of a Prawn (Penæus).

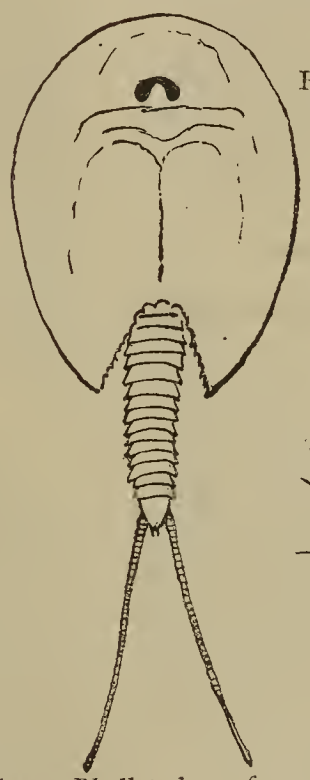

FIG. 7.

Apus, a Phyllopod, seen from above.

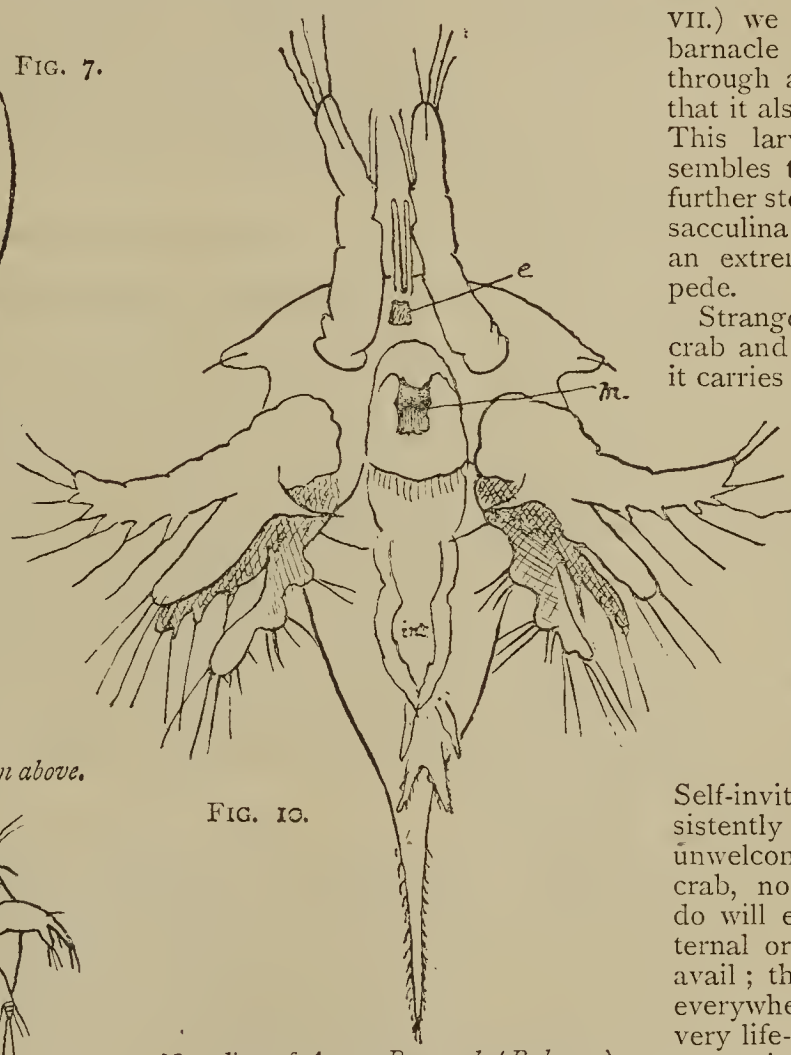

FIG. 10.

Nauplius of Acorn Barnacle (Balanus): e., eye; m., mouth; int., intestine.

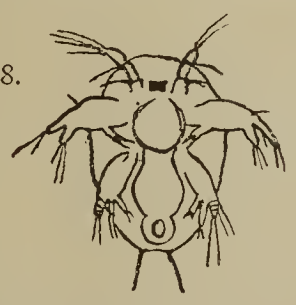

FIG. 8.

Nauplius larva of Cyclops, a Copepod.

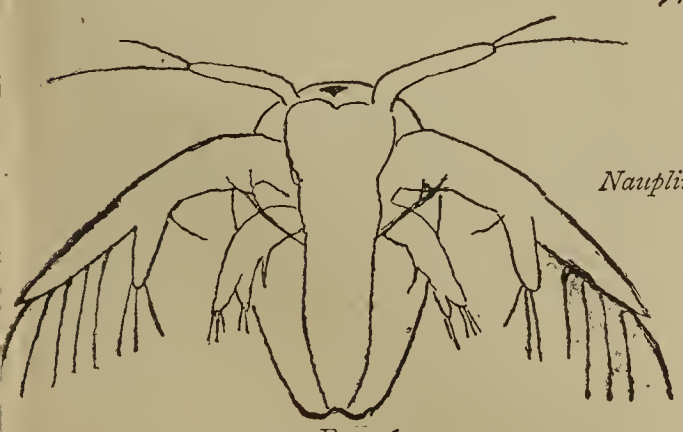

FIG. 6.

Nauplius stage of Apus. The tail end of the body is not shown.

In a later chapter (Chapter VII.) we shall see that the barnacle not only passes through a nauplius stage, but that it also has a cypris larva. This larva very closely resembles that of sacculina. A further step may be taken, and sacculina may be regarded as an extremely degraded cirripede.

Strange as it may seem, the crab and the sac-like parasite it carries about both belong to the same group of the animal kingdom. It not unfrequently happens that the poor relations of human kind are dependent upon their more well-to-do relatives, and often come to dine with them. The crab's poor relations dine in, not with their host. Self-invited guests, they persistently remain, although so unwelcome. Once within the crab, nothing the latter can do will extirpate them, no internal or external remedy can avail; the intruder permeates everywhere, subsisting on the very life-blood of its unwilling entertainer. But the sacculina pays dearly for its board and lodging—the price being the loss of all activity and chance of progression; furthermore, it becomes degraded below the level of its rank in life, and dies an ignoble, insensate pauper's death.

SEPARATION FROM SIN AND SEPARATION UNTO GOD.

By WILLIAM GOURLAY.

(*Continued.*)

IN our last, we considered the believer's separation from sin; now, we turn to his separation unto Christ.

In order to enter upon this way of holiness, the flesh must be crucified, and (by faith) left on the cross; and all that is necessary for growth in grace is simply to walk in this way; because, walking in Christ, we are certain to grow in grace. This way is bounded by walls of salvation,—the precious blood which cleanseth from all sin. A believer spiritually in this way is enjoying the land typified by Canaan; and just as the Jews enjoyed therein all temporal blessings, so here the believer enjoys the spiritual blessings Christ came to give (see Eph. 1. 3). In Canaan the houses were built, the fields planted, etc., all was ready to hand; so in Christ, our spiritual fortune is made, and the believer has nothing to do to provide himself with holiness, but simply to take possession of that which is already provided, to live on the fat of the land—*i.e.*, the sap of the True Vine.

TO BEGIN this walk, is to cross the spiritual Jordan (see Eph. 3. 17). TO CONTINUE in this way, is to fight the good fight of the faith. Against this walk, the world will cry out, the flesh will lust, the devil will roar; and if we look at our enemies, our hearts will certainly faint, like Peter's when he looked at the wind and the waves, or as the hearts of the Israelites did, when they looked on the sons of Anak.

The God-Man is alone fit to be our leader here; and, praise His name! like the man with the drawn sword (Josh. 5. 13), He has GONE BEFORE, and, following Him, we will encounter only BEATEN FOES.

Christ conquered all on the cross, Jericho and all the rest, great and small (see Col. 2. 15).

TO KEEP in the way of holiness, attention has to be given to all the exhortations in God's Word. These are most fully delivered in the Epistles; and, in conclusion, I will just allude to three things, viz.—The Study of the Word, Confession of Sin, and Prayer.

No Christian will ever be strong, except the holy secret is discovered, of feeding on God's Word, and so getting messages direct from Him. The best sermons, etc., will never make up for this. "Let the word of CHRIST dwell in you richly" (Col. 3. 16).

Confession of sin is a subject not well understood by many; so we often hear in prayer wearisome confessions of the utter sinfulness of our old nature. The confession of original sin was done, once and for all, when we came to Christ, and saw ourselves substitutionally dead in Him (2 Cor. 5. 14). No further confession is required from a criminal WHO HAS PLED GUILTY AND BEEN EXECUTED. The confession required from a Christian, is that of wrong acts committed, or known omissions of duty. To confess such, is a very different matter, and we will not be willing to do so, except we keep our hearts steeped in the humility of Jesus.

The result of the former style of confession about original sin, so far as holiness is concerned, is absolutely *nil*. People will drive away at that, and remain just exactly the same as they were before. On the contrary, confession of sin, allowed or committed, is always followed by the blessed result of cleansing (see 1 John 1. 9).

WE MUST NOT EXPECT TO SIN, just as Peter had no right to expect to sink when he walked on the sea. "These things write I unto you that ye sin not" (1 John 2. 1). Unconscious sin will no more deprive the soul of communion with God, than the fact of our Queen having criminals in her country will deprive her of the sympathy of respectable people. "The blood of Jesus Christ His Son cleanseth us from all sin" (1 John 1. 7). "It is no more I that do it, but sin that dwelleth in me" (Rom. 7. 20).

Our communion with God, however, will only grow in proportion as we increase in actual likeness to Jesus Christ. This means with us all, the getting rid of a great deal, not only known failures, but unknown.

Lastly, Prayer. If our walk in the way of holiness is to be a shining one, we must be men of prayer, otherwise our whole course will be shallow and powerless. True prayer includes much more than the mere asking of favours. It is the seeking of God's face, and rejoicing in the sweet presence of the Master FOR THE SAKE OF THE COMPANY.

"Now unto Him that is able to guard you from stumbling, and to set you before the presence of His glory without blemish in exceeding joy, to the only God our Saviour, through Jesus Christ our Lord, be glory, majesty, dominion and power, before all time, and now, and for evermore. Amen."

OF INTEREST TO YOUNG MEN.

PRINCE BISMARCK maintains that the acquirement of languages does not imply talent. He thinks the ear rather than the mind is cultivated by the linguist. A Consul recently appointed to Berlin pestered his minister to present him to Bismarck. At length an interview was granted, and, throwing etiquette aside, the Consul brought his son with him. Bismarck looked annoyed, but the Consul boldly presented his heir, with the remark, "A most remarkable young man, your Highness; he speaks several languages." Bismarck turned to the minister at his side, and said coldly, "What a fine waiter the young fellow would make."

A very wealthy and somewhat eccentric old gentleman, residing in Massachusetts, journeyed to Dakota recently to look up a grandson, to whom he designed to leave his fortune, if he found the young man worthy. On reaching the town where the youth lived, the old gentleman made a quiet investigation, and the young man was pointed out to him, lounging in the door of a saloon, smoking a cigarette. He did not make himself known, but took the first train for home, and changed his will in favour of a public Institution, which he was sure would put his money to good use.

The Annual Conference of the Free Church of Scotland Young Men's Guild was held recently in Perth. The report submitted by the Secretary showed that there were now affiliated with the General Guild ninety-two Congregational Guilds. The financial statement showed a balance on hand of fourteen guineas. This Guild was practically organized in 1884, when the idea was suggested at the General Assembly of the Free Church, that the Welfare-of-Youth Committee might somewhat enlarge its operations. The object of the Guild is, in the first place, to get at the young men, and then to give them a definite place in the Church organization.

CHRISTIAN EVIDENCE COMPETITION.

AS announced in our last, we are holding over the Questions in connection with the two Divisions of this Competition until the end of the month, in order that they may come into the hands of our monthly and weekly subscribers as nearly as possible at the same time.

We shall therefore give, next week (June 23rd), Questions in our Elementary Division, in which the text-book is Whately's "Christian Evidences." In our number for June 30th, we shall give the forty Questions in our Advanced Division on Row's "Manual of Christian Evidence."

Although this Competition may not be quite so attractive to some of our readers as one or two of our former Competitions, we are satisfied that it will be heartily taken up by a large number. These are days in which the prevailing currents of thought and popular opinion are running strongly, alas! in the direction of agnosticism and scepticism, and even open infidelity and contempt of God's Word. Let us, therefore, seek to strengthen our own convictions, and those of all around us, in the grand fundamental and vital truths which God's saints in past ages have held with such heroic tenacity, and for which we feel bound, also, earnestly to contend.

We reckon on our young men readers finding this Competition specially adapted to engage their intelligent and prayerful study. We hope many will take it up *con amore*.

SCRIPTURE ACROSTIC.

THE words to be supplied *occur but once* each in the Bible. The initial letters of these missing words in each paragraph give the name alluded to. These names also *occur but once*, and *their* initials give the name of a man but *once mentioned*, who had the honourable distinction of having "willingly offered himself unto the Lord."

1. The name of one who did not hesitate to make a full —— of his own frailty and inability to keep himself from falling. He was willing to forego the —— luxuries which wealth would have placed within his reach, lest in the hour of temptation sin should —— its hateful dominion over him. Nor did he —— desire the privations accompanying extreme poverty; for in them, too, he clearly saw might lurk hidden dangers.

2. A name which a desolate woman —— desired should be applied to her, as a sign of her altered circumstances, and when —— her life would in future be a sad one, full of —— of a happy past. However —— cared for by kind relations, who welcomed her to their home, her closing days must have been happier than her sad heart could have expected.

3. The name of one whose —— plainly marked her as a faithful waiter upon God. While the world around was —— Him, she gladly heard, believed, and spoke of the glorious —— of an event which she joyfully hailed as the —— of her dearest wishes.

4. The name of one who is mentioned as —— on one occasion with St. Paul. Probably he was an —— of a striking miracle worked by the Apostle, and of the —— with which he sought to attain the —— of a fixed purpose; although as he —— it was revealed to him that at his destination he would be —— by persecution from those who —— against his God.

5. The name of a man who belonged to —— people, one of those —— which often made —— of God's ancient people. With —— purpose he —— to destroy the king of Israel. His followers began to —— themselves when they saw the narrow —— of their leader, and they decided that they would be —— their duty if they did not —— in future to the king risking his life in battle. Their —— in the necessity for this precaution was manifested by an oath to abide by this determination.

6. The name of one concerning whose life and —— we are told very little. He is by no means a man of —— in the Bible. No special qualities are —— to him; but it is interesting to notice that in the account given of the discovery it was his —— to make, there is a greatd ifference in the wording of the Authorised and Revised Version.

7. The name of one in whose family death made sad ——, because, either in wilfulness or —— ignorance, he engaged in an —— concerning which God had said that a curse should come upon whosoever undertook it. Two members of his family —— and died as the consequence of his rash folly.

The Answer to this Acrostic will be given in our Number for July 7.

THE EMPLOYMENT OF LEISURE.

By a London Graduate.

IS every one who gives a few moments' consideration to the subject will admit, the importance of leisure, in its bearing upon the whole of a man's future, can hardly be over-estimated. We only need to recollect that a man's associates, his tastes, his habits, and in a great degree his motives, are formed in the time of relaxation from business, to realise this, and to feel, perhaps for the first time, that leisure carries with it an immense responsibility.

Some, of course, argue that a young man in business needs all his spare time for physical recreation; but others affirm, and, I think, rightly, that he may advantageously combine physical recreation with mental improvement.

Few, I think, are engaged for more than 12 hours a day in business, including the time occupied in the various meals of the day. What is to be done with the remaining 12? First comes sleep, and for this 7 hours are ample, and often more than ample. But taking 7, and allowing another hour for the failure of even the best-laid schemes, 4 hours per day, or the startling total of 100 working days per year remain.

With this fact before us, few, surely, will venture to maintain that all this time should be spent in bodily recreation and amusement. But even supposing the time were much less, were only half of this, I should certainly join issue with those who might say that it should be thus spent.

A man's chief aim in this life is not to live as *long* as he can, but as *worthily* as he can; and who can say that any one is doing this, whose sole object is to make for himself a fortune; or who, beyond business, thinks of nothing but food, sleep, and amusement? I grant, of course, that one must have some exercise, but he whose spare time is limited to a few hours a day should not give more than one-third of this to it.

Taking for granted, then, that young men are not called upon, that they cannot afford, to spend all their leisure in recreation, in the usual acceptation of the term, how shall they best spend it?

Literature, Science, and Art—each has its advocates; but to me the best course seems to be to obtain a general knowledge of each. By so doing, the sources of pleasure and interest will be indefinitely multiplied, the mental horizon widened, and consequently the ability to comprehend, and to take part in, many questions of the day, vastly increased.

The first step towards the attainment of this object is to cultivate a taste for reading; and on the principle that what is worth reading is worth buying, to spend a proportion of one's spare money in laying the nucleus of a good library. One who has been accustomed to read little else but novels may at first feel at a loss to know with what to begin. Such a one would do well to familiarise himself with the structure of his own language, and if he wants an interesting, in fact, a fascinating book to start with, let him take one of Archbishop Trench's—"The Study of Words," for example.

What an added interest is given to our every-day reading by a knowledge, such as this little book supplies, of the real meaning of many words; that, *e.g.*, when we use the word "dilapidation" we are denoting, either literally or figuratively, the falling asunder of the stones of a building; or that the Latin word "trivium" (from which comes our word "trivial") originally meaning a place where three ways (*tres viæ*) meet, was after a time applied to the conversation of persons meeting at such a place; then, such conversation being generally mere gossip, to all frivolous talk, and then to everything of little importance.

At the same time let him read, not only for their intrinsic interest, but also for the style and the pure English, the Essays of Addison, Bunyan's "Pilgrim's Progress," etc.; while it should be remembered, to use the words of Dr. Angus in his "Handbook to the English Tongue," "that the book which excels all others in spiritual and moral worth, the Bible, is the richest specimen we have of the beauty and force of the old Saxon speech."

Such a beginning may lead to a desire to know something of the languages from which many of our English words are taken—of Latin, Greek, French, or German. And let not a young man with three or four hours a day at his disposal shrink from attacking one or more of those, if, first of all, he has a good knowledge of his own mother tongue.

With such books as are now issued, he may learn a great deal himself; and, although Latin or Greek verse composition may be beyond him, he may educate himself to take a pleasure in the beauties of Homer or Virgil in the original, whilst the ability to study the Septuagint, or the New Testament, in the language in which they were written, is most valuable. The mental training which the study of a language involves should also of course be remembered in any enumeration of the advantages arising from such a course of study.

Some, however, have not the aptitude for the study of languages; but because of this they are not, by any means, to think that the domain of literature is closed to them. Let them learn something of the ancient writers; capital translations of the classics with interesting biographies of the authors are now to be had; and every one ought surely to know something of the standard writers of his own country—of Chaucer, of Spencer, of Milton, of Shakspeare, of Wordsworth, of Tennyson, of Browning, of Addison, Goldsmith, Lamb, Bacon, Kingsley, Ruskin, and many others.

But, supposing a young man determines to give his spare time to the acquisition of a knowledge of the writers I have mentioned, he should go about it in some degree seriously.

Coming to a decision of this kind is practically determining to study English literature; and he would do well, either first of all, or early in his course, to read some such work on the subject as Professor Craik's, or the simpler one by Miss Buckland. He will then have a view of the land that is to be possessed, and of the treasures that are in store for him.

History and Geography too, claim attention, especially from those who have political aspirations. Every one ought to have a fair knowledge, such as he may gain from the pages, *e.g.*, of the late John Richard Green, of the history of his own country. Probably the most interesting method is to take a central figure, like Cromwell, or, say, a period, like the Puritan Revolution, and master the facts relating to that figure or period, tracing events step by step to their ultimate causes.

Then, as to the study of Science. It will be admitted that every one ought to know something of the physical constitution of the earth on which he lives, and of the various influences to which it is subject.

If we would only ask ourselves some very simple questions, questions which, when once they are suggested to us, we wonder we have not asked long ago, we shall be astonished at our ignorance. You look, for instance, at a brick wall some years old. What is the cause of the numerous holes to be observed, and what does the answer suggest?

We read of volcanoes. What is their origin? and if the answer is, "the heat inside the earth," why is there any special heat there? How has the earth come into existence? What is the origin of its motion round the sun, and what laws govern that motion?

We frequently see barometers. On what principle do they work? who invented them? and what led to their invention? And if we know that air has weight, how is it that we are not crushed by it, that, in fact, we do not perceive its weight at all? These are all questions suggested by our every-day life, and yet an investigation of them would open up the way to a knowledge of some of the most interesting and important of the laws of Nature.

Such books as Huxley's "Physiography," Geikie's "Physical Geography," or Ball's "Story of the Heavens," would not only furnish answers to many such questions, but would prove as interesting as, and vastly more profitable than, very many of the novels which are now so eagerly read.

A young man, moreover, may well bear in mind that a systematic study of some branch of mathematics is exceedingly valuable in developing the reasoning powers, and in inculcating concentration of thought.

How important, also, it is that every young man should have a thorough knowledge of his Bible! Clearly it is the duty of every Christian to have an accurate knowledge of that on which he builds all his hopes for the future; and if any one prides himself on his free-thought or materialism, is it fair on his part to pass over without careful study the Book which he professes in the exercise of his reason to reject?

With respect to the pursuit of Art or Music I shall say little, merely registering my opinion that, as a rule, it is scarcely wise for a young man to give the *whole* of his leisure to either. Music and Art alone, though most valuable in their place, do not fit a man for the actual battle of life, and for the duties which may devolve upon him as a citizen, as do Science and Literature.

To a possible objection that much reading or study necessitates confinement; and that this, after close application to business, might prove in the case of those who are not strong, a source of many evils, it may be replied that whatever a man's health, he

generally reads *something;* and the less one reads the greater the necessity that it should be profitable. Besides, botany and geology, for instance, may be studied to much greater advantage in country rambles than within the four walls of a study.

Generally speaking, in the use of leisure, as in everything else, "where there's a will there's a way," and he who desires to improve himself intellectually, will not shrink from a few difficulties which may meet him in an attempt to carry out any such plan as that proposed.

And surely it is worth an effort to lift oneself above the dead level of mere drudges and machines, and to become in a real sense an "heir of all the ages."

"Have you," says Ruskin, "measured and mapped out this short life and its possibilities? Do you know if you read this that you cannot read that—that what you lose to-day you cannot gain to-morrow? Will you go and gossip with your housemaid, or your stable-boy, when you may talk with queens and kings? or flatter yourself that it is with any worthy consciousness of your own claims to respect that you jostle with the hungry and common crowd for *entrée* here and audience there; when all the while this eternal court is open to you, with its society wide as the world, multitudinous as its days, the chosen and the mighty of every place and time? Into that you may enter always; in that you may take fellowship and rank according to your wish; from that, once entered into it, you can never be an outcast but by your own fault; by your aristocracy of companionship there, your own inherent aristocracy will be assuredly tested, and the motives with which you strive to take high place in the society of the living, measured, as to all the truth and sincerity that are in them by the place you desire to take in this company of the dead.

"'The place you desire' and the place you *fit yourself for*, I must also say; because, observe, this court of the past differs from all living aristocracy in this—it is open to labour and to merit, but to nothing else. No wealth will bribe, no name overawe, no artifice deceive, the Guardian of these Elysian Gates. In the deep sense no vile or vulgar person ever enters there.

"At the *portières* of that silent Faubourg St. Germain there is but brief question: 'Do you deserve to enter?' 'Pass!' 'Do you ask to be the companion of nobles?' 'Make yourself noble and you shall be.' 'Do you long for the conversation of the wise?' 'Learn to understand it, and you shall hear it.' But on other terms? No. If you will not rise to us, we cannot stoop to you. The living lord may assume courtesy, the living philosopher explain his thought to you, with considerate pain; but here we neither feign nor interpret. You must rise to the level of our thoughts, if you would be gladdened by them, and share our feelings if you would recognise our presence."

"HOLDING ON."

A TRUE STORY.

By C. A. P.

SOME years ago I was sent for by a friend, to speak to her husband, who was seriously ill, upon the subject of salvation. I found him very ill, and mentally very dark. Although I knew the wife to be a sincere Christian woman, I had not hitherto seen the husband. She told me that he was outwardly moral, but not a Christian. He listened attentively to precious promises which I quoted from the word of God, and by the earnest responses he frequently made to the prayers on his behalf, I felt that the Holy Spirit was working upon his heart, moving him to penitence and contrition. Pressing my hand heartily, he asked me to come again, which I did.

I found him looking for me, or rather, I trust, for the message. He appeared to drink in the glad news of God's pardoning love, through the sacrifice and mediation of our Lord Jesus Christ; he found—as all *must* find—that the foundation of his own good works failed him just when he needed a rock upon which to stand. Oh! what joy to have a Christ, to whom one may always point the poor trembling, despairing sinner.

But the dying man had so long neglected and despised the offers of love and mercy, that he feared it was now *too late* to trust Him, or expect to be forgiven. Reminding him of the hope-inspiring words, "He is able also to save to the *uttermost all* who come unto God by Him," and "him that cometh I will in no wise cast out," I prepared to leave; but fearing lest I had not made the way of salvation quite clear to him, I turned and quoted our Lord's own words, "He that believeth on Me shall *never* perish," saying as I left him,—

"If you forget all else that I have said, hold on to this promise."

"I will! I will!" he replied.

A day or two after I was hurriedly sent for. Upon arriving at his house, I was met at the door by his weeping wife, who said,—

"Oh! come in. I fear he is dying. He is looking so eagerly round for some one; I think it is for you."

As I approached the bed, I was struck with the changed expression of the dying man's countenance. Although struggling with the last enemy, the sweet peace and calm which overspread his face told that he was proving the presence of death's triumphant Victor, who has (for all who trust Him) for ever taken away the sting of death.

Again looking round, he saw me standing by, and moving feebly his hand for me to hold, with his last remaining strength he clasped my hand, and bending low I caught the eager whisper, while joy beamed in his face,—

"Hold—ing on! hold—ing on!"

Only two short words (I think his last), but to me they spoke volumes.

Oh, the long-suffering of our Heavenly Father, who even at the eleventh hour will hearken to the cry of the truly penitent, when they seek Him in spirit and truth.

But what of the agonising remorse of that one who, looking back upon numberless opportunities for getting good and doing good, which were strewn all along life's pathway, now, alas! bitterly realises that they are gone *for ever*, and that he must appear before his Lord, "saved—yet as by fire," bringing nothing but leaves?

May those who read the above true story seek *at once* to make Christ Jesus their personal Friend, that life may not be *wasted*, but filled with acts of loving service for the Master.

Oh! when all earth's joys and pleasures, its friendships and ties, its best and brightest hopes are slipping away, to be found *holding on* to Christ! Surely here is perfect rest, perfect peace, perfect safety — its ultimate issue complete sanctification and fulness of glory.

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted,"

"Little Rainbow," "Corbiestanes,"

"Our Navvies," etc., etc.

"'It is folly, pure stupid madness, John, to persist in this idea of yours, —madness which I should not be doing my duty, were I not to try and set it aside.'"

CHAPTER I.

IN WHICH JOHN BURLEIGH MAKES HIS CHOICE, AND IS THOUGHT MAD FOR HIS PAINS.

THERE was nothing ordinary about the old drawing-room of Burleigh Hall. The cabinets were richly inlaid, the furniture carved with the elaborate care of an age whose workmen loved their handicrafts, and had the leisure to do their best.

The thick satin curtains fell in straight, soft folds. They and the Indian carpet were somewhat faded. All was a little old; nothing was shabby. The marble chimney-piece, inlaid with jasper, stood yellowed by time; but then it matched the full-length family portraits of the Cavaliers with plumed hats, and lovely ladies in white satin and point lace, immortalised by the pencils of Vandyke and Sir Peter Lely, who looked down from the walls with critical gaze on their descendants, mellowed by time into complete harmony with their surroundings.

Yes, this room was typical—long, broad, and low, built centuries since. The only things of to-day were masses of roses grouped in heavy china bowls and Chelsea vases. The flowers filled the surrounding air with a faint perfume. Such a room can be found nowhere in the world save in England—"this fair realm of England," across which the simoon of civil war has swept but twice, and where, from father to son, through many generations of culture and wealth, the same home has been occupied, and handed down as a loved and treasured inheritance of a race. Through the windows of this room could be seen a parterre of brilliant bloom, and then miles of nobly timbered park, sweeping away to the feet of the green grey hills, which rose against the blue sky.

The occupants of this drawing-room were as distinct in their individuality of race and breeding as their environments.

A lady of middle age, handsome still, and becomingly dressed in mouse-coloured silk and velvet, a rich lace cap resting lightly on her iron grey hair, was seated in a low chair. By her side was a work-basket filled with silks and crewel wool. Her work had fallen neglected to the floor, and the tips of the fingers of both hands were pressed together, emphasising her words.

Half leaning against the wall by her side stood a young man, listening thoughtfully. He was tall, and might by-and-by become a stalwart figure. At present he was so thin that only an inherited grace and ease saved his form from angularity. He was by no means handsome; the forehead was overhanging, the nose long and sharp, and the jaw square and thin. Yet his was a noticeable face. Nervous twitching lines now and again showed themselves round the mouth; and when he raised his grey eyes, and looked away into space, their expression touched the beholder with sympathy—they were so eager, so resolute, and yet so questioning.

"It is folly, pure stupid madness, John, to persist in this idea of yours—madness which I should not be doing my duty, as your mother, were I not, by every means in my power, to try and set aside. Do consider what you propose doing. Here am I, with your poor father gone, and inadequate means, with three girls whom I must introduce into society, and do my utmost to place well during the next few years. I assure you my hands are full; and here are you and Arthur. Consider, without your uncle's assistance, what could I have done with you? He sent you to Cambridge, and bought Arthur his commission, and he has never grudged you your allowances. I must own he has been much gratified by the degree you took, and by your gaining your fellowship. Poor dear fellow, he never did anything of the kind himself; in fact, quite the reverse. However, let that pass. You return home with quite sufficient honour; and all your uncle asks, is that you shall henceforward appear before the world as his heir should do. Take your proper position in the county; perhaps, in time, stand for it. At all events, lead the life of a country gentleman; show a natural interest in shooting and hunting; look after the estates a little; and make this place, in fact, your own."

"But, mother, it would not be my own. After all, what could I do here? That is just what I object to; there is not enough to occupy one's thoughts, there is nothing large enough to throw one's energies into."

"John, what nonsense! Not one young man in a thousand, but yourself, would ever say such things! Here is a life of importance, ease, and pleasure put into your hands, and you would throw it aside! Who ever heard of such infatuation?

"Don't speak," cried Mrs. Burleigh; "listen. If you want occupation, and an outlet for your energies, why cannot you rebuild the village, and drain the Mere marshes? Surely, those would be good works?"

"Yes; and they sorely need doing, too. But Arthur could see to these better than I; and he would be fully satisfied to live as you wish me to do. He would make a better landowner than I; he is never happier than when following the hounds, or out on the moors. Uncle would find him a congenial companion—more so, in truth, than he has ever found me. And, don't you see, mother, where Arthur would possess a complete existence, I should starve? One of two things must happen, were I to accept my uncle's offer, and follow your wishes; either I should be constantly longing and chafing after a clergyman's life, with all its wide possibilities of regeneration for others; or—which God forbid—I should grow content and find my portion here."

The young man spoke solemnly and tenderly, but a flush of anger rose in his mother's cheeks.

"This is Christian humility, indeed," she said, speaking low and bitterly. "So you alone of all of us are to lead a worthy life; so your brother will sin if he lives as a God-fearing, honourable gentleman should. Console yourself, John; the Burleighs do not generally disgrace their name."

"Mother! mother! why won't you understand? It is not that I am better than Arthur; nay, I've far more capacity for evil in me than he has. It is only that we differ. He would lead a worthy life where I never could. And, mother, surely each man must answer for his own soul to God. If I take up this easy existence, and put it on, and wear it, I shall verily, in one sense—perhaps in all—lose my soul."

"I cannot understand you, and I do not pretend to do so," answered Mrs. Burleigh, coldly. "But this I do comprehend, that if you refuse to comply with your uncle's wishes, you need never suppose you will have the opportunity of doing so later on. Whatever course you decide on now, you elect for always. Your uncle, if he once disowns you, will not change. If you resign, against his wish, your position as the eldest son, and take yourself off to an occupation he disapproves, he has told you he shall place Arthur in it; and to the fullest degree, now and afterwards, you must take the consequences. Do not suppose, if you repent this folly, as doubtless you will, in two or three years, you will find a welcome here. What you give up to-day, you resign for ever."

"I know it, mother," said John Burleigh.

"Do not speak, John; go away, and once more think it all over. I ask this as a favour, my son."

The young man bowed, and silently quitted the room.

Mrs. Burleigh was not left its sole occupant long. She was soon joined by her brother-in-law, a handsome, hale man of sixty, dressed with exquisite neatness in a suit of light grey.

"Well, Olivia, what do you make of the boy? Have you convinced him all these high-flown notions of his are rubbish?"

"Hardly, I fear; but at all events he has gone away to think it over again. I cannot imagine what possesses him."

"Nor I. He was always a queer fellow, full of enthusiasm and crotchets. He reminds me more than any of your children, of my brother and of our mother. Poor thing, how early she died," continued Mr. Burleigh softly. He stood opposite a picture, more modern than any of the rest, which represented a lady seated on a garden chair with two little boys—twins evidently—one on her lap, the other standing beside her. Her right hand rested on this one's shoulder, her left arm encircled the cherub on her knee, but she looked at neither of them. Her eyes, eager, questioning grey ones, seemed to gaze from the canvas directly into Mr. Burleigh's own.

"Their eyes are the very same; I've often noticed it," continued the squire gently. "Have I ever told you, Olivia, of the last time I saw her. No? Well, perhaps not. It was a summer morning; I was in bed; the nurse—old Bryant, you know—carried me in my little night-gown into my mother's room. I suppose she was wanted for something, for she put me down on the floor, and I, feeling very full of fun, began jumping about. Johnny's cot stood at the foot of my mother's bed. She would never let him sleep out of her room, because I think he was subject to attacks of croup. At all events, the cot was there, but Johnny was not in it. I saw him afterwards, standing crying behind the bed curtain. Well, I jumped up to see where he was, and hit my chin on the brass bar which ran round the cot. I bit my tongue very severely, it bled badly, and between pain and fright I screamed. Bryant caught me up, and putting her hand over my bleeding mouth, was hurrying away with me, when I heard my mother's voice saying—the only words of hers I can remember—'Bring him here, bring him to me, poor little boy.' Bryant carried me to the bed. My mother was lying supported by pillows. I know now she must have been dying; then I only thought how pale she looked, and how sweet she was. She feebly gathered me to her side, and comforted me till I fell asleep. 'My little one, my little one,' she said over and over again. When I awoke I was back in the nursery, and Johnny was crying bitterly, and said we should never see our mamma again."

Over the beautiful face of the pictured lady a smile lingered, and the squire gazed long and earnestly up into those eyes.

"We were very small orphans, only three years old!" repeated Mr. Burleigh in the pitying tone of a tender spectator.

At length he forced himself away from the picture, and took a seat near his sister-in-law.

"You know, Olivia, my brother's children are very dear to me, and for the sake of his likeness to your husband and to his grandmother, I have always put up with Jack's whims; but you are also aware I mean what I say, and if the lad persists in becoming a parson, he will never stand in my place. My name-sake Arthur must sell out. The boy will be only too glad to do so, to live at Burleigh, and we shall get on capitally together. The estates are not entailed, and I intend to keep my word. I shall leave Jack something in my will, but not a shilling—not even as an allowance—will he receive during my life. He shall pay for his fancies the full pound of flesh."

"I have told him how foolish he is, and how certainly he will regret it."

"Regret it! I should think so, indeed. What a fine lad—a gentleman—a clever fellow, too, like John can see desirable in running in and out of old women's cottages, preaching long sermons, and living the life of a rabbit—no go, no excitement in it, and not much use either—I can't imagine. Just think, he'll be a curate in a long sleek coat, playing croquet with girls! Pshaw! and finish by settling down in a living — a starving, more properly speaking, having a wife and about twenty children dragging after him, and not enough cash to keep one decent horse, even! And all for what? Why, to set himself up as a pattern man, and find fault with his neighbours. The Church is a respectable institution, and I admit a most necessary one—I'm the last man to say anything against it; but to have one of my nephews a parson! I never thought I should come *to that*." And the squire rose and walked impatiently up and down the length of the room.

Mrs. Burleigh wisely kept silence. She

was as vexed and angry as was her brother-in-law; still, her heart clung to her eldest boy, and she did not wish by any word of hers to increase his uncle's indignation. Half an hour of uncomfortable silence passed, and then Mr. Burleigh spoke again.

"I might say hard things, and tell the boy how *ungrateful* I thought him. Please, Olivia, don't interrupt me," he continued, holding up his hand, as he saw Mrs. Burleigh about to speak.

"I have no wish to do that. There can be no thought of obligation between the boys and myself; still I *am* hard set, and might possibly show it in a way I should regret afterwards. So we must let it stand thus: If he remains, the subject is from henceforth dropped entirely; if he goes, he goes at once, and does not pain me by a farewell. Will you arrange this? Thanks." And once more Mrs. Burleigh was alone.

The anxious silence remained unbroken all the afternoon. The setting sun was casting long shadows from the trees over the grass; some farm labourers plodded homewards across a corner of the park; crows came lazily flapping to their nests in the elms, cawing to their comrades, when Mrs. Burleigh heard the well-known footstep of her son on the flagged terrace, and she swiftly rose from her seat, and advanced down the room. John entered by the long window at the eastern end. The sunset was behind him. His face was strangely pale, for during all those summer hours the fight had been refought. Again and again he had been beaten down. He was exhausted now, but the victory was gained. His hands did not tremble, though they were very cold as he took his mother's in his own.

"Well, John?"

"Mother, I must follow my conscience."

"Others can do a clergyman's work better than you."

"Yes, mother, but I must do my part."

"It is too great a sacrifice."

John Burleigh now looked away from his mother's face, which he had been regarding with such tenderness, and gazed forward. Was he looking as his Master looked when He hasted to go up to the scene of His death, to the cross? If so, a like peace was his. Mrs. Burleigh's words were stilled. She could only look up tearfully into his face, the face of her firstborn son, who, she was convinced, was ruining himself; and yet, through that conviction an uneasy thought would obtrude itself. Was he indeed, after all, choosing well? He spoke, and it seemed that he was echoing and shaping definitely her idea when he said,—

"Mother, Christ said, 'I in you.' He gave His life a ransom for many. Not only on Calvary, though there He was able to say, 'It is finished'; but all through. If He is 'in us,' we are bound to give our lives also for those others He gave His to win and save."

"Then you *are* going, John?"

"Yes, mother, I am going, at a very humble distance, and very weakly, to follow my Master."

He stooped to kiss her, and his mother flung her arms about his neck, and as she bid him farewell, blessed him.

Then John Burleigh turned and left the lovely old home of his forefathers without a backward look, but with a bent head and straining hands clasped behind his back. His feet were also pressing the road to Calvary unhesitatingly and firmly; but he felt every jagged stone which cut them, and though he did not shrink, John Burleigh marked the upward path with his blood.

CHAPTER II.

IN WHICH IS ROUTINE.

A YEAR had passed, and the surroundings of John Burleigh's life were different indeed.

The wide-sweeping park-land, the cool greenness of deep woods, the tinkling song of little streams, and the thousand sweet scents and musical sounds of God-created country scenes, were exchanged for the hot square, the close atmosphere, the crash and roar of streets crowded by traffic, over-voiced by the rattle of machinery and the clanging clash of hammers in the iron-works. Even to breathe was pain to those who passed the wire-drawing factories, for you must needs inhale sharp, acid points of steel dust. And it was not thistle-down, but particles of cotton fluff, which trembled in the air, and fell softly on the thick dust of the pavement.

Not a pleasant neighbourhood to abide in. The dreary Square, with its iron boundary of railings, did not boast a single green thing. Its two or three miserable trees, and scant array of dwarfed shrubs, were smoke-dried, and that which ought to have been a lawn of turf, was, in truth, a patch of bare, baked soil.

Yet it was in one of the houses of St. Andrew's Square that John Burleigh and his two fellow-curates lodged. To the melancholy, reduced widow who let the rooms, they seemed what she always called them, "very desirable apartments"; but used ever to the refinements and exquisite purity of a gentleman's house, John Burleigh's very heart sometimes sickened at his vulgar and scarcely clean environment. He was hardly conscious that he was giving his daily life a sacrifice, but certainly one part of his nature was dying within him.

He had calculated on giving up all the great enjoyments of life, but he had never understood till he lodged in St. Andrew's Square, how very important the little ones are, how dependent human nature is for comfort on minutiæ.

John Burleigh was ashamed of himself for noticing the hundred trifles which daily annoyed him, and certainly no one save himself suspected their existence. His thanks were always so ready and so cheerful, that his landlady was accustomed to tell her friends—"Mr. Burleigh is the highest born of my gentlemen, but he is the easiest pleased, he never says anything is wrong."

His fellow-curates were good, hard-working men. His senior had been for several years with the Vicar of Saint Andrew's, Canon Feedman, and looked up to him as the most perfect of men, and a pattern to be minutely copied. Mr. Smithies, the third of the trio, was a good-tempered, blundering boy, full of kindness, and perpetually surprised at his own position; "awfully glad he got through" the Bishop's examination "without any nonsense—he always expected he should be sent down"; and then he would tell Burleigh what "awfully stiff" papers he had been given.

John Burleigh had been offered several curacies, and had chosen St. Andrew's, tempted thither by the prospect of much work, and also by the reputation of Canon Feedman as a Parish Priest. He came to the great manufacturing city full of enthusiasm. He told himself that if his Lord was here in England, it was to just such a centre of humanity His heart would have drawn Him. He came praying that he might tell the old, glorious story of salvation in suchwise, that hearts might be touched by the redeeming love and power of which he himself felt the force. He hardly knew how this was to be done; and he came, with true humility, to Canon Feedman to learn. And he learnt a great deal, but not as he had expected.

Canon Feedman did everything by system,—a very admirable and complete system, arranged by himself. He took a fair share of the work, and saw that his curates did their three-fourths punctually and thoroughly. Sunday and week-day services, mission services, district visitors' meetings, mothers' meetings, teachers' meetings, communicants' classes, choir boys' classes, practisings, fathers' classes, young men's classes, and gatherings of a score other kinds, followed each other like clockwork, and were going on in the two other districts of the parish, besides the central one, all at the same exact moment. Not one of the three curates ever could calculate where or when the Vicar would appear, and Mr. Smithies, with a groan, frequently remarked, "One thing I *do* know—when I expect him least, the Vicar is sure to be there; indeed, he seems *always* there."

The merchants and manufacturers "believed in Canon Feedman," and he never undertook any scheme which he did not successfully carry through. He could fight in a good cause—his causes were always good—never feel a rebuff, or stagger under an attack. And here was the secret of all his success—he never gave in, but held on with dogged persistency to his purpose. So the Canon was looked up to, respected, even feared. But no man can have everything—and *he* had no love. He was constantly doing kindnesses, but he took care never to be imposed upon.

He always got what he wanted, and, perhaps, he did not need love,—certainly, none was offered him.

John Burleigh, with his highly-strung nervous system, with his keen, quick sympathies, shrank into himself whenever he met the Vicar.

Canon Feedman knew him as an earnest, diligent worker, failing here and again in system, sometimes unpunctual, and with a habit of preaching sermons which had an unusual ring in them. "Very true, quite true," the Vicar would say in the vestry; "but so strangely put. Could you not say the same things in language one could recognise?"

"I say what I have to say—as it comes to me," John would humbly remark.

"Just so," the Canon would reply; "but could you not say it like other men? Now, I should advise you to read a course of sermons, and notice the style. I will lend you a few."

John Burleigh read half through several so recommended, but would throw the volume weariedly down, and take up his worn Greek Testament instead; and there was he the following Sunday preaching "as strangely as ever." But the poor loved to listen.

They crowded the Mission Room of which he had the special charge, and even the little children would leave their play in the hot courts to run forward and seize hold of his coat or make their little curtsies right in front of "Mr. Bur'ey" as he passed their mother's doors. And sick folks sent for him, and listened to the long-neglected message of eternal love with glistening eyes; and many a one passed more bravely into death's cold waters, because to the very brink they clasped his hand.

LEAVES FROM THE LOG OF A GENTLEMAN GIPSY.

By Gordon Stables, C.M., M.D., R.N.,

Author of "The Cruise of the Land Yacht 'Wanderer'; or, Thirteen Hundred Miles in my Caravan," etc., etc.

LEAF II. (*continued*).

THE meadow in which we lay was rich in wild flowers, for the summer drought had not yet come to scorch them up. So my little daughter and I spent a quiet and happy Sunday. Now and then, during the day, well-dressed children crowded round to gaze and wonder at the caravan. While on the road, the children one meets are a never-failing source of amusement and interest.

On this particular day we made the acquaintance of little Maggie May, who never before Saturday had seen aught save bricks and mortar, and the soot-begrimed stumps that grow in squares, and are called by courtesy, trees. Place children like Maggie down anywhere in the green country, when June leaves are on the trees, and the wild roses are beginning to blossom and go trailing over the hedges, when the sky-blue speedwell, the bright orange bird's-foot trefoil, and the scarlet pimpernel, adorn the sward, and daisies and buttercups are growing in the meadow-lands—and a new world is spread out before them.

Nothing delights country children more than to chaperon their wee town cousins, and to show them the wonders and the sights, feeling all the while just a little proud of their own superior knowledge, and a little pity for the ignorance of the city-bred bairnie.

Little Willie Wyatt and his sister had been taking Maggie for a ramble—I could tell this much from their talk as they were squatting beside the *Wanderer*—showing her woods and fields and the river, the great trees and splendid hedges, and birds' nests with blue eggs, and red spotted eggs, and eggs of darkest grey, and the great railway embankment, where the wild strawberries grew in abundance, and crowds upon crowds of starry ox-eyed daisies; to say nothing of horses and cows, the old mill-wheel and the smithy.

As she sat on the grass, there was a faint flush on Maggie's pale face, and a glad light in her eye; and she was laughing like a little daft thing, as Willie read her fortune with stalks of the seedling rye-grass.

"Now, Maggie," said Willie, "I'll tell you whom you'll marry."

And he began pulling seed after seed off, till he came to the last, giving a name to each: "Tinker, tailor, soldier, sailor, rich man, poor man, gentleman, plough-boy, 'pothecary, thief. Tinker, tailor." It was the last seed, and Willie roared, "Ha! ha! ha! you'll marry a tailor!"

And Maggie had to roll on the grass, to laugh at the very absurdity of the thing.

But Willie pulled another seedling grass.

"Let me see now," he said, "how you'll go to church," and he commenced pulling off the seeds as before. "A carriage and pair, a coach and four, a dog-cart, a barrow, a donkey's back." And so on over again, till the very last seed ended at "barrow."

"Ha! ha! ha! Ho! ho! ho! Marry a tailor, and go to church in a barrow!"

Maggie did not laugh this time. It was getting serious, and tears stood in her blue eyes; so her cousin Willie hastened to tell her a story, and we who had been listening in the coupé retired to dine.

If the above proves anything, reader, it proves how easily one can be amused while on the road; and it proves also how light-hearted, how happy and healthy one must be, to *be* so easily amused.

"I came across a quaint village like my sketch—the name I forget."

LEAF III.

TO KNOWL HILL, MARLOW, BEACONSFIELD AND AMERSHAM—AN ADVENTURE IN A LANE—LOST IN THE WOODS.

". . . Lost in a thorny wood,
That rends the thorns and is rent with the thorns,
Seeking the way and straying from the way,
Not knowing how to find the open air."

IT was very early in June, 1886, when, after many short tours here, there, and everywhere about the country, I started on my usual long, summer gipsy-holiday.

My two horses, Captain Cornflower and Polly Pea-blossom, were champing their bits, impatient to paw the road, and looking as fresh as the daisies that starred the lawn. The coachman stood by their heads, reins in hand, ready to mount. Hurricane Bob, my Newfoundland, and faithful companion in all my journeyings, was already on board, and my valet was on ahead with the tricycle.

It only remained to bid my family adieu, for we would be gone as many months as it would take us to steam to Australia and back.

The coachman and myself have at last mounted the coupé, the village children give a farewell cheer, and away we rattle at seven knots an hour, heading up the Bath road, Maidenhead way.

There is a dull, leaden sky overhead, with "water-dogs" drifting about in it, and the breeze is so strong, that when we stop some time after to say good-bye to a friend we have met, the *Wanderer* rocks like a veritable yacht in a sea-way.

At Knowl Hill a real gipsy fair is on, and caravans, with tents, are spread all about the grass, the owners of which smile as we pass, and wave us good-bye kisses.

The road to Marlow is a rolling one, with some very steep places, but we do it in grand style, and find this charming Thames-side town is all *en gala*.

We are visited by many, stared at by hundreds, bait our horses at the Greyhound—a pleasant inn and kindly landlord—and trot on.

We do not know yet where we are going, and we do not care. That is the best of gipsying. We are as free as the wind that rocks us to sleep of a night. Care belongs to people who live in the world. We—my servants and I—are out of the world. So in this journey I shall do as I please, zig-zag about, or go straight on, as the whim takes me.

Oh, but troubles may come! Yes; but as long as horses and men are well, I can laugh at these.

Well, it is not long before we do get something to laugh at. We are near a village by the river-side, and want to rise away up over the hill, to the table-land above. We have been warned against Woburn Hill.

Here it commences to rain hard, and the trees become green-leaved shower-baths. A flicker of lightning now and then, and some determined rolls of thunder, do not tend to raise our spirits, nor improve the roads.

* * * *

Just at this moment a country lad came in sight, as he turned a sharp corner.

"I say, my boy, which is the way to Beaconsfield?"

"Through the village and straight up."

"But we want to avoid Woburn Hill. Isn't there another road?"

"I don't know no ways but up the lane."

"Can we do it easily, boy, think you?"

"Why, ye—es; t' old baker's pony does it easily."

So on we went. But once into that hilly lane, we were in a fix. It was too narrow to turn in. It was cruelly rutty, as rough as a river-bed, and closely over-hung by trees. It was, moreover, a good mile and a half long.

By the time we reached the top, after many stoppages, we were all dead tired, and the branches had smashed one carriage lamp to smithereens. We ought to have unshipped them, and took a memo of this fact.

We would gladly have stayed the night at the next inn, but the stabling was bad, so we got on to Beaconsfield, finding a civil landlord, and a good meadow in which to bivouac.

Both myself and valet, who sleeps in the after-cabin, were awakened by the cantrips of a Welsh pony about five o'clock, and as the morning was fine, we did not go to sleep again.

One's meadow-mates do disturb one's sleep at times.

We all felt thankful we had not come to grief in that awful lane, and determined to avoid such places in future, if possible. Suppose on that hill we had met a carriage coming down! There was no room to pass. Here is an experience of mine of the year before.

AN ADVENTURE IN A LANE.

During all our caravan rambles we have met with such kindness and hospitality, that it would be beyond my power, if I wished it ever so much, to recall even half a dozen instances of a reverse nature. I will let these, with one exception, slumber in the background of oblivion. Even this should rest with the others, but there was something quite comical in the adventure, and, moreover, it taught me a lesson which I am not going to forget.

I have located the lane in which the adventure took place in Nottinghamshire. But it is as well to say at once it was in quite a different part of the country, which, for fear of even seeming to hold any one up to ridicule, I must not name.

The day was very fine, a delightful, warm, dreamy wind was blowing, the sky above cloudy, with rifts of blue, from which the sun shone brightly down whenever a chance occurred. The lane was a long one, and a very narrow one, with somewhat high banks at each side, all ablaze with wild flowers.

"I must have some of those flowers," I said to my coachman, "but I trust no conveyance will enter the lane till we get clear of it."

"That is unlikely, sir, I should think," was the reply; "you see it is just one o'clock; farmer folks will be all at dinner, and the gentry having lunch."

"Well, pull up."

I soon had gathered a bouquet of wild flowers that, with artistic sorting, would make the *Wanderer* gay for a week or more.

On we went again, and were soon considerably more than half-way through the lane. There was still, however, a good half-mile to traverse.

"We'll soon get clear away," I said.

For once I had reckoned without my host, for the words were scarcely out of my mouth ere a four-wheeled dog-cart and pair appeared round the corner.

Here was a fix. And a very disagreeable one it seemed.

Both the caravan and dog-cart were pulled sharp up within forty yards of each other, and from the back part of the latter suddenly bobbed up a red and wrathful face, flanked by a clenched fist. The words, I daresay, were meant to be appalling, but they did not have that effect. In fact, from the very commencement, I was impressed by the humour of the incident more than anything else.

"What is the meaning of this obstruction?" roared the owner of the red face. "Back you go; clear the lane immediately with that show. D'ye hear me, you gipsy people?"

I got quietly, leisurely down, and advanced to the dog-cart.

"This is my card, sir," I said. "You will observe that you have made a slight mistake; I am neither a showman nor a gipsy, but a naval officer touring for health and pleasure."

He almost spat the words of his reply at me,—

"I don't care a farthing who you are. I am a magistrate of the county, sir; I order you back—back—back—back, sir; and if you refuse to go, I'll have the law on you, as sure as wheels are wheels."

"Now," I said, "let me speak. Your manner is extremely offensive, but I take no heed of it. I am a medical man, and I observe you are of an excitable, not to say apoplectic diathesis. If you will permit me, I shall return to the caravan, and bring you a dose of *bromide;* you may then be able to talk more calmly and rationally."

"I am a magistrate of the county, and going to a public meeting; and I order you back—back, sir, back."

He was getting purple in the face, and shook his fist in a most threatening manner.

"First and foremost," I replied, "I am a Scot, and Scotchmen never go back; secondly, it is impossible for me to back my carriage; thirdly, after the way you have talked, I would not do so if I could. I'm sorry for the public meeting, but beg to call your attention to this rule of the road,—when two traps, such as yours and mine, meet in a lane like this, it is the duty of the light one to back, and give place to the heavy."

"*You*, sir, for aught I know a strolling mountebank, order *me* to go back—*me*, a magistrate of the county?"

"Pardon me," I said, "Mr. Magistrate-of-the-County. I have not ordered you back; I have but suggested the propriety of your going back. You may go when it suits you. Time, sir, is no object with me; yonder is my house, or hotel-on-wheels. I'm going to economise the delay by having a comfortable dinner. If you do not choose to clear the lane, we will lie here for the night, or for a week if need be."

I bowed to the magnate, and retired.

The nose-bags were put on, and I settled myself quietly on the coupé, among the rugs, with "yesterday's newspaper." We were in a state of siege, it is true, but one that I felt sure must soon be raised.

Nor was I wrong. I daresay the magistrate of the county cooled down a little, for in less than twenty minutes the driver of the dog-cart, a quiet, inoffensive-looking man, and certainly more of a gentleman than his master, came up and touched his hat.

"I beg pardon, sir," he said; "you mustn't mind master; he does be a bit wrathy at times—touchy, you know."

"Has he sent an apology?" I inquired.

"Not he, sir; he'd sooner die than do that; but he sees the sense of going back. And if you'd let your servants help a bit, we'll take out the horses, and then lock round the trap. I think we can manage it."

"Delighted, I'm sure."

In ten minutes more the dog-cart was turned, and the siege was raised. Off came our nose-bags, and away we went next.

But on the wide road at the end of the lane we found the irascible magistrate standing up in his trap, and, with closed fist and purple face, declaiming at us with terrible vehemence. With the rattling of the caravan, however, I heard not a word he said; and it was probably just as well. Only, ever since then, when I come to a narrow lane that I must get up, I send on my valet and tricycle to the other end, to prevent any conveyance entering till we are fairly clear.

We were soon on the road, and passing through a delightfully well-wooded and fertile country. Five miles *would have* taken us to Amersham, but twice as many hardly did. Our evil star seemed still in the ascendant. We came to cross roads, which were not in my guide-book nor maps, and no intelligent individual was anywhere near to direct us.

I walked half a mile, or nearly so, to inquire of a man hoeing turnips; I had to walk back as wise as I went. The man was as deaf as a door-nail. Even deaf men can hoe turnips, but they cannot tell you the road.

So we bore away to the left, and got lost in the woods. But what bewitching woods they were—waving cloudlands of green, flooded with the melody of birds.

What cared we for being lost? Nothing. We reached Amersham in the afternoon.

Amersham is quaint and quiet, with queer old casement-windowed houses, many of them much out of the plumb, and a queer old court-house. There is no railway here to deafen one, and we could not get a daily paper. But Amersham is delightful nevertheless, nestling in a verdant hollow, among hills and woods.

We passed on through quite an enchanting country, a drowsy one evidently; and perhaps I fell asleep on the coupé, among my rugs, with Bob for a pillow, for the last entry in my log talks of "hedges houses high," of "rows of spruce trees and silken-leaved beeches, and showers of May blossoms, borne along on a breeze, and falling around us like snow-flakes."

If I did sleep, surely my dreams must have been happy ones, amidst such pleasant surroundings.

THE MAN: OR HOLINESS IN LIVING.

By the Rev. J. Hiles Hitchens, D.D., F.S.Sc.,

Author of "*Ecce Veritas*," "The Young Men of Scripture," etc., etc.

WHEN the heathen physician, Galen, had finished his study of the anatomy of the human frame, it is said that he fell upon his knees and cried aloud: "Oh, the surpassing wisdom of the Creator! For this is the consummation of art, when a piece of mechanism is so exquisitely contrived, that, once set in motion, its functions shall be regular, constant, orderly, voluntary; that no conceivable power shall be wanted, and yet none wasted; that no link be missing, and yet not a thread in excess; that every joint be supplied of the fittest matter, made of the most proper strength and texture, and shaped in completest form; that the whole minister unceasingly to the necessities of the least, be self-nourishing, self-repairing, self-preserving, in subordination to the law of its building and the will of its Maker!"

Shakespeare was possessed of similar thoughts when he wrote, "What a piece of work is man! How noble in reason; how infinite in faculties; in form and moving, how express and admirable!"

Another eminent writer has said: "*We* are the miracle of miracles—the great inscrutable mystery of God."

And Lord Herbert wrote: "Whoever considers the study of anatomy, I believe, will never be an atheist; the frame of man's body, and coherence of his parts being so strange and paradoxical, that I hold it to be the greatest miracle of nature."

In such a line we have, doubtless, found our thoughts working, when we have considered, for a moment, the wonderful structure of the human body. We cannot think of the circulation of the blood, the complicated network of nerves, conveying sensation and transmitting volition, the labyrinth of arteries, veins, and minute ducts, all ingeniously hidden "under a moulded structure of grace and beauty and proportion," and all expressing themselves "in the flexibility of the sculptured face, in the play of every eloquent feature, in the moving language of contracted brow, curling lip, and flashing eye," without feeling that man is a mysterious yet invaluable piece of Divine workmanship. We understand, then, and appreciate the answer of M. Boudon, an eminent French surgeon to Cardinal du Bois, then Prime Minister of France, when he was called to perform a serious operation upon the Cardinal.

Du Bois said, "You must not expect to treat me in the same rough manner you treat the poor wretches at your hospital." "My lord," replied the surgeon with great dignity, "every one of those miserable wretches, as your Eminence is pleased to call them, is a Prime Minister in my eyes."

But man is more than a marvellous piece of mechanism. He is a *rational being*. We each possess a mind capable of receiving impressions from external objects. These ideas, received by the senses, though innumerable and diversified, can exist in the mind without occasioning uneasiness by their multitude, or confusion by their variety. We can retain these many and multiform ideas for fifty or sixty years; we can compare them one with another; we can arrange and classify them; we can form new ideas and construct new theories from them. Full of eyes, our minds are endowed with the power to look before and behind, on things external and internal, and even so to introvert the gaze as to determine on the propriety of those very thoughts and desires. The mind has sovereign dominion over the body, can make the strong frame falter and fall, or convert the delicate flesh and nerve into an impregnable fortress.

Man is also a *responsible being*. The brute is guided by the teachings of instinct, but man has a conscience, a power God-given, and given to represent God and plead in God's stead. Man has a will able to choose that which the conscience commends, and shun that which it denounces. As a rational being, the Infinite One speaks to man in His Word, by His dealings, and through His Spirit; places before him invitations of fervent affection, and promises unparalleled; plies him with reasons why the overtures should be accepted and the promises trusted; and incessantly reminds him that, for all these things, God will call him to account, that there will come a solemn hour when the cherished secrets of all hearts shall be disclosed, and He will judge the world.

Add to this, further, that man is an immortal being, that, "unlike the brute," when he dies he shall live again. The Divine Artificer has breathed into man a "living soul," an immortal guest which is not dependent for its life and power of action on its connection with the body—a soul with capacities of marvellous development and growth—a soul that, in a disembodied state, can live supremely young and happy. The wise man tells us that "the spirit of man goeth upward," and every man has within him the consciousness of a nature which requires immortality and yearns for a larger sphere and a grander scope.

We must also remember that man is a *redeemed* creature. The Almighty so fondly loved humanity, that when we had in Adam forsaken and forgotten Him, He sent His Son to tell us of His love to us, and His readiness to receive us once again; sent His Son to reveal His true character, to remove all hindrances to the sinner's return, and to impart all required assistance in our efforts to discharge our duty. To accomplish this great work, Divinity tabernacled in the flesh. Much as some men may depreciate flesh and blood, Christ robed Himself in it, lived thirty-three years in it, suffered in it, and then took it up to heaven itself, and, in a body like our own, sits this very moment at the right hand of the Father.

It is sad that a creature possessed of reason, a responsible, immortal, and redeemed being, should sink so low as man has done. There are men, alas! who knowingly fly counter to the direct intentions of the Creator, men who stoop to the vilest acts, and indulge in habits of the most revolting kind, men who go beneath the level of "the venomous snake, the poisonous toad, the fœtid vulture, or the prowling hyæna." Such creatures, hateful as they may be to us, *do* remain in their own natures, but licentious men, drunkards and libertines, go out of their natures, and surpass the very brute in villainy.

Hugh Miller has well put this point in his "Cruise of the *Betsy*." He says: "Some creatures are unquestionably used as scourges, but, perhaps, the less we mortals say about such animated pests, the better. They act up to their own organisation, but never beyond, whilst it is far otherwise with mankind. The serpent employs its poisoned fangs to procure food or avert peril, real or fancied; the jaguar uses its terrible incisors in the destruction of its prey; and the shark avails itself of its dental apparatus to assuage its appetite. But man must surely have become an immensely worse animal than his teeth show him to have been designed for; his teeth give no evidence regarding his real character. Of our racks and thumbscrews, our inquisitions and oubliettes, our noyades at Nantes, and our mitraillades at Lyons and Toulon, there is no prophetic intimation in our dentology." Yes, truly, man has become more vicious, more cruel, more blood-thirsty than he was ever intended to be. The records of our daily journals only serve to show how low man can sink—man who was made but a little lower than the angels.

But let us not forget, on the other hand, how high it is possible for man to rise. In *this life* the rebel creature may be renewed, and by the grace of God, and through the power of the Holy Ghost, become so transformed in feeling, aim, and affection, that he may sing with perfect truth and confidence:

"So nigh, so very nigh to God,
I cannot nearer be;
For in the person of His Son,
I am as near as He.

So dear, so very dear to God,
More dear I cannot be;
The love wherewith He loves His Son,
Such is His love to me."

And in the *other* life he may become the possessor of a perfect nature, the partaker of a perfect joy, the occupant of a perfect world, and the companion of a perfect God. In the other world the emancipated spirit will cast off all relics of sin, will imbibe felicity at the very fountain-head, and dwell in the house of the Lord for ever, receiving Heaven's choicest benedictions, and serving with untiring delight. All this blessedness and perfection is within the reach of every man. The guiltiest of Adam's sons may, through faith in the complete atonement of the Lord Jesus, enjoy this rich heritage, and eventually be possesor of all the perfection I have alluded to.

It is not enough that the head should be right if the heart be wrong, nor the heart right if the head be wrong. It is not enough that we be discreet in our choice of what we will see, if we are not cautious in what we say. It is not enough that we be temperate in what we eat and drink, if we are not equally vigilant in what we hear, think, and feel. Our walk before men may be admirable, whilst our actions in secret may be detestable. Wherefore "I beseech you, by the mercies of God, that ye present your bodies a living sacrifice, holy, acceptable unto the Lord, which is your reasonable service."

SAVED.

Poem suitable for Recitation.

IT is only Tim the drunkard,—the rest are safe to-night,
Safe in the heart of home, safe in the warmth and light.
Only Tim the drunkard,—the boy that is old in shame,—
Who broke a father's heart, when he stained a righteous name.
Tim, the village curse — Tim, the neighbours' woe,
Out in the mountain-storm, out in the blinding snow!
Will *no one* go to find him? is there not one to care
That the lad must perish alone in the bleak, unpitying air?
Perhaps in their secret thoughts, some by the fireside cry,
"It is only Tim the drunkard! it were better that he should die.
What hath he ever wrought, save a world of untold fears,
What hath he ever brought, save an agony of tears?
Better he perished now, where the pure white snowdrifts roll,
Than add to his boyhood's crimes, and the guilt on his young lost soul!"
Why should they go to seek him, roaming far and wide?
Perhaps he is dead *already*, away on the mountain side;
Turned out to the tempest when his last poor coin was spent—
Wandering to the darkness! they know not *where* he went.
Children are fast asleep, birds hide deep in their nest;
Red lights one by one tell of home and rest.
Homesteads drop to slumber, every warm light dies,
Only the snow comes down, and the bitter wind outcries.

A woman with thin grey hair, and agèd feet unshod,
Is treading the stormy hills in the strength of the pitying God:
Only Tim the drunkard, only the widow's son,
The babe that lay at her breast, her poor, lost, wandering one,
Helpless, save but for *her!* her arms are weak and chill,
But the mighty mother-heart must seek, must save him still.
Oh, weary, naked feet, that many a mile have gone!
Cry they not out against him, as they faint and quiver on?
He stole her shoes for drink, he dragged her to disgrace,
But nothing smote his heart, save the love-light on her face.
Trembling she calls his name. As the winds go sweeping by,
Hears she not, as in childhood, a sobbing, slumberous sigh?
"Oh, wake my darling, wake; it is *death* to slumber here;
Thou canst not, shalt not perish whilst thy mother's lips are near."
He moves, he feels her hand, he reads the truth at last,
That his old, sick, trembling mother across the hills hath passed.
"I have brought thee food, beloved! look, here is bread for thee;
Rise up, my boy, my darling! come home, for love of *me*."

That was the *last* he heard; he started up to know
That the agèd face was sinking quietly to the snow,
He felt the cold limbs stiffen, he chafed her hands in vain,
But in the yearning task his own grew warm again.
Daylight found them there—*he* with tortured tread
Moving to and fro beside her still white bed—
She, at rest for ever, and the weary feet
Tended by the angels within the golden street!
And he seemed to hear her voice, across the hills she trod—
"More than a mother's love is the love of the Son of God!
A mother may forsake, a mother may forget,
But, oh! *remember*, child, the Saviour loves thee yet.
All other friends may tire, all other patience die,
But to thy load of sin Jesus the Lord draws nigh;
He opens tender arms, He shows the light above,
He is whispering, '*Come home!*' unto the Father's love."

Tim lifts up his face, up to the morning sky—
Only God can hear the young heart's anguished cry,
Only God can answer; He alone can see
The glorious work of grace in the blessed years to be.
He alone can tell, whose mercy rules the whole,
The use that He shall make of this one rescued soul;
For Tim, the *saved*, shall rise, and the grand good news begin—
That the blood of Jesus Christ cleanseth from all sin,
And at the last great day, 'mid songs of deathless joy,
The mother in fair heaven shall see her long-lost boy,
Shall see him passing in with a shining, star-set crown,
And leading *many*, *many*, at the Master's feet bow down.

MARGARET SCOTT HAYCRAFT.

ALMOST sweet is unsavoury; almost hot is lukewarm. Almost a Christian is like Micah, who thought himself a Christian because he had gotten a priest into his house. Almost a Christian is like the Ephraimites, who could not pronounce Shibboleth, but Sibboleth. Almost a Christian is like Ananias, who brought a part, but left a part behind. Almost a Christian is like Eli's sons, who polluted the sacrifices; like the barren fig-tree which Christ rebuked; like the virgins, who carried lamps without oil; like the willing-unwilling son, who said he would and then would not.

WE should carry up our affections to the mansions prepared for us above, where eternity is the measure, felicity the state, angels the company, the Lamb the light, and God the inheritance and portion of His people for ever.—*Jeremy Taylor.*

I THINK people can never have enough of religion, if they are to have any.

THOUGHTS should be suffered to come into our minds only as men are permitted to go into a garrison, who are first strictly examined, who they are, whence they came, and what is their business.

THERE is, I know not how, in the minds of men a certain presage, as it were, of a future existence, and this takes the deepest root and is most discoverable in the greatest geniuses and most exalted souls.

IF there's a Power above us
(And that there is all Nature cries aloud
In all her works), He must delight in Virtue;
And that which He delights in must be happy.—*Addison.*

MEASURE not men by Sundays, without regarding what they do all the week after. —*Fuller.*

IF I have seen further, it is by standing on the shoulders of giants.—*Sir Isaac Newton.*

IN the course of a long life I have observed that when people are getting religion they are full of self-abasement, and are ever ready to condemn themselves; but when they are losing it, or have lost it, they are often full of self-confidence, and find their pleasure in censuring and condemning other persons.—*Dr. Newton.*

MICROSCOPIC holiness is the perfection of excellence. If a life will bear examination in every hour of it, it is pure indeed. To live by the day and watch each step is the true pilgrimage method.—*C. H. Spurgeon.*

RELIGION consists not in the doing of extraordinary things, but in the doing of common things extraordinarily well.

THE missionary contributions of Fiji last year were more than 20,000 dollars, and yet James Calver, who surprised them at their cannibal feast with the story of the Cross, is still living, hale and hearty.

AN AFTERNOON UP THE NILE.

By H. Major, B.A., B.Sc.,

Author of "Our Army," "Up the Nile," "In the Depths," etc., etc.

"We were now stretching the legs of our beasts in an afternoon trip across the desert. It was hot, very."

THERE is not much room for adventures in proceeding up the Nile in the earlier part of the journey from Cairo. The means of progression chosen by our party, however, made matters rather more interesting in our Nile boat than if we had partly performed the journey by rail, as is sometimes done by those short of time. But Egypt, of all countries, is not to be "*done*" at a jog-trot. It is the land of stately movement; of silent, slow progression; of the measured tread of the march of centuries—rather than of the go-ahead express rate of the "Flying Dutchman."

We had landed at Assouan, from the dahabieh, or river-boat, that had brought our party from Cairo; and we were now stretching the legs of our beasts in an afternoon trip across the desert between Assouan and the First Cataract. It was hot, very.

Cousin Elsie had been ordered to Egypt to recruit her health; and she was now as glowing and radiant as open air, exercise, and an omnivorous appetite could make her. Your humble servant, in the Scotch cap, had accompanied the party to prosecute Egyptian studies on behalf of the authorities of the British Museum. In the rear of us two skirmishers in front were my uncle, who had made the Nile tour before, and my aunt, who vowed she would never do so again.

We had felt that the latter part of our voyage up the Nile to Assouan had been flat, stale, and unprofitable. The banks on both sides of the great river were low and muddy; and even the islands, by which we slowly passed, seemed quite flat and uninteresting. But as soon as we had, this afternoon, mounted the backs of our steeds—by which, of course, I mean our asses—the exercise, and the freedom from the restraint of the boat, became exhilarating.

"I had half made up my mind in Alexandria and Cairo"—it was Elsie that was speaking—"that I would never ride on a donkey in Egypt again."

"Don't say donkey," I remonstrated; "the creature deserves a more significant title. 'Donkey!'—it would do for the sorry beast in England, but our Egyptian mounts are of a superior order."

"The creature is all right," resumed my cousin; "it is the accompaniment, in the shape of the *driver*, that is so objectionable in Egypt. He is all stick."

"The fellahs of Egypt have been so long ruled by the stick, as beasts of burden themselves, that I suppose a fellow-feeling makes them wondrous unkind," I remarked.

As we were proceeding on our way, we came across a small encampment of Egyptians. Egypt proper terminates at Assouan, which is the southern limit of the country; but the people themselves are still found in the neighbouring province of Nubia.

"What a contrast to Parisian styles!" I quietly remarked to Cousin Elsie, as we drew near a couple of types of modern Egyptians.

"More useful than ornamental," replied Elsie, criticizing their headgear. "But, you see, they feel no need of your abomination—the ubiquitous umbrella. Their headgear suffices to keep out the almost tropical rays of the sun. That is the correct expression, is it not?" she inquired, with an evident relish of the phrase, "tropical rays of the sun."

The women of Egypt have no very enviable lot. They are given away in marriage at so young an age that they can know nothing of household matters, or how to rear a young family. Moreover, the young bride rarely sees her intended husband before marriage, so that there is little opportunity of cultivating affections. Their secluded lot does not open up their minds; and it is very rarely indeed that an Egyptian woman is met with who can either read or write.

In all our experience in Egypt, we had universally found the women interesting and open to our approaches. They were by no means deficient in hospitality; and this afternoon's experience proved no exception to the rule. Though we were unaccompanied by our interpreter, whom we had left behind in the dahabieh, we soon fraternized—and *sisterized*, if I may coin a necessary word—with the Egyptian women before us. They presented us with water from the river, kept cool and refreshing in their porous earthenware vessels, and, in addition, offered us milk and cakes.

Aunt would not touch one of the latter, declaring she did not "like other folks' pastry," and "she liked to know what she was eating." But uncle was less squeamish, and gladdened the hearts of his hospitable entertainers by washing down cake after cake, by copious draughts of milk, out of shallow earthenware platters.

One great comfort the Egyptian women possess, which is not always enjoyed by their more refined sisters in England—their children are almost universally obedient, and subject to parental control.

Another blessing, quite as great, is the absence of drunkenness in their husbands. Coffee, water, and milk are the natural beverages; and the absence of intoxicating liquors shuts the wives clear off from fearful miseries felt in our own country.

We were invited into one of the better houses of the stray hamlet we had stumbled upon; and uncle gave us a brief description of the mode of life of our entertainers.

"These folks practise all their lives," he informed us, "the virtues of the proverb, 'Early to bed and early to rise'; though not many of them have a bed to do so with.

"The early breakfast," he continued, "consists of coffee, boiled beans, and a flat cake, such as that which your aunt so persistently refuses from our well-meaning hostess. The dinner at midday consists generally of rice, with a little butter, and occasionally meat. Supper is as frugal as dinner and breakfast; and a little sherbet is all the 'nightcap' they feel necessary to enable them to sleep soundly."

"These children of the desert appear at once primitive in their simplicity, oriental, and even Biblical, in their modes of life, and uncontaminated by some of the vices of our streets."

Whilst I was saying this, Cousin Elsie was dandling one of the half-clad progeny of the woman of the mud house we had entered. The child was brown as a berry, the glow of the Egyptian skies burnt into his bare legs, arms, and face.

Whilst the infant was being fondled, his august male parent—a perfect specimen of the Bedouin—was standing at the door of the mud tenement, glancing inside with a gravity that was as imposing as his presence.

We learned from uncle at a subsequent date that there are Bedouins and Bedouins.

There are more than half a million of them between the river Nile and the Red Sea alone. Most of them are as keen traders as the proverbial Jew, who was known even in ancient Rome by the pedlar's basket on his arm.

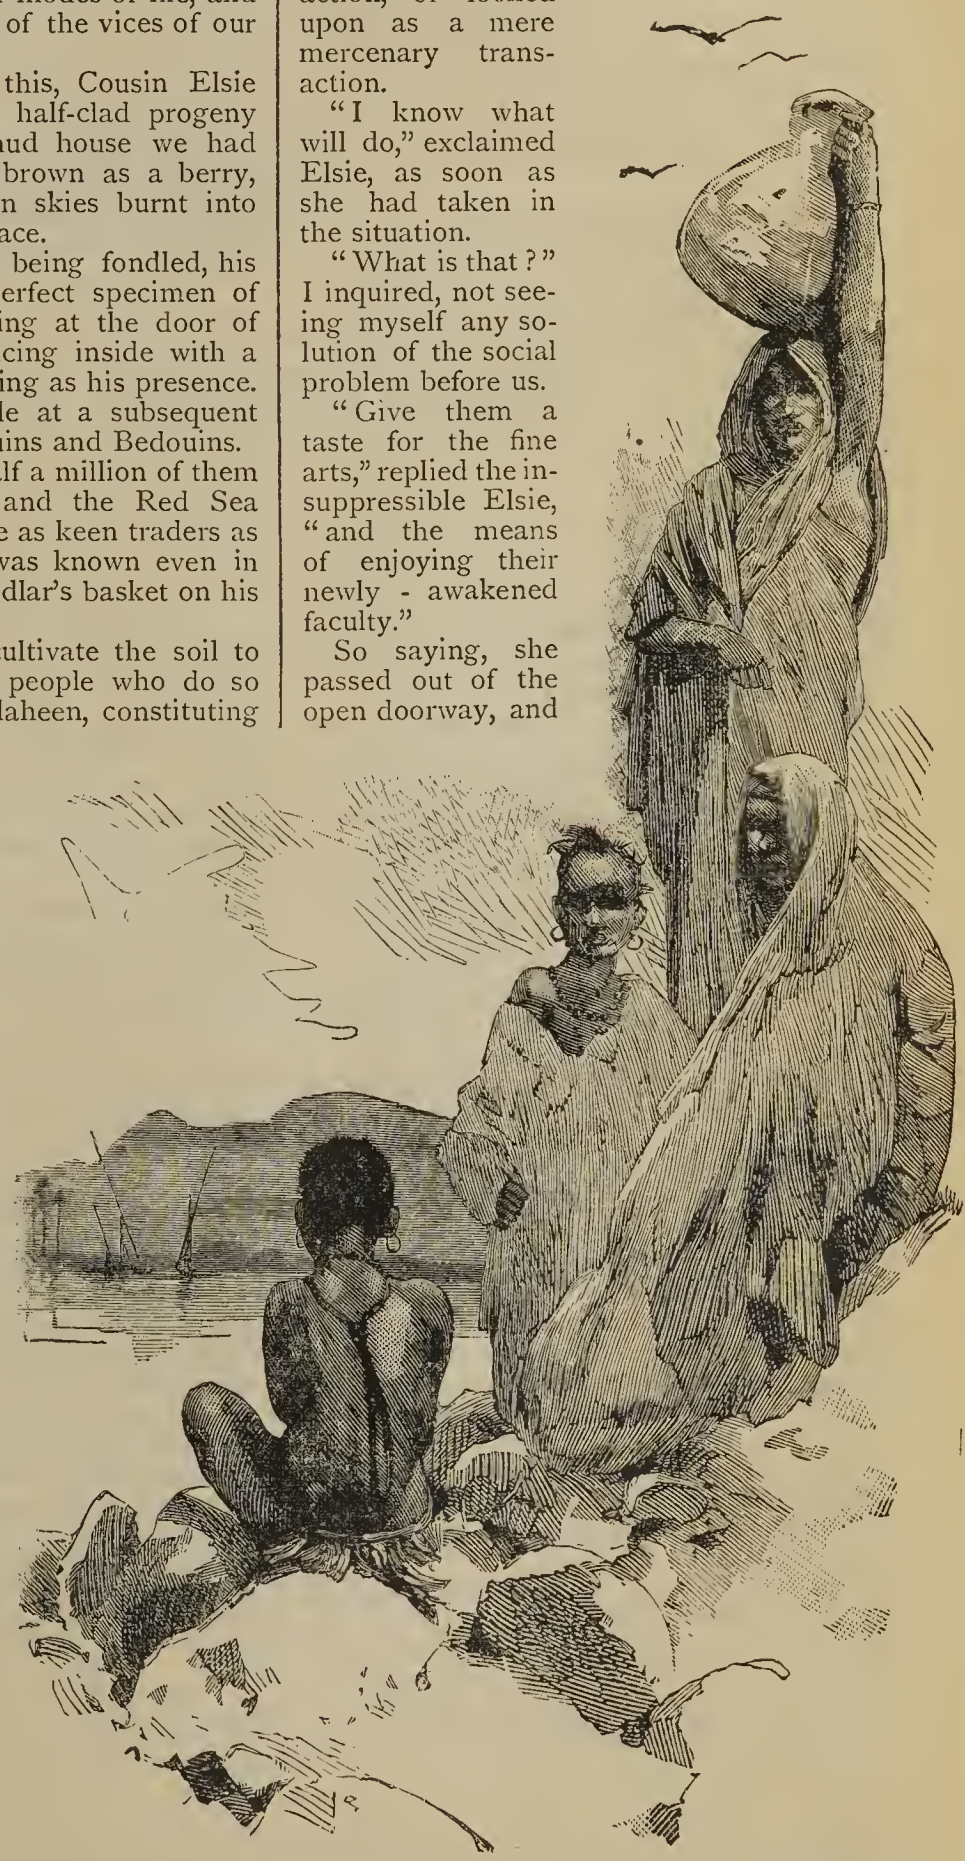
The Bedouins rarely cultivate the soil to any great extent. The people who do so are the Fellahs, or Fellaheen, constituting the native Egyptian *peasantry*. These spend long, laborious days raising water from the Nile by very primitive water-wheels, or by means of still more primitive buckets, swung from the end of long poles. These movable poles are balanced at the top of a vertical pillar, so that the bucket can dip into the river, and be raised at will.

But the Bedouins mostly depend on the produce of their flocks and date-palms. Nevertheless, some trade is carried on in exchange for western articles, such as calicoes, beads, etc.

But the tenants of our mud hovel had not spent much on Birmingham wares. They had perhaps adopted the saying, that nature when unadorned is adorned the best. They had not even the *yashmak*, or native veil, generally worn in lower Egypt in the presence of members of the opposite sex.

I must confess that I was most struck myself by the male head of the family; and so was Elsie, as she subsequently showed.

On taking our departure, uncle aired the little Egyptian that he could offer—and he did so with as much hesitation as a Cockney in *parlez vous* with a stray Frenchman. He merely wanted to say something agreeable, as he presented the woman who had entertained us with a few loose coins.



But these were refused with a good deal of native dignity. That intolerable nuisance of Lower Egypt, in the shape of *backsheesh*, or *gifts* from foreigners, had not yet penetrated this hospitable but remote region. The people before us still regarded hospitality as a sacred rite, not to be made an instrument of exaction, or looked upon as a mere mercenary transaction.

"I know what will do," exclaimed Elsie, as soon as she had taken in the situation.

"What is that?" I inquired, not seeing myself any solution of the social problem before us.

"Give them a taste for the fine arts," replied the insuppressible Elsie, "and the means of enjoying their newly-awakened faculty."

So saying, she passed out of the open doorway, and

"The group consisted of villagers coming down to the river for water for their household."

fetching her "artists' materials" from the pannier on the ass which had brought us hither, she proceeded to arrange herself, her instruments, and subject.

I thought uncle would have killed himself with laughing, as Elsie went up to the stately chief, and, to his amazement, "posed" him for a three-quarter's-face portrait. Aunt looked as if she were afraid that the Bedouin was a cannibal, all "savages," in her opinion, having a taste for man's flesh—and this being an unmistakable savage.

But the son of the desert was as imperturbable as a Red Indian, as soon as uncle, in a few words of the Bedouin's own language, explained to him that his daughter was about to draw a likeness.

While she was doing this, the women came out of the tent, and stood behind Elsie at her work. As her swift fingers sketched the outline of the splendid fellow before her, and they recognised the growing features, they clapped their hands, danced up and down on the sand, and in a hundred different ways expressed their admiration and delight.

He was a noble subject to sketch, and this is Elsie's presentation of him: Imagine that there stands before you, with left foot advanced, and right hand and arm majestically leaning upon a spear, a figure of five feet ten inches in height, and as sinewy and wiry as an athlete—not a superfluous ounce of fat about him! the sun and daily exercise have made the man all bone and muscle. His haughty, well-poised head was set erect on his shoulders, and was protected from the vertical rays of the sun by a turban, gracefully wrapped round it in several folds, passing under the chin, and falling at last from the left side of the head to the shoulder. His dark and fiery eyes lit up like coals of fire beneath his dark brow.

When Elsie's sketch was finished, she presented it, in a very pretty, artless manner, to the woman her instinct told her was the possessor of this splendid fellow before us.

I could not help smiling to myself as I watched the Bedouin, as he took the first glance at the picture of himself, thus sketched by a stranger. Nature prompted him to break out in expressions of wonder, as his wife had done. But art and training were stronger than nature, and he suppressed himself; making a dignified salaam to uncle, he found safety in retreat, and stalked off as if he had nothing to do with the portrait, or the portrait with him.

In making our way back to our asses, we took note of the native village through which we had to pass in doing so, and found it like nearly all Egyptian villages; in fact, the Land of the Pharaohs is eminently conservative in every respect. The houses, dress, pursuits, agricultural methods, food, native laws and customs, have changed but little since the time that the Jewish "fathers went down into Egypt."

The rude tenements before us were constructed out of Nile-mud, excellently adapted for the purpose of keeping out the heat and glare of the sun.

There appeared to be more dust, dirt, flies, and rags than other possessions in this village community. In addition, however, were to be seen a few stray goats, used for milking, some wretched-looking fowls, and a "wilderness" of children, apparently less tended than the fowls or goats.

Several of the houses were square, but most of them were rounded in shape, thatched with reeds brought from the neighbouring Nile and shaded by isolated palm-trees; the latter added a very graceful and redeeming feature to the scene.

The tenements were not arranged in any order, but there seemed everywhere to be the most admired confusion. The land was nationalized here, and every one seized just the spot he preferred. Between the detached houses were two plentiful heaps of rubbish, formed from the melting of native mud huts in the last year's flooding of the Nile. These were grand "play-grounds" for our infant school of young Egyptians. Here, with yelping curs, donkeys, fowls, and goats for play-mates, they were having a fine time, with no School Board officer keeping them in his eye.

Just outside of one of the mud hovels, but within the enclosure that marked it off as a special possession, two women were grinding at the mill, as in patriarchal times. Quickly from hand to hand, by means of the upright wooden projection in the upper mill-stone, they ground their corn, singing a native ditty as they did so.

After quitting the stray Egyptian hamlet, we retraced our way to the river. Our dahabieh, together with another river-boat that had accompanied us to Assouan all the way from Cairo, was tied to the bank in a reach made by a bend of the river. We could see both boats, though they were in the shade of the heights on the river bank, by their tall, sloping yards, as well as by three palm trees near which they had tied up for the night. These will be seen in the distance in our illustration. In the foreground was a group across which we stumbled, on turning a sharp corner of a defile leading to the water-side.

The group consisted of villagers coming down to the river for water for their household. One of these carried on her head the broad-based water vessel, so prevalent in the whole or fragmentary condition all over Egypt. Wherever the wandering encampment has been fixed and abandoned, broken potsherds are left as relics of the temporary resting-place. Our readers will find that the references to potsherds, or fragments of broken earthenware, are most frequent in the Bible; and they are so likewise as actual things in modern Egypt.

Indeed, nothing is so necessary in a dry and thirsty land, where no water is, except in the "river of Egypt," as this veritable blessing of a cup of cold water. The Egyptians have an exquisite name for the natural beverage of man: they call it the "gift of God"; and Scripture references to it, as the type of spiritual blessings, are never so well appreciated as by those who have travelled in the East. The land of Egypt depends absolutely upon the Nile for fertility. This is one-half of the meaning of the remarkable saying of Herodotus, the "father of history," who wrote largely on this country from his own observation, as well as from tradition. He calls Egypt the "gift of the Nile." As a rule, rain only falls for three or four days in the year, and there are no reservoirs or waterworks, as with us. The Nile is the natural drinking water, and the means of irrigation; wherever it can be applied to the land, there the date-palm and cultivated crops grow. Hence it was worshipped as a god.

"I was thinking," Elsie remarked to uncle, after a sufficient pause had elapsed for the quiet solemnity of the river scene to impress us, as it impressed her,—"I was thinking what would these poor native women have thought if our dear Saviour had conversed with them by the brink of the river, as He once did with the woman by the well. These have offered us, though perfect strangers, the water of the river freely; He would have as freely offered them the water of life; would they as readily have accepted it?"

I could see the tears rise in uncle's eyes as he gazed fondly for a moment on the thoughtful, placid face of his daughter; and I felt myself, that the touch of nature makes the whole world kin. These darkened faces, and perhaps darkened hearts, before us were brothers and sisters unconsciously revealing the needs they perhaps hardly felt, and certainly could not express.

On our way we were much surprised to come across symbols showing that a form of Christianity at one time prevailed in this district. We had, of course, seen abundant evidence on the way of the darkened superstitions and idolatry of ancient Egypt, in representations of idols and of idol worship.

But the symbols of a form of Christianity to which we refer, were long subsequent to these. Among them was the figure of the cross, palm-branches representing victory, and many other inscriptions less easy to interpret. These were carved out, or inscribed on the rocks and on the ruins of the ancient temples devoted to idolatry, and are due to colonies of monks, who retired to this secluded region soon after the Christian era. These monks have not left behind them a very good reputation for purity of faith; but appear to have been largely given up to superstition.

In our journey we met with one of the most striking evidences of the conservatism of the manners and customs of this stationary country.

Near the bank of the river, and in the midst of a small allotment of cultivated land, we saw a very rude erection, surmounted by an Egyptian lad of the fellah class. The latter was nearly naked, and was quite bronzed by the rays of the sun. The primitive platform upon which he was standing, consisted of four palm-tree stems as a support, fixed in the ground. These were tied together, and supported a rude platform of palm-stems, covered with branches or fronds of the same tree.

From this height above the level of the cultivated ground, as from a watch-tower, the lad was keeping off the birds that came down to prey upon the growing crops, by means of sling and stones.

The references to bird-life in ancient Egypt, found in the Bible, and still more in the pictures on their tombs and monuments, are very abundant. Our readers will remember the reference: "I had three white baskets on my head: and in the uppermost basket there was of all manner of bakemeats for Pharaoh; and *the birds did eat* them out of the basket upon my head" (Gen. 40. 16, 17).

In the British Museum the Egyptian monuments portray bird-fowling, waterfowl, decoy ducks, geese, etc. In addition, we find in modern Egypt, near or on the Nile, storks, cranes, pelicans, hawks, pigeons, herons, etc.

Lower down the river, in the neighbourhood of the "cities of the dead," we had also seen the mummies of the sacred Ibis of ancient Egypt.

We have already pointed out how dependent Egypt is for fertility upon the waters of the Nile. This was rendered strikingly evident on our way this afternoon, as we came across a fertile little patch of ground surrounded with arid sand. It was an artificial oasis in a dreary desert. There was not more than an acre of ground thus re-

deemed, and it lay close to the river. Evidently it belonged, except in its bare "prairie value," to a fellah, for it surrounded one of the usual mud-huts of the fellaheen.

The land was divided into small squares, each compartment being divided from its neighbouring squares by little ridges of sandy soil. The whole was supplied with water from the Nile, by means of a sluice, fed by the usual primitive water-wheel.

The water travelled along little courses, or water channels; and as we passed by, we perceived in what manner the irrigation was distributed. The fellah broke down one of the ridges with his foot, by pressing a toe against it. The water from the channel at once entered the small compartment and irrigated it.

This was the meaning of the Scriptural phrase, "watered with the foot"; and by this means we could readily understand how Egypt in the past and present could be made into a garden of herbs, for the cultivation of the leek, onion, garlic, cucumber, melon, etc.

It is in this way, too, as we had already perceived, that seed is distributed evenly on the soil. The husbandman "casts his bread upon the waters, and finds it after many days," by throwing his seed on the irrigated land, leaving the waters to settle, and carry with them the already sprouting seeds.

"For the land, whither thou goest in to possess it, is not as the land of Egypt, from whence ye came out, *where thou sowedst thy seed, and wateredst it with thy foot, as a garden of herbs:* but the land, whither ye go to possess it, is a land of hills and valleys, and drinketh water of the rain of heaven" (Deut. 11. 10, 11).

At almost every step of our progress in Egypt—not only this afternoon, but ever since we had landed at Alexandria—our thoughts were continually carried back from the present to the past by some striking persistence of the past into the present.

Meantime we were pursuing our devious path, with anticipation of a long, quiet evening in the dahabieh, as a recompense for our many labours this afternoon. I could perceive that Elsie flagged a little, and would decidedly have given up all hope of reaching the boat, had not uncle beguiled the way of its difficulties to her by holding in prospect an early arrival at the haven by the Nile where we would be.

(*To be continued.*)

CHRISTIAN EVIDENCE COMPETITION.

ELEMENTARY DIVISION.—£2 : 2 : 0 IN PRIZES.

Text-Book, "*Christian Evidences*,"

By the Most Reverend RICHARD WHATELY, D.D., Archbishop of Dublin.

QUESTIONS FOR COMPETITORS.

1. What answer would a merely professing Christian give for becoming so?
2. What reply would our Pagan forefathers probably have given to a similar question?
3. Discuss the question whether "it is the duty of each man to keep to the religion of his fathers, without seeking any proofs of its being true."
4. Show the importance and advantage of being able to give a REASON for our religious belief.
5. Show how the Christian religion differs, in the grounds on which it appeals for acceptance, from the religions of the Pagans.
6. Why is the conversion of those Pagans who first embraced Christianity to be regarded as a presumption of its truth?
7. What is the difference between FAITH and CREDULITY?
8. Show that we have abundant warrant for believing that the Old and New Testament Scriptures are trustworthy documents.
9. Why are the Old Testament Scriptures, in some respects, more instructive to us even than the persons who lived in the apostles' time?
10. What consideration must be taken into account, in forming a just estimate of the effect produced by the rise and progress of Christianity?
11. Say, briefly, what is the witness of prophecy to Christ.
12. Show, by a simple illustration, the strength of the argument from prophecy.
13. What led the early Christians, after a candid examination of the miracles which they saw, to conclude that they were not the work of evil spirits, but of God.
14. Show that "those who are unwilling to believe anything that is strange, cannot escape doing so by disbelieving the gospel."
15. What do you understand by a "miracle"?
16. What is in general meant by "supernatural"?
17. "There is a distinction" (with respect to miracles) "between our religion and all others, which is often overlooked." What is it?
18. What is the distinction betweeen INTERNAL and EXTERNAL evidences?
19. Name (only) some of the INTERNAL evidences of Christianity.
20. How does Archbishop Whately comment on the text, "If any man will do His will, he shall know of the doctrine"?
21. Jesus and His disciples not only proclaimed no temporal kingdom, but even warned their followers to expect persecution. Why is this to be regarded as all the more remarkable?
22. How would mere men, seeking to propagate a new religion in whatever way they think best, view any departure from a strict moral life in the zealous among their followers?
23. What was the nature of the WANT felt by the Jews at the time when Christ appeared?
24. Why did the greater part of them reject Him?
25. Explain the distinction between the way in which Christ and Mohammed, respectively, gathered followers.
26. Do you consider it preferable to study first the objections that may be raised against Christianity, or the positive evidences in its favour?
27. Supposing you meet with objections to Christianity which you are unable to answer, show that your inability is not a sufficient reason for giving up your faith in Christianity.
28. How is the present position of the Jewish nation an evidence in favour of Christianity?
29. What is the right way of viewing objections against any statement or system?
30. What is the weightiest argument against unbelievers?

The above Questions have been supplied by the Christian Evidence Society, by whom the Examination of this Division has kindly been undertaken.

Full particulars, with Rules, will be found in our Number for June 9th.

CHAPTERS FROM NATURE'S STORY-BOOK.

By Professor Haddon,
Author of "An Introduction to the Study of Embryology."

CHAPTER VI.

THE TALE OF A TADPOLE.

TO pass from salt to fresh water does not seem a very great step, and save for the absence of a tide, there is not much visible difference between the sea and a large lake or inland sea, especially if we compare the latter with a practically tideless sea like the Mediterranean. There is, however, the greatest possible difference between the inhabitants of the sea and those of fresh

Fig. 1. *Common Frog* (*Rana temporaria*).

water ; not only is there less variety in fresh water, but the proportionate number of animals is vastly inferior. When animals belonging to the same group occur in fresh and salt water, they usually belong to different divisions of that group ; for example, the fresh water worms and snails are more nearly allied to the land forms than to their respective marine neighbours. Certain groups of animals only occur in either the sea or inland waters, but not in both ; thus the prickly-skinned animals, or *Echinodermata*, are purely marine, whereas the frog group (*Amphibia*) are equally confined to the land or fresh water. It is concerning the latter group that I wish now to speak.

We will suppose we have a frog in front of us, and we first examine it externally. The body is short and tailless, provided with two pairs of limbs and a large flat head, which is not set upon a neck. The skin is soft, damp, cold, and is quite naked, that is, it is not provided with a covering of scales, feathers, or hair. Supposing we were to give this brief and simple decription to a naturalist, he would at once inform us that it could only apply to frogs and toads.

The very wide, gaping mouth and the prominent eyes are features which every one has noticed ; less conspicuous are the nostrils near the end of the snout, and a patch of thin skin behind each eye. The front limbs are much shorter than the hind, and have four toes ; the hind limbs have five toes, and these only are webbed.

Having administered some chloroform to our frog, we shall be able to make out some more details. On opening the mouth, we see that the large tongue is not fastened behind, like ours, but it is attached in front and free behind. Thus the frog is able to throw its tongue forward for some distance in front of its head, and thereby to lick flies and other insects into its mouth. If you pass a bristle into one of the nostrils, it comes out through a hole in the front part of the roof of the mouth : the corresponding opening in us is at the back of the mouth. At the far end of the mouth is the large gullet, and in front of it, on the floor of the mouth, is the slit-like opening of the wind-pipe. On each side, at the back of the mouth, is a short, wide tube. By passing a bristle along it, you will find that it opens into a cavity lying beneath the round patch of skin behind the eye which we have just seen ; the latter is the drum of the frog's ear, and the tube is the internal ear passage, similar to that which is found in reptiles, birds, and mammals.

If we want to learn more about the frog, we must now dissect it. This is not difficult to accomplish. I do not intend to describe the anatomy of the frog, but merely to point out to you a few organs which you can readily find for yourselves, and about which I shall soon have something further to say. Suppose the dead frog is lying on its back ; by carefully cutting it open along the middle line of the under side, we shall experience no difficulty till we reach the breast-bone. This will have to be cut through with a strong pair of scissors. We thus practically discover that a frog has bones ; next carry the incision as far forward as the mouth, and turn back the skin on each side. If this has been successfully accomplished, you will have displayed most of the organs of a frog's body, and the larger viscera only require a little further dissection to enable you to make them out satisfactorily. Only one or two points at present interest us. The slit-like orifice at the back of the floor of the mouth opens into a short ringed tube, the wind-pipe, which divides posteriorly into the lungs. In a dead frog the lungs are dark and greatly contracted, but if you blow them out by means of a fine tube, you will see that when distended, they form large spongy sacs, covered with a fine network of blood-vessels.

Below the breast-bone is the heart ; from it arise, and into it enter, all the large blood-vessels of the body. The heart itself is composed of three chambers, two of which are known as auricles, and the third is the ventricle. The aërated blood from the lungs, and the impure blood from the body pass through the left and right auricles respectively into the single ventricle. There is a beautiful arrangement connected with the heart, which would take too long to describe, which, so to speak, sorts the blood, for, as we have just seen, the pure blood from the left auricle, and the impure blood from the right auricle both pass at the same time into the ventricle. The contrivance acts in such a manner that the pure blood is sent to the head, so that the delicate brain of sense organs are supplied with the best blood in the body. Mixed blood is distributed over the rest of the body, while the lungs only have impure blood, which they purify and return to the heart by the left auricle.

So much for the adult frog ; we must now seek to learn something about its larval history. Early in the spring, frogs deposit their spawn in fresh-water pools and ditches. The spawn has the appearance of lumps of colourless jelly full of beads, which are black above and white below. Each little bead is an egg. The egg segments and develops first into a blastula and later into a gastrula.

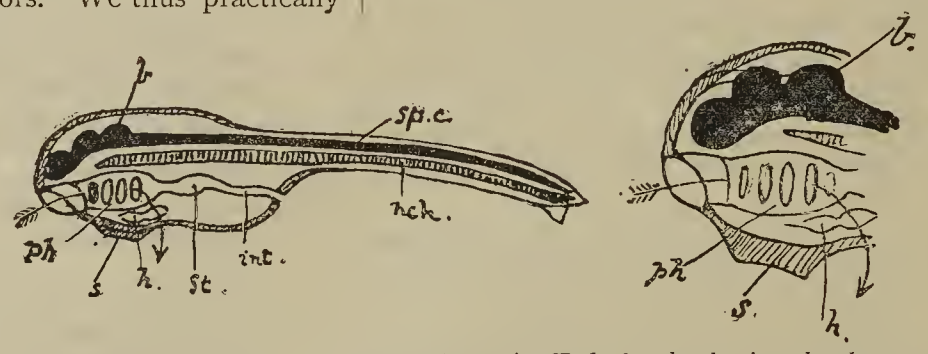


Fig. 2. *Diagram of Anatomy of Frog's Tadpole : b., brain ; h., heart ; int., intestine ; nch., notochord ; ph., pharynx with three complete gill slits on each side, and two incomplete gill slits, or rather pouches, the first of which will persist as the internal ear tube ; s., sucker ; sp. c., spinal cord ; st., stomach. The arrow indicates the direction of the current of water during breathing.*

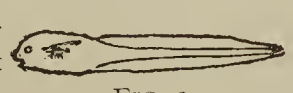

Fig. 3.

Fig. 7.

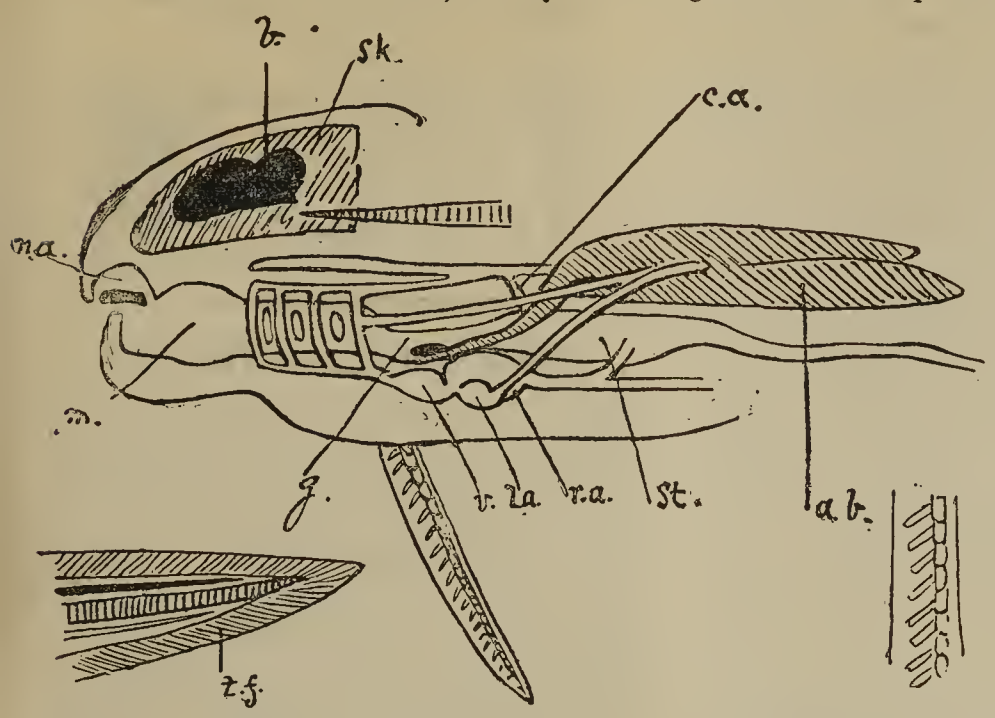

Fig. 8.

Fig. 3. *Newly hatched Frog's Tadpole. Fig.* 4. *Later Tadpole of Frog, with bud-like limbs. Fig.* 5. *Later stage, with better-developed limbs. Fig.* 6. *Later stage, with well-developed limbs and tail. Fig.* 7. *Larval frog, with tail in process of absorption. Fig.* 8. *Young Frog.*

We cannot here follow and describe the subsequent stages of development which immediately follow, but will pass on to the time when the little tadpole is just hatched.

By looking at the figure you will see that the tadpole is an elongated animal with a swimming tail. No limbs are present, the skin is naked and scaleless, the eyes are small, and there is a round sucking mouth, for at this time the tadpole feeds upon the jelly-like substance of the spawn. The throat is perforated by three gill-slits, and the animal breathes by means of gills. If you studied its internal structure, you would find that the heart has only two chambers, *i.e.*, a single auricle and a ventricle; the lungs have not yet appeared, the digestive canal is a straight tube, and the central skeleton of the body consists of a gelatinous rod, the notochord, which lies above the digestive canal and below the nervous system.

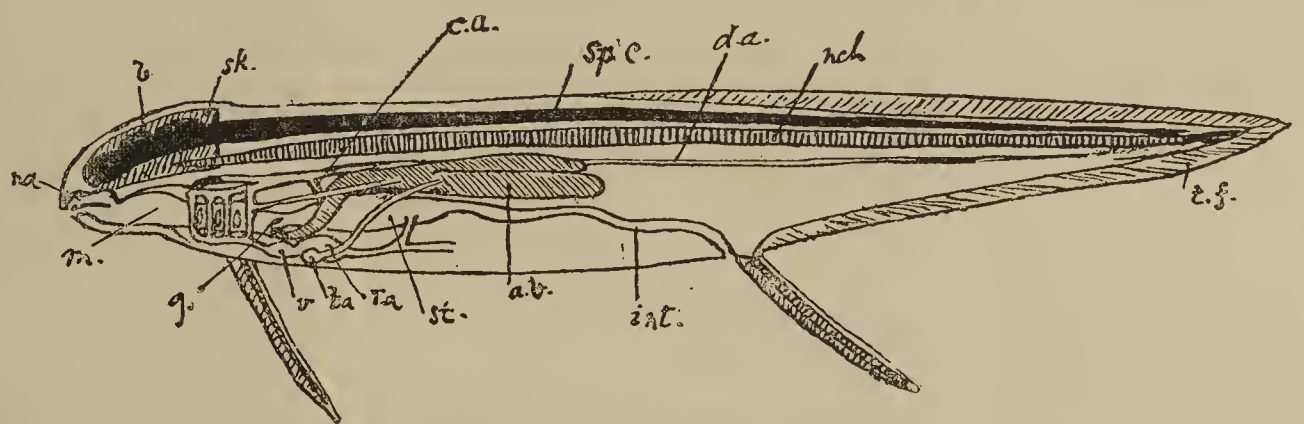

Fig. 9. *Diagram of anatomy of African Mud-fish* (*Protopterus annectens*): *a. b.*, *air bladder*; *b.*, *brain*; *c. a.*, *artery going to the stomach*; *d. a.*, *dorsal artery of body*; *g.*, *gullet*; *int.*, *intestine*; *l. a.*, *left auricle*; *m.*, *mouth*; *na.*, *nasal chamber*; *nch.*, *notochord*; *r. a.*, *right auricle*; *sp. c.*, *spinal cord*; *sk.*, *skull*; *st.*, *stomach*; *t. f.*, *tail fin*; *v.*, *ventricle*. (*The three upper figures give details of the respiratory apparatus, tail and limb respectively.*)

The tadpole grows bigger, and alters somewhat in form: the body being more rounded and the tail more marked, it is easy to see the notochord in the latter, the tail fin passing symmetrically round its end. As the animal assumes a vegetable diet, certain changes occur, which have reference to this alteration in its food. The jaws become more marked, and the gape of the mouth gradually extends further backward. Just as grass-eating animals have a very much longer digestive canal than flesh-eaters, so the intestine of the tadpole grows very long, and is coiled like a watch-spring. Soon the limbs sprout out as simple rod-like buds, and are not yet divided at their ends into toes. Although they all arise at the same time, the hind limbs appear to be the first developed, owing to the fact that the fore limbs are hidden by a fold of the skin. This fold of the skin arises in front of the gill-slits, and corresponds with the gill-cover, or operculum, of fishes. In the frog's tadpole, this fold grows right round the front part of the body, behind the mouth, enclosing it in a kind of sac, which has a single opening on the left side. The water which the tadpole breathes is taken in by the mouth, passes through the gill-slits into this pouch (the branchial cavity), and out through the single orifice. Small lungs are now being developed.

The limbs of the tadpole increase in size, especially the hinder pair, and toes are developed; the gills dwindle away, and the lungs are larger, and are beginning to be used for breathing. The tail is still very long.

A further development takes place along the lines just indicated; but the tail is now round, instead of flattened, and is much shorter. The eyes are becoming larger, and the gape of the mouth is much wider.

Lastly, the tail is absorbed, and a young frog hops about—the counterpart in all but size of its parent.

Having gained a knowledge of some facts respecting the development and metamorphosis of a frog's tadpole, and the structure of the adult, we must now seek to learn what is the significance of it all; and, in endeavouring to do this, we must have recourse to several different animals.

Let us commence with our first stage; that is, with a newly hatched tadpole. If you were to enumerate all the characters I have here mentioned, and to ask a zoologist to what adult animal they would apply, he would unhesitatingly reply that you were describing a lamprey! Of course there are many details in which a lamprey differs from a frog's tadpole; but the similarities are sufficiently strong to be almost startling.

A very curious fish, the mud-fish, is found in the fresh waters of tropical Africa, some branches of the Amazon, and in Southern Australia. The African and South American mud-fishes resemble one another far more closely than either does the Australian form. In order to appreciate the remarkable peculiarities of the mud-fish, it will be necessary to allude to some of the points in which they differ from all other fishes.

The mud-fish has a scaly skin, like other fishes, but its limbs are not true fins. They are long and narrow in the African, but paddle-shaped in the Australian forms; the fins are supported by gristly rods. The mud-fishes alone, amongst fishes, have external and internal nostrils. Gill-slits are present; but the animal can not only breathe water like a fish, but also air like a frog. Many fishes have an air-bladder, which serves to make their bodies more buoyant in the water. In the mud-fishes the air-bladder is spongy, and richly supplied with blood-vessels; and it communicates with the mouth by what is virtually a wind-pipe, the opening into the mouth being in the same position as the orifice of the wind-pipe in land animals.

Fig. 10. *Diagram of Newt* (*Triton cristatus*).

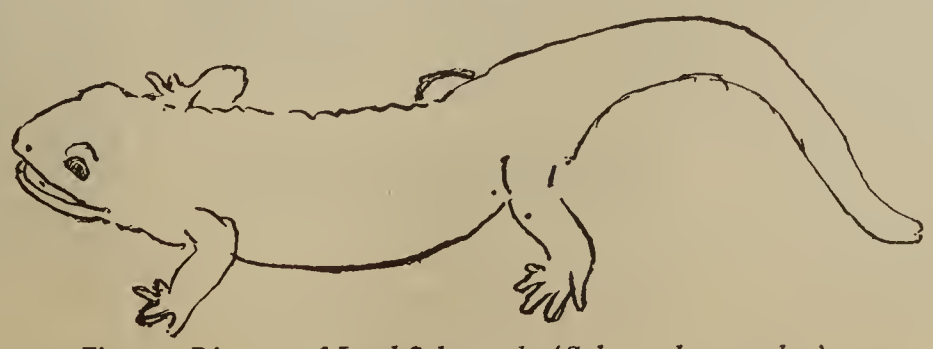

Fig. 11. *Diagram of Land Salamander* (*Salamandra maculosa*).

During the dry season, the water evaporates from many of the pools and streams, and the African mud-fish lives in a burrow in the dried mud till the rains come again. Consequently, this remarkable fish breathes as a fish during the wet season of the year, and as a land animal during the dry. In all other fishes, the blood-vessels of the air-bladder belong to the same system as those of the stomach; and, like the blood of the other viscera, the venous blood from the air-bladder passes through the liver on its way to the heart; but in the mud-fishes the air-bladder has its own system

of blood-vessels, and the blood which flows away from it is conveyed directly to the heart; and there is actually a small third chamber, or left auricle, to receive the blood. In this respect, the circulation of the mud-fish resembles that in the frog. In the mud-fishes, there is a gristly notochord, which extends right down to the tip of the tail. If you carefully compare all these characters with the description given of the frog's tad-pole in one stage, you will see that the latter passes through a stage which is perfectly comparable with the adult condition of the mud-fishes; the scaly skin is, however, one important difference. This stage removes us out of the group of fishes, and hereafter the larval frog is a true amphibian.

The common newts of our ponds are less highly developed amphibia than the frogs. They are air-breathers, for none of the English newts have gills when they are fully grown, although some of the North American forms retain theirs through life. The fore and hind limbs are nearly of an equal size, and a long, flat tail is always present. They thus represent a permanent condition of the frog's third stage.

In Europe, but not in Britain, a land newt, the spotted salamander, is found. In all essential points it resembles the water newts; but it is purely terrestrial in habit, and as it does not require its tail for swimming, that appendage, instead of being flat, has become round, a condition which the frog's tail assumes before it entirely disappears.

This is a very brief sketch of one of the most wonderful facts of natural history. Without referring at all to the earlier changes, we find that after it is hatched, the frog's tad-pole passes successively through stages, which can only be compared to the adult condition of a lamprey, mud-fish, newt, and salamander, before it eventually hops about as a frog. Every spring this story of development is croaked into ears that rarely stoop to listen to the wonderful tale.

THE PRIZE-FIGHTER'S CONVERSION.

A FACT.

DOES any one think that he is too bad to be saved? Know, then, that Jesus is "able to save to the uttermost those who come to God by Him" (Heb. 7. 25). To know your own need of a Saviour is *the only qualification* in God's sight, for "Christ Jesus came into the world to save sinners."

As an instance of this, let me tell you of one who took God at His word, and found it to be true.

There are those amongst the lowest classes of our land who find fighting more profitable than working. Of these prize-fighters, one of the cleverest and most eagerly sought for was a small but well-built man of extraordinary elasticity and strength, named G——. So popular was he in his "profession," that he was sent for all over the neighbourhood, and his profits during a successful fight frequently amounted to a considerable sum.

Upon the day on which a fight was advertised to take place, a large crowd of all classes would assemble, and, forming a ring round the combatants, would cheer and encourage their favourité, and endeavour to urge him on by large promises of rewards.

Such was G——, utterly godless; but his wife, who had been saved while attending the services held at a Medical Mission in the town where they resided, was continually praying for him. For some time, however, there was no change. One morning, early, as she was lying ill in bed, she heard him go out. The neighbours came in and told her that he was gone for two days. She felt sure that he had gone to a fight. The day was spent in prayer for him, asking the Lord particularly that He would be pleased to change him, and bring him back that night.

Nor was she disappointed, for in the middle of the night the door opened, and he suddenly appeared. She evinced no surprise, so great was her faith, but only quietly remarked, "I knew the Lord would bring you home to-night." He was in great distress of soul. Whilst engaged in the fight, conviction of sin had come upon him, and he suddenly realised that Satan had got hold of him, and held him firmly in his grasp. He could not continue fighting, and yet he could not rest. He had thrown up his earnings, and come home in the midst of the fight. For two days and nights he paced the room incessantly, without eating or drinking, in the greatest agony of soul. His sins were brought to his remembrance, and it seemed as if they were too black for forgiveness, and that there could never be any salvation for him. At the request of his wife he visited a godly man who lived in the next court, and who prayed earnestly with him, and pointed him to the Saviour of sinners. G—— was able at length to trust his Saviour, and returned home rejoicing in His love; and from that moment his whole life was changed.

He at once gave up all his old habits, companions, and occupations, and devoted himself to the service of the Lord, who "so loved him." His great wish, after his conversion, was to be able to read the Bible. To this end he attended a night school, and might be heard, when at home, diligently spelling words of two or more letters to his wife as he sat by her bedside. He made such rapid progress that he was soon able to read portions of the Testament, which were a great comfort to her. It was not long before he had to pass through the sorrow of losing his wife. She sweetly fell asleep in Jesus, leaving him to the care of his Heavenly Father.

He still continues steadfast in the faith, and a living monument of the saving grace of God, and of the keeping power of God's Holy Spirit.

And now, dear reader, what is it that has wrought the great change in this man? No earthly power could do it. "Can the Ethiopian change his skin, or the leopard his spots? Then may ye also do good that are accustomed to do evil." You cannot make yourself good: do not attempt it. No; but God can do it, as He did for G——. He invites you to come to Him. Jesus says: "Come unto Me, *all* ye that labour and are heavy laden, and I will give you rest."

"Just as I am, without one plea,
But that Thy blood was shed for me,
And that Thou bidd'st me come to Thee,
O Lamb of God, I come.

Just as I am, Thou wilt receive,
With welcome, pardon, cleanse, relieve!
Because Thy promise I believe,
O Lamb of God, I come."

CRISP CORRESPONDENCE.

A. E.—Is it right to go to a church where the truth is not plainly preached, in compliance with the wish of an unconverted mother? Children are commanded to obey their parents in the Lord, and the circumstances must be very exceptional indeed which can free them from that command. Moreover, it is undesirable, as a rule, that young people should pronounce judgment on the spiritual condition of others, especially their parents. At the same time, there may be cases in which a judgment cannot help being formed, in all meekness and love, and this may be one of them. If so, I should say, Deal very tenderly with your mother. Try to win her to the full apprehension of the truth by the patient dutifulness of your life and conversation. Show Christ to her in deed as well as in word; and above all, pray earnestly for her, that the Holy Spirit may enlighten and guide her, and lead her in the way everlasting. As to going with her to a church "where the truth is not plainly preached," that is a serious question; but who is to decide? If downright error be taught there on matters necessary to salvation, then Prov. 19. 27 prescribes the remedy. But if it be merely an obscure or imperfect setting forth of the truth itself, then stay where you are, in obedience to your mother's wish; and pray for your minister, that God, by His Spirit, may teach him more and more, so that he might be better able to teach you.

Is it right for a total abstainer to take food containing alcohol? It is well for a total abstainer to avoid alcohol in every form. But if, as sometimes happens, an article of food contains a small quantity as one of its ingredients, it is better, I think, to ask no questions for conscience sake.

Is it possible for any one who has been converted to be lost? Christ's own words are emphatic on this point: "My sheep shall never perish," etc. But this, instead of being an excuse for carelessness or self-security, should be regarded as an incentive to faith and holiness of life.

Is it wrong for a Christian to be afraid to die? No, not wrong, but needless; for our times are in His hand, and He has promised to be with us in that solemn hour, should it come. Besides, the Lord may come first, and then "we shall not all sleep," etc.

Is it right, when at home with worldly people, to laugh and talk with them? Be as happy and cheerful at home as ever you can, for true piety is one of the brightest things in all the world, and the happy Christian is the one more likely to win souls and recommend the gospel.

Is it wrong to place a brass cross on the Communion Table? 1. It seems a plain violation of the spirit, if not of the letter of the second commandment, which expressly forbids the use of material representatives in the worship of God, or as aids thereto. 2. It also seems contrary to the spirit of our Lord's teaching in John 4. 24. A cross in such a position as supposed, must be the object of observation, and therefore tend to distract the mind of the worshipper by drawing it towards the emblem, rather than the one and only supreme object of all spiritual worship. 3. The experience of Christendom has proved, beyond all reasonable doubt, that the emblematic use of the cross in such a position in our churches leads on to the crucifix, as evidenced in St. Paul's, London; and that its use as an aid to worship has ever been followed by its adoration, *i.e.*, by idolatry. 4. The use of a plain brass cross on the Communion Table, or in connection therewith, has been declared illegal in the Church of England by the Final Court of Appeal (July 11th, 1876).

"Heartfelt."—Your suggestion has been noted; we are sorry we cannot put it into execution, at any rate not just yet. "—'A. 1.'— increases in interest each week"—what a pleasant ending to your letter!

W. G. Ellis.—Palm Sunday, or the Sunday before Easter, is so called from the branches of palm trees which the multitudes strewed in the way on the occasion of our Lord's triumphal entry into Jerusalem the first day of the week on which He suffered. Low Sunday, or the Sunday after Easter, derives its name from the fact that among the ancients some of the Easter solemnities were repeated on that day, whence it came to be regarded as a Festival, although of a *low* degree as compared with Easter itself. The Rogation days are the three days preceding the commemoration of our Lord's ascension, and are so named from the special prayers, called in Latin Rogations, which were then offered up with a view, originally, to avert impending dangers.

S. M. H.—The list of prize winners and of those commended in our *first* Spelling Chase, was published in our Number for March 10th. The prize list in connection with our *second* Spelling Chase will be found in our Number for June 9th.

INQUIRY.

E. F. A.—Can any one kindly inform me what will clean ivory?

GEORGE'S PLEDGE.

By B. M. Wemyss-Whittaker.

Part I.

"DO you think I am in the habit of taking too much, little Joey?"

"I don't think you're a drunkard, and perhaps you never will be one," replied Joey dubiously.

"Still you think there is a faint chance. Come, Joey, I don't call that kind; does my glass of sherry or port at dinner distress you?"

Joey recognised the bantering tone, and it made the little fellow all the more earnest; he leant one knee on his cousin's long outstretched legs, and knit his brows anxiously.

"Why are you a teetotaler, Joey?" George went on, leaning backward, watching him.

"Because, first of all, mother wished it; and then I notice among the poor people in the village, those who drink beer aren't the happiest, they don't seem able to stop in time, and you know Scripture says 'no drunkard shall enter into the Kingdom of Heaven.' So I made up my mind that it would be a good thing never to take beer nor wine, and when Mr. Russell started the Band of Hope, he said it would be a good example to the village children if I joined. So I did."

"That's all very well, and it was plucky of you doing it. But you are such a little fellow, Joey, no one thinks twice about you taking wine or not; small boys are not supposed to drink champagne and claret, and all the rest of it, and I daresay it encourages the poor children to stick to their pledge if they know the squire's son does. But—well, you see, I am different. I am not the squire's son, and I am not likely to be in the way of Band of Hope children. I should look out of it if I did not take a little, and I flatter myself I am not likely ever to take too much."

"Oh! but, George, you can't tell that for certain. Think of Louis Grange"—George winced a little—"and lots of other fellows. Even if *you* never did, your example might make some one else; and if it did not do that, you would be hindering drunkards in finding the way to heaven."

"But, my dear little man, suppose the doctor ordered it?"

"Has he?" asked the child. "You look very strong, George; I don't believe you would like me to tell every one you were weak, and took wine as a medicine. But I will tell Charles that now," he added thoughtfully."

"Tell Charles! tell the footman, Joey! Whatever are you dreaming of? I meant it in fun, of course; I am as well as you are. But why, above all, should Charles be told?"

"Well," said Joey, slipping right down on his cousin's knee, "I asked Charles to sign the pledge the other day, and he laughed for a long time and refused, but would not tell 'why'; then suddenly he remembered you, and said, 'If a gentleman like Mr. Murray were to see fit to turn a teetotaler, he might; but as he did not, he (Charles) thought he was quite as well able to take care of himself as you, George," said Joey, winding up his story in a hurry.

"What next?" asked George.

"Just think," said Joey, "you might get him out of temptation altogether; for father says he is much too fond of it, and he can't keep him if he goes on as he is doing."

Before George could answer, the child was flying to welcome his father and mother in the hall, on their return from a drive.

The young man knocked the end of his cigar off thoughtfully, and wondered why every one was so particularly anxious to make him join the Temperance cause.

"Bother it all!" he said to himself; "it's all very well for them down here in this little country place, where I've no doubt there is lots of drinking, and where the people are always ready to follow the squire's example. But in town, among my friends, in my club—" and he gave his shoulders an impatient shrug. "After all, what good can I do? It will not make any one else drink less, though I've no doubt some would be better if they did. What a goose I am to worry myself about it! and as to turning teetotaler because somebody's footman is a tippler, it's the greatest nonsense I ever heard. Joey's a charming little lad, but he will grow a perfect nuisance about the whole concern if they don't look out. No, no, my boy; don't go signing the pledge, it would not suit you at all." And so thinking, George shook his head with a smile, and taking up a book, began to read.

He was soon interrupted by Sir Robert coming in.

"What is the matter, Uncle Robert?" asked George, as the old gentleman walked to the fireplace with a very unusual frown on his brow.

"Matter! what is always the matter now-a-days — the servants," said he irritably. "Johnstone has just come to me with an everlasting long whine about Charles, who it seems has been drinking again, and has been impertinent in consequence. I would turn him out to-night bag and baggage, only I hate doing that sort of thing; it's only another way of sending 'em to the bad at once. No. I'll keep him this month; such a nice, civil young fellow as he is, too, when he can keep from drink, and his family, one or another of them, have been in our service for years; it's a thousand pities. I'd really like to toss the whole of the wine and spirits out of the house to-night, if it were not for the sake of being inhospitable. There, there, George; I did not mean it personally, I am not so bigoted as that, and I am afraid the fellow goes down to the public, and would do so on the sly, any way. Well, well; it is time to dress for dinner," he added, looking at his watch.

"Hang it all!" said George to himself as he was tying his tie, "I begin to feel a regular culprit. I wish that little chattering Joey had not gone talking about me to the footman and the footman to me; it's——"

But the gong sounded, and George ran down to dinner.

"It's a great pity this, Charles," said George to him, when he brought the whisky and soda-water into the smoking-room that evening, looking sullen and heavy-eyed. "A great pity you are not man enough to knock off this habit; and to lose a good master and place like this. Why don't you sign the pledge as Mr. Garnier wants you to, and turn over a new leaf?"

Charles smiled rather sneeringly, and with a meaning glance at the glasses, answered, that "what his betters couldn't do without, he saw no reason to deprive himself of; it hurt no one but himself."

"Impudent fellow!" muttered George angrily, when he had gone. "I've done my best for you, Joey. That comes of trying to reform your neighbour's footman—you get cheeked. Serves me right for interfering. No, my fine friend; you will not see me signing the pledge on your account."

Part II.

"George," shouted Joey, racing after his cousin over the lawn, which was thickly sprinkled with falling yellow leaves, "what a splendid day for shooting! I am coming, you know, and mean to have a shot, if you will let me. I can manage the little rook rifle all right, only the trigger is a trifle loose."

"You had better take care what you are about, Joey, my boy," said George teasingly. "It would be safer for you, I fancy, to stay at home and convert Charles (you've only a week more of his company, remember) than to shoot some of us, not to say yourself too. Little boys and ladies are a nuisance in coverts. I think Bands of Hope are more in their line."

George's voice had more of a sneer in it than Joey had ever experienced before. The little fellow coloured, and looking at his cousin rather sorrowfully, said, "All right; I won't be a bore," and ran off.

"How ill-tempered I am growing!" thought George. "Oh, well, I will take him under my care, and let him have a shot or two to make up this afternoon. Uncle Robert can let him come at luncheon time with the ladies."

* * * *

"Why don't they come with the luncheon"? said Sir Robert impatiently, as after a hard morning's sport they arrived at the place of rendezvous, and found no one there. The tired men waited rather wearily. "Why," he added, "there is the dog-cart with the luncheon baskets and Johnstone, none of the ladies. Nothing wrong, I hope?" he asked, as Johnstone, white as a letter he held in his hand, drew Sir Robert apart.

"Read that," he said huskily to George; then turning to his friends, he said,—

"My dear fellows, you must please forgive me hurrying off; but—I—I have had news which calls me home at once. Johnstone has the lunch here; make a good one, and don't think me inhospitable." And before any of them could make a remark, he and George were in the dog-cart driving home.

The two men never exchanged a word, though that short drive seemed miles. George read and re-read the note with burning eyes.

"Dear Robert,—Come home *at once*. Joey has had an accident.—Mary Garnier."

Not another word; it might mean anything, the worst or nothing. "Women are always alarmists," he thought; but he shuddered as he looked at his uncle's drawn, ashen face, and another face with wistful, dark eyes rose up before him and haunted him. "What a brute I was! poor little chap!" thought George with a stifled sob.

At the hall door they were met by the doctor.

"Is he——?" began Sir Robert.

"Alive, and wants you," answered Dr. Lawes, and he pointed to the library door. Sir Robert went in.

"And I, can't I see him?" asked George.

"You shall presently, but not too many at once," said the doctor. "A sad case, a very sad case, and all carelessness; poor Sir Robert and Lady Garnier to lose their last child."

George started. "Lose him? Is he dying? really dying, little Joey? How did it happen? what did it?"

"It seems," said Dr. Lawes, "that Joey was very anxious to go at lunch time to join the sport, and got Charles to go into the gun-room with him for a certain little rook rifle. It also seems that Charles was not over and above sober at the time, and that on Joey's asking him to load it for him, 'not to bother any one afterwards,' he said"—George groaned—"he, Charles, had not the sense to refuse, did so, and handed it to the child with the barrel pointed at him. Johnstone, who happened to be passing the door at the moment, rushed in; but before he could interfere, somehow it went off, and your poor little cousin received the charge in his side. There is no hope for him; he can only last a short time."

George covered his face with his hands. "My fault, all my abominable, selfish fault," he moaned; "and Charles, where is he?"

"Sober enough now, poor wretch!" said the doctor. "He is dazed, I think; any way he won't leave the other door to the library, and I have told James to keep near him."

"George."

It was his uncle calling him, so he went into the library, Dr. Lawes following.

Joey lay on a sofa, his head on his father's shoulder, and holding his mother's hand; his curly hair damp with coming death, making his large, dark eyes and small, white face darker and more delicate than ever. A light rug was thrown over his little form.

"I'm not a bit afraid of dying," said he faintly, "and it doesn't pain much now. Please kiss me, George, for I'll never bore you any more—and—don't be angry, George, dear, but you'll sign the pledge, won't you?" he continued, as his cousin knelt down and kissed his forehead.

George nodded, for he could not trust himself to speak.

"Thank you *so* much, for I know Charles won't unless you do; he said so. Father dear, promise me you won't be angry with Charles; it was that horrid drink made him careless; he'll be so—sorry—to have hurt me. It was the rifle's fault—too—the trigger is so loose; and," added the child more faintly, "do, George—please sign in my book—Charles knows where it is—ask him for it—*now*—please."

The tears were rolling down George's cheeks.

"Joey, my dear, dear little fellow, indeed I will; forgive me for not doing it before—and—little man, try and get well."

Outside the door George found Charles; he was too sad to speak sternly, and when he saw the white, horror-stricken man, he spoke kindly.

"My poor fellow," he said, "*he* wants you to fetch his pledge-book, for us both to sign in it. It has been partly my fault that this has ever happened; please God, we will both be better men in future."

"Bless you, sir, for those words," said Charles hoarsely, as he went for the book.

Joey was, if possible, still weaker and whiter when they came in again. He was feebly trying to stop his mother's tears, and was kissing her hands; outside the servants were sobbing audibly, but his father never moved or changed a feature.

A bright smile spread over the boy's face as his cousin showed him the pledge-book.

"There are lots of—names—in my—book," he whispered; "but—I shall—love—the page—with—you—two—on it—best. Please write—quickly—and say—the promise — out — loud."

It was with trembling fingers and broken voices the young men did as he desired.

"Now, Charles—you—kiss—me—too; we all—quite forgive you; you will—be a—good man—and—help others."

Charles, white as the little face before him, kissed the child's hands, and, bursting into tears, left the room.

"My dear little man," said George, "I promise you to look after Charles, and never, if I can help it, put temptation in any one's way again."

Joey smiled. There was silence in the room while the little life ebbed quickly away. Outside the bright autumn sun flooded the hills and garden, where the child would never shout and play again; flooded the room, where the angel of death already waited.

"It's getting very dark—and I'm sleepy," said Joey. Then with sudden strength: "Heaven is bright and lovely—you'll all come—all meet me there—don't be long—good-bye." And the child's spirit passed away—one more innocent life gathered to God.

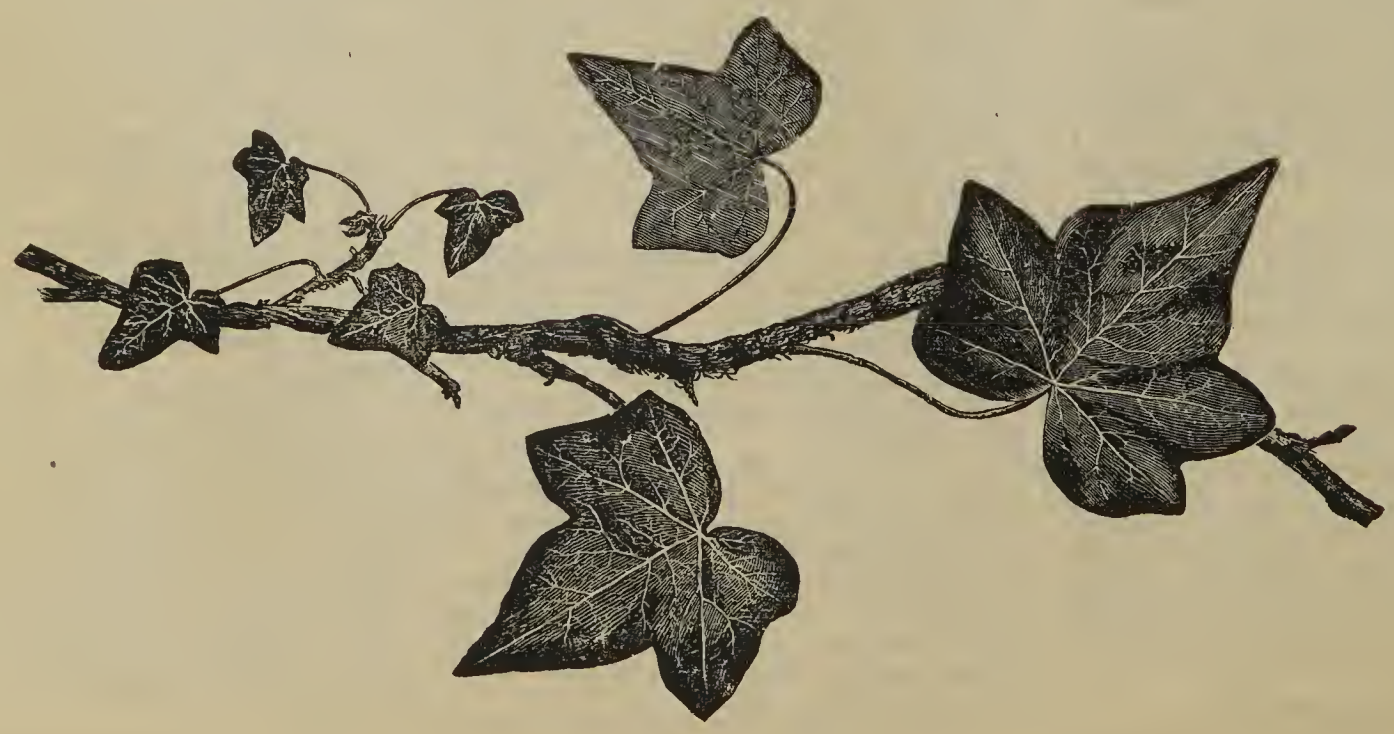
One more victim to intemperance.

"Charles," said George later, "I am going abroad; I want you to be my servant. You must not be hurt at Sir Robert not bearing to see you; it is but natural. We have both much to learn, much to regret; we must live and work for God and others, as that child would have lived, and wished us to do."

And Charles, with tear-dimmed eyes and pale cheeks, answered, "Ay, sir; and with God's help so I will."

There is a tract which lies in its unpopulated seclusion remote from the region of civilisation—a mere village, or straggling collection of houses, called by courtesy a Frontier Town.

It was here that George found a home, farming a large tract of land, and trying by industry to live down the bitter memories of the past which would arise.



A year later the news of the discovery of gold in the immediate vicinity became noised abroad, and as if by magic, saloons, houses, and shops sprang up. Thither flocked the waifs and strays of humanity.

It is night, and in the serene beauty of the cloudless moonlight, George thinks over all the past, and wonders dimly if he ought not to return and strive to do some more active good in the world. As he ponders, faint on the night breeze comes the coarse merriment of the carousers with which the town abounds. And then, as in a flash, the knowledge came to him that here, close at hand, was a work that might not be deemed inglorious.

Years have passed: the straggling frontier town is now a thriving centre of industry, but its chief boast is its immunity from drinking and gambling saloons.

Therefore Joey's short life was not without fruits, and George's pledge was one of them.

A mist rises before his eyes, even now, whenever he reads or hears the words—"A little child shall lead them."

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted,"

"Little Rainbow," "Corbiestanes,"

"Our Navvies," etc., etc.

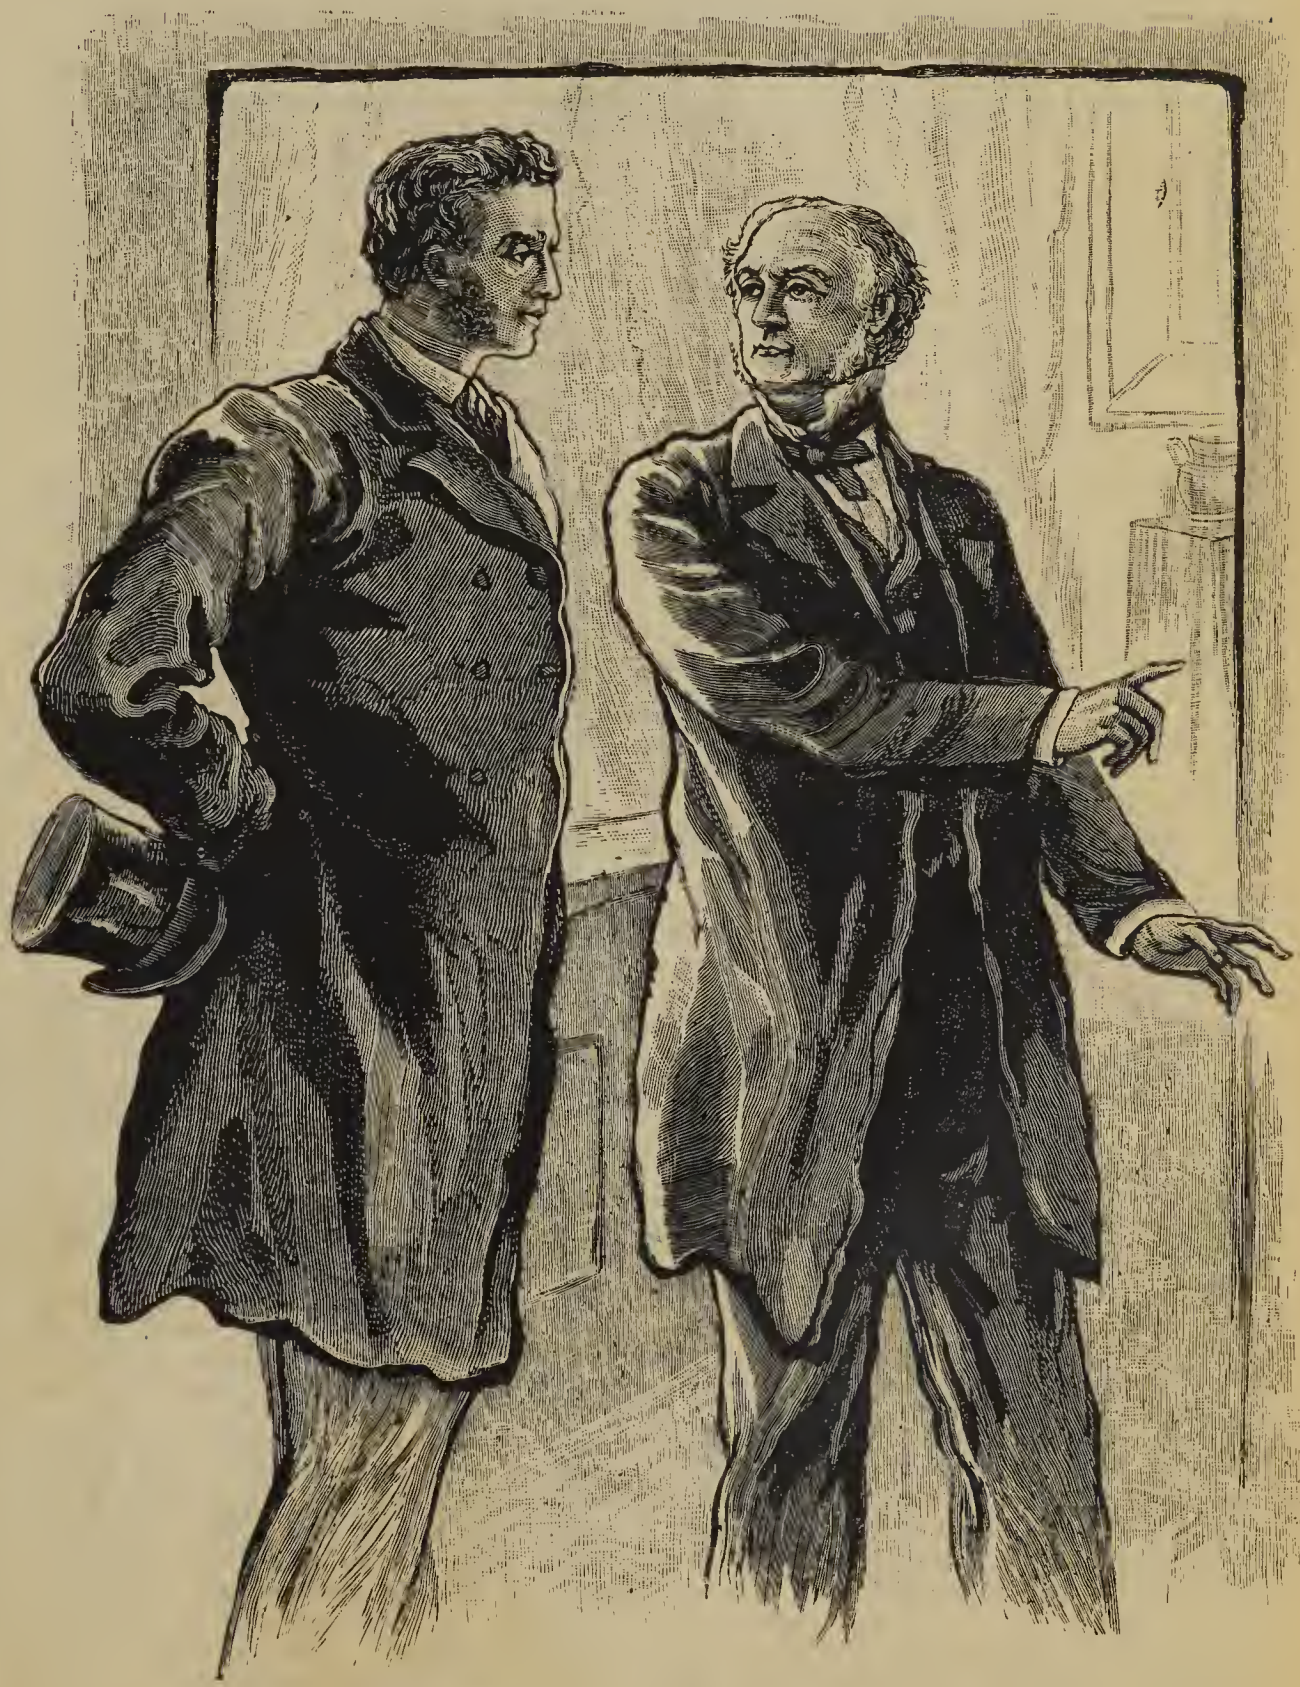
CHAPTER III.

PASSING THROUGH THE VALLEY OF THE SHADOW OF DEATH.

HE would have been very happy in his work, but one thing was a constant source of pain and apprehension to John Burleigh. The streets of his district were crowded together, and the free current of air obstructed by high factories. Houses were built facing both ways, so that, say, neither back Canal Street, nor front Canal Street, had any back doors. A draught through was thus an impossibility. Those were not the days of sanitary arrangements. The drainage was bad, the water impure.

"Few years pass without epidemics, and periodically fever or small-pox break out, and hundreds die."

Mr. Tozer early confided this information to Mr. Burleigh, and as he made the remark in the Canon's style, it was evidently a quotation.



"And is nothing done?"

"Well, what *can* be done? As the Vicar says, the people could easily take preventive measures, but then they won't. The Vicar has had health lectures; ladies and people from the good streets and squares came, but not a dozen poor people.

John could not forget the warning. He went about, almost unconsciously noting every dirty heap of cabbage leaves and decaying bones the hens were scratching up. He saw the ash-pits crushed against the dwellings, and though mostly the interiors of the houses were clean, yet the utter want of ventilation and the foul smells everywhere, spoke to him constantly in threatening tones. He did what he could. As he sat by the cottage fires, he spoke of open windows, and showed the men how to make filters. He lent about simple books on sanitary measures. Here and there an intelligent workman was won to his way of thinking. But circumstances, and the long-formed habits of their class—their dread of ventilation and ignorance of baths, were against them. And Mr. Burleigh they thought fanciful—"A real gentleman, but some very high notions; he's *there* and we're *here*," said the mother of a dozen children to a neighbour.

"You're right there," returned her friend. 'I should like to see what he would do with four rooms one atop of another, and none of 'em big enough to swing a cat in. I'm sure, when all our eight are in, I don't know how to turn."

"Nor me either," said the first speaker.

"'*Well,*' *said his senior,* '*my strongest argument is lying upstairs, and you have just faced it. Good-bye.*'"

And then the women gossiped on other subjects, and thought no more of Mr. Burleigh's warnings.

But the more his parishioners turned an unheeding ear to his prophecies, the more the subject weighed on the Curate's heart.

At last this shadow of coming evil became a morbid, haunting dread to the young clergyman. He started at night awake, and the first thought which rushed into his mind was the question, "How would it come?" There were so many forms of illness—scarlet fever, small pox, typhus fever, and last, that dreaded scourge, diphtheria. Any one of these would work wild havoc in those crowded streets on the bank of the indigo-coloured canal.

It might be prevented; it must! John Burleigh spoke to his Vicar and to some of the richer parishioners of St. Andrew's. He was listened to, and for a time he was comforted, hoping that something effective would be done. But he soon learned that the pressure of more immediate wants, caused his words to be forgotten. He interviewed the Mayor from time to time, and a single evil would be remedied, but as a whole, things were allowed to remain *in statu quo*.

So John Burleigh, feeling he bored people, ceased to speak. If he had been more thick-skinned, he might have continued to push and worry, but this was not possible to so purely strong a nature. The dread of the coming pestilence was ever with him, and oppressed his spirits and made his heart ache. The secret fire was consuming his energies.

John had entered on his curacy at Christmas. The following summer was singularly cold and wet, the hay and corn harvests were ruined; a bleak winter was succeeded by another cold, miserable summer, and the Curate of St. Andrew's at Benford almost rejoiced as, day after day, he noticed the steady downpour. Mr. Smithies, who loved sunshine, complained pitiably; but as John Burleigh marched about under his streaming umbrella, he felt happy, for the gutters were full of rain-water, and as he strode across them, he said cheerfully to his companion, "but think how the drains are being cleansed."

"I never knew such a fellow. You dream, I believe, of drains. If something did come, we could only do our best and ask God to help us."

"Ah!" said John, with an impatient sigh, "that is not doing the will of the Father; we are *not* doing our utmost with His talents."

"What a strange man you are," was all Mr. Smithies had power to utter, and John henceforth kept silence even to him; but the constant dread of the coming evil was wearing his strength out.

The third summer came. It succeeded a hard winter, in which, as trade was "slack," there had been much privation and suffering. The Canon's soup kitchens were crowded, and many others who never came there, pawned their warm clothes and the blankets off their beds, and sold every article of furniture which "did not show," and "demured" at home unmurmuringly. Somehow John Burleigh knew more of such cases than all the other three clergymen together. He never mentioned them, but all his public subscriptions were withdrawn without any reason being assigned, and for the first time in his life he had not a spare half-crown. The winter was succeeded by a spring and summer at which the farmers rejoiced. Mr. Smithies, too, revelled in the perpetual sunshine. The clerical holidays were arranged on system, as everything else. The Canon chose his month, and then notified to his curates which three weeks each they might have. Of course Mr. Tozer had his first. He returned at the end of June.

"Burleigh will have July, and I must wait till August," said Mr. Smithies ruefully.

He was delighted when his fellow-curate said that evening,—

"Suppose, Smithies, we change holidays, and you go now."

He eagerly accepted the offer, and never even thought of asking why it had been made, and John Burleigh gave no explanation. His secret terror had been growing stronger during the last six baking hot weeks. He had felt the awful shadow of death stealing over the city. He could hear the flutter of its dark wings hovering above the crowded courts and dense alleys of his district. He read in the papers that the city reservoirs, unequal to the supply in ordinary seasons, were nearly dry. Then the water supply was reduced. For two hours a day, water might be drawn at the street taps, but inside the cottages, it was cut off entirely. The Town Council blamed the incapacity of its engineer, who had planned, at enormous cost, a series of reservoirs fed by no constant stream. The engineer dare not retaliate, or he would have lost a lucrative place; but he spoke smooth things, and brought forward the idea of another enormous reservoir, to be completed in six years' time, which would be fed properly. His friends backed his scheme up, and so there raged an exciting war of words in the Council chamber, and in the newspapers. And in the meantime nothing practical was done. Dirt increased, and foul smells abounded.

One day John Burleigh was hastening down front Canal Street to a Mothers' Meeting in his Mission Room. A woman ran out of one of the houses; he recognised her as the mother of the dozen children.

She cried, "Do come in, sir. I can't think what's up wi' my Sammy—him in your choir, sir; he was badly all yesterday, so I kept him at home from t' Mill, but he's worse today; his throat's ever so bad, and now he's off his head."

Into the chamber, stuffed up with two large beds, the curate went. He turned pale as he looked down on the little factory boy.

"So it has come at last," he said under his breath, and aloud—"I will go for the doctor. Sammy has diphtheria."

So the battle began with a twelve-year-old Mill boy. The fell disease spread with awful rapidity. It passed along the banks of the canal, and then spread on every side. The infection seemed incredible. Day and night the curate passed from one sick bed to another. By May this Christ-like man, in single hand-to-hand conflict, struggled with the foe, and praying all the time to the Master, Who was watching the battle, held the demon at bay. At first John Burleigh was alone, but presently the people overcame the first fear of this unknown plague, and a knot of working-men gathered round him, and each day the band increased.

They passed from house to house, from street to court, whitewashing the dwellings, clearing away the impurities, flooding the drains, and nursing the sick as best they could. John Burleigh knew that the segregation of the sick, was the only true method of cutting off contagion, and of that there seemed no hope. All he could do was to stick to his post, and keep up the courage of his assistants.

Canon Feedman was busy, forcing the Corporation to pump up into one of their reservoirs, at a great expense, an abundance of comparatively pure water from a distant country river, and to open a large temporary hospital. The Council grumbled, and fought stoutly against the increase to the rates. He succeeded, as usual; but weeks had gone past before the hospital was ready, and in the meantime John Burleigh, in the worst district of the city, was teaching people to help themselves, and showing them that Christ Himself lives in the hearts of His servants.

Passing by the prosperous well-to-do citizens in their houses in the high situated squares and open suburbs of the town, the demon of diphtheria chose for his victims the privation-pinched inhabitants of the low-lying districts. He prowled hungrily around their poor homes, and, entering unbidden, struck one and another down, careless whether his prey was the bread-winner or the toiling mother, the baby in arms or the young man, the hope and prop of the house; but careful not to approach the old, the feeble, or the useless. In every street and alley was an exceeding bitter cry rising from desolated hearths. In each saddened home was the curate seen, and wherever he appeared, he brought with him comfort and help.

With a pale face and quivering mouth, but with those resolute eyes of his ablaze with sleeplessness and determination, he could be seen at all hours of the day and night at his work, encouraging his helpers, cheering the desponding, comforting the desolated, and drafting off the children and convalescents to a country hospital, or rather home, which Canon Feedman had hastily arranged. The bell of his Mission-room was heard clanging at the stated times of service, but he was no more seen at the parish church. And in the Mission-room, his people, self-occupied by anxiety and sorrow as they were, noticed daily how wan and tired the parson looked.

"He's wearing out," said Mark Thompson, one of his working-men helpers, to the parish doctor.

"Yes, he's killing himself; but he won't die so long as he's wanted," returned that practical person.

And he did not.

For nearly a month John Burleigh fought the fever with no outside assistance. All his helpers were from his own poor district. A frightful month it was. The heat was unbearable, and turned the dye-stained canal and polluted river into streams of poison, filling the atmosphere with disease germs. At last, Canon Feedman got the corporation to move. He quickened their tardy action by pointing out that the diphtheria, which had first spread through all the poor districts in the city, had now stealthily crept uphill and invaded the better squares and streets; the foe was at the Councillors' own thresholds. So action was taken. Water and disinfectants became plentiful, a great fever hospital was opened, and the sick were at last segregated. Infected clothes and bedding were destroyed. Another three weeks passed, during which much was done to stop the progress of the plague. And then the earnest prayer for rain, put daily up in the parish church and the Mission-rooms, was answered. One thunder-storm followed another in rapid succession. The air was cleared, the rain descended in floods. The turbid waters of the canal were stirred to swift motion, and brought with their muddy waves the scent of the moorland peat.

God had said to the destroying angel, "Stay now thy hand."

They held a thanksgiving service in the

Canal District Mission Room. It was crowded to overflowing, but many faces wore tears as well as smiles; and though they carried nosegays of flowers, most of the worshippers were clothed in mourning.

The service was very simple—some hymns and the sacramental service. Few stayed away that day from the blessed feast. Mothers weeping for their children, husbands whose motherless boys and girls were about them, widows bent with grief unutterable, mingled with others whose hearts were brim full of gratitude, as they looked around on the members of an unbroken family band. They thronged to the railings, on the other side of which John Burleigh stood, with the memorials of that unutterable dying love in his hands, and the words, "Given for you," "Shed for you," upon his lips. And as they knelt there, John Burleigh's heart was as full as theirs, of the memory of beloved missed faces. They had heard that remembrance in his voice as he had said, "With all the company of heaven, we laud and magnify Thy glorious name." And now they saw it in his face, as, after returning from that communion with Christ—with their absent ones and with each other—they saw him stand before them on the step where they had just knelt. His face was almost as pallid as his white surplice.

"My people," he said, "I want to speak to you upon these words, 'The fellowship of His sufferings.' Brothers, we have been learning that lesson. We are *members* of Christ. He became man—true man—that we might share His life, as well as that we might be saved by His death. We are one with Him."

Then they heard his voice fail, and the next words, even those nearest to him could not catch. He swayed backwards. A man sprang forward, and Luke Sugden, the warden, caught him, as he fell a limp mass of whiteness, fainting on the chancel floor; and that was the last time that John Burleigh was seen as a clergyman by his people. He had not taken diphtheria. He was simply sinking from exhaustion, and a kind of low fever. His physician declared his would have been an easier task, had there been a definite disease to encounter. As it was, there was nothing to take hold of, nothing to grapple with; only this terrible weakness, which no medicine touched—this sinking down.

"We have no leverage. There is no resisting power left in him."

Another physician had been called in to a consultation, and his own grey-haired physician made the remark sadly, as he looked into the younger and keen face of his colleague,—

"No, all the vital force he possessed, Mr. Burleigh has been using up lavishly for those poor people down by Canal Road. No mortal could stand such a strain, and not suffer,—least of all, a man of such a nervous temperament."

"Great folly! Perfect madness!"

"Ah!" replied the older man, "it strikes me that, though we may think such expenditure 'great folly,' there are eyes before which it looks a different matter. Mr. Burleigh said in one of his sermons, I remember, God had a right to the principal, as well as the interest, of our possessions; only we, as stewards, were left free to determine where and when the one or the other was to be spent. I suppose he thought—if, that is, he thought at all about it—that he would seldom have the chance of being so extravagant again."

"Well! I still say it was folly."

"Maybe. But come, now! Confess, such faith is in itself a noble thing. Christianity is not of *here*, or of *to-day*, if it makes a man act as Burleigh has done this last six weeks. There must be more than abstract truth. There must be life—vital force—in it. Eh?"

The younger physician shook his head and smiled. He was an Agnostic.

"I see, P——, you want to entrap me into an argument again. I really have not time for one to-day."

"Well," said his senior, "my strongest argument is lying upstairs, and you have just faced it. Good-bye."

"Good-bye," said his friend, and signalled for his carriage; but as he drove away, he could not forget John Burleigh or his folly, and the thought haunted him for some time.

It was quite a relief to hear the young clergyman had rallied sufficiently to be taken away by his mother to the sea-side. Then Dr. —— shook off his disagreeable recollection of John Burleigh's self-sacrifice, and put the remembrance of him entirely on one side.

In the neighbourhood where he had seen so much stupidity succeeded by so much misery, and where, through the apprehension of coming ill, and then the strain on every energy when the pestilence made its appearance, John Burleigh had, like his Master, laid down his life for his flock.

For three long months he could gain no strength. The very pattern of the paper on the wall reminded him of sorrow.

His was not a nature to be inwardly calm, however patient and long-suffering he might seem outwardly. Mr. Tozer said "he was a beautiful example of resignation under chastisement." Mr. Smithies "was awfully sorry he was so ill, but it was a good thing he was so quiet and happy." And all the time John Burleigh was loathing the very sight of their faces, the creaking of their boots; and the slamming (and they both slammed) of their doors brought the perspiration in beads on his forehead. He loathed the beef-tea his mother brought him, though he drank it and gently thanked her; he never smelt it without thinking of one and another dying bed where he himself had administered it.

He counted the diamonds of the cheap carpet, and viewed a hole in the seat of one of the horse-hair covered chairs, until he verily hated them.

It was all he could do, his hands clasped in prayer beneath the bed-clothes, not to groan aloud, when the Canon came, and in his sensible, ponderous way "sat a little" with him. Pleasure, too, was almost as wearisome as pain.

When Mark Thompson, or one of the district people called to inquire after him—and they were perpetually hanging about to hear how he was faring—Mrs. Burleigh dare not tell him, his face would flush so quickly, and his loving message be given in such a tremulous whisper.

So Mrs. Burleigh would see the group of toil-stained men waiting at the corner of the square at the dinner hour, and send Mr. Smithies out to speak. But she carefully carried up to his bedside the fresh egg, brought every other day by a cripple boy, and the flowers—country poseys—which the mechanics and shipwrights walked long miles, when their day's work was over, to gather, late as they brought them; and on Saturday, when they received their wages, many a hard-working man had gone with his wife to the market, "to look round for something our parson could fancy."

And John Burleigh smiled with a smile strangely akin to tears, as chickens, oranges, sour grapes, and rich cake were displayed to view. His mother thought it cheered him, as it did herself, to see how well beloved he was, until one day; and after that day's experience, he saw no more of the poor presents for which, with her gracious manner, she so thanked the givers.

A woman, dressed in her Sunday best, and leading a little girl, also clothed in mourning, came one afternoon.

"I'm Eliza Benson, ma'am. It were my Sammy that were the first one to die of the diphtheria, and I lost four after. We've only seven left now, and this is our eldest girl. She's only eight, and nobbut a mesh child always; and she's never right got over the diphtheria. It went inward, and the doctor says she's in a *con*sumption or a *de*cline. She's got so weak she couldn't walk; but nothing would suit but she must see Mr. Burleigh again, so I trailed her up in t' perambulator. *Do* let her see him, mum."

Mrs. Burleigh looked down on the little face, which seemed all eyes, and which was turned so eagerly up to her own.

"Why do you wish to see my son?"

"I've summut for him."

"Cannot you trust me with it?"

The little girl grasped a small basket tightly, and burst into tears.

"Don't cry, little one. There—there—you shall see him; come with me."

The thin little hand was quickly placed in that of the lady; but the child panted so painfully when they came to the stairs, that Mrs. Burleigh lifted the light burden in her arms, and carried her to her son's room.

The child went in very demurely and stood by the bed. Mr. Burleigh stretched out her hand and drew her near.

"Little Sally, so you have come to see me," he whispered.

"Yes, sir; I'm in a *con*sumption. I'm going to give you summut—see." She opened her basket and drew out a white geranium. Her great eyes sparkled as she put it into John's hand. "Won't it make you better, Mr. Bur'ey? Isn't it bonny? It's off Sammy's tree; it's all the flower it has. Don't you mind, Mr. Bur'ey, when Sammy was dying, and you and me was there, he said, 'Sally is to have my geranum'?"

John nodded; he could not speak.

"Well, Mr. Bur'ey, it's only got this one posey, and I'll be dead afore it has another; but I'll see Sammy, and tell him you got it. Don't you *like* it, Mr. Bur'ey?" she asked, fearfully, for John's face was working strangely.

"*Yes! yes!*" he muttered. "Kiss me, Sally, and give my love to Sammy."

The child put her arms round his neck, and kissed her friend again and again. And then Mrs. Burleigh carried her to her mother, who wrapped her carefully up, and took her home, a happy little girl indeed.

His mother went back to John Burleigh's room. Her hand was on the handle of the door, but she did not enter; she heard a sound which made her start, and then sent her softly away. John was crying like a child.

Half an hour later, when all was still, she found him sleeping peacefully, his cheeks wet with tears, the white geranium lying on the counterpane, clasped tenderly in his shadowy, long fingers.

She sat and watched him; now and again, with a little shiver, a sob broke from his lips. Then the slumber became profound; he still grasped the flower, but he slept all night.

(*Continued—page* 561.)

THE INFLUENCE OF ELDER BROTHERS.

By Major Seton Churchill.

"TOM, mother says the world is round. Is that true?" Such were the words a mother told me that one of her servants heard a little chap ask his elder brother, as she entered the room. The two were not so many years apart; but such is the implicit trust that youngsters have in the opinion of those just a few years older than they are, that even mother's word is not always accepted, unless it is corroborated by a more infallible witness.

As a rule, among boys, especially when they are manly little fellows, physical force, as displayed in one being able to defeat another in the art of self-defence, or skill at games, goes a long way in turning a big brother into a hero. The self-recorded tales of how nobly he conducted himself in a fight or two at school, all help to bring the younger adoring brothers to worship at his shrine.

Now, as a matter of fact, Master Tom may be the veriest dunce, or the biggest coward in the school which has the honour of his patronage, and among his own fellows he may be much looked down upon. The man with one eye is, however, a king among blind men, and he must be a poor specimen of humanity, who, having a few years' start of his brothers, cannot make them, at all events, look up to him as the beau ideal of what a boy should be.

This position, however acquired, is one of tremendous responsibility, as the influence of an elder son over his younger brothers, for good or for evil, may be enormous.

It is a little humiliating for the parents to hear the truth, and to know that their firstborn so often usurps the place of authority, and that even their teaching has to filter down to the younger ones through Master Tom's intellect, who often discounts very considerably what father and mother say. If mother says that the world is round, and Master Tom agrees, the question is no longer open to discussion. But if this young urchin, whoever he may be, does not approve of the statements made by the parental authorities, need we wonder that there is in the minds of some of the younger ones an element of doubt in respect of whatever topic he may differ from his parents upon?

So far, only the case of very young boys has been considered; but the principle is very much the same as the boys grow in years. If the eldest son is on the side of law, order, and parental authority, the task of the parents is very much simplified in conveying their principles to the little ones. As a matter of fact, that which is conveyed to the younger members of a family through the eldest son, is much easier for them to understand. He uses language and ideas more suited to their minds, than is possible in the case of the older parents, not even excepting the mother, whose influence with small children is generally greater than the father's. Boys understand each other better than older ones comprehend the younger ones; and consequently, an elder brother finds it very much easier to make his juniors grasp his meaning, than either of the parents would do. Added to which, there is implanted in all young children the instinct of imitation; and as the elder ones are generally more with their young brothers than either of their parents, the little ones not unnaturally fall into the habit of imitating the sayings and doings of an elder brother, rather than of any one else.

Perhaps it was in recognition of this truth that the elder son has such an enormous influence over the younger ones, that, previous to the selection of the Levites as a tribe of priests, it was the firstborn son of each family who officiated in that capacity for the others. When the Levites were selected, we are distinctly told whom they supplanted. "I, behold, I have taken the Levites from among the children of Israel, *instead of all the firstborn*" (Num. 3. 12; see also Exod. 13. 2).

The Levitical priesthood was an abnormal state of affairs, and was swept away with the dispensation to which it belonged. Although the actual priesthood of the eldest son has never been revived, there being now no sacrifices but spiritual ones, yet, nevertheless, there rests a very solemn responsibility on the eldest son of a family to exercise that priesthood to which we are all called, and to show by the living sacrifice of a life dedicated to his Master, whose he is and whom he serves. Too many re-act that terrible scene of Cain and Abel, and ask with that murderer of old, "Am I my brother's keeper?"

Cain slew his brother by depriving him of physical life, and he is consequently called "a murderer." But how many elder brothers do far worse than merely to deprive their younger brothers of physical life! The temporary existence through which each one of us passes, must, under any circumstances, sooner or later come to an end. Well might the Apostle say, in reference to our present existence, "For what is your life? It is even a vapour, that appeareth for a little while, and then vanisheth away."

But there is another life referred to by our Saviour, when He said, "For what shall it profit a man, if he shall gain the whole world, and lose his own soul? Or what shall a man give in exchange for his soul?" How many an elder brother might be branded as a murderer, in a far worse sense than was true in the case of Cain, for having been the first to lead astray the footsteps of those for whom he was morally responsible! Perhaps the words may never be actually used, "Tom, mother says the world is round. Is that true?" But, figuratively speaking, the question is continually being asked. Are not the wise counsels of the father, and the tender entreaties of the mother, often ridiculed by the elder son, with the consequence that the younger ones think there is not so much harm as there really is, in the evils against which they have been warned?

As the position of the elder son is very influential for good, so may it often be made a terrible curse for evil, and bring on the holder of that solemn office, that penalty to which the Prophet referred when he said, "Woe unto them that call evil good, and good evil; that put darkness for light, and light for darkness; that put bitter for sweet, and sweet for bitter!" As the elder son has the privilege of being able to direct the thoughts of his young brothers to all that is noble, pure, and of good report, so has he also the power of being able to infuse into the young, innocent brains, impure thoughts, which, like the germs of all that is evil, will multiply a thousandfold, and possibly hasten to destruction later on in years, that life which might have been so different, had a nobler mind but been the tutor, and had a better example been set.

It matters not if later on the elder son sees the folly of his life, as then, too often, alas! it is too late. His influence for good or for evil has run its course. That period of time can never return to him again. He can but say of it, as Pilate said of the inscription he had placed over the head of Jesus, "What I have written, I have written." For good or for evil, he has inscribed truth or falsehood on the young minds of those with whom he has associated, in those years when their minds were peculiarly receptive to the influences around them.

The elder brother may write what he likes, but there is no eraser which he has the power to use, which can remove the inscription he has set up. Evil habits cultivated in youth are not so easily set aside as manhood advances. Like the weed in the garden that has been allowed to remain some time, evil takes a firm hold, and sends its roots deep down into the soil. It may be cut down, but it will certainly spring up again, and thus it will go on acquiring a firmer grasp of the individual.

How many a younger brother might have been saved for eternity, had the elder ones but rightly used their opportunities of setting a good example, and by the life bearing witness to that which is true, ever remembering the fact that there can be no true life apart from Him who is the Way, the Truth, and the Life.

A SON'S PETITION.

[*Extracted from a letter from China.*]

BY-THE-BYE, there is such a nice old boat-woman at the Hospital now. She comes to learn hymns, and spends a long time repeating them line by line, till she can say them by heart. She has attended church for some time.

Her son lately went to the pastor privately, and said something to this effect: "My mother has lately become a Christian. I do not object to this, as she is the head of the family, and may do as she pleases. She also talks to us, and tries to persuade us to worship God. This, too, I can endure. But lately she has begun to speak to the people in the boats near us, telling them it is wrong to worship idols, and this is really more than I can bear. The boat-people laugh and mock us, but she will not stop. Now, can it not be arranged that my mother should be made *one of the kind of Christians who do not speak of their religion to others?* I do not mind her believing in God if she would keep it to herself, but she will try to induce others to believe too, and of this I do not approve. Can you not manage to make her a Christian who will not speak of her religion?" Now, is not that a testimony that some of us might envy? We fear that son must have met many an *English* Christian, by whose standard he judged the fearless testimony of the convert!

Many consult God about their safety who would never consult Him about their duty.

LEAVES FROM THE LOG OF A GENTLEMAN GIPSY.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the Land Yacht 'Wanderer;' or, Thirteen Hundred Miles in My Caravan," etc., etc.

Dr. Johnson's Birthplace.

LEAF IV.

TO WENDOVER, WINSLOW, AND WHITCHURCH—MAID'S MORETON AND BUCKINGHAM — TOWCESTER — LAZARUS AT THE GATE—DUNCHURCH, THE WROTHSTONE—PLEASURES OF THE ROAD.

"My whole life now I live in pleasant thought,
As if life's business were a summer mood."

I'M not only almost sure that I fell asleep on the coupé while driving to Wendover, but I am not at all certain that I was awake all the time I stopped there. It is such an enchanting, drowsy, dreamy little spot. If I took any notes of it, I have lost them, yet have I still retained visions of its beauty in my mind, and sunny memories of pleasant people who visited me; of a big old-fashioned inn; of a pretty court-house; of a walk along a meandering stream; of a fine church and churchyard; of great swaying trees and cawing rooks; of cosy hamlets by the river-side, and tall green hills rising all around. That is Wendover, I *think*. Yes, it must be, and did I not climb a high hill before breakfast, and find on the top of it a lark's nest, with three bonnie grey eggs?

Never mind. I awoke about half-way between Wendover and Winslow, at a straggling old village called Whitchurch. I know I was awake now, because here lie my notes. "The view from this elevation is splendid, an open expanse of hill, and dale, and wood, and water." These are the very words of my Log. Then it goes on to speak of two young ladies who met Bob on the street, and knew him from his portrait which they saw in the *Leisure Hour*, and brought their albums for me to write in, and asked me to come and see their mother, and a strange old mitred stone, with an arrow and the three stars that had been covered with plaster for ages, and a great many other items too numerous to detail here.

Then on to Winslow, bivouacking in a nice field behind the inn.

I was white and sick with pain when I entered the inn, for I had been thrown from my cycle, and sprained my wrist rather badly, falling on a heap of flints.

Winslow is a town in miniature, an odd, old-world sort of a place, with plenty of quaintness of roofs, and streets that an artist could make pictures of.

The road to Padbury is uninteresting, but then from the hill-top we had a peep at one of the finest views in Bucks, all rolling hills and dells, grandly tree'd, and to-day bathed in sunshine.

Made the mid-day halt at Maid's Moreton, a mile beyond Buckingham. The girls at Maid's Moreton, who served us with ginger ale and eggs, were apparently sisters, thorough types of English beauty, fresh and sweet, and seventeen, perhaps, wreathed in smiles, and straw bonnets of the newest pattern. The road was now very hilly. We had to stop almost every ten minutes to get on the skid and safety chain, or let down the safety roller.

Akeley, where we halted to buy bread, is a study in thatch, in gables, and in winking, blinking windows.

Whitlebury, near Wittlewood Forest, is worthy of special mention. The drive through the forest itself is pretty and romantic, though by no means wild; but when you bid good-bye to the deer, and enter the village, you will at once be charmed. It is one of the beauty-nooks of England. It is a village of cottages, but each cottage is more pretty and quaint than another, rich in quaintness of gable, and roof, and verandah, with roses and climbing things of all sorts wreathing garlands and tangles of beauty around them, and bonnie wee well-kept gardens in front, that it rests and refreshes the eye to look upon.

About three and a half miles from Towcester, where we bivouacked at night, the scenery becomes very beautiful, as seen from that breezy, bracing hill-top. Tree-clad hills and valleys, and green or yellow-flowered meadows all around us. Behind us, and to the right, lay a rustic wee village, with a church-tower peeping up through a cloudland of trees. I did not even know its name, but everything about sang of peace.

Here—two miles from Weedon—lying in a hollow, is a charming cottage-mansion, with terrace and lawn, spreading yews and feathery larch trees. Surely happiness dwells there. Perhaps, but not at the gate yonder, where, squatting on the grass, is the family of a tradesman tramp. The husband and wife, and two gaunt and hungry-looking children, of six to eight years old, besides the baby in a dirty, dingy perambulator, which also contains the tool-bag. They are all breakfasting off dry crusts, and baby has the biggest. This, methinks, is a true English picture, Lazarus and family at the rich man's gate.

We lay that night on the tree-shaded village-green at Dunchurch, stabling our horses at the Dun Cow. Several of the villagers came to see us, including the doctor and his wife, who kindly sent us flowers next day. The caravan is always gay with flowers, and in all my journeyings I never yet had to purchase a single bouquet.

Not very far from Dunchurch is a curious stone, large, square, and hollow, situated behind a tall hedge, with a weird-looking Scotch pine-tree growing at each corner. It is called the Wrothstone, and here, once a year, the Duke's agent meets the tenants, and they pay to him certain monies, in all amounting to about nine shillings and fourpence. This tithe must be paid before breakfast, or the tenantry would have to give the Duke a white bull with red ears—a wild Chillingham one, I should suppose. A friendly old antiquary, who boarded me at the Dun Cow, gave me this information, and a deal besides.

One of the longest and most beautiful avenues of trees in England was soon entered. It stretches west for many miles. Pines they are at the commencement, but soon elms take the place of these. A whirlwind had uprooted about a score of them shortly before our arrival, within a distance of some seventy to a hundred yards.

The trees in this splendid avenue do not hug the road, neither do they crowd each other. They are very regular, and leave plenty of green sward on which the wild flowers grow wanton from early spring to late in autumn.

* * * *

"What a deal you must see on the road," said a gentleman visitor to me one day; "and how many places of historical interest you must come across!"

"Yes," I replied, somewhat to his surprise, "but if I went out of my way—off the road, in fact—to visit places of interest such as you name, my life, instead of being a pleasure to me, would be a weary burden I should long to lay down. There is nothing palls upon a traveller sooner than the seeing of hackneyed sights. And just think for a moment of the number of objects of interest there are in every English parish—houses and halls; cathedrals, churches, abbeys,

and priories; waterfalls, woods, lakes, rivers, ruins, and Roman remains; castles, camps, and commons; parks and palaces. And, sir, 'the trail of the serpent is over them all.'"

"What serpent?" he asked.

"Oliver Cromwell. He's been everywhere, and had a shot at everything, from Land's End to John o' Groats. I'm sick of him now, and whenever I hear the name mentioned, I stick my fingers in my ears and fly. No, sir, a gentleman gipsy never needs to leave the road to seek for excitement, or subjects for thought and study. Life is everywhere before him, little incidents constantly occurring, hardly worth describing in print, perhaps, but very real and human, nevertheless. Then there is the book of Nature itself, constantly open before him, the ever-changing sky, the streams and babbling brooks, the billowy fields, the wind-tossed woods, the laughing wild flowers, the birds and the insects—all, everything talks to him, and tells him tales he never gets weary listening to, and that never worry him."

* * * *

But after the week is done, and Saturday has come round once more, how delightful to get the caravan anchored in some cosy meadow in which to spend the Sabbath. How doubly a day of rest it feels, after the dangers and toils of the road.

"How still the morning of that hallow'd day,
Hushed is the voice of rural labour,
The ploughboy's whistle, and the milkmaid's song."

While the horses are quietly resting in the stable of a Sunday, a walk along the country lanes to church is very enjoyable, or across the daisied meadows, where butterflies flit about in the sunshine; or bees make drowsy music as they flit from blossom to blossom of red and white clover, or over the rustic stile and up the footpath that winds through the green corn, crimsoned o'er with poppies, with perhaps a lark singing high in air, or through the copse, or into the woods, where birds are revelling in song; or into the quiet graveyard itself, to read little stories off the stones. Does not the following simple bit of verse tell a story?—

"Dear mother sleeps in Jesus, Life's battle is o'er,
Sin, sorrow, nor death can afflict her no more;
The valley is passed, the battle is done,
And all that is weary is past and gone."

It may be seen, then, that a gentleman gipsy has many pleasures in life, but they are very, very simple ones.

LEAF V.

AN OLD-FASHIONED HOSTELRY—TYBURN, COLESHILL, SUTTON-COLDFIELD, BIRMINGHAM, LICHFIELD—PILLORY AND STOCKS—BURTON-ON-TRENT.

"The negligence of Nature wide and wild,
Here, undisguised by mimic art she spreads
Unbounded beauty to the roving eye."

SATURDAY evening found the *Wanderer* at anchor in a cosy meadow across the road from a charming roadside inn, and here we lay till Monday.

There are thousands of such inns in England—hostelries is, perhaps, a more poetic name for them—but as I seldom have a whole day to look at any of them, I do not venture to describe them; but there was something so thoroughly English about this particular hostelry, that it deserves a word. I transcribe from my Log-book.

AN OLD-FASHIONED HOSTELRY.

An old-fashioned inn, indeed. Well, call it hotel or hostelry, if so minded; but there it stands, looking ever so quiet and cosy on this June morning. Its very appearance must suggest to the weary traveller from town, delicious ham and milky eggs, curds and cream, sweetest of butter, whitest of bread, and brown, fragrant tea, served up by some fair, dainty-capped Phyllis, or, mayhap, by the hostess herself.

Well back from the road stands the inn, leaving plenty of causeway for the carriages of travellers, or traps of farmers returning from the fair, and affording room also for a long seat and rustic paling right under the shadow of two giant elm trees. Not a high house by any means—two stories, with a rough pine-wood porch, spreading from either side of which is a verandah, also of pine branches, with the bark left on; and all over this verandah are clustering, blue-flowered clematis, and a wealth of wondrous roses. The walls and curious gables are nearly buried in ivy and virginia creeper; beautiful is the latter now, but more charming still will it be when autumn changes its pretty-shaped leaves to glorious crimson.

The blue smoke is rising very lazily from the chimneys, and losing itself among the sycamore branches that tower high above the house behind. To the right is a garden and orchard; to the left are stables, surmounted by an old clock tower, but so hidden in a cloudland of foliage, that did not an ostler, in sleeved waistcoat, emerge every now and then, you would hardly guess they were there at all.

Still farther to the left, the trees that border the road are a sight to see—spruces and lilacs, lofty elms and dark pines, all piled and draped together; while at one corner, among copper beeches, there peeps forth a cluster of the quaintest old ivy-covered cottages poet or artist could wish to see.

Add cattle and dogs and farmers' wagons to the road or foreground of your picture, and mass grey clouds with rifts of blue all over the sky, and then you have it complete—a cosy English roadside inn.

"Isn't it pretty?" I said to a sailor friend of mine, as we sat together at sunset on the *Wanderer's* coupé.

"Pretty?" he replied, "why, it is idyllic! I wouldn't mind having a little place like that. But, mind you, I should have everything in keeping. My milkmaid should dress the nattiest; she should carry the milk upon her head, and sing as she milked, all among the daisies. The very cows should be chosen for their colours and shape, and my children should hang garlands of buttercups and daisies around their willing necks. Even my pigs should be white as the driven snow, and sleep among fragrant straw, with nothing out but their noses. And I myself should enjoy my tea in the morning, my long pipe at night, and go dreamily fishing by day, or plodding over the fields after the partridges. I tell you what it is, my friend, we old sailors do know how to enjoy life on shore."

"That we do," I acquiesced.

* * * *

"Hullo there, Wells! Monday morning, lad, and a long day before us."

"All right, sir. I've been up for over an hour, and breakfast is all ready. Here is your shaving water."

In a quarter of an hour more, I am shaved, bathed, dressed, and sitting down to breakfast—fragrant tea, home-made bread, rashers done to a turn, eggs milky in their freshness, cream and butter from yonder red and white cow, who placidly chews her cud while she contemplates the caravan.

Meanwhile, Wells is busy doing up the beds, and stowing them away on the roof; presently Bob and I will go out for our morning walk, and when we return, we shall find the saloon as beautiful as a lady's boudoir, the flowers re-arranged in the vases, and everything ready for the start.

Now the coachman brings the horses, and, with their jingling harness making music like sheep-bells, they have their matutinal "pluck" of clover, while I do the agreeable to some morning visitors.

But all is ready at last, and off we start once more.

Though the road is but indifferent, the scenery and the weather are charming. We trot away through woods, cross many a little stream, and along by the side of a canal, and make the mid-day halt at a cosy little inn, in a quiet, sequestered village, two miles from Tyburn.

On a large, rush-grown common in front there is a flock of geese, strings of ducks, and mobs of little red pigs and black pigs, all in their glory. Near the road are two gipsy caravans. Romany Ryes, male and female, are lolling about smoking, one old fellow mending baskets. I gaze at the scene dreamily from the coupé; so does Bob, with only one eye. There are pretty gipsy children there, whom I beckon to, and fill their laps with fruit and sweets. They smile and curtsey, and retire. The horses are watered, the servants and myself have ginger ale, Bob has milk, then away we jog.

We are soon away out into the main road, which now for miles is lined on each side by beautiful villas, each one more pretty and more picturesque than its neighbour, and evidently desirous of being considered so. And their gardens and shaded lawns look charming. Trees and flowering shrubs of every kind all in their summer dresses, from dark, fantastic Scotch pine-trees, or gloomy, spreading yews, to the crimson-flowered chestnut, the yellow-tasselled broom, and the pink May.

During the next three or four days and nights, we find ourselves in and about Coleshill, Sutton-Coldfield, Birmingham, and Lichfield.

I am not likely ever to forget the kind hospitality I enjoyed at each of these.

Coleshill is a most interesting wee town, situated on a hill-top, as the name indicates—breezy, wholesome, romantic. I called the attention of a new-made friend to the fact that the upper part of the tall steeple was considerably out of plumb. He squinted at it, and observed,—

"Humpty-dumpty, sir, so it is."

"It may fall upon the people some Sunday," I added.

"So it may," he said, rather unconcernedly.

"I'm sorry I can't put it straight for you," I continued; "I would, like a shot, if I could."

"Oh!" he replied, "we'll take the will for the deed. It don't matter a deal either way. Have you seen the pillory and the stocks and whipping-post? Them's interestin' sights, if you like."

I went to see the pillory, the first ever I'd clapped eyes on. I could not help thinking I would not like to stand up there, high above the street, with my head and

hands fixed in holes, and the little boys down below flinging stale eggs at my massive brow.

Men used to be put into these neat, social arrangements for getting drunk, or for wife-beating. What a pity they have become obsolete! Candidates for the dignity of elevation in the pillory are always about.

But one of the last men put into the stocks at Coleshill met, I am told, with an untimely end. Soon after being released from his punishment, in a spirit of defiance and bravado, he got intoxicated, and in returning home across country, was caught in a flood and drowned.

From the top of the church tower—not the steeple—I had a charming view of the surrounding country. Away to the east I could descry the bare walls and steeple of a church that had been struck by lightning and burned a few weeks before. To the north-east, a lake-like reservoir of some hundred acres in extent, from which Birmingham is supplied with water, and, conspicuous amongst the woods, Blythe Hall, where Sir W. Dugdale, the historian, lived and died.

To the north, the town clusters beneath, with woods and mansions and distant hills stretching away to the horizon.

To the west, in fine weather, Birmingham itself can be seen, but to-day it is cloudy and cold. The seat of Captain J. W. Digby is a feature in the north-west landscape, and between the town and this gentleman's park, the Cole goes winding in and out like a silver ribbon.

In all my wanderings I make it a rule always to get up into the tower of the biggest church, and look around; I am always well rewarded.

It was at this place that Edmund Waller, the poet, was born, in 1605, and here, after his long and eventful, somewhat sad, somewhat sinful life, he fain would have died. But it was otherwise ordered, and he succumbed to age at Beaconsfield.

At Lichfield I sojourned about half a day. The cathedral is *the* lion of the place. Dr. Johnson's monument is another.

It was late when we got into Burton-upon-Trent, after a glorious drive from Lichfield. We did not know where to go, and the civilization of the place was harassing to my gipsy soul. However, Providence led us right. We found a man, or rather, a man found us, who had been once upon a time with Wombwell, though now little more than a beggar or tramp. He politely conducted us to the market-place, and soon we were snug for the night, as snug at all events as one could be in such a pitch, with houses all around, and stones or asphalt underneath.

Next day I visited the church and beautiful grave-yard close by the winding river.

There is nothing of very great interest that I know of about Burton. Though its inhabitants look a quiet, earnest, and industrious people, Burton itself is a beery place.

If you want views, look at the breweries, or gaze upon the empty barrels yonder, acres and acres of them piled high, tier upon tier, as we pile shot and shell in our Navy dockyards.

Burton's lions are its big brewers, and everything in and about the place smells of malt and hops.

We cross the Trent again by a fine old Gothic bridge, and the scenery suddenly becomes interesting.

(*Continued—page* 565.)

"LIFE'S VOYAGE."

"He will aid me, and not suffer me again to put down anchors to this world."—(*Extract from a letter of General Gordon, Khartoum,* 1877.)

1.

THE sun shone bright on the summer sea,
The white-tipped wavelets curled,
When a tiny skiff came gliding by,
With snowy sails unfurled;
And a gladsome voice rang strong and clear
As the little craft drew swiftly near:
"My barque shall never at anchor ride,
Till I moor it safe on the other side."

2.

I saw him pass by a sunny isle,
Where the children were at play,
They prayed him to join their sport awhile,
They cried, "Oh, come away,
And leave the boat by the willow trees."
But the answer rang out on the gentle breeze:
"My barque shall never at anchor ride,
Till I moor it safe on the other side."

3.

The burning heat of the noontide sun
Beat fierce on the shadeless sea;
The wind had dropped to a heavy calm,
'Twas still as still could be;
He could see the land with its shady bowers,
Yet still he cried thro' the scorching hours:
"My barque shall never at anchor ride,
Till I moor it safe on the other side."

4.

The storm-clouds gathered thick and fast
Across the peaceful sky,
The thunder rolled, the lightning flashed,
The angry waves beat high;
The boat was well-nigh washed away,
Yet still he faintly strove to say:
"My barque shall never at anchor ride,
Till I moor it safe on the other side."

5.

At length the storm has spent its strength,
The fierce winds sink to rest,
The earth is bathed in crimson light
From out the radiant west.
The pilgrim hath reached the longed-for shore,
He is tossed on the heaving sea no more,
His barque may for ever at anchor ride,
It is moored at length on the other side.

S. F. FORREST.

AN AFTERNOON UP THE NILE.

By H. Major, B.A., B.Sc.,

Author of "Our Army," "Up the Nile," "In the Depths," etc., etc.

(*Continued from p.* 536.)

"Huge masses of rock, reminding us of Scotch Highland scenery."

WE still had a long stretch to go, before arriving at the place where our boat was tied up, and the ground was very difficult and broken.

As a rule, Egypt proper consists of a narrow, flat, and sandy plain, on each side of the river Nile, covered with vegetation wherever irrigation can be made use of, but bounded by low hills in the distance where the desert and the cultivated region meet together.

But in Nubia, the threshold of which we were now crossing, the character of the landscape entirely changes. The flat, sandy waste, and cultivated garden, watered with the foot as a garden of herbs, by sluices fed by water-wheels and Nile water, give place to quite mountainous scenery.

Here are huge masses of rock, piled up in strange bold forms, reminding us of Scotch Highland scenery, rather than what one naturally associates with the land of the Pharaohs. We found it difficult to pursue our path at times, and the sure-footed asses upon which our party was mounted, were far more serviceable than the flat and spongy-footed camels, or ships of the desert, would have been.

In the ravines and clefts of the rocks, and among the small valleys, scattered or clustered palms, mimosa trees, and castor-oil plants grew.

The former are specially graceful and beautiful, and characteristic of Egypt. They are to be found wherever water is met with, either from the river direct, or by underground communication. The long, broad, pennon-like fronds, springing direct from the trunk, without any intermediate branches, are beautiful to look at, and afford a pleasant shelter from the noon-tide heat.

How often this day, and every day we had spent in Egypt, did the Bible references to shade and shelter against the hot sun cross our memories! How often, as now on this very afternoon, did we check our course and pant in the coolness of the "rock," and "refuge," and natural "fortress," shutting out the fierce glare of the sun above us.

As we approached nearer our resting-place for the night, in the quiet haven where our boat lay, we also drew nearer to the neighbouring town of Assouan. We had had evidence of this in crossing the track of persons returning thither. Assouan is a great trading centre with the interior of the country. Hither, from up the river, come boats and caravans, loaded with native products; and from Assouan down the river, these are transported by similar means to Cairo and Alexandria.

"They were closely muffled up in loose-fitting native garments."

The dhow or native trading-boat, passing us up stream, as we pursued our way to our boat station, was doubtless loaded with Manchester prints of gaudy gorgeous patterns, prepared specially for the Soudan market, with beads for the not-fair sex, or with guns and ammunition to be used in the accursed slave trade. And yonder "nuggar," or water-boat, going down stream, would be laden with elephants' tusks, ostrich feathers, gum, ivory, etc., etc., for western markets.

Of course, the greater part of this trade and traffic has been dried up at its sources since the lamentable death of Gordon. But the choked-up fountains of trade only require clearing, to flow again as copiously as ever.

On our way we came across an encampment of traders preparing to bivouac for the night in the desert. Truly this country is a land of surprises. This unexpected sight was as incongruous to us as the sight of a flat-footed ship of the desert to the shopkeepers of Regent Street.

"What a motley group!" exclaimed Elsie, as we drew near. "If I could only sketch these in all their various colours, different dresses, and changing features and gestures, as they are, I should make my fortune."

The group was indeed a motley one. There were Arabs, Turks, Jews, Copts, Egyptians, negroes from the Soudan, wily Greeks, keen Armenians, Moors, and Abyssinians, all assembled together. They each unloaded their camels, and the bales of merchandise now lay piled up round a hollow square, to serve as a rampart in case of night attack from the prowling Bedouins of the desert.

But we could not stop to admire; we were yet a long way from our dahabieh, and the afternoon was advancing apace.

"We must let her portrait, however, speak for herself."

Already the sun, sloping towards the Libyan desert in the west, was gorgeously illuminating the mountain masses on the opposite side of the river. We soon became entangled among rocks and ravines on our own side; for the Nile near Assouan and the First Cataract flows through very bold scenery, as seen in our illustration.

We were obliged to quit the river bank, having lost the difficult path that keeps the traveller within sight of the Nile. The rocks here rise almost sheer out of the water, which pours down in rapid current, as through a gorge or cleft in the mountains. We did not know which to admire more, the splendid panorama of cloudland above, or the magnificent landscape below and around us.

All travellers in Egypt speak in glowing terms of the atmospheric effects of the sun in this country, especially at early morning and at sunset. We realised this beauty this afternoon to the full. The higher peaks and summits of the mountains were bathed in a fiery glow, as if they were made of burnished gold. A little lower down the native colour of the rocks shone resplendent in their own tints, as if lighted from within instead of from without; while still lower down, where we were stumbling over the huge boulders and rocks, masses of dark shade intensified by contrast the higher tones above.

On our left, we saw beneath us a lower plain of small extent, sloping down to the river; but we did not descend to it, as our dahabieh, as we imagined, lay higher up, and we should have been cut off from a view of it by an intervening clump of trees. These consisted of small clusters of the ordinary palms, and a larger one of the branching Doum-palm of Nubia. The latter continuously divides into two; that is, the root stem first separates into two branches, or subsidiary stems, and each of these into two smaller branches, and so on, until the fronds or leaves are reached.

Beneath the cluster of palms we could see, in the distance, a trio of native shepherds on the bank of the river. Around them were masses of rocks, the relics of ancient buildings, apparently.

As we proceeded on our way, we perceived that these fragments of ruins increased in quantity and frequency. Evidently we were traversing a region once thickly inhabited by people of a high state of civilization. Indeed, as uncle told us, this region was the source of the building materials out of which the ancient Egyptians erected their obelisks, pillars, and other massive architecture, as well as the sarcophagi or stone coffins for their dead.

In a word, here was the quarry out of which the "cities of the dead" were built; and all this region once resounded with the noise of the workman's chisel and hammer.

The wildness and grandeur of the scenery had banished from our minds something of the littleness of self, that is so incongruous in such scenes as this. This sobering influence was strengthened by the reflection that under our feet, and all around us, were the monuments of a race that had perished, and left nothing but these ruins to testify of their existence in days gone by.

"Is it not strange," said Elsie, "that a people so advanced in civilization as this must have been—if we may judge of what is before us—should have perished from the face of the earth as if they had never been?"

"It is not a riddle without a solution," quietly replied her father. "The history of man is written with God's finger—the history of the future as well as of the past."

"You mean in prophecy, do you not?" inquired Elsie.

"Just so. The place which Egypt occupies in the sacred Word is second only to that of the "Holy Land" itself. Here was the wrestling school and training ground of the patriarchs, and of the Jews before they became a nation. 'Out of Egypt have I called My son' had a primary and typical, as well as a secondary and higher, meaning and fulfilment."

"I have been much struck," I remarked, "with the forcible references which are made to Egypt by the prophets."

"That is what I referred to," continued uncle, "when I said that God's finger wrote the future history of Egypt, which we now read as a record of the past."

It was not often that uncle revealed the deep impressions he felt, and we were a silent group for a few moments after this.

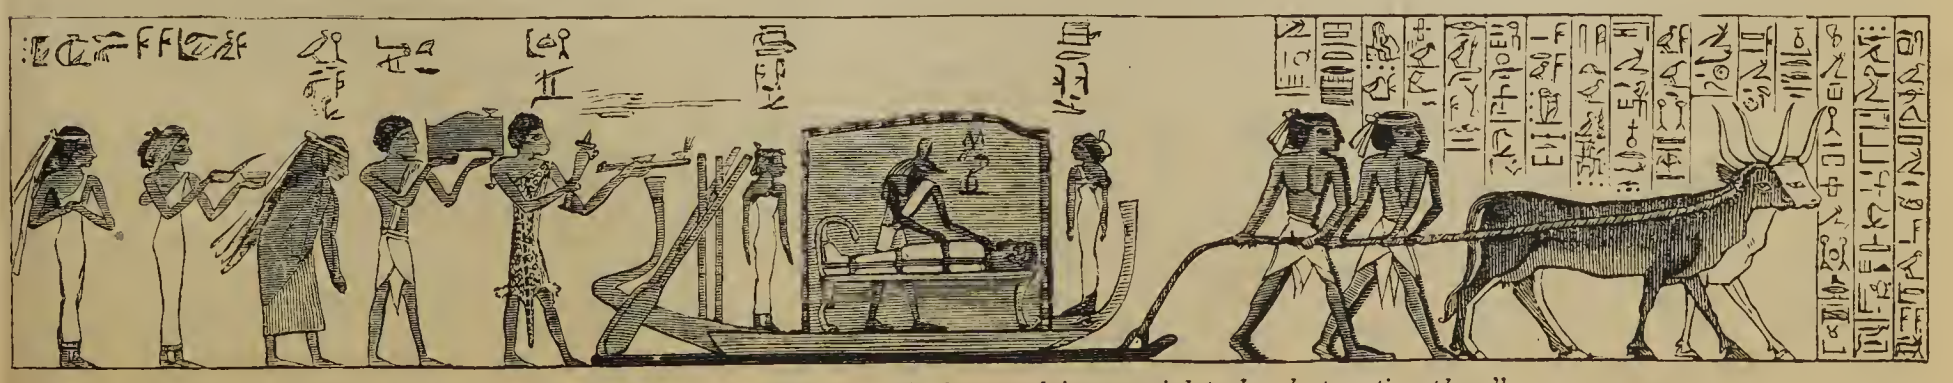
"Does not the purpose of God stand clearly expressed," continued he, "in these words? And have we not here its literal fulfilment, as well as in the 'Cities of the Dead,' at Memphis, at Karnak, and at Luxor?—

"'Egypt shall be a desolation, and Edom shall be a desolate wilderness, for the violence against the children of Judah, because they have shed innocent blood in the land' (Joel 3. 19)."

"Did this produce no effect?" inquired Elsie.

"None," continued her father. "But God did not leave them without further witness. A hundred years later, Isaiah wrote:

"'The Egyptians will I give over into the hand of a cruel lord; and a fierce king shall rule over them' (Isa. 19. 4).



"And again, still later, Ezekiel declared:

"'I am against thee, Pharaoh, king of Egypt, the great dragon that lieth in the midst of his rivers. . . . Because the inhabitants of Egypt have been a staff of reed to the house of Israel. . . . Her foundations shall be broken down. . . . I will also destroy the idols, and I will cause their images to cease. . . . And these cities shall go into captivity. . . . Thus will I execute judgments in Egypt: and they shall know that I am the Lord'" (Ezek. 29).

"I wonder," inquired Elsie, "whether the

"Preparing to bivouac for the night."

"A funeral papyrus of a dead queen being carried to her last resting-place."

Egyptians had light enough to make them responsible for the deeds which brought down on them such severe judgments."

"I think their own words are a testimony on this point," I remarked. "They were not left without witness. And we know that they believed in the immortality of the soul, in a judgment after death, and in the resurrection."

"What is there to make us think that they believed in the immortality of the soul?" inquired Elsie.

"The practice of embalming the dead takes its whole significance from this belief. You remember the mummies and mummy cases we met with so frequently in Lower Egypt? Moreover, we learn the same thing from their tomb and temple inscriptions, and from the rolls of papyrus found inside the mummy cases. These are called the "Books of the Dead." In one of these we find represented, above the drawing of the embalmed body, a spirit hovering with human head, and hands holding the symbols of life and transmigration."

"I do not remember to have seen that," replied Elsie; "but is there not a funeral papyrus of a dead queen being carried to her last resting-place? What is the meaning of that?"

"The ancient Egyptians," I replied, "thought that the happy immortality of the soul was dependent on the preservation of the body. If the latter were allowed to decay, it was believed that for three thousand years it would migrate from living creature to creature, before again it entered a human figure. Hence their solemn rites of embalming.

"And before burial, judgment was held over the dead. The judges met, and took their seats in solemn conclave on the farther side of a lake. The body of the dead was placed in a boat, in its mummy case, and any one that could bring an accusation against the deceased might do so; and if justly, burial was refused. Otherwise the boat was rowed or drawn by oxen, across the lake, and the dead tried by the judges in the judgment hall." The consecrated boat carrying the deceased queen to the hall of Osiris, is seen in our illustration.

"If pronounced innocent, the decree went forth, 'Take your sickle, reap your grain, carry it into your dwellings, be glad therewith and present it a pure offering to the God. Ye have found favour in the eyes of the great God: *Ye shall inhabit the mansions of glory, and enjoy the life of heaven:* the bodies which ye have abandoned shall repose in their tombs, while ye *rejoice in the presence of the supreme God.*'"

"How thankful ought we to be," said Elsie, that our light is so much clearer than theirs."

"Yes," I replied, "a Christian knows that he has no merit to plead, but that of his Saviour. But these are the declarations of self-righteousness, made and left on record by those who have now crumbled into dust:

"'I have defrauded no man; I have not prevaricated at the seat of justice; I have not made slaves of the Egyptians; I have not used violence, famished my household, made to weep, committed forgery, falsified weights or measures, been gluttonous or drunken.'"

Whilst we had been conversing thus gravely concerning the dead, we had been still making some progress towards our destination. But the sun had meanwhile visibly declined, and no opening on our left to the river had yet revealed itself.

After proceeding with difficulty through the broken ground, we again came in sight of the river, but not of the boat. We subsequently learned that in losing our way, and endeavouring to recover it, we had pushed on too far in front, and passed by our boat. We were accordingly higher up the river than our dahabieh, and, indeed, close to the First Cataract, as we found on inquiry from some natives.

"Why do they call this the *first* one?" inquired Elsie. "They cannot mean that it is the first one in the world in importance, or the first discovered by man?"

"Neither," I replied, "but it is the first in order reached by a traveller proceeding up the Nile from Alexandria and Cairo."

"I don't think it *is* a cataract at all, first, second, or third," answered Elsie, looking across at the rapids with some contempt.

"It may be that in days gone by, when it was described by Cicero and others, in language too lofty for what we at present see before us, that the river was at a higher level, and that there was a real waterfall here, which there certainly is not now. But half a loaf is better than none, and no amount of grumbling will make the thing any bigger. We may as well make as much of it as there is in it."

Whilst we were thus conversing, and going forwards to the object in question, we saw three things quite worthy of our notice.

The first was an ascent of the rapids. This is the proper name, for there is no actual break of continuity in the water, or fall from a height. The river only rushes down a steep grade, and between islands narrowing in its width, and so, for a double reason, causing whirling eddies and swirling rushes of water, which are doubtless more ugly to get through than to look at from the shore.

A dahabieh had just reached the foot of the first rapid as we drew nigh. The width of the river was broken by ledges of projecting rock, and there was a choice of several channels through which to make the attempt at an ascent.

The means of progression were various. First, there was a wind blowing aft or up stream, and filling the lateen sail of the dahabieh. This was the principal means of locomotion to depend on. Next, there were the stout arms of the Arab boatmen, used both in rowing and in poling. Lastly, the Arabs made use of warping, or hauling on ropes thrown to the projecting ledges of rocks, and fastened to the boat. The movements as a whole were controlled by a skilful use of the rudder.

We had not stood any long time on the banks, watching proceedings, before we caught the infection in the air, and became as excited as the actual workers. The captain perhaps never lost his head or his temper, but he certainly did not act as a cool and collected English captain does. He shouted and gesticulated as if going, if not gone mad, and his crew re-echoed his cries and repeated his gesticulations. Their eyes started out of their sockets; they leaped ashore on the rocky ledges, to throw a rope round some projecting point to ease off the dahabieh; they tugged at the oars like galley slaves; they used the long poles from both dahabieh and the rocks to keep the former off from the latter; they trimmed the lateen sail to make most use of the wind;—and did all this with such loud cries and fierce excitement, that they looked like Bedlamites. But there was a method in their madness, after all, as was proved by the successful passage through the first and second rapid, and the battling of the boat in the comparatively quieter waters above.

The second sight that greatly interested us was the opposite procedure, *descent* of the same rapids by a dahabieh. This was much less exciting than the preceding, as the current of the river was with the boat. But it required, if possible, still greater caution than the ascent. Little rowing was used, but a great deal of poling and warping, before the dahabieh floated at ease from her anchor below the rapids.

The third sight that greeted our eyes was one that was even more exciting to look at than the ascent of the rapids by the dahabieh. Looking across the river, we perceived numerous black figures in all attitudes, plunging and attitudinizing in the midst of the rushing torrent.

These were the natives of the district, enjoying themselves in the water, and earning *backsheesh* from the spectators at the same time. Looking more closely at these apparently amphibious creatures, we perceived that each man had a log of wood. This he was using as a float, keeping his head above the swirl and rush of the river, in its maddest plunge, by means of the log. The native held on to this like grim death; and it soon carried him through the channels to the quieter waters below, after many a somersault and turn over in the Nile.

Whenever their heads appeared for a moment above the stream, they made the most of their opportunities by shouting out to some rival swimmer near, as if they thoroughly enjoyed their gymnastics.

Notwithstanding the apparent danger in these aquatic sports, we were assured by those that stood by with us, watching them, that few accidents happened, as the natives are nearly as much at home in the water as on the land. This we could readily believe, when we saw, a little later, that they actually crossed the river by sitting astride of similar logs, using their feet as paddles, and at the same time balancing their dry clothes, tied up in a bundle and supported on their heads, while crossing the current.

But the sun was now approaching near the horizon in the Libyan desert; and we knew that there is but little twilight in Egypt. We were a long way off from our boat; and long before we could get back to it by retracing our path, the night would have set in.

We called a council of war to decide what was best to be done. That venturesome Elsie, who never appears to think of danger, suggested that we should "camp out" for the night. Our materials for "camping out" were a couple of umbrellas as tents; provisions we had none, and no means of defence against prowling Bedouins. Elsie said there would be no fear of burglars, where there was no house to break into. Uncle was more practical, and suggested that as the land passage was barred, we should try the river route. The dahabieh which had already descended the rapids, and was lying near, would perhaps take us. If so, we should be relieved of all muscular efforts, and for me, I was about "dead beat" with our "Afternoon up the Nile."

The versatile Elsie seconded the amendment to the original proposition, and we proceeded to the bank where the dahabieh was "tied up" for the night.

On descending the slope towards the river, we crossed the path of two native Egyptian ladies, probably making their way homewards towards some residence near, but which we could not make out. They were mounted, as usual, upon a couple of

asses; and Elsie watched them, I could perceive, with a good deal of curiosity. As members of the male sex, uncle and I kept our eyes mostly to ourselves. But for all that, I could not help seeing that they were closely muffled up in loose-fitting native garments, even their faces being covered up, except the forehead and eyes.

"They have very nice eyes," I remarked to Elsie, when they were out of earshot.

"What do *you* know about it?" she replied.

"I have noticed that most of the Egyptian ladies have beautiful dark eyes," I replied, not wishing to be snubbed. "And they are oval like their faces; only they are weak enough, like some others of their sex, to gild refined gold and paint the lily. They would be quite as beautiful if they didn't stain their eyebrows with their horrid cosmetics."

At the mention of the last word, Elsie broke out into a wild burst of laughter, at my knowing, or pretending to know, the use and meaning of such a term.

On arriving at the station where the dahabieh was lying, the *reis* or captain, in obedience to uncle's shouts and gesticulations from the shore, put off from his dahabieh in a small row-boat to the shore.

It did not take a long time to gain his consent to weigh anchor and sail down the river, with us for a new batch of passengers on board. Strict look-out was to be kept in the growing darkness for our own boat as we glided down.

Whilst we were descending the river, we made the acquaintance of a charming fellow-passenger—a lady of Cairo, returning thither from a trip up the river. We must let her portrait, however, speak for herself.

In about an hour we caught the first glimpse of our boat riding quietly at anchor in the reach of the river where we had left her at noon. In response to our shouting, our reis put off his boat, and took us again on board, with many cordial salutations and good wishes from the captain of the dahabieh which had brought us from the First Cataract, and nods and smiles from the Cairene lady left aboard.

So came to a conclusion our long, and, on the whole, enjoyable "Afternoon up the Nile." Elsie declared she had never enjoyed herself so much before in her life, only she yawned capaciously in doing so. But I think the dear girl was really as tired as the proverbial dog at a fair.

Aunt declared that she did not want any more "outings" like that, to which uncle jocularly remarked that she had had a good "innings," and should not now complain of it.

For myself, I soon went to bed, and, lulled by the gurglings and plashings of the river against the side of the boat, went to sleep and dreamed of Cairene ladies, Nubian swimmers, rapids, Bedouins, *yashmaks*, *backsheesh*, and Elsie. Somehow, the presiding genius of my dreams "mixed" things up a good deal, for I saw Elsie's sweet face surmounting a bas relief of an ancient monument, purporting to belong to the *nineteenth dynasty*, and I could not make out how Elsie could be so old as that! But even in my dream I determined to ask her whether she was about four thousand years old? and had she enjoyed her *"Afternoon up the Nile"?*

CHRISTIAN EVIDENCE COMPETITION.

ADVANCED DIVISION.

Text-Book, "*Manual of Christian Evidences*,"

By the Rev. C. A. Row, M.A., Prebendary of St. Paul's.

QUESTIONS FOR COMPETITORS.

(By the Rev. Canon Dobbin.)

1. What are the two great branches of Christian evidences treated of in this book?
2. What is the key of the entire Christian position in regard to this matter?
3. In what remarkable particular, as to the person of its founder, does the religion of Christ differ from all others?
4. What mistake is frequently made in reasoning on the laws of nature?
5. Define a miracle.
6. Distinguish moral miracles from physical, and specify some advantages of the former over the latter, as proofs of Christianity.
7. What claims of Christ, apparently preposterous when made, have now become the strongest evidences of His Divine mission?
8. Show the moral greatness of Christ by the enumeration of some facts (*a*) historical, (*b*) political, (*c*) social.
9. Whence do modern sceptics derive all that is good in their teaching? But wherein do they fail?
10. What remarkable testimony did Mr. Darwin bear to the spiritual power of Christianity?
11. What is it that constitutes the chief attractiveness of the gospel? and how is this a proof of its supernatural character?
12. Give Mr. Lecky's statement on the subject, with brief illustrations of its truth.
13. What is meant by the cumulative force of Christian evidences?
14. To what threefold choice of opinion are we shut up with regard to the person of Christ?
15. Show that He is not the production of the ordinary moral and spiritual forces of the world.
16. Nor of any process of evolution.
17. Nor of any mere ideal in the human mind.
18. Illustrate this latter point by a contrast drawn from the real and the mythical Gospels.
19. What feature in the delineation of our Lord's character may be looked on as one of the strongest proofs of its reality?
20. To what practical test may the truth of the evangelical history be brought by an honest inquirer?
21. How do sceptics try to account for the superiority of our Lord's moral teaching?
22. Show the futility of all such attempts.
23. What is the great end and aim of Christianity with regard to ethical truth?
24. Define the bases of the Christian laws of duty, and show what they involve.
25. What were the errors of the ancient moralists in this matter, and how does Christianity avoid them?
26. What is the grand distinction between the religion of Christ as a regenerative force, and every other system of religion and philosophy in the world?
27. What circumstance attending the formation of the Christian Church may be used as an argument in favour of its Divine origin?
28. On what grounds may miracles be regarded as (*a*) possible, (*b*) probable, (*c*) certain?
29. How did infidels, in the last century, try to evade the force of the argument from miracles? How do they try to meet it now?
30. What year, A.D., may be taken as the limit of necessary inquiry into the accepted facts of Christianity? and why?
31. Give a summary of the argument to prove that before that date, and back to the crucifixion, these facts were the same as we have now?
32. Show that the character and constitution of the Christian Church afford an ample guarantee as to their faithful transmission.
33. What is the nature, value, and extent of the evidence borne by the Epistles of St. Paul to the same effect.
34. On what miraculous fact in the history of our Lord, thus attested, was the Church professedly founded?
35. What three alternative opinions are there as to the explanation of this fact?
36. Mention and refute some of the infidel methods of accounting for it.
37. What undeniable evidence of its truth exists before our eyes at the present day?
    State the argument in favour of our Lord's Divine mission from His fulfilment of the Old Testament in regard to—
38. Its legal and ceremonial observances.
39. Its prophetical predictions.
40. Its moral teachings.

CHAPTERS FROM NATURE'S STORY-BOOK.

By Professor Haddon,
Author of "An Introduction to the Study of Embryology."

CHAPTER VII.

ON THE BAD EFFECTS OF SITTING DOWN.

AS it is low water we will go down to the sea-shore to look for "beasts." Fortunately it is a spring tide—that is, a tide which rises very high and goes out a long distance. This is due to the action of the sun and moon, as you will find explained in books on physical geography. The seaside naturalist is especially partial to the full moon, not only on account of her beauty and the soft light she casts upon land and water, but also because she causes the spring tides; and by following the far-receding waters he is able to see and capture many rare and beautiful forms of life which are otherwise seldom met with. All hail! then, to the full moon.

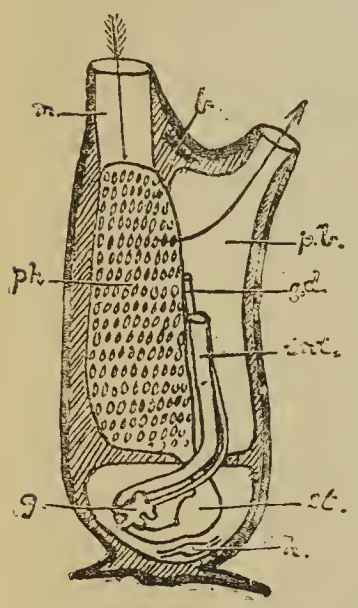


Fig. 1. Diagram of anatomy of a Sea-Squirt: b., brain; g., generative gland; g.d., duct of same; h., heart; int., intestine; m., mouth; p.b., peri-branchial sac or atrium; ph., pharynx or branchial sac; st., stomach. (The arrow indicates the direction of the current of water.)

Amongst the treasures of the shore, some of the most interesting are not the most beautiful. Attached to rocks, or more frequently nestling among the roots of the wrack, great oar weed, and other coarse sea-weeds, are strange bottle-shaped creatures. They are also to be found in myriads in the fine black mud of sheltered creeks. These are coarse in texture, and brown in colour; those attached to the seaweed are usually translucent, with soft bodies, or opaque white, with a firm and often warty skin, sometimes mottled with red.

Fig. 2. External view of larva of a Tunicate Tadpole.

There is one beautiful kind, which grows in all situations; you may find it growing in tufts, on the under side of overhanging ledges of rock, or nestling at the roots of seaweed; or by wading at dead low water, on the mud plats, where the long green eel-grass grows. The glassy case encloses the soft animal, which is streaked with opaque white or creamy yellow above, while below it is tinted with brown and orange.

If you squeeze these bottle-shaped animals, you will find that water is squirted out of holes; hence their popular name of "sea-squirts." Owing to their body being protected by a mantle, or tunic, they are termed *Tunicata* by naturalists. When they are alive in the sea, you will find that both orifices are open, and by carefully watching, you will see that the water goes in at the opening which is placed opposite to the point of attachment, and passes out by the other hole. The causing of a current of water, and the opening and closing of the two orifices, are the only visible signs of vitality in the sea-squirt.

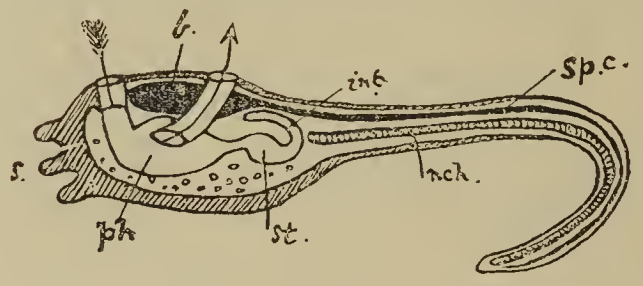

Fig. 3. Diagram of anatomy of a Tunicate Tadpole: b., brain; int., intestine; nch., notochord; ph., pharynx, with a pair of gill slits; sp. c., spinal cord; st., stomach. (The arrow indicates the direction of the current of water during breathing.)

With a sharp pocket-knife we can dissect a sea-squirt sufficiently well to distinguish its general structure. First of all it will be noticed that the tunic is only slightly attached to the body. The mouth, or that opening through which the water enters, is situated at the end of a large sac; the wall of this sac is perforated by an immense number of minute slits; the water passes through these slits into another sac, the "atrium," which opens to the exterior by the second orifice, the "atrial pore." As the blood circulates through the walls of the perforated sac, it is clear that this is the respiratory organ of the animal. The gullet arises at the lower end of the branchial sac, and opens into the slightly enlarged stomach. From this the intestine bends round, and passing back again, opens into the second sac. There is a simple tube-like heart, and, unlike any other animal, the heart beats a certain number of times, and drives the blood in one direction; then it stops for a moment, and beats a certain number of times, driving the blood in the opposite direction. The only other organ we need notice is a small spot between the two orifices. This is the rudimentary brain; a few nerves radiate from it in various directions.

If you open the atrium of one of the glassy tunicates in summer time, you will find that it contains a number of small round yellow bodies. By putting these under a microscope, you will at once see that they are the embryos of the sea-squirt in several stages of development. Here is a picture of one that I drew at Torquay, many years ago (Fig. 2).

By dragging a net through the sea in summer you will often catch the free swimming larval forms of other tunicates, usually yellow or orange in colour, and looking like miniature tadpoles—and little tadpoles they are, too. In the accompanying figures I have drawn a diagram of the structure of a frog's tadpole, and of a tunicate's tadpole. It is perfectly wonderful how closely they resemble one another. There is the short body and long tail. The throat is perforated for the gill slits. Above the alimentary canal is the gelatinous rod, or notochord; this extends right down to the end of the tail. Above this, again, is the nervous system; in front is the large brain, and behind is the spinal cord. Of course there are many differences between the two tadpoles, but their general "make up" is similar. The suckers on the chin are relatively much larger in the tunicate tadpole.

After swimming about freely for some time, the tadpole of the sea-squirt rests itself on the suckers of its chin, and then it sits down never to rise again. We have now to see what are the penalties of being lazy. It no longer requires a powerful swimming tail, so this organ gradually disappears; for in the living world it is an almost universal rule that that which is not wanted, must, sooner or later, go. Nothing useless is tolerated, because it entails unnecessary expense for its support. Nature is, so to speak, too economical to waste good material on superfluous structures, so that they always disappear, or are reduced to the merest traces,

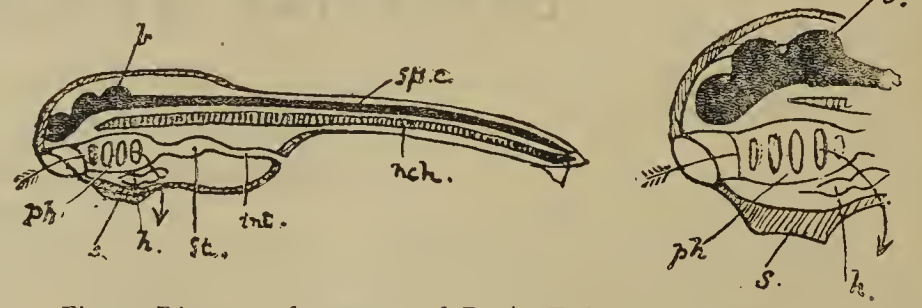

Fig. 4. Diagram of anatomy of Frog's Tadpole: b., brain; h., heart; int., intestine; nch., notochord; ph., pharynx, with three pairs of complete gill slits and two pairs of incomplete gill slits, or rather pouches, the former of which will persist, as the internal ear tubes; s., sucker; sp. c., spinal cord; st., stomach. (The arrow indicates the direction of the current of water during breathing. The diagram by the side gives certain details more clearly.)

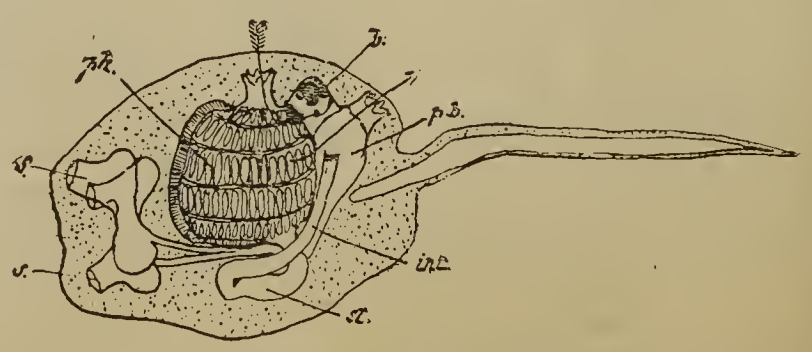

Fig. 5. Intermediate stage in the development of Sea-Squirt (Botryllus aurolineatus) between the Tadpole larva and the adult: b., brain, with large eye; int., intestine; p.b., peribranchial sac or atrium; ph., pharynx; s., suckers; st., stomach.

which may be of interest historically, but are of no economic importance.

As the adult is fixed, and cannot escape from enemies, it has no special need of eyes; consequently, the organ of sight of the swimming larva disappears. The general activity being so much reduced, there is less need for a large nervous system; thus the brain is relatively very much smaller in the adult than in the larva. The skin forms the protecting tunic, which supports the soft body, and at the same time fixes the animal. Fig. 5 is a picture of one kind of tunicate, drawn from a specimen from Naples, which shows very beautifully the transformation of a tunicate's tadpole into an adult.

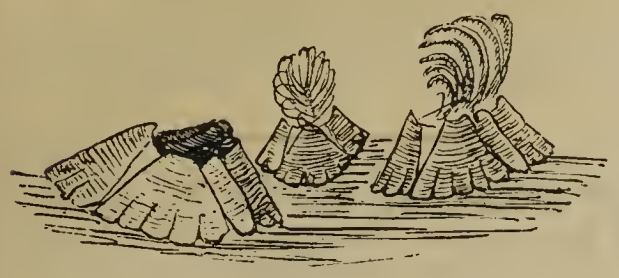

Fig. 6. *Common Acorn Barnacle* (*Balanus balanoides*).

Let us again return to the tadpole of the sea-squirt. We find a brain and spinal cord above; below is the alimentary canal, with its pair of gill-slits, and between the nervous and digestive systems is the notochord. This is an axial skeleton, which grows with the growth of the larva. We find exactly the same structures in the early embryonic condition of a fish, frog, lizard, bird, and mammal: all these animals belong to the group of the vertebrata, as they possess a backbone. None of the sponges, cœlenterates, echinoderms, worms, molluscs, or arthropods have a larval form like this, therefore we are justified in saying that the larva of the tunicate is a vertebrate; and if ever you study it more minutely, you will find there are many points of resemblance that I have not been able to dwell upon.

The adult has no brain, spinal cord, notochord, swimming muscles. It has an external, instead of an internal, support for its body. We can scarcely class it as a vertebrate. Starting fair, with all the possibilities of an active and progressive vertebrate career before it, the tadpole settled down early in life, and, giving up its prospects, degenerated into a practically invertebrate condition.

Let us now go back to the invertebrates,

Fig. 8. *Cypris larva of Acorn Barnacle; ant., antennæ; e., eye; m. l., muscles of legs; s., shell; t., tail.*

and learn what an acorn-shell has to teach us. In our first chapter it was alluded to as occurring on the sea coasts, indeed, in most places the rocks are simply covered with them. The shell is conical, and is composed of several closely connected furrowed plates; four little plates on the top form a sort of lid, which keeps all snug when the animal is retracted. When fishing for food, the lids open, and a number of long, jointed, curved filaments are extended, which move something like a beckoning hand. This is all that can be seen of the living animal. On account of its possessing a shell, the older naturalists classed the acorn shell as a mollusc; but, apart from all other characters, the mere fact of the animal having jointed appendages would at once proclaim it to be an arthropod, or jointed-footed animal; and on account of their appendages, the acorn shell and barnacles are termed *Cirripedia*, or animals with curl-like feet.

When it is hatched, the larval cirripede is a "nauplius." This, as we have already seen, is a form with an oval or triangular body, protected by a shell or carapace, with three pairs of jointed appendages and a single eye.

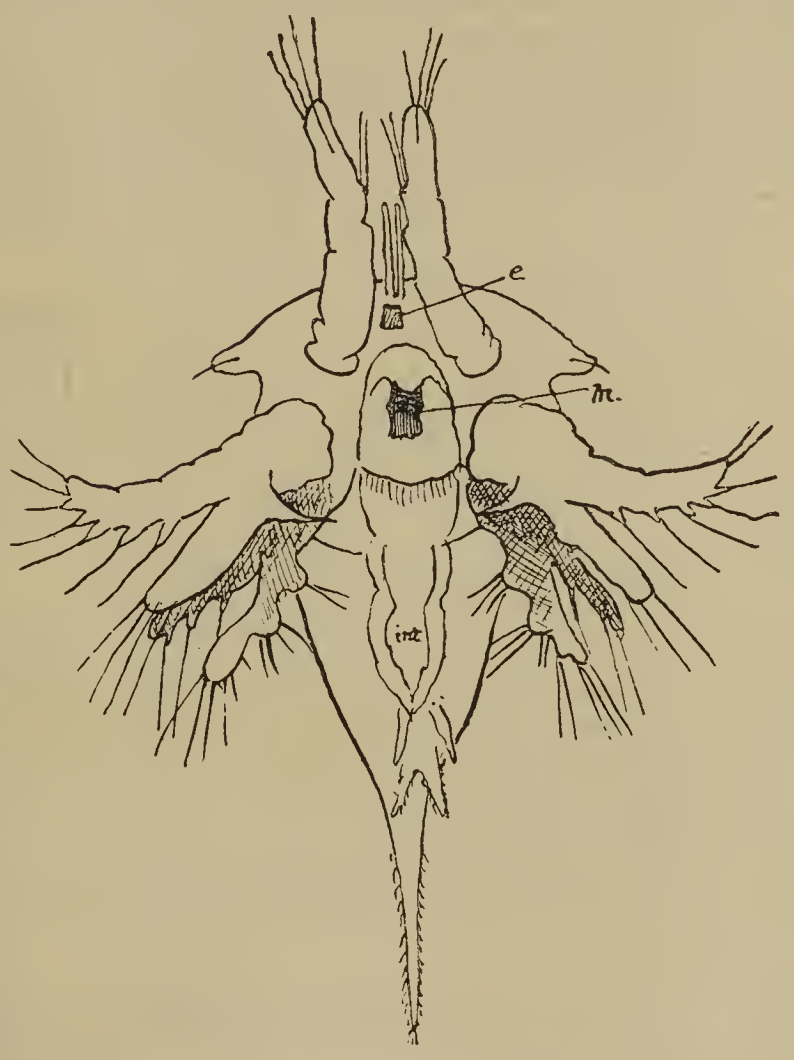

Fig. 7. *Nauplius larva of Acorn Barnacle: e., eye; m., mouth; int., intestine.*

Here is a picture of the nauplius of the acorn shell, and similar ones may be caught any summer all round our coasts.

After changing its skin several times, and slightly altering its form, the nauplius metamorphoses into a larval stage with a bivalved shell, somewhat resembling in form that of a mussel, but, of course, very much smaller. In front you will see the feelers or antennæ, and at their base is a sac or gland, which secretes chalky matter. We have already (chap. v.) been introduced to this "cypris" larva of the cirripedes.

Lastly, the larva attaches itself to a rock, or some other substance, by its antennæ, and the gland at their base secretes a chalky fluid, which firmly cements the animal to its support. Certain changes occur, and the shelly plates are developed which surround and protect the animal. The prominent eye in the larva is absent in the adult.

To recapitulate, the acorn shell starts life as an active, free-swimming nauplius, resembling the similar stage of so many other crustacea. Next it passes through what is known as the "cypris stage," that is, a stage in which it resembles the adult of another group of crustacea—namely, the ostracoda. As a "cypris larva," the cirripede is free-swimming, active, and also possesses a prominent eye. Lastly, by acquiring a sedentary habit, the swimming legs degenerate into jointed filaments, the eye is lost, and the animal can only feed upon that food which happens to come near it. What a contrast to the powerful, active, intelligent crab!

DON'T BET!

By Dr. THAIN DAVIDSON.

YOUNG men, *don't bet!* Perhaps no evil of our time is working more mischief than this. The extent to which it has reached is alarming. The land is filled with the curse of gambling from one end of it to the other. In quiet country hamlets, in pleasant watering-places, in the gloomy coal and iron districts, and in the fashionable resorts of great cities—everywhere this horrible vice exists. There is the gambling of commerce, the gambling of the Stock Exchange, the gambling of the race-course and casino, the gambling of games of hazard, and the gambling of the unwashed urchins who toss coppers on the street. If possible, thief gambles with thief in jail; ay, perhaps the judge who tried them, the lawyers who prosecuted and defended, all gamble too. Strange infatuation! Prolific source of iniquity and misery!

I defy any man to look me in the face, and say that he could kneel down and thank God for a shilling or a hundred pounds which he had acquired by a bet. The gain is due to no merit nor industry of his own, and means loss to some other person. Therefore, there is a curse upon it, and you cannot do better than fling it into the sea.

This evil is spreading; and it is time to speak out plainly on the subject. There is not a Christian merchant in London, there is not an astute business man, be he a Christian or not, who would not at once dismiss from his office a clerk who was addicted to this practice. I recollect reading a speech of the late Mr. Fawcett, the excellent Postmaster-General, in which he stated that nearly all young men in the Post Office who went wrong did so through betting. Even the *Times* newspaper, to whose columns we would not turn for instruction of a religious character, used these words in an article upon the subject:—"Horse-racing is an amusement to which is directly traceable more misery, more ruin, more demoralisation, than to any other lawful pastime."

I once went as a *visitor* to see that strange place—a material paradise and a moral hell in one—Monte Carlo. I peeped into the gambling saloon. What a picture! What agony on those faces gathered round the green table! Hollow eyes, haggard looks, pale complexions, quivering nerves: may I never see the like again! The passion once roused becomes desperate, and everything must yield before it. I never knew a gambler who did not come to a wretched end. Young men, whatever you do, *don't bet!*

"NOT FOR ME."

A TRUE INCIDENT.

"WITHOUT money, and without price!" Such are the terms on which God offers to all the gift of eternal life. Wonderful message of love! yet more wonderful how few will take it on these terms.

An incident which happened a short time ago, will illustrate my meaning.

A friend of the poor was often known to order a quarter of a ton of coals to be taken to persons whom he knew to be in distress. The weather was very severe one winter, the snow lying thick on the ground, and the kind donor rejoiced to think what warmth and comfort his gift would bring to many hearts and homes.

The coal-cart drew up opposite a poor, desolate-looking cottage, and the coalman knocked at the door, and told the old man within that he had brought him some coals.

"Who from?"

"Don't know," says the man, "but I was told to bring 'em here, and here they are."

"It's a mistake; they're not for me," answered the old man. "No such luck for me—I've no friend to send me coals for nothing."

"Nay, but they're for the man as lives at the dyke. Ain't that you?"

"That's me, sure enough; but there's a mistake. It's some other dyke, maybe."

"Nonsense, man; take 'em, and be thankful. I can't stay here all day talking!"

"Take 'em away then: they're not for me, and I won't have anything to do with 'em." And he shut the door with a bang, and returned to his desolate hearth. The cart rolled away, taking in it the gift that was intended for the old man.

The next day the same cart was seen drawn up opposite a low court in the town, and the same man, with a quarter of a ton of coals, knocking at one of the doors. "I've brought you some coals," he says cheerfully; "where shall I put 'em?"

"They're not for me," answered the man who opened the door; "you've made a mistake."

"It's no mistake," says the coalman. "See, here's the order:—No. 24, quarter of a ton of coals. Now, that's clear, ain't it?"

"That's my number, certainly," replied the other; "but these coals ain't mine, and I can't take 'em in. They must be for some one else!"

"Well," says the man with the coals, scratching his head with a puzzled look, "these coals beat me; they're more trouble than enough. One would think I was bringing yer poison. Here comes a nice present of coals, and yer clean refuse to take 'em. But leave 'em I shall; for yesterday I took 'em away from a house, and got into trouble for it. So, if yer don't open yer cellar door, I shall chuck 'em down here by yer doorstep."

Thus pressed, the man at last opened his cellar door, saying, "You'll soon be back to fetch 'em, I guess, so I won't set too much store by 'em. But if they're for me, I'm sure I'm much obliged."

One more house in that court the coalman visits with his load, and knocking at the door, tells the woman he has brought her some coals.

"For me?" she says; "oh, it can't be true, they must be for some one else."

"No, mum, here's your number, plain enough:—No. 8, quarter of a ton of coals."

"So it is! Well, then, I suppose God has sent 'em to me, for no one else knows that the last bit of coal is on the fire now, and that I didn't know where to get any more. Bring them in. It must be God who has sent 'em, and I must thank Him."

"Perhaps you'd better," is the man's short answer; but to himself he adds, "She's the only sensible one of the lot; the rest are fools for their pains."

"Fools for their pains!" How many such fools there are in the world!" God so loved the world, that He gave His only begotten Son, that *whosoever* believeth in Him should not perish, but have everlasting life" (John 3. 16), "*the gift* of God" (Rom. 4. 23). Yet, though God offers to each one the *free gift* of eternal life, we too often act like these poor cottagers with the coals. Some, like the old man, refuse it altogether. "It's not for me, take it elsewhere"; and they send away the messenger who brings the good news. Others, like the man at No. 24, are *afraid* to take the gift; and they need much persuasion, and many invitations, to induce them to believe that the glad tidings are for them. "Come, for all things are now ready" (Luke 14. 17); "Take the water of life freely" (Rev. 22. 17). These loving words have to be repeated again and again.

But again, some, like the woman who had come to the end of her coals, having found out their need, just accept the gift of life eternal with a "thank you" to the giver of it. At first it seemed too good to be true, but when she saw the *order* with her *own number*, she believed and rejoiced. So, when first the good news of a free pardon through Christ reaches the heart of such an one, it seems too good to be true, but when he reads the words, "*Whosoever* will," and again, "Jesus Christ came into the world to save *sinners*," he hesitates no longer. That word *sinner* includes him; and so, feeling his poverty and need, he takes God at His word, accepts Jesus Christ as the free gift of God, and thanks Him for His great love in giving him such a Saviour.

The coals were paid for by the kind donor: so our salvation has been bought with a price, even with the precious blood of the Son of God, "who gave Himself a ransom for all" (1 Tim. 2. 6).

Reader, have *you* accepted this free gift, and if so, are you showing your gratitude by a life spent for the One who died in your stead?

Y.M.C.A. ITEMS.

Ireland.—We are glad to note from the Third Annual Report of the Irish Section of the English and Irish Union that, during 1887, the membership has increased over 20 per cent. That this is no mere "spurt," but is the result of steady, plodding work, is evident from the fact that during the past four years, the membership has increased from 3,000 to 6,281. Missions, both Home and Foreign, occupy an important place in the work of the year, and it is gratifying to note that not only are young men trained for Mission work, but that many volunteer to go forth to the Foreign Mission field. The Travelling Secretary, Mr. R. McCann, was actively employed during the year, evidently with excellent results.

Hammersmith.—On Tuesday, the 8th of May, the fifth Anniversary of the Hammersmith Association was celebrated by a day of Thanksgiving. At the evening meeting, which was largely attended, stirring addresses were delivered by the chairman (J. H. Tritton, Esq.), Dr. J. H. Gladstone, Mr. Hind-Smith, and others, and no doubt the Association will profit greatly by the gathering. The collection (including promises for £7 17s. 6d.) amounted to £23 10s. 10d. The Secretaries, Messrs. E. Ellis and E. Franklin, have received many testimonies from young men to the value of the work carried on.

OF INTEREST TO YOUNG MEN.

DURING the winter months, the Wakefield Y.M.C.A. carry on very successful public Evangelistic Meetings every Sunday at 8 p.m., in the Music Saloon of that town. At the last of these Meetings for the season, Gospel Addresses were given by six young men.

The next Scottish National Conference of Y.M.C.A.s will be held at Paisley in September. The place is most suitable, being only a few miles from Glasgow, where the International Exhibition is now being held. There should be a large and interesting gathering of Y.M.C.A. workers from all parts, at this Conference.

PUNCTUATION COMPETITION.

IT is with much regret that we find it impossible to announce until next week the result of the examination in this Competition. Up to the moment of going to press we quite expected to have the final award from the Examiners, but they inform us that they must have a day or two longer.

ACROSTIC.

IF in this contest victor you now prove,
That will be your reward. Come, try and win.

1. A pattern this of industry well known;
   Consider now its ways; make them thine own.
2. Call it the first or seventh, as you will,
   One out of every seven is binding still.
3. Part of one upright here is shown, you'll see,
   Each fain would hope that it his own will be.
4. This tiny, fragile case holds strength and beauty,
   From it they emerge when it has done its duty.
5. Open or shut, according to pleasure,
   With room and comfort in very good measure.
6. A father's curse alighted on this son,
   For angry, cruel deeds which he had done.
7. When roads were long, when coaches ran of old,
   Thine host here welco med all fatigued and cold.
8. All shapes and sizes, all kinds one can name,
   Each has one, yet there are no two the same.
9. Guess this—another upright comes to view;
   Guess this—good fortune comes to you.
10. Good or bad, according to season;
    Early or late, for the self-same reason.
11. A refuge this from wild and angry waves,
    Its quiet shelter from such dangers saves.
12. Let but a letter for a figure stand;
    See, then, the new best "Weekly" in the land.
13. So, daily from all countries, far and near,
    Outward and homeward bound, they all meet here.
14. The shadow fell, and daylight fades, when this
    Resumes its sway, "the poet's hour" it is.

A. A. B.

The Answer to this Acrostic will appear in our number for July 21st.

INTERNATIONAL SUNDAY SCHOOL LESSONS.

JULY 1ST.

GOD'S COVENANT WITH ISRAEL.—*Exod.* 24. 1-12.

GOLDEN TEXT.—*Heb.* 8. 10.

By Rev. J. H. THORPE, M.A.

THE title of the lesson is "God's Covenant," but it may with profit be made a lesson under two heads. I. Communion with God; and II. Covenant with God.

I. COMMUNION WITH GOD.

Note two sorts of Communion—public, "thou and Aaron, Nadab, and Abihu, and seventy of the elders"; private, "Moses alone." We are not to neglect the first of these, but the second is that in which we draw nearest.

Note the *ground* of the Communion—the blood shed (see vers. 5 and 8; compare Heb. 10. 19).

Note the *object* of the Communion—to see God, to learn about Him, to contemplate His glory (see ver. 10).

Note the *result* of Communion—ver. 11, "Did eat and drink." "To strengthen and refresh."

II. COVENANT WITH GOD.

Note here the ground of the covenant is the blood. Ver. 8, "The blood of the covenant," as before. But, also,

Note the people must be sprinkled with the blood (ver. 8). God has no covenant with sinners otherwise than through "the blood of Jesus Christ."

Note it was to be entered on *knowingly* (ver. 7). Note the point in the words, "told, wrote, read." God wants none to serve Him without counting the cost.

Note a fuller knowledge of God's commands will produce a fuller acquiescence in them. (Compare vers. 3 and 7, and the added words, "and be obedient."

JULY 8TH.

THE GOLDEN CALF.—*Exod.* 32. 15-26.

GOLDEN TEXT.—1 *John* 5. 21.

THIS lesson, though an historical fact, might be used with advantage as a picture, showing the *origin*, *growth*, and *effects of sin*.

PLACE, camp of Israel; time, summer. Get scholars to take part in drawing a word-picture of the scene. All so quiet. What were they doing? They had to—

WAIT. Who for? How long? What was Moses doing? To wait was a trial for them. Trials are often tests. God often keeps His people waiting. A training-time. Illustration: Paul in Arabia. While waiting they began to—

WISH. What for? This contrary to God's law—no "graven image." The danger of vain wishes. An oriental fable tells of a shepherd who wished for water; the Ganges was then turned into his ground, and his flock and cottage destroyed. Wishing soon set their—

WILL to work. If you particularly wish for anything, you soon are determined to have it. Show the necessity for will-power; also necessity for that will to be in subjection to God's. "Thy will, not mine, be done." Thus the *wish* and *will* were put into shape, and there came—

WORDS (ver. 23). All had been quiet in the camp previously; the calm before a storm. Sin never shows itself all at once. Note the *disrespect*, the *unthankfulness*, and *forgetfulness of* their words. The power of words. The need to think twice before speaking once. Then came—

WORK. Fresh stir in the camp. Running hither and thither. What are they fetching? Where did they get them from? What were they for? Familiar figure to them in Egyptian religion. No work to be undertaken that God's blessing cannot be asked upon. Note the cowardly way in which Aaron tried to excuse himself from his share of responsibility. We shall have to give an account of *all* our work (Eccles. 12. 14). Draw attention to the *Eye* that was watching them from the cloud on the mountain peak.

There is a noise in the camp. The people were at—

WORSHIP—singing and dancing; the latter a common religious practice in those days. Sometimes a solemn dance, like David's, or an indecent dance, as amongst Egyptians. No doubt it was an Egyptian dance they were indulging in; hence a double cause for Moses' anger. Strange things men worship. Enumerate some of the idols we make in these days. Then came—

WARFARE. Two sides in the camp—the Lord's and idolaters'. Note Moses' power. "One with God is a majority." Which side won? What did their sin cost them? *Broken tables*, 3,000 *lives*, *a clear conscience*, *an entrance to Canaan*. What did they gain by it? No answer—*nothing*.

Show that sin still, in the same way—

STARTS, SPREADS, and SMARTS.

Ask scholars Moses' question. Get them to answer "I." Add to their "I" these three resolves. Then—

"I" will be whole-hearted.
"I" will be courageous.
"I" will be obedient.

The three "wills" will then be followed by three "shalls."

"I" shall be safe.
"I" shall be happy.
"I" shall be honoured.

Get scholars to find Scripture proofs for "the three shalls." C. SKINNER.

JULY 15TH.

GOD'S PRESENCE PROMISED.—*Exod.* 33. 12-23.

GOLDEN TEXT.—*Matt.* 28. 20.

MUCH help would be given to this lesson by giving brief Bible-reading on "God's Presence" as introduction.

Man's avoidance of God's presence (Gen. 3. 8). *Show it was not God who first avoided man.*

Sent from God's presence—a punishment (Lev. 22. 3). *Illustrate by child sent up to bed.*

Joy in God's presence (1 Chron. 16. 27; Ps. 16. 11).

Nature owning God's presence (1 Chron. 16. 23; Ps. 68. 8; Isa. 64. 3).

How to come into God's presence (Ps. 95. 2; 110. 2).

Effect of God's presence on offenders (Isa. 64. 2; Jonah 1. 3; Num. 3. 4).

LESSON-LINKS. *Moses' intercession. The Lord's refusal to go with the people. Abandonment of ornaments. Removal of tabernacle.* (Proper tabernacle not yet erected; this doubtless his own tent, to which he gave the name, "Tent of Meeting." *Moses' entrance into the tent. The cloud as doorkeeper. Effect upon the people* (ver. 10).

The whole of the lesson is an account of *a Conversation in the tent.* Some have thought it took place on Sinai, but there is no mention in verse 11 of Moses going thither; and in verse 2 of following chapter are the words, "Come up in the morning to Mount Sinai," which would hardly have been used, had Moses been there at the time. No doubt this is the conversation referred to in verse 11, where the Lord spoke "face to face." How many joined in the conversation? How many times did each speak?

THREE REQUESTS and THREE ANSWERS.

Requests.	*Answers.*
1. Show me Thy way.	1. I will give thee rest.
2. Go with us.	2. I will do this thing.
3. Show me Thy glory.	3. I will put thee in a cleft of the rock.

In the *1st request and answer* notice: Moses wanted *three things*—to know how the people were to be led, God's purpose concerning them, and if God still considered them *His* people. A threefold prayer: earnest, unselfish, bold, persevering. Show how in God's answer He promises two *personal* blessings—guidance, rest. Show how these two were greatly needed by Moses. God's blessing always appropriate to our needs.

In the *2nd request and answer* is seen Moses' importunity—wanted a blessing for the *people*, not for himself; wanted God to be people's guide, not an angel. Answer, both *clear* and *definite*.

In *3rd request and answer* Moses wanted to see God. It was a daring prayer offered by Augustine when he said, "Lord, hast Thou declared that no man shall see Thy face 'and live'? Then let me die, that I may see Thee!" A desire of many eminent saints, hence the great number who have tried to sketch the face of Christ. Our bodily eyes only made to look upon material things; even to look at the sun impossible. For God's glory see Exod. 40. 35; 1 Chron. 7. 1, 2. God's answer shows His *Divine care*, "I will 'cover' thee," and *gracious willingness*. What was it Moses saw? Perhaps a resplendent human form. Turn to Numbers 12. 8. Refer to transfiguration scene, and John's vision. When shall we see His face?

Sentences for scholars to repeat:—

God's presence our guide.
God's presence our guard.
God's presence *felt*, not seen.
God's presence our inspiration.
God's revealed presence our hope.

JULY 22ND.

FREE GIFTS FOR THE TABERNACLE.—*Exod.* 35. 20-29.

GOLDEN TEXT.—2 *Cor.* 9. 7.

(VERSE 20 needs the explanation that the people had been attending a great public meeting to hear a message from God, and were now going to their tents to do what had been asked.) This is a lesson on—

HOW TO GIVE AND HOW TO WORK.

Show that these two constitute life, are our "constant" concern, and on them depends the character of the future.

What were the gifts and work for? What was the tabernacle for? Who was the designer? Who saw the pattern of it, and where? God could have made it Himself, but He loves to co-operate with men. He could evangelise the world Himself, asks men to share the work.

Tabernacle, when complete, cost £250,000 (*Kitto*). Large supplies wanted. Read over the list in verses 4-9.

HOW THE PEOPLE GAVE.

CHEERFULLY (ver. 21). Everything was a voluntary gift, except the half-shekel of atonement money (Exod. 30. 12).

ACCORDING TO THEIR ABILITY. Whatever they had they brought (ver. 23). Little stores of oil, pieces of wood, tacks, pins, and precious stones. Some people keep from giving, because they cannot give much. Show how the widow gave more than the rich man.

ABUNDANTLY (chap. 36. 5). They had to be restrained from giving; all gave, men and women, rich and poor.

AS TO GOD (vers. 22, 24). They put into practice Paul's words in Col. 3. 17.

HOW THE PEOPLE WORKED.

WILLINGLY (ver. 25; also chap. 36. 12). Some people willing to give, but not to work; *both* needed. A willing worker makes a clever worker.

WISELY (vers. 25, 35). Much work spoilt for want of wisdom. Illustrate from daily life.

EACH IN HIS OR HER OWN SPHERE. "The man who made the pins as great in God's sight as Bezaleel who made the plans." No hint that they quarrelled who should do the showy work. All through the Bible great prominence given to little deeds.

IMMEDIATELY. In one verse we read (ver. 20), "They departed," and in the next, "They came." In chap. 36. 1, there is the word "then." No delay, no waiting for second thoughts. God's work needs wise haste. "He gives twice who gives quickly." Same with work.

UNCONDITIONALLY. No bargaining as to wages. Did not say with Peter, "What shall we have?"

ENTHUSIASTICALLY. Proved by their offerings and readiness. What is enthusiasm? "Better two men burning with enthusiasm than a house full of men whose souls are destitute of it." Pray, "Lord, baptize me with fire!" Dr. Arnot was once at a station where he grew weary of waiting for the train to move. He inquired of the men what the trouble was, and asked if it was want of water. "Plenty of water," was the quick reply, "but it's no bilin'." There is no lack of religious societies. "The engines are on the track, men in their places, but there is little or no progress. May it not be because 'the water is no bilin''?" Press home the two questions, "Am I giving like the children of Israel? Am I working like them?" Still the same need for gifts and labour. C. SKINNER.

JULY 29TH.

THE TABERNACLE.—*Exod.* 40. 1-16.

GOLDEN TEXT.—*Rev.* 21. 3.

THE STORY OF A WONDERFUL TENT. Teachers should obtain, if possible, small sketch of Tabernacle to take into class. Draw scholars' attention, as verses are read, to—

The day the Tent was erected (see Exod. 12. 2).
The amount of work done in one day.
The order in which the work was done. The most important done first. The work commenced from within, and grew outwardly.

ITS ARCHITECT—*God*. Every building needs an architect. God the architect of our bodies—the tabernacle of the soul—of the world—of heaven.

ITS BUILDER—Moses. (Some other Bible builders might be mentioned.) Show that we cannot all be architects, but may all be builders—of character.

ITS DESIGN. Where first shown? In three parts: *Court*, *Holy Place*, and *Holy of Holies*.

The Court. Its length, 100 cubits (Exod. 27. 11). (A cubit supposed to be 18 inches.) Get scholars to give the length in our measurements. Open to the sky. Composed of a framework of sixty pillars hung with curtains.

Holy Place, and Holy of Holies. These formed the tabernacle proper. Built of wood within the Court; wood overlaid with gold; roofed in by red ram-skins and seal-skins (Exod. 26. 14). Length, 30 cubits; breadth, 10. Divided into the two compartments by a "vail of blue," hanging from four pillars (Exod. 26. 31, 32).

ITS FURNITURE. *In the Court.* Altar of burnt-offering (ver. 6). The Laver (ver. 7). *In the Holy Place.* A Candlestick (Exod. 25. 31) made of pure gold, worth in our money £5,475. Table of Shewbread. Altar of Incense. *In the Holy of Holies.* The Ark, lid of which called Mercy-seat. Scholars should state what ark contained. Over Mercy-seat two golden representations of cherubim.

ITS USE. Worship. Sacrifice. Meetings.

ITS SERVANTS. Every house needs some one to attend to it. Priests and Levites. For description of priests and their dues, Lev. 21. 16-21; Exod. 28. 40-42. Head Servant—High Priest, Exod. 28. 30-39.

ITS DEDICATION (vers. 9-11). Anointed with oil (Exod. 20. 23). Set apart for God's use only.

ITS HISTORY. Was used as a place of worship till the time of David. When last heard of was kept as a relic in Temple (1 Chron. 5. 5).

ITS SYMBOLS. Everything in it had a meaning—*a great object-lesson to teach Christ.*

It symbolised God's presence: Christ with us.
It taught whereby we may have access to God.
It symbolised the holiness of God by the difficulty of access to the Holy of Holies. Altar of Incense spoke of prayer, Shewbread of good works, Candlestick of the Holy Spirit, and the Altar of Burnt-offering of Christ.

Every heart should be a tabernacle for God, and every soul a priest. We all need to learn

THE LESSONS THE TABERNACLE TEACHES.

1. The Altar of Sacrifice leads to the Presence of God.
2. Before entering the Holy Place, we must wash in the Laver.
3. God's Spirit gives us light, and Christ becomes the Bread of Life.
4. Thus we have access through the rent veil into God's presence.
5. Christ is MY High Priest. C. SKINNER.

NOTES ON THE Y.M.C.A. BIBLE CLASS LESSONS.

JULY 1ST.

THE LOST PIECE OF SILVER.—*Luke* 15. 8-10.

I. LOSER OF THE PIECE OF SILVER. We may take the woman as representing God. We may lose a thing in many different ways—we may lose a thing through our own carelessness, or we may have it stolen from us; it is in the latter sense that God lost us. Satan and sin robbed God from us, as well as robbing us from God.

II. LOST PIECE OF SILVER. 1. It was lost, so is the sinner. Lost in Adam; lost in sin; lost in self; lost in the world; and lost to God. Lost, like a man in a wilderness: lost, like a man without a character; lost, like a man under sentence of death; lost, like a ship without a rudder, being driven toward the fatal rocks; lost, like the wandering sheep; lost, like the prodigal in the far-off land; and lost, like the piece of silver—in the dust of sin and uncleanness. 2. It was a piece of silver, therefore precious. The sinner is precious and costly to God. We read this in the love of the Father, in the work of the Son, and in the labour of the Holy Spirit. 3. It was *one* piece of silver. One soul is precious to Christ. In John's Gospel we have Him again and again, saving and blessing individual souls.

1. Nicodemus,	illustrating	Self-righteous one.
2. Woman of Samaria,	,,	Prejudiced one.
3. Nobleman's son,	,,	Diseased one.
4. Impotent man,	,,	Helpless one.
5. Woman taken in adultery,	,,	Unclean one.
6. Blind man,	,,	Blinded one.
7. Lazarus,	,,	Dead one.

III. LIGHTED CANDLE. What does this represent? The light of man's reason? No. The light of nature? No. The light of the law? No. The light of learning? No. What then? Paul tells us in 2 Corinthians 4. 3-6, it is the gospel. The candle would lead to two things—reveal the piece of silver in the dust, and so cause the woman to recover it. Even so does the gospel. It searches (Zeph. 1. 12) and causes conviction, as in the case of Saul of Tarsus, when the light shone around him. And it brings the light of the gospel and salvation (Luke 11. 36).

IV. SIFTING THE DUST, OR SWEEPING THE HOUSE. There are two sweepers spoken of in the Bible. 1. The sinner, who sweeps his house with the broom of reformation (Luke 11. 25). 2. God, who sweeps away our refuges of lies (Isa. 28. 17), that we may flee to the only Refuge of Safety. Or He sweeps the sinner with the besom of destruction in judgment (Isa. 14. 23). Here we see the Lord working by His Holy Spirit through the gospel; and whenever He begins to work, there is sure to be a dust. We see it on the day of Pentecost. What a dust, to be sure! but three thousand pieces of silver found. What a dust, when Stephen spoke before the council! They killed him, it is true, but Saul of Tarsus was converted. What a bright piece of silver he was! What a stir there is in the conscience when the Holy Spirit works! Sin is then seen in its right light. What a stir there is in the will and understanding! There is decision for Christ and thinking of Christ when the Spirit works.

V. LABOURING TO FIND IT. She seeks till she finds. There are three seekers spoken of in the Word. Satan, who seeks to devour (1 Pet. 5. 8); the awakened sinner, who, like Zacchæus, seeks to see Jesus (Luke 19. 3); and the Saviour, who seeks the lost (Luke 19. 10). Here the woman represents the Church seeking by the Holy Spirit, through the gospel, lost souls.

VI. THE LIKEWISE OF JOY. There are at least seven parties who rejoice at the repenting of a soul. 1. The Father (Zeph. 3. 17); 2. The Son (Luke 15. 6); 3. The Holy Spirit (Luke 15. 9); 4. The angels (Luke 15. 7); 5. Loved ones (Heb. 12. 23); 6. The Church (Acts 15. 3); 7. The one who repents.

What encouragement this parable gives to workers! for the one thought is, the children of God are associated with God, in the salvation of souls.

F. E. MARSH.

JULY 8TH.

ZACCHÆUS.—*Luke* 19. 1-10.

I. THE MAN. Zacchæus. Three facts stated, and each tells against him.

1. Publican. 2. Chief among publicans. 3. Rich. (Rich with unjust gain.)

The office was hateful to the Jews (publican being a tax-gatherer), and the fact that he was eminent among the class, would, in their eyes, only add to his disgrace. The publicans were not merely collectors of taxes, but *assessors*.

II. HIS CURIOSITY.

"He sought to see Jesus who He was," apparently from no other motive than curiosity. Yet God overrules for good. A bad motive may bring a man under the sound of the gospel, under the influence of Christ, where he shall obtain lasting good.

III. HIS DIFFICULTY.

He could not see Jesus, because he was little of stature. There are *natural* difficulties lying in the way of the approach of some to Christ, which do not lie in the way of others. The *mental characteristics* of some are a hindrance; they are naturally light and frivolous, while others are disposed to seriousness. Or they are naturally philosophic and sceptical, while others are confiding. Then the *moral* bias is stronger in some than in others, inclining them powerfully to evil.

IV. HIS DEVICE. The sycamore tree.

God takes care that there shall always be a tree at hand for spiritual dwarfs.

Those who *really want* to see Jesus, *will find* a way of getting at Him. It is worth some effort to get such a sight.

Perhaps Zacchæus also thought the foliage would hide him, and that, being unpopular, the tree was the safest place.

"*He was to pass that way.*" Jesus often passes our way—be on the look-out.

V. THE UNEXPECTED CALL.

How surprised Zacchæus must have been to find he was discovered! "Can any hide himself in secret that I shall not see him?"

How still more surprised to hear his *name* mentioned! What a revelation this must have been to him! "Here is One who knows all about me!"

Compare "Woman of Samaria" (John 4. 29) and "Nathaniel" (John 1. 47, 48).

"*Make haste.*" "To-day." The King's business requireth haste. "*Now* is the accepted time." "Escape for thy life. Look not behind thee, neither tarry."

"*I must abide at thy house.*"

Thus Jesus invites Himself. What made the necessity? "The grace of our God, which is exceeding abundant." Necessary, for Christ to show His grace; necessary, for Zacchæus to receive His mercy and love.

Christ called Zacchæus to come *down* to Him, that he might afterwards come *up* with Him.

VI. THE GLAD RECEPTION.

Notice the promptitude of his obedience. Notice also its gladness. A golden opportunity seized and improved.

VII. WHAT THE GRUMBLERS SAID.

In their opinion Christ was degrading Himself by going to the house of the publican. But Christ went where He was most needed. "I came not to call the righteous," etc. The dignity of caste offended, but moral dignity raised.

VIII. THE EVIDENCES OF CONVERSION (ver. 8).

Read in the light of ver. 9, it is clear that these words are not a Pharisaic boast, but a penitent confession.

Query—After Zacchæus had given half his goods to the poor, and restored fourfold to those he had injured, how much would he have left?

Two good evidences are here—justice and generosity.

IX. THE BENEDICTION.

Salvation was there because Christ was there. The publican was a son of Abraham in the truest sense (Gal. 3. 9; Rom. 2. 28, 29).

JAMES L. STANLEY.

JULY 15TH.

THE LOWLY KING.—*Ps.* 8; *Matt.* 21. 15, 16.

I. THE EXCELLENT NAME. "Jehovah our Adōnahy." Jehovah is the name of God in covenant relationship; its meaning is, He who always is, always was, and always will be. Adōnahy, this means Lord or Master. These names are excellent, because of what they speak of.

"IN ALL THE EARTH." As Adam Clark says: "How illustrious is the name of Jesus throughout the world! His incarnation, birth, humble and obscure life, preaching, miracles, passion, death, resurrection, and ascension, are celebrated through the whole world. His religion, the gifts and graces of His Spirit, His people, and His gospel. No name is so universal, no power and influence so generally felt, as those of the Saviour of mankind." His name—

1. Separated to His name (Acts 15. 14).
2. Sonship in His name (John 1. 12).
3. Salvation by His name (Matt. 1. 21).
4. Suffering for His name (Acts 5. 21).
5. Severance from all iniquity through His name (2 Tim. 1. 9).
6. Submission to His name (2 Thess. 1. 12).
7. Service in His name (Rev. 2. 3).

II. ENCOURAGEMENT. "Out of the mouths of babes," etc. (ver. 2). Christ refers to and quotes this twice (Matt. 11. 25; 21. 16). And Paul seems to refer to this when speaking of the five weak classes of workers that God uses (1 Cor. 1. 27, 28). What encouragement this is, when we remember that God uses weak things. Joseph in Egypt to be the provider; stuttering Moses to be deliverer to Israel; Gideon and his 300 men to defeat the Midianites; David to overthrow Goliath; and the fishermen to be the apostles.

III. EXHIBITION. "When I consider," etc. (ver. 3). God's works cause us to wonder and worship. To wonder at His greatness, and to worship Him for His goodness.

IV. INQUIRY. "What is man?" etc. "Man," that is Enōsh, frail, mortal man, from Ahnash, incurable, mortal. "*Son of man.*" Adam, the son of a rebel.

V. ENDOWMENT (vers. 5-9). Man lost the power he had over the works spoken of by sin (Gen. 1. 26-28). It is regained by Christ (1 Cor. 15. 27). And will yet be enjoyed by man (Heb. 2. 6-9).

VI. ENVY (Matt. 21. 15). "They were sore displeased." The Pharisees, priests, and scribes were famous at this.

VII. EXULTATION (Matt. 21. 15, 16). The children sang His praises, and prayed Him to "save now," but the nation rejected Him; hence their house is desolate (Matt. 23. 38, 39).

F. E. MARSH.

JULY 22ND.

GENEROSITY.—*Prov.* 11. 24-27.

VER. 24. "*There is that scattereth, and yet increaseth.*" See this illustrated in *agricultural* life—seed-time and harvest. Also in *commercial* life—a man scatters his money in trade, in investments, and by interest and profits increaseth. The same principle holds good in things moral and spiritual. It applies to—

I. THE USE OF MONEY, etc. (see Prov. 3. 9, 10). Partly by the operation of a spiritual law, partly by direct Divine interposition, the liberal soul is made fat.

"There was a man, and some did think him mad,
The more he gave away, the more he had."

II. THE USE OF NATURAL TALENTS; *i.e.*, intellectual powers. The more used, the more they increase in power.

III. THE USE OF KNOWLEDGE. "Knowledge shared, is made more definite and certain." Knowledge imparted, is not lost to the one who imparts it. The very use of it often leads directly to an increase.

"*There is that withholdeth,*" *etc.* Imagine a farmer refusing to sow his seed for fear of losing it. By hoarding it he would lose it. "Cornered grain rots in the elevator." By withholding aught from God we only impoverish ourselves. The vapours which the earth sends up to heaven, return in fertilizing showers. The gifts we render to God come back to us again in blessings. The selfish soul, which shuts all its pleasures *in* to itself, shuts *out* the pleasures that would flow in.

Ver. 25. Men think that by generous gifts they rob themselves, but God views the case otherwise.

"*He that watereth,*" *etc.* You refresh others, and God will refresh you. You pour out the treasures of His truth and love upon others; He will make the rivers of His love to flow to you. Remember the widow's cruse of oil. The little lad gave up his barley loaves and fishes: see what the result was! Peter lent Christ his ship—what a draught of fishes he obtained!

Ver. 26. This is, of course, to be taken literally; but if true of the natural corn, how much more so of the heavenly supplies in the Word of God?

Ver. 27. "*He that diligently seeketh good procureth favour.*" This is illustrated in the centurion (Luke 7. 3). He sought the good of Israel, and he gained their favour. Note, it is he that seeketh *good*—the good of others—not his own *honour* and *gain*.

"*But he that seeketh mischief,*" *etc.*; that is, seeketh the mischief and injury of *others* (for no man seeks mischief to himself). See here the the law of retribution, and note its illustration in David's persecutors.

JAMES L. STANLEY.

JULY 29TH.

THE PRODIGAL SON.—*Luke* 15. 11-32.

SIDE-LIGHTS:— 1. The prodigal under law (Deut. 21. 18-21); and the prodigal under grace (Luke 15.).

2. Two "spent alls" (Luke 8. 43 and 15. 14).

3. Two "wants," or plenty and penury (Ps. 23. 1 and Luke 15. 14).

I. SEVEN DOWNWARD STEPS OF THE PRODIGAL.

1. *Discontent.* "Give me the portion of goods, etc." Discontentment was the seed that the devil planted in our first parents; it marred the life of Lot; it was the curse of Israel, and the death of Achan.

2. *Distance.* "Took his journey into a far country." Sin puts man at a distance from God, and outside of all blessing.

3. *Dissipation.* "Wasted his substance in riotous living." Dissipation means waste of powers, want of character, and woe to come.

4. *Destitution.* "Spent all . . . mighty famine." Without God, without Christ, without hope, without life, without peace, without joy, and without a home is the sinner. Destitute indeed!

5. *Distress.* "Began to be in want." The word "want" is a significant one. It is translated "come-short" in Rom. 2. 23; "suffer need" in Phil. 4. 12; and in Heb. 11. 37, "Destitute." To come short of God's glory, to be suffering need because of His grace, and to be destitute of the blessings of God's grace, is enough to cause distress.

6. *Disgrace.* "Feeding swine." What a come down! From the Father's house to the pig-trough. Thomas Fuller says, "He was brought from the keeping of harlots to the keeping of hogs."

7. *Dismay.* "I perish." The word "perish" occurs seven times in Luke 15. It is translated "lost" or "lose." From the connections in which the word occurs we see its meaning.

II. SEVEN RETURNING STEPS OF THE PRODIGAL.

1. *Discovery.* "He came to himself." Ambrose says, "He who returns to the Lord, comes back again to himself; he who departs from Christ forsakes himself."

2. *Desire.* "How many hired servants," etc. He seems to say, "My father treats his hired servants better than this citizen treats me."

3. *Decision.* "I will arise." The Levites decided for the Lord in answer to the question, "Who is on the Lord's side?" The prodigal decided, because forced to, by his need.

4. *Departure.* "He arose and came." An illustration of true repentance. What is repentance? A change of mind wrought by the Holy Spirit, and shown in the action.

5. *Determination.* "I will say unto him, I have sinned," etc. He was ready with his wail of confession, but the Father was readier with his welcome and kiss.

6. *Destination.* "Go to my *Father.*" He would have received a cold reception from his brother, but he knew where to go.

7. *Demerit.* "I am not worthy." The only thing that we are worthy of is death, as David said to Abner (1 Sam. 26. 16). But Christ is worthy, and we are blest for His sake, as Mephibosheth was blest for Jonathan's sake (2 Sam. 9. 1).

III. SEVENFOLD ACTION OF THE FATHER TOWARDS THE PRODIGAL.

1. His *discernment* of him. "He saw him."

2. His *devotion* to him. "He ran, and fell on his neck, and kissed him."

3. His *direction* concerning him. "Bring forth the best robe."

4. His *dress* upon him. "Put it on him."

5. His *design* for him. Ring for his hand, shoes for his feet, feast for him to partake, and his lost position restored.

6. His *delight* in him. "This my son was dead," etc.

7. His *demonstration* about him. "Let us eat and be merry."

F. E. MARSH.

THE DIFFICULT LOVE LETTER.

Say the words and I will write them." "Lieber Freund," she began. Then Lena could get no farther; the thoughts which came to her mind, the words which rose from her heart to her lips, she could not tell to the schoolmaster. She looked at him, and—she could not say them. *See page 621.*

"A.1."

MAD JOHN BURLEIGH.

By Mrs. CHARLES GARNETT,
Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow," "Our Navvies," etc., etc.

CHAPTER IV.

IN WHICH MR. BURLEIGH MAKES NEW FRIENDS.

THE following day there was a visible improvement in the curate. A week passed, and he was strong enough to be removed. The most careful arrangements were therefore made. Sammy's father and Mark Thompson came to carry him to the cab, and many others were waiting at the station, to place him in the invalid railway carriage, each pleased if he might only lift a portmanteau, or hand in a shawl.

John thanked them with that familiar smile of his, and shook hands feebly as they said good-bye. As the train left the station, men who, till he came to Canal Road, used to attend socialistic meetings in the Free Thought Hall, and curse "parsons," stood with their caps in their hands, waving a farewell. And there was not one amongst them who had not learnt more of the religion of Jesus from John Burleigh than all the infidel arguments they might afterwards hear in their workshops and dockyards would ever make them forget.

"It was a hearty good-bye."

"A month from that day."

"It's his *life*, see, yer lads, that was his most logical argument," said Mark Thompson, once himself a well-known advocate of free thought, as they turned away.

A month from that day John Burleigh had discarded a bath-chair, and was to be met slowly walking on the spa with his sisters, resting in the woods, or with his brother, driving about in a pony carriage. Life had returned to the young clergyman, and with it all the old loves. His women-kind half worshipped him, and Arthur gave up the partridge shooting—no small sacrifice—to constitute himself first head nurse, and then his constant companion. Even his uncle came over, and was very friendly—almost tender—in trying to convey an unspoken forgiveness.

It pleased John to see how admirably his uncle and brother suited each other. What comrades they had naturally become! How eagerly they discussed the same subjects, and chose the same interests and occupations!

He said nothing, for fear of rousing old pain, but he felt, and he knew, down in their hearts, both his mother and uncle understood that he had acted well for all parties, when he resigned an earthly inheritance, which stood—for him—in the way of his pursuit of an heavenly one.

One day, Mr. Burleigh the elder came in with a letter in his hand.

"This, John, is from Lord Azerley. It is the offer to you of the living of Houghrigg. It is not worth much, but it is pretty country, and near their own place. Our families have always been close friends, and you would find the earl a pleasant squire; and you see what a favour he makes of your accepting it. I hope you will feel it right to do so."

John Burleigh was a man of a very humble spirit. Perhaps no prayer was more frequently on his lips than—"Show Thou me the way I should walk in." When he once saw that way clear and distinct before him, no matter where it led, he would pursue it; but he was willing only to go where God pointed. So he hesitated, and days passed before he could make up his mind as to the right thing to do. He prayed much about it, and then he wrote and laid all the case before Canon Feedman. He hoped the Canon would say, "Come back," for his heart drew him to Canal Road Mission Room, and to all the people he loved, and he waited with much anxiety for his vicar's reply.

It came,—a sensible, kind letter, but not warm; it ran:—

"Mind it is a *sine qua non* that my curates should be men of not only the right way of thinking, but also of good health and robust constitutions. Now, this outbreak of diphtheria has severely strained you, and I most decidedly advise you to let your decision as to your return here, or your acceptance of Houghrigg, rest on a first-rate medical opinion, such as that, for instance, of Sir James Paget. It may be that after some years in the country, you will return to a city parish, able to bear its work."

John Burleigh had asked—"Show me Thy way, O God," and he considered the Canon's letter to be an answer to his prayer. If this was the will of God, he dare not cast it aside, because it was distasteful to himself.

The following day he went to town, and consulted Sir James. He did so certainly with reluctance, for his heart drew him back to Benford, but he went. The great authority forbade his return to town work, and prescribed country air and rest, and wished him a polite "good-morning."

It was not pleasant to travel back, conjuring up all the familiar scenes and honest faces he knew so well, to which he was mentally bidding adieu.

Still, he sat down immediately upon his return, and wrote to the Earl of Azerley, accepting the offer of the Vicarage of Houghrigg. He posted his letter with a sigh, but the wrench once over, there settled down upon his soul peace—full peace, even more—satisfaction. Here was the will of the Father, then. "Thy will be done," he said, and rested there.

So John Burleigh became a vicar.

Two mornings passed. The third brought a kind, warm note from the earl, thanking John for accepting the living, and inviting him to come at once to Azerley, and remain until the Vicarage was ready for his reception. "I have directed my agent to see it is put in thorough order at once. Your predecessor was a singular old man—quite a recluse—and the repairs will certainly take some weeks, during which time it will give Lady Azerley and my daughters much pleasure to welcome the son of my old friend to our home."

Nothing could be more kind and considerate. The elder Mr. Burleigh was particularly gratified, and secretly repented his angry vow of three years before. But his nature was far too obstinate to permit him to retract an inch. He had intended that the discontinuance of his allowance should act as a punishment to his rebellious nephew, and he would not have cared if only the mortification of his nephew's life had but proclaimed itself in a sad visage. John was, without doubt, under the lash, and his uncle would have liked to see scars made first, and then to heal them. Instead of which John had evidently never felt the thong at all, and asked no sympathy. And now had come this living of Houghrigg, and the boy had taken it, his uncle believed, at all events in some degree, at his desire, and the income was very little larger than that of that wretched town curacy!

His nephew would now be a still poorer man, for there was a Vicarage—though fortunately not, as it is so shamefully often the case, a large one—to keep up on the tiny stipend.

A Vicarage, Mr. Burleigh knew, was unlike an ordinary house in one respect at least; it was not, if worthily occupied, the dwelling of one man or one family, but the home of the whole parish—the centre to which all who were in sickness or penury looked as their natural and rightful source of comfortable supplies of ready relief.

The centre, too, where others, not the poor, should be secure of ever finding a cheerful welcome, a plentiful hospitality; and if a Vicarage could not be, or was not so maintained, Mr. Burleigh was well aware the parson's prestige was gone, his influence crippled, perhaps lost altogether. All these reflections made Mr. Burleigh very uncomfortable, all the more so that none such appeared ever to have suggested themselves to his singular nephew. He longed that John should come to him and ask for help, and he assured himself he would joyfully give such assistance, and with no grudging or calculating measure; but then John must come, and if not in words, at least by manner, show a sign of hearty contrition—be it ever so slight; he would then accept the apology. Mr. Burleigh still believed that John had been in the wrong when he gave up home and position, broad acres and ease, consideration, refinement, and leisure, and became nothing—"nothing at all."

He waited and he hoped, at first confidently, that John would own his mistake; then the expectation languished, and at length died down into a hard certainty that his wish would never be gratified. Then a secret anger stole into the old man's heart, accompanied by the conviction that it was not pride or obstinacy which locked John's lips, but that he had not dreamt such words were necessary; that he did not ask for money, for the simple reason he did not need it; and that he was quite content to be poor, since so he could more closely follow the Divine Master, with whom, though invisible, he walked, whose mysterious Presence filled his life with content, and whose words came to him, not muffled by the distance of eighteen centuries, but as plain words from a plain, unerring Teacher—ethics of practical daily life to be learnt and lived to-day by an English gentleman, as fully as by an ignorant Galilean fisherman in the long past æon, in that Eastern land.

Mr. Burleigh lingered as long as he could, even till the seaside party—a week after John's accepting Houghrigg—broke up, and with more vexation than he would have liked to acknowledge even to himself, he saw Mrs. Burleigh and the girls depart on a visit to a cousin's country place, and returned himself, with Arthur, to receive a shooting party at the old Hall. John stood on the platform waving a cheerful farewell, and looking very bright.

"To think," said the squire bitterly, "that fellow is going with a couple of portmanteaux and a box of books to begin life again."

"Ah!" said Arthur, thoughtfully stroking his moustache, "it hardly seems so to me."

"How do you mean?"

"Well, you said, 'begin life again'; that's hardly to me a correct definition. This is only a continuation of Jack's life. There is a consistency about him one does not often meet with, a method of action—not one that I should enjoy, certainly, but still a method."

"Yes, the method of madness. Thank Heaven I have one sane nephew;" and so the waters of Marah, which sorrow had sweetened for a time, welled up again in the squire's heart, and he persistently tried to forget his eldest nephew, "that fool of a parson," and he pretty thoroughly succeeded. One can easily form the habit of shutting one's eyes to the disagreeable.

In the old coaching days one of the passengers was engaged in a dispute with an acquaintance on the pavement, and the coachman lingered that the one "should hear the rights of it" from the other. An old and placid gentleman on the box seat suddenly, without any warning of irritation, flashed up passionately, "Drive on, John, drive on." Under the stimulus of his "drive on," unconsciously John touched the off leader with his whip, and to this day the argument was never finished.

"Drive on," said Mr. Burleigh mentally, "and leave behind the unconcluded argument; forget it if you can in motion—anyhow, leave it behind." So we escape our difficulties.

The next train which rolled out of the seaside station bore John Burleigh in one of its third class compartments to his destination.

His was a journey of several hours northwards. It was two o'clock in the afternoon when they drew near the scene of his former labours.

Though a beautiful autumn afternoon, the great city was obscured by a yellow pall of smoke. The spires of the churches, the

towers of the municipal buildings, the great dome of the town hall rose above and through a misty medium, a weary succession of wavering lines shadowed out the whereabouts of the distant streets, and those the passengers saw more closely looked hot and unclean with the encumbering dust of weeks.

But as the train slowly passed above the polluted river and all but stagnant canal, John Burleigh rose quickly, and leaning from the window, gazed down into his old district, noted eagerly this street and that yard, gazed lovingly on to Canal Road, and with misty eyes sought out the soot-darkened Mission-room. The place looked *strange* to him, just because it was so familiar. It had been the scene of intense emotion to him, and now he stood outside, looking on it as one who had no part therein. It was as though, for one brief moment, life had passed, and he awoke to find himself one of those sad spirits who watch outside the existence in which they have no longer any share, and wring their unavailing hands, and sob out their soundless grief at the bitter separation from all they love. The experience came and went in a breath, and left John Burleigh shuddering.

There was an hour to wait before the north train would leave. Should he run down to Canal Road, and get a hearty greeting or two, see a few faces light up in recognition, and so, with warmer heart, go to his new work? The thought was delightful, and he was just about to act on the impulse of the moment, when another consideration stopped him. What if his people begged him to return? He well knew, from the precious ill-written letters he had received, that this would be the case.

Another curate had been appointed; if he went into his old district just now, he should leave behind him a spirit of discontent. He knew his people well enough to be sure the very sight of himself would rouse feelings of ill-will, however undeserved, against his successor. He turned sadly back from the entrance to the station, and walked to the far end of the platform, from which he could see his very uninviting Canaan.

He was sadly looking towards it, when he heard his name called in loud and glad surprise, and turning round, his hand was seized and nearly wrung off by a stout man in a soiled grey suit and grey wide-awake hat. He had a jolly round face, brown moustache and imperial, but no whiskers, and quick, dark eyes. This was Luke Sugden, John Burleigh's late warden. He was cracking nuts with his teeth to fill up the time, and the moment he ceased shaking John Burleigh's hand, he dived under the left breast of his coat, and by an until then invisible silver chain dragged up a handsome gold watch, and glanced at it sharply.

"I've half an hour, sir. I'm glad to see you, sir; and you'll be shifting to your new situation, I take it?"

"Yes," said John, smiling, "and I was looking at my old one," pointing to Canal Road, "and wishing it was a return to that."

"Ah! and we wish it, too, sir, you may be sure. I heard it was your health you couldn't come back for, and you only look but a poor mesh yet! But we reckon naught of this new chap. He's nobbut a lad, and isn't up to his business yet. Means well, I think, but wants a bit of eddicating; he wants leading himself, and so of course he can't lead other folks. But he's obstinate. All weak men are that. I'm sure a lot on us has given him good advice; but then, you know, advice is only good to them that'll take it."

"Perhaps, Mr. Sugden, he does not like advice-giving, and you should remember he is a clergyman, and is placed over the district."

"Ah, sir!" said Sugden, cracking another nut, and putting his hands deep into his coat pockets, "that's just where it is. Do you think I'd put a chap on as *overlooker* yonder," pointing to a large Mill a short distance off, "if he weren't competent? I reckon not! I can tell you I should soon myself get sided by our master. If religion's of any importance at all, or of any good, it will bear the application of sound commercial experience. An ignorant chap's allus conceited, allus above advice. And then what does our new parson do? There's naught extra in himself to command respect, so he backs up his poor head-piece with his *office*, and talks no end about t' Church. As I said to him,—

"What do you preach about t' Church for, when we've only yet gotten a Mission Room?

"I knew what he meant well enough," said Mr. Sugden, with a wink, "but he thought I didn't, and says very meek and very superior,—

"'You don't understand! I am not talking of stones and mortar, but of the great Church invisible.'

"Then," I said, "we'll believe in *it* when you make it visible, sir, by living it, as Mr. Burleigh did. That took him down a bit, I reckon;" and Mr. Sugden laughed jovially.

John Burleigh blushed with pain. He could not say anything, but was thankful, doubly thankful, he had not gone into his old district.

"Depend on it, sir," said Mr. Sugden, "cream will rise. It's nobbut poor respect any man 'll get from an office. It's t' office that will get respected for t' man. Let t' coin ring true, and be full weight, and who cares whether it has George or Victoria's head on it; it will pass for royal gold anywhere, and fetch its worth."

"And you yourself, Mr. Sugden, have you taken the King's stamp on you, that all men may see whose you are and whom you serve?"

"I thought you'd be working it round to that, sir," said Mr. Sudgen uneasily. "It is always with you like yon old Nathan, 'Thou art the man.' I've been a respectable man all my life, or I should not be manager at Canal Mills."

"That is not enough. Respectability won't get you an entrance into the golden city."

"I know it, sir." Mr. Sugden cracked several nuts in succession uneasily, and then suddenly looked up.

"Did I ever tell you about our family, sir?"

"No, I shall be glad to hear."

"There were four of us, sir,—brothers. There's me, and Tom at Addingham, and Joseph at Wood Head, and Robert. He's dead now. He always was a singular man. He got religion early, and they put him on the Plan as a travelling preacher."

"You mean, I suppose, a local preacher amongst the Methodists?"

"Yes, sir, just that. Well, Bob never had much; *he* was allus giving; he gave the wife's frock away once, and her shoes when she could hardly spare 'em. I took him to task about it, and all I could get him to own was, 'I've faith in God.' Now, Tom and Joseph and me has been hard-working men all our lives, and wi' characters without a flaw. I've been saving and trying to gather brass, and so have my brothers, and we've none of t' three done much yet; but Bob, he did nought of t' sort. He used to say, 'My faith's in God,' and he gave all he could get. Now, I've been looking at my own children, and at my other brothers', and I've been looking at this brother's. We used to say to him, 'Thy children will be in poverty; thou never looks after them in ought but in getting them a first-rate eddication;' but we never could move him. Now I've been looking at the lot, and I've found his faith in God beats us all, even in money matters.

"See! his eldest son's in a Government situation worth £600 a year, and his other is getting over £400 a year, and a daughter married to very good high life. Now, for us—we are all in *this way*—all hard-working folks."

"Then, if you are convinced serving God pays best in this world, what do you think it will do in the next?" asked John Burleigh.

"There you are, sir,—at it again. There's your train. Let me help your things in," and they shook hands once more; as Mr. Burleigh took his seat, Sugden leaned forward and said in a low voice, before he shut the door,—

"You are right, sir. I'll write to you when I honestly can; but it will be a stiff job, without you to back me."

"Have faith in God."

"Ay, ay, sir."

So John Burleigh left the golden smokiness of the city, and as the train emerged into the open country, the brilliant afternoon sunshine flooded the landscape with light and promise—a hopeful omen.

CHAPTER V.

A CHANGED SCENE.

"Ring out the old,
Ring in the new."

THE autumn mists were blearing with shadowy fingers the sharp outlines of the landscape; still sheets of lakes lay like silver shields unresponsive beneath the colourless heavens; lazy files of home-returning rooks trailed slowly across the luminous greyness of the sky; the most solid objects, even the distant stone farm-houses, became etherialised and dimmed; near objects contrasted strikingly, decked in the autumn wealth of colour, with the weird silvery greyness of the uncertain distance. The roadside hedges were brilliantly mantled by the rich purple leaf of the nightshade, whose bunches of scarlet berries burnt and twinkled amidst the golden and russet setting of the changing foliage. The sunflowers, scarlet geraniums, and the humble but brilliant nasturtium glowed in the cottage gardens, and John Burleigh heaved a sigh of full content as, the road turning, he was brought in sight of the village of Houghrigg. To his right the landscape swept away in far rich meads, with innumerable folds of indistinct billowy distance. Far away to the left hand, behind the houses, rose a dome-like hill, the sides timbered with wide, low-spreading oak trees, and on its crest rested the crown-like battlements of an ancient castle, whose ruins by-and-by became his out-of-doors study.

On this first evening he only saw the sombre bushy slopes, and the bare crest towering on high, crowned with massy broken battlements.

The fortress was in ruins, but amidst all the changes, one object remained the same—a link through the ages from the shadowy past to the quick-coming future.

The grey church was still there; and beyond the old churchyard wall lay the

vicarage garden. In it stood the parson's house, covered with climbing plants —literally wrapped up in glistening ivy, burning Virginian creepers and jessamine, whose star-like flowers were hardly seen, being hidden by the graceful festoons of the hop plants, which hung in great garlands in the still evening air, and gave out a pungent odour to the passer-by.

John Burleigh, as he was driven slowly on, gave small regard to his house. No home thoughts gave it an interest in his eyes, but his heart was very full of the beauty of the dimly-stretching landscape about him, his church, and the homes of his people. It was a thought which sent a throb of wonder to his heart, that here was he, until this moment, a stranger, coming into this village life, becoming part of its unknown existence, touching other souls, and having his innermost consciousness touched in return by persons whom as yet he did not know, even by sight; that from this evening, when he came to them out of another life, and other environments, the past would die out, fade away into indistinctness like the shadowy distance beyond him, and the dwellers in these cottages and farm-houses would be knit to him, and he, an unknown stranger to them, in close human ties.

He was roused from his dreamy reverie by the shout of his driver to the lodge-keeper to open the great gates into the Chase.

From his boyhood he had loved the "merry woodland," and it was with renewed colour in his cheeks and light in his eyes, that John Burleigh now looked about him.

For two miles real forest this; timbered ravines, down which hurried brawling streams; open glades where startled fawns nervously sprang to their feet, and stood with heads turned over their shoulders, and long, questioning eyes towards the intruders, pausing to gaze one minute, before they slowly trotted off after the stag, who, with antlers thrown back and swollen throat, summoned them with a hoarse cry to the greater security of the all-embracing shadows of the green gloom beyond. And then the solemnity of a pine wood, whose dark crests stood black against the pallid sky or the silver bowls of groups of mighty beech trees, with wide-reaching branches and bronzing leaves. Now and again a nut-shell burst, and the sharp triangular fruit fell with a soft thud on the waves of feathery ferns beneath. Presently a weasel slipped across the road and lost itself in the undergrowth, or a hare with listening ears came leaping along, or a pheasant, alarmed by the rattling wheels, with a discordant cry and a wild whirr of wings, dashed upwards.

Beautiful, most beautiful, was the Chase at all times, but this evening even the ordinary objects were etherealised by a filmy mist veil of autumn haze. All too soon was the remnant of the old forest crossed, and the second gates reached, which led into the Home Park. Here, in all its wide extent, it was most carefully kept. Not an encroaching blade of grass was to be found now on the drive, not a disorderly stick or blown leaf was to be seen on the well-tended lawns. The noble trees were hidden in no bosky entanglement of the forest, but stood out singly, or in grand clusters about the park.

OUR MONTHLY TALK.

BY THE EDITOR.

"NOT FEELINGS, BUT CHRIST."

DEAR FRIENDS,—

First, let me thank many of our readers, and especially the young men, for their communications. I am always glad to receive letters on any subject on which I can give any help, but particularly in relation to spiritual interests. These I endeavour to answer *personally*, and you will kindly therefore understand the reason why a reply does not sometimes reach you as quickly as you may expect, and I would wish.

What cause is there for unspeakable thankfulness when the Holy Spirit of God rouses a soul from its unconcern, and perhaps open rebellion against God, to desire the priceless gift of pardon and peace. If this is your condition, dear friend—even though you are not yet enjoying the assurance of salvation—still praise God and take courage. An anxious soul is a quickened soul; and He who has thus begun His work, is ready to flood your soul with gladness and sunshine, through the knowledge of sin atoned for, and removed as far as east from west, by the blood of His cross. And that knowledge you may have at this moment. There is no need to wait a single hour. NOW you may trust the finished work of Christ on your behalf. NOW you may hear and believe His Divine assurance: "The Lord hath laid on Him the iniquity of us all." "I, even I, am He that blotteth out thy transgressions for Mine own sake, and will not *remember* thy sins."

Beloved friend, these words will be as cold water to your thirsty soul. And you may, believing them, at once claim Christ as your Saviour, and rejoicingly exclaim, "*My* Lord and my God."

Do not let the enemy cheat you of such unspeakable blessing, by whispering any of his wily suggestions. Be assured that *nothing* should hinder your present claiming and enjoying salvation, if you are true to God in earnestly desiring to be His, and to part with all that is contrary to Him. "*Then* shall ye find Me, when ye shall seek Me with all your heart." This moment may be that blessed "THEN" with you. Eternal issues attend your decision.

And when this great transaction is done, when we have yielded the citadel, when, "believing . . . we have life through His name," what then? Continual, onward progress; daily strength for daily conquest; manful championship on the Lord's side; firm, unflinching testimony; the sacrifice laid upon the altar, and bound, yea, to the very horns of the altar.

There are two special temptations with which the enemy seeks to assail. One is, —"the absence of joyous feelings." Feelings are extremely variable; they must never be counted upon as the ground of our joy; that springs solely from what we *know*, and not from what we *feel*. What we *feel* is of very small account; what Jesus has *done* is everything. Therefore, if you have no very joyous experiences, be not distressed, rest on Jesus, and it will be impossible for gloom long to enshroud your soul.

The second is "the recurrence of old temptations, and the force of old habits." Remember, that whilst you are now a living soul,—in Christ, the old nature within is *not* dead. It is a conquered foe; it is to be reckoned as dead (Rom. 6.); and we need to claim by faith, the promised power, in order to keep it under. Therefore, if some evil habit seeks, as of old, to get the dominion, take the shield of faith, and in the strength of the Lord, you will be victorious.

There has closed, but a fortnight ago, one of the most—perhaps we might truly say, *the most*—marvellous Conference ever yet held. A hundred Missionary Societies represented at the Universal Missionary Conference—whose sittings lasted for nearly fourteen days—was a spectacle never before witnessed. What a mighty inspiration may we expect to have been given to work for Christ in the Foreign Mission field! How many of our finest and noblest young men, will have been fired with burning zeal to offer themselves for this blessed, glorious work!

Once upon a time, the Church gave to the heathen that which cost her nothing —men and women scarcely able or satisfactory enough for Home work. But, happily, that day has passed for ever, and now she is sending forth her best—men and women filled with the love of Christ, and who count it their highest honour to give splendid abilities, eloquence, scholarly culture, wealth,—all, to this Divine and Christlike mission.

The infant Church at Antioch, from which the first pastor and the ablest preacher, it might be supposed, could ill be spared, gave to Foreign Mission work her Barnabas and Saul. Nor did she lose; for when, on their return, the Church at Jerusalem was found embroiled in a narrow-minded discussion, it was the missionary from Asia Minor, who had been rejoicing over multitudes of Gentiles pressing into the kingdom, under his preaching of the gospel, who convinced the assembled apostles of the breadth of apostolic truth, and sundered the bonds by which they would fain have trammelled those young believers.

And may there not be some reading these lines, to whom shall come the Divine voice: "Separate *Me* —— for the work to which I have called him"? Brother, sister, —rise up,—He calleth thee. Ask not why you *should* go, but rather see if there is any potent cause why you should *not* go and preach among the heathen the unsearchable riches of Christ. Oh! for the mantle of Henry Martyn and William Burns and of Hudson Taylor to fall upon many of our noblest, most promising young men,—

> "Till each remotest nation
> Hath learned Emmanuel's Name."

If any of our readers should feel constrained to offer themselves for Foreign Mission work, I would suggest their communicating either with the Rev. J. Hudson Taylor, China Inland Mission, 4, Pyrland Road, London; or with the Secretary, C.M.S., Salisbury Square, Fleet Street, London.

And now, dear friends, again assuring you how glad I am to reply to letters, which are always welcome, and asking your hearty co-operation in increasing the usefulness of our Paper,

Believe me,

Your sincere friend,

H. Jane Menzies.

(*Mrs. Stephen Menzies.*)

LEAVES FROM THE LOG OF A GENTLEMAN GIPSY.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the Land Yacht 'Wanderer'; or Thirteen Hundred Miles in my Caravan," etc., etc.

LEAF VI.

DERBY, DUFFIELD, AND MILFORD — ON THE WINDING DERWENT — BELPER CEMETERY — THE TREE-CLAD GLEN OF AMBERGATE — CROMFORD — MATLOCK AND ITS BEAUTIES.

"These groves were planted to console at noon
The pensive wanderer in their shades."

THE drive from Burton to Derby is about twelve miles long, and we hardly drew rein, even to gather wild flowers, till we were on the hill a mile from the town, and right above it. The view from this spot is charming—not only of the place itself, but the green wooded hills that stretch far beyond.

We found Derby all astir. It was market day, and though we fain would have stopped to see the sights, there was no rest for the soles of our feet.

From the little I saw of it, however, I consider Derby a delightful town, and hope to go back there some day, when the good folks are not so busy.

We put on the nose-bags at an inn, however, had lunch in our own hotel on wheels, and by-and-by jogged on towards Duffield, with hedgerows and woods on every side of us, and the summer sunshine glittering from every quivering leaf.

We reach Duffield early, although for sixteen miles and over the horses have not been taken out. They seem to know it is Saturday, and that they will have all day to-morrow to enjoy a good rest.

Duffield is a quiet, unsophisticated bit of a place, with lovely walks around it, and situated in the midst of a rolling woodland country. The little field in which we bivouac, looks as though it were made for the *Wanderer*.

On Monday morning we are up betimes, and away for Matlock. The day is a glorious one, the thermometer on the coupé standing at 70°, with no dust nor wind to try our temper, nor sunshine to try our eyes.

No more beautiful drive could be conceived, than that we enjoy this forenoon. It would be a shame not to glory in such scenery, not to revel in it; it would be a shame to drive quickly. Why, lying on the coupé here, the great Newfoundland looks happier than he has looked since we left.

We have many a pretty peep, many a pretty picture spread out before us, as we go slowly cantering on. Let me sketch one or two, but, oh! how poorly the best of pens could do this in words. Never mind, an artist, too, would fail.

Peep I. We have this from the railway bridge, and beautiful it is. There are fertile fields in the foreground, then hills like the giant waves of the Atlantic, green-wooded to the top, the ashes, elms, and beeches being a sight to see.

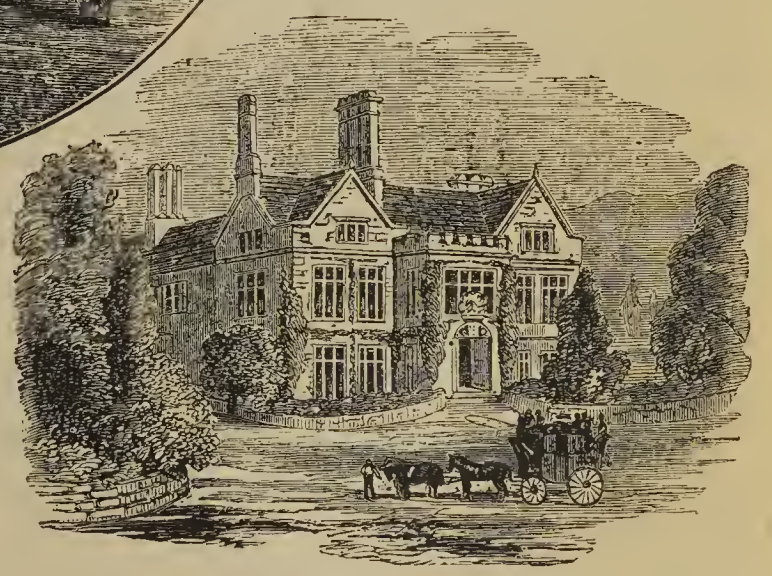
Peep II. We are crossing the river Derwent. The river here is clear and broad. Yonder it goes tumbling and roaring over a weir. Yonder, too, is an old stone-built mill. And yonder a quaint wee ivy-clad inn, cuddling beneath rocky cliffs, which are also ivy-clad and wooded on the top.

This little village goes straggling along the glen by the river's side, and the river sings to it as it flows onwards. The houses are nearly all stone-built. Perhaps that bonnie wee church is also built of stone, but it is so buried in ivy that no one can tell.

"Haddon Hall—quite a charming spot for a picnic."

Peep III. This is Milford here, I suppose. We thought the last place was. So much beauty is confusing. Here we again cross the Derwent. We cross the Derwent many times to-day; it *will* get among our feet somehow, and it *won't* get out of the way.

Milford is a beauty nook, and would make a charming health-resort. I wonder if it is one. The houses are of stone, and the eye is refreshed by the cool green of creeping ivy, wherever we look—ivy that that half buries houses, that canopies even cart-sheds, that surrounds the trees and crawls along the fences, toning and beautifying everything as moonlight does. Beyond are more hills and woods, and fields divided by stone fences.



Peep IV. We cross another railway bridge, and rattle along until we reach the lovely village of Belper.

The river is close aboard of us here. Placid and clear, it makes a charming sweep. The trees seem to love it; they bend towards it, they kiss it, they lave their arms in it, and look at their faces in it. But even the hills use the river as a mirror. We see a monument on the distant horizon. We don't care whose it is. We notice a church spire peeping through the greenery of the trees. We graciously permit it to be part and parcel of the peep.

Look yonder! half a dozen chubby children, the girls with yellow curly locks. They yell with delight, and toss their bare, shapely arms aloft, as we go trotting past, and the dust that grimes their faces fails to hide their quaint homely English beauty.

Peep V. Belper cemetery. A most enchanting spot is this. It adjoins the road, and lies along the hill, fifteen acres in extent—fifteen God's acres of surpassing loveliness. A beautiful garden, wide and wild—no, not wild, but fantastic. How green and neat the grassy lawns and graves; how sweet the blooming flowers; how dark the yews and *arbores vitæ;* how bright the flowering rhododendrons! And how peaceful and entirely in keeping were all the surroundings! We were indeed loth to leave this delightful place, but time would not permit us to linger, so we pursued our onward course.

Peep VI. A mile beyond the village of Ambergate—a tree-clad glen. The hills

"The Peacock Inn—a pretty study."

around are banks and clouds of foliage of every hue and shade, from the lightsome green of the silver-stemmed birches, to the needled darkness of waving Scottish pines. I stop to cull wild flowers, a glorious bouquet of nodding fox-gloves—every bell of which tells me that summer is in its prime—and tall, deep-crimson silenes.

Peep VII. And positively the last, for in sketching these word-pictures, I have been fighting at fearful odds; on one side

scenery unrivalled probably in the whole of Merrie England; on the other, poor me with my steel pen and my drop of purple ink. It was easy to see from the first, how it would end. I am vanquished, the scenery is triumphant. I have hardly another shot left in my locker, not another adjective of admiration to hurl at the beauties of Nature all around me!

Well, we halted at Cromford, to bait our horses before going on to Matlock, a village amongst rocks and woods; or, rather, I ought to call it a little town, and a pretty one it is.

But about this *Peep VII?* Well, it comes in immediately after we leave Cromford, where we find ourselves in oh, such a charmingly romantic glen, dingle, or dell,—indeed, it partakes of the characteristics of all three. Down beneath us there is the Derwent; on our right, the wondrous foliage of those waving trees, striving, as it were, to hide it. And the sly, coaxing old river dallies with the trees, and forms a great, deep, dark pool, and tries to make them believe it is in no hurry to get away; but presently it breaks from their embrace, and goes foaming and tumbling over a weir, and away and away.

Aloft on all sides, the rocks like towers and ruined castles and battlements, raise their heads above the cloudland of trees, while the ivy and the wild flowers go creeping round them and trailing over them, and even form caps of green for their hoary heads.

I believe Willersley Castle, the gardens, and dale are here or here-about. But I did not look for them; the river scenery was enough for me. Besides, I do not want to be told the names of places, nor anything about them. I am always afraid, when enjoying any scene like this, that some wretch, with a soul unattuned to sylvan beauty, may dash in with a bit of information about manufacturing industry, or something equally awful. Mind, I do not object being told that yonder lovely villa—Lee Hurst—is the home of Florence Nightingale, or that yonder castle is the ancestral hall of some bold fighting family, or that down in that pool a maniac lover drowned himself for the love of Jeannie Lee. That is all natural and romantic, but do not dare to drag in your cotton mills or your great railway stations or factories, and expect to win a smile from me; I will none of them.

We got safely into Matlock Bath, and after provisioning the ship, and taking the mails on board, we went on towards Matlock Bridge, and finally found delightful camping ground at Belle Vue.

There was a deal to be seen all round here, and I determined to see it. Not to "do" it, as the professional tourist says, but really to enjoy all I saw in a quiet and easy way.

I gave my servants plenty of leave of absence, and I myself, with Hurricane Bob, took plenty. Together we wandered about the streets of Matlock Bath, looking at the bonnie things in the windows and the pretty people on the parade. We embarked at the ferry, and went floating away on the calm bosom of the Derwent. We rambled through the lover's walks, we climbed the highest tors, and duly marvelled at all the wild beauty spread out before us and beneath us.

Not a point of interest was omitted, and we returned pleased with our exertions, and it need scarcely be said that we enjoyed the undisturbed sleep which follows fatigue.

LEAF VII.

TO BAKEWELL—ESCAPE AN ACCIDENT—A GHOSTLY HOUSE—CHATSWORTH AND EDENSOR—PEACOCK INN AT ROWSLEY—HADDON HALL—THE WYE—A GLOOMY DEFILE.

"How fraught with wondrous change for thee hath rolled
The stream of ages.—Each noble heart
And mind, whose life was thine, still speaks through thee
To kindred spirits of all time to be."

I LEFT old Matlock at last, left it reluctantly, if the truth must be told, and steered for Bakewell *en route* for Buxton and Lancashire. My intention had been to head for Sheffield, and so on north into Yorkshire from that direction, but I was told the roads were too frightful to attempt without four horses.

From what I saw of the commencement of some of them, they certainly were bad enough.

One of the chief delights of caravan life rests in the fact that you never know, as you start in the morning, what is before you in the shape of adventure, incident, scenery, or weather, nor have you—if traversing a country that is new to you—the slightest notion where you will bivouac, where your horses will be stabled, your coachman sleep, or the caravan be stationed.

Once away from Matlock, we found the valley of the Derwent widen considerably. It was still bounded, however, on all sides by beautifully wooded hills, and the scenery on the whole was charming.

We come across some strange-looking houses at times in our travels. Here is one in which a ghost might dwell or walk or stalk, or whatever is the correct thing for a ghost to do.

It is a tall house, though not large, three stories high, with three rows of long, slitty windows, a roof of triangular form, with one chimney in the centre. The walls are mostly ivy-clad, and it stands back from the road in a lonely place, with a wooded hill rising up behind, and the most dismal-looking dark shrubbery and lawn all around it. There is smoke coming from the chimney, however, so I suppose the ghost is not dead yet.

But not a hundred miles away from this queer domain, stands the charming house of Sir J. Whitworth or his agent. Stancliffe I think it is called. The cottage mansion is like our ghost's house, covered with the greenest of ivy—how beautiful ivy is when properly trimmed and trained—and is embowered among trees and shrubs. In front is a park or fields, where to-day picturesque-looking cattle are quietly browsing, or taking shelter from the sun, under the spreading branches of giant elms and chestnuts. Behind is a miniature mountain, very steep, and crowned with fir trees. Up this bonnie hill the lawn itself is carried to nearly the top, and is everywhere studded with clumps of trees and rock-work, and adorned at each side with masses of rhododendron, furze, and broom.

The road to-day is limestone, white and somewhat dusty. Nothing is more heating for horses' feet. How refreshing those long square stone wells look, that we pass every now and then. They are brimming over with pure clear water, and we cannot help letting the horses have more of it than is perhaps good for them.

Now no one in full possession of his seven senses would be anywhere near here without paying a visit to Chatsworth, and the charming wee village of Edensor. The whole place is too well known to need description. If I had been able to spend a week here, I believe new beauties worthy of description would have demanded my admiration every day. The gardens and grounds, the camelia houses and orangeries, the cascade, the fountains, all are visions of beauty that to see but once is to dream of for ever.

After rattling through a big railway station, where were rows of cabs with their drivers half-asleep, apparently, we crossed the Derwent for the last time, and found ourselves in the old-fashioned but delightful village of Rowsley. We pulled up near the Peacock Inn—a pretty study, and might be called the Artist's Own, or the Angler's Own, for all round about here the scenery is a magnet that draws the brothers of the brush from far and near, while the rivers lure the disciples of Walton.

But it should lure others as well—hard-working city men, for instance.

The air was balmy and delicious, the scenery everything a poet or artist could desire, the summer was in its prime, all around us was sylvan beauty, the music of birds, the glamour of wild flowers.

It was this indolent feeling, perhaps, that prompted me to drive off the road soon after leaving Rowsley, over the bridge, and right up to the gates of Haddon Hall itself. It belongs to the Duke of Rutland, though it is little else save a grand and imposing ruin. Yes, it might still be inhabited, though it would doubtless be rather damp and mouldy at first.

There is a guide to show the stranger through the castle. They are admitted in batches, and follow the man like a flock of herons, listening to all he says, in true English tourist style, forgetting it all next minute, buying a photo or two, and going away happy—because they have "done it."

Odi profanum vulgus et Arceo—including guides. I walked about by myself, and thought of the past.

Like most show places of the sort, it is disfigured here and there by shocking, though perhaps necessary, printed placards—"*No smoking allowed*," "*Do not write on the walls*," etc.

After seeing everything, I held a little *levée* in my own home, then drove away from Haddon Hall. There are some grand old ruined elms about the grounds, and, on the whole, it is quite a charming spot for a picnic.

We are back on the road again. That small, sluggish stream down there to the right, which meanders through the green meadows, its banks all golden with buttercups, and starred here and there with tall white silenes, is the Wye.

At Bakewell we anchored for an hour to bait and shop. It is a compact and pretty little stone-built town, and is much frequented by both the tourist and angler. There is a grand old church here, with monuments of antiquity, and an ancient bridge.

Just outside Bakewell, we came at once into a densely-wooded dell, with rocks overhanging the road, and many quaint and pretty cottages.

Through the village of Ashford, and Ashford Vale, the scenery is exceedingly picturesque.

Twice we cross the river Wye.

We then enter a defile, with hills and rocks on every side; the former green with

larch trees, or dark with waving Scottish pines.

We know now we are near the long and dangerous ascent to Taddington, and as the afternoon has closed over dark and threatening, the prospect before us is not particularly cheering.

The hill leads upwards, winding through the woody defile or glen, and so good is the road, that we are a long way up, before we think of resting on the roller. The horses begin to give out at last, however, and we stop to let them breathe.

On again, the air close and sultry, the tree-clad cliffs frowning over us, the dark clouds near enough almost to be touched, the gloom increasing every minute.

On and on, on and up. When does the real tug-of-war begin? When do we reach the terrible hill about which, for the last two days, every one we met has been doing his best to frighten us out of our wits?

Ah, here it comes! No, that was not it. We breasted that pinch, and now we descend again into one of the fairest and fairyest of fairy glens. Hills on every side, and the woods all one wild tangle of ferns and flowers. Just one green, *bare* hill up there to the right, dotted over with merely a few low, dark bushes, which take the shapes and forms of all sorts of beasts and bogies. The river is wimpling beneath us, singing a soft, dreamy kind of a lullaby. If fairies dwell anywhere in Merrie England, it must be in places just like this.

But a sharp peal of thunder rouses me from my reverie, and a golden gleam of lightning goes flashing through the green of the trees. We must hurry on and up ere the rain turns the road into a river.

It was, indeed, a long, stiff pull, and miles of it. In the old coaching days, they tell me, never fewer than three pairs of horses attempted this climb. But here we are at Taddington, though not even yet at the head of the hill. The very first house is an inn, and we bivouac before the door, for it stands off the road, facing the country we have just come from.

We are here almost beyond the pale of all civilisation, but we are safe. The landlord, an old soldier, is civil and obliging, and the stables fairly good.

Dinner now will be a comfort to us. We are tired and hungry. Why, one breath of the pure air of this mountain top would be enough to make a sick man jump up and find his way to the pantry. I do not think I need put it much stronger than that.

(*Continued—page* 581.)

ORIGIN AND TALISMANIC VIRTUE OF RINGS.

By Andrew T. Sibbald.

PROMETHEUS, being fastened to Mount Caucasus, made himself a ring out of one of his chains, in remembrance of the favours he had received from Jupiter. He set in this ring a small piece of the rock, and wore it on his finger; and this was supposed to be the first ring with a stone which was ever worn.

The Egyptians affirm that they were the first inventors of rings; and certainly Joseph, after interpreting Pharaoh's dream, received with his golden collar, a ring also, as a reward. And we find the Israelitish women giving their rings to Aaron, to assist him in making the golden calf; and four hundred years before the Trojan war, the Jewish priests wore gold rings, enriched with precious stones.

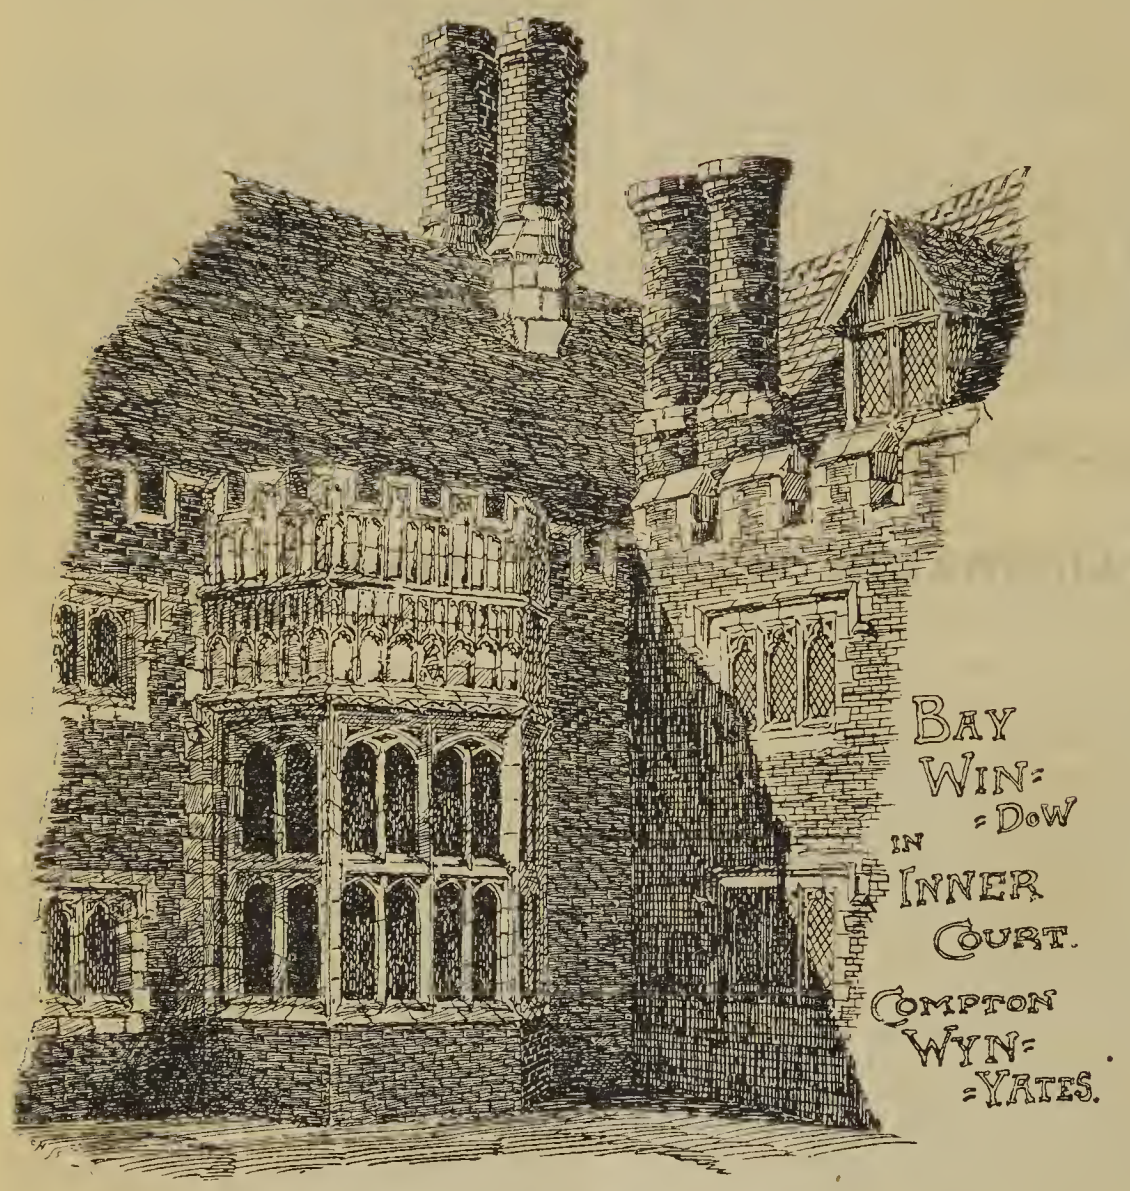
Queen Jezebel made use of the ring of Ahab to seal the counterfeit letters which she issued in his name. The Lacedemonians wore iron rings, either despising those of gold, or their monarchs, always desirous of checking every species of luxury, set the example of wearing iron themselves, and the people dare not wear what was more costly than those adopted by the sovereign. The ring was looked upon by most nations as the symbol of liberality, esteem, and friendship, particularly with the Persians, amongst whom none were permitted to wear them, unless they were a present from the king himself; and they relate that a certain prince of their Indian priests was possessed of a ring whereby he learnt every day the greatest secrets in nature.

But the most wonderful ring on record was that found by Gyges, and supposed to have belonged formerly to the chief of the Brahmins. Gyges was a shepherd belonging to the King of Lydia; and, after a great flood of water, which nearly overwhelmed the country, he passed into a very deep cavity of the earth, where, having found in a brazen horse, a human body of enormous size, he pulled from off one of the fingers this surprising ring, the stone of which rendered its wearer invisible if turned towards the palm of the hand. Gyges made trial of its efficacy by introducing himself at court, and at length gained over the queen to facilitate his ascent to the throne of his master, whom, with the queen's assistance, he killed.

Alexander the Great, after the defeat and death of Darius, made use of that monarch's ring to seal the letters he sent into Asia, and only used his own to those he sent to Europe. It was the custom at Rome, to send to the bride, before marriage, a present from the bridegroom of an iron ring, without any stone, to prove how lasting, durable, and firm their union ought to be, and the frugality requisite to be observed in the marriage state, in order to provide for a family. But luxury before long gained ground, and the old custom was abolished, the iron rings giving place to those of more expense. The Roman knights were distinguished from the senators by their gold rings; and it was customary, as a mark of honour, to present ambassadors with them when they received orders from the senate to depart for foreign states. After the regal power was put aside in Rome, gold rings were worn as a sign of liberty; and Hannibal, when he had gained a signal victory, sent to Carthage a bushel of gold rings, taken from off the fingers of the Roman nobles and knights, who were slain in battle.

Though the first inhabitants of England, Ireland, and Scotland, and the ancient Gauls, were accustomed to wear the wedding ring on the forefinger, the use, at last, prevailed amongst all nations to place it on that finger next to the little one on the left hand, called the annulary finger; because, according to the opinion of the Egyptians, a small nerve runs from this finger to the heart. In Germany, married men wear a gold ring on the little finger of the right hand, which is put on at their marriage, with the date of the day of the month and year in which their union took place. It was formerly a received and general opinion, and there are yet remaining those where the idea is not quite eradicated, that the precious stones in rings ought to be set in a collet pierced through, in order that the jewel may touch the finger; for many jewels are supposed to possess inestimable virtues. Thus, the diamond is said to be a preservative against poison and the plague. Against this latter dreadful malady, one would really imagine it might have some power, for in Turkey it attacks, at first, only the poorer sort, and the Sultan and princes about his court, who generally wear a profusion of diamonds, are scarce ever known to be afflicted with this rueful disease.

The diamond is also said to expel anger, and is therefore called the stone of reconciliation; and the ancients believed that whoever wore it when he was going to battle, it ensured him victory. Such a pernicious quality, however, is attached to diamond powder, that it cannot be corrected; and the great physician and chemist, Theophrastus Paracelsus, was poisoned by it.



The ruby, they say, banishes sorrow, and averts ill thoughts. (Who, then, ought to be without a ruby?) The amethyst's beautiful purple, it is said, will gain the wearer the favour of princes! (Alas! we fear that stands on a yet more brittle and uncertain foundation!) The jacinth fortifies the heart, and preserves the wearer against the dangers of thunder and lightning. Of the emerald, wondrous things are related: that it is almost a certain cure for epileptic fits; but if the disorder proves too strong, and the person should die with it, the stone instantly breaks in pieces. However, many people of unquestionable veracity have declared that the powder of it, being drank, is an excellent remedy against the bite of any venomous animal. The opal is reckoned a preservative against infectious air and fainting fits.

All these reputed virtues, whether real or imaginary, serve to show that the first wearing of rings had in it something holy, honourable, and talismanic. The small golden fetter, which binds the wife to the husband, is now reckoned the most sacred of all. The mourning ring, for a departed and dearly valued friend or relative, claims the next place; and though valuable rings are often given as pledges of love, respect, and amity, yet only two—the wedding and the mourning ring—still possess the symbolic solemnity of their first institution.

PLACES WORTH SEEING.

BANBURY—COMPTON WYNYATES—WARWICK.

By William Alford.

"'There's th' old house, gents,'—a relic of the Middle Ages."

PROBABLY very few of the readers of this Article have ever heard of an old Tudor mansion, situate in the north of Warwickshire, and rejoicing in the name of Compton Wynyates, but such an one exists to this day, and I propose to give an account of my method of getting there and back, together with some of the places of interest I passed on my journey.

First, then, the traveller must find his way to Banbury, and here he may well stay a day, for the old place is full of interest, and he will have to arrange for a drive of thirteen miles to Compton Wynyates, or rather to Brailes, a village about a mile and a half distant, where he will spend the night. Or perhaps he will prefer to do the double journey in the day; but this, together with a visit to the old place, would probably make a toil of pleasure, and spoil the excursion.

Arrived at Banbury, I am greeted on the platform with the inevitable "cakes" for which the place is famous, but I resist temptation, and walk up the High Street to the Red Lion Hotel, where I have arranged to meet the friend who usually accompanies me on these rambles. Nearly opposite the hotel stand some picturesque old houses, the ground floor, alas! disfigured by the introduction of modern shop fronts; and there are many other picturesque houses of the 16th and 17th centuries in the streets. The old church was destroyed, for no particular reason, in 1793, and an ugly modern classic edifice has been erected in its place. The town once possessed a large castle, of which no trace now remains. It is related that this stronghold stood two sieges; one in 1644, of three months' duration, when the garrison was relieved after eating all the horses but two; and again in 1646, when the building was pulled down by the Parliamentarians. "The inhabitants," says Murray, "were noted for their Puritanic tendencies."

The cross at Banbury, the only one remaining of some four or five, still stands; and is the identical one referred to in the Nursery Rhyme, "Ride a cock-horse," etc.; but the history of the original "fine lady" who rode on the "white horse" I am unable to discover.

As we saunter through one of the smaller streets of the town, we catch a glimpse, through the open stable door of the Reindeer Inn, of a mullioned window, which most assuredly is not the work of the modern mason. Curiosity prompts us to enter, in spite of the fear of unknown dogs, and we are rewarded by finding a fine old oak-panelled room, with a wonderful carved mantel and rich plaster ceiling. And this is the bar parlour of the Reindeer Inn.

The next day, having hired a conveyance somewhat resembling a fire-engine painted green, we start on our long drive; and a very pleasant drive it is. On our right, soon after we leave Banbury, we catch a glimpse of Broughton Castle, half hidden amongst foliage; and after that, I have a confused recollection of the fine undulating country characteristic of the Midlands; of sharp ascents and sharper descents; of tiny villages, each with its old church, where the small inhabitants turned out opened-mouthed to see our strange conveyance, and the older ones touched their hats in respectful astonishment; of several miles of road without a habitation visible; and then our driver, pointing with his whip, remarks: "There's th' old house, gents," and pulls up. And there, deep down in the hollow, with its twisted chimneys on a level with our feet, lies the mansion of the Comptons.

We dismiss the driver, with orders to leave our goods and chattels at the inn at Brailes, and to bring the fire-engine for us the next day; and wend our way down the footpath towards the house, each step revealing new beauties of form and colour, and in a few moments we stand in front of the old place. It is wonderfully beautiful. The brickwork, a lovely red and covered with a sort of "bloom," the exquisitely carved timber, the crumbling stone battlements, and the gnarled chimneys combine to make up a charming whole. Towards the right, a mass of building rises high above the rest with splendid effect, and culminates in the secret priest's chamber in the roof. The right hand portion was formerly occupied by the garrison, for Compton Wynyates was a fortified house, and traces of the moat which surrounded it still remain.

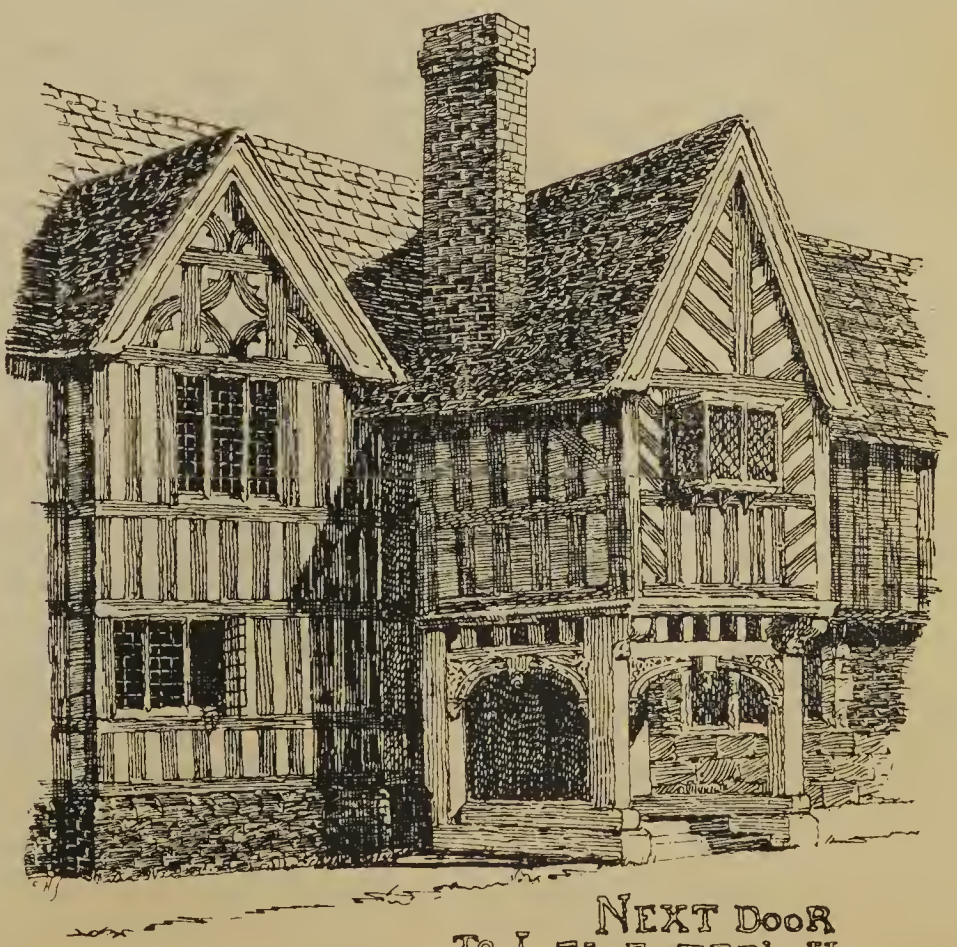
As I have said, the mansion is situated in a hollow far from any other habitation, and it is impossible to convey in words the intense silence and loneliness that brood over the place. It has a strong influence upon us, and we imagine ourselves back in the middle ages; and, as we cross the well-kept lawn, once occupied by the stables of the house, and stand in the porch, we almost expect to see a Tudor retainer in doubtlet and hose, appear in answer to the clanging bell we have set ringing. Of course the modern servant is a highly respectable person of the "butler" type, who receives us graciously. The family is away, so we are conducted over the house with great solemnity.

The house is built, as most of these Tudor mansions were, with an inner courtyard or quadrangle, round which most of the principal rooms are ranged, and which is entered immediately from the oak-seated porch. This inner court, to my mind, is the most beautiful part of the house. On the right, as you enter, is the room in which King Henry VIII. was entertained; and on the left a bedroom where Charles I. slept the night before Edgehill. In the right hand corner, almost facing you, is an exquisite bay window, lighting the great

INNER COURT: LORD LEICESTER'S HOSPITAL: WARWICK.

hall. A magnificent room this, looking out into the quiet courtyard, its walls hung with armour and tapestry, its windows with the painted arms and crests still remaining, and its benches and table as they existed in the reign of King Hal.

Before leaving the hall, we sign our names in a large book kept for the purpose, and betake ourselves up the staircase on to the first floor. Here the passage, in the form of a gallery, runs across one angle of the great hall, and thence round the inner court. It would take more space than I have at my command, to give a detailed account of the rooms upstairs. Suffice it to say that the visitor is utterly bewildered before he has gone far. There are steps up here and steps down there ; in one part of the corridor a panel slides away, and you look into the family chapel ; in another, you find a narrow staircase leading to a secret chapel high up in the roof, where the priests held services during the Puritan *regime*.



There is a haunted room, of course ; and an entirely secret chamber, which is approached through a sliding panel ; and I have had an uncomfortable idea that if I lean hard against the wainscot, I may suddenly disappear into an unknown dungeon, of which no living man knows the situation, or possesses the key. The whole place is delightful, and abounds in quaint wood and stone carvings, the Tudor rose and crown figuring prominently.

When we leave it we are both tired and dusty, but charmed with our visit ; and take a path across the fields to Brailes, a most charming place, where we find a very comfortable inn and a good dinner.

A word or two as to the history of the house would not be amiss here. First of all, then, as to the name. Comp-ton means a collection of dwellings or a town, in a *cwm* or valley ; hence, Compton Wynyates or Wyniates, signifies a dwelling in the valley of the vineyard, though why vineyard, I have been unable to discover. The natives still call the place Compton-in-the-Hole, which, considering what the word Compton means, savours somewhat of redundancy. The family is a very old one, the name appearing as early as the twelfth century ; but it was not until the reign of Henry VIII. that the Comptons were raised above mediocrity. A certain William Compton was page to the Duke of York, second son of Henry VII., and afterwards Henry VIII. When his master became king, William was knighted, and made Chancellor of Ireland, and allowed to build a "goodlie mansion," the present Compton Wynyates, on his estate. His great grandson was created Earl of Northampton in 1618 ; and the house remains in the family to this day.

Compton Wynyates is one of the few fortified houses remaining in England, and one of the last buildings erected before the pernicious influence of the Renaissance made itself felt. It narrowly escaped destruction during the civil war. In 1646 it was garrisoned by the Parliamentarians, who, for reasons best known to themselves, reduced the neighbouring church to a complete mass of ruins.

The only two villages near Compton rejoice in the most extraordinary names, Brailes and Tysoe : at the former we were very comfortably lodged. Next morning we pay a farewell visit to the old house, make some

NEXT DOOR TO LEICESTER'S HOSPITAL.

sketches, and then retire to the top of the hill to wait for the fire-engine, which appears in due course, and conveys us straight back to Banbury station, where we take train for Warwick. Here, as we have another day to spare, we intend spending a short time, and returning straight to London.

I said, I think, that Banbury was an interesting town. What, then, is Warwick, and what would it have been but for the awful fire which destroyed nearly the whole of the town some two hundred years ago? The place, as it is, teems with picturesque buildings, but we have time only to visit the Castle, which is delightful, and Lord Leicester's Hospital, at the west end of the town. On our way back from the castle, we pass an old stone, many-gabled house, a good example of domestic work, but of whose history I could learn nothing.

Leicester's Hospital was founded by Queen Elizabeth's favourite in the 28th year of her reign; but the buildings facing the roadway and the hall are of earlier date, and belonged to a very ancient association, known as the Guild of St. George. The Hospital or Almshouse is charming, an ideal place to spend the evening of one's life, and I almost envied the twelve brethren, each with his room and piece of garden, and seat in the common kitchen. Here the brethren sit in the winter evenings, and "fight their battles o'er again," for preference is given to those who have been maimed in the service of their country, and the brethren are almost invariably old soldiers. In the summer, the old fellows sit out in the front and smoke their pipes, and take weekly turns in showing visitors over their home. They are very independent, and not afraid of saying what they think, as becomes gentlemen of independent means. I remember, when I was sitting outside, sketching the house next door, which with its porch is very picturesque, one of the brethren came up and looked over me.

"Your mate," he said, "is a-drawing the kitchen beautiful."

"Yes," I replied modestly, "he sketches well. I haven't been very long at it, myself."

"No; I can see that," said the old pensioner, and left me.

This same veteran, when we were sketching in the inner court, used to bring parties round, and invariably at the same spot he would say, "Artists, you see, come here to paint," indicating us with a comprehensive wave of his hand; and then proceed to point out to the visitors that the entrance "was all hoak, pegged together wi' hoak pegs; if they'd bin nails, it would all ha' rusted to pieces long ago," and so on.

This inner court is very delightful. On the left, a covered gallery runs round, leading to the bedrooms of the brethren. Under these is the common kitchen. Behind you is the residence of the master, and on your right, the great hall where James I. was entertained in 1617. A piece of embroidery from the hands of the ill-fated Amy Robsart is preserved here. In various places the Bear and Ragged Staff, the badge of the Leicesters, meets the eye, together with the Porcupine, the emblem of the Sidneys.

Of course this place is much more in the beaten track of tourists than Compton Wynyates, and has been described again and again by far abler pens than mine. One more reference to the old Tudor mansion, and I have done. I have heard that since we were there—three years ago—the place has been closed to visitors. I hope this is not so, but if it is, it is only another instance of how the careless behaviour of the few may interfere with the enjoyment of the many. The same thing has happened at many of our old mansions, where 'Arry and his friends have amused themselves by carving their initials on the old oak panelling, scratching their names on the lattices, and so on. In such a case the owner can hardly be blamed; but the harm is done, and lovers of art are thus prevented from feasting their eyes on lovely examples of domestic architecture; an art which is, to all intents and purposes, dead, in this practical nineteenth century of competition jerry-building.

ARTIFICIAL ICE.

By Captain James T. Johnston, R.E.

ICE is one of our *cheap* luxuries, not so much in England, perhaps, as in sunnier climes, where the want of it requires to be felt, before it can be estimated at its true value; but even here, during the summer months, its use is so pleasant, that we can quite understand the old duchess's feelings that, "were the drinking of iced water but a sin, it would be so much more delicious." We fear there is a great deal of nonsense about some of our so-called luxuries, their sole claim to the title being their prohibitive cost. They would cease to be so considered, should they at any time come within easy reach of all.

One of the greatest blessings that science has conferred upon mankind is the manufacture of artificial ice, which can now be turned out from the machine at the cost of a very few shillings per ton. It is not our intention here to describe the several methods of producing it, by radiation, evaporation, expansion, etc., nor to dwell upon its manifold benefits; but it is worthy of remark that artificial ice is purer, more transparent, harder and denser than that formed by nature. A brief outline of how ice is obtained in certain parts of Northern India during the cold weather, and stored for use against the next hot season, may interest those who have not seen or heard of it before. A large open space, proportionate to the size of the cantonment, is selected on its outskirts, covered over with the dried stems of the last season's maize, and laid out in rows with myriads of small, shallow earthenware saucers, having paths just wide enough for a man to walk between. In one corner are the storehouses, deep pits, some 40 to 50 feet in diameter, surrounded at ground level by a thick mud wall, about 6 feet high, the whole covered in with a conical roof of deep thatch.

Each evening at sunset, during the cold weather, the *bihistis* (water carriers) from every house are summoned to the ice-field by the beating of *tom-toms* (native drums beaten with the fingers), where they proceed to fill their *mashaks* (the skins in which they carry the water) from wells sunk for the purpose, and from which they fill the little saucers. Next morning, before the sun is up, a small army of coolies is assembled, by the same means as were the bihistis the evening before, to collect, in rough baskets, the ice that has formed in the saucers during the night, and to empty it into the pits, where it is rammed by others into a solid mass.

These operations continue daily, so long as the frosts last, by which time each storehouse contains one huge block of ice, several feet thick, which is then covered over with a layer of straw, and several feet of earth, there to remain until required for use. The average yield is 1½ seers (3 lbs.) per head per day, for 4 or perhaps 4½ months; but the introduction of ice-machines is fast supplanting this crude method of manufacture, which, in its day, has proved an inestimable boon to thousands of our fellow-countrymen, whose lot has been cast in the shiny East.

We all know that water, in freezing, after reaching a certain degree of cold, viz., 40° Fahrenheit, violates the general law of contraction-by-cold, by expanding, 174 volumes of water producing 184 volumes of ice; but few, perhaps, are aware of the enormous force exerted by it, when confined, in passing from the liquid to the solid state. In order to test the greatness of this force, Huyghens filled a cannon made of iron one inch thick, with water, and having securely closed its mouth and touch-hole, exposed it to a strong freezing draught. The water froze in about 12 hours, and expanded with such terrific force as to burst the piece. The force exerted upon this occasion was calculated to be sufficient to raise 27,720 lbs. This calls to mind a dangerous piece of construction that we have observed, particularly in barrack buildings, where the verandah of an upper storey is supported by cast iron pillars, which are made to do duty also as rain-water pipes. In course of time one or more of these down-pipes gets choked, a frost sets in, the confined water freezes, the pillar bursts, down comes the verandah with a crash, and the authorities are astonished; but what else could they expect after blindly inviting such a catastrophe?

The fact of ice taking much longer to melt, than it does to form, as well as that of its hardness being proportionate to the degree of cold by which it is congealed, facilitates the construction of the fairy-like ice-palaces of northern regions. "During the hard frost of 1740, a palace of ice was built at St. Petersburg after the most elegant model, and the justest proportions of Augustine architecture. It was 52 feet long, and 20 feet high. The materials were quarried from the surface of the river Neva, and the whole stood glistening against the sun with a brilliancy almost equal to its own. To increase the wonder, six cannons of ice, two bombs and mortars, all of the same material, were planted before this extraordinary edifice. The cannons were three-pounders; they were charged with gunpowder and fired off. The ball of one of them pierced an oak plank at 60 paces distant and two inches thick, nor did the piece burst with the explosion."*

There is always a certain charm about paradoxes, and ice furnishes some that appear particularly absurd. It seems, at first sight, ridiculous to be able to set fire to anything by means of a piece of ice, but this has been done, and can be done again by any child. One very clear day, a gentleman near Wentworth procured a circular piece of ice, 2 ft. 9 in. in diameter, and 5 in. thick, which he reduced to the form of a lens; and having, about noon, exposed it

* M. de Mairon, "Dissert. sur la Glace," Part II., sect. 3, chap. 3.

to the sun, the rays transmitted through it converged to a focus at seven feet distance, and fired gunpowder, paper, linen, and other combustibles.

Quite as impossible does the converse read, viz., to make ice with the aid of fire; yet this is equally true and equally easy of accomplishment. We have only to fill a pewter pot with water, and place a plate of similar alloy filled with snow on the top of it, then to bring this simple apparatus near the fire, and stir the snow with a piece of stick or other instrument. As the snow dissolves, ice will form upon the under side of the plate. Mixing a little salt with the snow will render the result more apparent, which reminds us of still another paradox, namely, that we can melt ice by increasing the degree of its coldness. To prove this, mix sal-ammoniac with snow or pounded ice, which will at once convert them into water; and if we now place a thermometer in the mixture we shall find that their cold has been increased to a surprising degree. Any salt-alum, nitre, or common salt will do the same, but in their case the cold produced will not be so intense.

A pretty experiment is to melt the interior of a lump of ice without in any way affecting its exterior, by bringing the rays of the sun, through a burning glass, to a focus in its centre. In melting, the centre will contract, and become a drop of water in an envelope of air, and will puzzle many, like the fly in the amber, or the milk in the cocoa-nut.

The following account of a *natural ice-house* discovered in Burgundy about the middle of the last century, from the History of the Royal Academy of Sciences at Paris, is interesting :—"It is a great cavern hollowed in a mountain, which is covered with oak and other large trees; the entrance resembles the gate of a city; the arch is raised very high; one can see clearly in all parts of it, and the interior is a spacious saloon, covered with a kind of vaulted roof upwards of sixty feet high, the flooring of crystal. There is often ice in it to the depth of four feet, and some great pieces besides, which hang from the vault in the form of festoons. The people are busy all day long carrying away the ice in wagons and on mules to all parts of the province, and yet the store is never exhausted; for one day in the midst of summer produces more than can be carried off in eight days. This prodigious quantity of ice is formed out of a rivulet that flows in a part of the grotto, which runs in winter, but is frozen in summer, and all the winter through, the cave is filled with thick vapours."

A LEGEND.

THERE is a legend of a monk to whom in his chamber, the Lord appeared in a vision, bringing great peace and joy to his heart. Scarcely had he been thus favoured for a few moments, when the bell summoned him to the duty of distributing bread to the poor. For a moment he hesitated; but he went to his work. "Oh, what a sacrifice to leave this glorious vision for the dull routine of duty!" Returning to his cell, what was his joy to find the vision of the Lord as before, and to be met with the greeting, "Hadst thou tarried, I had departed."

Thus we are taught, that it is *sin*, not *work*, which separates us from Christ.

ROSES.

By MARGARET HAYCRAFT.

THE gladdest season heart can know
Is girlhood's sunny June,
When rosy buds begin to blow,
And life is all in tune;
And linnets chant adown the way,
And skies are sapphire blue;
Ah, "gather roses while ye may,"
Sweet roses, bright with dew.

Rise up and cull Life's richest store,
It shall not drift away;
The fragrance that the roses bore
Immortal breathes for aye.
Unfading flowerets ye may meet
Each opening valley down;
Oh, "gather roses," maidens sweet!
For woman's holy crown.

The garden of Saint Charity,
With roses are aglow,
And buds of balm abide for ye
Where rills of pity flow;
Oh, bear ye, where the shadows stay,
The light of love again;
So shall ye gather flowers alway,
Baptized in heavenly rain.

GARDEN GLIMPSES

FROM MY BEDROOM WINDOW.

By TRACEY LAYARD ROBINSON.

AT about half-past four every morning I am awakened by such a chorus of twitters and shrill cries as constrain me to jump out of bed, rush to my window, and look out to see what is the matter. For you must know that, being more accustomed to the dull booming roar of London, I am still somewhat startled at the suddenness of these country sounds and noises.

Thus, when my window-sill is converted into a breakfast-room for half a dozen young sparrows, who have only learnt to fly from their nest in the honeysuckle to this comfortable and convenient landing-stage; when in the shrubbery just below my window, a speckled hen persists in laying her egg every morning amid a series of cackles of ear-piercing power and gatling-gun regularity and precision; when the starlings in the chimney begin their peculiar cries, which sound so like water dropping, that I feel certain when I hear them in my half-waking, half-sleeping condition, that some water-pipe has burst in near proximity to my room, and I spring from my bed in terror of some later flood; it is not to be wondered at that my Cockney nerves are startled and I can sleep no more.

Perhaps this enforced early rising will account for the enormous appetite I find myself possessed of when, at half-past seven, I seat myself to a breakfast of fresh eggs (for aught I know to the contrary laid by that speckled hen which helped to wake me), country sausages, fish, fresh green lettuces, and butter, oh, such bútter! home-made bread, too! and then the preserves! Shades of John Moir and Edward Pink, where are you?

Perhaps it is the deliciously fresh air which fills my room when I open the window that makes me so ready for br eakfast.

Right opposite to my window is a rustic arbour or archway, beside which is a fernery and rockery, literally covered with lovely ferns and most beautiful blue periwinkles. Perched on the very top of this archway a pair of blackbirds have for some mornings past been busily engaged in building a nest. Most interesting the operations have been. The old gentleman sits on a bough close at hand and whistles while the lady does all the building. This doesn't seem quite a fair division of labour, but then Mrs. Blackbird can't sing at all, and she is evidently very fond of listening to her husband. I don't know whether he sings the same song as all blackbirds, but his is a curious composition and bodes no good for the fruit which is now undergoing the ripening process. It is "Chip-chaw-cherry-chop-cherry-cherry-come-straw-berry-good-cherry-straw berry-chip-chip-chaw!!" And so I suppose the lady is not only delighted with the song, but sustained by the promise of future feasts, and works with much good-will in consequence. She brings first a few twigs and lays them straight, and then sits upon them, working them into shape. Then come some mouthfuls of mud, which is worked in in the same effectual manner. This is followed alternately by moss, dried grass and leaves, mud, small twigs, and all is made to lay straight and work in. I am looking forward with a great deal of anxiety to seeing the youthful progeny of this happy and industrious pair.

Nearly opposite to my window is a Kentish cherry tree. I must plead guilty to an experiment in connection with this tree. It has borne no fruit as yet (the experiment, the tree is loaded), but I live in hope. Every morning a pair of little blue tomtits come to that cherry tree and play about it for hours. I suppose they find worms of a minute species, ants, and small flies and beetles, for they can't enjoy the green, hard, barely-formed cherries. Well, I have heard that these little birds choose the oddest places for building their nests in—an old watering-can, a letter-box, a water-spout, a pump; in fact, anywhere unexpected, so I have laid a trap for them. I found a quaint old Moorish water-bottle, round like a gourd, with one opening. This I have fixed surreptitiously in the tree, and I hope the tomtits may take a fancy to it and build their nest in it. If they do I will believe all those other stories; if not, well, I hold over my judgment.

I like those tomtits. They are such quaint little impudent fellows. The sparrows are jealous, envious, and pugnacious, but the tomtits don't care a fig for them. They make very little noise, only a small rasping twitter, but they are so lively and so spry. It is fun to see them do all sorts of acrobatic feats that would put any horizontal bar performer to the blush. It is a matter of perfect indifference to these little tumblers whether they hang downwards or stand upright. One minute they are running with lightning rapidity up the trunk of the tree, the next they are hanging by their claws from some tiny twig which bends and shakes even beneath their feather-weight. If my experiment proves a success, what fun it will be to have a whole family of ten or twelve young black-headed, blue-bodied acrobats performing for my especial benefit every morning, and charging no fee for admission to the show!

I flatter myself it is not every one who has such a pretty look-out from his bedroom window as I have. Nor is it every Londoner who has such a temptation as I have, to draw him from his bed at such an early hour.

There is a big field just beyond the wall and the cherry tree, where the farmer is growing a crop of wheat or barley, I am not yet sure which. This is the morning meeting-place of a large colony of rooks, who live in a fine old rookery about a quarter of a mile away. Each morning the big, dignified old fellows come in crowds to this field and waddle, with all the pomposity and self-content of a lot of aldermanic beadles, finding, I suppose, any amount of grubs and worms about the roots of the young corn. I cannot hear what they say; but I have no doubt they tell each other that the farmer is a very good fellow to provide so well for their sustenance, and speak in high praise of the quality of the grain which is about to appear in due season.

On this same field, too, and mixing with charming impunity and effect among the black rooks, come six very pretty white fantail pigeons, which belong to the house. They are usually very busy carrying to and from the pigeon-cote on the house wall, the particles of food they judge most appetising and nutritious to the young "squeakers," as their little ones are called, and of which there are at least two pairs growing up.

Besides these birds, I have lately noticed a pair of flycatchers, whose sudden darting swoops are most fascinating to observe. They sit on the top of the wall which separates the garden from the field, but they never rest many seconds at a time. With amazing quickness they shoot into the air a few feet, their wings fluttering, and their beaks wide open. At each swoop they evidently catch some flying insect, which is invisible to my eyes from the distance, and then return to momentary and motionless rest on the wall, at exactly the spot they had at first chosen. I am told they usually build their nest in a peach-tree which is trained against the wall of the house beneath my window. I hope they will do so this year, for they add very much to my morning entertainment, and will be a great deal more interesting when they have young.

There is a stern decree against interfering in any way with birds' nests in this garden. We think that we have fruit enough and in plenty for ourselves and all the birds which, trusting to our hospitality, venture to construct their tiny homes in our trees and shrubs. Consequently we have no sympathy for cats.

The gardener wages a constant war against members of the feline persuasion. They spoil his pinks and carnations by rolling upon them, and they spare no opportunity of killing our young birds and chickens. So we do not let any opportunity slip of heartily aiding and abetting him in his warfare.

I could tell a great deal about our fowls, for I overlook their yard from my bedroom, but I shall, on this occasion, only speak of certain wilful wandering hens, who persist in being dissatisfied with the arrangements made for their comfort, and prefer to seek more agreeable nesting quarters in various parts of the garden. We have considerable trouble in hunting up the eggs, but are occasionally rewarded for our patience and long-suffering, as we were a few mornings ago, by the appearance of an old hen (who had disappeared for three or four weeks), at the door of the yard with ten little chickens walking along and cheeping cheerily at her heels. We are under the fond impression that at least two hens are shortly going to similarly surprise us, for they also have vanished in exactly the same mysterious manner, and search where we will, we cannot discover their whereabouts.

CHAPTERS FROM NATURE'S STORY-BOOK.

By Professor Haddon,

Author of "An Introduction to the Study of Embryology."

CHAPTER VIII.

SUMMING UP.

N the previous chapters we have studied certain types of animals, and watched some phases of their growth and development. It may conduce to definiteness in our views if we give a brief survey of what we have already learnt, and, at the same time, to touch as lightly as may be, upon some more general questions.

It is a very noticeable fact, that the newly-hatched young of the great majority of marine animals are free-swimming; sometimes they resemble their parents in most features, but more frequently they are very distinct, in which case, with few exceptions, they are in every respect simpler in organisation than the adults.

Let us take a few cases in point. Some sea-anemones swim away through the mouths of their mothers in the gastrula stage, as we saw in our second chapter. These start early in life, and have to go through all their changes or metamorphoses at the same time that they are feeding or fleeing; for there are hosts of animals which feed solely or partly upon free-swimming larvæ. There is, consequently, considerable risk to be run, and to make up for the certainty of great quantities being devoured before they arrive at maturity, a very large number of young must be produced. Most of the echinoderms, or prickly-skinned animals, lay their eggs in the water, and these have to run the gauntlet of their enemies all through life.

But in some sea-anemones, and in a few echinoderms, the young are born as small editions of their parents; in the former case, larvæ of all ages may be found swimming about in the central cavity or stomach of their mothers; in the case of certain echinoderms, the eggs are deposited in peculiar pouches, or lie hidden, being protected beneath plates or groups of spines, and there they securely hurry through their development, and only come out into the world as young echinoderms. They "can't be bothered" with going through a whole series of complicated changes as free-swimming larvæ. This is what is termed a secluded development. Such forms have a considerable advantage over the others; instead of having to take care of themselves in the "struggle for existence," they are taken care of by their mothers, and so have a better start in life.

One cannot help recalling the miserable chance in life that the young of our poor have. Turned out of doors very early, they too often have to forage and feed entirely on their own account. They are naturally much more subject to disease and early death than are their more favoured brethren. Their energies are too early taxed, and, consequently, they are unable to arrive at that higher physical, mental, and moral development, which would result from careful nurture during their early years. At the present moment, I am referring solely to such questions as exposure, "knocking about" in life, and being constantly on the look-out. The lack of a place of possible retirement or home, the continually being "moved on," the sense of being an Ishmaelite, with every man's hand against them, all tend, possibly, to precociously develop certain qualities, but, at the same time, to dwarf and retard, or nip in the bud, those qualities which, after all, alone raise men above the level of the beasts which perish. This struggle for existence is too keen for the young, and they must succumb.

It is interesting to find that "Nature" has found this out too. In all groups of animals in which the young are born very early, we find some members who provide for their young, and retain them in safety for a considerable time.

Another provision is usually made for the babies, and that is food. Most eggs are often of considerable size, the bulk of the egg being composed of yolk, or, as it is often called, "food yolk." As the little embryo grows, it feeds upon this reserve of food. It is easy to understand that embryos provided with food in this manner are better circumstanced than those which

have to provide for themselves. All their energy goes towards growth, none of it is dissipated in swimming about seeking food, or in nervous activity, looking out for danger and escaping therefrom. The eggs of some animals have only a little food yolk, and they are hatched a little later than those with none ; the yolk carries them on a certain distance, and then they have to look out for themselves. Others, again, have a considerable quantity, and they remain in the egg for a long time.

The sea-slug and the purple snail we studied in chapter iv., and the sacculina of chapter v. possess a small amount of yolk. So also is it the case of the frog (chapter vi.). All these animals leave the egg as larvæ, very different in appearance from their respective adults, and, as we have seen, they undergo a more or less extended and varied metamorphosis.

The elucidation of the significance of these transient forms constitutes one of the most interesting studies conceivable, and one in which the interest is none the less, in spite of the fact that difference of opinion is sometimes held as to the exact interpretation of some of the phenomena. But in all the broad questions there is unanimity amongst those competent to decide.

We have now to consider some of the effects of the increase of the store of food upon the embryo. Not only are the young born at a relatively advanced stage, but the changes of form undergone by the earlier hatched larvæ of other members of the same group are passed over with great rapidity. There is no use, so to speak, in building up larvæ with organs suitable for locomotion, digestion, and sensation, if the individual does not require them for these purposes. According to the theory held by naturalists, their ancestors long ago did actually require them, and the habit of making these structures is of too long standing to be readily dropped. So they are still developed, but in an increasingly perfunctory manner, as if there was rebellion against doing apparently superfluous work. This abbreviation of the metamorphosis is a direct result of the increase of food yolk.

The development of the frog, as we have already seen, illustrates an ascending series of metamorphosis in the most beautiful manner. The lizard and the bird have a very much greater amount of food-yolk than the frog, and instead of being born as tadpole-like animals, they step forth into the world as miniature lizards or birds. Amongst animals without a backbone the same occurs, as, for instance, in the cuttle-fish, the young is not born as a veliger larva, but as a cuttle-fish proper.

What an advantage these young ones possess ! They start life with a fund of energy which enables them to live more vigorously than their less nourished cousins. The cephalopoda, or group to which the cuttle-fish and squid belong, are more active, wide-awake, and possibly more intelligent than most other mollusca ; and it can well be believed that a lizard, or a bird, is superior to a frog. How important, too, is good nourishment for babies and children. The question of free dinners, or 1d. dinners for destitute school-board children, is based upon the fact that brains cannot be exercised or improved unless they are nourished. Food for the body comes first, food for the mind follows.

As has just been stated, the successive metamorphoses are in an ascending scale. This holds good in the vast majority of cases. The exceptions are but few, and like other exceptions, they prove or test the rule. These exceptions are most interesting and instructive, and in all cases we can supply a reason for the apparent vagary. In fact, we have already studied a few typical cases ; these are quite sufficient for our purpose.

In our last chapter we saw that the nauplius and cypris larvæ of the acorn barnacle, if not higher in the zoological scale, are at all events more active than the adult. The agile, free-swimming tadpole larva of the sea-squirt, with its internal skeletal axis, and large brain and eye, is certainly metamorphosed in a retrograde manner into an immovable, eyeless, practically brainless adult. The reason is not far to seek. The degeneration is simply due to sitting down, or, as the naturalist would term it, to sessile habits.

The animals which merely become fixed, usually are only slightly degenerated. Those which acquire parasitic habits may become greatly so, just in proportion to the nature and amount of their parasitism. We have studied an "awful example" in sacculina, and this is only one out of numerous others which might be cited. It will be remembered that in sacculina the young passed through an actively swimming existence, and underwent several moults and changes of form. It possessed jointed limbs, muscles to move them, a brain, and an eye. The adult has none of these structures, except a brain, and that is a new one it had to get for itself. The lively arthropod metamorphosed into a limbless sac.

The moral of all this is obvious. How many a young man is full of promise ; he is enthusiastic, chivalrous to women, and possesses high aims. Then he "settles in life," and endeavours to accumulate money ; he becomes overweighted and swamped by his possessions, and first ceasing to take an active part in endeavouring to ameliorate the condition of the more unfortunate, next his interest diminishes in such matters, and lastly he ends by losing all power or will to do other than live for himself. This is the case of a man who "sits down." There may be nothing evil or vicious in his nature, he merely takes a negative position in life ; it is not doing wrong, but doing nothing, which has thus brought about his degeneration.

In large numbers of cases, however, a man permits one side of his nature to acquire sessile habits. He fails to cultivate either his physical, mental, or moral being, wholly or in part, and gradually the power or talent goes ; the functionless, degenerate rudiment remains, the tombstone of a possibility.

There is still a worse evil to the State than this, and what the result may be no one can yet foretell. I refer to the parasitic classes—those who live on the products of the forced activity and labour of others. So long have they imbibed unearned nourishment that they have ceased to see the evil and danger, have ceased to feel that no one has a right to live in idleness upon the "working classes," have ceased to exhibit any activity for the welfare of others. Nemesis has already overtaken some sides of their nature ; possibly their much-cherished physical comfort may one day be rudely disturbed.

So one could go on almost indefinitely. The operations of "Nature" are so far-reaching, embracing alike the minute and the large, the young and the old, the apparently insignificant and those which we are pleased to consider as more important.

"ALL THY WANTS . . . UPON ME."

Judges 19. 20.

THY wants are all on Him, there let them stay,
Move not thy hand to take the load away;
The shoulders of *His* strength can well sustain
The burden thou would'st seek to bear in vain.
On Him *thy sins* were laid, He bore the whole,
Canst thou not trust Him with *thy wants*, my soul?
Oh calm thy fears, bid anxious thoughts subside,—
The piercèd hand of Jesus will provide.

(*Ps.* 34. 9.)

J. L. STANLEY.

CHRISTIAN EVIDENCE COMPETITION.

£5 5s. in Prizes.

THE great importance of this Competition must be our reason for again referring to it. Some of our readers have complained of what they have considered the simplicity of several of our former Competitions. To them, and particularly to Sunday School Teachers and senior scholars, this Examination into the Evidences for the truth of Christianity may be strongly commended.

The Rules and full information as to text-books, etc., were given in our Number for June 9th, and the Questions in the Numbers for June 23rd and 30th.

The Competition remains open until August 31st.

BIBLE JOTTINGS.

The Trinity "for us."

Rom. 8. 26. . . . The Spirit.....for us.
„ 8. 31. . . . God.....for us.
„ 8. 34. . . . Christ.....for us.

Abram was called to leave his people—
Heb. 11. 8.
Moses was called to join his people—
Heb. 11. 24, 25.

Redeemed from destruction .	Ps. 103. 4.
„ „ among men.	Rev. 14. 4.
„ by the blood . .	1 Pet. 1. 19.
„ in Christ . . .	Eph. 1. 7.
„ to God	Rev. 5. 9.
„ for ever	Heb. 9. 12.
„ when Jesus comes	Rom. 8. 23.

The Joy of Jesus.

1. In anticipation	Prov. 8. 31.
2. In obeying the Father .	Ps. 40. 8.
3. In resurrection	Ps. 16. 11.
4. In revealing Himself . .	Luke 10. 21.
5. In His Church	Ps. 16. 3.
6. In His people's obedience	John 15. 11.
7. In presenting them to His Father in the day of His glory	Jude 24.

Ephesians 5. 8.

Past . . .	Ye were darkness.
Present. . . .	Ye are light.
Future.	Walk as children, etc.

PUNCTUATION COMPETITION.

FIVE PRIZES.

AT last we are able to give the result of this most popular Competition. We, no less than our Competitors, have regretted that the time occupied in examination has been so long; but, as our readers will have gathered from the announcements we have made from time to time, the number of Competitors was extraordinary, and justified the remark that whilst most people think they can spell, very few acknowledge any difficulty in punctuating.

It is to be regretted that out of nearly three thousand papers sent in, not one agreed with the original (the opening paragraphs of the chapter on "Character" in Smiles' "Self Help"), and that 40 or 50 mistakes were by no means uncommon. A profusion of capital letters, superfluous stops—one aspirant favoured the end of one clause with three,—insufficient stops, and a misplacement of stops, caused by the writer's meaning not having been grasped, accounted for the majority of the errors; though stops placed at the *beginning* of a line were met with!

Some excellent Papers, comparatively, were sent in by boys and girls of from 12 to 14 years of age.

We congratulate the successful Competitors, and to the unsuccessful promise that, if we can get our examiners to face a similar array of Papers, we will give them another opportunity of distinguishing themselves.

The following extract from a Report of a recent meeting of the House of Convocation will interest our Competitors, and especially console the unsuccessful ones, for "who shall decide when *bishops* disagree?"

"Their lordships then passed to the consideration of other business, *some discussion arising upon the substitution of a semicolon for a comma in a document.*"

£1 1s. for the best-punctuated Paragraph.

ARTHUR KEMP, Newport.

Four Prizes of 5s. each.

REID, J., Sandling.
SHROEDER, ROSIE.
SPARKS, E., Hoxton.

* Two Prizes of 2s. 6d. each.

DAVIS, D., Lampeter.
McDONALD, B., Wimbledon.

** The Papers sent in by B. McDonald and D. Davis being of equal merit, we were obliged to divide the 5s. Prize.*

HIGHLY COMMENDED.

BARKER, A., Walthamstow.
CAMPBELL, M., Edinburgh.
EALES, M., London.
ELY, F. A., London.
GILMORE, S. A., Weston-Super-Mare.
HARRIS, R. W., Weston-Super-Mare.
HEMMANN, E. K., Southend.
KNOWLES, E. D., Plymouth.
LACY, H., Torquay.
LLOYD, J., Oxton.
PRICE, M. H., Liverpool.
SELBY, E., Ipswich.
WILLIAMS, Rev., Dorking.
WOODHEAD, F., Barton-on-Humber.

COMMENDED.

BIGNOLD, M. A., Lowestoft.
CARTHWAITE, L., Harrogate.
DALE, M., Shepherd's Bush.
DANVERS, AGNES.
DICKINSON, H. F., London.
FIELD, M. L., London.
GIBBS, J. T., Dalkey.
JELLIE, J. E., Oldcastle.
McMORRIS, I. E., Manorcunningham.
PALMER, T. E., Willesden.
TAVERNER, T., Bolton.
WYLIE, N., Edinburgh.
"ZAIRE," Dublin.

The Competition Paper sent in by E. W. Moore, Nottingham, deserves honourable mention, though we cannot include it in our list above.

STICK LIKE A LIMPET TO A ROCK.

A YOUNG lad was asked, "What is faith?" He replied, "Clinging to Christ like a limpet to a rock." Not a bad answer—one that can easily be understood by those who have to do with the sea-shore.

How does a limpet cling? So fast, so close, so tight, that no force can separate it; the rock holds the limpet, the limpet holds on to the rock.

The storm may rage, the wind may blow, the waves may dash, men may pull; but it clings all the closer, firmer, tighter to the rock. While life is in it, there it clings.

So the Christian holds on to Christ, the Rock of Ages; Christ the Rock holds him; adversity and trial only make him lay more hold on the One he loves, and Christ holds him with a firm, never-failing grip.

The Apostle Paul may well ask, "Who shall separate us from the love of Christ? tribulation? distress? persecution? famine? Nay, in all these things we are more than conquerors" (Rom. 8. 37).

RECIPES.

RASPBERRY PUDDING.—The weight of three eggs in flour. The weight of two eggs in sugar and butter. Two eggs well beaten, half a teaspoonful of baking powder. Two good tablespoonfuls of raspberry jam. When well mixed, put in buttered basin or mould. Tie over with cloth, and boil two hours. Serve with white sauce.

GOOD ECONOMICAL PUDDING.—Half a pound of flour, 2 ounces ground rice, half a pound of beef suet, chopped fine, ¼lb. moist sugar, ¼lb. raisins, the juice and rind of one lemon, one or two eggs, well beaten, a quarter of a pint of milk. Mix well, and beat with a spoon five minutes. Tie down in a mould, and boil quickly for three hours.

ORANGE MARMALADE.—Take 6 sweet oranges (St. Michael's preferred), 2 Seville, 2 lemons. Cut them in quarters, and slice very thin. To every pound of fruit, add 2 pints of water; let this stand 24 hours, then boil till the chips are tender. Let it stand 24 hours again, then boil with 1 lb. of sugar to 1 lb. of fruit, till quite clear.

THE TWO SEALS.

Soul—"Ah me! how blest my soul would be, if God would grant me feelings."
Answer—"Wait not for that. Believe thy God, Faith leads to all revealings."

TWO friends sat talking together one evening. One, with eager face and persuasive voice, had been turning hither and thither among the leaves of his Bible, reading all the verses he could to help the other to understand God's forgiveness and love for mankind; but it seemed more and more difficult every moment, and at last his friend had dropped his head in his hands, with a groan, saying, "Thank you, Ned; it's no use telling me any more. I suspect I know as much about it as any one does, but I am no better for that; oh! if God would but just make me *feel* that I had the eternal life! I don't feel; I can't feel; and it makes me miserable."

"The fact is, that it is too easy for you to believe," said Ned. "If God had said that you were to do some great thing to earn it, Ben, I believe you would get up and do it with a will."

"That is just it," said Ben; "I would do it at once, and there would be no mistake about my having done it. I should know it for certain."

"You remind me of Naaman the Syrian," said Ned; "he would not be content at first to wash in the river Jordan, but wanted the prophet to command some great thing to be done; he would rather have gone to the great rivers of Damascus; he despised the Jordan, and that is like you. Christ is not enough for you to trust to, but you must needs do something towards your salvation."

Ben made no reply, and there was silence in the room for a little space. At last Ned leant forward. "Look here, Ben," said he, "would you do anything to get it? Are you in earnest?"

"I would do anything for it," said he, "but it is no use. I can't feel sure that I have it."

"Look here, then," said Ned, pointing to the twenty-fourth verse of the fifth chapter of St. John: "Verily, verily, I say unto you, He that heareth My word, and believeth Him that sent Me, *hath* eternal life, and cometh not into judgment, but hath passed out of death into life." "You believe *about* this, don't you, that God sent His Son?"

"Yes, I do."

"And further, that those who believe on Him have eternal life?"

"Yes," said Ben slowly.

"*All* do who believe; it is not enough to hear, it must be hearing, and believing, both."

"Well, yes, if you believe, I suppose you have it."

"Look then," said Ned, "the witness is this; 'that God gave unto us eternal life, and this life is in His Son' (1 John 5. 11)."

"Yes, I believe that," said Ben.

"Very well; now look here, Ben, at the thirty-third verse of the third chapter of the Gospel of St. John: '.He that hath received His witness, hath set his seal to it, that God is true.'* Three verses further down it says, 'He that believeth on the Son hath eternal life.' I am going to put a circle by the side of that verse, and you may put the initials of your name inside it, to show it is your seal. You know they often put a mark at the end of business documents, to show where the seals or names are to be placed. Now suppose it was a paper, making some land over to a man, it would be none of his till he made it so by setting his seal to it, or else signing his name. Just so, you must put your seal to God's witness, or record; then the inheritance is yours. I want you to believe Him without asking any questions."

Ben took the book, and after a little hesitancy wrote his initials in the circle by the thirty-sixth verse.

"You wanted it, you heard you might have it, and you took it?" said Ned, looking inquiringly at Ben.

"Yes," said the other, "I have put my seal to what God has said."

"Now then, if you begin to think again about feelings, just look at your own seal in this book, and at another seal which is God's (2 Tim. 2. 19): 'The firm foundation of God standeth, having this seal, *The Lord knoweth them that are His.* I will mark it for you—that is a mighty firm foundation, and you will *feel* it too, more and more every day. 'The rock of my strength and my refuge is in God!'"

* * * *

Two or three days later the friends met again. "Well, Ben," said Ned, "what do you feel like?"

"Why," said he, smiling, "those two seals are enough for me; time after time I have turned to look at them. God gave, I took; and He knows all the rest—I trust it to Him. I feel my joy growing deeper every day I live. I could not have dreamt that there was such happiness in the world as I now enjoy. Jesus Christ does satisfy me."

* See the Revised Version. The words "witness" and "record" have the same meaning.

EXTRACTS

I AM not so lost in lexicography as to forget that words are the daughters of earth, and that things are the sons of heaven.

A man should no more read than eat without an appetite; for if he do, the book will be nearly as much amused and edified by the man, as the man by the book.

What I have tried to do in life, I have tried with all my heart to do well. What I have devoted myself to, I have devoted myself to completely. Never to put one hand to anything on which I could throw my whole self, and never to affect depreciation of my work, whatever it was, I find now to have been my golden rules.

A dwarf on giant's shoulders, sees further of the two.

Courage that grows from constitution often forsakes the man when he has occasion for it; courage which arises from a sense of duty acts in a uniform manner.

"Light come, light go," is the history of a day.

The greatest bankruptcy is not of fortune, but of faith.

Dirty work sometimes makes clean money, and no man has a right to be ashamed of faithfully following an honest calling.

Fifty years ago it was a capital offence for a Chinese to be a Christian; now you can preach the Gospel in China with more liberty than in many places in Europe.

It is computed that the death-rate of the world is 67 a minute, and the birth-rate 70 a minute.

It is computed that there are 2,000,000 Sunday School teachers in the world, and 16,000,000 scholars.

At the census of 1881 there were in India 669,100 widows who are under nineteen years of age.

Nearly all the finest diamonds in the world were cut and polished at Amsterdam.

If some men had to eat their own words, their health would be ruined for ever.

Never lose to-day in thinking about to-morrow.

Only seventeen out of the forty-three Freshmen at Amherst, U.S.A., smoke tobacco. Who says there is not hope for the young men of to-day?

The "Frances E. Willard" Hotel, in Fall Brook, California, does honour to the Temperance cause. Fall Brook is definitely teetotal; all land let in lots for building has a clause in the deed, prohibiting for ever the sale of liquor upon it. The Hotel is as teetotal as the rest.

A sensible law has been passed in Waldeck, Germany, forbidding the granting of a marriage license to any person addicted to drink.

Money Orders at Christmas Time.—15,271 money orders were sent from New York to Great Britain and Ireland last Christmas. They amounted to $163,279.

The Public Schools in Pennsylvania number 20,683, and the average daily attendance 665,300.

MY PASSPORT TO GLORY.

WHEN, in the darkness of the midnight train, the conductor's lamp is seen glimmering from carriage to carriage, does he hold it to your face to learn who you are, in order to be satisfied of your right to proceed? No! he lets its light fall on the ticket which you hold out to him, and if that is right, you are right, no matter who you are—rich or poor, rude or noble. So Christ, and Christ alone, is *our passport* to glory. Never can we say, Lord, look upon me, for I am holy—never; but upon Christ, who is my passport. Unworthy? Most assuredly you are. And if you live to be the veriest saint, you will be unworthy still. God has chosen to save you. It is not a question of what you deserve, but what Christ deserves. It makes all the difference when, instead of putting our own value upon the work of Christ, and accepting it merely as meeting our need, we learn God's estimate of that work.

"Be not afraid, only believe."

"I CANNOT LOVE GOD."

A GENTLEMAN who, in company with others, had lived many years a life of sinful pleasures, heard that the ringleader of the party had been converted, and wondered much that he should be such a fool as to give up his jovial, free, merry life, to become, as he thought, serious and melancholy. It led the gentleman to look into the Bible and read for himself; and he began to realise the unsatisfying nature of the pleasures of sin, and the hollowness there was in the life he had been leading.

Shortly after this he met his old friend, who said to him, "Do you ever read your Bible?"

"Yes," he replied, "but I can get no comfort out of it. However much I try, I cannot love God."

"No," said his friend, "nor could I; but the truth is 'that God loves me!'" and then he wished him good-morning.

"'God loves me!' 'God loves me!' What can that mean? Then came the thought of God having shown His love by giving His only begotten Son to die on the cross to save sinners. The reason of it flashed on his soul with Divine power and light. 'Now I see it! I see it! God loves me as a sinner. Yes! God loves and longs to save me. It is not that I must love God before I can be saved, but God loves me, a lost sinner!'"

The question for the unsaved one is not, Do I love God? but the acceptance of the fact that "He loved me." "Hereby perceive we the love of God, because He laid down His life for us" (1 John 3. 16). Then after that follows, "We love Him because He first loved us" (1 John 4. 19).

THE LAST LETTER.

A SOLDIER, the night before the battle of Bull Run, in the American War, received a letter from his mother, which he opened and began to read. He had proceeded but a few lines, when scalding tears bedewed it, and prevented his reading further. He handed it to a comrade, and requested him to read it for him, which he did, and had his own heart melted by the tender appeals of that mother to her boy—to come to Christ. The last words of the letter were, "O my son! my son! will you not take your mother's Saviour for your Saviour?"

He went into the battle and was killed. In the morning, as they gathered the dead, he was found with one hand firmly grasping that letter, baptized now in his own heart's blood, as well as his tears.

WAITING.

A YOUNG man was once awakened to cry, "What must I do to be saved?" He went to a friend who was a professing Christian, and unburdening his mind, eagerly and earnestly besought him to tell how salvation was to be obtained. His adviser declared that all his efforts were unavailing; that salvation was not to be had by works; and that if he patiently *waited*, in "God's own time" he would get what he was in quest of. "But *how long* am I to wait?" asked the seeking soul. "I cannot answer that question," was the reply. Months and months passed on. He "waited," and "waited" "God's time." His agony of soul increased and grew more intense.

At last he resolved to call on another friend, and seek his advice. This person told him that instead of "waiting," he ought to *pray* earnestly to God for pardon, and he would obtain it. "*How long* am I to pray?" asked the anxious inquirer. "You must just continue praying, and in due time you will receive it," was the reply. He prayed earnestly, and *besought* God to give him salvation. For years he continued "striving" and "agonizing in prayer" to God, entreating Him to be reconciled, and imploring Him to "have mercy" on his soul.

At the end of about three years he began to think that his friends had given him wrong advice, and resolved to seek counsel from an earnest Christian whom he had come in contact with, and see how he had received the forgiveness of his sins. Having told what his friends had said, and how he had been "waiting" and "praying," this Christian pointed him to God's simple plan of salvation. He showed that all the time God had been *waiting*, and had been beseeching *him* to be reconciled. The mistake discovered, he immediately "took God at His word," and rejoiced in the liberty which the *truth* alone can give.

ROTTEN SHIPS.

MUCH has been said and written about rotten ships, and what a sad piece of iniquity it is for any, just for the sake of present gain, to attempt to trifle with human life, in sending men in ships that ought to have been broken up long years ago. Old unseaworthy hulks patched up and painted, then freighted with precious life, all sacrificed for the cupidity and covetousness of the owners, how the world reprobates such conduct, and cries out against it!

Would that all equally condemned the attempts to sail to heaven in the rotten hulks of man's providing.

When we try to gain everlasting life by anything that we do, say, or promise, ignoring the new and living way, what is it but sailing in a rotten ship that must founder? When we boast ourselves of our morality, sincerity, good deeds and intentions, ignoring the work and person of Jesus the Saviour, what is it but a fair coat of bright paint that covers a worm-eaten, rotten ship, that will not stand one breath of God's judgment? When we weary ourselves with the performance of outward forms and ceremonies of religion, and try to satisfy the conscience with acts of devotion and contrition, rejecting the work of Christ, who hath "by Himself purged our sins," what is it but building again what God has destroyed, and embarking in that which will never reach the shore?

God condemned all these ways four thousand years ago, providing an "ark," even Christ Jesus, for the saving of the soul—the sinner's refuge and way of escape. And what He said unto Noah, He says to you, "Come thou, and all thy house, into the ark."

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted"

"Little Rainbow," "Corbiestanes,"

"Our Navvies," etc., etc.

"Then John wrung the hand stretched out in greeting."

CHAPTER VI.

HOUGHRIGG.

THE house, built of stone, which had bleached, not darkened, in the sunshine and rain storms, was a noble building, and rose on a terrace guarded by balustrades of the same white stone. Many lights shone from the not yet curtained windows. A group of sportsmen, with keepers carrying game-bags, and dogs crouching around them, had just arrived at the principal entrance. A sense of movement was everywhere. As John Burleigh drove up, he felt he did not come as an interruption, but as a natural accession to the life of the place. The earl, in a pair of new tan gaiters, detached himself from the group about the door, and came forward with a warm greeting, and no sooner had John stepped upon the terrace than his hand was grasped by one of the shooting-party.

"Why, Jack Burleigh, what an age it is since Eton! Don't you remember Russel, your fag? It brings the Reach, and the stones, and holly, and all the concern back to see your face again."

"I cannot say, Russel, the same for you. Why, you rise six feet, and you were such a fat little chap then. Tubby Russel indeed!"

"He's not particularly shadowy now," struck in another voice.

John Burleigh started, and turned quickly, his face glowing with pleasure.

"Surely not the Spinmer?"

"At your honour's sarvice—as much as at old Trinity. We were new there together, Jack, before Russel was in the fifth."

Then John wrung and wrung the hand—a broad, brown hand—stretched out in greeting; and a flush came into his face as he looked at the thin, sunburnt officer who wore a sabre scar across his forehead, just under his close-clipped hair.

"And since then, Grahame, how nobly you've won your spurs!"

"And you too, Jack, I'm certain."

"No," said Burleigh sadly; "no. I have not begun to yet. I always fall short, as in the old days."

"Of that let others judge, old man."

"You will find this a pleasant country, Burleigh; there are two good packs within a reasonable distance, and the Marquis's covers are capital. The neighbourhood, too, is good; some really nice people; I quite envy you the coolness and leisure of your profession."

"Thanks, Grahame, I suppose coolness is one of the pleasantest conditions you can think of after Abyssinia."

"Just so—I saw your little place; it is a mass of creepers. I looked in at one of the windows, a broad low room just made for a gun-room—it quite delighted me."

"Now, honestly, Grahame, would you prefer what you are pleased to call coolness and leisure, to the hurry and excitement of an army man's life?"

"Well! I don't know; 'honestly,' as you put it, one gets very tired sometimes of it all."

"Don't you think that is the case all the world over, and that every one at times grows tired 'of it all,' no matter what the all consists in?"

Major Grahame looked at John Burleigh for a moment, and then laughed.

"What a queer fellow you are, Jack, perpetually offering suggestions. If I had not known you of old, I should think that you did so in deference to your cloth; but it's delightful to hear you at it still. I seem to see you back a dreamy lad, lying on the Thames bank. All the same, how you could flash up! Do you remember little Hardman?"

"Yes," replied John, uneasily, and turned away.

"What is that?" said Lord Azerley, coming up, and laying a detaining hand on the new Vicar's coat-sleeve.

"Oh, only a lad who was with us at Eton, and Burleigh saved his life; he was dreaming on the bank, and saw Hardman go down, and dived for him just as he was; he saved him, but not a minute too soon."

"Hardman! was he that young fellow who has been so hard hit on the Derby?"

"Yes, the same. Perhaps, after all, Burleigh did him no kindness. He was a nice innocent little chap in those days—a widowed mother, used to come often, I remember, to see him, and always left him with such magnificent tips that Hardman's house was demoralised with sweet-stuffs for a week afterwards."

"Ah! I am afraid he is going all the wrong way, now."

Then the conversation drifted into other channels; but before they went to bed that night, John Burleigh obtained Hardman's address. He hardly knew why he asked for it, but some day he thought it might be useful; his heart went out to the merry boy who once was his little friend.

As he stood winding up his watch, he thoughtfully said to himself,—

"God has so many ways of leading a soul to Himself—and yet—poor Hardman!"

(At that moment the subject of his prayer was in a box at a theatre, with four companions, male and female, and he had yet sufficient virtue left to feel ashamed, when a lady whom he knew, raised her eyes and recognised him.)

"Where can Mr. Burleigh be? He did not even come in to luncheon," asked Mrs. Grahame.

The ladies were seated in the early twilight, taking five o'clock tea.

"He went to the village; no doubt he wishes, before Sunday, to get some idea of his parish," returned Lady Azerley.

"I'm awfully glad that dreadful Mr. Rice has taken his departure," cried Lady Susan, the countess's eldest daughter—there were two other grown-up sisters, but Lady Susan took the lead, not only in conversation, but in all else. "Do you know, Mrs. Grahame, we always called him 'the railway guard,' because in the pulpit he kept holding up one arm as if starting a train, and he preached *such* sermons. In one he told us how anxious he had been to see a house on fire; his opportunity arrived; he immediately put on his boots, and *emptied his pockets*—prudent man! not even his longed-for excitement could make him forget his money—and sallied forth to the fire, 'the view of which gave him every satisfaction.'"

"Well, but, Susie," said Lady Charlotte, gently, "Mr. Rice was a good, kind man, and I am sure he worked hard."

"Yes," said her sister, "so he did, but——"

Her next words remained unspoken, for Mr. Burleigh entered the room. She looked curiously at him. He did not seem so cheerful as in the morning, and her kind heart felt a pang of pity; his face was so pale, and he sat down with an air of suppressed weariness. She noticed what an effort it was to him to answer the innumerable trivial questions her mother asked, and skilfully drew first the conversation into another channel, and then strolled to the piano and illustrated a remark she had made on some new music, by striking a few bars. Lady Susan was well known to be an exquisite pianist, and at once was entreated "to play something." She began with some passages of Chopin's, but gradually wandered off into Weber's weird strains. The room was dim, a hush came on the group, a pause in life's haste and turmoil fell about them. Lady Susan looked up, John Burleigh was standing by her side, his eyes seemed luminous in the half light, and her fingers instinctively fell on the grand opening bars of Beethoven's Sonata in D. As it ended, the servants came in with the lamps, and the shooting-party, entered, all ready for a warm cup of tea and a bright gossip.

* * * *

Two days afterwards, Mrs. Bradley took her basket on her arm, and, it being Saturday, proceeded to the village of Houghrigg, distant from the brick fields a mile and a half, to do her shopping. She was a stout, red-haired woman, the wife of a thin, red-haired brick-maker, and was blessed with ten children, two of them being twins, Martha and Mary; but she considered them rather a drawback. All the other children, as she was fond of asserting, were "wick as scorprills." Martha was a large, heavy child, but an idiot. Mary was "nobbut weakly" and "no size" for her nine years; but she was a patient little thing, with large blue eyes, and was generally left in charge of the baby. Mrs. Bradley was a managing woman. She drove her husband in the way he should go with hard words and a loud voice, and her children were kept in order by smacks unsparingly administered. She kept her house spotlessly clean inside—it was not her fault that there was no drainage, or that the drinking water was drawn from a polluted well. Into the tenderest corner in her heart little weakly Mary had crept. In fact, she was a motherly woman, with the righteous, hard, undemonstrative manner of her northern nature. Her mother had never, in all her life, given her a caress, and she never bestowed one. Her caresses were soft soap and friction, clean, well-patched clothes, plenty of milk-porridge, and on Sunday a pudding. So she "did her duty by them." And to buy raisins—"they went further than currants"—for the Sunday pudding was her present errand. There were several villagers in the little shop, and two or three iron-stone getters from the mines in the hill beyond the Castle. These men—some called them miners, others navvies—lodged in the village, and added considerably to the population. They were a rough, kindly set of men, who worked hard, and occasionally drank hard, "who feared not God, nor regarded man," but were always ready to do a brave or generous action.

"And have you seen the new Vicar, Mrs. Bradley? or hasn't he got out so far as your way yet?" asked little Mrs. Pattison, the shopkeeper. She was a brisk, wiry old maid, who had married Pattison—a fat, slow man—late in life, and she was decidedly the better half of the business, as well as of the proprietor. She was ubiquitous this Saturday afternoon.

"No, he's not been up yet. I expect he'll take us at t' back end."

"Happen," said one of the customers, "I watched him; he goes regular to every house, and skips none; he's a gait of going through t' parish, I expect."

"What do you reckon of him, Mrs. Pattison?"

"Well, I'd like to hear him give his experience before I say ought," said the shopkeeper mysteriously.

"T' oud cat!" muttered one of the miners to his mate; "she's for ever on wi' her Methody talk."

"How can she help it? They say her father were a minister. Let's be off. Here, missis, how much do yer want of us?"

"Tea 1s., butter 1s. 2d., sugar 6d., ham 3s., onions 8d., wool 2s. 3d.—8s. 7d. in all."

"Trade must be slack; you clap it on middling," and out the men lounged.

Now the women had it all their own way. Some of them, it appeared, had approved of the new Vicar. Others liked Mr. Rice "a sight better," but one woman remarked,—

"He talks so strange, not like a parson ought. It's their business to talk to you about yer soul, and if they do right by you, they'll mention t' subject. You ken what the've come to speak on, and yer know, if you've been respectably brought up, what to say back. But in he comes to my place, and I'd just put out our men's teas. I axed him to have a cup, and I buttered a hot shortcake—it weren't like t' children's,

short of fat, but a real good un. Well, he were very friendly, though he nobbut made a poor tea, and then he axes about my lodgers, and I told him I kept eight; and he axed where they slept, and I showed him t' room, for I'se flayed of nobody seeing my beds; t' sheets are beautiful white. I bleaches 'em regular."

Then the narrator stopped.

"What did he say? Go on," urged her friends.

"Well, he looked at the beds, and he said they were nice, but he were capped wi' t' size of t' room. I said, 'Yes, if it were a little bit bigger, we could get five bedsteads in instead of four, and take ten lodgers. He stared at me as if he'd seen a boggard, and began stepping down t' middle between t' bed feet, for two stand on either side of t' room close together, and he liked gasped, 'Twelve feet!' But he said it in a way that made me feel ever so queer, I don't know why, and he went to t' winder and tried to open it, but I told him it were painted down; and then we went back to t' house, and he began some long talk about ventilation. I told him there were in general a bit of frost in t' air, and we liked to keep warm."

"Was that all?" asked Mrs. Pattison, shaking her head. "I fear he's not fully saved. Didn't he expound or offer a prayer?"

"Yes, he prayed; but it were queer. He said nought about 'bending our feeble knees,' or not 'being like an unthinking horse rushing into t' battle,' like Jonathan Binks does."

"Eh! Jonathan's a powerful pleader."

"Well, this man talked as if he were a child. I could tell every word he said; but if he didn't pray God to forgive me for having them beds so close together! Anyhow, it meant that, and I've been that oneasy since, that I can't forget it, and I'm thinking of noticing two of my chaps."

"Never you mell on 'em, Mrs. Jowett; they're all right," said Mrs. Bradley. "I can't a bear to waste. What's the use of losing the brass they pay?"

"Maybe"—returned the woman, "but I mean to go to church to-morrow and hear him—I'm going home now to fettle up my best bonnet, for it's three year since I were there."

Mrs. Pattison shook her head and sighed, as she placed the pound of candles in Mrs. Bradley's basket. That respectable woman thought of many things as she went home. All the children were off next morning to school, early as usual, and as was not usual, even Bradley was driven to church; but his wife went not. She soothed her conscience with vicarious devotion, and gave the oak chest of drawers, her pride and glory, an extra polish that Sunday afternoon.

On Monday the Vicar arrived. Mrs. Bradley was hanging out the clothes, for since four o'clock she had been washing, and always boasted her "washing was sided" in one day. She pushed Martha into the back kitchen and shut the door, and told Mary to sit behind the clothes' horse with the baby, who was not a presentable figure; then she wiped down a chair, and was ready to welcome her visitor.

"Glad to see you, sir, though I'd as lieve you'd come another day."

"Don't apologise, Mrs. Bradley; a good manager, they say, begins to wash on Monday always."

"I say more, sir, I say they finish too."

"But how can you manage? There were no less than seven children of the name of Bradley at school yesterday, and I understood they were all yours."

"Yes, and three more beside. One's not herself, and the other twin is nobbut a mesh child; but I'm not ashamed on her, though I am of this dirty boy."

So saying, Mrs. Bradley dived behind the clothes horse, reappearing with a bouncing baby in her arms, and a little, shy girl holding by her skirt—a child with a plaintive face and big, blue eyes. John Burleigh stretched out his hand. Little Mary looked at him a moment, and then put her small one in his grasp, and nestled to his side.

Mrs. Bradley's heart was won as she saw the Vicar put his arm round her little child.

"Yes, sir, it's hard work, especially in winter, to make both ends meet; but what I say is, 'frame' Bradley's a steady man, and every one of t' children has to help. My girls allurs knits their own stockings after they're three years old; and our lads addle—if it's nobbut a little—after they're four. I'll have nought said about it, and they know that. I can't do with rebellious children. T' hymn says it's like a serpent's tooth, is an ongrateful child; and t' Bible says, 'Spare the rod, and spoil the child.' Me and father tewes for them, and if they won't do right by us and theirselves, I takes t' strap to them."

"And do you take the strap to this little girl?" asked John Burleigh, smiling.

"No, no, not to her," said Mrs. Bradley hastily; "not but what she will get it if she doesn't behave herself," added her mother on second thoughts, as a warning.

Little Mary smiled to herself, and played with the Vicar's watch chain. She was not afraid.

"You see, sir, I must rule 'em; it's not as if I had their grandmother to send them to now."

"Is your mother dead?"

"Yes, sir; both she and father died in the typhus fever four winters back."

"What?" said the Vicar, his face flushing, and sitting up quickly. The thought flashed through his mind, was he to meet his old enemy in another form even here—here, in this lovely place; or had the foe come and gone for ever? Then he thought of Mrs. Jowett's over-crowded lodging-room, and said to himself, "Surely that is the only one in the village."

"Yes, sir, four years ago it was what they call a green winter. All the back end were warm and murky, and it went on the same gate all winter, never a bit of frost all t' time. Well, first one died and then another; it seemed to take mostly old people, t'others all pulled through, only one of t'iron getters died. Well, mother went first, and then father took it, and he went too; he seemed to have no heart to struggle with it by his sen."

"And did it end there?"

"Well, the worst on it did; but t' summer after was as cold and nasty as t' winter had been warm; and all of a sudden in August it turned hot, and t' fever broke out again. Doctor said it was on account of some right good blankets Betty Dunn took home to wash, but I reckon nought of such silliness. I say Farmer Boothroyd did right to lock 'em up."

"You don't mean to say they were fever clothes—that they had been near any one who had typhus fever?"

"Yes, but they were right good things; they belonged to his daughter what died."

"Has he them still?"

"Yes, for aught I know; neither Boothroyd nor his missis would give a candle end away."

"Did any one die that second time?"

"Yes, four or five children, and Jack Robinson—he left a widow and four little ones—and two iron getters, and Mrs. Pattison's sister, a very tidy lass. It seemed to miss all t' old folk. They'd no call *that* time to be flaid."

"And how long is this since?"

"Four years."

"And you are always well out here?"

"Yes, all but David Robinson, my master's man; he only enjoys bad health. By times I make him a cup of herb tea to strengthen his inside."

The Vicar walked thoughtfully towards the Chase. Presently he heard "Parson! Parson!" called.

He stopped. Little Mary Bradley, her cheeks flushed, and a light of delight in her starry eyes, ran up to him holding out two or three nasturtiums tied in a bunch with some mint and southernwood.

"They're for your own self; I got 'em out of our garden. Don't you like posies, Parson?"

"Very much. Do you, Mary?"

"Yes, ever so. The others made game of me because I used to go and talk to t' flowers, and they as still as aught, and can say nought back. I know better now; I'm a big girl now, you ken, but I wish many a time they could talk back. They'd say pretty things, wouldn't they, Parson?"

"Yes, that they would."

"Happen they'd tell one tales."

"What about?"

"Oh, all mak of things. Squirrels, and trees, and birds. I *seed* crows once having a parliament on t' trees."

"What did they do?"

"Oh, a middling lot flew out of t' trees into t' ground, and all the rest in t' trees held their chatter, and they all sat and watched, and I peeped through t' hedge behind a big fox-glove. And then them on t' ground chattered and flew round so, and so, and made a big din; and then they flew back into the trees, and there were four poor crows laid dead on the ground! The others had killed them! I *was* sorry. Now I must go back to baby. Good-bye, Parson, come again soon."

And away little Mary ran, and John Burleigh walked onwards to the grreat house to mix in all the refinement and beauty which existed there, and forget, if he could, the crowded cottages and the stupid ignorance he had left behind him.

(*Continued—page* 593.)

"SUFFER LITTLE CHILDREN TO COME UNTO ME."

Matthew 19. 14.

By Richard J. Minns.

An angel stooped earthward to gather a flower,
For an offering meet at the footstool on high.
O'erpassing the blossoms that cluster the bower,
Chose the tiniest bud, that had never the power
To straighten its stem and peep up at the sky.
'Tis plucked in a moment, speeds heavenward now,
The dew of life's morning still fresh on its brow.

IMAGINARY DIFFICULTIES.

By Edward Butler.

EVERY ONE has heard it said — I will not vouch for the truth of it —that a goose will bob its head to walk under a rainbow. And yet, when one comes to think of it, there is really room for the goose to walk upright, without undue deference to that "triumphal arch that spans the sky."

The dictates of fashionable society, on eating, drinking, playing, fighting, dressing, talking, and behaviour in general, form a code which "spans the sky" of many a goose, also many a gander. But there is room for independence and uprightness in the most superfine society. In fact (this is strictly confidential) society will cheerfully make room for a vitally vigorous nature, charged with individual convictions ; just as if he were a red-hot poker, which always makes room for itself.

Many of the difficulties that men, especially young men, feel, in adopting a course of life that does not run parallel with that of the society which forms their environment, are wholly fantastic : they evaporate like dreams at the first stride of the will towards them. The dread of hostile criticism, the fear of what people will say, may be barriers to an infirm purpose, but fly, like ghosts at cockcrowing, before real conviction. I do not deny that those fantastic terrors cause real suffering to an unsound mind. I remember a man who was the subject of an insane delusion that he was too big to get through a doorway. His attendants thought to convince him, on the principle of *solvitur ambulando*, by forcibly taking him through. They did so, but the poor fellow died in the process—squeezed to death by his fancy. Bearing this poor fellow in mind, I would deal tenderly and soothingly with souls in trepidation before imaginary difficulties, remembering that imaginary difficulties may become real ones if they paralyse the will. The mesmerist, having established a control over the mind of his patient, says decisively, "You *cannot* get up from that chair," "*cannot* extend your arm," and so forth ; and the patient finds he cannot. The imagination lies behind all our voluntary actions, and if the patient is absolutely convinced of his inability, he is unable. Blessed, therefore, is the deliverer, who is himself free from fastastic chains, and who comes with cheerful, resonant voice unto a society toiling under unreal chains, imaginary obstructions, fantastic perils, crying, "You are free!" "So we are!"

Why do women cramp and mutilate their feet in China, and their waists and viscera in England? Why do men, who cannot afford it, give dinner-parties with expensive viands, unseasonable fruits—such as strawberries—that ought to be abed and asleep, costly wines, and all manner of elegancies? Why do sorrowing mourners, who want every shilling for life's necessities, waste a prodigal expenditure on funerals? These are but random specimens of the numerous class of men and women who are bound by imaginary chains, and are bobbing their heads to walk under a rainbow.

Have you, gentle reader, ever seen the leader of a flock of sheep jump over an imaginary obstacle, and every following sheep make a jump when it comes to the same place, though there be nothing to jump over? And have you moralised thereon?

It used to be said—I have not made the experiment—that if you set a cock upon a table, put his beak down to it, and then with a piece of chalk draw a bold, visible line from the point of his beak across the table, the bird will be stuck fast, under the conclusion that he is held down by the chalk line. We are held down to many undesirable customs by that chalk line.

The way to get rid of imaginary difficulties is to cherish the conviction that we *can* do what we *ought* to do. It is, generally speaking, not difficult to find out what we ought to do (for the moment I put aside the consideration of certain moral puzzles) ; and we must cultivate the habit of heading straight for what we *ought* to do, with small regard for what lies in the way, as Ezekiel's wheels and living creatures followed the spirit that led them—prompt, sharp, without hesitancy, and without turning. There are three officials or functionaries in our internal life: "I can," "I ought," "I will"; and a good deal depends on a right setting of the question of precedence. Let "I ought" give the word. "I can" will then not be nearly so often troubled with rheumatism, nor "I will" with sleepiness.

THE INVENTOR'S WIFE.

IT'S easy to talk of the patience of Job. Humph ! Job had nothin' to try him ;
If he'd been married to 'Bijah Brown, folks wouldn't have dared come nigh him.
Trials indeed ! Now I'll tell you what—if you want to be sick of your life,
Jest come and change places with me a spell—for I'm an inventor's wife.

And sech inventions ! I'm never sure, when I take up my coffee pot,
That 'Bijah hain't been "improvin'" it, and it mayn't go off like a shot.
Why, didn't he make me a cradle once, that would keep itself a-rockin ?
And didn't it pitch the baby out, and wasn't his head bruised shockin' ?
And there was his "patent peeler," too—a wonderful thing, I'll say ;
But it had one fault—it never stopped till the apple was peeled away.
As for locks, and clocks, and mowin' machines, and reapers, and all such trash,
Why 'Bijah's invented heaps of 'em, but they don't bring in no cash.

Law ! that don't worry him—not at all ; he's the aggravatinest man—
He'll set in his little workshop there, and whistle and think and plan,
Inventin' a Jew's harp to go by steam, or a new-fangled powder-horn,
While the children's goin' barefoot to school, and the weeds is chokin' our corn.

When 'Bijah and me kep' company, he warn't like this, you know ;
Our folks all thought he was dreadful smart ; but that was years ago.
He was handsome as any pictur' then, and he had such a glib, bright way—
I never thought that a time would come, when I'd rue my weddin' day ;
But when I've been forced to chop the wood, and tend to the farm besides,
And look at 'Bijah a-settin' there, I've jest dropped down and cried.
We lost the hull of our turnip crop while he was inventin' a gun ;
But I counted it one of my marcies when it bu'st before it was done.
So he turned it into a "burglar alarm." It ought to give thieves a fright ;
'Twould scare an honest man out of his wits, ef he sot it off at night.

Sometimes I wonder ef 'Bijah's crazy, he does sech cur'ous things ;
Hev I told you about his bedstead yet ? T'was full of wheels and springs ;
It hed a key to wind it up, and a clock face at the head,
All you did was to turn them hands, and at any hour you said,
That bed got up and shook itself, and bounced you on the floor,
And then shet up, just like a box, so you couldn't sleep any more.
Wa'al, 'Bijah he fixed it all complete, and he sot it at half-past five,
But he hadn't more'n got into it, when—dear me ! sakes alive !
Them wheels began to whiz and whir ! I heard a fearful snap,
And there was that bedstead, with 'Bijah inside, shet up, jest like a trap !
I screamed, of course ; but 'twan't no use. Then I worked thet hull long night,
A-tryin' to open the pesky thing. At last I got in a fright ;
I couldn't hear his voice inside, and I thought he might be dyin'.
So I took a crowbar and smashed it in. There was 'Bijah peacefully lyin',
Inventin' a way to git out agin. That was all very well to say,
But I don't believe he'd have found it out if I'd left him in all day.

Now, sence I've told you my story, do you wonder I'm tired of my life ?
Or think it strange I often wish I warn't an inventor's wife ?

E. T. Corbett.

LEAVES FROM THE LOG OF A GENTLEMAN GIPSY.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "A Cruise of the Land Yacht 'Wanderer'; or, Thirteen Hundred Miles in my Caravan," etc., etc.

Our first peep at Buxton, and sketch of an old house on the road. Blackberries were abundant.

LEAF VIII.

IN A MOUNTAIN VILLAGE—UPS AND DOWNS OF GIPSY LIFE—IN A LIVING CLOUD—PEEP AT BUXTON—A ROLLING COUNTRY—NEW TOWN AND DISLEY.

WE have turned over a new leaf, it appears. So accustomed have we been to sylvan glens and wooded hills, that the naked mountain top is quite pleasant.

We are early astir and off—Bob and I—for a summer morning's ramble. Not before breakfast, though; not before one of the most substantial breakfasts ever I sat down to. To have ventured out without eating would have been rash in the extreme, so keenly appetising is the air that blows across these bleak heights.

"Good morning," I said to the landlord; "what a pleasant, breezy, healthy place to live in!"

The landlord smiled and shook his head.

"You ought to be here in winter sometimes," he said. "The wind is enough to cut one's nose off."

It is a dull grey morning, without a blink of sunshine, and a bluish haze lies over all the wide-extended landscape. Not enough to hide it, however; so we go along a lane between rough stone walls, enter a meadow, and sit down in the lee of another stone fence. Here the rich grass and flowers are tall enough almost to bury the dog. Down to our left yonder lies the village. All around is a country of rolling hills, dotted sparsely over with trees. Each hill is green to the top, and divided into fields of every size and shape, by the everlasting stone wall. Very easily built those fences must be, for the material lies everywhere close to the hand; and just as easily knocked over. I experienced the truth of this remark in a by no means agreeable way, for as I sat sketching, a cow of an inquisitive turn of mind put her head over the wall, and tried to see who was there.

"It's all right, old girl," I said complacently.

But that cow took quite a different view of the matter; so she inserted one of her stubby horns in the fence, and the whole pile came hurtling down. I sprang nimbly up, to save myself from utter annihilation, and then it occurred to me rather suddenly that the view from the adjoining field was equally good, and Bob bravely defended the deadly breach till I was safe, and then he came rushing after, followed by a whole herd of the humoursome short-horns.

It was very silent and still up here to-day—the twittering of a linnet, the cuckoo's notes, the lowing of cattle or distant song of chanticleer, nothing more.

Verily life on the road has its ups and downs. Yesterday chatting pleasantly with ladies at Haddon Hall; to-day, after my walk, talking freely and frankly with a gang of real gipsy folk, squatting on the grass. But in this way we get information about the roads, and find out the truth about "the terrible hill" that day after day is ever on ahead of us.

Socially speaking there is not much "up" about Taddington; but it lies about 600 feet above the sea-level for all that. And we have to climb higher still before we get clear of the place; but the view from the hill is everywhere wild and beautiful. For three miles the scenery would be difficult to match, bluff and bare though it be. We shall not forget the descent into this gorge, however. Some idea of the steepness of the hills around us may be gathered from the fact that stone fences, built as marches between property, have slid bodily down the hill.

Once fairly down into the bottom of this glen, the road runs close alongside the winding Wye. It is here brown and boisterous—quite a mutinous sort of a stream; but there is many a pool nevertheless, and from this coupé here we can see many a lusty, lively speckled trout.

"Look there, John," I say to my worthy coachman; "do you see them? Are they not beautiful?"

"I sees them," says John; "but lor! sir, they'd look far more beautiful in a frying-pan."

I'm afraid John is no poet.

And now we enter one of the sweetest, stillest woodland glens imaginable. Around us are great banks of every kind, and of every shade of green, with the soft summer sunshine shimmering on their wind-moved leaves.

About a mile and a half from Buxton we had a somewhat novel, and by no means pleasant experience. The day had become unusually sultry, the sunshine had fled, and dark, ominous-looking clouds were heaped and banked all over the sky, when we made the entrance of a deep glen, where the rocks, half-hidden in trees, rose up like battlements above the riotous, roaring river. And just here we came upon a wondrous cloud of gnats, or midges, a good mile long, and entirely filling the gap between the trees. They completely obscured our view of everything for the time being, more effectually than a dense fog could have done. They blinded men and horses, and I was glad to hurriedly shut up windows, doors, and skylights.

When we groped our way clear of the cloud at last, the state of the horses was pitiable; they were still snorting and sneezing, and their nostrils were covered with mucus, froth, and blood.

Buxton is altogether a beautiful place, well built, clean-looking, and healthy. We halted in the square to bait, to shop, and get the mails, and were, as usual, surrounded by a crowd, and visited by many good people.

Our day's work was not over, however; so, after seeing all that was possible in so brief a time, the order for the start was given, and away up the long hill we trotted, *en route* for Whelley Bridge.

The road is a very winding one, and snow-white and limey.

No corn, no wheat, no crops of any kind, all pasturage, and whenever we stop to breathe the horses after rushing a pinch, the bleating of sheep and scream of the pee-wit fall on our ears.

It is a country of green, rolling hills, and over them all is a thin, uncertain haze, though the sky itself is dark as ink. But with every turn of the road—and, indeed, the road seems all turns—the profile of this mountain land is changed.

* * * *

What with the hills and dust, and glare of the roads, we are all well tired before we reach Disley, and determine to encamp as soon as we can find a place. Ah, there is the rub. It is all too evident that we are getting into a very populous district; indeed, far too much so to be anything like pleasant.

At Whelley Bridge we might have had a comfortable bivouac, but we passed it, thinking we might come to a better, and now behold us obliged to lie in the street all the night, close beside a row of workmen's cottages.

The place itself is Newtown, near Disley. I call it place for want of a better name; long, straggling towns or villages such as this are very common in districts like this. The houses are built to meet the exigences and conditions of life, so no plan is aimed at, space and convenience are considered first. No, I did not like my bivouac to-night, though I have been in many worse. The people, my neighbours, are as civil as any heart could wish, but one old fellow came home in the gloaming, just a leetle wee bit tipsy, perhaps. He at once jumped to the conclusion that I was a Cheap Jack, and because one of my wheels lay on his causeway, he began to rate my valet soundly. Had it been the Giant's Causeway, and this neighbour of mine the Giant himself, he could not have made more noise about it. Meanwhile, the villagers took up cudgels for me, and the Giant had to retreat into his den growling. But he apologised manfully next morning, so he must have been a gentleman at heart, after all.

The Swan is a pleasant, old-fashioned hotel, and those who keep it pleasant, old-fashioned people, of a type one so seldom meets with now-a-days. The stabling was good, and I certainly did not expect to see such hot-houses and beautiful gardens as those in the rear of the Swan. This is the landlord's hobby, and a very delightful one it is.

We rise early, and while my valet is getting everything ship-shape for a start, I get away up behind the houses and climb a green hill, on which the sunshine strikes bright and clear, for it is, indeed, a lovely morning. All around me are patches of wild flowers, reddest clover, crimson-bloomed trefoil, and speedwell. Like the speedwell, the sky itself is blue. Never a cloud, even as big as a man's hand, has yet risen to meet the sun; only on the grass under the shadow of the hawthorn tree yonder, where the dog has laid himself down to cool, the dew still hangs white.

Far beneath us lies the town—we can see to-day it *is* a town—stretching along a beautiful valley, and straggling half up the round, bluff hills, in a way that quite reminds me of Scotland.

There are hills, hills everywhere, and the milky haze that hangs over them, with the incessant buzz and hum of insect life, betoken a day of unusual heat.

So, in an hour's time we are ready. Little Nellie, the maid of the inn, presents us with a bouquet of flowers, good-byes are said, and away we rattle.

On now through dusty Disley. But the road is good.

As we pass the Ram's Inn, we notice it has a nice open space in front, and a row of trees, near which we could have encamped, had we come on last night. But we did not regret it.

We are bearing up now for Stockport. The day continues delightful, and the road continues dusty, and the country around picturesque and beautiful.

About a mile from Stockport one catches a very nice view of this cottonopolis. There it lies, spread out in the hollow beneath us, a study in red and grey, with many a spire and many a lofty stalk uplifted in the summer air. Strange to say, only a few of these tall chimneys are pouring out smoke. Trees and fields make a very pretty foreground to this picture.

We are in Lancashire now without a doubt, and to speak the truth, we do not half like it. I determine not to go on to Stockport, but to branch off here to the right, and bear up in a bee line, if that be possible, for Rochdale.

Something tells me that for a time I have left the lands of romance behind me, and that the prospect opening out ahead is one of stern reality. For some time to come there will be no green waving woods, no clear rippling streams, no song of birds in sylvan nooks, no rural beauty or living poetry. We must rough it now. Even a gentleman gipsy's life is not smooth and sunny, if he makes up his mind to see a little of all that is to be seen, and mingle in life of every class.

"Shall we go back, John?"

"I don't think so, sir. 'Scuse me, sir, but I don't think you're one o' that sort."

LEAF IX.

A CHANGE COMES O'ER THE SPIRIT OF MY DREAM—DENTON AND STALEYBRIDGE—AN UNSAVOURY ENCAMPMENT—LOVE'S YOUNG DREAM—AN OASIS IN THE DESERT.

We bore away to the right, then, without entering Stockport, and shortly after this, everything was changed for the worse. We were struggling onwards through side lanes paved—if paving one could call it—with holes here and there big enough to bury sheep, through long, uninteresting villages, over and under bridges, and past many a busy factory and mill, that we cared less than nothing about.

The country, where it was country, with its streams, and hills, and woods, was all picturesque enough, only slightly grimy. But woe is me for the roads to-day, and woe is me for the horses!

Though happily there is no wind, the dust, which is inches deep, rises in black and stifling clouds, choking our good steeds, and, combined with the stifling heat, making us all feel drowsy and wretched.

Our pace is the pace of the tortoise, only not quite so fast and free. The jolting is fearful, as wheel after wheel goes banging down into a hole. This is roughing it with a vengeance. We get mixed up too with—and have to follow in a procession of—tradesmen's carts and great wagons laden with dusty coal.

We get to Denton at last, and put the nose-bags on, but the horses for a time are too jaded to eat, and we have to remove them to let the poor beasts breathe.

* * * *

I was about to give some new experiences in gipsy life, which, if not altogether very pleasant, possessed for me the charm of originality. We were coming into a densely populated district, though I did not know it. Not, perhaps, a black country, but at all events a somewhat grey one, where smoking chimneys took the place of trees, and the rattle and roar of mills were more often heard than song of birds.

Had I been a Cheap Jack now, I daresay I could have done a roaring trade. I should have drawn up in some publican's yard, or semi-green field, and as soon as the honest working folk had washed their faces and eaten their suppers, sold knives, cork-screws, flat irons, and cheap articles as fast as my man could have handed them out. Had I been a showman of any kind, I might have made an excellent harvest. Had I even been an itinerant photographer, I should have done well. But alas! I was only a gipsy naturalist, and quite out of place in roads like these.

The horses were fagged, but I said cheerfully to my coachman,—

"This long village is bound to come to an end soon, and then we shall find ourselves in some cool delightful meadow again, under the trees."

"I hope so, sir," said coachee.

We passed a strange old-fashioned black and white-chequered church, but I failed to get a peep at the interior.

Did the village end? Did we come to that sylvan nook our souls were longing for? Well, if the village did end, it ended by anastamosing with another and another, perhaps. There was no break for five miles, till we found ourselves at Staleybridge. It was one long gloomy, far-from-cleanly street of bricks and mortar, with shops and stores and people who—well, looked like their work.

Rough enough both men and women looked as a rule, but civil, all civil.

I want to say one thing, and I may as well say it at once. All through the densely populated towns, villages, and districts of Cheshire, Lancashire, and West Yorks, wherever I went, I met with nothing but kindness and civility from the people. And although, after leaving the pillars of cloud that hang over Leeds, far behind me, I was not sorry to be out of smoke and dust, and to see once more the sweet wee wild roses climbing over the green hedges, I bore away with me *two* impressions paramount to all others; first, that the population of our mill and mining regions are thoroughly hospitable and good at heart, and thoroughly English; secondly, that our country is a very great and very wealthy one. It had never so struck me before, but now my mind was opened to its richness and vastness, and my heart was laid bare to the kindliness and honest worth of its people.

* * * *

Near the entrance to Staleybridge, while resting for a few minutes by the roadside, I was boarded by an English clergyman, who had "read about me." Mr. D—— is an Irishman, and one of the good old sort. We enjoyed a twa-handed *crack*, and I had the great pleasure of meeting him and some of his children the next day.

He directed us to the George Hotel, and away we toiled again, over the roughly paved street or road, and over the tramway, through dust and glaring sunshine.

The George is *the* hotel. But alas for our luck, there was to-night no room for our horses, and no decent place anywhere near to bivouac.

For nearly an hour I rode about on my tricycle, hunting for a stable, and succeeded at last, so we crossed the bridge, bore round to the right, and laid the *Wanderer* in the market-place without asking leave of any one.

Out came the horses, and my valet began to cook our well-earned dinner.

But we were not to be allowed to rest quite in peace even yet, for presently our little knocker was plied, and a man in uniform asked to see me. He was the market surveyor, and as soon as he noted who we were, was extremely polite, but for form sake we had to pay for our stand—three pence for just such a ticket as any ordinary gipsy or showman would have got.

Now by all the unsavoury and disreputable bivouacs it is possible to imagine, I think ours of to-night was the worst. I felt sorry for the beautiful caravan being seen in such a spot.

Perhaps the least said about it the better, but one side we are flanked by heaps of rubbish and paving stones, with a background of houses; on the other is the river Tame. No silvery stream, I assure you, but black and ugly—a sewage river apparently, and smelling aloud. The broad canal in our rear is no whit better. The view from my coupé is one which might have interested Dickens. There is an inn over yonder, which, for aught I can tell, may be a highly respectable one of the sort. My immediate surroundings, alive and dead, are as follows: three or four intemperate-looking young viragos, black, and grimy, and bare around to the shoulders; a group of sparsely clothed, dirty, unkempt urchins, looking on and learning the language and actions of said viragos; a large and elegant heap of manure, with Spanish hens making the most of it; a ragged beggar on crutches, heaps of wood, iron, cinders and rubbish, broken carts, hen-coops and old ladders, and one weird old tree, an elm, on which leaf nor bark itself remained, though I suppose at one time it had flourished green and bonnie. The sun, however, is shining as brightly as it can shine through the smoke-filled atmosphere, and away on the right yonder, high over grey old mills, workshops, and telegraph poles, there looms through the haze a suspicion of hills and mountains.

One needs to be a philosopher to be quite at home in such surroundings. I fear I am not a philosopher. But there was something worth listening to even to-night—a chime of beautiful bells.

Dinner discussed, Hurricane Bob and I went for a little stroll. We wanted to find something rustic, if possible, so, immediately after crossing the bridge, we left the main road or street, and found a footpath that went winding up along this questionable river's brink—I will not say bank.

The river is shallow and broad, and black as ink. Across yonder it goes sweeping along by the foot of tall stone walls, through pipes in which, every now and then, great jets and streams of dark polluted water are poured from mills and drains. By the footpath here is a strip of half-starved grass, higher up a precipice of earth and rubble, and over that a wall that frowns like a battlement. Look where you will, everything is unsightly, everything unsavoury. Unsightly houses, mills, bridges, round tower-like furnaces, and heaps of broken sewage pipes, with featherless, unsightly fowls, scratching on equally unsightly heaps of rubbish.

And yet here to-night, on this very footpath, among these unsightly surroundings, I meet a youthful, loving couple, sauntering hand in hand. And he is telling her the old, old story—

> "Oh! there's nothing half so sweet in life
> As love's young dream."

No, certainly there is nothing in this world to equal it; but—love *here*, love by the brink of *this* murmuring stream! Never mind; perhaps by the time this is published those young folks will be married, and will settle down and live happy ever after. So may it be.

As I came slowly back over the bridge, I heard two young men arranging to fight. They had quarrelled about something, and I could not help smiling as I heard a portion of the conversation. Perhaps I cannot give it in the true vernacular ring, but it was something like this:—

"Noo, Jack, I'll just tell thee what I'm gan to do to thee, lad," said one of the intending combatants; "I'm gan to *paralyse* thee."

"Ned, that's nothin'," was the reply. "Paralyse me, wilt thou? Ned, I'm gan to *pulverise* thee, and mother 'll think thou's been through a bone mill."

It is satisfactory to be able to relate that neither of these dreadful operations took place, for next minute they shook hands, and went off arm in arm.

But another ray of romance came to brighten up these dingy surroundings of mine next morning, for, lo! as I sat writing and waiting for breakfast, I lifted up my eyes and beheld quite a pretty picture—quite an oasis in this desert of dirt. It was a farmer's milk-cart that had stopped, with clean brass-hooped cans in it, and holding the reins the farmer's milk-lassie herself. What a bright young face she had! What a clear complexion, and how pleasant her smile as she serves her customers! "Bob! come along with me, old dog; a glass of good milk will do neither of us any harm."

(*Continued—page* 596.)

NIGHT MISTS.

> "Until the day breaks, and the shadows flee away."—*Cant.* ii. 17.

NIGHT mists are creeping low,
The stars of heaven are bright;
On the darkened scene shines heaven's queen,
With a beauteous silvery light.
And the gentle breezes blow,
With a murmur soft and low.

Night shadows higher rise,
Like phantoms of the night;
But the moon glides by in the starry sky,
With her soft and lonely light.
The wind now moans and sighs,
And the mighty deep replies.

Thick clouds, as night rides on,
The earth o'ercast with gloom,
As moon and stars, the storm clouds bar,
With darkness of the tomb.
And their kindly light is gone,
And the night is bleak and lone.

The morning star appears
Above the eastern hills,
Piercing the shroud of the midnight cloud,
And the heart of the watcher thrills;
For the joy of morning wears,
And past is the night of tears.

The sun illumes the sky,
And casts his cheery glow
On mount and moor, and on rich and poor,
On the ocean's mighty flow;
On the worm, and on the fly,
And the eagle soaring high.

Thus we are called to shine
Like the moon, for our absent Sun;
To reflect His light in the darkest night,
Though the hours but slowly run.
Yet the mists of night confine,
And the weary watchers pine.

But soon the dawn will break,
And the shadows flee away,
Then the darkest night, with its silvery light,
Shall be transformed to day.
And the slumbering shall awake,
And of lasting joys partake.

WILLIAM H. ROSS.

A TRAVELLER'S EXPERIENCES IN FLORIDA.

By ARTHUR MONTEFIORE, F.R.G.S., Author of "Letters from Florida."

"The undergrowth of bush lies in tangled profusion."

OF course there are exceptions, but for the vast majority of Englishmen, life in Florida means growing oranges and other fruits, and engaging in the various diversions which shooting, fishing, and yachting afford. Florida possesses what is called a sub-tropical climate, but the conditions of life in that peninsula are in many respects different from those which exist in countries belonging to the same climatic belt. In the first place, Florida may be regarded as a vast swampy plain, possessing fairly extensive patches of dry country, and a few isolated regions of elevated land. While the fruit-grower selects the dry pine-land for his grove and his home, the sportsman pitches his tent—and he generally prefers to do this on a wide flat-bottomed boat, in the region of marsh and lake—along those great waterways, the St. John's and Indian Rivers, or in that vast labyrinth of swamps, over a million acres in extent, known as the "Everglades."

Again, the position of Florida is geographically unique. It has been called the Italy of America. Like Italy, indeed, it is a long, narrow peninsula, a land of grapes, oranges, and limes; washed, like Italy, on either side by a sea, and subject to the welcome breezes of both. But Italy has no Gulf of Mexico on its western shores, and none of the highly fructifying winds that daily sweep from that fountain of fertility across the pine-covered plain of Florida. The heat of the climate is tempered, and the scorched vegetation refreshed, by the breezes from the Atlantic or the Gulf; their humidity is arrested by the pine forests, the palm groves, and the colder air of the higher lands, and daily throughout the long thirsty summer, there occurs a fall of rain.

But there is a demon abroad, whose hand is never stayed. From north to south, from east to west, the country is malarial. From millions of acres of swamp there is continually rising the deadly breath of miasma. Fever steals through the land, and silently, but none the less surely, clutches its victims. In such a country as this, it is not surprising that the constitutions of Englishmen, who go in for sport, are severely tried. It may be regarded as an axiom that the better the sport, the greater the risk. Quail are still to be found in respectable numbers on the higher pine-land, but as there is an entire absence of game-laws, ruthless destruction is going on, and in the vicinity of settlements, it is impossible to find any sport. The gunner must go further afield. For anything like sport, or for larger game,

"Sailing along the low shores and 'keys.'"

whether it be for deer or bear, wild cat or rattlesnake, heron or duck, or for that veritable *pièce de résistance*, the alligator, the sportsman must follow along the edges of the great swamps, or the marshy fringes of the lakes. He must make his way through the undergrowth of bush that lies in tangled profusion at the feet of the pines and the scrub-oaks, the magnolias, and the cabbage-palms ; or, again, he must embark in some "mud-turtle" of a boat, wide and roomy, but of sufficiently light draught to float almost in a puddle. From this coign of vantage he will be able to penetrate those vast tracts of reed and weed that everywhere appear upon the waters.

Plenty of sport, and first-rate sport too, can be had in Florida, if you like to go and look for it. But while doing this, it is quite possible, and, if precautions are not observed, probable, that you will get an attack of chills and fevers, or downright undiluted malaria, that will upset all plans for the future, and necessitate a return to places more frequented of men. The air is thick with miasma. In early morning and evening it lies on the land and water in a white layer, twenty feet deep. As night falls, the scent of decaying vegetation and stagnant swamp becomes overpoweringly strong. Any exposure to this night-air is sure to be fatal. Warmly but lightly clad in flannels, the Englishman lies down under his tent, or within his cabin, blind to the wondrous beauty of moonlight in this climate, and deaf to the strange cries and weird movements that resound through the surrounding forest, and over the black, sluggish swamp.

Not till the day is well born, not till the rapidly rising sun has dispelled the white veil of death that covers the land, is it safe to "come forth into the light of things," and enter on another day's sport. I have met men who did not observe these precautions—men who would spend their nights in the woods, treeing 'coon or trailing skunk ; but they were examples of neither health nor wisdom. Yellow faces, "liverish eyes," shaking hands, and an inordinate desire to "tipple" proved this ; my knowledge of their habits added proof. They were not sportsmen in the true sense of the word, but men who had no respect for the conditions of Nature in their pursuit of game—men who were ignorant of Nature, and who consequently violated her laws at every turn.

With regard to fishing, much better sport can be had along the coasts of Florida than in its rivers and lakes. The king of fish is the tarpon ; the palace in which he delights is the Gulf of Mexico. As an article of food this fish has no value, but I know of no fish, unless it be the mahseer, that gives one such an exciting time from the moment of hooking to that of landing. An enormous amount of line is required, which it is absolutely necessary to keep clear, as he will rush off at a tremendous pace, and think nothing of the fact that he may have in tow a good-sized boat, with perhaps half a dozen men in it. I remember once, off Tampa Bay, hooking a tarpon some ninety pounds in weight, that took to his heels, or his fins, in such good earnest, that before we could pay out sufficient line the boat was nose under, and taking in such quantities of water that we ran some risk of sinking. There are numerous other varieties of fish, of course, but I would recommend the tarpon above them all to my fellow-countrymen : playing it will be a new sensation to them, and one well worth experiencing.

It is pleasant to sail along the low shores and in and out the "keys" of Florida in one of the handy sailing-boats the natives have for hire, here and there noting the landmarks in the shape of a lighthouse. A suitable boat may readily be procured at Tampa, or Tarpon Springs, or St. Augustine. The price charged is, wonderful to relate, not exorbitant, and a man will accompany you, who will be of great assistance as pilot and cook. The boats are not often more than seven tons in measurement—of course they look larger than that, owing to their light draught—and it is not advisable to have more than one man with the boat. Room is an object, and most men who find themselves on such a trip are good enough sailors to be able to bear a useful hand. Not the least pleasant feature on these trips is the occasional stopping at some one of the multitudinous "oyster-bars" at the mouths of rivers, and the taking on board a thousand or two of these delicious bivalves. But it is well to wear boots when wading about on the "bars," for the shells are very sharp, and will cut the feet terribly unless some such precaution is taken. These yachting trips need not be expensive. For a party of three, the individual share for boat, man, and provisions should not exceed fifty dollars a month. When one remembers how much may be seen and done in a month's yachting along the creeks and bays, and the low, but not altogether unlovely, shores of Florida, this sum, indeed, seems remarkably small. In fact, I hardly know another spot in the Eastern or Southern States where one may get so much with so small an outlay.

"A mother and her piccaninny."

I have dealt with the diversions—the sport of Englishmen in Florida. Now for a few words on their work. A great deal has been written about orange-growing and the like, but unfortunately the writers seem to have been either interested parties or disgusted failures. The statements of both are necessarily valueless. Orange-growing, and the culture of fruit generally, undoubtedly pays if sufficient capital and sufficient enterprise and knowledge are employed. Young capitalists—more or less—fresh to Florida and its industries, and ignorant of any sort of agriculture, arrive in that country, and within a month have become landed proprietors, and fruit-growers to boot ! How they can expect to succeed surpasses the expectation of any one of experience. There is, however, nothing to be said against the style of emigrant that comes from England. He is a fine young fellow, as a rule ; an Army failure, or the younger son of one of "the classes," a man who is too fond of his horse and his gun to do much at his books, but withal a perfect gentleman. I spent more than a month at one time in an English colony of over eighty men, and I never met a single member of that colony who was not a "good fellow" ; nay, more, I have never met pleasanter fellows in any quarter of the globe. Consequently, society in Florida may be regarded as exceptionally good ; it is no social ostracism to find one's self in an English colony. At the same time, Englishmen as orange-growers have not been generally successful. Many have succeeded, but more have failed. The reason is not far to find : they have not understood the work they have taken up ; they have miscalculated its conditions, and underrated its difficulties ; they have reckoned without their host.

Soil is the great enemy to success in Florida. The soil of the pine-land, the only healthy land, is sand, fine white sand, as porous as a sieve and as sterile, almost, as a board. The hammock-land is fertile enough, and it contains phosphorus and potash in large quantities. But then it lies on the margins of swamps, or is reclaimed swamp itself, rich in vegetable mould, but also highly productive of malaria. No European can work for long, or live for a week on such a soil ; his health would be wrecked. Moreover, the price is almost prohibitive. £20 an acre for purchase, and £20 more an acre for cleaning it of its dense growth, are sums that seem rather high to the average Englishman. As a consequence, nine-tenths of our countrymen are to be found making their homes and their groves on the more healthy but less fertile pine-land. On this land the expense of fertilising is a very heavy item.

There is no pasturage in Central Florida ; no cattle can be herded ; all manure, therefore, is artificial. Bought in a distant market at a high price, and conveyed by a railway company which charges exorbitant rates to within a mile or so of the purchaser, by the time the manure is put on the land a good deal has been paid for it. Then come the heavy rains, and in a month or so every trace of this expensive "fertiliser" has filtered bodily through the sieve-like soil, and left behind scant profit from its presence. This surface-soiling with commercial manure is costly and unsatisfactory work, but it is essential to success. Beyond this item there is no very heavy expense ; and with a capital of, say £2,000, and the continual employment of his common sense, the average Englishman does and will do very well in Florida for some time to come.

The climate and seasons have been much misunderstood ; and, before closing this

article, it will be well to give some account of Florida weather. The year may be divided into three seasons: summer, by far the longest; autumn; and winter.

The summer of Florida is intensely hot. This heat, however, is rendered more bearable by cooling thunderstorms that are of almost daily occurrence. The hottest part of a summer day is between the hours of eight and ten in the morning. At the latter hour a light breeze springs up, and gradually increases in strength till about four o'clock in the afternoon, by which time it has brought up a thunderstorm. The storm breaks suddenly, and, among the terrific crashes of thunder and the livid flashes of lightning that rush from horizon to horizon across the blackened sky, there falls a perfect deluge of rain. Not rain as we understand it in these temperate climes, but tropical rain, that will drench you to the skin in less than a minute, the drops of which are as large as peas, and the force with which they fall as great as that of hail. But within an hour of the bursting of the storm all trace of cloud has passed away, and the great quantity of moisture been absorbed by the thirsty sand. The air is perfectly cool and still. One by one, in the rapidly darkening sky, the stars appear; and, as the gloom of night draws down, they hang as lamps of fire in the deep, dark blue of the heavens, and cast shadows across the white sandy ground and under the branches of the pines. The atmosphere is fragrant with the scent of the orange blossoms in the grove and the pine-apples in the garden. For the first time one can move about with enjoyment, and at last the most delightful hour of the summer's day has come.

The autumn of Florida, though short, is very trying to the European constitution. It begins about the first week in October, and lasts till the middle of December. Throughout this period heavy rains are continually falling. Ague, chills, and fevers, and all forms of malaria are rife. "Dengue" fever is rampant in every town, and, although it seldom ends fatally, it leaves its mark in sickly complexions and enfeebled constitutions. Happily, this state of things is not of long duration. Winter, with its drier climate, soon succeeds.

Floridians claim for their winter an equable climate, but this is far from being the truth. As an example of its variableness, I may mention that on one day last winter my thermometer registered 88° of muggy heat, and next morning the water in my bedroom-jug was frozen! As a rule, January is the coldest month, and February and March the most delightful. The sky is clear, the sun hot, and the air balmy and invigorating.

There is much to interest in Florida, and it is at least well worth seeing. The preponderance of negroes over whites is very striking, and along the interminable sandy tracks you will constantly pass a mother and her "piccaninny" standing at the door of her log hut. To the intending settler or traveller I would therefore say: Take plenty of light flannels and stout English clothing; take your own gun and your own sporting paraphernalia; live sparely, but well; travel "flying light"; expect to find a new country; and go when you can!

SCIENCE AS APPLIED TO SEA-MARKS.

IF the bottoms of all seas and navigable rivers were like the smooth interiors of wash-hand basins, there would be little need to mark them; but since "the great waters" are full of submerged hills and valleys, it is desirable, for the convenience of those that go down to the sea in ships, to indicate the hills, for avoidance, and the valleys, as channels. The simplest way would be by floating spars moored over the dangers by chains and sinkers; but science soon intervenes to make the floats of the best form for being seen, and yet not to be in the way of passing ships, nor liable to be driven from position by tide or wave.

Then comes, to increase visibility, the question of colour. Moreover, the sailor will want to know on which side of the sea-mark he should pass. Some authorities for his guidance put red on his right hand, black on his left, or *vice versa;* others say red and black get too much alike by exposure, the red getting dark and the black rusty, and use, therefore, red or black on one side, parti-coloured on the other. White, pure white, is not the alternative, because broken water, foam, or spray are white; and from confusion of eye the buoys would be, as one has actually been named—"the seldom seen" buoys; but white chequering red or black, or in alternate stripes, is very distinctive, and thus—reserving green to indicate temporary danger (wreck)—the system becomes tolerably complete. But here science gives another touch. With the knowledge that defined spaces of white have more emphasis on the eye than spaces of the same size in any other colour—even as white letters on a coloured ground can be read farther off than coloured letters on a white ground—therefore in parti-coloured buoys the white patches are actually much smaller, in order that the chequers may seem to be of the same size.

But buoys are but a partial help to navigation; they cannot, or could not until recently, be seen at night. Again science steps in; she makes a gas from oil refuse and compresses it, she makes her buoy of iron, a floating gasometer, lights it, and it burns for a month untended. But buoys with a "u," like boys without one, will be buoys, they break away or get run down; and then we look for shore marks, beacons. Many things will do. If by keeping a church spire in line with a tall tree or chimney the sailor learns that he is in the deep channel, he keeps the spire and the tree or chimney in line, and being in safe water can disregard the buoys; but then he may want to see these leading marks on shore at night, so they too must be lighted.

The first lighted sea-mark would probably be the candle in the fisher-wife's window, when "the harbour-bar was moaning"; but immediately thereon comes a call upon science, of a primitive sort, for distinction. If fisherman Dick's cottage be half a mile away from fisherman Tom's, and both want to beach their boats in front of their own doors, how are they to know one light from another, when they are at sea? If both be shown together, the right hand one may be Dick's, the left hand Tom's, but if the showing of both be not co-incident, let it be agreed beforehand that Mrs. Dick always shows only one light, Mrs. Tom always two, one above the other.

But then if lights can lead they can also mislead, and on coasts where the people profited by wrecks, science, in devilish hands, used to arrange a lantern, hung on the tail of a horse, made to move along the cliff; the undulatory character given to it by the motion of his hindquarters making it appear to be a light at sea, whereupon persons actually at sea made boldly for it, and were wrecked and plundered.

From the fisher-wife's candle the light soon got to be a coal fire. Coal fires in the headlands have existed almost within the memory of man. When the wind blew from sea they would burn clear to the eye of the mariner, when it blew from off shore, not so; and they were wasteful and fatiguing to tend; so candles were harked back to, but candles of a large size, and in a chamber of their own. The present writer has seen candles made for use at a light-house. The next step was oil, whale oil, very costly stuff, and only capable of being burnt effectually in lamps of peculiar construction; then followed the vegetable oil, colza, cheaper and more manageable; paraffin; the electric light; and—with a cry back to the coal fire, but a cry of science—gigantic burners of distilled coal in the shape of gas.

In all these developments science has been full busy. We all know something of the Argand burner; know that a lump of wick saturated with oil (such lamps as may still be seen, perhaps, at country fairs or roadside stalls), burns smokily, only half burns, in fact, but M. Argand made his wick into a circle, and let the oxygen in the air get well at it from the inside, whilst he also condensed it on to the flame, with a glass chimney on the outside, and science rejoiced at him; and since then, and on the principle that "to him that hath shall be given," the intensity of heat accompanying the development of the light has exalted the combustion to such an extent, that in the six-wick concentric burners of a first-class lighthouse—of which the three outer wicks only burn in clear weather—when the three inner ones (although much smaller in area and bringing therefore much less oil to the bonfire) are raised up and ignited, the intensity of the flame is *doubled*, and again science smiles.

Having taken such pains to generate the light, it behoves us not to waste it. If the lighthouse be on shore the light will not be wanted on the land side; therefore science

puts reflectors behind the lamps, and bends back (reflects) those rays to seaward.

Again, light is not wanted in the roof of the lantern, nor on its floor ; science afresh puts on its considering cap, and noting that light passing through any other transparent medium than that in which it had been generated, gets bent, or deflected, or refracted (of which law the broken look of a stick or oar partly in the water is a familiar illustration), so arranges a series of glass lenses and prisms (they look like gigantic glass beehives), that rays of light entering into them on a given line on one side, come out of them on a different and on a desired line on the other ; so that in the dioptric or refracting system of light apparatus the lamp is in the centre, surrounded by belts of glass most cunningly arranged (mathematical science being here the chief inspirator), which intercept the rays at a few feet from the lamp, and bend them obediently seaward, where all of them fall upon the sailor's path to guide him "into that haven where he would be."

With the multiplication of such guides, the need for distinctive character increased. The fact of one light in Mrs. Dick Fisherman's window, and of two (shown vertically) in Mrs. Tom's, is not enough. There are other lights about : ship's, riding lights, street gas lamps, etc., and the sailor's light must be unmistakable. Perhaps it had better flash—once or twice every minute a flash, although not always before the eye, appeals to it more strongly when seen than a fixed light ; moreover, that same witch, science, who bent the rays from shore and sky, and lantern-floor to seaward, can concentrate them, and make them stronger, far stronger, in a flash than in a fixed light. Imagine a lady's fan with the light at the hinge or pivot, and the rays dispersed from it round half a circle when the fan is fully open ; and then think of the same light concentrated into a powerful bar or beam when the fan is shut, and it will be understood how, by intercepting the rays from a central lamp they can not only be directed, but *packed* into an intenser beam.

But even this is not all we ask of science. Having got one keen strong flash, it may yet be not distinctive enough ; we may require one, two, or three flashes in quick succession to distinguish a sea-mark from its neighbours. And again science, in the guise of a senior wrangler or F.R.S., rubs its lantern glasses with the cheerfulness of an Aladdin, and produces the wealth of variety which we desire. Nay more (and we are very exacting of these slaves of the lamp), we may wish our flashes to be alternate red and white, and then, remembering that red light is weaker than white light, and yet that it is necessary to the sailor that both red and white should be seen at equal distances, science resorts to the communism of Robin Hood, and robbing the rich to feed the poor, so arranges its lenses as to steal from the white in order to reinforce the red ; and again the sailor is guided and informed of his whereabouts, and every night and all the night, at the very entrance of the English Channel, science has joined humanity at the Wolf Rock Lighthouse to flash upon the homeward-bound a rosy and a sunny "welcome home."

Once more ; the *place* of the light is often an important question ; sometimes it seems well to mark a solitary rock of evil renown in the deep waters, such as the Bishop off Scilly, the Wolf off Penzance, the Skerryvore off western Scotland, or the Eddystone of world-wide reputation. Then science of a different type, but fraternal spirit, comes into use ; the science of construction, tenacious construction ; cunning jogglings and morticing of stones to build up mighty, deep-sea lamp-posts, to build them as in Smeaton's imagination, with the homogeneity of a tree ; and led by men who do not say "Go and do this dangerous thing," but "Come and hold *me* whilst *I* do it," the thing gets done. Or it may be that lights should gleam around a dangerous quicksand, and then they have to be placed on light-vessels, as round the Goodwin, marked at this time by four ; and finally, we have special necessities along these northern coasts of ours from fog ; conditions of weather when light in all form fails us, when the sun himself is beaten—and one has but to watch a jet of steam thrown up from a locomotive between us and the sun, to see how easily. It is not then the poet's contest "betwixt nose and eyes," but the transfer of duty from eyes to ears ; times of driving mist and snow, when, as respects any value to navigation, "by daylight or candlelight eyes may be shut."

And here we are met by many difficulties. In the use of eyes it has only recently been noted how many persons cannot distinguish colour truly, do not know green from red, are, in fact, colour-blind ; and few people seem to know how many there are whose two ears do not hear alike ; and yet if only one ear be doing work, say the left, all sounds, whenever generated, even in the right, would appear to come from the left ; and whatever the scientific aurist may be able to do for such persons, until he has done it, and until they possess trumpets of that special pattern with one of which, when purchased by a woman known to the late Thomas Hood, "the very next day she heard from her husband in Botany Bay,"—they should not be sailors.

But to the sailor with all his senses "on deck," as he would say, sound, as a guide in navigation, has often, on the English coasts, to be resorted to ; and the task taxes science severely, because not only do the light-houses and light-vessels use sound signals, but all vessels afloat do so, to avoid collision with each other. As respects the sea-marks themselves, to be theoretically symmetrical, their sounds should resemble their sights ; the fixed light, always visible in clear weather, in fog should make continuous moan ; the half-minute flashing light should give a blast every half-minute, and so on, but practically there are intricacies. The atmosphere, too, with its varying condition is, in some of them, as difficult for sound as it is for sight. In a scientific report by Dr. Tyndall on the matter there is a most graphic account of a day afloat off Dover, with fog signals on the shore ; when the sea was halycon and the air (apparently) propitious, so that, for the observers, all promised to go (for determining niceties of power) as "merry as a marriage bell" ; but no, the sun was drawing up invisible vapour, and in irregular columns, from the sea, the atmosphere that looked so sunny clear was really flocculent and streaky, and neither sound of gun, nor of fog-horn, nor of whistle could travel deftly through it. Then, again, a fierce wind will carry sound sharply away before it, and when "the raging seas do roar," no other sound can hold its own against them.

Fortunately, however, in times of thick fog the winds and seas are often quiet, and one of the happiest thoughts in respect of fog-signalling from light-houses has been the use of loud explosive rockets, which, with their carrying power, can be fired in any direction, and will travel some way *against* a moderate wind, and burst with loud report at sufficient distance from the danger from which they emanate (the light-house rock), to keep the listening sailor free. And who shall say, in these days of telephones and of especial development of our vibratory and auditory knowledge, what triumphs may yet be in store for science in this and in other beneficent directions connected with the guidance of our sailors at sea?—science, so patient and yet so august when, humbly, she makes herself, as she needs must, interpreter of that "Eternal Father, strong to save, whose arm hath bound the restless wave," but who yet has made it the condition of our material existence that we should *understand* the laws of His universe, in order that we may find our safety in the piety of obedience to them.

FIVE IN ARRAN.

A HOLIDAY PAPER, SHOWING HOW GIRLS CAN BE HAPPY ALONE.

WE had determined to spend our holiday near at hand.

Why, we asked, should we go abroad to seek the picturesque, with mountains, flood and forest, so to speak, at the door? Why follow the multitude to Norway or Switzerland, and leave the beauties of our own Western Highlands unexplored behind us? No, we would be patriotic, and would revel in those good things upon which Providence had given us a closer claim.

So we threw aside our Baedekers, and drew forth a map of Scotland and an A B C time-table, and finally fixed upon Arran as the scene of our exploits.

There were other considerations which led to this decision; considerations financial, and those still vaster ones of time and space. We wished to be economical, and we had but a fortnight during which to devote ourselves to making holiday.

There were five of us, and we had all been hard at work during the winter in study, studio, and hospital; and were wearying now for change, fresh air, and some amusement. It was the first week in June, too—spring time we might almost call it up in the tardy north; and with this late spring there had stolen upon us the mysterious "*wandern-lust*," that delicious longing to be up and away, one cares not whither, that comes with the first soft winds and the bursting of the buds.

So we did not linger long over our plans, but as soon as our decision was fixed, packed up our things and made away. We took with us only the sternest requirements; for we meant to rusticate thoroughly, or even to "rough it" a bit, if necessary. Indeed, the greater part of our baggage consisted of ready-cooked provisions; for rumours had reached our ears of primitive ways in some parts of the island, and we thought it wise to put ourselves in a position of independence towards the culinary powers, or impotence, of our prospective landlady. Of course we took no servant with us. We were in search, no doubt, of the picturesque, but no less were we in quest of freedom, change, and complete rusticity; indeed, it is our success in this latter quest that we are most anxious to record here.

We started on a glorious sunshiny morning, and after an hour and a half's journey found ourselves transported to the little village of Craigen-doran, that lies smiling on the northern bank of the Clyde, opposite Greenock. At the pier lay the *Ivanhoe* in waiting, and we in a few moments were off, steaming into the golden morning haze that still hung over the river.

It would be impossible to give any one unfamiliar with the Clyde a true idea of the thousand beauties and charms of the scenery through which we passed. What words hold magic sufficient to call up before us the broad placid waters of the noble estuary; the wooded hilly shores with their groups of gay villas; the smiling islands; the glimpses through the opening lochs up into the gloomy mountainous regions of Dumbarton and Argyle? Who could depict the golden net-work that seemed to hang suspended from the heavens; the shifting mists on the mountains, the shadows chasing each other over wood and cornfield and meadow?

To us the long four or five hours' sail passed away like one deep-drawn breath of delight. In next to no time it seemed to us we had left Greenock behind, had passed the "tail of the bank," had taken on passengers at Dunoon and Wemyss Bay, and were steaming round the Toward Point into the pleasant waters of Rothesay Bay. From thence we passed into the narrow, hill-bound strait that divides the island of Bute from Argyleshire, the "Kyles," as it is called. Here steaming warily, for yachts and rocks abound alike in this tortuous, watery passage, Tighna-bruaich, the capital of this little region of pleasure—Tig-na-brick, as you may hear the summer tourist call it,—was soon lost to view behind the receding hills; we were out again into the open waters of the Firth, and in two minutes more Arran arose before us, a huge rugged pile of mountains, rearing itself up out of the sea, and glistening and glittering now in the strong beams of the June sun. Half an hour later we were drawing up at the pier in Brodick Bay.

Our first thoughts on landing, after one enchanted look around, turned naturally to lodgings. Two of our party accordingly encamped with our various goods and chattels amongst the ferns and primroses beneath the shady bank that skirts the shore, near the landing-place, while the remaining three formed a reconnoitring party, and went in search of a spot in which to pitch our tent for the following fortnight.

Brodick itself, with its sands and the sea before it, and the blue slopes of Glencloy behind, looked tempting; but here and there amongst the houses of the village we caught sight of a suspiciously fresh print dress, a deer-stalking hat, or a mountain staff. The owners of these were the first wave of the tide of pleasure-seekers that infest the shores of Arran during the later summer, and we fled from them as though they had been a pestilence.

Turning our footsteps, according to advice given at the friendly post-office, in the direction of Glen Shirrag, we pursued the road inland for about two miles, by which time we had reached a point high up on the hilly side of the glen, from which, looking down, we could see Whin Farm, our proposed destination, standing in the midst of a gigantic bouquet of blossoming hawthorn trees. The house was unsurrounded by wall or paling; the field in which it stood sloped down to a dancing burn; beyond that rose a high bank, bright with whin bloom and wild roses; and above that again, high on the other side of the glen, a great fir wood. The scene was deliciously fresh and peaceful.

"This is the correct thing," said number three of our party, who embodied its decision; and we struck down the little footpath leading to the house door. There were, in fact, four houses, two built together in front, and two behind, all belonging to one family, who had added them one to another, year by year, as their own wants increased, and the demand for summer quarters grew. We addressed ourselves to the smaller of those that stood behind, and soon found ourselves in the presence of the patriarchess of the clan, who rejoiced in the time-honoured name, redolent of so many unsavoury associations, of Mrs. McClarty.

"Could we have rooms?" we asked.

"Ou, ay."

"Which rooms?"

"Ou, ony o' them."

"And light, and attendance, and everything, and no bother?"

"Ou, ay; ou, ay."

So we closed with this delightfully assentive landlady at once, and chose the smaller house in which we stood, as being most suited in size to the depth of our purses.

The rooms, we may record, proved all that we could wish for, small, but comfortably furnished after a simple fashion. The light, we lived to discover, was limited after sundown to one guttering candle; and as to the attendance and "everything"—well, thereby hangs a tale.

It was now our duty to retrace our steps to the beach, acquaint the rest of the party with our success, and escort them, and also our baggage, back to the haven of rest which we had discovered.

This done, our cravings naturally took the direction of tea; and now it was that that rustic simplicity, for which we had been sighing so long, began to unfold itself.

We acquainted Mrs. McClarty with our desires. Two minutes later the good lady appeared in the little parlour.

"Here's the cloth," she said, laying that article on the table. "Ye'll find the cups in the press, and the knives and spoons ben the house, in the kitchen, like."

We saw what was expected of us, and did accordingly; Mrs. McClarty watching us with a smile of eminent satisfaction from her arm-chair in the kitchen, as we bustled out in search of the various requirements for the meal. Everything was in spick and span order of a peculiar kind. The spoons lay on the top shelf of the kitchen cupboard, behind the table; the knives reposed in a mellow newspaper, bearing the date, September, 1881, on the window sill; and the salt had to be fished up in a little

parcel from the depths of a gigantic water-jug. But the old lady was able to tell us without hesitation where to lay hands on everything; and we were soon seated round the parlour table in the full enjoyment of a sumptuous country tea.

The windows stood open meanwhile, and the balmy air that floated through them drew us out as soon as we had finished, to enjoy the peaceful evening before the cottage door. But scarcely had we established ourselves on the rickety bench that graced the front of our residence, when the quaint accents of our landlady were heard through the open doorway.

"Ye haven't *sided* the dishes yet."

"I beg your pardon?" said Number One, scarcely comprehending.

But Mrs. McClarty was gifted with a convenient, intermittent deafness, and toddled on without replying.

This was more than we had bargained for; but we adapted ourselves to the circumstances of the case, and set to work immediately, each one carrying her share of crockery back into the kitchen, where we were glad to discover that our hostess had made preparations to do the washing-up herself.

This was but our preliminary initiation into the duties that lay before us. We had said to Mrs. McClarty, while making arrangements with her, that we did not object to roughing it a bit; we had now to discover that our idea of roughing it, and Mrs. McClarty's idea of the same were widely different. As surely as we flattered ourselves that now had come the moment when we might freely indulge in the enjoyment of sweet do-nothingness, so surely did the good lady's accents steel upon our ears in some such admonitory terms as the following:—

"It'll be about time ye had the potatoes on," or "I'm thinking there's no water up for the tea."

On the morrow of our arrival we were making beds, the next day paring potatoes, on the third fetching water from the well. By the fourth day we had the sweeping and dusting in hand, and had we stayed a week longer than we did, it is highly probable we should have been brushing the boots, and lighting the kitchen fire.

But for all that, we had found what we wanted. The glen was a perfect paradise of peace and prettiness, with its ferns and wild flowers, its noisy burn and pleasant grassy slopes, where few came to disturb the soothing solitude. We were outside revelling in these good things, I cannot say "from morn," for that portion of the day was devoted to the sordid cares of housekeeping, but at all events till "dewy eve." Every day we drew our table out to the front of the cottage and dined there, with the cocks and hens chuckling around us, and a bewildered, knock-kneed calf or two by way of lookers-on. And every evening we carried our eatables to the burnside, and had a long, leisurely, anecdotic tea amongst the whins and rose bushes there.

Our good, primitive landlady, too, and our landlady's good, primitive relations gave us infinite amusement.

The former, Highland fashion, was untiring in her efforts to make us think little of ourselves.

"'Deed, if ye saw some folks working, ye would nae think sae much o' your bit turn," she would say, when we appealed to her for encouragement in our labours.

To the national susceptibilities of Number Four of our company, who was a foreigner, she proved a perpetual irritant.

"It'll be Gaelic ye'll be speaking in your country," she would remark with condescension, in one of the intermediate calms betwixt the crises of tea-making.

"Oh, yes, it's Gaelic," we others would reply, in chorus, humouring her.

"But it'll noo be like oor Gaelic. Oor Gaelic's different frae the North Country Gaelic. It's poor speaking in these northern parts—very poor."

To any remark unfavourable to the weather on which we ventured—say when a great, grey mist came rolling down the glen, or when the wind blew sharply, she invariably made the following reply,—

"Ou, ay, ye ken, it canna be aye fine." And then turning to Number Four would proceed, "But *ye'll* be used to it. It'll be far waur where ye come frae; cold and comfortless, nae doubt. It's a poor country, I'm thinking, a poor country."

And then, as if to vindicate her right to criticize Europe, she would add,—

"Ou, I've travelled a good bit mysel' in my day. I've been to Glasgow, and Kilmarnock, and to Stranraer. Ou, I hav'na just bided here a' my days."

Her delight and our discomfiture reached their height on the sixth day, when the stock of provisions we had brought with us came to an unlooked-for end. With the improvidence of inexperience we never gave this contingency a thought, until on opening the cupboard door on the above-mentioned morning, our gaze was met by an uncompromising row of empty shelves.

"Ye'll be busy the day, I'm thinking," said Mrs. McClarty, when she had spied out the barrenness of the land.

And we were busy. As good luck had it, the clouds had fallen over night upon our glen, and the rain was now descending in torrents. There was no temptation, therefore, to wander out of doors; so we speedily converted our little sitting-room into a kitchen, possessed ourselves, after much rummaging, of a baking board, rolling pin, and other requirements, and set ourselves to what was the unfailing resource of the well-known "Three in Norway" in similar circumstances, namely the construction of two "boss" pies. The one of these was composed of rhubarb from the cottage garden, the other of meat; and on eyeing their proportions when finished, even Mrs. McClarty was forced to allow that starvation had been again staved off to a pretty indefinite period.

From that day our labours in the kitchen were doubled, and the amount of chuckling that Mrs. McClarty got through, as she eyed us over her volume of Gaelic Psalms, must have confounded the very trees in the neighbourhood. Only once did she put out a hand to help us, and from what motives far be it from us now to determine.

A batch of scones, on which we had rashly ventured, had turned out a dead failure. Our good landlady had watched the process of mixing and "firing," and had said never a word; but on the completion of the scones, when on prodding them with a fork we found them in consistency resembling brickbats, she had indulged in such a succession of chuckles as positively to alarm us.

"Hoots!" she said, "run awa tae yere bit paintin's, and I'll turn ye out twa, three scones. It's as simple as look at it, if ye've just the knack o' it."

And when tea-time arrived, sure enough she arrived with it, bearing in, with many evident signs of pride, two heaped-up plates of girdle scones and crumpets; to both of which we did prompt and ample justice.

Seductive though the glen was, with its primitive ways and rustic prettiness, we were not content to spend all our time within its confines, but pursued our search for the picturesque farther afield. There is no place of similar extent richer than is Arran in scenery of every charm and variety; and our retreat was so situated as to place these riches within our easy command. In whatever direction we struck out, the path was sure to lead to some one of the chief beauties of the island.

Turning to the left as we reached the foot of the glen, ten minutes' walk round the shoulder of the hill brought us to the entrance of Glen Rosa. We paid our first visit to this wild, picturesque spot in the evening time, when the sun had sunk behind the hill, and when the white mist was rising in woolly circling masses from the bottom of the valley, a startled deer here and there breaking through the shifting wreaths, only to vanish in a moment again, like some disturbed, strangely fashioned dream. The air was biting and chill; but we could not resist the temptation to wander up the side of the valley to the head of the glen, which lay bleak and solitary beneath its encircling boundary of bare, precipitous mountains. The tops of these were rugged, and serrated, and grim, like miniature Alps, and from their sides came no sound but the bleating of a stray sheep or the shriek of the curlew. We could have found no place in all Europe more quiet and still, more fit to banish the memory of every vexing small thing.

Then there was the road to Glen Sannox, and the beautiful glen itself. We went there on a brilliant, sunshiny day, when, as we traced our way along the sea-shore, past the nut woods, and past the little string of white-washed cottages called Corrie, we could see the Ayrshire coast, and the islands and mountains far up the Clyde, all hazy and golden and tender-coloured in the distance. And when we came to the glen itself, with its little river and birch copses, and steep ragged hill-sides, we found it all breathless, and bristling under the hot sun; rocks, trees and water glancing and shining and shimmering, as they only can do in June, when the summer is still young.

And last, but not least, there was Goat-fell, the mountain of winds, to climb, for which arduous undertaking we were capitally placed at Whin Farm. The mountain—for it is none of your hills, but a bona-fide mountain, 2,945 feet high—presented its easiest and most inviting ascent to our glen, and we waited, and chose what we considered a perfect day for this our foremost expedition.

To those lucky ones who know Arran, the course we had to take will be familiar. There was the green, smiling valley, with its herds of feeding deer, to cross first, a beautiful valley with the horn of the bay tipped by the Duke's castle to the right, and to the left the blue depths of the Glen Rosa. Then we reached rising ground, and had to trace our way up through the pine wood, through the undergrowth of rhododendron and flowering broom, out on to the bare hill-side, where the real work began. I wonder if we shall ever forget that long, stiff pull under the hot sun, slipping as we did on the scorched grass, stumbling over heather tufts, and often coming to a

dead stop before some huge boulder that lay in the path, and that had to be scrambled over before we could come farther on. And then the terribly tough climb up the almost perpendicular peak, with its tumbled mass of stones and rocks. By the time we reached the top we had not breath left to say, "How wonderful!" and yet it was wonderful.

In the last ten minutes one of those quick changes that form the charm, and at times the disadvantage, of our Western Highlands had come over the weather. Instead of lying bathed in sunshine, the base of the mountain and the valley were enveloped in grey mist, thunderous black clouds were rising behind Caim-na-Calliach to the north-west, and amongst the sharp, desolate-looking summits of the other hills, and down in the dark crater-like abysses betwixt them, the wind was shrieking dismally, scourging and tearing the mist, and whirling it into a thousand weird, fantastic forms. It was soon so dark that we could not see farther than six feet before us, and we ate our luncheon crouching beneath a sheltering rock, our fingers and faces blue with cold, our hair streaming round us in wet, dishevelled masses, and our dresses clinging limp and dripping to our shivering limbs. In another half-hour it was all bright and glowing again, and we had a glorious prospect over hill, dale, and sea, away to Rathlin Island and Ailsa Craig and the mountains of Argyle.

Another delightful resource was the boating; and what could be sweeter than to paddle about Brodick Bay, or, resting on our oars, to watch the shadows playing hide-and-seek across Glen Cloy, or the clouds sweeping down and rising again over Goatfell, or circling round the summit of the dark Ben Noosh?

We might have fished, too, if we had liked, in the sea, or in the mountain burns. But fishing did not come within our province; and indeed, after one experience, when we walked two miles and a half to Brodick pier to buy "Loch Fynes" for tea, walked back with them to Mrs. McClarty's, and beneath the depreciating gaze of that good dame cleaned, cooked, and ate them without an intermediate pause, we felt that nothing could ever induce us so much as to look at a finned creature again.

And so we cooked, and walked, and boated, and paddled, and made sketches of various parts of the glen, with the Swiss mountains beyond (the village shoemaker assured us the formation was Alpine), and dozed on our bank of roses, and were happy; and our fortnight's rustic holiday-making came all too speedily to an end.

When the day of our departure came, we wrung a few words of regret even from Mrs. McClarty, who remarked in a casual fashion that the place would be "dull like" without us. We felt dull ourselves, for we were more than sorry to leave. However, our venture had prospered perfectly. We had proved it possible to find a spot in our own over-crowded island, within a few hours' journey of a populous city, where we could enjoy what was beautiful; and rest, and ruralise, and make merry in primitive fashion, as successfully as we could do the same on the Fjelds of Norway, or in the secluded vales of Switzerland.

The moral of all which is, that all the hard-worked young women in the four kingdoms might and could do the same if they only would.

"Was it a success?" our friends asked, when we arrived home after our return journey. "Was it a success?"

"Completely so," we replied in triumph, and proceeded at once to combat their evident scepticism by a favourably coloured and graphic sketch of our experiences.

But tell it not in Gath; for we hid it well from them, when supper was announced, and when we had partaken of it, and had fingered the dainty china, and basked, as it were, in the light of the shining table-cloth—when we had done all these things with a relish never experienced before, and leaned back in our chairs to discuss our adventures at ease—what put the finest point upon our enjoyment was undoubtedly the thought that there was no voice likely to steal upon our ears, at the climax of our comfort, with an admonitory reminder of "dishes to side."

"THANK YOU, CAPTAIN!"

A REVIEW of his army by the first Napoleon was no ordinary scene. He was a conqueror, and he looked with pride on the human instruments of his victories. His soldiers believed in him with unquestioning faith, and followed him with enthusiastic devotion.

But it happened on one such occasion of imperial display, that, while occupied in giving an order, the emperor incautiously let the rein fall upon the neck of his horse, which, taking fright, darted off at a gallop, placing the rider in imminent danger of being thrown.

While all stood gazing in consternation, a private soldier, from his place in the ranks, sprang before the horse, seized the bridle, and respectfully placed the reins in the hand of the emperor.

"Thank you, *captain*," said the rescued emperor, as quick to reward as to apprehend a service.

"*Of what regiment, sire?*" asked the soldier, saluting him.

"Of my own guards," replied the emperor, charmed with such a manifestation of faith in his sincerity; and he then galloped away.

Instantly acting on the declaration, the soldier laid down his gun, intimated his new rank to his companions, and passed over to the group of staff officers.

"What does the fellow want?" haughtily asked one.

"The fellow," said the soldier, "is a captain of the emperor's guards."

"A captain!" cried another. "Who said so?"

"*He* said so," replied the soldier, pointing to the emperor; on which the officers immediately greeted him as one of themselves.

Would it not have been more discreet, more modest, to wait and see if the emperor took any further steps in the matter, for such a piece of good fortune seemed really too good to be true? No! the truest discretion was to *believe* that the emperor meant what he said, the truest modesty was to receive unquestioningly the grace bestowed, and obediently accept its conditions.

Enfolded, parable-wise, in this incident lies a great spiritual lesson.

A wonderful word has been spoken, and wonderful results are to follow for all who *believe* it.

"God so loved the world, that He gave His only begotten Son, that *whosoever believeth* in Him should not perish, but have everlasting life."

It is a familiar sentence, to be heard in every place where the gospel is proclaimed.

On the simple fact of belief or unbelief hangs the power and consequence of the whole declaration.

Shall a little earthly dignity be instantly accepted on the word of an earthly sovereign, a despot, a tyrant, because he is understood to mean what he says, and has power to fulfil it? And shall the word of the King of kings, the Lord of the whole earth, who died to purchase the right so to bestow, be doubted and rejected? Is not such rejection presumptuous and absurd?

But once appropriating individually the blessed "whosoever," once over the rubicon of "believeth in Him," there is no limit to the sinner's welcome, the saint's inheritance. "All things are" then "yours, for ye are Christ's, and Christ is God's."

"STORM AND WIND FULFILLING HIS WORD."

I WAS walking in the direction of a village near to my lodging, when the dark clouds gathered on the sky, and threatened a storm. I paused and prayed to be guided whether I should proceed. I was then midway. I had no umbrella, and there was not any shelter on the road; therefore I prayed earnestly that I might return if the storm were about to break, as I had no protection from it. The clouds seemed drifting before the wind, and I felt assured that, as I still felt led to go on, I should gain my lodgings again before the storm would break.

I reached the village, transacted the business for which I came, and was passing the last of the houses, when the storm burst fiercely, and I rushed for shelter to the first open door, wondering in my heart why I had not been directed to return to my lodgings, where at that time I should have been in safe harbour. More uneasy at these unbelieving thoughts than in the outward circumstance, I looked into the pitiless storm with a troubled heart, when a low, subdued voice from within entreated me to enter, and not stand in the draught of the door. It was a boot and shoe warehouse, with an inner room, wherein was seated a widow at her books, making up her accounts. Her mourning was fresh and new, and the distress of her countenance at once drew forth my pity. She invited me into her little parlour, and placed a chair for me; she then took her place again at the table, and resumed her occupation.

I said, "'Let their widows trust in *Me*.' Are YOU trusting in the widow's God?"

She started, and with sudden vivacity replied,—"I do, I do; but *my* trouble is so great. Mine is such a peculiar trial"; and as she looked into my face, thankful for the sympathy, I saw her eyes were red and swollen with weeping.

Surely it was the Lord who opened her heart to spread her woes before me. I showed her it was Satan's plan to harass and bewilder her in her sorrowful circumstances, more severely felt from her loneliness and grief.

When I had said this, she exclaimed, as if new light had broken on her darkness, "Ah, if I thought this was not *my* doing, but Satan's temptation, I could pray more than ever." We went over the affair quietly together, and she was cheered and comforted. I hardly think that the widow rejoiced more in her deliverance than I in tracing the hand of my God in giving me something better than I could have asked or expected. The storm ceased, and I turned from the house of shelter, blessing the Lord for a rejected prayer.

A week or two went by, and I paid a visit to the widow. The trial had passed, and left a harvest of blessing. She told me that she dated a new era in spiritual life from that darkest day of her affliction; and not only that, but in temporal things also she had found the widow's God!

ANNA SHIPTON.

BRITISH INDUSTRIES.

By Henry H. Bourn.

WORKING IN A COAL MINE.

COAL seams are generally believed to be the fossilised remains of forests, bogs, and moors. This theory is supported by the discoveries of huge trees of strange forms, thick hedges of tall reeds, and plants and leaves of numerous kinds in the different coal measures; and further, by their microscopic structure, combustible properties, chemical composition, and certain phenomena, which may be observed in reference to their position in the strata.

From certain remarks made by Whittaker, in his "History of Manchester," and by Pennant, respecting the finding of a flint axe in some old workings in Monmouthshire, we feel justified in inferring that coal was known and used by the ancient Britons. It is quite certain that the Romans used it. From the twelfth century we possess reliable information respecting the getting of coal, and its being used for different purposes. For centuries only small quantities were procured from seams which were exposed on the surface. In our time, however, the quantity raised, from a few feet to that of nearly two thousand feet below the surface, during each succeeding year amounts to the almost incredible total of about a hundred and fifty million tons, giving employment to about five hundred thousand men and boys.

Knowing what we do of the different colliery districts of the United Kingdom, and of the people residing therein, we have no hesitation in saying that if, for the most part, colliers are rough and uncouth, they are extremely simple as a class. Beneath an unpromising exterior, they are found to be strong in their affections, and to have hearts which are both warm and true. Many illustrations could be given in proof of these statements, if space permitted. Sufficient allowance is not made for the unfavourable surroundings of the men, or the peculiar temptations by which they are beset. Although the hours of labour have been considerably reduced during the last thirty years, it may still be truthfully said, that of human life they see as little as the train of black ants we watch emerging from their holes in the ground. A life so cheerless, and yet so useful, should at least receive at the hands of the Government every protection that can be thrown around it; and we are glad to know that the last three Acts for the better regulation of collieries have been framed with a due regard for the safety and comfort of the miners; but, after all preventive measures have been taken by both the Legislature and colliery proprietors, the risks will still be great, even with careful men, as the following description will show.

When once the shaft has been sunk, and the "inset" has been made secure, it is usual for two men to descend for the purpose of "driving" "gate roads," or "levels"; other roads are then "driven" at various angles, more or less approaching right angles with the "gate road," till at length everything is in readiness for "opening the work." As soon as it has been decided to "get the coal," several "pikemen," or "hewers," "bandsmen," "dirt-carriers," "horse-drivers," and a "hanger on," are set to work.

The two principal methods pursued in removing coal from its bed are the "stoop-and-room," or "pillar-and-stall" system, which is followed in all thick seams; and the "long-wall" system, which is generally adopted in seams of eight or nine feet in thickness. In the first, or "square-work," the coal is taken out in parallel spaces of about fifteen feet in width, intersected by a similar series of passages at right angles. Between these large masses of coal are left, which in some districts are called "stoops," but in other localities they are spoken of as "pillars." When the roof no longer requires support, these are removed.

The "long wall" system consists in excavating the entire seam of coal at the first working, the overlying strata being supported by the waste rock from the roof, workings, and roadways, the sides of the latter, leading to the different parts of the mine, being built up with stone, or what are termed "packed walls," so as to keep them in proper order for traffic and ventilation.

To make this more clear, we will ask the reader to accompany us in a visit to a coal mine. Having dressed ourselves in true collier fashion, we, in company with the manager, take our place in the skip, or cage. At a signal given by the "banksman," the engine driver commences to let us down the shaft. Although the manager encourages us by saying, "Do not be afraid," we cannot help our thoughts running in a direction somewhat like this:—

"Supposing the hooks should become unfastened?" or, "If the bottom of the skip or cage should give way, where should I be?" "If the chain should break?" "If the cage should catch in the brickwork of the shaft?" or "If I should lose my hold of the chain, what would be the result?"

These questions are, however, soon interrupted by the "banksman" calling to the "hanger-on" at the bottom of the shaft, saying, "Some gentleman and the 'gaffer' are coming down." We are not long in making our descent. Although it is a difficult task to make darkness visible, it is possible to understand much, if accompanied in our subterranean journey by an intelligent person. In passing along the main road, our companion tells us not a little respecting the different methods of working; and almost bewilders us with his information about "holeing," "blowing," "brushing," "tree-setting," "working in the band," "gate-roads," "air-heads," and the "face of the work." At length we come to a door, which is opened for us by a boy. These doors are necessary for directing the current of air. Most serious consequences have followed their not being properly closed.

Proceeding on our journey, it may be three or four hundred yards, we arrive at the "work," or the place where coal is being excavated. We find one man working with his pick-axe in an opening not more than two feet high, but eight or ten feet from the "face." He is in a trying attitude for work, as there is not sufficient room for him either to stand, kneel, or sit. Poor fellow! he has to rest himself on one hip, while he swings his "pick." Another man is cutting up the side of a piece of work, which has already been cut under, so that it may more easily be brought down by wedges being driven in, or some explosive substance being used. Another man is dressing the sides of a pillar, which is being left to support the roof, while others are busily employed filling the skips, or tubs, and boys are engaged in carrying away the dirt, or fine coal, so that a free space may be kept for the workers. It is all heavy and exhausting labour.

If any of our adult readers will condescend to take a position under a table, in an attitude similar to that of the miner, they will be able to picture to themselves the inconvenience of picking with an axe the underside of the table for eight hours; they will obtain some slight idea of the knot into which the poor collier has to tie himself for the whole term of his working life.

If we look at a collier, we see instantly that his back is curved, his legs bowed, and the extensor muscles of his calves withered through long disuse. He has knotted himself so long that the erect position of his race becomes a punishment to him.

Few persons are aware of the fact that one-third of the value of the miner's life is cut off by the hand of death; or that, during one-fifteenth of his working life, he is dependent upon the parish, the sick club, or the friendly contributions of his fellow-workmen.

Although explosions in collieries call public attention to our miners occasionally, it is not generally known that more persons are injured and killed in coal mines from other causes. Stated thus, it may be said that about 17·80 per cent. of deaths, in and connected with coal mines, result from explosions; 41·00 per cent. from the falls of roof; 14·90 per cent. in shafts; 19·20 per cent. miscellaneous underground, and 8·00 per cent. on the surface.

If more regard were paid to ventilation, and a limit set to the working area of mines, greater care taken in timbering, and time cartridges used instead of powder in fiery mines, we should not hear of such harrowing details as twelve hundred, more or less, meeting with violent deaths, and at least fifty thousand receiving injuries, five thousand of which prove to be permanent; or of five hundred poor women and two thousand children being left destitute by catastrophes in coal pits alone, during each year, with almost unvarying regularity.

While writing this, we are pleased to notice that special efforts are being put forth in the Northern coal field for the avowed purpose of benefitting the colliery population. We sincerely hope that the movement originated in an earnest desire to secure the spiritual and social welfare of the people, and not to make proselytes to any Church. If such were the case, we can, from our own experience and knowledge of miners, promise the ladies who have undertaken the work a hearty welcome; and will pray that their mission may be greatly blessed of God.

"WARRANTED TO REMOVE ALL STAINS."

AS I opened my door one morning, I found on the step a hand-bill advertising a wondrous preparation for the removal of *all* stains in cloth—"sure to do it, never known to fail." I read it, and thought of other stains more foul—stains that had struck into the textures of life, and left a sorry mark upon soul and character—guilty stains. Who is without some of these marks?

Oh, what effort is made to keep them out of sight—cover them up—washing "with nitre!" But the spots stick; they will not out. Much management may keep them out of others' sight, so that the garment of life is made to look tolerably respectable; but alas! they glare out, and bring discomfort and terror. One's very effort to conceal them often makes them the more prominent—directs attention to them.

Now what a sale might be made of some mixture that would "take out the stains of sin." What a market it would find!

Is there anything that will do it?

Yes, a fountain, and "sinners plunged beneath that flood, lose all their guilty stains."

Near?

Yes, close at hand; always accessible.

Costly?

"Without money and without price." None so poor but may wash here and be clean.

Where is it? What is it?

"The blood of Jesus Christ, that cleanseth from all sin." Soul-stained, sin-defiled, will you try it? If you try it, you will find to your joyful satisfaction that it will just meet your need—the very thing you want.

The voice saith, "Come now, and let us reason together, saith the Lord: though your sins be as scarlet, they shall be as white as snow; though they be red like crimson, they shall be as wool." This is what God says.

Won't you come to that fountain? Come now, and you will sing, "Happy day, when Jesus washed my sins away!"

BUILT INTO A BLOCK OF CONCRETE.

THREE hundred years ago, in the lovely town of Algiers, situated in the sheltered vale closed in on the south and west by the snowy Atlas mountains, and washed on the north by the blue waves of the Great Sea, some builders were at work on a new tower. They paused as a Christian captive was dragged by his Mahommedan persecutors to the spot.

"We give you twenty-four hours to consider. Either renounce your Christianity, or be built into this wall for ever."

He firmly replied, "I have faith in the Lord, who by His grace will give me strength to die for His holy name. I am a Christian, and a Christian I shall die."

Remaining steadfast, he was thrown alive into a mould in which a block of concrete was being made, his feet and hands being bound with cords; and the block containing his body was built into an angle of the wall.

In 1853, when the Tower of the Twenty-four Hours was pulled down, the workmen found the space in which the Christian martyr had been laid. It exactly corresponded to his form, which had been laid on its face with the hands tied behind. He had been short in stature and of spare form, his face thin and brown. He had been built a living block into that dead tower. His body perished, but in thus giving it for his Master's glory, he nobly finished the spiritual temple he had in his life been making for his Lord. Even that cruelly defaced body of his still helps the Master's building to grow. In the Museum at Algiers, the mould of that body, taken in its mould in the wall, is now preserved, and no one can look upon it unmoved.

The sacrifice of Geronimo the martyr is this day a help in the work of the Lord.

"I WISH I WAS SOMEBODY ELSE."

"AH," says the cooper, "Mine is a hard lot, for ever trotting round like a dog, driving away at this hoop."

"Heigho," sighs the blacksmith, "this is life with a vengeance, melting and frying one's self over the fire."

"Oh that I were a carpenter," ejaculates the shoemaker. "Here I am, day after day, working my soul away in making soles for others, cooped up in this little seven-by-nine room."

"I am sick of this out-door work," exclaims the carpenter, "broiling and sweating under the sun, or exposed to the inclemency of the weather. If I were only a tailor."

"This is too bad," cries the tailor, "to be compelled to sit perched up here plying my needle; "would that mine was a more active life."

"Were ever such a life as mine?" says the housemaid, "ever on the run to carry out the whims of missus."

"The days are too long," says the mistress; "how one is plagued with these servants."

"Trade is shocking," says the shopkeeper; "people won't buy, and I can't get my money in. I wish I was in a situation."

"Happy fellow," says the assistant; "here am I kept hard at it from morning to night, while master can go out whenever he pleases."

"I wish I had a pile of money," says the fast one; "gold, gold, what would I not do if I had plenty of it, instead of crawling along in this fashion."

"Was anything so perplexing?" says the merchant; "that bill due to-morrow, and not a penny in the bank to meet it; I wish I was out of this concern."

"Oh!" groans the lawyer, as he scratches his head over some perplexing case, "I would rather be stone-breaking than at this."

"What! another ring at the bell," says the doctor, as he turns out of his warm bed. "I wish I was sound asleep some twenty miles from here."

And so it is, all through life; none content, nothing will satisfy but Christ. A real Christian never wished to be something else.

FROZEN TO DEATH.

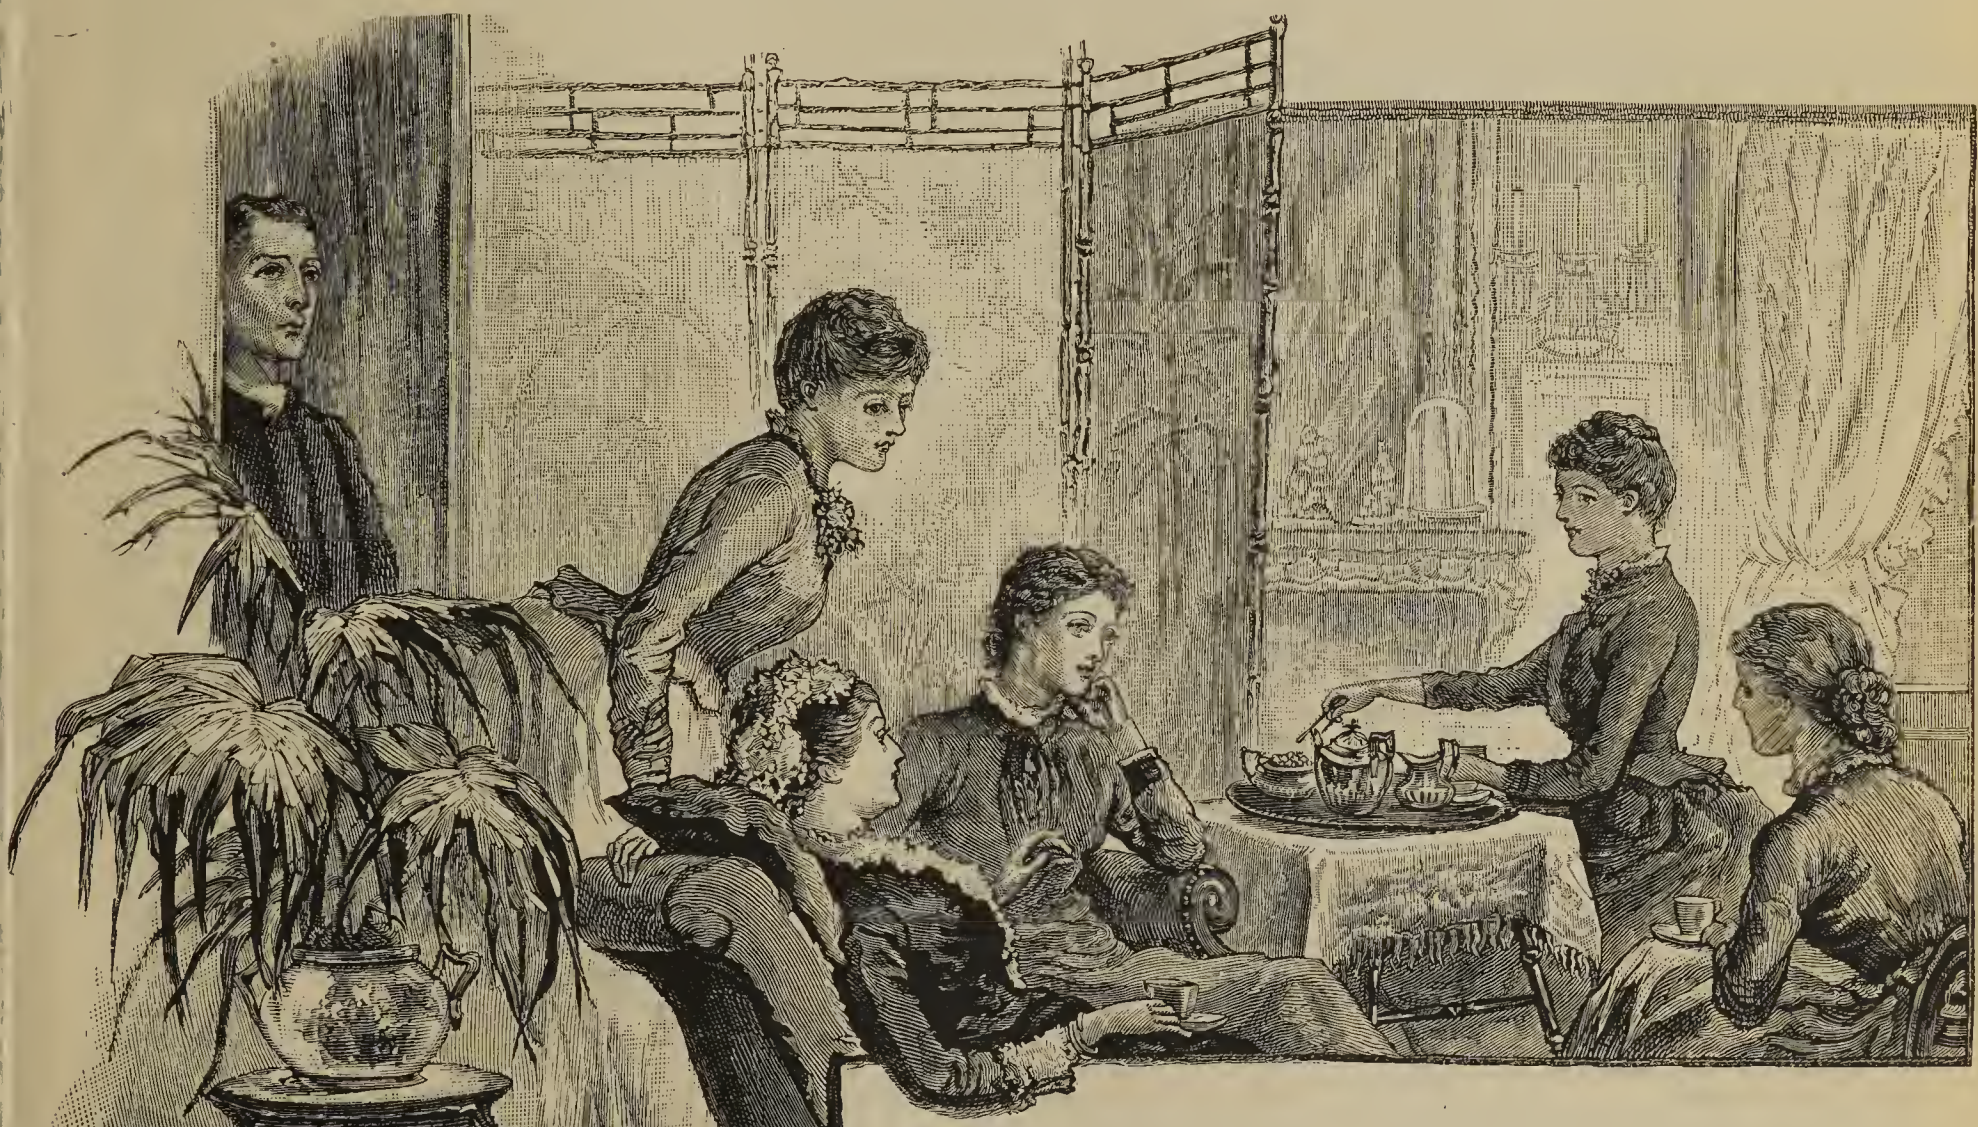
IN the École des Beaux Arts at Paris, there is a bronze Mercury drawing a thorn out of his heel—the last work of the sculptor Briantes. Although a man of genius, he was very poor, and a garret had to serve him for studio as well as home. During the severe winter he was working at this statue, and had to save his small allowance of fuel for the hours during which his model was sitting to him. One night the cold was so intense that he heaped upon his own bed all the clothing he possessed. Suddenly he remembered his masterpiece; and dreading lest the damp clay should be frozen, he stripped himself, and put all his clothing and bed covering round the figure. When his friend Cavalié entered next day, the sculptor lay on his bed, frozen to death. Was not his a passion for work? He was gone, but his work remained. In memory of him, his friends had the Mercury cast in bronze.

This is the picture which is now exhibited for the study and inspiration of young French sculptors in the École des Beaux Arts.

A GOOD ANSWER.

A POOR negro woman was lying ill in an American city. A student of theology, who was visiting her, wishing to test her faith, said to her, "Do you mean to tell me that God cares anything about you? He has the President and all the great people to care for." "Yes," she said, "He is my Father, and He cares for me." "But you know that soon they will be laying you in a deal coffin, and will bury you in an unknown grave." "Yes," she replied victoriously, "I know all that; but just then a glorified spirit will be going through the streets of the New Jerusalem, and all the angels will gather round, and they will say to one another, 'See what the grace of God can make of a poor old coloured woman.'"

MAD JOHN BURLEIGH:



A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted,"

"Little Rainbow," "Corbiestanes,"

"Our Navvies," etc., etc.

"A minute later John Burleigh entered the room."

CHAPTER VII.

IN WHICH JOHN BURLEIGH EXPOUNDS SOME OF HIS MAD NOTIONS.

"HE certainly has a most peculiar way of viewing things. He is a very good fellow, without doubt, but more than *rather* mad."

So spoke the earl.

The shooting party had long disappeared, other visitors taken their places and also departed, and now early Spring had arrived, and the family were alone, and gathered themselves round the drawing-room fire after dinner.

"What do you say, Susie? You are more in the village than any of us."

"I agree with you, father, about the peculiarity, but not the insanity, or if so, then Mr. Burleigh is mad in the same way as Saint Paul, and Luther, and Francis of Assisi, and a host of others. The men behind all great movements have ever been considered insane, you know; and," added the young lady with a laugh, "Mr. Burleigh is rather a big reformer for our small village."

"Indeed, yes. Revolutionist you should say—not reformer. Why, if I were to carry out one-half of his suggestions, I should be ruined!"

"Perhaps, then, you would listen to a quarter of them?"

"No, that would be fatal. Just open the sluice-gate ever so little, and the pressure behind forces it; the flood rushes through and sweeps everything before it. Even so with enthusiasts like Burleigh; yield one point, and you are lost."

"But what does he ask?" The countess spoke largely; she was leaning back in her chair, content and comfortable.

"My dear, rather tell me what he does

not ask, or rather, by implication, demand. Let me see. The church to be heated and lighted for every service, cleaned also, open pews all free, organ repaired, a new carpet, and so on, say £400; the village to be drained, say another £400; an abundant supply of water brought five miles from Azerley town, say £200; all the cottage bedrooms to be enlarged, or more rooms built, say £1,000; gardens, in allotments, say a yearly loss of £5; a village club, say £50 outlay; and then £20 a year, and all the manorial forest rights to be given up to the forest dwellers, which means free pasturage for twenty cows, rights of gathering sticks and cutting turf, which would interfere with some of my best shooting. And the restoration, finally, of Barton's Free School, which means a rent charge, not paid in the old marks, on Barton's grave stone, but the marks of his day translated into their corresponding value in this, about £200 a year, instead of ten. In money, £2,000 down, and a yearly payment or loss of some £300. To say nothing of enough work to leave no room for the slightest rest for a couple of years to come for me."

"I never heard anything so abominable," cried Lady Azerley. "And do you really mean to say Mr. Burleigh has dared to propose all this outlay to you, Oliver?"

"Not exactly propose; but somehow he has a most uncomfortable way, as I remarked, of suggesting all these things; and more still, he, as it were, plants the idea, and leaves it to develop."

"The people have been perfectly happy and content as they are. Why should he stir them up to discontent?" observed Lady Diana quietly.

"Ah!" said Lady Susan, "papa will tell you that Mr. Burleigh also implies more shame for those who have left them in ignorance. I must say I agree with him."

"Then," observed Lady Charlotte, "if Mr. Burleigh wants to be so extensive a reformer, why not give him permission, father, to do as he pleases, and just let him carry out his fads himself?"

"Ah! if I only could," sighed the earl. "But then comes in the duty property bears—in fact, *noblesse oblige*—and plainly I cannot afford all this outlay. People may think as they please, but I am a poor man."

"Markham is horribly extravagant," sighed the countess.

"Yes," remarked her husband dryly; "and Edward is not specially careful."

This reference to her favourite son made his mother glance up quickly.

"Poor boy! What can he do? The Guards is such an expensive regiment."

"Just so. Therefore I cannot drain villages and re-build cottages."

"But," said Lady Charlotte, "cannot you give Mr. Burleigh *carte blanche* to do what he pleases? He is a rich man, and a bachelor. Two or three thousand pounds are nothing to him, and he will enjoy using them."

Lady Susan crimsoned, but said nothing.

"There, again, I can't understand Burleigh. He keeps but one woman servant, no man, no horse, nor groom. His clothes are well worn; and I went in at dinner-time last night, and he was dining from a piece of cold boiled beef and some potatoes. There was not even a glass of wine on the table. If one did not know Burleigh of Burleigh was such a rich man, one would fancy his nephew absolutely poor; but that cannot be. Burleigh, I know, has but two nephews. He has always brought them up as his own sons, and this one is the elder."

Lady Susan rose and left the room. She knew the Vicar's position better than her father did. He had said to her quite simply one day, and as a well-known fact, "Arthur is my uncle's heir; he will make a capital squire of Burleigh some day." They had grown to be great friends, John Burleigh did not suspect how great, though Lady Susan did; and this inner consciousness made her silent, and prevented her being the Vicar's champion. Moreover, as Lord Azerley disappeared, the quick ear of Lady Susan caught his hurried words of greeting, and a minute later John Burleigh entered the room.

Perhaps there was no one in the parish whom, since his arrival, John Burleigh had more influenced than this young lady. He spent most of his thoughts, and almost the whole of his time, on the villagers and farm folk. He went to the Chase at least once every week, and spent hours talking to the gardeners and grooms. He even held a Bible Class for an hour one afternoon a fortnight, in the housekeeper's room, for the maid-servants; and then he would make his way to the drawing-rooms, and spend an hour more with the countess and her daughters. Now and again, too, he would dine with the earl; but Lady Diana, who was great at croquet and bowls, and Lady Charlotte, who was a famous horsewoman, soon found the Vicar was always too much occupied to join them in their recreations.

The day had been when he loved even violent bodily exercise, but since his long attack of low fever, he had never felt up to it. He worked untiringly so long as the duty in hand demanded exertion, but the moment that was satisfied, he suddenly felt weary and weak.

Sometimes, too, a pain as of a steel cord compressing his chest, brought him to a sudden standstill when he was walking rapidly. He had to battle with this pain, and the strange feeling of suffocation which attacked him, and then, after a few minutes, he would more slowly resume his walk, with his aching arm hanging by his side. The parishioners were phlegmatic, and the Vicar's fiery enthusiasm beat itself against their stolid natures, and fell back often exhausted. He suffered for them far more than they were capable of doing for themselves, and wore himself out, mentally and physically, with the strain of a passionate sympathy, which they neither understood nor required.

John Burleigh could not comprehend this; he knew the command—"Rejoice with them that do rejoice, and weep with them that weep," and, with his quick imagination, it was easy for him to understand, as he imagined, his people's joys and griefs, and to enter into them. But he was mistaken; he, in truth, exaggerated their capacity of enjoyment and pain, and bore for them a far heavier burden than they carried themselves.

Some amongst them thought the new parson fanciful, some thought him queer,—none understood him. Lady Susan first learnt to do so one warm Spring afternoon, such as surprises us with a visit now and again towards the end of April.

She was a good walker, and taking her sketching block and box, set off immediately after luncheon to the old Norman castle, which frowned down on the village of Houghrigg. She wanted to get a sketch of one of the oriel windows while the ivy, which crept about it, was yet of a tender green.

She was in the midst of her work, when she heard a step, and the Vicar entered the ruined court-yard; he saw her, hesitated a moment, and then came over the soft green turf towards her. Lady Susan felt that he had come here to be entirely alone, and that for a moment he had been surprised, and perhaps disappointed, at seeing her. She felt awkward, almost as though she had walked into the Vicarage and established herself in his library! She blushed under the thought, and was angry with herself for doing so. "The place is ours, and it is he who is intruding, not I," she told herself, as the Vicar came to her side.

Being confused, and vexed with herself for it, Lady Susan's greeting was of the stiffest; but either the Vicar did not see her constraint, or did not heed it. He threw himself down by her side, and discussed her sketch with her, then the old castle.

"You know it better even than I do, Mr. Burleigh. Do you often visit it?"

"Yes; it is a kind of out-of-doors study to me. I found it out last Autumn, when I first came. It is so utterly still, it rests me to be here. Sometimes I bring my books or my writing with me; sometimes I come just simply to rest, as to-day."

"And to be alone—in which, for once, you are disappointed."

"I am glad it has been so," replied John Burleigh simply; "it has done me good already seeing you. I needed some one to consult. Have you ever felt, since you were grown up, the old need to confess you have been naughty, and the longing for absolution and counsel, which as a child drove you crying to your mother's side?"

The Vicar spoke musingly, and did not look at his companion, but at a sprig of ivy which he held between his fingers.

"I have felt it," replied Lady Susan; "but I crushed the hunger down, and I thought that you were too good a Protestant to have such proclivities."

"Ah! there is the mistake. Why should not we Protestants—the Lord's free men—dare to think on this, as on all other religious subjects? Believe me, Lady Susan, many a young person is drawn Romewards by the longing for confession and absolution from one they consider a priest, only because they have not faced the truth. Are ye not all the Lord's priests?" he asked, with a bright smile.

"What is *your* idea of priesthood, then, Mr. Burleigh?"

"Well, a wide one. Is not every believer a priest? Not only those who proclaim God's mysteries—the mysteries of life and death—and who preach the gospel of redemption; but every one who knows experimentally that Christ died for him, and into the very fibre of whose being it enters to unfold the same grace to others. But we are drifting away from confession. I cannot understand any one longing to go to a man, simply because he holds a certain office, and lay bare his wounded heart for his inspection. The highest and deepest confession is the cry of the broken and contrite heart to God Himself, the deepest absolution His peace; but though I feel no office can entitle a man to hear confession, and in God's name to give absolution, yet on the other hand I know it is an absolute necessity to some minds to unburden them-

selves, and to consciously hear God say, through human lips, 'Go in peace'; and as God knows the weakness of our human hearts He provides for their unburdening."

"But how?"

"Well, thus. I have many a time, all unconsciously to my confessor, made true confession, and gone away with the felt blessing of God's absolution from the cottage of a feeble old woman, who could not read even her Bible, but who had a wise head, and who so lived in the light of God's countenance that she had caught so much brightness she had ever a ray to lend to some neighbour toiling onward in darkness."

"Ah, yes! I have done something like that; but then I never felt the absolution."

"Because you did not recognise that the water of life is from God, and that He can quench our thirst with it out of the humblest vessel."

"But the Bible says, 'Confess your faults one to another.'"

"True! 'And pray for one another.' Just so, if you have caused pain or offence, go and beg pardon. That is God's penance, and so like Him! One full of reasonableness and meaning, not a senseless repetition of prayers or a gift—a corban, but an actual fighting of the devil, of pride, and anger, and self-assertion—one that brings the soul to the feet of the Christ, and leaves it there. But I am speaking of the secondary confession, which implies human counsel asked, and of the absolution which is the confidence and peace which comes of having heard the words, 'This is the path, walk ye in it, with the blessing of God guarding you'—comfort, in fact."

"But surely *you* never need such help," said Lady Susan.

"Yes, and often, too, though I but seldom ask it." He paused a moment, and then added, "I am going to make my confession to you. May God, through you, send the grace of His absolution and the direction I need."

John Burleigh spoke with a quiet seriousness which was solemn, and his companion was startled.

"Oh, don't!" she cried; "I am not worthy."

"No; but as I came up the hill, I asked God to show me His light. And why should either you or I trouble as to who holds His candle?"

They remained silent, and the girl knew that the clergyman was praying. She looked beyond the ruined walls to the blue sky above, and God felt very near.

When he next spoke, it was in a very quiet voice.

"It seems a little thing, yet I feel the jar of it. I was in the school this morning, as usual, taking the Scripture Class, and noticed that Dick Bradley, from the brickfields, was absent. You know him?"

"That sharp boy with red hair?"

"Yes, the same; and, on inquiry, the master told me he had been absent on another day this week. So, this afternoon I walked out to the brickfields to see what had become of him. I found Mrs. Bradley evidently in a bad humour. She continued cleaning the fire-irons after my entrance, and would hardly speak; and then, when she did open her lips, she poured forth a torrent of reproach against one of the men who works in the brickfield, and whose special offence, though she talked for a quarter of an hour, I could not make out. Finding her in this unreasonable temper, I determined to say nothing about Dick, who now, I began to suspect, was playing truant. Unfortunately, at that moment he came in. He suspected I had come to see after him, and instead of greeting me as he ought to have done, he put on a sullen air, and immediately turned to go out. His mother saw him, and absolutely flew upon him. 'I'll teach you manners!' she cried; and before I could prevent her, she seized a strap which was hanging on the wall, and beat the boy furiously. I tried to stop her, but Mary, a delicate little girl, clung to my hand, and cried piteously that I should be hurt, that mother would kill me, too. I lifted the child on to the drawers, out of harm's way, and then stopped the woman. But the boy made matters worse, for he cried out that he would never do it again, and that he would go to school regularly in future. No sooner did his mother hear this confession, than she cried out, 'Then that's why t' parson comed, is it? I'll give thee such a hiding to-night as thou won't forget as long as thou lives!' Then, when I saw that child cowering down, already so savagely beaten, and that furious woman, I lost my temper, too. I, Lady Susan, the minister of Christ in this parish, I turned the children into the back kitchen, and I really hardly know *what* I said to their mother. I know that I did not speak loudly, but she stormed! Then, still in a white heat of anger, I fished the boy out of the scullery, and brought him away to the Vicarage, and there he is at the present moment, fast asleep in the kitchen. Now, what do you say? How am I to put right this wrong that I have done?"

"I fail to see where the wrong is."

"I have probably taught that child to despise his mother's authority, and I have sinned in temper myself. I declare," said John Burleigh, with a sad smile, "I feel it tingling in my veins yet. He is such a *little* boy."

"About the effect upon yourself, you are the best judge," said his companion thoughtfully; "but, so far as I can see, the rest is all good. Mrs. Bradley will be by this time ashamed of her passion, and as she is a kind-hearted woman, she will be really grateful to you for saving her from cruelty to her child. As for the boy, you must make him beg his mother's pardon, not sullenly, but freely and truly."

The Vicar thought deeply a few minutes. When Lady Susan glanced towards him, she could not see his face, for his head was bent.

"I remember, 'God often uses our blunders to His glory,' some one said," the Vicar repeated slowly, "and to go deeper still, the pardoned sins of His children may bring forth His praise. But oh, the shame, the bitter shame! God forgive me!"

He rose unconsciously, and then the girl saw his face, and through its intense pallor peace shone deep and steadfast.

"God has sent His absolution through you; now pray for me that I fall not again;" and without even a hand-shake, John Burleigh went away.

Lady Susan knew he had gone home to devote himself to Dick Bradley, to give the lad the happiest evening he had ever spent in his life, and to take him home that night a truly penitent child.

She noticed the following Sunday how earnestly the usually restless boy watched the Vicar all through the service, and saw him linger in the porch till the clergyman came out, and then she envied the boy as his shoulder was kindly patted, and the two walked to the Vicarage together. Lady Susan made an errand out to the brickfields the following week, but she heard nothing of the affair, and found Mrs. Bradley as masterful and managing as ever; but she noticed the strap no longer hung on the nail by the door. If possible, Mrs. Bradley's remarks on her village acquaintances were more stinging than ever, and she emphatically informed Lady Susan that "she'd like to fettle some on 'em up, specially Mrs. Parkinson, who were a real bad un, and t' school maister had better look out and not mell on any of her bairns, or she'd let him know, and she would say for herself, when she got agait talking, she mostly let folks know her mind."

"Yes," Lady Susan answered her, "indeed she did;" whereupon Mrs. Bradley smiled, and they parted the best of friends, helped thereto by the bunch of grapes bestowed in a tiny basket upon little Mary.

From this time forward, the Vicar dropped unconsciously into the habit of telling his worries to Lady Susan. It was a comfort to him even to tell them to so sympathetic a listener; and to the girl, these quiet half-hours under the great trees in the Chase, or by the fire in the morning-room, were very precious. They opened a new and ideal life out before her. One not only high above the self-life she had always been surrounded by, higher in its aims and objects, but one, rather, which was entirely different, a life which at first seemed impossible and unreal, but which answered to all the aspirations and cravings of her nature, and satisfied its longings. A life which she shrank from contemplating as possible for herself to live, and which yet she admired intensely, and every week desired more, that she was capable of sharing. To one half of her mind a life of self-renunciation was painful in the extreme, to the other it was noble and ennobling. The present and the future, the best and the ordinary, time and eternity, were ever weighing their possibilities before her. And the very fact that John Burleigh always unconsciously credited her with the same grand motives, the same entire and Christ-pleasing devotion which governed all his own conduct, drove her constantly out of her worldly into her higher self. On his part he found comfort in her cultivated companionship, and help in her good strong common sense, and without reasoning on the subject, he went to her when he was weary or anxious, or happy from some encouragement which met him in his work, and felt the week incomplete which did not end in a long talk with Lady Susan. He did not notice that each one was somewhat more lengthy than the preceding one, but so they became.

Mrs. Pattison was standing at her shop door, looking up and down the street, which was the title whereby the villagers dignified the road which ran through the village. For a wonder she had nothing to do, and therefore was eager for some neighbour to gossip with. But if she was at leisure, every one else was busily employed indoors; and the only living creature in sight was the Vicar, walking towards her with his head bent. She did not love the Vicar. Her "forbears" had been Methodists from the time of John Wesley, and, unfortunately for herself and every one else, she inherited their phraseology, but had no idea of their burning zeal and

absorbed devotion. The volcano which had altered the features of the country was only in her case attested to by a hard bed of dead scoria. Poor Mrs. Pattison! She clung to a lifeless Shibboleth for salvation. The shell was there, but the kernel was gone. The Vicar never used the passwords which she fancied were the "open sesame" to heaven, so she shook her head and sighed as she saw him approach; but she did not go into her little shop,—even he was better than no one to speak to. John Burleigh might have passed, had not her voice roused him from his reverie.

"A fine day, sir!"

"Very—a visible resurrection."

"Resurrection! Well, sir, *I* don't see it. We shall have to wait for that, and there'll be a resurrection of *two* sorts, you know."

"Yes."

"Why do you sigh, sir? The Bible says so; leastwise *I've* always considered it does."

"It does, and it is an awful thought. Have you ever really *faced* the subject, Mrs. Pattison? I was try ng to do so just now as I came away from the school."

"Well, sir," said the shopkeeper indulgently, "I was well brought up; all my elders were of the best sort. My father was a class-leader for fifty years, and my mother attained perfection ten years and a quarter before she departed. I was converted at a revival when I was twelve years old, and I've never gone back. I've been a joined Member and attended my class very different from most. I've an inward witness, and I'm not ashamed any time to bear my testimony."

The Vicar looked at his parishioner with a pained surprise. "And is *this* all, Mrs. Pattison?"

"And enough too, sir, I should say."

"Christ thought otherwise. He said, 'Except ye be converted, and become as little children, ye shall in no wise enter the kingdom.'"

"I *am* converted," said Mrs. Pattison sharply.

"Pray about it, and read the Gospel of St. John," said the Vicar, as he turned away.

But Mrs. Pattison could not bear the conversation to end so uncomfortably. She wanted to drown the remembrance of the Vicar's words in a torrent of others, so she hastened to say,—

"Shall I tell you, sir, what I was thinking this morning?"

"If you please."

"Well, I was wondering at the great folks from the Chase—the earl and the countess and the ladies. It does seem strange that *they* cannot be content. They are like as the Psalm says, 'the waves of the sea.'" Mrs. Pattison did not dare to finish the quotation, but she looked the rest. Seeing the quiet glance the Vicar gave her, she grew confused, and hastened to add: "Well, I'm sure it is so. See what a grand place the Chase is, and yet they're all off next week to London, and there they'll stay, a-going to have tea with the Queen, and to theatres, and balls, and all sorts of worldliness, and then they'll go to Inverben Castle, which is just a heathen place, I hear tell, amongst all those foreign Highlandmen that wears petticoats, and talks an outlandish language, I suppose. And we shall never see one of them till October. And I do say, when people have a good house they should bide in it. Well, sir, I see you want to be going, so I'll wish you 'Good-day.'"

"And I you, Mrs. Pattison, and do not forget my advice. Pray to be converted, and read the Gospel of St. John—not in texts, but straight through, as you would a newspaper or any other book."

"Well! I never heard a minister, thank goodness, talk like that! Read it like a newspaper. He's in thick darkness, that's certain."

"Poor woman! Lord, open her understanding, and warm her with Thy Life," prayed the Vicar, as he walked on.

Suddenly he stood still. "Never see one of them again till October." The recalled words struck him as a blow might have done. Then he turned aside and climbed the hill to the old castle.

LEAVES FROM THE LOG OF A GENTLEMAN GIPSY.

By GORDON STABLES, C.M., M.D., R.N.,

Author of "The Cruise of the Land Yacht 'Wanderer'; or, Thirteen Hundred Miles in my Caravan," etc., etc.

LEAF X.

AT MOSSLEY—AN EXCITING SCENE—THE TERRIBLE HILL—ON MOUNT AND MOORLAND — HOLMFIRTH — A STUDY IN DUST.

YOU'LL go through Mossley, work round by the Clarence at Greenfield, and on till you come to a hill with Marsden lying at the foot of it. Then keep to the left.

These were my instructions before I started, as far as I can remember, but we got mixed somehow, I think, and it ended in our finding ourselves struggling up the most terrible hill ever the *Wanderer* has been dragged to the summit of. But stay; we are not quite there yet. We had a long hill to climb out of Staleybridge, and from the summit thereof the view was an extensive one, high rolling mountains, a Londoner might call them, on every side, but sadly obscured by smoke and haze; for mill-stalks are vomiting dark rolling clouds, and the railway engines are doing all they can to add to the murkiness and gloom.

The line of moorland hills, however, although indistinct, is rugged and grand,—quite a small sierra.

"Did you notice that, sir?" said my coachman, as a huge black cat crossed our bows at the gallop.

"Yes, I saw her; but you're not superstitious, are you?"

"I dunno about that, sir; I hope we won't come to grief to-day, among them ugly hills. Did ever you see anything else but bad luck follow a black cat?"

"Yes, I saw a bull-terrier follow one the other day, and the black cat had the best of it."

Mossley is not much of a place. It is a long Lancashire street, with plenty of mills in it, plenty of coal dust, plenty of grime, and a fair share of poverty.

Here we pulled up half a minute to witness an exciting scene, for very little serves to interest one on the road. What we saw was doubtless an every-day occurrence.

The view of over-the-way to the row of houses opposite is a long series of black arches, over which coal-laden trains frequently rattle. One of these went over as we were passing, and for the benefit of society beneath, dropped a lot of coals. Instantly there was an exciting rush of women from the other side of the street, to scramble for the black diamonds. Bareheaded, or with tartan shawls instead of caps, short in garment, somewhat grim in visage, but laughing, shouting, joyful, even hilarious. It was fine fun for them and fine fun to see them. But really, when one comes to think of it, this is as good a way of getting coals as any other. You have not got to give orders, you have not got to study the circulars of rival diamond-merchants. You have only to wait for the wagon, and there you are. You try to gather your share, and I try to gather mine and yours too; and football itself is nothing to the fun of it. Besides—there is nothing to pay.

But here we are at the Royal George, not far from the foot of the terrible hill. Oh, it *was* going to be a terrible hill this time in earnest, for the mountain we had to get up over is seventeen or eighteen hundred feet above the level of the sea, and the road that leads to the summit is several miles long, with never a morsel of level or resting ground all the way up, not even as big as a billiard table.

We rested at the Royal George, and gave each horse a little water mixed with oatmeal. They knew from that there was danger ahead.

"We've got an awful hill to get up," I said, fondling Polly Peablossom's bonnie ears.

"But there is a top to it, isn't there?" said Peablossom.

"Oh yes, Polly, there is a top to it."

"Well, that's all right; we'll go there."

"That's about what we does mean to do, measter," put in Cornflower, who is not so aristocratic in his way of talking as Peablossom.

As we stood there, a waggoner came to the corner; he had been up with four horses.

"Yoo'll never do it," he remarked comfortingly. "Six horses wouldn't take you

over. Besides," he added, "the road's worse nor a sea-beach."

We started, nevertheless, without six horses; and the fact that, though pausing often to rest our steeds, we did the climb in five minutes within the two hours, speaks well for the pluck and strength of our noble nags.

A mile or so farther on, through a bleak, bare, heath-covered moor, and we reached the breezy inn called Isle of Skye. It is Friday evening, but so delightful is the situation, so wild, and lone, and grand

"Business or busy-ness seems to be the great feature of Leeds."

the scenery, that I determine to make this hostelry my bivouac till Monday.

The Isle of Skye is said to stand nearer to the sky than any other hotel in Great Britain, so Dalwhinnie must look to its laurels. However, there is some difference between the two houses, for this Isle of Skye hotel is but a poor place compared to the other. It stands close to the road, only considerably beneath it; a long, two-storied stone building, with two doors in front, one above the other. You cross a bridge to enter the upper flat, you go downstairs to the lower door.

The landlord is a jolly Yorkshireman from Leeds, and gave us a kindly welcome.

There is nothing but moor, moor, moor all around us, the earth being a kind of peat, very boggy and treacherous in places, and the principal flora, heather and bilberry, but even this is sparse enough. The scenery, in whichever direction one looks, is very wild and majestic.

The *Wanderer* lay for the first day at the roadside, but as it came on to blow big guns, and she rocked to rather an alarming degree, we shifted camp to a more sheltered situation.

What a glorious change is this breezy, bracing, healthful bivouac from the grimy, unwholesome pitch we had at Staleybridge! Why, up here the only complaint a man can possibly suffer from is *bulimia*,* and that is easily cured, for the best Yorkshire bacon and milky eggs in the world are to be found on this mountain-top. Four meals a day

* Inordinate hunger.

But that the Isle of Skye is well appreciated as a place for picnics was amply proved, for on Sunday hundreds passed here, not, however, without stopping to see the landlord. They came from Huddersfield chiefly, driving in all kinds of conveyances, but were very quiet and orderly. Many of them brought pigeons to fly, that being rather a common fancy about these parts.

The sunsets were very lovely, and well worth coming up into this elevated region to witness.

The *Wanderer* was an object of interest to many, and many had a peep inside. One young man said to me,—

"What be you, measter? Sellin' books loike?"

For the good folks round here talk of woats, and pertaters, and turmots, and call London Lunnun. And why shouldn't they?

Monday, July 5th, opened with a glorious sunny morning. The hills and moors all round us were a sight to see and be sorry to leave. Our drive to Holmfirth was a splendid one, over a good road, but downhill all the way, often with skid and safety chain on.

We reached the village of Holmfirth in fine form, and pulled up to water and stop. It is a fine little sturdy, stone-built town, which lies in a wooded glen, and goes struggling and straggling up the hills on both sides in quite a romantic kind of way.

Through the glen winds the river Colne, and very romantic and pretty is the scenery here.

The jolting over the rough roads tells on the caravan to-day, especially in passing through Huddersfield, which is very roughly paved. By the time we reached Mirfield, we were glad enough to get into a little meadow behind the Black Bull hotel and seek the assistance of a blacksmith, for one of our tires was split.

Our company in the meadow was a rather noisy one, being composed chiefly of children. They seemed much exercised in their minds, not as to what the *Wanderer* was—she was put down as a show at once, and unanimously, but what did the show consist of?

One little boy with two small sisters appeared determined to solve the problem, so the three of them went home and had their faces washed, till they shone brightly enough to have made the fortune of Pears, had they been used as an adver-

"A huge hostelry this inn would have been called in days of yore."

tisement. Then they came and stood in a row, hand-in-hand, beneath the coupé, and when the boy caught my eye, he said pleadingly,—

"Please, sir, we've only got tuppence; me and my sisters. Can we all come in for tuppence?"

Of course they could, and for much less, even for nothing.

Our only drawback to-day from perfect enjoyment has been the dust. When we came down from the mountains, we literally descended to the dust.

But there has been a good deal of variety even in the dust. It rose about us in clouds, it rose in Liliputian whirlwinds, it flew fore and aft and everywhere. It was a searching, an ambitious dust too, and got in everywhere—in through the skylight, in through the ventilators, into the drawers beneath the carriage, and into the meat-safe.

There was variety in its very colour, which depended on the kind of road we were on. We had it sometimes limey white, and from that through every shade of grey, green, and brown, to coaly black itself. So, had we not been satisfied with both its quantity and quality, we should have been hard indeed to please.

LEAF XI.

MIRFIELD—DEWSBURY—DRIPPLINGTON—A WEARY DAY—LEEDS AT LAST—A TIRED GIPSY'S DREAM.

BUT here at Mirfield, a town I never till yesterday knew existed, I find myself logging these words: "I have had enough of manufacturing towns, steam trams, huge, unsightly mills, and tall stalks, that vomit their volumes of murky smoke over rolling fields and wooded hills, till Nature herself looks sickly and poisoned."

Robin Hood lies buried not a great way from here. I should dearly have liked to talk an hour with Robin under the greenwood tree. He should have come into my caravan, and I would have made much of him.

But yonder on the braeland, amidst clouds of struggling foliage, stands the house, perchance, of some wealthy millowner. The furniture within may be in perfect taste, the *chef* himself an artist, and but for that tall chimney-stalk, the view from the drawing-room windows, on a Sunday afternoon, after a shower, may be charming. Woe is me for the stalk!—*that*, to my way of thinking, banishes romance, dries up enthusiasm, and kills poetic feeling, as it blasts the trees and shrubs.

* * * *

About a mile and a half from Mirfield is the Fountain Inn, from near which we catch a capital view of the market town of Dewsbury, lying away on the hill yonder, and, like most towns, borrowing enchantment from distance. We can see its steeples, towers, and stalks, with green fields and trees on the braelands beneath, over which, on this glorious summer's day, the clouds' shadows are chasing each other.

The people we meet are rough, but always polite, civil, and obliging.

But oh, the dust and the wind! The breeze blows the stour everywhere, the horses' sweating sides are matted with it, we crunch sand between our teeth when we close our mouths; the grass by the roadsides is grey, not green, and every tree and hedgerow seems made of slate or stone, while the children who run out from cottage doors and gates to halloo and cheer us, their dresses fluttering around their bare knees, are veritable dust-demons, black and begrimed.

We pull up at last at the entrance to Dripplington, an old-fashioned, grey stone village, and the honest, kindly folks come crowding round the caravan, and those I ask inside seem wonderingly delighted.

On a breezy upland, about two miles farther on, we stop to admire the wide and extensive view. Yes, without doubt, it could be called not only beautiful, but romantic in the extreme, were it not for those everlasting chimney-stalks; they tower heavenwards from many a village and town, and belch forth clouds of darkness into the sweet summer sky.

But looking at the country from another point of view, probably no other part of England could be found that would so impress a stranger with the magnitude of this empire's commerce. Within a mile of Leeds, on every side of us are railway embankments, pit mouths with their hideous machinery, mines, mills, bricks, and banks of cinders. And away on ahead yonder is Leeds itself, but all we can see is a dense, grey smother of smoke, one dome or steeple with a white clock face, and an ocean of stalks.

Business and busy-ness seem to be the two great features of Leeds. To-day the traffic and stir on its not over-wide paved streets are tremendous—carts, cars, and carriages, trams and steam-trams are everywhere, and it is not without difficulty we get through. The street paving suits but ill the shoes our horses wear, and they often slip and stumble.

Once upon a time, when new to the road, I used to bivouac (or try to) in great towns. I know better now. In a place like this, or even half like this, there is no rest for the sole of a gipsy-foot, so that when I want to visit cities, I get through them, encamp on the outskirts, and return without encumbrance.

We had a long day, and were glad to find stabling at last. A huge hostelry this inn would have been called in days of yore, and would have well deserved the title. The landlord asked me to view his cellar—it would have held a regiment of the line.

Before turning in, I go, as is my custom, for a little walk. It is not a very invigorating one; iron mines and "tips" are on all sides, and the dark murky air is lit up here and there with the fitful gleams from the furnace stalks.

One of the most pleasant times of the day in my caravan life is the half-hour or hour during which I read after I have turned in for the night. I am probably delightfully tired. I know I can sleep sound as soon as I turn out the light, which is close to my hand. All is safe, the valet is quietly sleeping in the after compartment. Hurricane Bob slumbers in his coupé cabin. Everything is still and quiet, and I feel at peace with all mankind.

To-night was no exception, but I was far more tired than usual; the sun's glare and the dust had done it.

HOMELY HINTS FOR STRUGGLING WIVES;

OR, HOW JOHN AND MARTHA GRIMSHAW MANAGED ON £1 A WEEK.

By PHYLLIS BROWNE.

No. I.

WHEN Martha Moody told her mistress, Mrs. Jackson, that she wished to leave that day month, to be married, Mrs. Jackson looked very grave. It was not only because she was sorry to lose Martha, though that was undoubtedly the case, for Martha had been a good servant. She had been in her present situation five years; she was a thoroughly good girl, and a clever manager. Mrs. Jackson had a real regard for her, and Martha had a real regard for her mistress, so that it would have been strange if both had not felt sad at the prospect of parting.

But Mrs. Jackson felt more than sad; she felt disappointed, because she thought Martha was making a mistake. This lady held the opinion very strongly that girls comfortably settled in good situations were very foolish to marry to poverty. She wanted to make them realise what they would have to put up with in consequence of taking this step. "Think," she would say to them, "how fortunately placed you now are. You have plenty of good food, no anxiety, and no care; you have a good wage, regular holidays, no rent to pay, no taxes. You can buy warm suitable clothing, and yet put money away in the savings bank. You are mistress of your work, and can get through it quite easily; why should you leave it to take upon yourself cares which will weigh you down? If you marry, you will have to pinch and screw and save; you will have to live in one or two rooms, work hard from morning till night, very likely bring into the world three or four children, for whom you will have to toil and contrive, and turn yourself into an old woman before you have become a young one."

Without doubt Mrs. Jackson was right. Girls are foolish to rush into marriage without counting the cost. It needs a good store of love to enable a girl to weather the storms of married life with limited means, because unless the love is very firmly planted in the heart, it has an unpleasant habit of flying out of the window when poverty comes in at the door. Yet not many of the girls to whom Mrs. Jackson talked took any heed of her words. They listened and assented so long as there was no temptation to anything else, but the first likely wooer, and sometimes the first unlikely wooer, who came along, made them forget everything else. Thus it had happened that again and again during the thirty years which had passed since she

began housekeeping, Mrs. Jackson had seen girls leave her to be married, looking stout, healthy, and handsome, with a good sum in the Post Office, and a large box filled with well-made clothes to be carried away with them, and perhaps a somewhat too exalted notion of their own consequence. Again and again had these girls come back to her, after a few years, looking thin, careworn, and shabby. "Could the mistress give them a bit of sewing, or let them do a day's charing? Times were so hard, it was so difficult for poor folks to pay their way. If only they had known what they would have to face, they would never, never have married." Sometimes a still more pitiful story was told. The husband drank, or he had been out of work for months, and wife and children were starving. Mrs. Jackson was very sorry for these poor creatures, but she could not help them all. Often she felt inclined to say, "My good woman, you made your own bed, you will have to lie on it." But pity made her hold her tongue.

Now Martha Moody was going the way the others had gone. Martha, who was so respectable and sensible; Martha, who had so often said that she would never marry until her lover could take her to a good home, and keep her as she had been accustomed to be kept. Mrs. Jackson knew that Martha's lover was making at the present time 20s. a week, and that he had no prospect of making more than this. He had saved a little money to buy furniture, and Martha also had saved a little; but 20s. a week was very little for a girl like Martha, and the savings would soon be gone. "Oh, Martha!" she said sorrowfully, when Martha announced her decision. But Martha was determined.

"Yes, ma'am," she said, "I know all you would say, and I don't know but I *am* foolish. But I love Jim very dearly, and I believe he loves me. You have said yourself, ma'am, that with love, people can manage wonderfully. It is very lonesome for Jim, all by himself in lodgings, and with no one to mend his things and look after him. So I have made up my mind to take the plunge."

Mrs. Jackson knew from experience that when Martha said, "she had made up her mind," there was nothing more to be said. So she put on her bonnet and went out to buy a pretty tea-set for a wedding present to her faithful handmaiden, and as she gave it to her, she said, "I want you, Martha, to accept these cups and saucers as a token of regard from me. I did not want you to be married, but all the same I hope your marriage will be a very happy one. And I believe if there is one girl in the world who will manage well, and who can make a comfortable home on very little, that girl is yourself."

For five or six years after this, Mrs. Jackson saw nothing of her old servant. Family troubles came upon her, and she was called away to another part of England to nurse a sick relative. Engrossed with her own affairs, she had no opportunity to inquire after Martha. At length her relative died, and she returned to settle in her old home. She had not been there very long, before she was told one day that a respectable-looking woman, a Mrs. Grimshaw, wished to speak with her.

"Grimshaw! Grimshaw!" said Mrs. Jackson. "I know no one of that name." Then it flashed across her mind that "Jim," whom Martha Moody married, was named Grimshaw, and that very likely Mrs. Grimshaw was her former maid. So it proved; and in another minute the two old friends, for so they might well be called, were sitting opposite each other, wondering at the changes which only six years, in which had been crowded a good deal of the experience of human life, could make.

After a few questions had been asked and answered, there was a pause, and then Mrs. Jackson said: "Now tell me, Martha, candidly, was I right or wrong in advising you as I did? Are you glad you married?"

Martha was silent a minute or two before she answered. Then speaking very slowly, she said, "I think, ma'am, you were right; and yet I am glad I married. I often think if I had known before I was married what I should have to buy and pay for out of 20s., I should have kept housemaid till the end of my days. But it's well we do not know these things until we have to bear and share in them, and now I can truly say,—

> 'My husband and children are more to me
> Than all the money in the world could be.'"

"I am delighted to hear it," said Mrs. Jackson. "You will remember I said that if any one could make a happy home out of little, you could. No one knows better than I do that it is not having a large amount of money that brings happiness."

"No, indeed," said Martha. "Still, I think the sort of home you have depends a great deal upon the wife. I suppose I ought not to say as much, for it is rather praising myself. But really there are a good many who live near me, who have I know more to live on than we have, and yet they never seem free from debt and difficulty. If you go to see them, they are full of troubles, and you cannot discern one spark of pleasure in their lives. By no means are they prepared to receive a visitor except like themselves. I am very thankful to say my home is not of that sort. Nor would I say that it is the wife only who makes home happy. A woman may be ever so clever, but she has a very poor chance if her husband does not work with her. Jim and I have always pulled together."

"Where, then, do these poor things you speak of make the mistake?" said Mrs. Jackson.

"It would really be difficult to say in a few words, for they make so many mistakes," said Martha. After thinking a minute or two, however, she continued, "I should say that the chief thing is, they do not *divide their money, and so manage to pay for everything every week.* If poor women don't do this, they soon get into real straits and confusion. I don't believe in poor people running bills at all. If they cannot pay for one week's food out of one week's wage, I am certain they cannot pay it the second week when it gets to just, or perhaps a little more than just, double the amount."

"Indeed, I should think not," said Mrs. Jackson.

"You would say so, all the more, if you were to see what I see," continued Martha. "I know several young wives—in fact, two of them were friends of mine. Their husband's wages are 21s. per week, sometimes a little more, sometimes a little less. Their rents are much the same as my own, 5s. per week; and they have a lodger, or perhaps two, to help pay the rent. This is what they say, but I don't believe it helps them a bit. When Tuesday or Wednesday comes, I have known them to be with not one penny in the house; their baker's bill and grocer's bill is not paid, and they have yet half a week to get through before any more money comes in. The consequence is they run from one shop to another, trying to get what they want on trust, and so they go on till there is no end to their trouble and shame."

"Poor things!" said Mrs. Jackson.

"Yes, poor things, indeed," said Martha; "only one cannot help seeing that their misery is of their own making. If they would manage better, they might be very different."

"What other mistakes do you think they make besides not dividing their money and paying for everything as they get it?" said Mrs. Jackson.

"In many homes that I know, wives make a mistake by putting out and paying for so much needlework to be done."

"But surely, women whose husbands are earning only 20s. a week do not put out needlework," said Mrs. Jackson.

"Indeed, ma'am, they do," answered Martha; "you would be astonished if you knew how many wives and mothers there are in these days who have no notion of being handy with their needles. They put out what has to be done; and as they pay a very low price, the needlework is very poor, and the clothes soon come to pieces. If you say anything to them on the subject, they say they have no time for sewing, and yet one would think they could do their own sewing in the time they spend gossiping from one neighbour's house to another."

Mrs. Jackson shook her head. She did not like to hear of women not being handy with their needles. At last, she said, "At any rate, *you* never gossip, Martha,—of that I am quite sure."

"That I never do," said Martha; "in telling you how I have got on, I am afraid I am rather praising myself, and for that I hope you will excuse me. Also I have no doubt I have made mistakes again and again, but not in that way. I have never gossiped, and neither do I wish to do so. I never go into any neighbour's house unless I am properly invited to tea or supper; then my husband goes with me, and we make acquaintance together; but as for going first into one door and then into another during the day, that I never did. I am not one of the sort to do such a thing."

"Well, well," said Mrs. Jackson; "you must not be offended. I am quite sure you are not a gossip; but, Martha, you see where these poor things make mistakes; and I know you manage better yourself; how would you like to tell me your plans? You know I am very much interested in such things, and I should be very glad if, while you are sitting with me, you would let me know your methods, and judge for myself whether they are wise ones. You said that you could stay an hour or two with me and have tea here, so what do you say if you employ the time in letting me hear exactly how you go on?"

"If you care to hear, I shall be very pleased to tell, ma'am," said Martha; "especially as I think you may be able to tell me how I might improve and do better. If you are tired, ma'am, before I have done, you must say so. And please let me think a few minutes before I begin, that I may tell you exactly." And folding her hands in her lap, Martha prepared to put on her considering cap. The result of her cogitations must be given next week.

ADVENTURES 'MID ALPINE SNOWS.

By Rev. W. Spotswood Green, F.R.G.S.,

Author of "The High Alps of New Zealand," "The Home of the Eider Duck," "On the Track of Columbus; or, Sketches in Trinidad," etc., etc.

Part I.

"We commence to ascend the cliffs."

So many people go to Switzerland now-a-days, that it is hard to write anything new on the subject; nevertheless, its lovely valleys and snow-clad peaks are as charming and impressive in themselves now as ever; and although much of the mystery and romance which clung to them when Byron wrote "Manfred," or Coleridge his "Hymn to Mont Blanc," has been dissipated by the ever-advancing army of tourists, the sun still rises in the same glory, the thunder peals as of yore, and there is no reason why those who must stay at home should not be asked to share the pleasure with those who are fortunate enough to travel thus far.

I want you now to join with me in the pleasure of a few excursions; and though I know it is most difficult to give you a full share with the means at my disposal, or even a fraction of a share, I can only do my best.

Well, then, I don't want any one to come with me who is in the habit of saying that "climbing mountains is all folly and madness, and involves a wanton risk of life." Such people may change their minds when they are brought face to face with the spotless glory of the eternal snows, but they may not. There is then a hopeless want in their nature; and though they may be most estimable people in other ways, I would rather have their company on some other occasion. Perhaps Holland might suit them. Ah, then, I forgot, there would be the wanton risk of travelling in a steamer and on a railway when there was no necessity, so on the whole perhaps they had better stay at home.

It is not well to attempt too much at first, as the man said who began his dinner by trying to swallow a roast goose, so I shall ask you to meet me in a sequestered valley of the Bernese Oberland, and to come with us over the Tschingel Pass. I have come across people in Switzerland who go there, and travel through it, and still have no more idea of the shape and position of its mountain chains, than they have of the other side of the moon, which no man has as yet seen. And lest it should be so with any of our party, I must ask you to wait a few minutes until we have a look at the map. Along the north of Switzerland you will see the Jura range, beautiful enough, but with no snowy peaks; then come the great plains of Switzerland, dotted with populous towns, and carpeted with rich corn-fields. To the south and east of this, the country again becomes mountainous. Here we find, in the hollows, beautiful lakes reflecting the snow-clad peaks; and this group of high mountains to the south of Lakes Thun and Brienz, is the Bernese Oberland. *Oberland* means simply *highlands*. Now if you look at a picture of a king's crown, with a central spike or ornament, you will have a fair model of this group of mountains. The central spike, and the highest, is called the Finsteraarhorn, meaning the "Black Peak at the source of the Aar." In the circle of peaks forming the outer rim, we have, amongst others, the Wetterhorn, Schreckhorn, Eiger, and Jungfrau. This last mountain presents a most lovely spectacle as we approach the Oberland by the ordinary route. It was the sight of this peak, glittering like frosted silver against a clear, blue sky, that first awakened in me the love of mountaineering; it was the first peak I longed to climb, and, curiously enough, it has turned out to be the very last. To the south of the Oberland is the long and wide valley of the Rhine, on the far side of which runs the great Pennine chain, bearing such peaks as Monte Rosa, the Matterhorn, and extending to Mont Blanc. This forms the Italian frontier.

I have spoken of the Oberland being like a crown. There are a number of pendants and outer adornments which I have omitted; but let us remember that in the middle, where the top of the king's head would come, we have immense fields of snow, which for the greater part has become hard ice, hundreds of feet thick, and has pushed itself out through the hollows between the peaks, and descended towards the fertile valleys as glaciers. The melting of these glaciers forms the sources of most of the big European rivers. In these regions snow falls both in winter and summer; but owing to the overflow moving off in glaciers, it remains at much the same thickness. The depth of the ice can be measured by lowering a cord into some of the great cracks in the ice which are called crevasses.

Now, the valley I asked you to join us in is the valley of Lauterbrunnen, just beneath the peak of the Jungfrau. We are at the head of the valley, not far from where it is closed in by a great precipice, over which pours the fall of the Schmadribach. There are dark pine woods on the mountain sides. There is a tinkle of cow-bells near the little inn, from the window of which pours forth a ray of ruddy light, while above the purple gloom of the valley, the snows of the Breithorn shine resplendent in the last glow of the sunset.

Away above the cliffs of the Schmadribach, in a hollow of the mountains, lies the Tschingel Glacier; and as we are to cross it together, I may as well spend the evening by telling you how we crossed it on a former occasion.

We arrived at this little inn one fine summer evening, a party of five—three ladies, whom I will call A., L., and P., and two males, J. and myself. The plan was that, if the weather permitted, four of us should cross the Pass on the morrow, while A. took charge of our things, and travelled a long two days' journey by road, so as to meet us at Kandersteg, on the other side of the Pass. I had traversed the Tschingel glaciers twice previously, so I thought that I knew the way quite well enough to dispense with professional guides. We went to bed early, and were up long before dawn, full of expectation for a good start. On going outside the door, however, to inspect the weather, we found the valley so dense with fog, and so dark, that not a tree even was visible. The distant splash of the Schmadribach fall, and constant music of the stream as it foamed over the boulders on its way down the valley, were the only sounds which stirred the chill night air. The fog I did not much mind, as the clearest mornings do not always precede the finest days; but it was necessary to wait for some light to find our path by.

At last it came, so, taking a small piece of candle, to help us beneath the dark shade of the trees, we followed the little path up the valley, and then commenced to ascend, through dark pine woods, rich with ferns and low-growing Alpine rose. From the sombre woods we ascended to grassy "alps" (alps in Switzerland mean upland pastures), where every leaf and blade was drenched with dew. We could now look down on the valley, with the pine tops peeping above clouds of dense white mist. It was yet but dim twilight, and the fog, which now began to change to a thick drizzle, made it still darker. "Not very hopeful," you will say—so we thought, too, but still we continued to ascend till we came to the little hut on the Steinberg Alp. We ought now to have had a glorious view, but a white wall of fog closed in everything at fifty yards distance. The lower glacier was now not far off, so we pressed onwards. The path we had followed soon lost itself amid heaps of

"We tied ourselves together, and commenced our long trudge up the snow-covered glacier."

broken stones brought down by the glacier; and as it got darker, and snow began to fall, we thought it better to crouch under boulders, and give the weather a chance of clearing.

Steadily, steadily the soft snow fell; everything was turning white. Still, we made the best we could of our shelters until nine o'clock came; and then, considering that even if the weather did clear, it was too late in the day for a start, we turned our steps downwards—down through the wet meadows, down through the drenching woods, and arrived at the inn in a regular downpour of rain. Fortunately, A. had not yet started; so, making the most of the few things our luggage contained, and of blankets gracefully put on *à la* Red Indian, we sent our clothes to be dried, and contented ourselves with such entertainment as could be improvised in a tiny wooden inn, now and then changing our occupation by rubbing our noses against the window pane, watching the goats and the rain, and congratulating ourselves at not being on a pass nine thousand feet high.

At last bedtime came, and we all went to sleep, feeling certain that to-morrow would be a splendid day. The early morning belied our hopes—there was the same pitch darkness and fog, so we waited, not wishing to repeat our experiences of yesterday; at seven it cleared, so, though late for a start, we set off at once. The path was all mud, the trees and ferns were reeking, but between rolling masses of cloud there were patches of clear blue sky. Again we ascended through the forest glades; again we traversed the flowery Alp, with the dew-drops sparkling like diamonds and rubies; once more we reached the Steinberg, getting broken glimpses of fine, snowy peaks; but, alas! steadily the clouds settled down, and when we reached our shelter of yesterday, the fog was as "thick as a hedge," and snow began to fall. We might still advance, but, as there was the possibility of going wrong, I deemed it wiser to wait a little. The chief *difficulty* of the pass was not far off; it consists in a rocky cliff, called the Tschingel tritt, in some places over a thousand feet high, which must be ascended; above it is the upper Tschingel Glacier, and over this precipice the ice pours like a great frozen cataract, to join the lower glacier, on the brink of which we had now halted. It was necessary that the weather should clear, for if I could not from this point select the line by which the cliff could be ascended, and shape our course for it over the trackless glacier, we might get into great difficulties. We decided that we could spare one hour before it would be necessary to give up. At last it began to lighten; then the clouds broke.

There was the great cliff of the Gspaltenhorn in sight; then came a bright ray of sunshine, and in an instant the clouds rose, and glaciers and cliff were in full view. There was no time to lose, so we set foot on the ice at once. These lower glaciers, in all parts of Switzerland, are so covered over with mud and stones, that they are not beautiful, but the ice is quite rough, so, although it is in hills and hollows, and pools of water are frequent, it forms a good surface to walk upon. The air off the ice is most exhilarating, so that even most staid and sensible people often find themselves shouting and singing in an idiotic manner, and don't know in the least why.

The lower glacier passed, we commenced to ascend the cliffs, first up some steep snow, then over loose banks of stones, and then up rocks where hands and knees came into play. Now and then we paused to admire the lovely shades of blue, and green, and silvery white, amongst the ice-blocks of the ice-cascade on our left. And then let our eyes wander heavenwards, to where the towering Silberhorn, Jungfrau, and Ebneflue shone in the blue sky. Occasionally an ice-block fell in the cascade with a rumbling crash, or the echoes of a distant avalanche growled like thunder through the mountains. Clouds still hung about the cliffs, boding ill for the weather, so we hastened to make the most of the sunshine while we had it. Near the top of the Tschingel tritt, the rocks were steepest; a rough ladder, made of one pine tree, used to be placed here in times gone by, to aid in the ascent; now it was gone, so I climbed up first, made our rope fast to a rock, and let the end hang down to

"Climbing mountains is all folly and madness."

afford a firm grip to the others, and so guard against a slip. Above the cliffs, we still continued to ascend over stony wastes, strewn in one place with huge blocks of ice, the remains of a great avalanche which had fallen from near the Gspaltenhorn.

We mounted the last pile of loose stones, and there before us was the vast plain of the upper Tschingel Glacier, sloping gently upwards to the pass. All around us was bright sunshine, and the glare from the white snow made it necessary to put on our blue spectacles, which form an essential part of every Alpine outfit.

Beyond the pass, however, we could see dense masses of black, inky clouds, and from the rapidity with which they changed their shapes, it was too evident that bad

weather was brewing ahead. It was too late now to turn back—the difficulties before us were less than those behind; so, halting for a hasty meal, and taking bearings with my pocket compass for the top of the pass, we tied ourselves together on the rope, and commenced our long trudge up the snow-covered glacier.

The wind, which up till now only made itself felt in little, shifting airs, settled into the westward, and came in fierce squalls, bitterly cold, and charged with minute particles of ice-dust from the pass. Soon the black, inky clouds rose and obscured the sun; the top and sides of the pass were closed in, then everything vanished from our view, and in an instant we found ourselves battling against a furious storm, and dense, driving snow.

To traverse this snow-field in fine weather takes five or six hours—what it might take now, we did not like to think. The gusts of the storm swirled round in all directions, so I could not steer by the wind. For a time I could see where the sun was, and it gave us a mark to aim for, but now we could not even make out this. There was nothing for it but to keep our heads low, and watch the compass. This was not easy in the driving snow, but a glance now and then would keep us to our course.

I was first on the rope, the two ladies next, and J. behind. J. called out to me during a furious squall, "We must have passed the top, for we are descending now, not ascending." I knew we could not yet have reached the Col, yet what he said was true.

With benumbed fingers I pulled out the compass. Yes, we were a little off our course, but a slight change to the left set us right, and on we trudged, now most certainly ascending. Suddenly, to my surprise, I came to fresh tracks in the snow. "Now we are all right," I sung out; "another party has crossed the pass, and we will have their tracks." But J. remarked, "I have watched those footprints too long not to know them again; we are back in our own tracks." L., too, was positive that was the print of her foot. Yes, there was no denying it, we had gone round in a circle, and how big we did not know, but it could only have taken place between two observations of the compass. For the future I must not take my eyes off it; so, setting it comfortably in my hand against my chest, we started again, once or twice having to kneel down to hold our own in a heavy squall. We had not gone far, when a sudden gleam of light came, the snow-storm passed away, and though the wind continued to blow with fury in our faces, everything we wished to see was unobscured. We were quite close to the top of the pass, and, looking back along our tracks, we could see the circle we had described; it was no more than 100 yards in diameter.

Our descent to the Gastern Thall was by the long Kander Glacier. When the crevasses in it became too numerous, we left the ice, and descended, over heaps of loose stones, to the flat valley. The peaks of the Blumlis Alp were glorying in the sunset light, as we crossed the stream from the glacier, and reached the flat pastures and little village of Alpetly. Here a man warned us that the path in the lower valley had been carried away, and that we would surely go astray; but having got thus far without a guide, we declined his proffered services. The path turned out to be all right; and though dark night closed in, we met with no further adventure. Descending the steep paths by the falls of rushing Kander, with the roar of its waters ascending to the stars, the lights in the hotel at Kandersteg became visible, and at 10 p.m. we were having supper, and then did not dream of snow-storms or anything else.

Next day we found a heap of hewn logs near the hotel—a comfortable place to bask in the sun—and when A. turned up with our luggage, we enjoyed together some of the sights near Kandersteg, and planned further rambles "'Mid Alpine Snows."

THE CHEMISTRY OF SOAP AND WATER.

By Louisa M. Billing.

THE great chemist Liebig is said to have affirmed that the quantity of soap used by a nation is a test of its civilization; if so, is there any fear of England ever being anything less than a most highly civilized country? I think that even those who are most ready to detect our spots and our blots, will have to confess that, as a nationality, our cleanliness is part of ourselves; and I have heard it said that a Continental neighbour once accounted for the strength and vigour of the Englishman, by the supposed fact that all the delicate babies were killed in infancy by means of *cold baths!* Every native of our land has a right to belong to the Most Honourable Order of the Bath, and if his parents are so depraved as to deprive him of this right in his early years, as soon as he is capable of understanding matters, if he is a typical Englishman, he will assert his claim.

"Soap and water,"—how naturally we place them together!

Part I.

THE SOAP.

How old is soap? It is considered that the soap ("sope") of the Old Testament refers to ashes of plants, or alkalis, such as potash and other purifying substances; but Pliny speaks of hard soap and soft soap, as used by the Germans, and as far as we know, the races of Central Europe were the originators of this commodity. Pliny says that they used it especially to improve the colour of their hair.

The soap of commerce is, as we all know, made from a very unlikely substance. We go to fat to obtain something which helps us to remove oily impurities from our hands and greasy spots from our clothes.

All fat is made up of three parts—a hard part, an oily part, and a sweet part. It is scarcely necessary to remark that fat as fat will be worse than useless for ordinary cleansing purposes, so the fat must first be decomposed, in order that we may dispense with certain parts and retain others.

The chemist has a particular name for each fatty substance, according to its composition. We will take mutton fat as a typical fat; and this the chemist calls glyceryl stearate. Now it is the glyceryl group in this compound which is in the way when we want to make soap. Formerly it was considered a useless constituent, only fit to be thrown away; to-day, however, the manufacturer thinks very differently, and he looks no longer upon that which it yields him as a *waste*-product, but as a *by*-product which *adds to his gains.*

The fat is first melted down; all fibrous particles have to be got rid of, and on solidifying again, it is called tallow. The tallow is re-melted by means of steam or boiling water; but though the water melts it, it declines to mix with it. Let it stand a very short time only, and there will be the two distinct layers; heavy water at the bottom, with the lighter, oily, glyceryl stearate floating on the top.

Now it is that the first chemical change is effected; the removal of fibre and gristle, and the melting of the fat were merely physical changes. To understand what takes place, we must know that inanimate atoms and groups of atoms, resemble us, in having a liking—an affinity, a chemist calls it—for certain other atoms or groups of atoms, and being less easily drawn to unite with others, or perhaps being perfectly indifferent to them. These likes and dislikes (as in other instances) bring about great changes.

Some caustic soda (sodium hydroxide), which has been dissolved in water, is introduced into the mixture. Up till now, the glyceryl group in the fat was satisfied by its union with the stearate group; but no sooner is it brought into contact with the caustic soda, than it forsakes its former companion and detaches from the sodium, by dioxide, the hydroxyl group for which it has a marked preference; the sodium, being thus set free, makes up to the stearate group for the perfidy of its late comrade; and with it forms a new compound, sodium stearate,

which we call *soap*. Thus, you see, that while we had in one vessel originally glyceryl stearate and sodium hydroxide, we have now sodium stearate, which we call *soap*, and glyceryl hydroxide, which we call *glycerine*.

But the soap is soluble in the water (as indeed we should wish it to be, or else how could we wash with it ?), but it would be extremely inconvenient if we could never buy soap except as soap solution ; that is, always in a liquid form. Happily, therefore, soap is insoluble in water that has a great deal of salt in it ; so now sodium chloride, or common salt, is added, and this is called the "salting out" process ; for by means of it, the soap is separated from the water, and can be removed and pressed into bars or tablets. If in the first chemical process caustic potash is used instead of caustic soda, the salting out process cannot be effected, and therefore it is that soda soap is called "hard soap," and potash soap is called "soft soap."

The great objection to potash soap for personal use is, that though acting vigorously on grease and other impurities, it also acts strongly on the little particles of our surface-skin, which defend the more sensitive skin underneath; it really dissolves them, and then the true skin, missing the covering with which Nature has endowed it, is readily cracked and otherwise injured by the exposure.

But to return to hard soaps. They are not all alike. All yellow soaps have, after the salting-out process, some resin added to them ; this adds to their detergent qualities. Then some are perfumed by certain volatile oils, as oil of almond ; this would yield almond soap. Others, again, are impregnated with iodine or carbolic acid, so as to give them medicinal properties ; and others have some of the glycerine (which was left behind in the salting-out process, remaining dissolved in the water) mixed with them, to render them more softening and pleasant in their action on the skin.

Transparent soaps are produced by dissolving the ordinary soap in alcohol, then distilling off the alcohol, when the jelly-like residuum is allowed to harden and dry slowly.

Cocoa-nut oil differs in its behaviour from any other fat or oil, while in the hands of the soap-maker. It is unaffected by an alkali solution (*i.e.*, a solution of caustic soda or potash), unless it is *very* strong, in which case it is acted upon rapidly, and forms a stiff soap without any application of heat.

It has the further peculiarity of being soluble in a solution of salt, so that soap made from this oil can be used for washing in *sea-water ;* hence it is often called *marine soap*.

Soap bark, and soap nuts, of which we may have read, are not really soap at all. They are parts of a tree called *Saponaria officinalis*, and of allied species, growing in Chili, etc. They receive their name because they produce a cleansing lather like that of true soap.

Part II.

THE WATER.

As there are soaps and soaps, so there is water and water ; and it is the chemistry of the different waters that we have now to consider. That there is a difference, none will deny. We may get a beautiful softening and cleansing lather directly we have passed our hands once or twice round our soap ball, and yet, with the same piece of soap, we may work and work, but no lather appears—the fault must therefore be in the water. We will investigate the matter, and see first wherein the evil lies, and secondly how we can remove it.

All water comes to us from the clouds : it has been drawn up there in the form of *pure* water-vapour by the heat of the sun. Could we get it direct, we should have it back again as pure water, but it reaches us by a shorter or longer journey, and on its way passes through our atmosphere. Wherever life and death are going on, whether in connection with animals or plants, this atmosphere is charged with impurities, mainly carbon dioxide (often called carbonic acid), which we give out every time we breathe, and ammonia. The pure water dissolves these gases, and brings some of them with it to the earth's surface. If we catch it as it falls in cisterns or vessels, we have for our use "soft water," that is, water which will coalesce with soap, or dissolve it ; for the gases in solution in the water in no way impede its action on soap.

But on the other hand, should this water be allowed to trickle into the ground, and not be used by us until it bursts out again at some lower level, in the form of a spring, it is highly probable that it will have undergone a great change. If the rock of the district through which the water has run is a limestone rock, like that of the Derbyshire hills, and the cliffs of Cheddar, and of Clifton, near Bristol, the water charged with carbon dioxide from the air, acts on this rock and dissolves some as it passes over it, or through it ; and we receive it as water charged with limestone or carbonate of lime (*Calcium carbonate*). We cannot see it, but because it is dissolved in the water, the latter becomes *hard*.

No sooner do we put soap in this water than a fresh chemical change takes place. We remember that the forsaken stearate group in the fat had to content itself with the sodium set free by the union of the glyceryl group with the hydroxyl group of the caustic soda. Now, however, that it is brought into contact with carbonate of lime (*Calcium carbonate*), it leaves the sodium and unites itself to the calcium ; so that whereas we put into the water soda soap (*Sodium stearate*), we have now instead a lime soap (*Calcium stearate*).

The question is, "Why should not one sort of soap be as good as another?" The answer is, "Because lime soap is not soluble in water, and we can get no lather with it." Not only is the lime soap, which we see as curdy flakes floating in the water, of no use to us for cleansing purposes, but it is a positive hindrance by sticking to the surface, that we wish to wash. But you will say, "If we go on long enough, we get a lather." Quite true : if we go on until we have used up all the calcium carbonate in the water in making lime soap (*Calcium stearate*), we shall then come to an end of the process, and all the soda-soap that we put in *after* that, *remains* soda-soap, and is soluble as before, but we still have the unpleasant lime soap clouding our water and hindering our work.

So the best thing to do is to try to get rid of the calcium carbonate (carbonate of lime) from our water before we put the soap in at all. You will remember how it got there : it came from the rock ; but the rain water could never have dissolved the rock if it had not got carbon dioxide (carbonic acid) from the air dissolved in it. So the best way is to go to the root of the matter by getting rid of the carbon dioxide, and then the water will no longer keep the carbonate of lime in solution. This is done every day in our kettles ; those of us who examine the kettle in which hard water is constantly being boiled, will find the inside covered with "fur." The explanation of this is, that, in boiling the water, we get rid of the carbon dioxide gas, without which the water cannot hold the limestone in solution, so is left behind in the kettle as a solid deposit which we call "fur." This accounts for the fact that if we *boil* hard water, we make it less hard.

Another way of getting rid of the carbon dioxide is to put in some substance, such as carbonate of soda (*Sodium carbonate*), which will at once unite with it, and so there will be no free carbon dioxide in the water to enable it to hold the limestone in solution. This is how the washerwoman "softens" the water with which she is going to wash the linen.

Sometimes the water has got another lime-rock dissolved in it, called sulphate of lime (*Calcium sulphate*) and this too, if it comes near soapy water, will give up its calcium to the stearate to make an insoluble lime soap. Boiling does no good in this case, because pure water will dissolve this calcium sulphate as easily as water that has carbon dioxide in it ; the presence of the latter makes no difference. But by putting sodium carbonate as before, we first turn the calcium sulphate into calcium carbonate, then, if there is carbon dioxide in the water, we get rid of it as before, by putting more sodium carbonate to unite with the carbon dioxide till there is no longer any left free.

So we come to the conclusion that the best soap for personal use is that which is made of soda, and that water is the best which we receive direct from the clouds, and which has had no chance of having any mineral dissolved in it, however much these "hardnesses" may make it more pleasant for drinking. At the same time, we see that the little quarrel apparently set up between the soap and water is not always their fault directly, but far more often due to the interference of a third substance ; and it is sometimes desirable to send in a fourth to give the third notice to quit, and so to rearrange matters that the soap and water may work well together once more.

PHOTOGRAPHIC INKLINGS.

"HOW can I become an amateur photographer? Is it really a difficult art or not? What will be the necessary expenditure of time and money? Whose make of camera do you recommend, and what lens? I have studied all the guide books on the subject, till I am utterly bewildered with the conflicting statements contained therein!"

Yes, on all these points the writer can give, from experience, a few useful inklings.

Photography is by no means a difficult art. Care, cleanliness, judgment, are the three principal essentials. Any one of average ability, after a few days' practice, should be able to take a passable picture of landscape or architecture. Portraiture is the *pons asinorum* of photography. Many professionals of second-rate calibre fail in this, the most difficult department of the art.

Many people have but a dim idea of how a photograph is produced; consequently they are quite at sea as to the amount of time expended in its production.

An old lady, the other day, is reputed to have requested her photographer to "put in the box enough stuff for three copies"! Many other people have equally as wild and original theories relating to photography.

The actual taking of a picture, that is, the exposure of the prepared plate to the image reflected in the camera, by means of the lens, is but the work of a second or so.

Of course, going out like Dr. Syntax, in quest of the picturesque, takes time, but our usual constitutional may be utilized for this purpose; for "things of beauty" lie all around, though frequently, for want of sight, they "blush unseen."

The picture once "taken" can be developed at leisure, either the following day or the following month, providing only that the prepared gelatine plate be kept perfectly dark. One tiny streak of light, though it be only of a moment's duration, will work dire ruin.

The only safe light in which gelatine plates can be manipulated, is red or yellow. The "dark room," as the photographer's workshop is designated, must have every cranny through which the treacherous white light can pierce, most effectually stopped up.

A red calico, known as "ruby medium," affords the best covering for the window. It is safer to tack it double-thickness, as even then sufficient safe light will filter through the medium, to enable the operator to see what he is about.

If the room is a dark one, and sufficient light does not filter through the calico, or if the amateur works only at night, a photographer's red lamp must be resorted to.

Actual development takes, as a rule, about half an hour.

It should be explained to the uninitiated that, prior to development, not a shadow of a trace of the picture taken is to be seen on the exposed gelatine film of the dry plate. Apparently it is exactly the same as it was before exposure. Development of an exposed dry plate is one of the most beautiful experiments in the whole range of science.

When the "developed" plate has been what is technically called "fixed," white light has no further effect on the negative. After being most thoroughly washed, sun-prints on albumenized paper, or gas prints on the new bromide paper, may be taken at any time.

Any number of prints may be taken from a single negative. They may be printed all at once, or as necessity requires. Providing only that the negative has been properly fixed, most thoroughly washed, and afterwards coated with varnish as a protection against the damp, there is no reason why our children's grandchildren should not print from the same negative.

Prints, previous to being mounted, have to pass through two baths, one of "toning" and one of "fixing." The "toning" bath alters the colour of the photograph. Chloride of gold is the principal ingredient of the bath. By altering the nature of our bath, we are enabled to obtain almost any colour for our photographs we may desire, from a rich purple to a shy grey. The "fixing" bath simply kills the unused silver in the paper, which if not destroyed by means of hypo-sulphite of soda, would rapidly darken by exposure to the light, and so ruin all our previous work.

Quite a large batch of prints may be "toned" and "fixed" in the hour. After "fixation," the prints must be thoroughly washed by being left in running water for seven or eight hours' duration. The fading of our prints will be the result of imperfect washing.

The cost of the necessary apparatus was another inquiry.

My first advice is, avoid second-hand cameras. Second-hand cameras are like second-hand umbrellas—neither good for use nor ornament. The price, of course, will depend on the size and quality of the camera.

A quarter-plate size would be the best to learn with. This camera would take a picture four and a half inches long, by three and three quarter inches deep. The larger the camera, the greater the all-round expense. A quarter-plate negative can be produced for one penny, while the popular cabinet size would incur an expense of threepence. At first the beginner might reasonably regard himself "lucky" if he did not waste more than one dozen plates, before he got some dim notion of the rationale of picture-making.

A fairly good quarter-plate outfit can be purchased for from two to three guineas.

The lens is really the most essential part of the apparatus. Photographic lenses may be classified under three heads:—(1) Single lenses; (2) rectilinear lenses; (3) wide-angled lenses. The rectilinear lens is the most useful of the three, being suitable for all-round work. It is the lens for architecture, and will also take a portrait, or piece of landscape, well. For successful instantaneous shutter work it is a *sine qua non*.

The single lens is the best one for landscape, pure and simple, while the wide-angled one is the only lens which will take buildings in confined positions, or cramped interiors.

The "cases" which hold the dry plates during exposure in the camera are called "dark-backs." The best form is that known as the "double dark-back," which is constructed to hold two dry plates. The more "double dark-backs" the amateur possesses, the more pictures he will be enabled to take when out touring.

It will be as well here to give a list of the really necessary articles required, as in these "bad times," dealers, exaggerate somewhat the tyro's requirements.

Apparatus.—Camera; lens; focussing cloth; dark-backs; tripod; leather bag; a few bottles; 3 large dishes for "developing," "alum," and "fixing"; plate rack; two-ounce measure; minim measure; 2 large dishes for "toning" and "fixing"; Printing frames, etc.

Chemicals.—½ oz. pyrogallic acid; ½ lb. sulphite of soda; 2 ozs. citric acid; 4 ozs. meta bisulphite of potash; 1 oz. bromide of potassium; 1 oz. ammonia, ·880; 1 lb. alum; 1 lb. hypo-sulphite of soda; 1 oz. borax; 2 oz. acetate of soda; one 15-grain tube of chloride of gold; dry plates; and sensitized paper.

The cost of all these chemicals should not exceed seven shillings, including one dozen quarter dry plates, and one cut sheet of sensitized paper.

"Which is the best text-book to study?" An important inquiry this. I recommend two at first—"The Beginner's Guide to Photography" (1s.), published by Lejeune & Perken, of Hatton Garden; and "Practical Photography" (2s. 6d.), published by Marion & Co., of Soho Square. When these are mastered, Captain Abney's "Instruction in Photography" (3s. 6d.), will afford food for thought. A little book, entitled "The Landscape Photographer's Systematic Exposure Book" (1s.), published by Cartwright & Rattray, 28, Brown Street, Manchester, will be found invaluable.

"The Amateur Photographer" and the "Camera," the first a weekly, and the second a monthly Magazine, both afford capital reading, as interesting as instructive.

Much experience would be gained, too, by joining a "Postal Photographic Club."

TO KATE.

I KNOW a maiden with a face not "fair,"
But dark and glorious. Waves of raven hair
Break o'er her brow. Two perfect arches rise
Above a pair of radiant glowing eyes,
Shrouded with drooping lashes, black as jet—
A face, once seen, no man can e'er forget.

They call her "Kate."
My soul is moved to wonder if the grace
Of Jesus dwells with her who owns that face;
Whether the mighty love of Him who died
To save us from our sins has sanctified
Her heart, making both gem and casket shine
With light, part human, and yet all Divine.

If so—*then* do
I know a maiden with a heart all fair,
Matching a face all lovely. Oh, 'tis rare
To find such union! Oh, 'tis rare to see
Goodness with beauty joined! My memory,
Charged with a pleasure more than I can tell,
Has fixed that image. Can I say, "Farewell,
Grand face—sweetheart"?

JAMES I., in one of his capricious moods, threatened to remove the seat of royalty, the archives of the crown, etc., from the capital; whereupon an alderman said, "Your Majesty will, at least, be graciously pleased to leave us the River Thames!"

A MOTHER'S LOVE.

By M. F. Billington.

IT was a dreary afternoon. A raw, cheerless fog hung over the metropolis, and no quarter seemed more wretched than did a little side street between Clerkenwell Road and Hatton Garden. In a poorly-furnished, gloomy back room there, where the handful of cinders in the grate had burnt down to a grey ash, sat a widow, with her hands clasped in an agony of grief. On her lap lay an open letter, which ran as follows :—

"Blank Street, Brighton,
"*Jan.* 17*th*, 188-

"My dearest Mother,—

"You will be sorry to hear that I have got into a beastly row here. I knocked a cad down, and am likely to be fined a 'fiver,' or sent to prison for a month. Now, I have not got a penny to call my own, but the disgrace of going to prison I cannot face. So sure as my name is what it is, I will blow my brains out with father's old revolver in his dressing-case, rather than suffer that shame. *Can* you send me on five pounds by return? I would like more if you could spare it, but I don't suppose that funds are very flourishing with you.

"I got one pretty sketch of sunset effect from my windows, but was obliged to make my old dragon of a landlady take it for rent. It is too cold to go out sketching here.

"If the money doesn't arrive by the first post, really, mother, you must be prepared to see in the evening papers, 'Shocking suicide of a young artist at Brighton!'

"I hope you are well, and with my best love,

"Believe me,
"Your affectionate son,
"WALTER LEWIS."

Presently the poor mother rose, and with a bitter sob drew from her pocket an old purse, in which was a five-pound note, about eight shillings in silver, and a stamp! It was not the first time that her boy had come to her for money, and she knew him well enough to know that however wild a threat he made, he carried it out.

"Oh, Walter, Walter," she cried, "I can do no more for you!" But the vision of a fair-haired, handsome lad, with a ghastly wound through his head, came before her, and hastily she sat down again, saying, "Better he has it than I. What matter if I die? Even he would not miss me, and I cannot help him."

She wrote a loving letter, that would have melted a heart of stone. Then enclosing the five-pound note, she took it to the post herself, and came back to try to drink a cup of cold, weak tea, and eat a slice of dry bread.

Perhaps she sat over this wretched meal for a quarter of an hour, thinking over the past. She recalled herself the pretty bride of the young officer in a line regiment; she saw Walter as a baby again; and then she remembered how her husband had been killed in a railway accident, leaving her with the bright boy, and eight hundred pounds. With that she had tried to do so much! But it had soon melted into five hundred, and then she had purchased a slender annuity. How hard she had worked at her needle and with her brush—for she had some artistic ability—none but herself knew. She had given Walter the best education in her power, and he had developed real talent for art. If he had only applied himself with any strength of purpose, he could undoubtedly have conquered a position and competency in life. But, as his letter showed, he was fearfully selfish, and fatally idle. He had drifted into a set more highly endowed with money than himself, and idle also, to say nothing of other bad examples they set him. His head was filled with notions of only working at such rare intervals as he felt "inspired." The vivid *impressioniste* sketches that he produced lacked finish, and the very facility with which, with a few hours' work, he could turn out really original studies and pictures, was a snare to him. He had quite abandoned his mother, save to beg from her, and he had not seen her for several months before he sent her the appeal that distressed her so much.

A step in the passage caused Mrs. Lewis to start, and she wearily answered, "Come in," to a knock at the door. It turned out to be Mr. Brown, the landlord.

After a formal "Good evening" on both sides, Mr. Brown said,—

"I am sorry to have to remind you, Mrs. Lewis, but you know your rent is considerably overdue. With what was owing before, it was four pounds, eighteen shillings up to last quarter-day."

Mrs. Lewis tried to answer calmly, but her voice was choked by sobs, as she said,—

"I had the money by me last night, Mr. Brown; I had painted some menu cards, and had been liberally paid for them, and I intended to have brought it to you this morning. But what was I to do? See how my darling boy wrote to me! I could not bear the thought of his going to prison; and if he threatens to do a thing, he always does it."

Mr. Brown read the letter; and, ordinary, almost coarse, man as he was, its heartless, patent selfishness disgusted him. He said, as he laid it down,—

"Well, ma'am, a young cub who could write such words as those wouldn't be much loss to any one, I should think. Still, I s'pose a mother has different feelings to any other. But I really want my rent. I don't want to be hard to you, Mrs. Lewis; you've been a careful, quiet tenant, I know. You see, I'm not a rich man. I'll give you one more week, but I must indeed be paid then. Good-night."

He gave one glance round the room as he left. The scanty furniture it contained would scarcely have recouped him if he had distrained on it.

She said, "I will do what I can for you, Mr. Brown. No one can be more truly grieved than I am to be so long in your debt."

She sat up till twelve, and did needlework by the light of a tiny candle.

Walter got out of his "row" through a technical error in the summons, and in anticipation of the money that he felt sure was coming, treated some of his companions to a sumptuous supper. Hard as Mrs. Lewis worked during that week, she had only a trifle more than a sovereign for her landlord. She had written begging Walter to send her even a couple of his clever sketches to help her; but the miserable lazy fellow wrote back that he had nothing by him of the least good.

There was no help for it! Mr. Brown must have his money. He must take the scanty furniture, and she—well, she must do what she could. There was the workhouse, after all, but she was a lady, and anything seemed better than that. She had no friend to turn to in the world. When Mr. Brown came that afternoon, she told him that she must leave, and that she hoped the few bits of furniture would pay his rent. If she could have foreseen any prospect of paying him off, she might have asked him for an extension of time, but it might be weeks before she could get even another sovereign. He was sorry for her, but he had no idea of her utter destitution.

So she took away in a very light bundle her few clothes, one or two little memorials of her husband, and his and Walter's photographs; and on a chill, drizzling afternoon, she passed out homeless into the street, with a shilling and some coppers in her pocket, and a heart of lead in her breast.

Fourpence of her slender fund she spent in a bed at a common lodging-house. The next morning she awoke with cold in every limb, her body aching, and her throat sore. She rose, and painfully dragged herself to a dispensary near, where she spent some more of the pence in a futile effort to obtain some relief for her cough. Another scanty meal, and all that was left was just the fourpence that would give her the night's shelter, and then there was nothing more but death. Oh! how sad it seemed to die alone, hungry, and forgotten, in a house full of strangers.

The following day found her still worse, and the landlady advised her to go to the parish infirmary, and then, if she became better, to apply for out-door relief. Thither she went, but, instead of mending, she grew worse and worse. The cold and exposure of those two blank, hopeless days following upon the insufficient food and privation of many weeks, had brought on congestion of the lungs, and it soon became evident that she could not recover. They broke the news to her, and asked if she had any relations whom she would like to see. She longed, of course, to see Walter, but for some time she hesitated to send for him, feeling with the utmost refinement of affection that it would be painful to him to see her in the wards of a workhouse; but finally she gave his address, and besought him to come and bid her adieu in this world.

When the earnestly-worded summons came to him, he could scarcely realise what it really meant. His mother dying! In a pauper's bed! But with an agony of reproach he remembered her piteous request for a picture, and how he might have given her every reasonable comfort for her old age if he would only have exerted himself. He had idled away splendid opportunities, and when one little picture—a few hours' work on his part—could have kept the roof over her head, he felt how utterly heartless and brutal he had been. As it happened, he had made several sketches a day or so before, and these he hastily parted with, so that he might have two or three pounds in his pocket to do what he could for her, although it was now too late.

He took the next train to London, and was soon standing outside the gloomy walls of an East Central London parish hospital. With a shudder of shame he passed in, and was led to his mother's bedside. Texts on the walls, and flowers did a little towards relieving the painful aspect of the long rows of beds, but Walter's remorse that his mother, through him, was in such a place, is not to be described.

The end was very near. When he approached her, she extended a thin hand, and said, "My darling boy. God has heard my earnest prayer to let me see you before I die. Oh! Walter, do try and work for yourself more—you might do so much if you would try."

Walter sat on the edge of the bed, and passed his arm round his mother's slight, wasted figure, and his tears came very fast as he answered, "Yes, mother, I will. I have thrown away time and money in all conscience, but the worst part is that I have brought *you* to this. Mother, *can* you forgive me for the brutal selfishness I have shown you?"

"Yes, darling; may God do so as I do. I am going to join your dear father in a little while now, and then life's troubles will all be over. If I can die, feeling that you will do your best, and sever yourself from your lazy companions, I shall be happy at the last."

As he bent his head and kissed her, he whispered the promise. He sat beside her, hearing the sweet words of love that only a mother can say, till a change came over her, and as she breathed a prayer for him, her soul passed to "where beyond those voices there is peace."

* * * *

Walter kept his word bravely. He is now working hard at his profession, and exhibits in some of the lesser galleries. hoping in time, with best exertions, to win one of the coveted places "on the line" at Burlington House.

SIX TRAINS A DAY ROUND THE WORLD.

SIR RICHARD MOON says that the trains on his railway now run equal to six trains a day round the world. And it carries 60 millions of passengers, and 33 million tons of goods, annually. It employs 60,000 persons, has 50,000 wagons, 5,000 carriages, 3,000 horses, 20 steamships, and 3,000 engines. What would George Stephenson have said?

ABOUT OURSELVES.

A LARGE number of Papers and Periodicals have been calling attention to the illustrations and Articles in our Magazine, and have said many kind and complimentary things about us. We tender our sincere thanks for their kind appreciation.

We remind our numerous readers that we are always glad to send small Parcels of Specimen Copies, free and postage paid, to any who will distribute them advantageously.

On the back of a post card, please send us the addresses of half a dozen young men to whom we may post a Specimen Copy.

A NEW PRIZE COMPETITION.

NEXT week we hope to announce another Prize Competition, which, whilst not difficult, will test the capabilities of our readers in quite a fresh direction.

SUNDAY SCHOOL CLASSES.

DIFFICULTIES IN TEACHING.

By the Rev. J. H. THORPE, M.A.

MAKE your Class your daily prayer, ask for their attention and believe in the Holy Ghost. There are, however, very important human elements in the matter, and a fortnight's experience need not discourage you, because you have not won their attention. They can hardly know *you* yet, and to *know your scholars well* is a great step towards getting their attention. The ages of your pupils suggests that you must not expect too much. Do not mind if the earlier part of the lesson is not very attentively listened to. Aim for their chief attention at the end of the lesson. Remember their minds cannot take in all you would wish, and do not deal with your Class (practically infants) as if they were men. As a rule, references are quite useless—excepting a few very plain ones—with such a Class. Here is a suggested "Bill of Fare." School assembles. Hymn and prayer being ended, arrange your Class. Keep them all in front of you. If your Class is seated on three benches in the form of three sides of a square, place your chair on the line of the fourth side—thus all your Class will be in front of you. Ask, "What is the verse for to-day? Where is it found? Old or New Testament," etc. Begin the repetition, but *not in order*—do not begin at the top and go round; ask boys who are not expecting. This keeps attention.

If hymns are learned, always have them repeated. Do not be VERY particular at this part of the lesson about general attention, because here you are dealing with individual memories (of course you must keep strict *order*). If a boy makes an error in his repetition, do not correct him yourself; ask another boy what mistake he made. Then you come to the lesson proper. Be sure you know it well yourself. Dwell on *facts* and *incidents*, rather than deep doctrines—or indeed doctrines at all. Cultivate the art of word-painting, endeavour to put a picture of the incidents of the lesson or suggested incidents before them. Tell anecdotes by all means, *if you know how*, but be very careful to keep them in the second place. Many teachers forget that an anecdote is only a nail to hang the truth upon, and so their lessons are often many nails and few *truths*. Keep a note-book for your anecdotes, and if possible, have more illustrations than stories. We know of no book bearing on this subject except the book called "Experience," which each must write for himself!

CRISP CORRESPONDENCE.

"Tare."—A correspondent asks for name of editor, number of volumes, and present price (including postage), of the Encyclopædia you wish to dispose of. Please send us these particulars with your name and address.

A. J. S.—The help which you seek in this matter is so important, that we have given a separate paragraph to this subject in the previous column, hoping that the valuable suggestions it contains will be helpful to many S. S. teachers besides yourself.

G. E. M. P.—To stain boarded floors, obtain a bottle of Varnish from J. H. & S. Johnson, 6, 8, and 10, Whitechapel, Liverpool. The colours are Ebony, Mahogany, Rosewood, Oak, and Walnut. A 1s. bottle will do about three yards square, or round a moderate-sized room. The polished surface is sustained by occasional rubbing with bees'-wax and turpentine. We are glad to hear that you have derived so much good from —"A. 1."—and hope that you will introduce it to your friends.

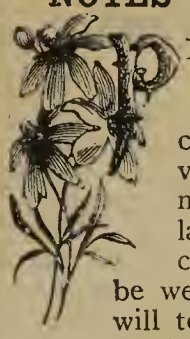
A Well-Wisher for "A.1."—Mark 16. 16 teaches that faith is *absolutely* necessary to salvation—that is to say, without faith a person cannot be saved at all. A believer may be saved without baptism; it is not the privation of the Sacrament, but the contempt of it that condemns. As to the signs following them that believe, and their cessation in the Church now, the reason appears to be this, that at the first setting up of Christianity in the world. miracles were intended to be the credentials of the faith. But when the gospel had taken root and become more fully established, then the ordinary operations of the Spirit, which indeed are miracles of another order, took their place. Just as in nature. The world was created miraculously, but afterwards carried on by what we call the ordinary providence of God.

Douna.— Are believers taught to look back to the cross, to a dead Christ, or to the Father's right hand, at a risen, living, and interceding Christ? If the latter, then surely a crucifix is not the emblem which should engage our thoughts. Further—if a beloved friend had suffered untold agony, and for you—would you feel satisfied in gazing continually upon the instrument by which all the suffering was inflicted? And since such grievous dishonour is done to our Lord by the adoration offered to the symbol, surely those who love Him should be jealous for His honour, and oppose every appearance of evil. It is *spiritual* worship which the Father seeks, and those who are spiritual, neither need nor desire such material aids; whilst to those who are not spiritual they are an undoubted hindrance, if not a positive danger.

Spelling Chase No. 2.—We have had a few groans from disappointed Competitors. One friend felt confident that if not entitled to a Prize, his name should have been on the "Commended" List, for it certainly had, at most, only one mistake. He had kept a copy, which he begged as a favour might be glanced over. We complied with the request, and had, alas! to return it with some eight or nine mistakes marked.

R.G., Southend.—Very glad you enjoy our Paper so greatly. Your letters have reached us safely. If your friend who wishes to see Specimen Copies of—"A. 1."—will send his name and address to our London Office, he will receive a small parcel. May you always realise the presence of the Lord Jesus, and cultivate close acquaintance with Him through His word; then you will lack no earthly fellowship.

ACROSTIC.



SHE failed to do my first—a tearful child;
A toy that makes my second dry her tears.
Years pass. With wondering eyes, the maid reads wild,
Weird tales about my whole. Again more years,
And softer shine her sweet eyes when, for one
Who is my whole, they are my first, and then
Her heart becomes my second. She is won,
And weeps no more, nor frighted is again.

1. Although with many strokes and strong my feeble form they beat,
   My spirits ne'er forsake me, and my nature still is sweet.
2. But use my eyes, and soon you'll see
   A dozen more for two or three.
3. A winged creature, yet not found in air,
   But fleet of foot, and great, and strong to bear.
4. Majestic, fearless, strong, and kingly,
   I should not care to meet him singly.
5. This is not lake or river, stream or sea,
   But near all these 'tis always sure to be.

Answer will be found in our Number for August 18th.

WE rejoice to hear of such a good building and bright future for the West Bromwich Y.M.C.A.

NOTES ON PET MONKEYS.

PERHAPS it is because monkeys are not very common pets that information concerning their management is not very readily procured. A handy manual on the subject* has lately been published by L. Upcott Gill, which will doubtless be welcomed by monkey lovers, and will tend to make the lives of these droll captives more endurable than in the past.

Notwithstanding the eulogium of our author, we doubt whether these quadrumana will ever be thoroughly popular. Amusing and droll they doubtless are, but their mischievous propensities are well-nigh ungovernable, and their temper is rarely to be trusted. A bite from an angry monkey is not lightly forgotten.

At the same time, a number of more or less irrational persons *do* keep tame monkeys, and for their benefit we reproduce a little of our author's sage counsel, referring them, if they desire further information, to the book itself.

A monkey without a cage is a domestic nuisance. Some folk still cling fondly to the delusion that a pole is essential, with the cage mounted on top, and the monkey so chained that he can run up and down the pole, and have a certain limited space of floor at his disposal. This makes your monkey an unpleasant occupant of any room, and is unnecessary. He will thrive as well, if not better, in a cage made of an ordinary packing-case, strongly wired in front, and provided with a trapeze, wheel perch, ring and bell, and swing looking-glass. The cage, by a little ingenuity, can be made at home, and will not cost much.

The chief importers of monkeys are Cross, Carpenter, and Johnson, of Liverpool; and Jamrach and Abrahams, of London. But there are monkey dealers in most towns, and also papers dealing in exchanges, through which good animals can frequently be had. The price for an ordinary monkey varies from 12s. to £1, but you can go as high as £30 if you choose.

A few hints as to diet. Boiled milk and rice stand first, bread and milk next, then boiled potatoes. Fruit of any kind may be given in moderation; sliced Swedish turnips, carrots, beet, boiled maize, cabbage, and onions are also good. Some monkeys will not touch onions, but most are delighted to get them.

Monkeys should be kept warm—in a temperature not exceeding 60°—and free from draughts. Generally speaking, milk with the morning and evening meal will prove sufficient moisture for your pet; in hot weather, however, a little drinking water should be given, but if a pan of it is allowed to lie in the cage, the monkey is sure to upset it.

A monkey at sixteen years of age may be reckoned quite a prodigy. A young monkey should possess a smooth, well-kept coat, a tail fairly woolly and free from a mangy appearance, teeth clean and perfect, and eyes free from "grumble." As a monkey ages, his temper becomes crusty and uncertain. His canine teeth develop, and so does his propensity for using them. When he comes to this stage, it is better to dispose of him to the next menagerie, or your fingers will suffer from his bites.

Our author is careful to point out that the monkey tribes are very far indeed from being new-fangled pets. He says:—

"As pets, monkeys were kept centuries since; it is recorded in the Books of Chronicles and Kings, that Solomon, among other importations, brought a quantity of apes. The Egyptians were not slow to appreciate the special qualifications of the *Simian* species as pets, and on many of their tablets and obelisks are to be seen chiselled the Thotto Baboon, the Grivet, the Patas monkey, and others.

"In the Middle Ages the 'baron bold' and 'ladye fair' always made the strolling minstrel and his monkey welcome in the 'hall or bower'; and as great a favourite still is the little Savoyard, who, with his monkey and his barrel-organ, can always draw an admiring, if not an appreciative audience.

"The menagerie and the Zoological collection are incomplete without a certain complement of monkeys; whatever else may awe, and frighten, and command the admiration of the gaping crowd, it is this department that awakens the broad grin and hearty laugh."

Finally, we most heartily reciprocate our author's sentiments, where he says:

"Tormenting a caged monkey seems to be so natural to some folk, that they cannot visit one but they must poke it with sticks, offer and withdraw food, etc., in order to see the droll anger exhibited by its every grimace, action, and shriek. In cases of this kind, where once telling does not suffice, I politely escort such an one to the door of my monkey-house, the effect upon a crowded assembly being always very striking. The most abominable thing one can do to a caged animal is to test its capacities of forbearance."

* "Notes on Pet Monkeys, and How to Manage Them." By Arthur Patterson. Price 2s. 6d.

EXTRACTS.

WHEN Daguerre was working at his sun-pictures, his great difficulty was to fix them. The light came and imprinted the image; but when the tablet was drawn from the camera, the image had vanished. Our lamentation is like his, our want the same—a fixing solution that shall arrest and detain the blessings. He discovered the chemical power which turned the evanescent into the durable. There is a Divine agency at hand, that can fix the truth upon the heart of man—God's Holy Spirit.

CARNAL man cannot comprehend that God loves those whom He permits to suffer. But faith teaches us that the cross is the gift of His love, the foundation of our hope, the mark of His children, the evidence of title to the inheritance of heaven. But unless God sanctify it by His Spirit, it becomes an insupportable burden, a subject of murmuring, an occasion of sin.

O THOU Good Shepherd, who hast laid down Thy life for me, let me trust Thy love and feel Thy support, that whatsoever lies before me to be done or suffered, I may be enabled to do it, and to suffer it, by the continual supplies of Thy grace.

THE REV. SPENCER COMPTON relates the following incident: "During a voyage to India I sat in my cabin, feeling thoroughly unwell, as the sea was rising, and I was but a poor sailer. Suddenly the cry of 'Man overboard!' made me spring to my feet. I heard a tramping overhead, but resolved not to go on deck, lest I should interfere with efforts to save the poor man. 'What can I do?' I asked myself, and instantly unhooking my lamp, held it close to my window, that its light might shine on the sea as near the ship as possible. In half a minute I heard the cry, 'It's all right.' The next day, however, I was told that my little lamp was the means of saving the man's life; it was only by the timely light which shone upon him that the knotted rope could be thrown so as to reach him. Christian, never think there is nothing for you to do in the dark. Looking unto Jesus, lift up your light; let it so shine that men may see, and in the resurrection morning, what joy to hear the 'Well done!' and to know that you have saved some soul from death!"

THERE are two thousand Protestant girls in convent schools in the Canadian province of Ontario. This is rousing Protestants to the importance of establishing good schools for girls.

PERSONS of genius are more individual than any other people, and less capable, consequently, of fitting themselves, without hurtful compression, into any of the small numbers of moulds which society provides in order to save its members the trouble of forming their own characters.

PATIENCE.—The Son of God lived till thirty in an obscure village of Judea, unknown; then came forth a matured and perfect Man—with mind and heart and frame in perfect balance of humanity. It is a Divine lesson! I would I could say as strongly as I feel deeply. Our stimulating artificial culture destroys depth. Our competition, our nights turned into days by pleasure, leave no time for earnestness. We are superficial men. Character in the world wants *root*.

THE NewYork Y.M.C.A. has elevenBranch Associations in the city, five of which occupy their own Buildings.

THE Annual Report of the Carrickfergus (Ireland) Y.M.C.A. shows a Membership of 135, an increase of 16 on last year. This vigorous Association starts this year free from debt, and has recently opened a first-class café, which is proving very successful.

THE STAR OF TEL-EL-KEBIR.

DURING the Egyptian War, which is memorable for the battle of Tel-el-kebir, an incident occurred which is worthy of note. All night long the British forces had been marching across the well-nigh trackless desert. The order had been given that not a word was to be exchanged, not a light was to be shown. The troops were under the command of General Wolseley, but their guide through the sombre darkness of that memorable night, was a young naval officer, whose knowledge of astronomy proved invaluable to him in the terribly responsible position in which he was now placed.

As the first streaks of coming daylight stole across the sky, the intrenchments and outworks of Tel-el-kebir were reached. Stealthily as the English advanced, their approach soon became known, and the report of a gun was the signal for a battle to commence in all too deadly earnestness. Among the very first to fall, on the English side, was the young naval officer, whose unerring wisdom had led his countrymen so well. As he lay there, wounded and bleeding, his life-blood fast ebbing away, his commanding officer went up to him, and bending over him said, "Well, you did lead us splendidly." His reply, faint and weak, was, "Yes, I did lead you straight; but it was only because I kept my eyes fixed on yonder bright star."

Every soldier of Christ has a warfare to engage in, far more hazardous, and with more tremendous issues at stake than any Tel-el-kebir.

His path is sometimes apparently trackless, through a spiritual desert, and the night is sometimes very dark, but still there is ever shining above him the Star of Bethlehem—the life and the Person of Christ. And with his eyes fixed on that true Light of lights, the course he takes will not only lead to his being more than conqueror himself, but by his example he may lead many a brother "from the error of his way," and thus "save a soul alive, and hide a multitude of sins."

AT THE CRYSTAL PALACE.

IT was the "Exeat" or half-term holiday in the Easter term, when several Harrow boys were wending their way to the Crystal Palace in London. The grounds looked very pretty, while inside the Palace the sunlight was streaming everywhere. In one part of the hall stood a large picture, in a very handsome frame. As we approached the picture to look at it, we stood for a few moments on one side of it, at a little distance off. Evidently the light which fell upon the picture from where we were standing, was a wrong one in which to look at it, for the painting seemed to be only a confused daub of colours, pervaded by a kind of misty darkness.

Crossing over, we looked at the picture in its proper light, and found that it represented a beautiful landscape scene, which well repaid a close and careful study. Indeed, the more one looked at it, the more brightly did the realisation of the whole scene dawn upon one. That picture, then, had *two* sides, a dark one, which inevitably presented itself to those who stood and looked at it in a wrong light and from a wrong point of view, but a bright side, continually getting brighter, to those who looked at it in the light in which the artist had painted it.

Exactly so is it with the Divine Picture, drawn and painted by the Master-hand of the eternal Father Himself. This picture, representing the gift of God to man, has two sides. One side is a dark one indeed, because the dark shadow of sin has fallen upon it—that side tells us only too truly that "the wages of sin is death." But crossing over to view the picture in the light in which God intended it should be seen, we find the bright side, which shows to us that "the gift of God is eternal life, through Jesus Christ our Lord." The more we stand looking at this picture the more do we realise in our own soul that its Divine glory of light grows "brighter and brighter unto the perfect day."

But this was not the only lesson learned in the Crystal Palace that day. Soon afterwards there was a grand organ recital, listened to by several hundred people. A few had reserved seats, but the majority stood in the body of the hall. Suddenly a man went into the gallery, and held up a large blackboard, on which was written, in chalk, the word "*Free.*" The crowd saw the notice, believed it was intended for *them*, and immediately occupied the gallery. Instinctively our thoughts went to that *Free* place in the Crystal Palace of Heaven, offered without money and without price to all who will believe it has been purchased by the life-blood of the Son of God, and "prepared for" them by Christ Himself. *That* is the Palace of the "King of kings."

"*It is a good thing to believe;* it is a good thing to admire. By continual looking upwards, our minds will themselves grow upwards; and as a man, by indulgence in habits of scorn and contempt for others, is sure to descend to the level of what he despises, so the opposite habits of admiration and enthusiastic reverence for excellence, impart to ourselves a portion of the qualities we admire. Here, as in everything else, humility is the surest path to exaltation."

"SAVED FROM THE WRECK."

IT was one day in November, 1886. The wind was blowing a strong gale from the N.E., and all day long the waves had been rolling "mountains high" in the German Ocean, just off the coast of Lowestoft. Ever since early morning, the fishing-boats had been making for port, and their entrance into harbour had been eagerly watched by an anxious crowd on the north and south jetties. The tugs had been busy all day, and many a vessel, more or less disabled, had they towed into port, in answer to a signal of distress. As evening closed in, the beachmen and others felt that their time of watching was over. Suddenly, at about 8 p.m., the sound of a rocket startled all the town, being followed in rapid succession by two more rockets. There was no mistake about it, a vessel must be either on the sands or aground somewhere. The latter was the case; a French fishing-boat had mistaken the harbour lights, and the strong wind had driven her on to the breakers.

The coastguardsmen and beachmen were soon on the spot; and after about three-quarters of an hour, the rocket-line reached the vessel, and was securely made fast.

Meanwhile the beachmen waded into the sea, and stood there, sometimes buried in the surf, to receive the first comer in the life-saving apparatus. The first thus rescued was a lad, and a loud cheer greeted this proof of the unselfishness of the men. Then, after a long interval, came a poor fisherman whose leg had got broken, then one or two more, and last of all, midst ringing cheers, the skipper of the boat. The poor fellows, wrapped in blankets, were driven to the Sailors' Home, which noble institution is open to all, without distinction of language, creed, or race.

Somehow or other, as I wended my way home at nearly midnight, I thought how "man's extremity was God's opportunity;" and how, over the darkness of the stormy sea of life, the bright rocket light of a Saviour's love shone clearly, revealing, it is true, the hopeless shipwreck of man's life, and yet pointing out the life-saving, the *soul*-saving method of God's provision. All that is needed is to leave, once and for all, the failure and wreck of the past, and stepping boldly into the means of salvation provided, to be received on the shore of eternal life into the strong arms of our Deliverer, and by Him to be led in joyful security to that everlasting "*Home*," which is open for "all nations, and kindreds, and peoples, and tongues"—over the door of which is engraved in letters of redeeming love, "Whosoever will may come." "And the nations of them which are SAVED shall walk in the light thereof."

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow," "Corbiestanes," "Our Navvies," etc., etc.

CHAPTER VIII.

"ACCIDENTS ARE OFTEN GOD'S PROVIDENCES."

JOHN BURLEIGH entered the courtyard, and threw himself down on the turf, and thought how lonely the place would be without them all. Certainly he was not a great deal at the Chase; but then he felt that the home circle was always there, and that at any moment of despondency he might take refuge in it. He called to remembrance many happy hours. And then it flashed upon John Burleigh's heart that Lady Susan had been the centre of all this consolation and comfort. The next instant the steel cord drew itself across his chest, and the pain was as intense as if he had been running desperately. He placed his hand on his heart instinctively and threw the other up. Slowly the pulsation came back, and the sense of suffocation passed. He felt faint and weak, but the sunshine warmed him, and presently his brain began to work again. The spasm of surprise was past, and a wonderful warmth of happiness glowed within him. He thought of this young girl so intensely that he was hardly startled when he saw her standing in her grey dress in the old gateway. She gave a little laugh, and came forward.

"This sketch seems destined never to be finished. I find you here again, Mr. Burleigh. I won't disturb you this time. I will go. Though, by-the-bye, you were the intruder before."

"Don't go, Lady Susan; sit down here where you sat six weeks ago."

"Has something specially pleasant happened? You look quite radiant."

"I don't know; I fear now that my vision was illusive. Still it is always well to see the truth."

"May not I see it too, for it seems a pleasant one?"

"I do not think you would consider it such."

"Let me judge."

John Burleigh bent his head on his hand.

"I have heard this morning," said John Burleigh simply, "that you are all going away, and that you will not return until autumn. Of course I knew it before, but I had never realised the fact that all through the summer the Chase would be empty, and that I should be alone here. When I realised it, as I said, I saw what a second home yours had been to me, and then I discovered that *you* were the centre of all its warmth and help to me, and so I found out that I loved you, as I have never loved any one before."

John Burleigh held out his right hand, and his eager questioning eyes looked down into the girl's very soul.

In the two or three minutes during which

"His questioning eyes looked down into the girl's very soul."

she hesitated, a great ocean of strange thoughts rushed over her, and almost engulfed her.

Was Mr. Burleigh mad? A poor man—so very poor. If she put her hand in his, farewell to all prospects of a brilliant future. She would never be a leader in society or politics; all the day dreams of her life would vanish into thin air—not one would become a reality. Her father, mother, sisters, friends, every one would consider her insane, and Mr. Burleigh, he would expect her to live on his own high level. Would she ever be able to do that? And then she glanced at him; his hand was still outstretched. Their eyes met in a long, solemn gaze, and as she placed her hand in his, his whole face was illuminated with brightness, and tears sprang to the girl's eyes, and she bent her head and kissed the fingers which held her own.

John Burleigh, as he walked across the park two hours later with Lady Susan, remarked quietly,—

"As you all go to-morrow, I must ask your father for his consent to-night, Susie."

Lady Susan stood still in horror.

"Oh no!"

"Why not?"

"Because—why, John, it would be madness! Father is worried about a great many things. It would vex him terribly to hear of any new plans just now. Do trust me—I will tell you when to ask."

"But it would not be honourable—we cannot be engaged. I cannot feel you are my promised wife until all the world knows the happiness you have given me."

"No, we are *not* engaged—I want to test you, perhaps. Anyhow, I ask you to wait my time. I promise you I will let you know the right moment as early as possible. Markham and Edward have both been tiresome lately, and I do not want to add to the family burdens."

"It is rather hard, but let it be as you will. I can feel at least that you are my dearest friend; but if you are as yet to be *only* that, I cannot intrude on your family this last evening. Good-bye, Susie."

Lady Susan did not regret the step she had taken. She had gained the love of the only man she had ever cared for, and the very fact of being beloved by him was happiness and promotion inexpressible. Yet she knew that every one would consider her infatuated to prefer poverty and seclusion to rank, honour, riches, and the rush and glory of a life such as she could easily secure—such as she had had the choice of before to-day. All her relatives would place themselves in opposition, and bitter times were looming. Still Lady Susan told herself, one day she would be John Burleigh's wife, come what might, and then happy thoughts lulled her to sleep with a smile on her lips.

Next day the family went to town, and a strange stillness fell on the village. It was not, however, of long continuance. In three weeks the spring races at the neighbouring town of Castleborough were held, and the country roads were crowded by all manner of carriages, from the four-in-hand drag to the coster's cart. Showmen, thimble-rig men, gipsies, and many other specimens of humanity were trudging through Houghrigg, towards the scene of a hoped-for harvest, for days before. Nor were the villagers themselves exempt from the general excitement. A feverish restlessness seized on some of the quietest men, apparently, in the place. Amongst the rest, William Bradley, setting at defiance the wife to whom he was usually so submissive, went to the races with all the carefully saved cash she had in the house in his pocket.

"I've a right to my bit of pleasure as much as any gentleman, and a deal more, for I work for it and they don't," he said sullenly, and disappeared for three days. At the end of which time he reappeared, crestfallen but silent to all Mrs. Bradley's reproaches.

"I'm glad it's come and gone," said she to the Vicar; "he like goes off his head spring and autumn, but all t' rest of t' year he's a decent man enough; and when all's said, he's a sight less wasteful than the gentry. They've plenty to fool away, and he's only a little. Look at Lord Markham, why, after these races the earl is near distracted, they say. He once had a horse that got him £20,000, but he's lost a deal more nor that wi' others."

John walked home across the fields, little Mary running by his side and chattering all the way. He wished her "Good-bye" at the stile which led into the high road, close to the lodge gates of the Chase.

It was the third and last day of the races, and on to the quiet evening air came the tramp of horses, the rush of wheels, and the voices of men. Then came a dogcart, driven tandem, with three men and a groom. The four horses, excited by the rhythm of the crashing hoofs before them, were with difficulty held in by their driver. Presently a piece of newspaper blew out of the hedge and fluttered before the leader. The thoroughbred started in terror, reared, plunged, and bolted round. The next instant the dogcart was over, and the wheeler was kicking it to pieces.

The groom had seized the leader, one of the gentlemen was cutting the other free from the traces, while John Burleigh and the other gentleman raised the dogcart and drew from under it the driver, with difficulty getting him beyond the range of the wheeler's heels.

"My leg is broken," he gasped; "it is a wonder it's not my head."

John Burleigh ran away for assistance, and as he did so, he puzzled where he had seen the injured man before. He could not remember. He returned very soon with a door, some cushions, and the village blacksmith, and his two men. Then the doubt was solved.

"Hardman has fainted. I'm afraid it's a bad smash. We must get him to the Chase as quickly as possible."

"There is a short cut to the house."

"How far may that be?"

"About a mile."

"Ah! we shall be there before the doctor. I have sent Banks back on the leader for one. The chestnut has cut her legs to pieces."

John Burleigh helped to carry his old schoolfellow home, and waited by his side until the doctor came and set the broken leg; and when even he had gone, lingered still by the sick bed.

His friends had all left the sick man, and the stillness of the room was profound.

Hardman was suffering, but was so much more at ease now, that he began to wonder who this helpful parson with the delicate, strong hands, and the strangely familiar face could be. He tried again and again to seize on the dim memory, but it always escaped his grasp.

"I suppose the other fellows have gone to dinner?"

"Yes, they went down some time since."

"Of course. It is a great bore being with a sick fellow. Had you not better join them?"

"I should not care to do that. If I leave you, it will be only to go home."

"Then you live near here?"

"Yes, I am the Vicar of this parish. The Vicarage is at the other side of the park. You are weary; I will go now, and call again to-morrow."

"Not unless you are tired; if you really have nothing better to do, I should be much obliged if you could remain until they have dined, and see Markham for me."

"Yes."

"Tell him, will you, that I know he has a lot of engagements, and I trust he will not remain here a moment beyond eleven to-morrow. I know they were all going up to town by that train."

So John Burleigh sat on in the dim light of the late May evening, and wondered at the chance—or was it the design?—which had brought this young man so near to him.

There had been a long silence, and then Hardman said,—

"I trust that you will not think me impertinent, but I feel as though we had met before. It must have been long ago, or only casually, for I cannot recall your name."

John Burleigh came forward. There was an amused smile on his lips and in his eyes.

"It does not seem very long ago since you were a fat, small boy at Eton. Hardman, don't you remember your great score the first time you played with your house eleven?"

"Don't I remember, you mean, that awful surging of the water in my ears, and feeling very limp on the bank afterwards? Jack Burleigh, dear old Jack, who would have thought you would have turned out a parson! Why, man, you were intended for a cavalry officer, or an Arctic explorer, or something quite out of the common;" and in his excitement Hardman half raised himself, and sank back on to his pillow with a half groan and an oath.

The door opened, and Lord Markham came in. He looked very handsome, and tried to suppress some of his brightness in deference to his sick friend; but the satisfaction which possessed him at having that day more than retrieved the previous one's losses, and the remembrance of the grand *coup* of the first one, could not be easily forgotten.

"Why, Hardman, old fellow, this is a worse smash for you than Monday's. Losing a pot of money is nothing to you. I'm awfully sorry."

"Yes, it's a bad job, but it is no use crying over spilt milk; and look here, Markham, what would distress me would be if you permitted this unfortunate leg of mine to interfere with your plans. If your people may look after me for a few days, I shall be much obliged, and I will clear out as soon as possible."

"It's very good of you, Hardman, but it would be an awful shame to leave you here alone."

"Not at all. I shall not either be that, for I have just found that your Vicar here was my hero at Eton. He'll come in sometimes and give me a look up with the rest of the old women, won't you, Burleigh?"

"I don't feel quite easy about leaving Hardman," said the Viscount, as he walked down the grand staircase, holding John Burleigh's arm; "but then it would

be *very* inconvenient to me to remain here just now. And as you are so good as to say you will look him up sometimes, I don't see the use of stopping."

"Certainly not," said John Burleigh, with a quiet smile.

"Then," said Lord Markham with relief, "we will consider it settled, shall we?"

"Yes, I will gladly do all I can for him, and will let you hear how he progresses."

"Many thanks. After all, you know, a broken bone is not a dying matter, and no doubt he will be all the better for being kept quiet."

They paused as they reached the drawing-room door. A loud, rattling song was ending, and its final flourish was received with laughing applause.

"Come in, that's Gibson; he's a capital man at a comic song. He was one of the men in Hardman's cart."

"No, thank you, not to-night."

"You had better, if only for an hour. It will cheer you up after Hardman."

Burleigh went back to Hardman's room, and found the invalid sitting up, as if looking for his return. There was silence for a moment, and then Hardman said,—

"It seems a queer fancy, but do you know, Burleigh, whom you remind me of?"

"No; how can I?"

"Of my mother. Of course you are not like her in your features, but there is the same pure, quiet restfulness about you; I don't know any other man with it. I'd give something to be as content with myself as you are."

"You are wrong there. How can any man be satisfied with *himself?* We all have some ideal, and we all fall short of it; the worst criminal has his good thoughts, his better desires, sometimes. We all feel our own feebleness dragging about us. Even St. Paul knew what it was to 'groan, being burdened.' I am *not* content with myself. I find in myself a continual failure."

"I thought religious men like you were all right, and knew it."

"Hardman, when a man feels the weight of the Divine hand, he is crushed to the earth; and as he lies there, the soft touch of Christ's fingers presses his eyes, and he looks up and has sight. Then what does he see? He sees what God intended him to be in Himself, and for others; he gazes within and sees himself debased; he longs after reformation, a new life; he strives after it; he wants to live the Christ-life, and be made like Him, and he ever falls short. How can he be content with *himself?* And then he sees, too, what God means him to be in this world of ours; he sees it full of cruelty, and wrong, and folly, and impurity, and he knows because God has saved him that he is bound to save others, and his utmost efforts seem as nothing. It is claying the hole with a feeble sand heap. He would lose all heart, were it not that he believes that every puny effort tends to make up a grand whole of protest against wrong—that ten thousand others are also agonising for this world, the world for which Christ died. And yet in the midst of all this you are right, the Christian is content if not satisfied."

"Why, how do you make that out?"

"Just in this way: the law of amendment is always antagonistic to evil; all human life is raised by the struggle of resistance. God has apprehended us for character and for work, and we must be dissatisfied until we have seen in ourselves and in those around us, that for which the hand of Christ was laid on us. But though we shall never on earth be satisfied, we can be content; for every step is a step not only onward but upward. We know that in the end right will overcome wrong, sin and death will be cast out, and that Christ will be the universal, the only King. We long for that day; and being confident it will come, we possess our souls."

"But this seems all for others; one does not think of these things much. Of course a fellow is indignant when one reads in the newspapers of swindles, and cruelties, and lies, and meanness, and one sees them all about one too. But somehow one gets sucked in, and if a fellow does not do the worst things, one goes part of the way. And when you are going down hill, what is the use of trying to be a regenerator? One wants to begin somehow——"

"Just so," said John Burleigh, eagerly, taking the sick man's hand; "just so. My dear boy, you want to be regenerated; you cannot build up a character on your own good resolutions, they are like shifting sand. You can only build up a character on something that is firm as a rock, on One who never changes, who is always just and pure and true. That One is Christ Jesus, the Rock of Ages. Hurricanes may drive, storms may rave, but the lighthouse stands unshaken—it is founded on a rock. From itself its light shines out on others over the angry waters. Are you on the Rock? Are you built into Christ?"

"I don't know—I think not—I wish I was."

"If you *were* you would know. There is no mistaking that profound security; you can only attain to it in one way."

"How?"

"By seeking and receiving forgiveness through the atoning work of the Lord Jesus. I will leave you now, Ralph. Think over your wrong-doings; all you have done and what you have been. Tell them over to your God. He already knows them every one, but He waits and wants to hear you *say* that you *are* sorry."

"But God seems so far off."

"He was made nigh in Jesus. He can and He will save you. On Him was laid the iniquity of us all. Ralph Hardman, if you trust Him as your Saviour, you are forgiven, because Christ died."

"Am I?" thought the young man; "I wish I was. Oh, the vile things I've done! the fellow I've been. I would not have had my mother know if she were alive now, for all I possess. My pure, dear mother. The best friend I ever had, my mother!"

And as one and another scene, one and another name—with all their degrading associations—suggested themselves to his remembrance, his face burnt with blushes, and he covered it with his hands, as though in very truth his mother was watching him. He loathed himself, as he lay there, with a sickening disgust. For hours he thought, till he hated himself; and yet he would not give in. At length he fell asleep, and slept till morning. The early rays were streaming in a thin sheet of light between the curtains, when he suddenly and fully awoke, with his mother's voice pronouncing the words, "My boy, say you are sorry." He looked around; had she indeed spoken, or had he but fancied the words, "I am sorry, very sorry"? His eyes were dim with tears, and his glance instinctively followed the ray of light which crossed the foot of his bed, and fell on a picture on the opposite wall. It represented black, impenetrable darkness, broken only by one figure, the figure of the Saviour on the cross. On the frame of the picture, in black letters, were written the words, *Consummatum est.*

Ralph Hardman lay all that day in a repose of perfect peace, saying to himself, "*Consummatum est*—yes, *consummatum est.*" Sometimes he thought of his future life—all his old associates, as well as associations, were gone. The Vicar's usual hour for calling came and went, and yet he did not arrive.

(*Continued—page 625.*)

NOT GIVE UP, BUT TAKE.

ERNEST TREVOR, a young man, rich, handsome, in high social position, and living what the world calls a life of pleasure, was greatly discomfited when Arthur Elleslie, an old college chum, arrived in town completely changed from his old tastes and manner of life.

Completely *spoiled* Ernest thought him, but the spell of an old friendship was strong, and Arthur evidently would not be shaken off. He continually "dropped in" at his friend's chambers, his bright face wearing such an expression of calm joy that Ernest, whose head was often aching from late hours, could not help a feeling of envy. And yet Arthur never lectured, never dogmatized, but, after telling straight out the story of his conversion, he left the leaven to work, only aiding it now and then by a little warmth of kindly influence or protest.

The only persistence he showed was in the attempt to bring Ernest into the family circle where he had received so much blessing; but Ernest, knowing from Arthur's case that their religion was "infectious," would not go. At length, however, he yielded, and was startled by the refinement, and intellectual culture, and social grace he found there.

During the evening he found himself *tête-à-tête* with *the ringleader*—as he mentally termed her—of all this spiritual fuss and excitement, and thinking to forestall any remark of hers, he said in his pleasant, graceful way,—

"I know what you will say to me, 'Give up the world, give up this pleasure and the other;' now I wish to tell you frankly that I don't intend to give up anything."

She flashed upon him a quick look of surprise. "Excuse me, Mr. Trevor, I was not going to ask you to give up anything; I *had* thought of asking you *to have something*—I did wish to ask you to have the love of Christ in your heart, and any giving up would be left entirely to yourself."

And then the conversation was turned to other subjects; but all through the evening, through the whirling dance of a fashionable rout that followed in its later hours, there came like a sweet refrain the words, "*have something, have the love of Christ.*"

They seemed to master him, to drive him, with a magical constraint, away from that gay scene, away to his own room, where, kneeling by his bed, "the powers of the world to come" upon him, he cried, with the intense earnestness of an awakened soul,—"O God, if there be a God, reveal Thyself to me!" Need we doubt the answer? His whole subsequent life, consecrated, joyous, soul-winning, has testified to its reality.

LEAVES FROM THE LOG OF A GENTLEMAN GIPSY.

By Gordon Stables, C.M., M.D., R.N.,

Author of "The Cruise of the Land Yacht 'Wanderer'; or, Thirteen Hundred Miles in my Caravan," etc., etc.

LEAF XII.

"PLEASE BUY MY WOSES'—TADCASTER—YORK—SPITTLE BRIDGE—A MUSICAL EVENING.

THERE is one thing that Hurricane Bob cannot well do without of a morning, any more than I can dispense with the wholesome exhilaration, born of bucket and sponge,—namely, a roll in the grass. He was not disappointed even to-day; we did find a clovery field, and there was dew on it—*black* dew.

We now turn our backs on the dark, smoky cloud under which slumbers busy, populous Leeds, and bear away for Tadcaster.

Very soon we leave the last—we hope at least it is the last—mine behind us, and by-and-by a change once more comes o'er the spirit of my dream, for the country—a rolling one—opens up green and bonnie; the sky is blue, very blue, with fleecy clouds that now and then drift across the sun, and temper its rays. But look yonder! Wild roses once more begin to sheet the hedges.

"Now Nature scatters free and wild
Each plant and flower, the mountain's child:
Here eglantine perfumes the air,
Hawthorn and hazel mingle there."

"We must pull up a minute here, coachman," I say; "simple ocular admiration will hardly meet the exigencies of this auspicious occasion. See, John?"

My man smiled.

"I generally gets the whip-hand o' your meanin' after a bit," he said.

"Give me your knife, then."

In ten minutes more we were trotting gaily on again, with roses in the saloon vases, roses at the horses' ears, and a huge bouquet dangling in front of the verandah.

I find it very easy to be a philosopher to-day, and when we stop at an old-fashioned roadside public, and put the nose-bags on, I stretch myself on the grass, book in hand. I do not often see a newspaper, care very little indeed how this world wags, and feel as if I had eaten the lotus leaf.

By-and-by some country children come round. They have huge bunches of garden roses, and their complexions are of the same hue; their cheeks like the red of a *Louis Quatorze*, their brows the tint of a *Gloire de Dijon*.

"Buy my woses," lisps a little bare-legged maiden. "Buy my woses; mine's the best."

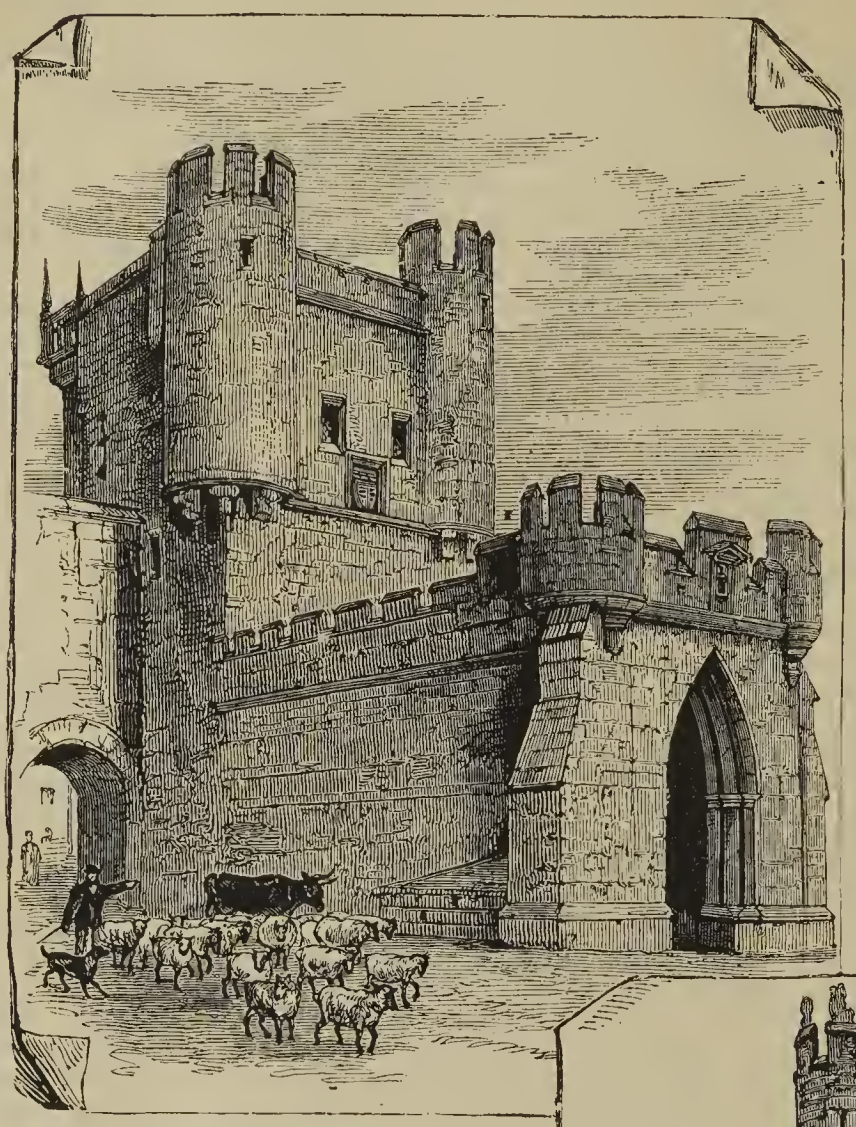
"How much, dear, for the lot?"

"Anything, sir; anything you please."

"Give them all to my valet yonder, and he'll give you sixpence."

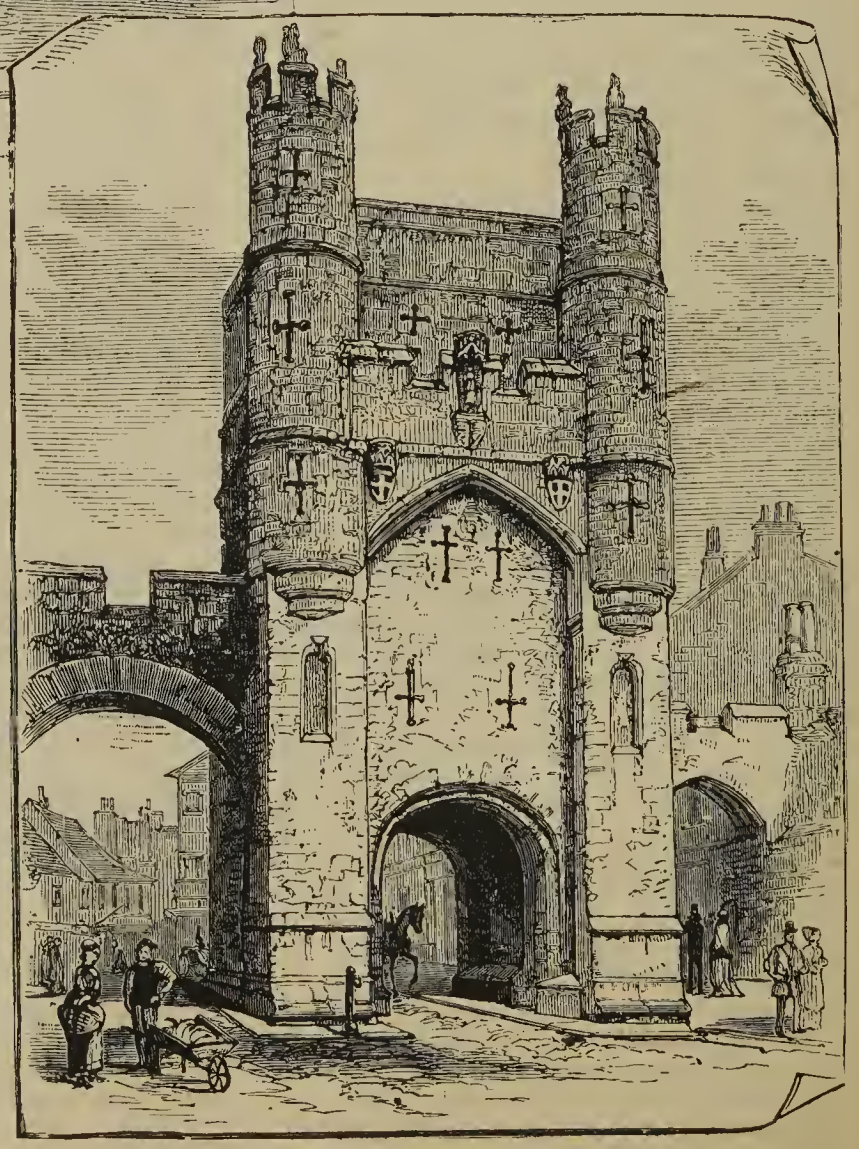
A very smart-looking dog-cart drives up with two very smart officers in it, one an inspector of police, another the surgeon of the force.

I find that out soon after, when they come to have a peep at the caravan, and something more besides, namely, that the doctor, like myself, was a navy man, and had entered the service the very year I did myself.



"Oh no, you mustn't go on through Tadcaster. We are going to a cricket match there. They'll make you right welcome, and you can camp in the field."

And it all turned out as the inspector said.



I'll tell you all I know about Tadcaster in a very few lines. It is a smart little town of about two thousand population. It is built of grey stone or slate, and is quaint, if not pretty. There are twenty-one public houses in it. I did not count them, but am willing to take the word of my informant about it. Tadcaster was taken by the Romans, and called Calcaria, but the brewery was not built then, else the tables might have been turned, and the Romans under them. On a high plateau not very far from here, a famous battle was fought between the Yorkists and the Lancastrians in 1461. I do not know which side won, and I do not care.

After leaving Tadcaster, and struggling on some miles over a road as rough and stony as the dry bed of a Highland river, we found ourselves in a beautifully wooded country. There was no smoke over the landscape, however, but in the distance a haze as blue as the sky rifts, or the eye of the speedwell, which grows so bonnie at the hedge foot.

The hedgerows to-day are very beautiful, in some places quite o'er-

"Notably the old gates."

"Reminding one of byegone days."

canopied with trailing roses, in others, starred with the blossoming elder.

We stop to rest the horses on a breezy hill-top.

The fields of corn on each side are very green, but dotted all over with crimson poppies.

A rose-linnet singing on a thorn-tree.

A yellow-hammer trilling near.

All silent else. Till a huge, hulking, but happy-looking tramp goes past, whistling, "Good-bye, sweetheart, good-bye," and spoils the song of both birds, and scares away the romance from the landscape.

What delightful scents are wafted towards us to-day! Here it comes on the breeze that blows over a field of new-mown hay; here from the elder flowers; here from eglantine; and here again from a meadow carpeted with white clover, in which the bees are busy.

We meet many tramps to-day, of all kinds, but hardly any of them beg. They see, perhaps, that, like themselves, we are on the road, and they know from experience that gipsies have seldom much to spare.

With York, where we only stayed a short time to shop, my coachman expressed himself much dissatisfied. He had never been here before, but had been hearing about its greatness and its grandeur all his life long; and now to find there wasn't room to swing a cat in its streets, he thought was rather disappointing.

"Last time I was here," I said, "I gave my servants leave to visit the cathedral. Would you care to go?"

"No, thank you, sir."

Still there were points of interest in York, notably the two old gates, frowning and battlemented, reminding one of bye-gone days.

About four miles from York we came to a very pretty, cosy, wee roadside inn, such a place as an artist or poet would delight to while away a week at.

"How far is it to Spittle Bridge?"

"Seven miles," said the landlady; "and there isn't another house till you get there."

Seven miles! A longish drive with horses already somewhat tired with their long drag into and through York.

"Is Spittle Bridge a big place?" I inquired.

"A big place, sir? What, the bridge, sir?"—she evidently misunderstood me—"Yes, a largish one, sir."

I had an idea now that Spittle Bridge might turn out to be a huge place like Ashton and Denton in Cheshire, and I still retained dusty memories of Staleybridge. However, I elected to go on; the day was fine and cool, the road was good, and the fields and trees fair to look upon.

After a capital drive of about seven miles by dead reckoning, there hove in sight another roadside inn, more old-fashioned than, if not so pretty as, the last.

Still haunted by the greatness of Spittle Bridge, I was delighted when the landlord told me that he had excellent stabling.

"And how far," I asked, "is it to Spittle Bridge?"

The landlord smiled, and pointed to a little bridge that spanned a brook. This brook went meandering in a very lazy way indeed through fields of green corn, and meadows where flocks of noisy geese were feeding. Pollards lined the stream, and drooped lovingly over it, as if to protect it from the sun's rays.

"Yonder's the bridge, sir."

So it was no town, after all, simply a bridge *et preterea nihil*.

I believe that for genuine hospitality in this country you must go to Yorkshire, if you do not go to Scotland. In both it seems not only a trait in the character of the inhabitants, but positively part and parcel of their religion.

An hour or two after I arrived at Spittle Bridge inn, I felt as much at home with this kindly family as if I had known them all my life.

The daughter, though a child in years, being only fourteen, was an accomplished pianist. We had a concert in the caravan, harmonium, flute, and violin, and quite a musical evening in the house afterwards.

LEAF XIII.

WOODS AND WILDS—MALTON—RILLINGTON—SNAINTON—A BLANK IN THE LOG—A DRIVE THROUGH SCARBOROUGH—EN ROUTE FOR FILEY.

WE were heaving away for Scarborough next day, and with the one drawback of dangerous hills, the drive to Malton was a most enjoyable one. Such delightful treescapes! And such a profusion of wild flowers,—here, there, and everywhere,—lavishly spread over the hedges, snuggling down along their feet, carpeting the fields and the roadside sward, and fighting with the ferns for mastery in many a green and fairy-like dingle or dell! Then there was the sunshine to rejoice our hearts, and the cloud-shadows, chasing each other over woodlands and meadows.

We came to the hill-top at last, and down yonder, in the valley, amongst the trees, was Malton—Malton-on-the-Derwent; another Derwent. It is a pretty place, with good streets and shops, and many a quaint, old-fashioned house.

I feel dreamily independent, as a gentleman gipsy often does on the road. I can enjoy Malton just as it is to-day. I do not want to know what great man or woman was born or buried here, nor whether a battle was fought in the neighbourhood; and I would listen to not a word about that awful ghost Cromwell, who haunts one wherever one goes.

When I come to a pretty spot, I much prefer to people it from my own imagination.

It is four miles and a half from Malton-on-the-Derwent to Rillington, and it would be difficult to conceive a prettier drive.

In my log I mention Rillington as "a queer wee village, with a queer wee steepled church, with houses very much of one pattern—two-storied brick buildings, with red tiles."

There is a delicious indistinctness about the adjective "queer," used twice in the last sentence, and for the life of me I could not tell at this moment what I meant by it. Anyhow, red-tiled villages look exceedingly pretty, peeping through the greenery of the trees.

My log runs on to say: "After leaving Rillington, the character of the scenery changes; it gets more open, though still well-tree'd, Scotch firs and larches predominating. We must," the log adds, "be high above the sea-level, for the air is so balmy and bracing."

Now I know why I called Rillington queer, the sea air from off the wide Northern Ocean had been getting round my heart, and after all the toil and road-spent energy of weeks of travel in the dusty West, reaction was coming. Indeed, I am sure this was the reason, for six whole pages of my log-book are blank, and I have begun to write again on the seventh. It is quite evident that I had meant to fill up those pages with notes and—didn't.

If one does not write up his log while on the road, day after day, it is quite impossible to tell, after a time, where he has been, what he has done, or what he has seen. And if one keeps no log at all, then a gipsy-life is just like a dream of yesterday.

Let me think back now, and consider: Spittle Bridge to Malton is seven miles and a quarter; Malton to Rillington, four and a half; Rillington to Snainton, eight miles. Well, that would have been a good day's journey. So we must have bivouacked there, though Snainton has faded from the map of my memory. I have a hazy notion of fording a stream that crossed the road, and I would not have even that, had not Polly Peablossom made a determined attempt to lie down and roll in it.

I cannot pick up the running at all, till I remember leaving the caravan on the road and climbing a fern-clad hill to cull some splendid fox-gloves. And there was Scarborough lying down below, a measureable distance to the right.

We made a midday halt just at the entrance to the town, and stabled our steeds till I should ride into the Brighton of the North-East Coast, and secure comfortable quarters.

Log or no log, I remember that; and I also remember putting my cycle up at a fine old-fashioned hotel, in What's-its-name Street, hiring a pony carriage, and, with a boy as a guide, doing Scarborough in that.

I came to the conclusion, as I stood on the Castle Hill, and gazed away seawards, and down to the beach, and all round me, that Scarborough really is a pretty place, with quite a lot of pretty people in it.

My guide book was quite full of its beauties, and advantages, and ancient history, and all the rest. I pulled the book out of my pocket, and read bits whilst I leant against the embattlements. I soon learned that I was standing three hundred feet above the waves yonder; that Scarborough was built in the reign of King Stephen—whoever he was; that it had been twice besieged by the Parliamentary troops, and afterwards dismantled; that it was put into repair again in the —45, to welcome Royal Charlie; and that there are still a few troops in the garrison, who live on the fat of the land and sleep on feather beds. There are mineral springs here, as well as sea-bathing. Also, that the place possesses numerous churches and chapels, a theatre, assembly rooms, banks, and book-shops, to say nothing of an indefinite number of match-making mammas.

What more could any one wish?

But, inasmuch as I could find no convenient site for my caravan, impressed, moreover, with the glitter and grandeur of the place, and the fact that were I to lie here a week, I should have to wear a neck-tie, gloves, and a longitudinal hat, I came to the conclusion that Scarborough was no place for me.

So I mounted my trap again, and marvelled much to see the pony trot down the hill without falling even once.

An hour and a half afterwards, the *Wanderer* was on the lone breezy cliffs, standing south—and—away for Filey.

The road hugs the cliff-top for miles, and is indeed what I may call a rough and tumble one.

The pinches are exceedingly steep. We took the only possible way of getting over them, and I believe that the coach-and-four does the same. We drove, then, Highland style. Thus, when near the bottom of one hill, we let the horses have their heads, and encouraged them to tear along ; the downward sweep and impetus of the caravan carrying it half-way up the pinch, the whole of it being cleared at a glorious gallop.

When at the top, we rested for fully five minutes, then away we went again. It needs sure-footed nags for this work ; but we have them, and they thought it great fun, especially as every now and then they were treated to a tuft of greenest grass, or allowed to wait long enough to munch a morsel of dog biscuit.

Some men give their horses beer in hilly roads. I never do this. I feel convinced that it lacks staying powers, and affects the wind, and I find no stimulant to equal a handful of oatmeal and water—for horse or man.

But here we are at Filey, and the difference between this pretty wee watering-place and great gay Scarborough, is striking in the extreme.

But withal, the change from the dusty bustle and the fashionable confusion that seems to reign paramount at Scarborough, was a most welcome one. Far across I could see the quiet waves breaking against the Brigg, and farther inland, quaint old cottages, with thick thatched roofs, were nestling, and gleaming brilliantly against the sky in their glorious raiment of new whitewash. Here and there, nearer me, I could see the gable end of one covered and festooned with climbing roses. It was a place to gladden the heart of any wanderer, and I determined to stay, at any rate for a few days longer.

In my next Leaf I shall hope to make you more acquainted with the beauties of Filey.

(*Continued—page* 628.)

HOMELY HINTS FOR STRUGGLING WIVES;

OR, HOW JOHN AND MARTHA GRIMSHAW MANAGED ON £1 A WEEK.

By Phyllis Browne.

No. II.

AFTER thinking a few minutes, Martha thus began,—

"You must please understand, ma'am, that the ways I have now are not the ways I had when I was first married : I have learnt a great deal since then. Besides, we have two children now, and that makes a difference."

"Certainly," said Mrs. Jackson. "Pray tell me how you manage, now that you have two children."

"Then, ma'am, before saying anything else, I think I ought to repeat once more that we should never be as comfortable as we are if Jim did not pull with me. But Jim is *very* good. You see, it is this way. We have £1 a week. Jim always brings his money to me on Saturday evenings. At first I felt as if I could keep house very well on this ; but, be careful as I might, there were expenses that I did not think of, and I began to get a little behind. I knew this would never do ; that to begin to get behind was to begin trouble, and I told Jim we must put our heads together, and divide our money ; and find out what we could afford, and what we could not afford ; and what we could not afford we must go without."

"That was the right way," said Mrs. Jackson.

"So, after going through it again and again, we found what we thought was the best division. This I am going to tell you. I can say the sums off, because I have gone over them so many times in my mind. There is first, rent of two rooms, 5s. a week."

"Wait a moment," said Mrs. Jackson. "Let me get a pencil and paper, and write the division down as you say it. *You* know it off by heart, but *I* do not, and I want to see how it looks when written down."

The pencil and paper were procured, and then Martha began again,—

	£	s.	d.
Rent of two Rooms, including rates and taxes	0	5	0
Firing and Light	0	2	0
Vegetables	0	1	0
Groceries and Extras	0	2	4
Bread and Flour	0	2	0
Milk	0	1	2
Butcher's Meat	0	3	6
Butter and Eggs	0	1	0
Clothing	0	2	0
	£1	0	0

"This, you see, comes to £1. When we had made this division out, Jim and I looked at it awhile. Then Jim said, 'I think, Martha, that this division of the money is very fair, and I do not see how we can divide it better ; but neither do I see where my glass of beer and my pipe are to come in.' I looked at him, and shook my head. 'Neither do I see it, Jim,' said I. You know, ma'am, I am teetotal. You persuaded me to be so, when I lived with you. But Jim had always taken his glass. He was very moderate, he never had too much, but still he thought a little beer helped his dinner. But when he looked at our division of money, he saw that beer and tobacco were extras we could not afford. So, after thinking a minute, he said, 'All right, Martha ; I will go without both beer and tobacco. We shall get into difficulties if I have them, and they are not worth that.' And if you will believe me, ma'am," continued Martha, with tears in her eyes, "since that day he has never touched either ; and he has been all the better for it. He has very good health. His face looks fresh, and his eye clear, and he is so steady and clever ; there's no one can do a better day's work than he. At first he found doing without his beer and his pipe a trial, and felt a want of something, but he soon got over that ; and now he says he never feels to miss them at all. When he sees his companions cannot get on without a pipe or a glass, he is glad that he is not a slave. As for me, when I see men with their pipes in their mouths, or taking a glass of beer now and again, I wonder how their wives manage. To me it is a mystery how they get on at all."

"Your husband is certainly very good, and you have reason to be proud of him," said Mrs. Jackson. "But now, go on. I should like to know a little more about the way you lay out your money. You say your husband gives you his week's wage of £1 every Saturday. Then I suppose you go out on Saturday evening and buy your Sunday's dinner ?"

"Indeed, no, ma'am ! I do nothing of the kind. I do not like Saturday night's shopping. I think that women who go out late on Saturday, when every one is busy, and bargains are being made, may sometimes get things cheap. But they are much more likely to buy what they do not want, and what is not very good ; and this is a great mistake. Besides, I like to buy Sunday's dinner in good time on Saturday, so that I may partly prepare it, and have Sunday for a day of rest. I think it is very bad management when a woman has to make Sunday the busiest day of the week."

"You are quite right, you are quite right, Martha. I beg your pardon ; I did not think what I was saying for the moment. But tell me, then, how do you manage ?"

"When my husband gives me the money on Saturday I put it away till Monday morning," said Martha. "It is for next week's needs, and I should think myself sadly behind if I had to use it for the week which was gone. Of course, in saying I do not buy on Saturday, I remember that this would not do for all. One's shopping must depend very much upon the neighbourhood in which one lives ; and a wife must look about, and find out what is best to be done. I know there are places where it is wisest to buy on Saturday for the week ; this is a

matter on which one ought to be governed by circumstances. Where I live, I find it best to deal at the same shops; the shopkeeper knows me, and knows I pay regularly, and he treats me well.

"On Monday morning, therefore, I have my pound untouched, and this is how I lay it out. Soon after breakfast the landlord or rent collector calls; to him I pay 5s. My first purchase is made at the baker's. Of him I buy a peck and a quarter of flour (in weight, 17½lbs.) and 2ozs. of German yeast, costing altogether 2s. This serves for bread, puddings, and pastry through the week. I make the bread at home. Once we lived where there was no oven, and I had only a register stove. Then I found that I had to spend 2s. 6d. per week at the baker's."

"And you did not live so well, either, I daresay," said Mrs. Jackson.

"No, we did not, ma'am. With an oven, you can make a plain cake now and then, and you only need for it a spoonful of currants or raisins, and a little sugar and nutmeg, with a piece of dripping and some baking powder. Cake for Sunday's tea is quite a luxury. Many other good things also you can make. It is a misfortune to have to do without an oven. When I had only the register stove we had to boil everything, and this was not nearly so easy. Even then, however, I found that with a small Dutch oven I could cook a rasher of bacon, or a small piece of meat in front of the fire; and from a cookery book which a lady lent me, I learnt that a large biscuit tin can be used as a Dutch oven. It must be fitted with two small hooks, suspended each from a bit of string passed through a hole in one side of the tin. A knot has to be tied in each string just inside and just outside the tin, to prevent them from slipping, and the two pieces may then be tied together, to make a handle by which the tin can be lifted. The tin may either be placed on a stand close up to the fire, or it may be hung by a cord from a nail in the mantel-piece. It can be brought nearest to the fire when it is hung."

"That is a very clever plan," said Mrs. Jackson.

"Yes. We try new ways when we are put to it," said Martha. "When women are put to it, they can use empty Australian meat tins as saucepans, and a bottle for a rolling-pin; and many a good stew has been made in a basin with a rim, and a saucer put over it for a lid. All the same, it is a great advantage to have an oven. Women who have to do without an oven are heavily handicapped.

"The baker done with, I think of coal and wood. In winter time I cannot, to be comfortable, do with less than a hundredweight and a half of coal, four pennyworth of wood, and one quart of lamp oil; so that is 2s. 2d. for firing and light. From the greengrocer's I buy one peck of potatoes (10d.), and two pennyworth of carrots and onions. To him, therefore, I pay 1s. I have to be very careful when I go to the butcher, because I know that with him I ought not to spend more than 3s. 6d. per week, and sometimes it is a little difficult to get dinner for four every day out of this."

"Perhaps before you go you will tell me what you provide for dinner now and again?" said Mrs. Jackson.

"Indeed, ma'am, I will tell you with pleasure, if you care to hear," said Martha.

"I care to hear very much," said Mrs. Jackson. "I must tell you, Martha, that I think you manage very well indeed. I wish every woman who has to keep house on a pound a week were as clever and capable as you are."

Martha coloured with pleasure. She liked to be praised by her old mistress.

"Ah, ma'am," she said, "you must remember I have a good husband. A woman gets heart to go on when she has sympathy, and her efforts are appreciated by the one she loves best. Not that I do not think there are quite as many bad wives as there are bad husbands. But when either are bad, it takes away the hope; and somehow I think a husband's sympathy does more to help a woman on than anything you can name."

"I daresay you are right," said Mrs. Jackson. "But now go on with your expenditure."

"I have nearly come to the end of it. Every week I get half a pound of butter and three eggs, which we have as a treat for Sunday morning's breakfast. These cost 1s. With that my weekly expenditure is over."

"You have said nothing about groceries," said Mrs. Jackson.

"Because I do not buy my groceries weekly. If you count up what is already spent, you will find that, adding twopence a day for milk, it amounts to 15s. 8d. Two shillings per week we always put away for clothing; and this leaves 2s. 4d. for groceries and extras. I think it is very extravagant to buy groceries, and such things as rice, peas, beans, oatmeal, and soap, as they are wanted, in small quantities. Those who do so buy at the very dearest rate, and they also get goods of inferior quality. It is really a saving and a great advantage to buy groceries once a month, and then to send a good order to a good shop. It is very easy to put the things in different tins on a high shelf; Australian meat tins can be used if there is nothing else, and it is astonishing what excellent dishes can be made when the ingredients are on the spot, which could never be thought of if they had to be bought for the purpose. Then you know, ma'am, that soap goes twice as far if it is slowly dried before being used. It melts away directly if it is put into the water fresh. And there are goods which you buy much cheaper when you buy half a dozen pounds at once."

"You are quite right," said Mrs. Jackson. "I have always felt that it was very hard on people who have little money that they are obliged to buy in the most expensive way."

"But they are not obliged," said Martha. "The mistake they make is that they do not look ahead. There is another advantage I get through buying my groceries monthly, that is, that I have always a little money by me, so that if anything unexpected happens, you see I am not quite destitute.

"You do not know, ma'am, what a different feeling you have when you have always a little money by you. I pity women who cannot manage this; they never seem free from difficulty, and are so often anxious and full of trouble, and they get into the way of thinking themselves poor, which is miserable. Do you not remember, ma'am, you used to say that 'the really poor were those who *felt* themselves poor'?"

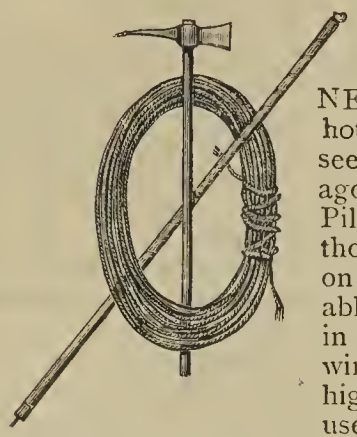
"Yes, I remember," said Mrs. Jackson, smiling. "And you do not feel yourself poor?"

"No, indeed I do not," said Martha "How can a woman be poor who has a kind loving husband as I have? I am thankful to say that ours is a very bright, peaceful, happy home, and yet, as you see, it is not the large amount of money that makes it so."

"Then what sort of an order do you send to the grocer?" said Mrs. Jackson.

"It varies, according to my needs. One month I shall be out of rice; another month I shall have run short of beans or peas, and I try to arrange to keep up my stores. Every month I buy three-quarters of a pound of tea, which comes to 1s. 3d., 6 lbs. brown sugar, 2 lbs. of loaf sugar, 7 lbs. of oatmeal, and a bar of soap. This comes to about 5s. 3d., and out of what is left, I get as I can, sago, rice, coffee, cocoa, peas, beans, golden syrup, soda, etc. But I try hard not to spend more that 7s. 6d. per month, and the little that is over we put into the Post-office, to make the saving which is sure to be wanted one of these days."

"I suppose that is the only saving you can make?" said Mrs. Jackson.



"Not entirely," said Martha. "It is very wonderful how, when people begin to put a little away, the chance of putting away more comes to them. Perhaps once in six months my husband has the opportunity to do a little overwork, for which he is paid 1s. or so. That we consider a windfall, and we put it away directly. Windfalls are very rare with us, but they are always put away, and the sum thus saved is most valuable, while the knowledge that it is put away makes us quite strong.

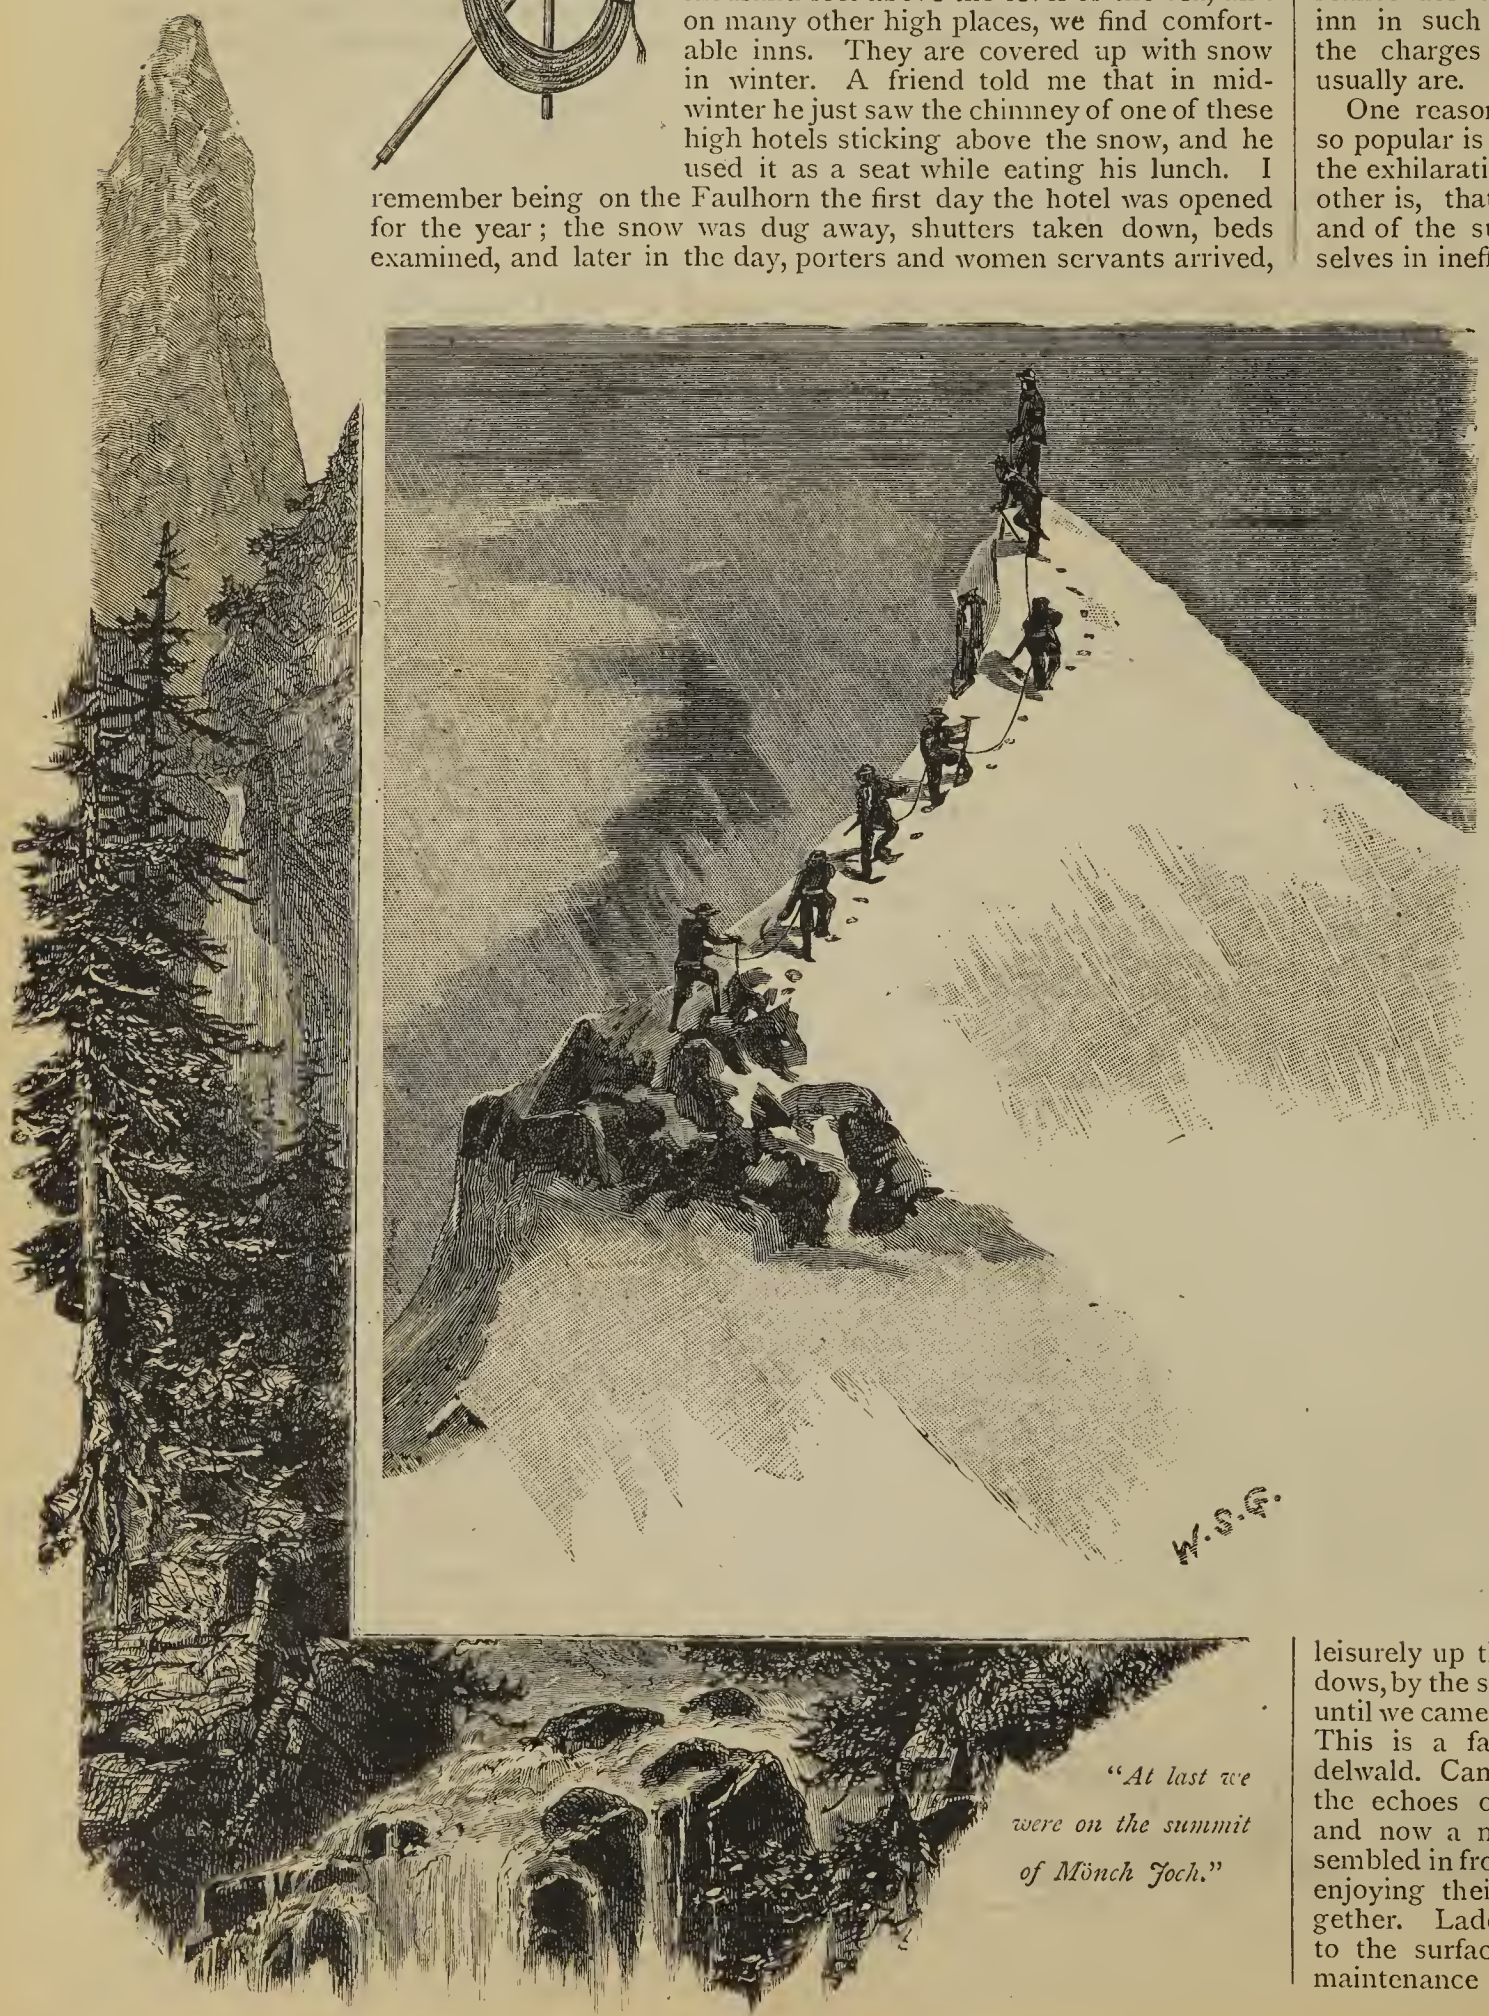
ADVENTURES 'MID ALPINE SNOWS.

By Rev. W. Spotswood Green, F.R.G.S.,



Author of "The High Alps of New Zealand," "The Home of the Eider Duck," "On the Track of Columbus," etc.

Part II.

NE sees numbers of places in the Alps where hotels have been built, which would have seemed most unsuitable sites a hundred years ago. On the top of the Rigi, on Mount Pilatus, on the still higher Faulhorn, seven thousand feet above the level of the sea, and on many other high places, we find comfortable inns. They are covered up with snow in winter. A friend told me that in mid-winter he just saw the chimney of one of these high hotels sticking above the snow, and he used it as a seat while eating his lunch. I remember being on the Faulhorn the first day the hotel was opened for the year; the snow was dug away, shutters taken down, beds examined, and later in the day, porters and women servants arrived, carrying heavy packs. Each girl had a load of household linen packed on her back; one man carried a most unwieldy burden of iron chimneys for the stove, others had provisions; and it made one realise the difficulties of maintaining an inn in such a position, and wonder that the charges are as moderate as they usually are.

One reason why these high places are so popular is that people can here breathe the exhilarating air of the mountains; another is, that the glories of the sunrise and of the sunset sometimes reveal themselves in ineffable splendour. And though tourists often ascend, and descend again without seeing anything, the white peaks at times glow with ruby light, casting shadows of pale green, and stand out, set like jewels in the clear sky, above the purple darkness of the valleys. Going up for the sake of a sunrise or a sunset, or for the chance of seeing such a thing, is all very well; but the true way to enjoy their glories is to be up amongst the eternal snows themselves. And as, in a former Paper, I spoke of the grand aspect presented by the Jungfrau (13,671 feet), as we approached the Bernese Oberland, I will now ask your attention while I recount some incidents in its ascent.

"At last we were on the summit of Mönch Joch."

We started from Grindelwald about 11 a.m., a large party, three friends—two of whom were novices at mountain climbing—two guides, a porter, and myself. We had to carry provisions for two days, so we engaged the porter to come as far as the Bergli hut, where we were to spend the night; but he elected afterwards to come with us for the whole expedition.

The day was bright, and the sunshine made the valley so oppressively warm, that we strolled leisurely up the ascent, amidst green meadows, by the side of the Grindelwald Glacier, until we came at length to the Berenegg hut. This is a favourite excursion from Grindelwald. Cannons are there fired to awaken the echoes on payment of half a franc; and now a number of Germans were assembled in front of the little *salle à manger*, enjoying their lunch and the scenery together. Ladders must now be descended to the surface of the glacier, and for the maintenance of the path so far, and the

ladders, half a franc each is paid. Below the ladders we descended over a heap of pulverized rocks and stones, and at last set foot on the ice.

From the margin of the glacier, the ice ascends, in large hummocks, towards the centre, and the whole surface is rent by huge crevasses, down which we can peer into the dark depths; but we must not go too near, lest a slip might precipitate us into the abyss. To guides, familiar with the locality, there is no difficulty in finding the way to the other side of the glacier; but if you were placed here, without any previous knowledge, you might wander this way and that way through the maze of crevasses, and take several hours to reach the further shore.

We crossed quickly, and then commenced to ascend very steep slopes, covered with grass, amidst which, numerous lovely little Alpine flowers opened their petals to the sunshine. The great variety of these little mountain flowers adds an intense pleasure to all Alpine excursions. As we ascend we seem to reach new floras; the large campanulas and orchids of the valley are left behind. We meet on the higher slopes with lovely pink primulas and saxifrages in great variety. Sometimes one comes upon whole beds of crocuses; but the flowers which give the most distinct character to the higher slopes are the two gentians—the large one, with deep, bell-shaped flowers, of dark blue, occurring in such quantity that they may be seen miles away, like a carpet of blue on the mountain side. The small star-shaped gentian grows in still greater profusion, and keeps on blooming when the other has disappeared. The blue of its petals is much brighter; it is, in fact, the very purest, brightest blue in all Nature. I must pass over the lovely Alpine rhododendron, and many another plant; two, however, call for special notice. You will no doubt ask, Where is the Edelweiss found, about which so much sentiment has entwined itself? I have often gathered it in quantities on the high places, where it nestles on heaps of *débris* at the base of cliffs, facing the sunny south. The other flower is the charming soldanella, with its little purple hanging bell. It loves the snow. Just as the snow, melts its flowers open; where the snow was to-day, there we find the soldanella, hanging down its modest head, to-morrow.

About two hours were expended climbing these flowery slopes—a regular garden in the midst of glaciers; then we found another ladder, which we ascended, and soon the world of flowers, or of any kind of vegetation, was left behind. Before us was the upper basin of the Viescher Glacier, beyond which the ice comes down in great broken masses from the Mönch Joch.

Our route to the Jungfrau lay over this pass, called the Mönch Joch; but for to-night we must sleep in the little hut on the Bergli rocks, which were seen projecting above the broken masses of the ice fall.

On reaching the brink of the Viescher Glacier, we tied ourselves together on the rope, for a pure white carpet of snow lay on the ice; and lest its smooth surface might cover treacherously many a deep crevasse, this precaution seemed necessary. Then we tramped along, making a wide zigzag now and again, to avoid a dark opening in the snow, and as the evening began to close, we reached the broken ice, up through which we must now find our way.

A broken ice-fall is one of the most impossible-looking things to climb that can be contemplated by the inexperienced; but there was the hut, perched on its rock, like a lighthouse in a sea suddenly frozen in the midst of its raging. Carefully we crept over a crevasse; then with the ice-axe cut steps up the side of another. The men knew the way, and though one great ice-block had to be ascended by standing on the handle of an axe, driven deep into its side (of this I made a sketch), we reached in safety the base of the Bergli rocks. Then came a short scramble up the crags, and just as the purple shadows were deepening over the route by which we had come, and the peaks were lighting up in golden splendour, we opened the door and entered the snug little dwelling, which is free to all comers, thanks to the well-directed hospitality of the Swiss Alpine Club.

A hotel built on a mountain five or six thousand feet high, where mules are the only means of conveyance, may be wondered at; but though I have seen many of these club huts, I never cease to admire the skill and persevering hard work which was necessary for their construction. Here we were perched on a rock, over ten thousand feet above the sea, in a snug, well-built little châlet, about fourteen feet by twelve, every stick of which (and the roof-tree was a very heavy piece of timber) had to be hauled up precipices, over broken glaciers, and the rock blasted, to make a little shelf on which it could stand. The shelf thus possible not being sufficient, a further extension was made by building up a rough wall from crags lower down; and here it stands, bearing its heavy load of winter snow, weathering out the fierce tempests which howl round the peaks, and ready each summer to shelter those who wish to explore the great snowy wilderness of the Oberland. A shelf with straw on it made a comfortable sleeping-place; cots hung up over-head might serve a similar purpose, but they were also fitted as stretchers, to be used in case of an accident occurring in these regions; and as wet boots are not comfortable to sit in, huge felt boots were there for us to slip on, and enable us to enjoy our supper with warm, dry feet.

"Our second guide now produced an empty bottle, and knocking the bottom out of it, inserted a candle."

While the guides were heating the soup, and boiling the kettle on the little stove, we took down the visitors' book, recorded our names, and thanked the S.A.C. for their hospitality. Then we took one more look from the doorway over the glacier world, and the higher peaks faintly illumined by the dim twilight. The night was still, but not quite cloudless. The air was chill, so we quickly took our places on the sleeping bench, pulled the blankets over us, and with hopes of a bright morrow, speedily dozed off into unconsciousness.

At twelve the guides began to stir; then the fire was poked up, and a cup of tea served round. Sleepily we pulled on our wet boots, and at one a.m. we fixed ourselves firmly on the rope, and stepped out into the night. A searching northerly breeze made us shiver, but the necessity of taking each step with the greatest possible caution, put all other thought from our minds. A few feet up the rocks, and we found ourselves on a sharp ridge of frozen snow, on either side of which everything vanished into black darkness. The faint starlight was just sufficient to enable men who knew the place well, to find their way. We ascended in silence, broken now and then by a word of caution from K——, who was leading. Our progress was necessarily so slow that our fingers were benumbed, and our ears tingled with the cold frosty air. At last the snow flattened out, a crevasse was crossed, and we were on the summit of the Mönch Joch. Standing on a snowy ridge, twelve thousand feet above the sea, under a star-spangled sky, with grand mountain forms all around, is one of those experiences which gives to mountaineering the charm which can never be explained in words, but which never can be forgotten!

While ascending the last slopes, I had looked back now and again to the eastward, to see if there were there any signs of the sunrise. At one point the light seemed coming rapidly. Now, as we halted, the brightness of the east increased, and Venus rose from the horizon, scintillating like a diamond in the frosty sky. Her brightness was wonderful, but still the light continued to increase. It could not be the sunrise yet. We were puzzled for a

moment, but soon the mystery was solved by the crescent moon rising, and following Venus on her upward path. It was marvellously beautiful; but we must go on.

A steep descent for a short time hid the east from us—we seemed descending again into black night; then we traversed an immense, snow-covered, undulating plain, and halting now and then to admire the rosy tints of dawn, till the sudden rush of golden light came, and, looking eastwards, we saw the sun himself just rising over the snowy ridges, and commencing his daily course. Immediately we donned our goggles and trudged along, our feet sinking deeper and deeper as the snow melted. I won't ask you to join in this weary tramp. You must imagine the great plain of snow, also the steep glacier descending from the Roththal Sattel, over which our route lay, and meet us again as we reached the snowy ridge, on the extreme right of my sketch, and from which we ought to have looked down upon the Tschingel pass and the valley of Lauterbrunnen.

"But why didn't you?" you will ask. Let me tell you why. The weather, clear in the morning, became threatening after the sun arose, and clouds drifted up from the westward, enveloping all the higher peaks. They drifted fast, telling us of a high wind aloft; but we ascended under perfect shelter till the ridge was reached. Then suddenly we found ourselves exposed to a furious snow-storm, which obscured everything, and turned each member of our party into a veritable "Father Christmas." We could not see the length of our rope. However, turning to the left, K—— commenced hacking away with his axe, cutting an ice staircase towards the final peak. It was soon necessary to re-arrange our party. The two guides now went first, so that each might help at the step cutting. I came next, also hacking away, so as to ensure good steps for our descent; and the porter brought up the rear.

Once or twice the clouds opened, giving us glances down ten thousand feet of precipices into the verdant valley, over which we seemed to hang. These views downwards were interesting, but, I fear, not quite reassuring to some of our party. To slip! No such idea could be entertained. Onward! upward! must be our only thought. I descanted on the great educational advantages derivable from having one's nerves tested; but the fury of the blast made conversation impossible, and our attention was entirely devoted to keeping our feet in the steps, and holding on by our ice-axes.

Two hours on steep ice, overhanging a fearful precipice, seemed quite long enough; but at last we reached some broken rocks, and at ten a.m. we were on the summit of the Jungfrau!

Unfortunately, there was nothing to be seen except white mists; but the oddest thing about it was, that we felt not an air of wind. On the Roththal Sattel, and halfway up, we had been in a furious storm; here, on the summit, there reigned serene calm. It was not *very* cold, so we lay on the rocks, and ate our provisions; and then, after a halt of three-quarters of an hour, I suggested that we had better begin the descent.

Close at hand, the snow rose in a ridge, some feet higher than where we had halted; as this formed the actual top of the peak, K—— said that we must go up there before descending. So up we went, K—— first, but while he stood upon the apex, there was only room for one other to kneel at his feet. We had given up all hopes of a view; but just at the right moment, while we all stood along the little topmost crest, the clouds rose, a vista opened first here, then there, and in an instant the whole marvellously grand panorama was open to our view. To describe it is impossible.

On one side of us lay the world of glaciers, and rugged peaks, over which our eyes ranged for more than a hundred miles; and on the other we looked down into fertile valleys. There was Interlaken, with its line of hotels. There was the silver sheen of lakes; the glancing stream; the dark forest; the higher pastures; and little specks of châlets. The opalescent colouring and soft, atmospheric effect was simply entrancing.

What mattered the deep wading through snow, or the dangers of the avalanche, or the nervousness of the icy slopes, when this prospect was the reward?

To whatever extent one's nerves may be tested in such an ascent, the trial is much greater going down. On regaining the rocks, we re-arranged our party on the rope. The two guides and I were to be last; the porter went down first, and, as one member of the party moved from step to step, the others held on, and so, slowly, but surely, we made our way back to the Roththal Sattel. A slip now and then seemed almost inevitable; but I encouraged my friends by saying that no fatal accident had ever taken place on this peak. I could not use this argument *now*, for a whole party of six met its fate on the Jungfrau within the last twelve months. Then we slid and glissaded down the slopes, then tramped for hours over the great plain of snow, and in good time regained the Bergli hut. As we hoped to reach Grindelwald that night, we could make no great delay. But some one suggested soup, so the fire was lit, and most excellent soup concocted out of very scant materials—some cheese and bread crusts boiled down together, and flavoured with milk, salt, and pepper. Then we started again, hoping to have daylight as far as the well-made path to Grindelwald.

But the descent of the ice-fall was slow work; and when we reached the brink of the lower Grindelwald Glacier at seven p.m., there was but little twilight left. We could, however, see the Berenegg hut, and quickly shaped our course for the ladders on the other side. The clouds now banked up in inky masses, and it became very dark. We pressed on quickly, even running wherever the ice was sufficiently level. But suddenly—flash! We were fairly blinded by the blue lightning, and then, while the thunder rolled overhead, the succeeding darkness seemed impenetrable.

The guides now took a wrong turn, and we found ourselves in a regular maze of crevasses. We halted; then we tried a new route, but the next flash revealed a frightful abyss before us, and again we had to come to a stand. We hardly knew where we were, but gazed steadily in the direction of the ladders, believing that we were not far from them, and hoped that the next lightning flash might reveal them. But though we could see the whole mountain side, the glare was too evanescent to make visible any details.

Our second guide now produced an empty bottle, and knocking the bottom out of it by careful taps of his axe, inserted a candle through the neck, and so extemporised a capital lantern. But the little speck of light was only like that of a glow-worm in the deep gloom. However, he started with it to explore a route. We saw him creeping along a ridge, then all moved on; but after a short debate we returned, and began to make up our minds for a night of it.

As I had had quite enough of this kind of thing on a former occasion, I determined to try my hand at exploring. We were evidently quite close to the side of the mountain, so, after the next lightning flash, I made a move ahead. There was a great shadow before me. K—— said it was a crevasse, and called to me to come back; but I rolled a stone down, and hearing it strike other stones quite close to me, I followed it. Then up another ice hummock, and I pitched another stone; but this time there was silence for an instant, and then, far down, I heard it hop and rumble in the depths of a crevasse. I turned aside and once more hove a stone; this time it was all right. I threw another and another to make sure. Then on I went, and found myself on the mountain side.

I was not a little elated at the result of the experiment, and shouted to the others to come along. Our candle was now most useful, for by its light we found the ladders. At half-past ten p.m. we reached the Berenegg, where we aroused the inmates, borrowed a lantern, and, after a long, but delightful day of twenty-three hours, we arrived at Grindelwald in safety.

PRIZE TRANSPOSITION COMPETITION.

FOUR MONEY PRIZES.

DIVISION I.—PROSE INTO POETRY. { 1st Prize, 10s. / 2nd Prize, 7s. 6d.

DIVISION II.—POETRY INTO PROSE. { 1st Prize, 7s. 6d. / 2nd Prize, 5s.

THE Competition we announce to-day is the first of the kind that has appeared in our columns, and we shall be rather curious to see how it is taken up.

We give below the Selection in Prose which is to be transposed into Poetry.

On page 622 will be found the Poem to be converted into Prose.

In awarding the prizes the Examiners will take into account—

(1) The fidelity of the transpositions to the main incidents and spirit of the originals;

(2) Their literary merit;

(3) Punctuation, spelling, and general neatness.

RULES.

1. Competitors may select their own Division, but no Competitor may enter both.

2. Foolscap paper must be used, written on one side only; and Competitors must write their names and addresses at the head of the first sheet.

3. Inquiries must be accompanied by a stamped addressed envelope, and the envelope containing the inquiry must be clearly endorsed on the outside, "Query."

4. The covers in which the Papers are sent must be endorsed "Transposition Competition, Division .," and must reach the Office, 62, Ludgate Hill, London, E.C., not later than September 8th.

5. Papers cannot be returned.

DIVISION I.—PROSE INTO POETRY.

THE FROZEN MILL-STREAM.

HIGH amongst the mountains of Norway there rose a big, bright stream. It rushed headlong over the rocks in dancing, foaming cascades, and down, down into the valleys beneath, away towards the sea. It was a beautiful river, and people would come long distances to gaze at, and admire its falls, but it was also a very useful river. Huge blocks of timber from the hewn pine-trees on the hill-sides were launched into its bosom, and floated down to rude, water-power saw-mills. Here they were sawn into planks, and started once more on a longer voyage, sometimes tumbling grotesquely down the cascades, sometimes getting stranded for a time in shallows, sometimes making their way slowly enough, but all arriving safely at last at the great timber port for which they were bound.

The old miller at the saw-mill by the bridge, with his shining brass buttons on his coat, and the long white hair, had lived there all his life, and worked at the mill since he was strong enough to manage it, and float the smooth, sweet-smelling planks. He had no wife, or children, or near relations of any kind, and lived alone in his log hut; but he loved the old saw-mill which brought him in a comfortable maintenance, and he loved his work, and he loved his constant companion and helper, the strong, active stream. So, year after year, the river and the miller worked on together, and the river remained as fresh and strong and vigorous as ever, but the miller grew older and feebler. The mill-wheel did its share just as quickly and securely as it had always done, but the sawn planks became fewer in number. The old man could not wield them as easily as he used to do, and sometimes he had to rest his aching limbs between whiles.

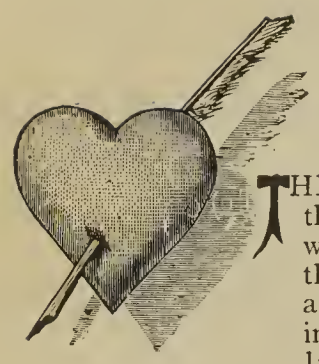
When he counted the floating planks, he knew that old age and helplessness were fast creeping on, and began to think sadly and bitterly of the time that was coming, when he must fold his hands and sit within his cottage door, destitute, or dependent on the charity of others, and watch other and younger hands at work at the mill. The old man grew feebler. Then there came a long, dark winter, when his strength failed very fast. For days the snow fell thickly, and he could only work at the mill for short spells at a time. Then there was a terrible frost, the hardest that had ever been known in that part of the country. One whole long dreary night the poor old man lay awake, his limbs benumbed with the pitiless, all-penetrating cold. At length the daylight dawned, and the hardy old miller crept out of his hut to look about him. All was intensely still, intensely cold.

The white snow lay thick around, the dark pine trees were fringed with snow and ice. The stream itself was frozen into a glacier. The waterfall hung in huge icicles from the rocks. The mill-wheel was fixed in the midst of the ice, motionless, powerless. The old man gazed at the frozen river intently, heedless of the death-like cold which surrounded him. "So you have gone to sleep, old friend," he murmured. Then he crept back into his hut, and cowered over the stove. Later a neighbour, not seeing the active old man about as usual, came to look for him, and found him stretched on his rough bed.

"The river is frozen," he said; "the mill is stopped; I think I will sleep for a while too; but it is cold, very cold."

The neighbour threw a reindeer skin over the old man, and left him. For days the frost continued, and the miller remained in his hut. Every day the neighbour came in to see him, and every day he answered the unspoken question he could see in the old man's eyes: "The river is frozen still, the mill cannot work."

At length there was a change; the sun shone again, the icicles began to drip. The neighbour hastened to the miller's hut with the good news, thinking to cheer him.



"It is thawing," he cried; "we shall soon have the mill at work again."

Then the old man sat up and smiled, "The river may go to work again," said he, "but I must rest a little longer first. The good God thinks I have worked long enough."

The river melted, and the wheel went merrily to work again, and the pine logs floated to the old timber port, but the old miller slept on under the snow-covered turf.

The Heart's Choice:

OR, THE DIFFICULT LOVE LETTER.

THE Herr Jägenthal the elder was considered, though a learned, a rather pitiable individual, in the little village of Oberwasser, where for many years he had taught the village school. He smoked his big pipe in the parlour of the Wirthshaus in winter, and under the shade of the linden, which grew outside its door, in summer. He spoke seldom, and when he did, he always took a desponding view of the situation under discussion. He had no faith, not even in the Emperor William, still less in Prince Bismarck. When others praised the minister, he shook his head and said, "Ah, the Kaiser is governed by a paper-maker, and he—*he*—by his little dog! So!"

Being so learned a man, his opinion carried weight. His depressing sentences set people thinking; and many, who but for him would not have thought at all, but submitted as a matter of course to all Prince Bismarck's "impositions" and "reforms," submitted still, but grew in their hearts to be republicans. Herr Jägenthal had but a small income from his scholars. They each paid a few kreutzers per week, and in turns in winter brought a billet of wood for the stove. Now and again the mother of a new pupil would propitiate the master with a loaf of white bread, or a flask of home-made kirchenwasser. Therefore, being so poor, the Herr Schulmeister was glad to earn a thaler now and again by writing letters for his fellow villagers, who seemed to have forgotten all he had taught them when they were children.

One there was who forgot nothing, and who was for ever pushing forward in the race of life, and that one was Herr Jägenthal the younger. He was an orphan nephew, adopted and brought up by the Herr Schulmeister. He was a good-looking young fellow, and left the village early, and engaged himself as a waiter in the hotel of the neighbouring town. For years he wandered. He saw Zurich, Lucerne, Geneva, Paris, Berlin, and Rome; indeed, he was fond of saying that he had been everywhere, for he one season found himself a waiter in a foreign restaurant in Coventry Street, near Leicester Square. Here it was he made the acquaintance of his fellow country-woman, the Widow Klop, married her, and returned home.

Then a new life began for Oberwasser. So near Switzerland, under the very shade of the Jura, on the high-road thither, it was unendurable, Herr Jägenthall declared, that prosperity should stream past in the wake of the English tourists, and never lave their shores.

"Oberwasser shall become a favourite resort," exclaimed Herr Jägenthal, striking his breast as he stood under the linden, surrounded by an admiring crowd of his old acquaintances. His uncle shook his head.

"Who will do it?" he asked despondingly.

"I will; I, Heinrich Jägenthal."

"How?"

"Thou wilt see."

And the schoolmaster did see. He beheld an hotel arise on the edge of the pine woods, at the foot of the hills. He saw it furnished and supplied with many baths. He remonstrated at every outlay. The furniture was too expensive; the spring mattresses—who ever beheld the like? The gardens, the paths in the woods, the rotunda built over the sulphur spring. All, all, were a foolish waste of the Frau Jägenthal's money. But, beyond all, the crowning folly were the baths! Plunge baths, shower baths—hot, cold. What was the meaning of all this?

The schoolmaster was very angry.

"One needs but to wash one's face and hands, and those not often."

His nephew laughed.

"Wherefore this folly?" demanded the old man. And to all his remarks his nephew answered but one word.

"The English. Wait ten years."

In ten years Oberwasser was another place. There was a Kursaal, where the band played, and ices were served at the little tables; a long, straggling street, with many shops; and the prosperous hotel was always full. The salubrity of the air, and the efficacy of the sulphur waters, had been duly advertised. The Germans came for the waters, the English to picnic in the pine woods, to spend quiet Sundays, and to rest after the fatigue of mountaineering.

Herr Jägenthal was in his element, constantly inventing some new source of amusement, or adding to the attractions of the little town he had created.

One spring day he was gossiping with his old schoolfellow, Johann Sinck, once a very poor carver of cuckoo clocks, now the prosperous proprietor of the "English Emporium of Curios," when a girl came into the shop with the carvings her father had finished that week. The hotel-keeper looked at her. She was a pretty, bright girl. She would do; yes, certainly. And there and then mein Host struck a bargain with Lena Riffen.

"I have a Parisienne, and an Alsacienne, and I must have a German girl. You will all wear costumes, which Madame Jägenthal will arrange for you and you will assist Adolphe Muller. He speaks all the languages, even English. You will wait on the Herren."

So Lena Riffen went to the Hotel Victoria, and her bright smile and cheerful willingness soon made her the favourite waitress there. Many a gift she received, and carefully she stored up each thaler so obtained, for had she not a motive? Her parents had a right to her earnings, but these gifts were her very own.

She had a happy but busy summer. No time all the week for rest. But on Sunday morning she rose early and went to the Lutheran service, and across the aisle she glanced sometimes to the men's side, and saw Frantz Biner. He was a tall, strong young fellow, with yellow hair, blue eyes, and a kind face, which grew kinder when his glance caught hers. He would say a word or two to her as they walked to the hotel together, and then in the evening she would put off her service costume, and in her pretty Sunday day dress, and her hair plaited and tied with ribbons, she would go into the Kursaal Gardens, where the band was playing, and all the neighbours were walking; and after greeting one and another, somehow Frantz Biner would be by her side; and then soon they would find themselves wandering off into the pine woods, not returning thence until the sun had gone blazing down, a ball of fire, behind the black pines of the towering Jura. Ere they parted Frantz would press her hand and whisper, "Next year."

Winter came. The hotel was shut up, the shops closed, and Lena put off her gay skirt, velvet bodice, and snowy linen, and donned a dark, coarse dress, and her fingers no longer arranged flowers, but were busy with flying needles on endless yards of stockings. All the gaiety died out, and the sleep of winter settled on Oberwasser.

"Next summer," said Frantz, "I shall go away, Lena; there is more money to be earned in Switzerland than here. I will go to my uncle at Zermatt; then surely before winter comes again, I shall have the price of three cows. Then my father says that he will agree to our marriage, but not else. And he is right. We need more cattle. He knows," added Frantz, with a laugh, "if I had thee safe at the farm, I should want nothing more."

"But, Frantz, I have money enough for one cow now; take it."

"No, Lena. Thy money we will keep and put by, and it shall be for thee. Who knows what thou mayest need, liebschen?"

So the young people looked forward to summer.

Soon, very soon, it was there, and life began again at Oberwasser. Yet Frantz could not tear himself away.

Adolphe Muller, who had been travelling with an English gentleman, returned. He had in a hundred cunning ways plundered his employer, and came back rich. He had been also making inquiries, and knew where he could borrow more money, and he was now secretly planning to open a rival hotel at Oberwasser. He had a clever way of talking, had travelled much, and seen many people, and he generally was successful in getting what he wanted.

He wished for two things now—an hotel at Oberwasser, and Lena for his wife. He began to pay the girl much attention.

Adolphe was a great man in her simple eyes, and she was elated. The more so, because Marie Mignot, the French waitress, was piqued thereby. The first summer Adolphe had been her special cavalier; now he was absorbed in Lena.

The band was playing a lively air, and Lena, wearing some flowers Adolphe had presented to her with a pretty speech, was sauntering by his side in the Kursaal Garden. He was telling her an amusing anecdote, and she, looking up into his face with a smile on her lips, did not observe Frantz Biner coming towards them.

Frantz had, ever since Adolphe's return, been growing uneasy. He had even made excuses to the hotel to see Lena, but she was always engaged. Three times now Adolphe had told him so with a disagreeable grin. So Frantz's heart grew sore. He came to hate the head waiter, and yet his very unhappiness chained him to Oberwasser. If he met Lena, he was cold and constrained, and when she asked him wistfully when he was departing to Zermatt, he answered her bitterly, "None the sooner that she wished it."

Their last walk together had been an uncomfortable one. Chilled and hurt, she too, grew constrained. Had she been alone now, Lena would have seen him approach, and one shy, sweet look from the eyes he loved so well would have been enough assurance for her lover that she still was his. But they met abruptly. Lena was confused, and hesitated, as Frantz brusquely ordered, rather than invited, her to come with him. Adolphe, with the French air he had acquired in Paris, and which Frantz hated, instantly interposed with,—

"A thousand pardons, but the Fraulein is engaged to me this evening."

"And perhaps," said Frantz savagely, "for always, likewise?"

"I hope so. Fraulein Lena honours me."

"Frantz!" cried Lena, in a piteous tone, as he turned away; but the young man either did not, or would not, hear her.

Some days after, Lena ascertained that Frantz Biner had left the village that Sunday evening. At first she hoped to hear from him. He could write. But no, not a line came. Then the thought came to her, that she would work very hard, and save up the money for the two cows—money for one she had—and this thought comforted her. She sat up at night, and did sewing for the English ladies, or washed their clothes, and so earned many a thaler. But she heard not one word of Frantz.

Adolphe was always there, and more attentive than ever; but since the evening she had last seen Frantz she cared not for Adolphe.

So the summer went by slowly, and bit by bit the girl's heart grew more and more sorrowful, and she came to fear that Frantz cared no longer for her, and that this terrible silence would go on for ever.

Frantz, on his part, had gone away in a rage. The force of his anger burnt up all the loving thoughts which had filled his heart, and made it Lena's home; and when the passion was past, it was an empty, desolate place—the more sad because the remembrance of her would sometimes visit him. His uncle, the guide, took him out with him. The work was often dangerous, and the life one of hard endurance. Its constant excitement did him good. He grew to love his employment, and tried to banish all thought of Lena.

So August passed. One day, when Lena was waiting on three English gentlemen, she heard the name of Frantz Biner repeated several times. When the gentlemen went on to the terrace in the pine wood, to smoke their cigars, she summoned courage to steal after them. One, who she knew could speak German, might tell her of Frantz. Her heart beat as she approached them, but at length she managed to say,—

The Matterhorn from Herr Seiller's Hotel.

"Mein Herr, you spoke of Frantz Biner. Has mein Herr perchance been to Zermatt?"

"Yes. We were speaking of a new ascent of the Matterhorn, and the Biners were our guides. The younger—Frantz—nearly lost his life, but his promptitude probably saved ours. He is a brave man. Is he your brother?"

Lena's white lips could hardly murmur "No."

All night she tossed about in misery. She wanted Frantz back—back, safe in Oberwasser. Yet how could she ask him to come? How tell him she cared not for Adolphe, nor ever had cared, but loved *him* only. How be so unmaidenly? At first she told herself that she could not do this thing, then that she must, or die.

Another difficulty was that she could not write; but then old Herr Jägenthal would do that for her for a thaler. At length she rose and dressed herself, and while all yet in the hotel were asleep, made her way to the school house. She knew the schoolmaster was a very early riser, and she found him, as she expected, seated at his table. She had brought her market basket with her. She would call for the eggs on her way back—it made an excuse.

"I want you, Herr Jägenthal, to write a letter for me. I could not come later."

"*Wohl! sehr wohl!*" replied the old man, producing paper and pens. "Say the words and I will write them."

"Lieber Freund." Then Lena could get no farther; the thoughts which came to her mind, the words which rose from her heart to her lips, she could not tell to the schoolmaster. She looked at him, and she *could* not say them. "Lieber Freund," she repeated.

"Thou dost not want it written twice, dost thou?" inquired the writer sternly.

"No! no! mein Herr. Put—the money for the three cows is waiting."

"*Sehr wohl!*" Lena remained silent. "What more?" inquired the old man.

"Only," cried Lena desperately, "Adolphe Muller and Marie Mignot are *verlobte*. See, I can write my name at the bottom. And now, Herr, direct it to Frantz Biner the younger, guide, Monte Rosa Hotel, Zermatt, care of Herr Seiller; and here is the thaler."

Lena posted her letter, and then waited anxiously for a reply, but none came. Three, four days passed.

It was Sunday evening. Lena had no heart for gossiping with the neighbours; she wandered off into the pine woods, and stood, tears blinding her sight, gazing towards the Jura. On the other side of those dark mountains was Frantz, and he had cast her off for ever! She had shamed herself for nothing; he loved her not!

The sun went down. She turned to go home, alone. Ah! but who was this who caught her in his strong arms? This man, with the brown face, who showered kisses on her eyes, her hands, her hair, who said but one word, "Lena! Lena!"

She cried again, but for very joy. Presently the girl looked, smiling shyly, into her lover's face, for in truth she had now found her heart's choice.

"It was such an awkward letter to write, but I thought you would perhaps come—for the three cows.'

"Oh, yes! doubtless I came for them; but, see you, my Lenachen, those noble Englishmen have given me more than the price of the cows. So you can keep your savings—for goats, if you like. I want but my wife, my Lenachen."

"After all, it was not an awkward letter," said the girl, with a happy laugh!

PRIZE TRANSPOSITION COMPETITION.

(*See page* 619).

DIVISION II.—POETRY INTO PROSE.

THE LEPER.—By NATHANIEL PARKER WILLIS.

"ROOM for the leper! room!" And, as he came,
The cry passed on—"Room for the leper! Room!"
Sunrise was slanting on the city gates
Rosy and beautiful, and from the hills
The early risen poor were coming in,
Duly and cheerfully to their toil, and up
Rose the sharp hammer's clink and the far hum
Of moving wheels and multitudes astir,
And all that in a city murmur swells—
Unheard but by the watcher's weary ear,
Aching with night's dull silence, or the sick
Hailing the welcome light and sounds that chase
The death-like images of the dark away.
"Room for the leper!" And aside they stood,
Matron, and child, and pitiless manhood—all
Who met him on his way—and let him pass.
And onward through the open gate he came,
A leper, with the ashes on his brow,
Sackcloth about his loins, and on his lip
A covering, stepping painfully and slow,
And with a difficult utterance, like one
Whose heart is with an iron nerve put down,
Crying, "Unclean! unclean!"

'Twas now the first
Of the Judean autumn, and the leaves,
Whose shadows lay so still upon his path,
Had put their beauty forth beneath the eye
Of Juda's palmiest noble. He was young,
And eminently beautiful, and life
Mantled in eloquent fulness on his lip,
And sparkled in his glance; and in his mien
There was a gracious pride that every eye
Followed with benisons—and this was he!
With the soft airs of summer there had come
A torpor on his frame, which not the speed
Of his best barb, nor music, nor the blast
Of the bold huntsman's horn, nor aught that stirs
The spirit to its bent, might drive away.
The blood beat not as wont within his veins;
Dimness crept o'er his eye: a drowsy sloth
Fettered his limbs like palsy, and his mien,
With all its loftiness, seemed struck with eld.
Even his voice was changed; a languid moan
Taking the place of the clear silver key;
And brain and sense grew faint, as if the light
And very air were steeped in sluggishness.
He strove with it awhile, as manhood will,
Ever too proud for weakness, till the rein
Slackened within his grasp, and in its poise
The arrowy jereed like an aspen shook.
Day after day, he lay, as if in sleep.
His skin grew dry and bloodless, and white scales,
Circled with livid purple, covered him.
And then his nails grew black, and fell away
From the dull flesh about them, and the hues
Deepened beneath the hard unmoistened scales,
And from their edges grew the rank white hair,
—And Helon was a leper!

Day was breaking,
When at the altar of the temple stood
The holy priest of God. The incense lamp
Burned with a struggling light, and a low chant
Swelled through the hollow arches of the roof
Like an articulate wail, and there, alone,
Wasted to ghastly thinness, Helon knelt.
The echoes of the melancholy strain
Died in the distant aisles, and he rose up,
Struggling with weakness, and bowed down his head
Unto the sprinkled ashes, and put off
His costly raiment for the leper's garb;
And with the sackcloth round him, and his lip
Hid in a loathsome covering, stood still,
Waiting to hear his doom:—

Depart! depart, O child
Of Israel, from the temple of thy God!
For He has smote thee with His chastening rod;
And to the desert wild,
From all thou lov'st away, thy feet must flee,
That from thy plague His people may be free.

Depart! and come not near
The busy mart, the crowded city, more;
Nor set thy foot a human threshold o'er;
And stay thou not to hear
Voices that call thee in the way; and fly
From all who in the wilderness pass by.

Wet not thy burning lip
In streams that to a human dwelling glide;
Nor rest thee where the covert fountains hide;
Nor kneel thee down to dip
The water where the pilgrim bends to drink;
By desert well or river's grassy brink.

And pass thou not between
The weary traveller and the cooling breeze;
And lie not down to sleep beneath the trees
Where human tracks are seen;
Nor milk the goat that browseth on the plain,
Nor pluck the standing corn, or yellow grain.

And now, depart! and when
Thy heart is heavy, and thine eyes are dim,
Lift up thy prayer beseechingly to Him
Who, from the tribes of men,
Selected thee to feel His chastening rod.
Depart! O Leper, and forget not God!

And he went forth—alone! not one of all
The many whom he loved, nor she whose name
Was woven in the fibres of the heart
Breaking within him now, to come and speak
Comfort unto him. Yes—he went his way,
Sick, and heart-broken, and alone—to die!
For God had cursed the leper!

It was noon,
And Helon knelt beside a stagnant pool
In the lone wilderness, and bathed his brow,
Hot with the burning leprosy, and touched
The loathsome water to his fevered lips,
Praying that he might be so blest—to die!
Footsteps approached, and with no strength to flee,
He drew the covering closer on his lip,
Crying, "Unclean! unclean!" and in the folds
Of the coarse sackcloth shrouding up his face,
He fell upon the earth till they should pass.
Nearer the Stranger came, and bending o'er
The leper's prostrate form, pronounced his name—
"Helon!" The voice was like the master-tone
Of a rich instrument—most strangely sweet;
And the dull pulses of disease awoke,
And for a moment beat beneath the hot
And leprous scales with a restoring thrill.
"Helon! arise!" and he forgot his curse,
And rose and stood before Him.

Love and awe
Mingled in the regard of Helon's eye
As he beheld the Stranger. He was not
In costly raiment clad, nor on His brow
The symbol of a princely lineage wore;
No followers at His back, nor in His hand
Buckler, or sword, or spear,—yet in His mien
Command sat throned serene, and if He smiled,
A kingly condescension graced His lips,
The lion would have crouched to in his lair.
His garb was simple, and His sandals worn,
His stature modelled with a perfect grace;
His countenance, the impress of a God,
Touched with the open innocence of a child;
His eye was blue and calm, as is the sky
In the serenest noon; His hair unshorn
Fell to His shoulders; and His curling beard
The fulness of perfected manhood bore.
He looked on Helon earnestly awhile,
As if His heart were moved, and stooping down,
He took a little water in His hand,
And laved the sufferer's brow, and said, "Be clean,"
And, lo! the scales fell from him, and his blood
Coursed with delicious coolness through his veins,
And his dry palms grew moist, and on his lips
The dewy softness of an infant's stole.
His leprosy was cleansed, and he fell down
Prostrate at Jesus' feet and worshipped Him.

INTERNATIONAL SUNDAY SCHOOL LESSONS.

AUGUST 5TH.

The Burnt Offering.—*Lev.* 1. 1-9.

GOLDEN TEXT.—*Isa.* 53. 6.

SHOW, from previous Scriptures, sacrifice was no new thing. Practised also by heathen nations. Tabernacle quite finished, we now enter upon a short study of *Tabernacle Services*. Five offerings are mentioned in the first five chapters of this book. Burnt, chap. 1; Meat, chap. 2; Peace, chap. 3; Sin, chap. 4; Trespass, chap. 5. They expressed the sense of Sin, and the desire to render Thanksgiving. Our lesson to-day is about the first. In this lesson, more than most, explanations needed as verses are read.

Ver. 1. Where had God spoken to Moses from before? Show why the place was changed. How the people would appreciate the change!

Ver. 2. The law gave choice of offering according to circumstances: five animals named as suitable—the ox, the sheep, the goat, the dove, and the pigeon.

Ver. 3. The offering must be *perfect*, and given *voluntarily*.

Ver. 4. The putting of the hand upon offering was symbolical, an act of satisfaction—"this animal represents me, is now for present purposes myself." Egyptian word, "atonement."

Ver. 5. There was first the presentation, then the slaying, and thirdly the sprinkling of the blood.

Ver. 6. To flay is to skin; hide given to priest (chap. 7. 8). The whole of the offering was burnt, none eaten, as in peace and sin offerings.

Ver. 7. This fire never went out (chap. 6. 13); therefore either this refers to the first kindling, or it should read, "shall make up the fire." No offering without the aid of priest. Worship had to be offered through a mediator.

Ver. 8. "Order." Draw attention to God's unfailing law of "order." "Said to have been the same as the members held in the living creature."

Ver. 9. "Shall he wash." "A further search after blemishes" (Ps. 51. 6). The *life* already offered in the blood, now the whole substance. "Modern science, by showing that the effect of fire upon the substance of a body is to resolve it into gases which rise from it, contributes a new illustration to this verse."

Picture a man bringing offering; go through the whole scene. Ask scholars if they see in the picture anything you have not mentioned. Answer will certainly be, "CHRIST." With scholars again go through verses, *finding Christ* in each, aided by New Testament references.

God speaks to us now, not from tabernacle—where? (Heb. 1. 2.)

Christ offered Himself (Heb. 7. 27).

Was without spot or blemish (Luke 23. 4; 1 Pet. 2. 22).

Bore our offences, and was Himself our Atonement (Rom. 4. 25; 5. 11).

Our Priest and Mediator (Heb. 3. 1; 1 Tim. 2. 5).

His body the "medium" of His "sacrifice" (Heb. 10. 5, 10).

The Cross His Altar (Phil. 2. 8).

According to Divine order (Heb. 10. 7).

Accepted by God (Eph. 5. 2).

Another look at the picture. We see—

WHAT GOD REQUIRES FROM US.

What is it? Sacrifice of cattle? No. See Ps. 51. 16. For answer, get scholars to read Rom. 12. 1, 2. Draw on paper or blackboard following plan, giving necessary explanations to each word:—

Give { O urselves
F reely
F aithfully
E ntirely
R egularly
I ntelligently
N ow
G ladly } TO GOD.

Close by getting some scholar to repeat Miss Havergal's Consecration Hymn, "Take my life."

AUGUST 12TH.

The Day of Atonement.—*Lev.* 16. 1-16.

GOLDEN TEXT.—*Heb.* 9. 22.

EVERY book in the Bible is said to possess a *key-word*. *Atonement* the key-word of Leviticus. Verse 34 in our lesson chapter, the key-verse.

Show, before reading verses, that though God planned out so minutely the life of these Israelites, *holidays* were not forgotten—their number—but in those days religion and pleasure were synonymous terms.

What were the names of Aaron's sons, and how did they die? (ch. 10). Connection between them and our lesson: their punishment showed importance of strict obedience, their sin, of a need for atonement.

THE DAY. It was,—

A day fixed by God. Binding upon all.

A day of Rest. Verse 31. A yearly Sabbath in addition to seventh day.

A day of Retrospect. Thinking over the sins of the past.

A day of Humiliation. "Ye shall afflict your souls" (ver. 29).

A day of Sanctification. Freed from sin.

A day of Anticipation. Joyful feast of Tabernacles was near.

THE DAY OF ATONEMENT. The chief personage—High Priest.

What he did. 1. Bathed. 2. Dressed in white garments, typical of entire purity (ver. 4). 3. Presented a bullock for a sin-offering for himself (ver. 3). 4. Presented two goats for the congregation (ver. 5). 5. Cast lots on the goats. 6. Offered up the bullock. 7. Went into the holy place with incense. 8. Returned to court, and taking blood of bullock, sprinkled mercy-seat. 9. Came into court and killed the goat set apart by lot for sacrifice. 10. Third time went into holy of holies, and sprinkled with goat's blood. 11. Purified the other parts of the tabernacle with blood. 15. Confessed the sins of the people upon the head of remaining goat (named Azazed, the remover), and then had it sent to the wilderness.

Teacher should repeat these "acts," getting scholars to find verses recording them.

Afterwards group into scenes—I. The casting lots on the goats. II. Priest offering—his own sacrifice. III. People anxiously watching his entrance through the mysterious veil. IV. Confessing sin on head of goat. V. Watching the goat disappear towards the wilderness.

THE DAY OF OUR ATONEMENT.

This part might well be worked out entirely by questions and answers from Scripture.

Do *we* need any atonement made? (1 John 1. 8).

Who is our High Priest? (Heb. 3. 1).

On whom did He put our sins? (1 Pet. 2. 24).

Was His atonement sufficient? (Acts 4. 12).

What veil did He tear down? (Heb. 10. 20).

Into what place did He enter? (Heb. 4. 14).

In what was this atonement better? (Heb. 7. 26-28; 9. 13, 14).

From these we gather these four thoughts, which it would be well for scholars to write down:—

THE ATONEMENT. *A need.*

THE ATONEMENT. *A fact.*

THE ATONEMENT. *An inspiration.*

THE ATONEMENT. *An example* (1 John 4. 11).

Illustration.—A deaf and dumb scholar once wrote on the slate to his teacher, "I cannot see how Jesus Christ alone should be able to die for all men." The teacher thought for awhile how she should open his mind to the blessed truth; and then she went out and brought in a whole apronful of dead leaves, which she put on one end of her desk; then she took off a diamond ring and put it on the other end. "I see it now," he wrote; "Jesus is a diamond worth more than all the leaves of a dead world."

AUGUST 19TH.

The Feast of Tabernacles.—*Lev.* 23. 33-44.

GOLDEN TEXT.—*Ps.* 118. 15.

INTRODUCE by referring to Jewish holidays mentioned last week. The three great feasts were:—

THE FEAST OF PASSOVER. Held about our April.

THE FEAST OF PENTECOST. Held fifty days after Passover. Hence meaning of word "*fiftieth.*" Also called FEAST OF FIRST FRUITS.

THE FEAST OF TABERNACLES, after the vintage had all been gathered in. Get scholars to state between which of these occurred "Day of Atonement."

This lesson is particularly appropriate as summer holidays are now on, for it is about A GREAT HOLIDAY AND HOW IT WAS SPENT.

Where it was Spent. During wilderness life "in the place which He shall choose" (Deut. 16. 16). Afterwards in Jerusalem (Zech. 14. 16).

Where they Lodged. In booths, ver. 42, Neh. 8. 15. One long picnic. What was this to commemorate? (ver. 43.

How long it lasted. Eight days.

How the Time was chiefly spent. In holy service and sacrifice. Refer to how modern holidays are spent. For list of sacrifices see Num. 29. 12-35. Each of the seventy bullocks was accompanied by an abundant oblation and drink offering, the number decreasing daily.

"There were obvious reasons why the feast should be thus specially marked." It was the national *harvest home*, the fitting season to *dedicate the person* in burnt offering; the *property* in drink offerings and oblations.

In what Spirit it was spent. JOY (ver. 40). The rejoicing so great, the rabbis used to say that he who had never been present knew not what rejoicing meant.

After the temple was built, the services were still more elaborate and imposing. If the teacher could frame in his own words the following extract, scholars would get some pictures of the rejoicing:—"Four large candelabra were lighted in the court; light visible to whole of city. Around these, men danced with lighted torches, Levites accompanying on instruments of music. It is to this grand illumination that Christ is supposed to refer, when He said, 'I am the light of the world.' Early in the morning of the last great day the people, with the paradise apple in their left hand, and branches in their right, marched to the sound of music in a procession, headed by a priest who bore a golden pitcher, to draw water from the fountain of Siloam. Here the priest filled the pitcher and brought it back amidst the sound of cymbals. The return so timed, they arrive just as the priest is laying the pieces of the sacrifice on great altar. The water from golden pitcher poured upon the altar. Immediately the great 'Hallel' (Ps. 113.-118) was chanted, with responses from the people. The first line of every Psalm was repeated by the people, and at the end of each line they repeated, 'Praise ye the Lord.' At the close they shook towards the altar the branches. It was in an interval of silence that Jesus cried out, 'If any man thirst, let him come unto Me and drink.'"

THE EFFECTS OF THIS HOLIDAY.

1. It had a *healthy effect.* This brought about by the journey—*change, rest, outdoor living*, and through *ventilation* of the emptied houses.

2. *Educational.* They learnt more about each other and the world they lived in.

3. *Religious.* They came back with fresh love and thankfulness to God. Every right holiday should have these effects. Picture how miserable some people are after a holiday.

THE LESSONS OF THIS HOLIDAY.

1. God wishes us to be thoroughly happy.

2. The thought of God should be in everything we do, in our pleasures and play.

3. To try and share our pleasures (ver. 22, Deut. 16.).

14. "It is more blessed to give than receive."

4. Thankfulness the chief source of pleasure.

5. Every day may be a holy day.

AUGUST 26TH.

The Pillar of Cloud and of Fire.—*Num.* 9. 15-23.

GOLDEN TEXT.—*Ps.* 43. 3.

CHILDREN of Israel were—ON A JOURNEY. Question as to requisites for traveller's outfit. For Junior Classes the lesson might be described as—

ALL ABOUT A WONDERFUL GUIDE-BOOK.

If we wish to know a book thoroughly, we must ascertain all about—

ITS AUTHOR. Who was it? *God.* What other books had He made? *Nature, Law, Bible.* He knew their *need* of guidance, consequent on their great number, the trackless waste they were in, the enemies around. Show our need of same. What guide-book have we?

ITS DESCRIPTION. Cloud by day, fire by night; illustrate by clouds tinged with fire at sunset. Persians carried a sacred fire in silver altars before their armies. "When Alexander the Great" led his army across the wide levels of Babylonia, he caused a grating filled with a blazing fire to be borne aloft on a long pole, that its smoke might guide the march by day, and its fire by night. Still the same done by caravans which make the pilgrimage to Mecca. Refer to Isa. 34. 4, and Rev. 6. 14 for authority to liken cloud to book. Get scholars to give description of *our* guide-book.

ITS HISTORY. First appearance, Ex. 13. 21. Defence against Egyptians, Ex. 14. 19. Takes its place, Ex. 40. 34. A few words on history of Bible would be of use here.

ITS MESSAGES. *God is here* (Lev. 16. 2; Ex. 19. 9). *God is thinking of you. God is guiding you. God knows the way best.* Show how they were punished when thinking they knew best. How its glow would cheer them on dark nights, its shadow cover them in sultry days (Ps. 105. 39; Lev. 14. 44). Get scholars to give a few of the most prominent Bible messages.

ITS METHODS. Rested on Tabernacle when people had to remain. How when they had to move? Why had the cloud to be "taken up?" To make sure every one saw it, as the camp was about five miles square. Show Bible methods of guiding just as plain.

ITS DEMANDS. Two—Look! Obey! Picture each morning Israelites peeping out of tent to see if it had moved. It once rested eighteen years. Bible makes same demands.

For Senior Classes lesson might be grouped round following thoughts:

GOD'S GUIDANCE is—

Given in various ways.

Given unto all who seek it.

Given conditionally.

1. Willingness to wait.
2. A watchful eye.
3. Ready action.
4. A trustful spirit.

GOD'S GUIDANCE ALWAYS LEADS US RIGHT. None can ever say to Him, "You led me WRONG." The youngest brother of the poet Wordsworth was shipwrecked off the coast of Dorsetshire, through the conceit and incompetency of the pilot. "Oh, pilot, you have ruined me!" were among his last words.

Repeat Sankey's hymn, "I will guide thee."

No doubt during summer months teachers will read accounts of accidents to travellers through having no guides. Use these as illustrations; also lives which have been ruined through not having Heavenly Guide.

Prove whether the lesson has been as good seed in good soil, by getting scholars themselves to point out—

WHY GOD'S GUIDANCE IS BEST?

C. SKINNER.

NOTES ON THE Y.M.C.A. BIBLE CLASS LESSONS.

AUGUST 5TH.

The Penitent Thief.—*Luke* 23. 39-43.

NOTE the intention of Christ's murderers in placing Him between thieves: to add disgrace to His death. Prophecy fulfilled, "He was numbered with the transgressors." But see how God thwarted the design by making it grace the triumph of the Redeemer. The conversion of one thief turned the shame into honour.

Concerning the *penitent* thief notice—

I. HIS CONFESSION OF SIN. Ver. 41, "the due reward of our deeds." This is the first step towards salvation. "He that *confesseth* and forsaketh his sin shall find mercy."

II. HIS SUBMISSION TO JUSTICE. "We indeed justly," "the due reward." "Every mouth shall be stopped, and all the world become guilty before God."

"Lord, should Thy justice grow severe,
I am condemned, but Thou art clear."

III. HIS APPEAL TO CHRIST. "Remember me." Observe its simplicity, earnestness, confidence. If Christ did but *remember* him, that would be enough.

IV. HIS CONFESSION OF CHRIST.

(1) His sinless humanity. "This Man hath done nothing amiss."

(2) His kingship. "When Thou comest in Thy kingdom."

(3) His power to save, implied in the appeal to Him.

(4) His belief in Christ's ultimate deliverance and future glory. He evidently believed that life did not end at the cross. He anticipated the life to come.

Mark also the *time* of this man's confession. It was at a time when *no other voice* was lifted in Christ's behalf. Condemned by rulers, jeered by the crowd, forsaken by disciples, *then* it was that the thief confessed. This *greatly enhances* the value of the confession. See from what unexpected quarters God can raise up testimony.

V. CHRIST'S RESPONSE.

"*Verily.*" The certainty of the promise.

"*I say unto thee.*" Note the deliberate, formal, and solemn assurance.

To-day. A sidelight on the "afterwards" of death. "Absent from the body, present with the Lord."

"*With Me.*" This is heaven—"with Christ, which is far better." What honourable company for the thief! Christ enters Paradise with the first spoils of Satan's kingdom. He "opened the kingdom of heaven to all believers."

"*In Paradise.*" Paradise regained.

We must either go to heaven with one thief, or to hell with the other.

There was *one* saved at the eleventh hour, that none might despair; *only* one, that none might presume.

JAMES L. STANLEY.

AUGUST 12TH.

Ps. 22. 1-21; *Matt.* 27. 46-51.

I. CHARACTERS CHRIST IS SEEN IN.

1. The Forsaken Man (Ps. 22. 1).
2. The Earnest Pleader (ver. 2).
3. The Weak Worm (ver. 6).
4. The Reproached One (ver. 6).
5. The Despised One (ver. 6).
6. The Mocked One (ver. 7).
7. The Deserted One (ver. 8).
8. The Beset One (ver. 12).
9. The Reviled One (ver. 13).
10. The Suffering Servant (ver. 14).
11. The Thirsty One (ver. 15).
12. The Hunted One (dogs, ver. 16).
13. The Rejected Messiah—wicked Jews (ver. 16).
14. The Crucified One (ver. 16).
15. The Dis-robed One (ver. 18).
16. The Mighty and Conquering One (Matt. 27. 50).

II. CONTRAST AND CONCLUSION WE MAY DRAW FROM HIS SUFFERINGS.

He was forsaken, that we might be forgiven. God was far from helping Him, that He might be near in helping us. His was the roaring—like an animal in pain, that ours might be the rejoicing. His was the cry of despair, that ours might be the cry of delight. His was the night of horror, that ours might be the light of day. He was a worm and no man, that we might be heirs of glory. He was reproached, that we might be redeemed. He was despised, that we might be welcomed. He was made a laughingstock, that we might be God's delight. He was scorned, that we might be saved. He was reviled, that we might be blest. He was helpless, that we might be rescued. He was beset by demons, that we might be ministered to by angels. He was poured like water, that we might know the preciousness of that Name which is as ointment poured forth. He was out of joint, that we might be in joint. He was melted like wax, that we might be sealed for ever. He was strengthless, that we might be empowered. He was thirsty, that we might not cry for a drop of cold water in hell to cool our parched tongue. He was brought down into the dust of death, that we might have eternal life. He was compassed by dogs, that we might be compassed by mercy. His hands were pierced by the nails, that our names might for ever be engraved there. His feet were nailed to the accursed tree, that we might walk through the new Jerusalem. He was stripped, that we might be clothed. He received the sword of justice, that we might be shielded for ever. He was bruised by Satan, that He might burst our bonds.

What a contrast between Him and us! We in our filth, He in His purity. We in our sickness, He in His health. We in our sin, He in His glory. We in our poverty, He in His riches. We in our enmity, He in His love. We in our shame, He in His glory. We in our weakness, He in His power. We in our folly, He in His wisdom. We in our curse, He in His blessedness. We in our unrighteousness, He in His righteousness. We in our bonds, He in His liberty. We in our destitution, He in His comeliness. We in our death, He in His life. We in our emptiness, He in His fulness. But I Thank God! we can say with one, "He has taken my sin, and I have taken His righteousness." Or, as an old Scotchman in the Highlands of Scotland once said, "I swapt with Jesus." Ah! He took our filth, that we might have His purity. He took our sickness, that we might have his health. He took our sin, that we might have His glory. He took our poverty, that we might have His riches. He took our enmity, that we might enjoy His love. He took our shame, that we might have His beauty. He took our weakness, that we might have His power. He took our folly, that we might have His wisdom. He took our curse, that we might have His blessing. He took our unrighteousness, that we might have His righteousness. He took our bonds, that we might have His liberty. He took our destitution, that we might have His comeliness. He died our death, that we might have His life. He took our emptiness, that we might have His fulness. He went to Calvary, that we might go to glory.

Calvary! What a blessed spot that becomes to us, although it was an accursed one to Him. But upon that rugged hill our roses shall blossom; our springs of peace and blessing come forth; our city of refuge is upon this height; here we see our robing chamber, where we take off our rags, and put on His comeliness; this shall be our resting-place, and we may well sing,—

"For ever here my rest shall be,
Close to Thy bleeding side;
This all my hope and all my plea—
For me the Saviour died!"

Here we see the Tree that was pierced, from which comes the balm to heal our wounds. Here we see the Rock smitten, from which comes the water of life. This is the Place of safety, the Rock of security. In vain the waves of the curse beat upon it, for they are only dashed back. The lightnings of judgment may play about us, but here is the Conductor upon whom they have descended.

This is our Elim—place of rest. This is our Bethany—house of blessing. This is our Bethesda—house of mercy. This is our Bethsaida—house of fruit. This is our Bethel—house of God. This is our Bethlehem—house of bread. This is our Bethshan—place of healing.

F. E. MARSH.

AUGUST 19TH.

Truthfulness.—*Prov.* 12. 17-22.

VER. 17. From the latter clause of the verse it would appear that the "speaking truth" refers to witness bearing in a court of justice, the contrast being between a truthful and a false witness. The passage may, however, be applied to truth-speaking in general; *speaking* truth is as essential as *acting* truth.

Ver. 18. "*Like the piercings of a sword.*" See 1 Sam. 20. 30; John 8. 48; Ps. 64. 3. The power of the tongue to wound is aptly compared to the piercings of a sword. But there is a *good* sense in which the words may be regarded. See for instance Acts 7. 54: Acts 2. 37. "The tongue of the wise is health." Contrast the words of Nabal and Abigail. See how the words of Nabal stirred the wrath of David, exciting his mind to fever heat. Abigail's words had the contrary effect, soothing, quieting. See Prov. 10. 11, 13, 20, 21.

Ver. 19. "*The lip of truth,*" etc. Truth is eternal. Those who speak and live the truth share its immortality. The stability of truth is here contrasted with the precarious position of falsehood. A liar never knows a moment when he may be discovered and exposed. The man of truth is confident in his own integrity. Take Joseph and Potiphar's wife as illustrating the opposite characters of this verse.

Ver. 20. "*Deceit is in the heart of them that imagine evil,*" etc. They deceive, and are self-deceived. In imagining evil against others they promise satisfaction to themselves, but they are deceived. Deceit actuates them, and deceit rewards them. On the contrary, "to the counsellors of peace is joy." See Matt. 5. 9. "The fruit of righteousness is sown in peace of them that make peace" (Jas. 3. 18). See also Isa. 32. 17.

Ver. 21. "*There shall no evil happen,*" etc. No permanent injury (1 Pet. 5. 13, 14; Luke 12. 4). Seeming evils may, but *real* evils never. See on this Gen. 50. 20. "But the wicked shall be filled with mischief." Contrast the security of the one with the peril of the other; also the fulness of happiness in the one case, with the fulness of misery in the other.

Ver. 22. Falsehood and truth, according to the Divine estimation. See here two sides of the Divine character—grace and righteousness, wrath and love. The moral sentiments implanted in ourselves, exist in their highest degree in God. The fact that God is love must never be allowed to obscure the fact of His wrath against sin.

JAMES L. STANLEY.

AUGUST 26TH.

The Dishonest Steward—Wicked but Wise.
Luke 16. 1-12.

IN looking at the Parables we must always remember that there is generally one main feature, and beware of pushing them too far. This same applies to illustrations in the Word, for instance, Christ says, "We are to be as wise as serpents," but He did not say, "Be hurtful as serpents." In the parable that is before us, the one thing that is commended is the prudence, forethought, and wisdom of the steward, and not his craft and dishonesty.

In ver. 9 the Revised Version is much clearer. "Make to yourselves friends *by means of* the mammon of unrighteousness," that is, use money for God's glory by giving it away to others; thus you will make friends here, and receive reward hereafter. Not love it or hoard it up.

1. "Certain rich man." God as the Possessor of all things.
2. "Steward." Mankind as responsible to God.
3. "Accused." All brought in guilty before God.
4. "Wasted his goods." Sinner wasting what God has given. (See Luke 15. 13.)
5. "Give an account." All unsaved will be judged according to works.
6. A reminder. No scheming on the part of the sinner will acquit him of his sins. Salvation and forgiveness are through faith in Christ alone.
7. Condemned and commended. The steward was condemned for his wastefulness, but commended for his wisdom.
8. A Lesson. We may learn a lesson of wisdom from the steward, but we may not copy his wickedness.
9. Right use of money (ver. 9). Make friends by giving it away to the glory of God.
10. Faithfulness (ver. 10). If we are faithful in little things, the principle will actuate our lives. "Minute events are the hinges on which magnificent results turn. In a watch the smallest link, chain, or ratchet, cog, or crank, is as essential as the main-spring itself. If one fall out, the whole will stand still."
11. A Question (ver. 11). Character is essential to blessing.

Lessons we may learn:—

1. Do everything with an eye to the future.
2. Use our money to the blessing of others, for in so doing we bless ourselves.
3. Be faithful in the least things, yea, in all.
4. Serving Christ alone (ver. 13).

F. E. MARSH.

Strange it seems that tourists should so follow beaten tracks, when Norway offers such wide and varied attractions.

Sailing through its Fjords, one gets glimpses of lovely valleys, distant blue glaciers, mountain ranges, and forest-covered hills. Perhaps in no other country does the scenery present such exquisite combinations of grandeur and sylvan beauty.

MAD JOHN BURLEIGH.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow," "Our Navvies," etc., etc.

CHAPTER IX.

"THE FLESH LIKETH IT ILL."

"SMITH," said his master, "I wonder what is the reason why the Vicar has not been to-day."

"It's not late, he might call yet, sir," replied his servant, and thereupon he left the room rather abruptly.

"What a good thing he did not question me further! It would have placed me in a most unfortunate position, for I really should not have known how to answer him. I should think tea will be ready in Mrs. Banks' room by now. Wonder what she's got to-night?"

John Burleigh had left Hardman the night before profoundly touched. He had seen his old schoolfellow every day during the past fortnight, and he had prayed constantly for him. He loved the bright, boyish young man. He did his utmost to amuse and interest him, but he waited for God to open the way for more serious themes. At length they had had a

"'If he's worth the name, he'll see justice done!'"

conversation, in which he had been able to speak straight to the young man's heart. John Burleigh knew that the turning-point in Ralph's life had come. A future, a life, an immortal soul, were in the balance. Would it rise or fall? Which would win—Christ or Satan? The decision was in Ralph's grasp.

The Vicar's heart reached up in an intensity of prayer, to lay hold on God, for he was deeply agitated, and needed rest. He had walked only a short distance from the house, when he observed two persons standing on the sward by the side of the carriage drive, under the shadow of the trees—a man and a girl. The man was speaking angrily, and the girl retorted in loud tones,—

"I tell you I will. I've come all this way on purpose, and do you think I'll be stopped by you?"

"And I say you shan't. Why, you surely do not think that I would let such a one as *you* go to him there? It would be as much as my place is worth; and do you think I'm going to lose a place that suits me to please *you?*"

The young woman sprang past Smith, but he seized her arm determinately, and held it firmly.

"Come along," he cried, dragging her back.

The Vicar was close upon them. The girl was screaming, and the angry man storming. As they turned, struggling, they found themselves face to face with the clergyman. Suddenly a silence fell upon both.

Smith touched his hat, and stood in a respectful attitude, but took care still to grasp his companion.

"What is the matter?"

"Nothing, sir, of any consequence. I was only having a few words with this young person about a little business she has the impudence to meddle with, as is no concern of hers."

"No concern of mine! I'll let you see about that, I can tell you. I will see him."

"Whom do you wish to see?" asked the Vicar.

Smith muttered something that only the girl could hear, and then held his peace.

"Worse for me if I tell! Will it be? Then it shall be. I'll say what I like to the gentleman. He's a clergyman, and some of them are a good sort. If he's worth the name, he'll see justice done."

"I will, if it is really justice you want. Now tell me your trouble."

The girl's fury was all gone, and she began to cry.

"I've been wondering for a fortnight, sir, where Mr. Hardman was, and I heard from a party I know, yesterday, that he was lying at that Hall there with a broken leg, and so I've come to see him and to know how he is."

"You can go, Smith," said the Vicar; "but do not say anything to your master until I give you permission."

"Certainly not, sir," said Smith, touching his hat, and hurrying away.

"Now come with me, and you shall tell me all your sorrow."

The girl looked at John Burleigh, and seeing only intense compassion and pity there, and no touch of disapproval or contempt, followed the clergyman, whose face had made her change her purpose.

They had only proceeded a short distance when the Vicar noticed that she was carrying a somewhat heavy bag.

"Permit me," he said, and gently took it from her grasp.

"Oh, sir, no! I can carry it."

The Vicar was troubled, and was anxiously debating in his own mind what it was right for him to do. He had found this girl, and he wished to help her; but how? If possible, he must prevent her going back to London and her old life. To do the one would be to resume the other.

Then where must he place her? It was already late in the afternoon. There might be time for a journey to Castleborough, but certainly not farther. And who would help him there? He knew of no one in whose charge he could leave this waif. It would be useless to take her to lodgings in Castleborough, and to leave her there with no one to watch over—to guard her—until she could be restored to her friends, if she had any, or to a lady whom he knew and could trust. He would have taken the girl to her that very evening, but he remembered with a pang that she had gone with her overworked husband, a clergyman, to Switzerland for a month's rest.

Then John Burleigh thought of his own parishioners. The agent's wife thought herself a very great lady indeed, and an example to all the neighbourhood. She, he knew, would have been exceedingly offended if asked to speak to, much less shelter, such an outcast. Then one by one he thought of the farmers' wives—all busy people, very much absorbed in their own interests, and he saw the difficulty with which he would at once be faced. Then mentally he canvassed the cottages of the village. In one there were delvers lodging; in another there were many children—all were overcrowded save one. There was the shop—Mrs. Pattison had a spare bedroom; but then, what a terrible time the girl would have, even if Mrs. Pattison would condescend to receive her. Yet, if the girl remained at the Vicarage, he foresaw the consequences. Money, position, comfort, he recked lightly of, but his reputation was very dear to John Burleigh.

Think as he would, no light came, and so their silent walk ended. They came out at the side gate, whence Hardman had been carried, crossed the road, and reached the Vicarage. They entered a stone-flagged hall, from which, right and left, the doors of the two sitting-rooms opened. One was a plainly furnished dining-room, the other a library, where all John Burleigh's treasures found a home.

The Vicar put down the girl's bag, and motioned her to enter the first; then he closed the door and left her. She felt dazed, and was glad to sit down.

"Martha," said the Vicar to his housekeeper, entering her clean kitchen to speak to her, "I have found a friendless girl as I came home. She is in the dining-room, and very tired. Will you take her some tea, and—wait, what is there for my dinner?"

"Two mutton chops, sir."

"Take her one; I can make out with bread and cheese."

Martha felt very angry with the stranger who had come at such an inopportune moment.

"If he'd only met her after dinner, I'd not have minded; but there, what's the use of talking? I might as well take the girl her tea and send her off."

She put the things on a tray, and carried the meal into the room. The girl, who was handsomely though somewhat loudly dressed, was standing looking out of the window. She turned slowly round. Martha stared at her a moment, then turned and left the room, slamming the door behind her. The girl laughed, but the housekeeper marched, boiling over with indignation, into her master's study. He was sitting wearedly, leaning his head on his hand.

"Master, do you know who we've got in the house?"

"I do not know her name, Martha. I have never seen her before."

"Well, she don't look fit to be in the house wi' a decent woman."

"She is friendless and tired, and doubtless hungry."

"Well, master, for your sake she can have her tea, and then out either her goes or me."

When Martha returned with the Vicar's meal, he saw that her face was still red with anger, and that a hard, determined air said as plainly as words that she would keep her threat.

John Burleigh felt weak and tired; he suffered so with omens, that it took the actual bodily strength out of him. He knew that he required food, and he forced himself to take it; then he crossed the hall, and entered his dining-room. The tea-things and empty plate were still on the table. Martha evidently would not condescend to clear them away.

"Now," said the Vicar, "if you feel able, tell me your trouble."

But the girl did not reply.

"You said," urged John gently, "that you wanted justice done, and looked to me for help."

"Since then I've been thinking," she replied, with a laugh, "that there is no justice in the world. It's all for the rich and for gentlefolk, and none for such as me."

"That is not answering my question. I am in this parish, a representative of Christ; as His servant, use me. I will do my utmost to help you. What is your name?"

"Rose Maydew."

"Your real name?" said the Vicar, and there was a slight ring of sternness in his tone.

The girl looked up with her round brown eyes, and fixed their gaze on the pale face and penetrating glance of the Vicar.

"Rebecca Sugden," she whispered, as though the words passed her lips without her consent.

John Burleigh rose suddenly—a likeness flashed before him—and walked quickly to the window and back again. The girl was the one now to be surprised. "What could be the matter with the gentleman?" she thought.

"Are you any relative of Luke Sugden, the head over-looker at Canal Mills, at Benford."

"He is my father," cried she, flinging her arms on to the table, and bowing her head on them, burst into tears.

She felt a hand laid on her shoulder, and heard a voice vibrating with sweetness say,—

"Father, forgive her, she knew not what she did." Then the hand was lifted, and she heard the Vicar's footsteps pacing up and down the room. She cried herself quiet. He waited till her sobs ceased.

"How long is it since you left home?"

"Five years, sir."

"You must only just have gone when I went to be curate at Benford. Did you ever hear your father mention the name of the clergyman at the little Mission Room in Canal Street, of which he was warden?"

"Yes; he thought a sight of him—Mr. Burleigh. He told me about him in his letters."

"I am Mr. Burleigh. Now, can you trust me?"

"Yes, sir."

And then she told her tale. She had learnt dressmaking in a shop in Benford, but had gone, five years ago, with a companion of hers, up to London to improve herself. Her father had willingly given his consent, as he thought that she would "get on" by doing so. The work the girls found hard, and the hours long. It was a very dull life. One night, as they were going home to their lodgings—for they lived out of the shop—they met one of the shop assistants and a friend, who asked them to accompany them to a singing saloon in Leicester Square. They went, and that first evening came away disgusted, and vowed to each other that they would never go again.

In those days there was no interest taken in shop girls out of work hours. There were no warm and pleasant rooms where they might pass the evenings, no innocent amusements, no bright religious gatherings. Sunday, instead of being the happiest and most occupied day in the week, was the dullest and most lonely. The temptation to leave a bare lodging, and to behold some of the brilliancy of the streets, to wander about where other people were moving, was sore. They had disapproved of the first entertainment they had gone to; but a wet evening, a flare of gas inside the gaily decorated vestibule, made them venture into another one, "just to see what it was like." They had meant no harm, but their sense of right was blunted, and again and again the two girls went to singing saloons and theatres, and their disgust at the words they heard, and the shameless women they saw perform and sing, soon wore off, though their hunger for excitement increased. What they saw in these evening hours furnished the subject of their conversation during the day. They had but very little money, and could only afford to go to cheap seats. One night, in the same singing saloon where they had first gone, they saw, sitting in the boxes, smartly dressed, with flowers in their hair and hands, talking and laughing with some "real gentlemen," two girls who served in the very shop in whose dressmaking department they were. Next day they asked them how they managed it. For some time, nearly three years now, though still writing home and pretending to their parents they were rising in their employment, they had lived in lodgings together, and done no work. Every womanly and holy thought had vanished; still they had not gone as far as many. They considered themselves "very respectable" still. In this base, evil life—which, like a upas tree, kills every virtue on which its accursed shade falls—destroying all kindliness, all honour, all righteousness, Rebecca Sugden had made Hardman's acquaintance some months ago. He had been kind to her with a merry, thoughtless kindness, and therefore the girl was grateful to him, and when she heard of his accident, his disappearance having frightened her, she set off to nurse him, honestly wishing to do so because she knew "he had no one belonging to him."

It was a pitiful tale: the old story—the love of this present world, the blindness to the great possibilities of the present and the glorious certainties of the future *life* with God. So ended Rebecca Sugden's tale.

Then tenderly and gently John Burleigh showed the girl what God had intended her to be. She was, after all, a clever North country girl, with a brain and a heart both there, but both as yet lying fallow.

As he went on, and those eyes of hers shone with comprehending intelligence, he had no need to point out to her that for years she had been repressing all the best in her nature. Now the weight of that self-repression was taken off, and as she saw the vision of Christ dying, agonising for her—He who to just such another, and whom all the righteous folk of that day despised, said, "Thy sins, which are many, are all forgiven"; He who knew all about her—her temptations as well as her sins—her heart broke out in one yearning, passionate cry to Him, and she sobbed aloud.

"Rebecca Sugden, you are tired, and must go to rest," said the Vicar, as her pitiful crying grew calmer; "but before you do so, give me permission to write to your father."

"Oh! sir, need you tell him? I was always 'my father's lass.'"

"Yes, he must know. The first step towards your heavenly home must not be taken in deceit. This is of the things which are behind."

"Very well, sir," replied the girl; "I want to be straight now." And falling into the broad Yorkshire she had spoken as a little child, before her parents "got up in the world," she added, "I'm sore huinded, but I'll bear ought, for I deserve it; but it's hard. I wish I could hug all t' load mysel'."

"Ah! Rebecca, no one liveth to himself; and not only are the sins of the fathers visited on the children, but the children's on the father. We are bound together, close together, and the 'whole world is bound' about the heart of God."

So Rebecca Sugden was once more alone.

Then the Vicar went into his study. "Lord Jesus Christ," he said, "show me *Thy* way." What would *He* have done? Would *He* have regarded evil whispers? *Did* He regard them when on earth? So scathing had been the irony of His reply when the righteous men of His day called Him Beelzebub, it seemed as though He had laughed in contempt. Did He let a sense of propriety come between Him and a soul which was being lost? Ah! never. Yet it may hurt my influence in my parish, and it must hurt the souls of my people, if they think evil thoughts and harden themselves with uncharitableness.

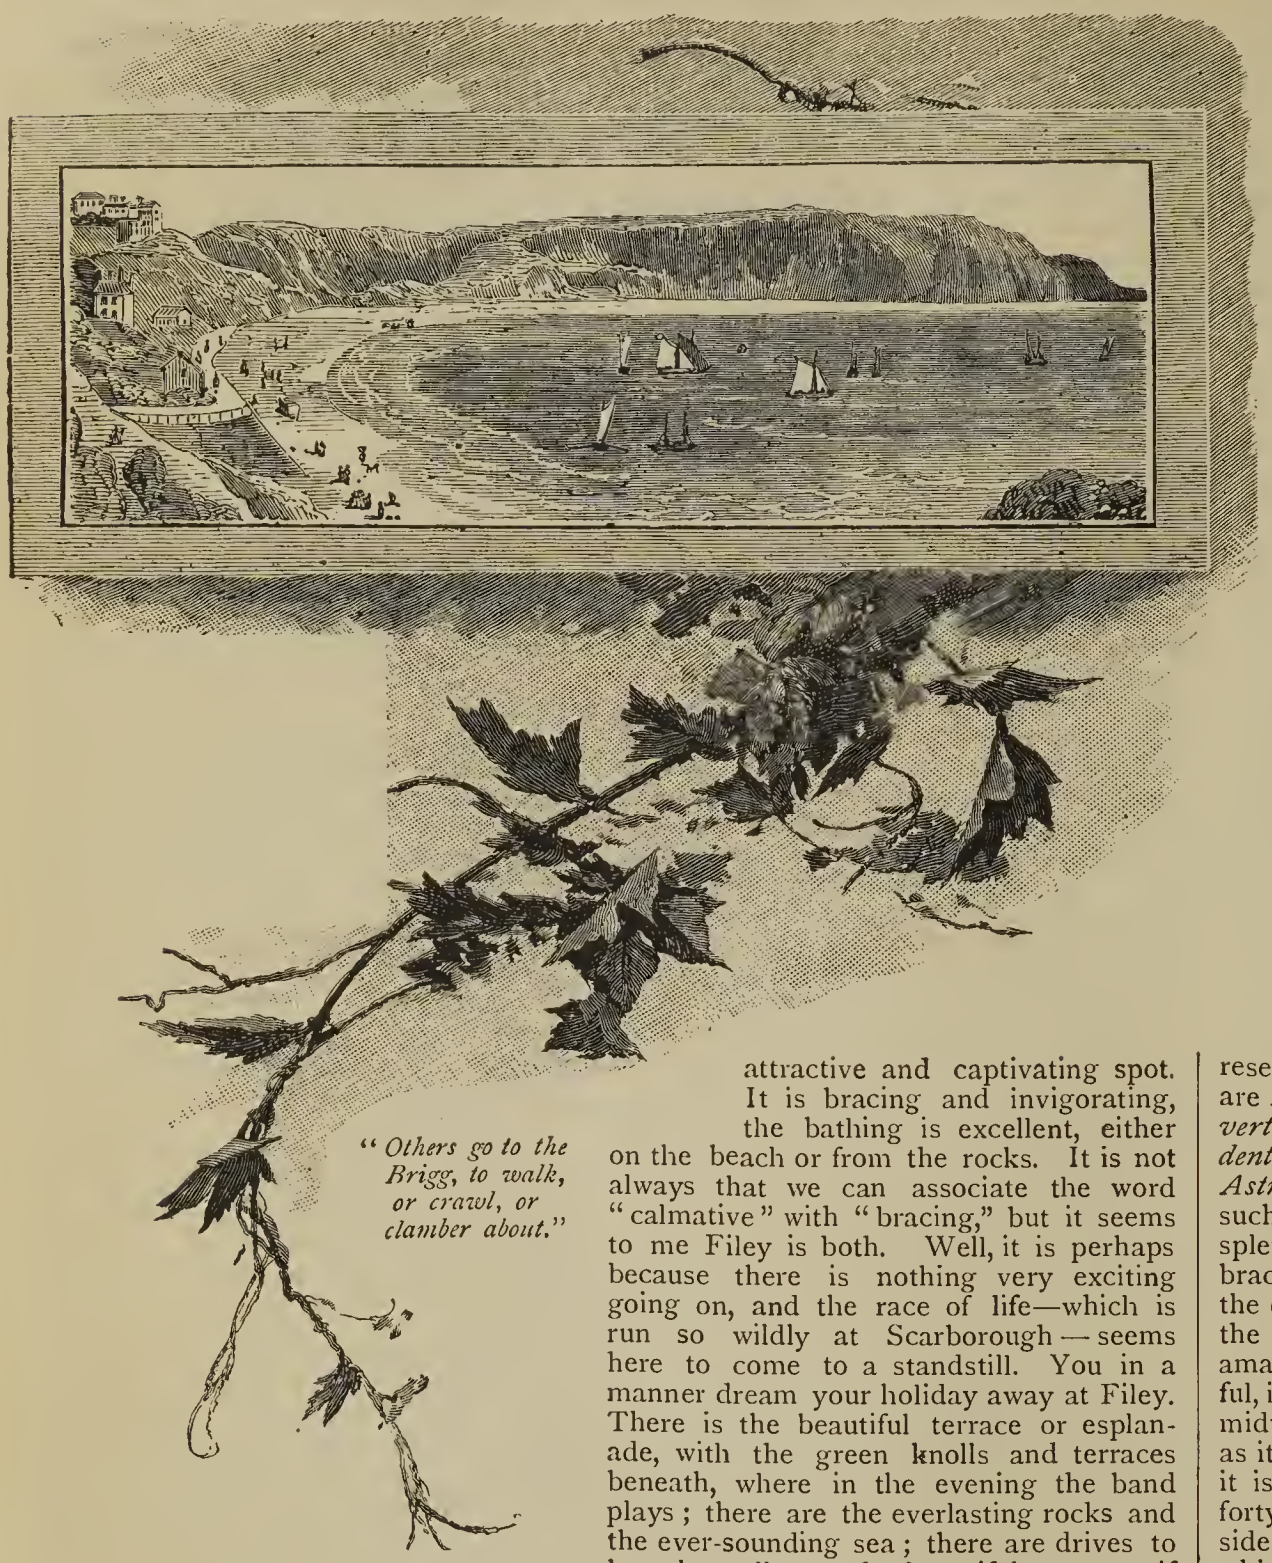
"John Burleigh," said an inward monitor, "you know this is a subterfuge; you dislike doing this act of charity because it will, you surely know, tarnish your fair fame. For shame of yourself. You who have given *all* to your Master, are you going to put Him off with an excuse when He asks you to sacrifice for Him your reputation?"

Then the Vicar went into the kitchen and told Martha. "This girl was the daughter of an old parishioner of his—a worthy and respectable man—that she had done wrong, that she wished to do right, that he had written to her father to come for her; and that so deep was her grief he dare not leave her beyond his own care until that father arrived, and he could give her up to him; that he had thought over every house in the parish, and Mrs. Pattison's was the only one where she could possibly go. Now, Martha, what do you say? Shall I go and see Mrs. Pattison? Perhaps her love of money will induce her to take the girl. But you know Mrs. Pattison; judge for yourself. Shall I place her in Mrs. Pattison's charge, or leave her in your keeping? She can sleep in the spare room, and have her meals in the dining-room, though it would be kinder if you would have her here in the kitchen with yourself."

"That, master, I never will! But as to her going to Mrs. Pattison, she shall not; for all the parish would be had in to see her. It will be bad enough as it is, for she's sure to hear the young person's had her tea here, and be up in t' morning prying round."

Martha's dislike of Mrs. Pattison helped her to a charitable decision, though the Vicar had still a hard fight with her. Respectability is more difficult to overcome than sin. It is a precious possession, and many are going to heaven on its merits.

At last Martha agreed. "For *your* sake, master, I'll bide wi' her in t' house; but I shall make her keep hersel' to hersel'. She mustn't expect to set foot in my kitchen, or, for t' matter of that, to go out of t' dining-room."



"For *Christ's* sake, Martha?"

"Well, yes, sir; but I can't say yet but what I grudge her sleeping in our spare bedroom—and there's no other."

(Continued—page 641.)

LEAVES FROM THE LOG OF A GENTLEMAN GIPSY.

NINE DAYS BY THE SEA—THE BRIGG—RUDSTONE — KILHAM — A STRANGE GRAVEYARD—IN CAMP AT NAFFERTON —DRIFFIELD AND BEVERLEY — SOMETHING LIKE A CHILD.

I SOON found a comfortable meadow adjoining the railway station, and belonging to a true-blue Yorkshire man, honest, kindly R——.

I lay at Filey nine days, and for nine days my log continues a blank. Not that I need a log, though, to remind me of dear old Filey, and the universal kindness I met with there. The place and its people will dwell in my memory while life shall last.

I cannot say more—I could not say less. Filey may lack the woodland glory that beautifies some of our Welsh watering-places, and the stern and gloomy grandeur of the Scotch, but it is none the less an attractive and captivating spot. It is bracing and invigorating, the bathing is excellent, either on the beach or from the rocks. It is not always that we can associate the word "calmative" with "bracing," but it seems to me Filey is both. Well, it is perhaps because there is nothing very exciting going on, and the race of life—which is run so wildly at Scarborough — seems here to come to a standstill. You in a manner dream your holiday away at Filey. There is the beautiful terrace or esplanade, with the green knolls and terraces beneath, where in the evening the band plays; there are the everlasting rocks and the ever-sounding sea; there are drives to be taken all over the beautiful country, if you are not too happy and contented where you are. If you stop at home, you can laze most gracefully, or if tired lazing, or gazing at the distant crags of Flamborough, you can spend an hour very pleasantly talking to the simple fisher-folk. Yes, Filey is a pleasant spot, and I believe people actually come here for the benefit of their health; and those who spend one holiday here are sure to spend another.

The lion of Filey is The Brigg.

Everybody goes to the Brigg every day to do something, while many try to make themselves believe that they are studying natural history. The delusion does them good, and does not hurt anybody. Others go to the Brigg to walk, and crawl, and clamber about the rocks like crayfish, some read books, and a good many do nothing with enviable ease.

There is a kind of edible sea-weed found here, called "dulse" in the north. It is not generally known that dulse is an excellent tonic and blood-purifier.

I tore the following description of the Brigg from a newspaper. It is faithful, and worth reproducing.

"This most wonderful ridge of rocks, which Camden says juts out into the sea like a file (hence the name of Filey), forms a natural and romantic pier of oolite rocks and calcareous grit, and from its stretching nearly a mile, with the ocean rolling on either side, affords, without dispute, the finest sea-walk in England; whilst the wild and rugged scenery to the north is of the most romantic and enchanting character. Here, sloping rocks are covered with boulders of prodigious size, numbers of them weighing from forty to fifty tons; scaur after scaur, in perpendicular form, rise to a height of twenty feet; and most curious caverns in the rocks (like Roman amphitheatres) are seen, which have been hollowed out by the action of the waves, as they have in their immense power and terrible majesty during a northerly gale, come rolling on the Atlantic Ocean. Not far distant from here is found pool upon pool, abounding in *actiniæ algæ*, and corrolines, with the funny little hermit crab and other interesting objects well suited to the aquarium; numerous fossils, some of great beauty, are obtainable after much labour and research, amongst which the most striking are *Ammonites excavatus* and *Ammonites vertebralis*, *Pinnal anceoata*, and a large *dentalium*, with a beautiful fossil star-fish, *Astropecten orion*. No wonder that in such a field, 'mid such majestic rocks and splendid cliffs, and nerved to toil by the bracy breezes wafted from boundless depths, the eager botanist, the naturalist, the artist, the geologist, and last, though not least, the amateur fisherman, spend so many delightful, interesting, and successful hours. About midway of that wonderful Brigg (not bridge as it is sometimes erroneously called), where it is the highest, and at an angle of about forty-five feet, there juts out from its south side another ridge of rocks called 'Spittals,' which are only visible at low water and during spring tides. These, no doubt, were constructed by the Roman invaders, for the purpose of making Filey Bay a special 'Harbour of Refuge,' where their innumerable galleys might anchor with perfect safety, which would have been the case had the 'Spittals' been built up sufficiently high to have kept out the south-east sea. To strengthen this idea, there is now, to every careful observer, to be seen the remains of an inner ridge, called 'Old Quay Rocks,' supposed to be the foundation of a jetty or pier, alongside of which their frigates might lay undisturbed. Besides, old fishermen now tell of the existence of an 'old mooring stone' at the north-west corner of the bay, which was formed of a flat piece of rock projecting from the cliff, through which a hole was made sufficiently large to admit of the ropes or cables by which these vessels would be moored or fastened. About fifty years ago this re-

markable instance of Roman ingenuity was removed by ruthless hands, while stone was being cut from 'Filey Brigg' with which to build a pier at Bridlington."

On a bright breezy day, the thermometer in the coupé standing at 80°, we bade farewell to old Filey and our friends, and turned our horses' heads towards Rudstone, a primitive little village, where we made a mid-day halt, receiving a visit, amongst others, from the clergyman.

There are clumps of trees now and woods everywhere.

The day keeps bright and fine, but the sun is veiled in clouds, and there are ugly wee water-dogs hurrying athwart the sky that seem to bode us no good.

A most refreshing little peep is that we catch of the village of Kilham as we roll round the corner, with its quaint, long streets, and picturesque church at the bottom, one huge green tree half hiding its gable and a portion of the steeple. There has been a funeral, and we pass through crowds of mourners. The graveyard is a mere field, with very few graves and gravel, not grassy mounds, but all bedecked with flowers.

The clergyman kindly showed me over the old church.

We pause on a hill-top two miles from Nafferton this afternoon. An extensive and beautiful landscape is spread out before us and beneath. Level it is, but rich in colour and tints, and prettily treed, while the church spires and windmills lend romance to the view.

We bivouacked at Nafferton in a cosy tree-surrounded meadow. A little footpath winds through it, and many children squat near to look at us. There are sixteen hundred people in this village, and only one doctor. This speaks for its healthiness.

We had as many roses and flowers presented to us at this place as will make the *Wanderer* gay for a week.

We are never astonished at getting kindly gifts from Yorkshire people, and these take many forms, from game down to green peas and gooseberries.

Driffield is a clean, quiet, nice town. Its cemetery is a lovely garden—God's garden.

The country 'twixt here and Beverley, about fourteen miles, is flat, but charming; the road fairly good, though narrow. We had little more than a peep at Beverley, but all was beautiful that we saw. First came an avenue of trees, with villas half-hidden, and lounges or seats on the side-path; then a broad street, with wide market square, and a quaint pillared old cross. A peep at a fairy-like minster; a peep at the canal, with lazy barges and bargemen; then on past villas again, with well-kept flowery lawns, and so out into the wide, flat country again.

After a drive of four or five miles we were glad to find a meadow in a long, straggling village of brick houses.

This is a country of hedges and ditches. They tell me that sometimes in winter the water is over even the hedges. Fancy skating over a hedge! Well, there are sedges everywhere, also splendid grasses, and a canal that cuts across at right angles, and goes sleepily away towards the horizon.

But all things and creatures seem to thrive here—vegetables, flowers, cattle, pigs, willows, weeds, and children.

North Cave, where we encamped next night, is a most quiet and peaceful little place. Its church is a fine structure. The clergyman, they told me, was eighty-six years of age, and "beloved by every one."

It was not an interesting country we drove through next day. The land is level, and the trees stunted. It is a land of grass, though, and a land of geese to eat it; a land of good horses, and a land of windmills. They must be windmills where the water will not run.

We mid-dayed at Hemmborough, under the shadow of its gigantic spire, that rises a hundred and twenty-six feet above the battlements of the tower.

We are not often asked to pay toll, but to-day we cross and recross the Ouse near Selby, and are mulcted in three shillings for the treat.

I am now in towns and villages where the land yacht *Wanderer* is well known, and meet friends and friendship wherever I go.

In four or five days' time I find myself at Scrooby.

(*Continued—page* 648.)

A TWENTY-FIRST BIRTHDAY ODE.

By the Rev. CANON DOBBIN, M.A.

1.
DEAR May *petite*,
So fair and sweet,
Accept this natal lay.
Your clear blue eyes,
Like summer skies,
Inspire my muse to-day.

2.
Where Ocean laves
The sea nymphs' caves,
And curlews love to play,
A tiny skiff
Beneath the cliff
At anchor rode one day.

3.
We little thought,
Though trim and taut,
How soon 'twould cross the bay
Of life's young prime
With its golden chime—
You are twenty-one to-day!

4.
In gallant style,
'Neath Heaven's smile,
With pennons bright and gay,
You catch the breeze
Of the rolling seas—
You are twenty-one to-day!

5.
It seems as though
The ebb and flow
Of years had passed away,
Like a dream of night
At the morning light—
You are twenty-one to-day!

6.
May gentle gales
E'er fill your sails,
And speed you on life's way,
No friend forget—
Our darling pet
Is twenty-one to-day!

7.
And when at last
Your anchor's cast
On yon bright shore, we pray
That you may rest
Among the blest,
In God's Eternal Day.

HOMELY HINTS FOR STRUGGLING WIVES;

OR, HOW JOHN AND MARTHA GRIMSHAW MANAGED ON £1 A WEEK.

By Phyllis Browne.

No. III.

WHEN Martha and Mrs. Jackson had reached this point in their conversation, Mrs. Jackson thought it was time that Martha should rest awhile, and have a cup of tea. But Martha was so much interested in her subject that she could not leave it. Even during tea-time she kept returning to it, and was evidently quite glad when the cups and saucers were cleared away, and when Mrs. Jackson had resumed her seat, and was prepared to listen once more. Then she said,—

"Where did I get to in my talk, ma'am?"

"You were telling me how you laid out your money; and you were going on to say what sort of meals you provided for your family. I want very much to hear of them; but before you speak of them, will you return to one of the items in your estimate, and that is clothing? You said that 2s. a week was set apart for clothing. How do you divide that sum?"

"We manage the clothing this way. One shilling per week is my husband's share. With this he clothes himself entirely; and he always looks tidy, and is comfortably dressed. The remaining 1s. I pay every Monday to a Mothers' Meeting, to which I belong, and from that way my two children and myself are well clothed. Of course I put no needlework out, excepting when I have a best dress for myself. This does not occur very often, you may be sure. You see, ma'am, this dress I have on now is my best. It looks very tidy, and it fits me very well." And as she spoke, Martha rose and turned round about, so that Mrs. Jackson might have an opportunity of viewing the gown on all sides.

"Very tidy, indeed, and very becoming," said the lady. "How long has that dress been in wear?"

"Well, ma'am, you will perhaps be astonished to hear it, but I have had this dress for five years. Of course I have taken a great deal of care of it. I have kept it for going out, and I have never worn it when the weather was bad; and I brush it well always after wearing it. But it has been worth the trouble, and there is plenty of good wear in it yet. I suppose by rights I ought to have made it, and not put it out to make; but somehow I do not seem to be able to manage to fit myself as I should like, and as I make everything else, I feel that this little extravagance may be allowed me."

Apparently Martha felt that she could scarcely appologise sufficiently for putting out a dress once in five years. So, to restore her equanimity, Mrs. Jackson changed the subject.

"About your food then, Martha? What do you provide for the family meals?"

At once Martha's face became calm. "Well, ma'am," she said, "I cannot say that our meals are anything but very plain. Yet, at any rate, the food is wholesome, and it is better to have food ever so plain than to run into debt. However, this is the kind of food we have: For breakfast I boil a teacupful of coarse oatmeal for half an hour. This makes porridge for us all, and my husband and I have a cup of tea or coffee, and a little bread and butter. The children seldom want more than the porridge; but that is just as they choose. Next comes our dinner and best meal. Sometimes I take half a pound of beef or mutton pieces, whichever I can get best and cheapest. This I put into a pint of water, with one onion, one carrot, half a teacupful of rice, pepper and salt, and I let it simmer very gently for an hour and a half. Then, in another saucepan I cook just a few potatoes, and in another saucepan I have light dumplings. You know them quite well, I daresay, but this is how I make them. I take about three-quarters of a pound of flour, one teaspoonful of Yeatman's yeast powder, and a pinch of salt. Mix into a stiff paste, with cold water, then work into round balls, about the size of a teacup; put them into boiling water, let them boil twenty minutes without raising the lid, and they are done. Take them out and open them a little with a fork, to let out the steam. Part of these we eat with our meat and vegetables, and the remainder we have as a pudding, and eat either golden syrup or jam with it, which I can spare best. This makes a very good dinner, and often there is a little left. If I paid for everything separately it would cost 10d., but buying things in quantities I get it cheaper.

"Another day I take half a pound of beef, and make it into a small pudding. This I boil gently for two hours, and have a few potatoes cooked separately, to eat with it. For a pudding I boil a teacupful of rice in water, and when it is thoroughly cooked, I add a little milk, sugar, and nutmeg, or a little golden syrup. This meal costs 8d.

"Another day we have soup. This has to be partly made the day before it is wanted. I get three pennyworth of bones, and put them into a saucepan, with cold water to cover them; then simmer them for several hours. This done, I strain the liquor into a basin, and very often in cold weather it sets to a jelly by the morning. Then I put it into a clean saucepan, with as much vegetable cut very small as I can spare, and also a teacupful of rice, or large sago, and let it simmer for two hours.

"Sometimes, if we are expecting a friend to dinner on Sunday, we have a little hot joint for a treat. Of course I cannot afford a large or a prime joint, and so I choose about 3 lbs. of the flank of beef. For this I pay 6d. per lb. The butcher takes out the bone, and rolls it ready for the oven, and I get also about three pennyworth of suet. I know that this flank of beef is suitable for salting; but we do not like salt beef, and when it is gently cooked through in the oven, it is very sweet and tasty, with vegetables and a pudding.

Tea we have at 6 o'clock, and it is the last meal of the day. With tea we have bread and butter, or bread and jam; the latter I make at home in the fruit season. The children have a cup of boiled milk instead of tea, because I know it is more nourishing. Those are the kind of meals we have, and I should be very glad, ma'am, if you would tell me, if you think I could improve on them in any way."

"Indeed, Martha, I think you manage wonderfully," said Mrs. Jackson. "I am sure you are most industrious and managing, and it reflects the greatest credit upon you that you are able to make things so comfortable on so little. Yet I cannot help wondering a little that——"

"That what, ma'am?" said Martha.

"That you do not use peas, haricots, lentils, and hominy more. Are your children strong?"

"I cannot say that they are very strong. They are not delicate, but they are not robust. Their flesh feels soft and flabby; I have often wondered what more I could do for them."

"I should say that the porridge you give them for breakfast is excellent. So also are the bread and milk for tea, and the occasional suet puddings for dinner. But still I think you would find that their health would improve after a few months, if you were to vary their diet. I suppose you know that the foods I have mentioned are as nourishing as meat. When you buy meat for dinner, you buy half a pound for four persons—two of whom, it is true, are children, but one is a strong man. This is not much, but you cannot afford more. You could get the haricots and peas with your groceries, and if you were to use them occasionally, you would save out of the butcher's bill."

Martha evidently was rather disappointed that her friend was not entirely enthusiastic about her methods. "But I stew bones," she said; "and I get soup that is so stiff that you could almost cut it with a knife. Surely that is as nourishing as meat."

"Many think so, but it is a mistake," said Mrs. Jackson. "Once of a day we used to suppose that soup which would jelly was most valuable; but clever men have given great attention to the subject, and they have altered their opinion. They do not say that it is valueless, but they think that it should be mixed with other foods. If, for example, on the days that you have soup, you were to thicken it with peas, you would have a most nourishing dinner, and boiled haricots with onion occasionally might do instead of meat. I should try foods of this kind if I were you, Martha; they are very cheap, and they are also exceedingly nourishing."

"Thank you for the hint, ma'am, and so I will," said Martha. "They will be something new, but we are not so ignorant that we should object to them on that account. They have to be soaked for a day before they are used, also, I believe, but that is no objection to them either, for it takes long enough to stew bones properly. Any one who can look ahead long enough to make soup from bones could look ahead for other things."

"Indeed, that is so," said Mrs. Jackson. "Yet I am sure that to manage a home like yours it must be necessary to look ahead constantly, not only with the meals,

but with the work. You must be always busy, to keep the home comfortable."

"I certainly do not spend many idle moments," said Martha.

"Next time you come to see me I should be glad if you would tell me—if you do not object—how you arrange your daily work. I have been so much interested in your management of your money, and in your cooking, that I should like to know your ways all through. I hope you do not think I am idly curious; it is real interest in you which makes me want to know all this."

"I shall be only too pleased to tell you what I can, ma'am," replied Martha pleasantly. "They say two heads are better than one, and, by talking things over, you may get hints for improvement. But I must hasten home now, or John will be wondering what I am about. If I may, I will come again shortly, and then I will tell you all about my daily work."

With this understanding Martha bade her friend farewell, and took her departure.

(*Continued—page* 650.)

"BRUSHMARKS."

IT was but a tiny square of canvas, about four inches by six, fastened upon an ordinary drawing-board with pins, upon which, some twenty years ago, I had been working with much joy and satisfaction to myself, from a copy that now, as it stood side by side with my reproduction, did not—to me—look so vastly superior.

The background of the picture was a bit of mossy bank, with an ivy leaf or two at the right hand. At the left was a fungus, of the common drab-tinted species: it was so placed as to show only its upper disc, and looked not unlike a plate on a dresser-shelf. In the foreground were four or five damsons and one scarlet berry, lending the necessary "bit of colour."

This was my first work in oils.

My master was a grave, silent man—like many another genius. He moved about the studio at times, stopping quietly behind a student's chair to mark progress, or make mental observations on the manner of execution, to be descanted upon when opportunity offered. These observations were wisely reserved for fitting seasons, never obtruded suddenly upon the student, startling him into further perpetrations of clumsiness, or rendering him nervously helpless. The gentle request to be allowed to sit down for a moment to the work in hand, however, although not fraught with a terrible foreboding of severe criticism or unmitigated censure, was still sufficiently suggestive of the detection of mistaken mode, of crude expression or ignorance of tint, with also the hope of help or possible rectification under the master's touch.

As his own researches were close and deep, and his own expression tender and delicate, so he sought to lead on every student to the same tenderness and delicacy of tint and touch, and to enforce, in his own peculiar way—so powerful because so silent—the same exactness and precision that marked all his own works. It was impossible to look upon these works and believe that the hand which produced them could at any time also produce such inartistic excrescences as not infrequently mar the walls of even our most select Academies and Exhibitions.

To him the almost invisible stamens of the hawthorn blossom, the minute spottings of the London Pride petals, or the all but imperceptible gradation of cerulian tints upon the wing of a "Chalk Hill Blue" were things worth engrossing all his comprehension to understand, and the bending of all his energy to imitate.

To insult nature by representing her finest touches and most delicate traceries in the vulgar daubs and clumsy blotches which have obtained so greatly of late, would have appeared to him as a gross failure; and I think he would have hewn his pallets into firewood, and cast aside for ever both brush and pigment, rather than detect in his works any evidence of such result of his years of patient investigation and practice.

But to return to myself. As many another tyro, I had gone on with my work, "scrubbing and smoothing" to my heart's content; too confident of my own ability to ask advice or help. And so, at last, there stood my finished specimen. There was the fungus, there the damsons, and here the red berry. Yes, there could be nothing awaiting it but the most hearty praise and warmest congratulations on my being the possessor of a genius—equal to? nay, even surpassing that of my master, who had worked for years ere *he* produced the copy from which I had been working; and I—well, this was my first work!

For one moment my master scanned the picture in silence. "Lost in admiration," thought I. Then, raising it from the easel, he turned it down so that the full light from the window fell upon it. I was startled, appalled! Could it be the same thing? He only said, with a quiet smile, as he replaced it before me, "Too many brushmarks."

I was unaccustomed as yet to the various technicalities of the profession. I knew nothing of "dragging," "digging into," "scumbling," or "glazing," and a score of mystical expressions; but there was no need to ask for an explanation of the term used. In the master's hand, and under the strong light to which he had turned it, the imperfections were clearly manifest.

Ah me! years have passed since that bitter moment, when my ignorant conceit, smitten from her self-erected pinnacle, lay grovelling in the dust of her well-earned abasement, never again to occupy the same lofty position. Ever since that revelation I have detected "brushmarks" in all my works, and shall no doubt continue to do so to the end of my life.

And not alone with the subject in hand has this word become associated, but with many arts other than that of oil painting. "Brushmarks," or evidences of *un*finish, have been seen everywhere; and no life-story could be truthfully written and endorsed as "perfect."

The ancient epitaph—

> "He was—
> But words are wanting to say what.
> Think what a man should be,
> And he was that!"

must have been the overflow of fulsome flattery or blind devotion; for, from Adam downwards, there was no Bible character free from blemish—save One; while since, in spite of the lofty assertions of perfectionists and others, frailties and imperfections have ever marred the human character. Many a lofty pedestal to-day rears its pinnacle in mockery above the prostrate form of him who erected it for his own aggrandisement.

"He that is low need fear no fall." But how hard it is for us to *take* the low place! How hard to sit at the feet instead of wearing the crown of pre-eminence! How hard to be ruled when the heart is full of cravings to wield the sceptre!

But it is still to-day as ever. "If thou wilt be perfect—come and *follow* Me." We may not all be tempted by the glitter of golden or other possessions, as was the youth to whom the Divine Master spoke those words; but if we will listen to the whispers of the "still small voice" within, we may discover many and many a "brush-mark."

A trifling action, a hasty word, or even a hidden thought might, if caught like a gossamer thread and traced home, lead to the source of many a moment of discomfort, and sometimes avert ultimate hours of disgrace; for as the gossamer, lovely and glittering in the sunny dawn, if followed, will reveal a spider, so the thought, word, or action, however small and insignificant, is but the outcome of a principle within. Natural perspicacity may discover the black and repulsive spinner of the gossamer thread; but only the mind which is illumined by the Sun of Righteousness can detect the hidden root from which may spring any and every evil of which human nature is capable; and only the will that is completely under the Divine rule will obediently follow the teachings of the Divine Master.

Hence we are forced, however unwillingly, to conclude that many human minds are still in darkness, and that many human wills acknowledge no Divine rule. And yet in this age we hear much of "enlightenment," of "progress," of "culture." There is, too, the outward gloss of a "religiousness" that passes for the correct imitation of the work of the great Master, which, if only subjected to the penetrating gleam of the True Light, would be seen to be full of coarse, contradictory evidences—a mere patch of "brushmarks."

BALLOONING, SAILING, AND SWIMMING SPIDERS.

By Henry McCook.

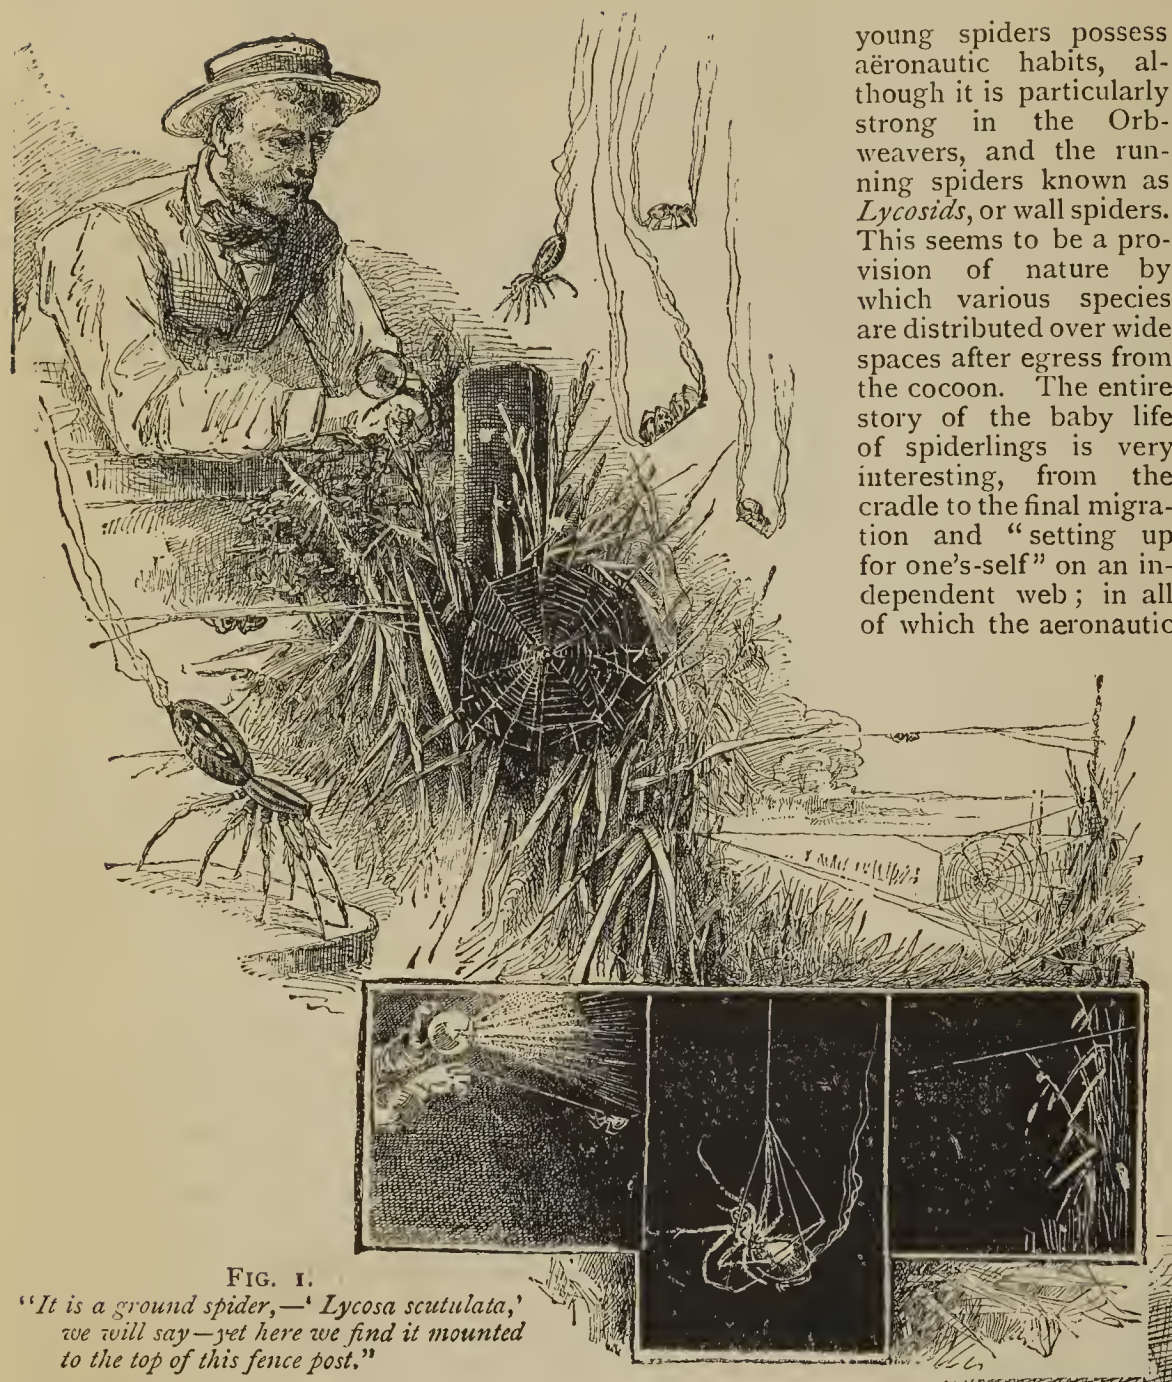

Fig. 1.
"It is a ground spider,—'Lycosa scutulata,' we will say—yet here we find it mounted to the top of this fence post."

ONE who walks in the fields on a bright autumn day will see innumerable threads of silk floating from every elevated spot. They fringe the fence posts, they stream like pennants from the tall weeds, they lace the foliage of the bushes with delicate meshes. These are the ropes and netting of "ballooning spiders," or, as they are popularly called, "flying spiders." If one will glance upward some October afternoon, he will see long white, sinuous filaments drifting through the air, over tree-tops, across the river, far aloft, or mayhap low enough to be within his reach. Let him grasp one of these threads, and, if he be careful, he may find in his hand a little spider. Perhaps, before the creature can be fairly observed, it will have diverged itself from the line, have mounted from the finger in some mysterious way, and once more will be gone "ower the hills and far awa'."

This is the famous spider aëronaut, arrested in her "aëronautic flight," and the silken filament is in fact her balloon. There is no species entitled by special eminence to the name of flying spider, for most young spiders possess aëronautic habits, although it is particularly strong in the Orb-weavers, and the running spiders known as *Lycosids*, or wall spiders. This seems to be a provision of nature by which various species are distributed over wide spaces after egress from the cocoon. The entire story of the baby life of spiderlings is very interesting, from the cradle to the final migration and "setting up for one's-self" on an independent web; in all of which the aeronautic habit has much to do. But let us now suppose that baby life is over; the hand of nature is on the young aranead, urging it by the instinct of migration to seek a home in the "wide, wide world" of yonder meadow. It is a ground spider —*Lycosa scutulata*, we will say—yet here we find it mounted to the top of this fence post, where, with the aid of a common pocket lens, we can watch its movements. The fore part of the body, the cephalothorax, is turned towards the direction of the wind, the abdomen is elevated, the eight legs are spread out so that the feet are at points within the circumference of a circle (see Fig. 1). Beneath the apex of the abdomen are the spinnerets, four cylindrical organs containing the most wonderful spinning apparatus known to men. Hundreds of minute tubes cover the tips of these spinnerets, through which liquid silk is exuded from a multitude of glands within the body; these harden and combine at contact with the air, so that the gossamer thread of a spider is composed of a great number, sometimes several hundreds, of separate lines.

We keep the lens directed upon the spinnerets of our little adventurer. A ray of several threads is issuing; these, caught by the breeze, are drawn out and floated upward six, eight, or ten feet in length. Meanwhile the legs are gradually straightening out, thus lifting the body upward as seen in the figure; then they incline backward and toward the post, while the spider shows in every feature the muscular strain of an animal resisting an uplifting force.

There, with a sharp bound, the aëronant is off! The thread has been drawn out so far that its buoyancy is great enough to overcome the specific gravity of the small balloonist, and float her upon the air. It may be a long while before the observer shall find examples that he can study with satisfaction. Some are caught up into the heavens with so complete a rapture that they are at once out of sight. Others scud along under so swift a wind that they cannot be followed. But, patience! Here at last is one who is off before a slow breeze, and is hugging the ground at about the height of a man's head. And there, too, goes a man, following her across the meadow at a sharp run, his head turned away, his eyes fixed on what seems vacancy to yonder ploughmen, who are debating the question of his sanity. Nevertheless, this is what he sees.

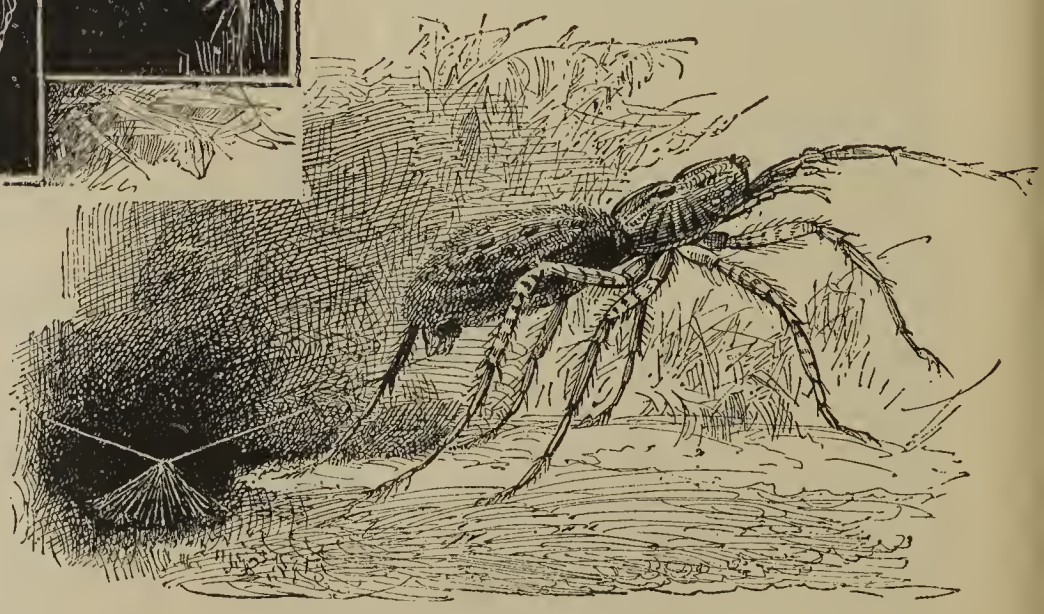

Fig. 2.
"The emitted thread is simply permitted to entangle on some adjacent object."

The spider, as she was raised from the perch, had her head downward. She immediately and swiftly reverses the position, clambers up her floating threads, at the same time throwing out a few filaments, which are cannily twisted into a sort of basket on which the feet can rest. Now the upper legs grasp the lower end of the ray, and the spinnerets being released therefrom are again set to work, and with

amazing rapidity spin out a second and similar ray, which floats up behind her. Thus our aëronaut's balloon is complete, and she sits in the middle of it, as the upper figures show, drifting whither the breeze may carry her. She is not wholly at the mercy of the wind, however; for if she wishes to alight, she can gather the threads into a little white ball under her jaws. As they gradually shorten, the spider, having nothing to buoy her, sinks by her own weight, and the striking against some elevated object, or falling upon the grass, makes her feel at home. In this manner spiders are often carried for long distances; but this, of course, depends upon the condition of the wind and the height of the balloon, or the chances of entangling upon a tree, house, or other object. I was enabled to trace, by specimens, one species of Laterigrade spider (*Sarotes venatorias*) almost entirely around the world in the courses of both the northern and southern trade winds. It had undoubtedly been so distributed by means of this aëronautic habit.

Orb-weaving spiders (see Fig. 2), those which make the geometric snare, utilize this habit in travelling from point to point, and in laying in the foundation lines or frame of their snares. Instead of mounting aloft, as just described, the emitted thread is simply permitted to entangle on some adjacent object—perhaps several inches or several feet distant. The entanglement is at once perceived, the line drawn taut, and over this fairy bridge-work the animal passes from point to point. While observing these habits at night by lantern light, one can at any time cause a thread to entangle upon his hand, or, if he please, upon his face. He will then see the spinner venturing across, creeping nearer, until perceiving the cheat, and liking human society less than man likes her, she cuts the cord in a trice, swings downward through a great arc upon her elastic bridge line, then mounts it hand over hand to the starting-point.

FIG. 3.

"Here is one acrobat hanging in her silken basket, feeling for intruders of whatever sort."

Often the spider will be seen, as in Fig. 3, to drop from a twig or leaf, and hang suspended in mid-air, in a sort of silken basket. Even as I write these words, a brood of spiderlings, hatched in my study for observation, are swinging in their pretty nets, from the borders of the globe of my table lamp, and practising their ballooning, line bridging and spinning habits. They catch on the moving goose-quill, on the table furniture, on my body. Here is one acrobat, precisely as shown at Fig. 3, hanging in her silken basket; she waves her fore pair of feet, as though feeling for intruders of whatever sort; she expands her spinnerets, and gives forth a gossamer line that glints in the gas-light as the breeze which puffs through the open window bears it straight to my forehead. I catch the line upon the feather-end of my quill, lift it toward the window, and now it is off through the night. June is "commencement" month with young spiders, as well as with young misses and men, and millions of them are now afloat, "beginning life."

Most animals must be satisfied with the power to move upon one element. But spiders, like waterfowl, have command of the water as well as the air. Many species of the Lycosids run upon the water with perfect ease, seeking insects that breed near, hover over or fall into ponds and sluggish streams. One of this family is shown at Fig. 4, *Dolomedes sexpunctatus*, the six-buttoned Dolomede, though, by the way, this is a misnomer, for the professor who named the creature, miscounted the white spots along the abdomen which pass for buttons (see figure). When alarmed, this dolomede dives beneath the surface, and there remains, holding on to a water-plant or other object. The innumerable fine hairs that cover the body and limbs retain bubbles of air, which surround the spider like a silver armour (Fig. 5), making a pretty sight. I knew one of these six-buttoned demoiselles to stay thus under water for *forty-two minutes*, breathing the while the shining, bubbled coat-of-mail that encompassed her.

More curiously still, our little spinster friends have the power of sailing, actually sailing, upon the water. There is an English dolomede that makes a leaf-raft and goes buccaneering thereon over the fens of Britain. But some of the American spider fauna have developed a regular yachting propensity. Walking one autumn on the shore of Deal Lake, where it is divided from the ocean by a narrow sand-hill, I amused myself by shaking the clumps of tall grass growing at the water's edge, in order to note the behaviour of the spiders that fell into the lake. A rather odd-looking species of Orb-weaver, with a peculiar jaw and long, narrow, cylindrical body, which have procured for her the formidable name of *Tetragnatha extensa*, had quite usurped these grasses, and numbers were shaken off. They were not a bit disconcerted, although wholly arboreal in habit. Some, being near the shore, spread out the four hind legs, the feet (apparently) being united by quickly spun lines, and using the four front legs as oars, paddled themselves to land. Others spread the eight legs wide apart, as when preparing for aëronautic flight, touched the abdomen to the surface of the water, united the feet by a delicate raft of spinning work, raised the abdomen as shown in the upper figure, and set the spinnerets in play. Several long threads floated upward; they bent before the gentle surface breeze above the spider's body, as yet held rigid and motionless. Now the threads flutter far above the grass tops; sail is next spread, the wind fills it, and away scuds the spider-

"'Dolomedes sexpunctatus.' When alarmed, this dolomede dives beneath the surface, and there remains, holding on to a water-plant."

ship over the lake, the feet making little ripples as they go. In a moment the strange yacht touched the shore, and the master landed. I tried this experiment again and again, placed spiders at the end of long sticks, and launched them as far out as I could reach, and always had the same result. The spider yachtman wove her raft, spread her sails, and came with wonderful swiftness to the shore.

Meanwhile her comrades were "ballooning" from the summits of the tall weeds along the path; and beyond the sand-hills I could see the broad-sailed ships of my human fellows ploughing the Atlantic's waves. It seemed all the more wonderful to me as I glanced down to the lake, and again saw my lowly friends rivalling the great achievements of man by the natural instinctive endowments of the omniscient Creator of both. How narrow the bounds that after all divide our behaviour from that of the humblest creatures of the field!

BIBLE JOTTINGS.

"One Things" of the Bible.

Luke 10. 42.—One thing needful: Conversion.

Mark 10. 21.—One thing lacking: Decision.

John 9. 25.—One thing known: Assurance.

OUR MONTHLY TALK.

A CONTRAST.

BY THE EDITOR.

DEAR FRIENDS,—

There are, as we all know, men *and* men. Some are mean, grovelling minds, looking only on the glare and glitter of things present; others, head and shoulders above their fellows, are breathing the atmosphere of heaven, and thence looking down upon, and estimating at their true value, the baubles and trifles of time. The men may be alike as to their circumstances—their surroundings; but their standpoint is totally different.

Such two men we get presented to us in Abram and Lot. Abram walked with God. Lot went with Abram. Abram had become satisfied with God. Lot knew nothing of this blessed converse, and was ever grasping at worldly advantage and broad acres. The course of Abram's life was not always upwards; he knew the power of the enemy, and had experienced humiliating defeat. But through it all, the vision of the God of glory gleamed with more or less brightness, recalling his wandering steps, and turning him into the narrow path of obedience and self-surrender.

Lot, alas, had gone down, into Egypt, too; like all departures from God, sin left its scar. When Abram came back, Lot came back too. But Egypt had made a fatal impress upon his soul; and when a quarrel amongst the herdmen compelled the selection of new pastures, Lot's avaricious eye sought out the well-watered plains most "like the land of Egypt." Yes, "like the land of Egypt," albeit the men who lived there were "sinners before the Lord exceedingly." The devil easily met that difficulty. "Possibly he might influence them for good; or if not, no necessity to have much to do with them." It was the first step on a "down-grade" line into Sodom, from whose awful doom this "just man" was hardly saved. The Lord preserve us, beloved friends, from this fatal delusion—that we should mix with the worldly in worldly scenes, in order to influence and draw them towards God. No, no; our very presence in such surroundings seals our lips, and contradicts our testimony. Many a year must Lot have rued that fatal choice—a choice not dictated by any concern for the glory of God, but for his own self-aggrandisement alone.

Meanwhile, where was the man of faith—Abram, the friend of God? Ah! he could afford to retain his less fertile plains—he had God; he was satisfied with God; he could trust himself with God. Like Moses, he counted the portion he had in Jehovah greater riches than all the treasures of Egypt.

These two are typical men. They represent Christians *and* Christians. Which shall we choose to be—the Abrams or the Lots? Shall we sacrifice the present to secure the future? or shall we grasp at the present and forfeit the hereafter? Maybe Abram was considered singular—peculiar; possibly narrow in his notions — straitlaced. So may you be, but what matter? Whilst Lot was rushing in terror from the doomed city, Abram was resting securely in his tent upon the plains of Mamre.

And what shall it signify to you or to me, that *we* have been counted fools for Christ's sake, in the day that He owns and acknowledges us before the assembled hosts of heaven? Let us look at everything here in the light of that coming glory. Let us weigh every consideration in the balances of the sanctuary, and, for the honour of our Lord and Master, let us tread very closely in His steps, keeping as far as possible apart from all that would compromise His name.

I have spoken of the life of a Christian—I have shown that two Christians may be living on quite a different plane or level. Do not let me be misunderstood.

It is quite fashionable now to build from the top; to exhort men and women to surrender and consecration; to preach magnanimity and dignity of character, when all the while they have never submitted themselves to the cross of Christ—have never been awakened by the Holy Ghost to the deep, overwhelming consciousness of guilt and need, and hence have never fled for refuge to the cleansing blood.

How manifold are the enemy's devices for shunting souls off the main line to heaven! This, perhaps, is one of his most fatal, because most disguised plots. To preach consecration, philanthropy, morality,—surely this must be right. A handsome tower, an elegant spire, are valuable adornments. Yes, surely! But what if the superstructure rests upon only a foundation of *sand?* And to attempt to build the moral or spiritual superstructure upon any other foundation than the atoning, substitutionary work of the Lord Jesus Christ, is solemnly fatal. Terrible indeed will be the responsibility of allowing souls thus to build upon "another foundation."

This is the Cain offering — fruits and flowers, the product of the natural soil, with no recognition of a sacrifice; and by whomsoever offered—the most amiable, the most benevolent or philanthropic—it must be rejected by God. The *only* path into the kingdom lies by the way of the Cross; and he that "climbeth up some OTHER way, the same is a thief and a robber." Let us not, then, speak of *consecration*, except as the fruit and sequence of SALVATION—first consciously needed, and then believingly and rejoicingly claimed by the new-born soul.

If there should be some reading these lines, who have hitherto believed that they could be accepted by God in the coming day of reckoning, on the ground of excellence of character, propriety of life, self-devotion to the interests of society, may you be led to see that over every child of Adam—however outwardly fair—God has written alike one verdict, "GUILTY"—"all the world GUILTY before God." And before one word or act of your life can be acceptable with God, that question of original and actual guilt must be settled, in perfect consistency with the claims of God's unerring and inflexible justice. This awful problem is solved alone by the Cross of Christ. There, and thereby alone, God can be "*just* and the *Justifier* of him that believeth in Jesus."

"*Consummatum est*" — it *is* finished. Yes! "finished" for each one of us who is willing to accept. That many may thus enter into rest, is the earnest desire of

Your sincere friend,

M. Jane Menzies.

(*Mrs. Stephen Menzies.*)

ECLIPSES IN THE CELESTIAL EMPIRE.

By Andrew T. Sibbald.

THE great sage and philosopher, Confucius, recorded thirty-six eclipses of the sun, most of which have been verified by European astronomers. This fact, however, does not prove that the Chinese understood the science of astronomy in those days, but merely that they were careful observers of celestial phenomena; and it is also useful as proving the authenticity of their historical annals.

A magazine, printed in Chinese, is published every week at Shanghai, under the title of "Wan Kwoh Kung Pau" (*Chinese Globe Magazine*), in which such subjects as the comet of the summer of 1874, and the transit of Venus, were explained in a popular manner. Notwithstanding these efforts to instruct this self-sufficient people, the vast majority of the enormous population of the empire still remain intensely ignorant in regard to scientific and kindred subjects, and cling affectionately to their old-world traditions and superstitious observances. During the year 1874, their equanimity was constantly disturbed by the occurrence of an unusual number of celestial phenomena; and under these circumstances it will, perhaps, not be uninteresting to mention some of the strange customs and ideas of the Chinese in regard to eclipses, comets, etc.

"Throughout Chinese history," says an old writer on China, "the phenomena of nature, such as an eclipse, the appearance of a comet, a vivid meteor, an earthquake, as well as pestilences, excessive rains, drought, locusts, and famine, have been regarded as signifying the displeasure of heaven, and have induced a real or feigned desire to repent or reform. General pardons have been granted, measures taken to alleviate the distresses of the poor, and imperial proclamations issued, inviting persons to speak pointedly and freely their opinions of what they deem amiss in the Sovereign's conduct."

The Imperial Almanack, published in the first instance by the Board of Rites, at Pekin, and afterwards by the various provincial authorities, does not, so far as we are aware, mention beforehand the coming eclipses of the sun and moon; but the imperial astronomers, some time previous to their occurrence, notify the Board of the very hour when they may be expected to be visible, and this information is at once transmitted, through the high provincial officers, to all the subordinate officials throughout the empire, whose duty it is to "save the sun and the moon" from being devoured by some celestial monster. For the Chinese nation has no definite notion of the actual cause of eclipses, as may be inferred from the terms by which they denote them, viz., "*jih-shih*" and "*yüeh-shih*," literally meaning an eating of the sun and moon respectively. The agent in the matter is usually thought to be the omnivorous dragon; but some believe that there is a dog chained up in the sky, who, when he can get loose, sets off to eat the moon.

These absurdities are bad enough, but a well-educated Malay writer remarks that "half of the Siamese say that the sun is being married to the moon; but the latter dislikes the junction, and so runs away, and the sun after her, and, as he snatches her, it becomes dark."

The Chinese view an eclipse with wonder, mingled, to a great extent, with fear and terror, and most of them take some steps to aid the sun or moon, as the case may be, in the hour of need, the principal agents employed being, of course, gongs and gunpowder, without which no ceremonial observance of any kind is complete. The officials at their several *yamêns* (official residences), go through a regular set ceremonial on these occasions. They call in the aid of the Taoist priests, and an incense-vase; and a pair of large candlesticks, containing red candles for luck, are placed on a table in the *hua-ting*, or audience-hall, but sometimes in the court in front of it. When the eclipse is beginning, the red candles are lighted, and the official enters, in his robe of state.

He takes some lighted incense-sticks in both hands, and bows low in front of a table, waving the incense about, according to custom, before placing it in the vase. He next proceeds to perform the ceremony of "*ko-tou*" (*lit.* knock-head), kneeling down thrice, and knocking his head nine times on the ground. He then gets up, and huge gongs and drums are beaten to frighten the devouring monster away; and, finally, the priests march round the table in solemn procession, repeating certain formulas in a sing-song tone, until the termination of the eclipse.

The officials are, of course, always supposed to be successful in rescuing the sun and moon from their perilous position, and the ignorant masses in China fully believe that the happy result is brought about by the ceremonies just described. They have seen the orb more or less obscured, or, as they have it, swallowed up by some monstrous beast, and after a time returning to its former condition, and they are quite satisfied that the deliverance has been effected by their own exertions, and those of the officials. On these momentous occasions, some of the people beat in their own houses a species of winnowing instrument, made of bamboo splints, in the hope that the din they raise may aid in averting the dire calamity from the sun or moon; and on the occurrence of an eclipse of the latter, sailors on board native junks always beat gongs with a very great heartiness and goodwill; and the noise they make is sufficient to drive any one but a Chinaman distracted.

We do not for a moment affect to suppose that Chinese officials, generally, actually believe in these absurd customs and mummeries, though they are obliged to observe them in obedience to behests of their imperial master, and in deference to the superstitious feelings of the populace; for fully two centuries ago the Roman Catholic priests, who were then in high favour at the Court of Pekin, taught them the main principles of astronomy, how to foretell eclipses, etc.; and many well-educated Chinese are acquainted, through the medium of translations, with some of our best works on this and cognate subjects.

In times gone by, the errors and ignorance of the Chinese in regard to eclipses, have sometimes been made the pretext for offering insane adulation to the Emperor. It is on record that in the twelfth moon of the seventh year of Chên Tsung, of the Sung dynasty (about A.D. 996), an eclipse of the sun, which the astronomers had predicted, did not take place, and that on this occasion the ministers congratulated his Majesty, as if for his sake so unlucky an omen had been dispensed with. Again, Dr. S. Wells Williams, in his "Middle Kingdom," mentions that some clouds having prevented an eclipse from being seen, the courtiers joyfully repaired to the Emperor to felicitate him, because the heavens, touched by his virtues, had spared him the pain of witnessing the eating of the sun.

If the Chinese view an eclipse with fear, still more are they alarmed at the advent of a comet. "According to their shape and appearance," Sir John Davis tells us, in "The Chinese," "comets are called by the Chinese, broom stars, hairy stars, and tail stars, and they are said to point the tail towards the region of whose ruin they are the presage. . . . The Chinese affect to draw presages from the appearance of comets, and here they bring into play their foolish theory of the five colours. If the appearance be red, particular consequences are to follow; if dark, they expect the overthrow of regular government, and the success of rebellions, etc."

The comet of the summer of 1874 caused considerable alarm amongst the ignorant, and was by them, in accordance with their superstitious beliefs, connected with the invasion of the island of Formosa by the Japanese. But during the reign of Hsi Tsung, of the Tung dynasty (A.D. 865 to 879), a dreadful phenomenon appeared in the sky to bewilder and terrify the superstitious Celestials, for two falling stars or meteors shot across the heavens with a motion repeatedly intersecting each other's track, the appearance of which was similar to threads interwoven; they appeared of the size of a large bowl, and, adds the native historian, whose account of the occurrence we quote, "the circumstance was regarded as very extraordinary."

All these little peculiarities and eccentricities of the Chinese, at which we have thus briefly glanced, will doubtless call up a smile to the face of an English reader in this latter half of the nineteenth century, but they are not alone in their superstitious absurdities, as witness the following anecdote, which appeared in the columns of a London Paper in July, 1873: "During a storm which lately raged around that place (Clermont, in France), the lightning struck the steeple of a chapel in a neighbouring commune, just as four persons were assembled therein to ring the bells, in order to drive away the terrible visitor."

FELIX BRAND; OR, DO GOOD THINGS PAY?

A TRUE STORY. BY MAX GERARD.

HILLMORE is a pretty place when once you are out of the neighbourhood of its few shops, and off the long, dusty London road. But just about its slow market-place, the traveller coming in from the station is struck with the vacant air that seems to rest upon everything. The market-hall is a poor, tumble-down structure, whose chief ornament is the frequent display upon its stuccoed pillars of huge posters containing announcements full of interest to the local sight-seer; but particularly dreary-looking to any one who may resort to this offshoot of a borough for something more than mere man-made pleasures.

But once off the high road, and out of sight of its very mixed and ordinary architecture, the prospect of the country lover is grand! There are breath-spending hills, and fertile dales, and lanes so full of verdure and song, as to seem like a perpetual psalm of joyous thanksgiving to the Great Creator.

And the woods! they are numberless and beautiful, and they abound in all the garniture of Spring,—primroses, blue-bells, and the gentle anemone—so that they echo with the gladness of children's voices, and the song of glad, free spirits, who go there to see the wonders wrought by the hand of God.

The poor, and the sad, and the wretched sometimes go there too. You may often see a dilapidated, footsore, weary-looking creature emerging from the shade of the woods in the early sun-lit morning, with a basket slung over his shoulder, and he will offer you a few roots of primrose or violet, so that he may earn twopence for his breakfast, poor fellow!

It was some hours past breakfast time the other day when Mary Garton, passing the arid spot on which the market-hall stands, saw, crouching in the shadow of a little chapel-wall, one of these same poor creatures; and something within her at sight of the forlorn figure, and the basket of freshly-gathered primroses, impelled her to speak to this man. Something also in *his* bearing attracted her: he did not beg, but with mute eloquence and quickly-drawn breath, appealed to all who might gaze upon his refined, but wasted features.

"Are you quite right to sit there?" asked Mary; "the wind is very bitter, and you appear to be ill."

The man lifted his eyes to her face.

"I *am* ill," he said; "I am dying. I could not eat, if I had the money to buy food, and I don't want to live."

"But, remember, you are not your own," reminded Mary; "if there is a chance of life for you, you ought not to throw it away. Do you know that Jesus loves you—died for you?"

"Yes, I know it," he answered wearily; "but I have known it only six months as I know it now."

Mary Garton felt that the voice and speech were those of a gentleman, while the tattered garments belonged to one in want of the necessaries of life, one who was needing what would soon be of no use to him—care and nursing. After seeing him carefully lodged and cared for, she learnt from his lips the story of his sad and eventful life.

"I was born," he said, "at Broadgate, where my father had a large house and grounds, and where my mother taught me to whisper the name of Jesus. But she died, and then I was left to the care of a tutor, and to the carelessness of servants, for my father was much from home.

"As I look back now over the whole course of my not very long life, I can see that my greatest temptation was the flattering or persuasion of companions; while my greatest moral lack was decision of character. A few persuasive words under the guise of friendship, and I was ready to be led hither and thither. One day my father said to me,—

"'Felix' (what a contradiction may sometimes exist in a name!) 'I hope you never yield to any importunity from your friends in the matter of drinking, smoking, or gambling; and that whatever company you may keep, bad language is never heard on your lips. Remember your mother's horror of every kind of impurity.'

"My father was a good, moral man, as the respectable world goes, but he knew nothing of salvation by Jesus Christ, or he would never have spoken in this way to *me;* for I was utterly unprincipled where the gratification of self was concerned, and so became the slave of my own sinful appetites. If my father had said to me, then, 'Remember, my son, the eye of your Maker and Saviour is upon you, and He bids you follow Him,' it is just possible that I might have been tempted to serve Him, for my heart was plastic and my nature emotional, and a strong influence for good might have saved me from myself.

"But one day, my tutor and I had been out fishing, and at the end of our sport (during which he had made use of some expressions which I felt could belong only to the very depraved) he selected a roadside hostelry as the best place for our refreshment. Strong drink in two forms was placed upon the table, and when he pushed first one glass, and then another before me, with some remark on the pleasure of being alone, in congenial company, and on the manliness of 'the social glass,' I felt elated, though all the time a poor, miserable little bit of conscience was trying to say: 'You know it is not right; what will your father say to this? It is your first step to ruin.' But I hated conscience, and to drown it, I laughed and talked as my companion did, and before two hours were passed, I—a boy of sixteen—was lying on an inn bench, helpless and insensible through strong drink!

"That was the beginning of the end,—not in reference to drinking habits only, but with regard to my moral character. After that day I never seemed to have strength of mind to say 'No' to any one. If I struggled on Saturday evening with myself, and resolved to spend the next day in honouring God in His house, a godless companion, meeting me on the road to church, would have power to turn me at once from my good resolve. If one of my set offered me a book which I knew to be bad, all my scruples fled before the arguments of the tempter, and I would read it to please him. And so with other things, step by step, I was drifted into folly and sin, and grew careless as to where it would lead.

"My father having died, I found myself, at the age of twenty-two, at the head of a large mercantile business, which, being particularly irksome to me, I was glad to leave in the hands of the senior clerk—a man three times my age. One day he came to me in a state of agitation.

"'Sir,' he said, 'matters look very black. You must at once sell your shares in such and such a concern, for if we do not meet certain payments on Friday, we are ruined.'

"'Very well,' I replied, 'you know best; sell out at once.'

"But when I came to investigate the matter, I found things worse than I had anticipated. Instead of being in my office, I had made a business of attending the meetings of wily speculators, whose plausible arguments had led me to risk, and ultimately to lose, heavy sums of money; and to complete my chagrin and ruin, my confidential clerk fled the country, taking with him the proceeds of the shares he had withdrawn at my request!"

"But," asked Mary Garton, "had you no true friends—no wife to urge you to nobler and better things?"

"Yes; I had married, a few months previous to this, a daughter of one of my older chums. She was five years my senior, and might have made me a good wife, had not her love of dress blinded her to every other interest.

"'Felix,' she would say to me, 'never mind those silly little debts just now; give me ten pounds for such and such a thing, or I shall think you very mean.'

"This was generally more than I could bear, and so I would give the sum asked. Her father came to me.

"'Felix, my son,' he began, 'I never knew such a splendid fellow as you are; there is nothing in which I do not trust you—I come to you in all my difficulties; you are as good as the Bank of England to me.' (I thought I was better than that, for he had not a penny there, and never would have). 'Here, just put your name to that—a mere form, and involving no risk—you are my son, you know.'

"I looked at the slip of paper, it seemed to be all right, and could not I trust my father-in-law? So I signed it, and thought no more about it, until a month later I found myself arrested on a complication of charges, the chief being that when I was, so to speak, penniless, and my business in legal hands, I had further involved myself

and robbed others by signing an order for some thousands of pounds' worth of goods! So much for my father-in-law!

"For this I suffered a year's imprisonment, and now comes that part of my story which belongs to my present state. My business utterly gone, without a friend,—my wife and her father having renounced me,—and without money, mine was indeed a pitiable position. I managed to get into the graces of one of my former acquaintances so far as to get him to entrust me with the sale of a cheap tea, my only remuneration being the commission I made upon every pound sold. I walked miles upon miles of road, addressed hundreds of persons, raised enough metal, in the form of knockers, to build an ironclad; but all to no purpose. At the end of the first week, I had in my pocket the sum of two and fourpence; but I determined that I would persevere, and found myself richer by one penny at the end of the second week than I was the week before. This did not look flourishing, but I still went on, until I was compelled, through absolute want of shoe-leather and food, to give up my tea agency.

"Then I applied for clerkships innumerable, but was unsuccessful in all cases, until, an election going on in the town where I was known, I was employed in one of the polling booths as entering clerk, and felt that I was rich when, the election over, I found myself the possessor of thirty shillings!

"I need not go through all the many vicissitudes of fortune which I suffered; it is enough to say that my early habits of insincerity, lack of decision, drinking, and indolence, had left their mark upon me, and I was totally unfitted for the battle of life. I desired reform, but it did not seem possible. The moment I made a good resolve, something happened, either from without or within, which effectually hindered its performance.

"In this way I went on from year to year, until I was content to sleep in the fields, or under hedges, and to beg the little food I got from those who were charitably enough disposed to allow me to hold their horse-bridles while they entered a house of refreshment, or to carry a portmanteau to the station for them, or to run on inconsiderable messages from one person to another, in places where I was known and pitied.

"One day, Farmer Judson, the principal man in a hamlet branching west from Hillmore, and called Sweetham, gave me an old suit of his own, a pair of his boots, and a hat which was much too large for me; and in return for these things I was to carry to Hillmore Junction two heavy travelling bags, filled with samples of seeds, and which had been left with the farmer by a traveller who was to receive them from me at the Junction.

"I got along fairly well for the first two miles, but soon after that, felt that fatigue, hunger, and dizziness, would not allow me to proceed much farther.

"I do not know when I came to this conclusion, but memory became a blank, until I found that I was lying on the Hillmore road, the sun scorching my face, and a man unfastening my vest, and feeling about my heart.

"'Are you better?' he inquired, and I knew by his voice that he was kind and good, and a gentleman.

"'I think I am, but I am very miserable,' I replied.

"'Do you think that you could walk to my vehicle if I help you? You want refreshment and medical advice.'

"Somehow, I managed by my new friend's help to get to the dog-cart, and we were soon speeding along the road in the direction of Hillmore.

"I think I must have been shedding tears, for my companion looked at me two or three times, and then said,—

"'I believe I've got the very thing you want—something to lighten your conscience and to gladden your heart. Did it ever strike you, in any of your troubles, that GOD knows?'

"Now, something in the way in which the words were said—not merely the words themselves (for I must have known them before, in a mechanical, careless sort of way), but the ring of earnestness and conviction they carried struck home to my heart, and I seemed to feel a load lifted, as I replied,—

"'It *has* struck me, but not in *that* way. Do you think *He cares?*—because that makes all the difference.'

"'Look here,' he said, reading out of his pocket-Bible, 'and judge for yourself,—"For God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should *not perish*, but have everlasting life." Will that satisfy you?'

"Oh, the miserable wretch I was at that moment! I covered my face with my hands, for I saw it all. Did not it say, 'Whosoever *believeth*'? and I had neither cared nor believed. I had often taken His name in vain, not in intentional blasphemy, but in the many senseless and profane expressions that worldly men use in surprise or emergency; but that was all. So I answered,—

"'Yes, *His* part satisfies me—but *mine!* O God, forgive me!'

"'Amen!' was the fervent response.

"We drove up to a cottage hospital, as I afterwards found it to be, and as my companion seemed to be well known there, I got every and immediate attention.

"'Now about those bags,' said he; 'if you tell me where they are to go, I will see them put into the proper hands, and you need not trouble yourself any more about them.'

"I was very grateful for this; it all seemed too good to last, and I could hardly believe that any one was taking an interest in me, with no other reward than the love of doing so, and the joy that rightly-exercised love always brings.

"He—I found his name was John Markley, and he called himself 'a servant in the ministry of the gospel,'—came often to see me, and I hailed his visits with unwonted pleasure. He was such a manly, decided fellow—there was no cant or rant about him, and when he said *yes* or *no*, you instinctively knew that he had reasoned out and weighed the conditions of such an answer, until there was not a shred left, in his own mind, of undue balance, or partiality either way; it was *the truth*, whatever it cost him to say it.

"'I am afraid,' he said rather sadly, I thought, 'that they are not going to send you out of here cured, Brand. That cough of yours means a time of wasting sickness, I fear.'

"'Don't say you *fear!*' I begged him; 'thanks be unto God and yourself, I am ready to go now, and more than willing. I should like you to see the last of me.'

"'You will not go just yet, my dear fellow. But how rejoiced I am at what you tell me! But I thought that it was so, and only waited to hear it from your lips.'

"'Yes, I'm forgiven, but I shall never have any joy. I don't deserve it; "my sins are ever before me," and it must be so. If I could live a year of my life over again, so that I could serve God before men, I might feel differently.'

"'Yes, you might,' he quietly said; 'but remember that your Saviour does not ask you for *feeling*, but *faith*.'

"After a time I was sent to the Infirmary, and here I found two or three men like myself, who had 'wasted their substance in riotous living,' and were reaping the corruption which is promised to those who sow to the flesh. Oh, the bitterness of soul that filled me as I contemplated their existences and mine! How often I have cried to God to send into the haunts of misery and sin, where good mothers' sons are sowing to the whirlwind of lust and death, and blotting out with the devices of hell the manhood that God has put upon them, some who shall rend them from the powers of darkness!

"But, praise God, there *are* beautiful lives upon earth, and John Markley's was one of them. A month ago I left the Infirmary at my own wish. I was resolved to earn a few shillings if I could, for I wanted to buy him something in memory of what he had done for and been to me. I could not do much, I knew, my breath was so bad; but I felt that I could post a few bills, so I called on the regular bill-sticker of Hillmore—quite a swell in his way, and he told me that I had just come in the nick of time. He had about a hundred small bills that he wanted posted on various boardings, a list of which he gave me, and he would stick the illustrated posters himself. I was to get two shillings for the job, and accepted at once. But when I saw that the announcements advertised a play, whose hero was a gambler, spendthrift, and libertine, I refused to do the work; I did not seem to have the heart to touch anything of the kind again.

"'Oh, you're pi, are you?' exclaimed my employer. (I had often used the expression myself, and knew he meant *pious*). 'Well, here's something in your line, but I can give you only a shilling instead of two for the same amount of work. *Good things never pay.*'

"'I've tried the bad, and they don't pay—what *does?*' I asked. 'I'd try the good if I had the time, anyway.'

"'Yes, poor chap, you look as if you'd only time to die,' and, giving me the shilling and the bills, he was off. As I began to stick one up, I saw the words,—

'Gospel preaching by John Markley.'

That was enough; whatever it cost me, those bills should soon be up, and I would go to the preaching, which was for two nights hence.

"I went, carrying with me a little note-book I had bought with the shilling, and preparing myself for a treat I had never enjoyed—to hear John Markley preach, and to sit with Christians as one of themselves.

"I was there in good time; the man was lighting the gas and putting out the hymn-books, and as he gave one to me he said,—

"'Did ye know as Master Markley ain't goin' to preach to-night? He's took wi' the fever.'

"My head began to swim round; I staggered to my feet and made for the door.

It seemed there was nothing left, for I firmly believed that John Markley would die.

"And he did. Ten days later he was laid in a quiet corner of Redgate Churchyard, 'In sure and certain hope of a glorious resurrection' (though they did not read those words over him), and I felt that my only earthly friend had gone.

"A week ago I was sitting near his grave when the Vicar came up—he is, as you perhaps know, ma'am, a jolly-looking man, who preaches a sermon of ten minutes' length in the morning, but gives his people —God pity them!—nothing in the evening but what is called 'a beautiful *service*.'

"He said, 'What are you doing here, my man—studying the tombstones?'

"'No, I am looking at John Markley's grave. He brought the kingdom of heaven down to me, and changed my life.'

"'Oh, one of the peculiar people who talk about being *converted*, I suppose. Sorry for you, my man. Good-day.'

"When you found me outside the wall of the place where John Markley often preached, I had with me a basket of primroses I had gathered to place on his grave, where I hoped to die. But it was three miles further on, and I knew I should never reach it alive. I hope that some one will be good enough to put a few of my flowers where he sleeps, just a last token from Felix Brand. If I should become unconscious before the end comes, you will know, dear lady, that I am as sure of forgiveness, of God's love, of everlasting life, as I am of the awfulness of sin, and the truth of the words—'*Whatsoever a man soweth, that shall he also reap.*'"

[NOTE BY MARY GARTON.]

I must add just a few words to the story of Felix Brand, to say that a gentler, more patient, suffering creature it has never been my lot to meet.

I visited him very often before he passed away—just five days after he was found where he had lain down to die. He was very grateful, but very sad; and I plainly saw that though the pardoning mercy of the God of love is known and fully realised, the pains and scars of sin become a bitter sorrow to such as Felix Brand, who spend their strength in the service of sin, and give God the fag end of a wasted life.

He had one gleam of joy just before he passed hence. Trying to lift his wasted hand, he pointed upwards. "Blessed Jesus! my Joy—'who loved me, and gave *Himself* for me'—I thank Thee!" were his last words.

We buried him beside John Markley, and planted primroses on the spot in memory of the blessing and the blessed, "until He come."

ACROSTIC.

I KNOW a ruler, crowned with wond'rous splendour
(He is my first), and throned in highest place;
We follow him enthralled, and faithful render
Attendance, though he hide from us his face.
I know a stream that wanders through the heather,
And in its course my second cannot be.
I know full many things, not linked together,
And what they are my whole will tell to thee.

1. A thing to sever.
2. What's over never.
3. Surprising ever.

Answer will be given in our Number for September 8.

COMPETITION NOTES.

OUR readers may look forward to some very novel Competitions shortly. Amongst them will be a Prize Puzzle Competition. This is sure to be popular.

Some of our readers will thank us for reminding them of the Transposition Prize Competition announced last week. Not the least benefit which Competitors will derive, will arise from the fact that the pieces selected will to some extent thus become fixed in the memory.

Three or four weeks still remain before the Christian Evidence Competition closes. Much may be accomplished in this time, and Competitors who feel that they have yet a good deal to do, must not be discouraged. The benefits arising from this Competition will be permanent.

WRINKLES FOR AMATEUR PHOTOGRAPHERS.

A SIMPLE CONTRIVANCE FOR PRINT WASHING.

THE amateur who has only the ordinary basin, with running water, at his disposal, will find the following a very simple and effective method for washing prints:—

Fit a cork, through which a small hole has been bored, to lower outlet of the basin. Get four or five feet of ordinary rubber tubing, that will fit snugly over the end of the faucet, or if the faucet be a large one, fit a cork to inside of it, and run one end of the tubing through it. In the other end put a plug of wood, with a hole through it. One end of tubing being attached to faucet, lead it down one side of basin, and coil the remainder in the bottom, the nozzle end well down. Cut three sticks to reach across inside of basin, between three and four inches from the bottom. Flatten at the centre, and fasten all together there with a small screw, so that they may be opened out like the spokes of a wheel, and round them off from the centres to the ends to the size of a pencil. Weight slightly, to keep them down in place. Start the water moderately, and you will soon have a basin full, flowing continuously in a circle, the rapidity being easily regulated at the faucet. Have two outlets for the dissolving hypo. Drop prints in one by one, face downwards, and if not too many, they will float around sufficiently to allow the water free access to all parts.

If the basin is crowded with a large batch, they should be turned over by hand occasionally to prevent sticking together, or, what is better, wash some first, the others after. After an hour's washing in this way, and the use of an hypo-eliminating bath for a few minutes, and then ten or fifteen minutes' further washing, the hypo will be well out of the prints, and they will not show any traces of it by the iodide of starch test. This accomplishes in ninety minutes what formerly took all night to do as thoroughly, saving water, the loss of prints by blistering, and the trouble of having to dry them in the morning, when time is so precious to many. The outlay need not exceed the small sum for the tubing, and the traps, when once properly fitted, are easily folded for being put away, and are always ready for future use.

ABOUT OURSELVES.

WITH this Number we begin our *Tenth* Monthly Part, and soon Vol. I. will be completed. Though determined to succeed, it was with just a *little* trepidation, that we were making our arrangements a year ago; and for the undoubted success which has by God's blessing attended the Paper, we feel we have to thank many of our readers who have helped and are helping us greatly, by making it more and more widely known.

At no small cost we have for some time been experimenting in, and aiming at, still further improvements in the production of our Paper. To our Artists and Engravers we owe much praise, but we hope our readers will have viewed with no small satisfaction the perfection at which our Papermaker and Printers have arrived. As our name, —"A. 1."—, has of necessity to stand at the top of the list, we keep our eye upon it and its position.

"I wonder if my friend has seen —'A. 1.'—?" If not said aloud, how often thought! Don't forget that your friend's address, sent on a post card to our office, 62, Ludgate Hill, E.C., will ensure a Specimen Copy being sent off immediately.

CRISP CORRESPONDENCE.

Tare.—The official regulation in reference to Post Cards is that when printed on the back, but unposted, *any* communication may be written over or across the printing, but nothing may be attached, save a stamp for late fee. "Those who live in glass houses should not throw stones" is our reply to "The Cobbler," etc. (Swindon), who, contrary to postal regulations, sent us a communication of the nature of a letter, and affixed only one half-penny stamp. Nevertheless we thank him for his letter.

Straw Hat.—We regret that we are unable to give information of the kind you ask, and would suggest that you apply to a medical man.

"Contrary Movements."—A correspondent writes in reference to the paragraph on this subject in our issue of May 9th, "The first two are a little difficult, but by no means impossible, and very easily acquired; the last not very difficult. It would be interesting to know the experience of others of your readers."

Adolphus.—We cannot say. You might be able to ascertain from the Universal Information Office, Southampton Street, Bloomsbury, London, who would make a charge of 1s., and a penny for postage of reply.

Violet Rivers.—Thank you for your interest in our Paper. We have with pleasure sent Specimen Copies, as requested.

Juvenis. — In Romans 7. the Apostle is making a kind of spiritual dissection of himself; he is undoubtedly speaking as Paul the Christian, for he says: "I delight in the law of God." Only a believer could say this, the natural man being a hater of God and of His law. This is further confirmed by the words of the Apostle, *after* he has pointed to Jesus Christ as his Deliverer. After that he says: "So then with the mind I myself serve the law of God, but with the flesh the law of sin." Then follows on the argument in the 8th chapter: "There is therefore no condemnation. Christ Jesus hath made ME free from the law of sin and death." The "ME" must thus refer to the "I myself," and this accords with the further development of the argument (ver. 9), "Ye are not in the flesh." (See also Col. 2. 11. R.V.) We would add, however, that mere intellectual grasp of the doctrine is a *small* part of the blessing, the great thing is to rise up into the power of it by the Holy Ghost. Many people, as in the Salvation Army, almost utterly ignorant of the doctrines, are able to do this, and become spiritually powerful. The mere *understanding* of it conveys NOTHING.

M. H.—The few thoughts you have penned are neither original nor vigorous enough for our columns. You would need to study composition, but above all your Bible, more closely, in order to more thorough accuracy of Scriptural statement.

L. G., A Constant Reader.—We regret that your verses are not suited to our columns. We would take this opportunity of reminding correspondents that the heavy pressure upon time and space quite forbid our giving criticisms of verses. Many of our correspondents also forget that we must strictly adhere to our rule not to reply personally, except an addressed and stamped envelope be enclosed. Neither can we reply through these columns to any questions that are merely idle or unprofitable, and not of general interest.

WHAT WE GET FROM COAL-TAR.

COAL-TAR is an exceedingly complex material, being a mixture of a great number of different substances. We are now going to see to what purposes tar can be applied, besides painting our sheds and wooden fences; and we shall find that this black, sticky, and strong-smelling substance is a compound capable of yielding a very surprising number of interesting products.

The tar, as it comes from the gas-works, is placed in large tanks, where it is allowed to stand for awhile, to enable any ammoniacal liquor which may be mingled with it to rise to the surface. This is drawn off to be treated chemically for the manufacture of ammonia and its salts.

The tar is then pumped from the bottom of the tanks into large stills, and it is subjected to a moderate amount of heat. At first, water containing sulphide of ammonium, and some of the more volatile products, passes over into the receiver; these first products are set aside as "Ammoniacal liquor and first light oils." After these have ceased to flow, the heat is increased, and various heavier products, called "medium oils," pass over, and are collected into another receiver; finally, what are called heavy oils distil over, and nothing but pitch remains behind in the still.

The light oils are next distilled at a heat of about 200° *Fahrenheit*, or twelve degrees below the boiling point of water. At this temperature, a very light spirit, known as benzole or benzine, is obtained. This is not pure benzole—to obtain which, a delicate form of rectification is necessary. The commercial benzole is first well agitated with concentrated sulphuric acid, which causes it to assume a dark-brown colour. It is then distilled, and allowed to crystallize at a low temperature, and then distilled again, by which process it becomes nearly pure.

It is a painful fact that Mr. C. B. Mansfield, the discoverer of benzole in coal-tar, lost his life by being severely burned while making experiments with this useful but dangerous substance.

Benzole was introduced previously, by Faraday, in 1825, in liquid, produced by strongly compressing gas obtained from oil. He called it *bicarburet of hydrogen*; but afterwards another chemist having procured the same body by distilling benzoic acid with lime, termed it *benzine*. It is exceedingly inflammable, and the vapour, when mixed with air, is also highly explosive; it therefore must be used with great caution. It is a colourless liquid, and smells like a fresh-cut white turnip. Benzole or benzine is a powerful solvent of fats and resins. It is sold under various names, as benzoline and benzine collas, and is used for removing grease spots, cleaning gloves, etc. Its formula is $C_6 H_6$, which means that one molecule of it is made up of six parts of carbon and six parts of hydrogen.

After the benzole is distilled over from the "first light oils," the remainder is treated with strong sulphuric acid, which chars the chief impurities; these deposit in a heavy black acid mass, like tar.

The clear oil is then separated, and treated with caustic soda, after which it is again distilled; by this process a lighter oil is obtained, which is utilised for burning in the lamps used by costermongers, and for dissolving India-rubber. This is known as naphtha. As it runs from the still it is of a reddish-yellow colour, has a strong odour, and is lighter than water. It is then purified by repeated distillation.

When these lighter volatile oils have been distilled over, and the heat of the still is again raised, the last product which comes off consists of a heavy oil, from which, on cooling, a peculiar crystalline substance is obtained, called "naphthaline." This substance separates from the body of the oil, and is afterwards collected, drained from the oil, and redistilled several times; when it ultimately becomes beautifully white and crystalline. It has a powerful odour and is highly inflammable, burning with a red flame and abundance of smoke.

When cannel or boghead coal is distilled at a much lower temperature than is required for making gas for lighting purposes, very little uncondensible gas is formed; the volatile matters passing over chiefly in vapour, which condenses into the liquid form. This "crude oil," which is of a dark-brown colour, is next distilled to dryness in iron retorts. It is then agitated with strong oil of vitriol, and distilled again, when "paraffin naphtha" at first comes over, and when this ceases to be produced, the next article obtained is the well-known and valuable oil known as "Young's Paraffin oil."

The next material which is obtained after all the paraffin oil has passed over is a heavier liquid called "machinery oil," from its being used in lubricating machinery. When this oil and the last products of the distillation are subjected to a very low temperature, a white, solid, semi-transparent substance is obtained, called paraffin, much used for making candles. Solid paraffin is also found in coal tar, but not in any quantity. If we look upon one of those beautifully delicate paraffin candles, we may well wonder that such a substance can be obtained from coal-tar.

Liebig once expressed a wish that coal-gas might be obtained in a solid form:—

"It would certainly be esteemed one of the greatest discoveries of the age, if any one could succeed in condensing coal-gas into a white, dry, odourless substance, portable, and capable of being placed in a candlestick or lamp."

Now it is curious that paraffin has nearly the same composition as good coal-gas; it burns with a bright and smokeless flame, and the candles formed of it burn like those made of the finest wax. When the fused paraffin first assumes the solid form, it is transparent like glass; and if it could be retained in that condition, we might have the pleasing novelty of transparent candles. But the particles seek to arrange themselves in crystalline forms, and the substance soon takes on its white, semi-opaque appearance. If benzole be added in small quantities at a time to very strong and warm nitric acid, a brisk action takes place, and when, after awhile, water is added, a yellow, oily-looking liquid falls to the bottom of the vessel, the benzole will have disappeared, and instead we have the yellow oil "nitro-benzole." Nitro-benzole has a sweet taste and fragrant odour. It is known in commerce as essence of myrbane, or artificial oil of bitter almonds, and is largely used for perfuming soap, and also for imparting to confectionery the flavour of bitter almonds. The most important use, however, of nitro-benzole is in the manufacture of aniline, to which substance we must now turn our attention.

This remarkable substance, which derives its name from "anil," one of the plants which yield the blue colouring matter known as indigo, is obtained from that substance by distilling it with potash. Its production from coal-tar, however, is one of the many marvellous results of scientific research which have so greatly enriched the history of coal-tar during the past half-century. It is prepared from nitro-benzole on the large scale by heating it with acetic acid and iron filings. When first prepared, aniline is a colourless liquid, but it very soon turns yellow, and then red or brown. It has no smell, and scarcely dissolves in water, but is readily soluble in alcohol, ether, etc.

We now come to what may be fairly considered, if not the most interesting, certainly the most remarkable part of our subject—the production of colour from coal-tar.

It was a Russian chemist, named Zinin, who discovered that nitro-benzole could be converted into aniline; but it remained for other experimentalists to discover the peculiar power which that remarkable substance possesses of producing different colours when treated with certain chemical re-agents.

In 1835, Runge discovered that a solution of aniline or its salts acquired a blue tint when heated with chloride of lime. This was considered an interesting scientific fact at the time, but it was not followed up by any practical result. Twenty-one years later, however, the world was startled by the remarkable discovery of Mr. W. H. Perkin, who found that by dissolving aniline in sulphuric acid (forming sulphate of aniline), and adding this to a solution of bichromate of potash (a deep red crystalline salt), a blue-black powder was obtained, from which he subsequently extracted the famous purple dye called mauve — the French name for marsh-mallow. The intensity, novelty, and beauty of this, the first-discovered tar colour, not only excited the greatest astonishment and demand for it, but as it necessitated the separation of large quantities of benzole from tar, it marked quite an epoch in the history of the coal-tar industry. Up to this time distillers simply divided the tar into naphtha, creosote, and pitch.

It must be noted that when Mr. Perkin discovered mauve, he was not engaged in searching for dye-stuffs, but was carrying on a purely scientific investigation as to the probability of artificially preparing quinine.

Mauve, or "aniline purple," is readily soluble in spirits-of-wine, but not so easily in water. Its tinctorial power is so great, that one-tenth of a grain suffices to impart quite a deep colour to a gallon of water. Silk and woollen fabrics have an extraordinary attraction for this colour, which attaches itself very firmly to their fibres.

Mauve was the first coal-tar dye, and its discovery led scientific men of all countries to seek for further gems in the mysterious products of coal-tar. Nor did they seek in vain. In due time the world was again startled by the discovery of the superb red colour known as "magenta," or fuchsine, from its resemblance to the colour of fuchsia petals. The marvellous colouring matter of some of the coal-tar dyes is such, that it is calculated that one ten-millionth of a grain of magenta will give a red colour to a drop of water. This magenta was discovered by M. Verguin, of Lyons, three years after the discovery of mauve by Perkins. It was obtained by treating crude aniline with chloride of tin, and it is not a little remarkable that magenta would not have been discovered had M. Verguin and others operated on pure aniline instead of on the ordinary commercial article. For it was found afterwards by Dr. Hoffman that pure aniline cannot be made to yield magenta, the presence of another body being necessary. This substance is of a similar nature to aniline, and is called "toluidine"; crude aniline always contains some of this substance.

Magenta is used not only as a dye, but more largely as a raw material from which a number of other beautiful colours are obtained.

If magenta be heated with aniline, the colour changes gradually through purple to blue, while ammonia is at the same time given off. This is the colour known as aniline blue, or "*bleu de Lyons*."

One obstacle to its employment is that it is insoluble in water; but a similar substance has since been obtained in a soluble form, and is extensively used for dyeing wool, under the name of "Nicholson's blue."

It was found that magenta was a chloride of a substance called rosaniline. Now by acting on rosaniline or its salts with iodides of ethyl, or iodide of methyl, Hoffman obtained a beautiful series of violets varying from red-purple to blue.

Another derivative of rosaniline is the aniline green. It is obtained by acting on a salt of rosaniline, with aldehyde (a substance obtained by acting with oxidizing agents on alcohol).

Aniline green dyes wool and silk—the latter especially—a magnificent green; perhaps as beautiful a colour as any of the coal-tar series.

Again, by a modification of the process for producing the Hoffman violets, another green of an entirely different constitution may be obtained. It is bluer in tint than the former, and is much used for cottons and silks under the name of "iodine green."

In the manufacture of magenta there is formed a residuum or bye-product, consisting of a resinous substance, from which Nicholson obtained a dye, imparting to silk and wool a gorgeous golden yellow colour. This dye cannot be obtained directly, but is always produced in greater or less quantity when magenta is made on the large scale, and is separated during the purification. By first dyeing the silk or wool with magenta, and then with this dye, which is commercially known as "phosphine," brilliant scarlet tints are obtained.

After all the salts furnishing the lovely tints that have been mentioned have been extracted from the aniline, there is in their manufacture a final residuum, and from this an intense black is obtained, which is largely used in the manufacture of printing-ink.

A large quantity of naphtha, instead of being sold for burning, etc., is purified by repeated distillations, and then carefully distilled at different temperatures; by this means it is divided into several parts. Each of these, by subsequent treatment, yields a fixed and definite product. These are benzol, toluol, xylol, and cumol, which, by treatment with nitric acid, and then with acetic acid, iron and zinc filings, and steaming, are converted into aniline, toluidine, xylidine, and cumidine, from each of which brilliant dyes are obtained.

We now come to the distillation of the "medium oils." This mixture is first treated with caustic potash, and then with hydrochloric acid. This causes "phenol," or carbolic acid, to rise to the top, and then it is decanted and purified by distillation. When it is pure, it forms colourless crystals which dissolve to some extent in water, and are readily soluble in alcohol.

Carbolic acid is a powerful antiseptic, that is, it arrests the process of putrefaction in animal and vegetable bodies, and it is very poisonous.

If carbolic acid is treated with nitric acid, an important yellow dye is yielded. This is picric acid, called also "carbazotic acid." It forms bright yellow crystals, and its solution readily imparts a bright, pure, yellow colour to wool, silk, etc. It received the name of picric acid from its exceedingly bitter taste. When picric acid is treated with cyanide of potassium, it gives a rich purple dye, which is, in fact, "murexide," a dye identical with the famous Tyrian purple of the ancients.

Perhaps the most important dye from this source is "aurin" or "rosolic acid," an intense colouring matter made by adding oxalic acid to a solution of carbolic acid. Many shades, varying from brick-red to orange and gold, are dyed by it, and being a cheap article, it is largely used for staining paper, printing, and the like.

Two splendid red or crimson dyes, called "peonine" and "coralline," are obtained from rosolic acid, by heating it with liquid ammonia.

Salicylic acid, which is a medicine or drug of much importance now-a-days, is obtained from carbolic acid. Another acid, called cresylic acid, is associated with carbolic acid in the distillation, and possesses similar properties to it.

The next substance that distils over from the medium oils is creosote, which is largely used for preserving timber from the effect of the weather. It is also used for pharmaceutical purposes after being carefully purified.

Next comes naphthaline, which, until the last eight years, was worse than useless, and most difficult to get rid of. A small quantity was consumed for lamp-black; but most, however, was used up as fuel.

It was discovered that by treating this substance with nitric acid, a way was opened up to a variety of useful products, which have revolutionized the dye trade. Magnificent scarlets, reds, purples, gold, orange, and yellow are now being made from it in wonderful variety, and at such cheap rates as the natural and original sources cannot possibly compete with.

Cochineal is rapidly being displaced, as have been the old dye-woods, barks, and roots; and the enormous sums of money annually remitted from this country for the singular little cochineal insect will soon all be kept at home.

We now come to the heavy oils which consist of "colliery oil," used for lubricating purposes, and "Anthracene." The latter has done as much to increase the value of coal-tar as any of its other constituents.

Pure anthracene is a very beautiful substance indeed. Although it is in reality a white flaky crystal, it has a lovely blue fluorescence in a remarkable degree. When boiled with nitric acid a new substance is formed, called "Anthraquinone," which crystallises in small needles of a bright yellow colour.

Now, by treating this anthraquinone in a complex manner, we obtain a substance which is identical with the colouring matter obtained from the madder root; this is called Alizarin. It is used for dyeing the colour known as "Turkey red." This substance was not discovered accidentally, but was the result of careful, well-directed research.

The production of artificial alizarin is restricted to the quantity of anthracene procurable from coal-tar, which is unfortunately comparatively small; for it is found that from the distillation of two thousand tons of coal, only one ton of anthracene can be obtained.

Coal-tar perfumes are now in more or less general use, including the artificial perfume of the Tonquin bean, of the sweet woodruff, and of a variety of sweet grasses; the perfume of "new-mown hay" really comes from coal-tar.

Of all the marvellous productions from coal-tar, that which takes the palm is saccharine. It is a white crystalline body, prepared from toluol (which is distilled from naphtha), and possesses an intensely sweet taste. It was discovered (accidentally) by Dr. Fahlberg. It is not really sugar, and does not act as a food, but only as a flavour. Its sweetening power is three hundred times greater than cane sugar. Its chemical name is orthobenzoyl sulphonic amide.

The colours derived from the tar from a pound of coal will dye a full shade—(1) *Magenta*, a piece of flannel 60 by 27 inches; (2) *Yellow*, a piece of flannel, 60 by 27 inches; (3) *Orange*, a piece of flannel 2 by 27 inches; (4) *Turkey Red*, calico, 4 by 27 inches.

After everything has been distilled from the tar, pitch is left; this is mostly used for the manufacture of patent fuel, a most important industry on the Continent, where coal is soft and consequently plenty of coal-dust is available. The pitch and coal-dust are ground up together, and the whole, after gentle heating, is pressed by machinery into lumps in the form of bricks; these are known as briquettes.

That coal-tar—a dirty, repulsive-looking fluid—should have become such a prolific source of colour and useful products, is one of the most striking illustrations of modern scientific discovery, coupled with commercial enterprise. Although of such youthful age, it is already the progenitor of a very large family indeed; and, unlike their parent, the offspring are often very beautiful and always interesting.

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow," "Corbiestanes," "Our Navvies," etc., etc.

CHAPTER X.

IN WHICH JOHN BURLEIGH GETS A FURTHER INSIGHT INTO THE HUMAN NATURE OF HIS PARISHIONERS.

UNTIL the arrival of Luke Sugden, the Vicarage must be his wayward child's home; so John Burleigh acknowledged. The plant of repentance which had sprung up so rapidly must be sheltered from the heat, and shielded from the blast, until it had gathered strength to strike its roots deeply, and lift its head steadily. John Burleigh knew that in his house alone could this shelter be afforded; and yet, when his ear caught the metallic ring of Mrs. Pattison's voice at the unusual hour of ten next morning, engaged in a long conversation with the housekeeper (though he knew she would extract few facts from that wary female), yet he was aware she would make the utmost of each word, and that at every dinner table in the village that noon, the strange conduct of the Vicar would be fully discussed. Still, he crossed the hall with the few amusing books he possessed in his hands, and asked the girl if she would like to come into the Chase for a walk. He was ashamed of himself for the relief he experienced when she declined.

"'*Make yourself look as you used to.*'"

"I am going to ask a favour from you, Rebecca."

"Oh, sir, what is it?" cried the girl, raising her head, and throwing off her dejected attitude.

"It is *possible* your father may be here to-day or to-morrow; do you think you could——?" And John Burleigh hesitated painfully, and blushed like a girl. He wanted to say, "Wash the paint off your face, and the golden dye out of your hair, but somehow, when it came to the point, he could not insult a guest by such words.

"Could do what, sir? I will do anything you wish."

"Well, make yourself look like you used to do before you went to London."

"I will do my best, sir." And Rebecca Sugden began pulling off the rings which covered her fingers, and laid them on the table a glittering heap.

"It was not so much those as——"

"I understand. It is not easy to get dye out of hair—it has to wear away; but I will do my best. I have promised, sir."

Then John Burleigh went down to the school as usual, and gave the Scripture lesson. As he returned up the village he met the walking postman, and took his letters from him. There were but four; the three first he tore open, read quietly, and noted the contents. The fourth he held tenderly in his hand; and when, after the steep climb which took his breath, he found himself alone in the old court of the castle, he kissed the envelope before he opened it. It was one of Lady Susan's friendly epistles, telling him of what they were all doing, and asking questions about the villagers; but he read between the lines, and it was with a light heart he rose up after his long day dream, and with a start noticed it was already after noon.

He felt he must go to see Hardman, and yet shrank, as the truth that sin in the *abstract is so easy to pardon, and in the particular so different*, forced itself upon him. With the recollection of Rebecca Sugden's honest father in his mind, his own true friend, how could he appear to this young man as though he felt no shadow had come between them? He wandered down to the Chase asking himself, "What would Christ have done?" but could find no answer to his question; his perplexity would not clear. He turned from the main drive into the heart of the forest, and sitting down at the foot of a gigantic oak, drew his Greek Testament from his pocket, and read right through half the Gospel of John; and then, in the all-encompassing calm of that Life and those Words, went on to the Hall. He had almost reached the entrance, when William Bradley overtook him, crying,—

"Come, Master Burleigh, right away to t' brickfields; our Martha's in a fit, and being as she's none so sharp, we never had her kistened, and my mussus is taking on finely, because she can't lig in t' churchyard if she isn't kistened."

Away the two hurried.

"Little Mary's crying like ought; her mother's afraid she'll make herself badly. Martha never were a wick child, but Mary's that feeling, she cares for everybody. Now Martha were always greedly like, and Mary would give her head off her shoulders if she could. It's a queer thing, and them twins too."

"Perhaps that is the reason."

"Well, if they'd both been a bit weakly and silly, I should not have been capped; but you see, Martha's a great stout lass, always eating, and all body as you may reckon, and Mary's a weak body, and a head big enough in sense for two; and none of t' other children has half as soft a heart as she has."

"Your wife will feel it a trouble to lose little Martha."

"My mussus, sir, isn't a woman to fret about what she can't mend, and we have Martha in a burial club; I may say we have 'em all in but Mary, and what for I never could mak out. T' missus never would hearken to putting her in, though many's the time I've said to her, 'Why, mother, she's likeliest of any of 'em to go off;' but my missus allus flies into one of her tantrums and says, 'Nought o' t' sort;' so seeing it made a bit o' unpleasantness, I never mention t' subject now. Maybe sir, when you've kistened Patty, you will speak to her about it."

"I think we both had better leave the subject alone, if it pains your wife."

"I thought you could put it in like convenient now, for Patty is sure to go off, and it's as one may say quite a provential warning."

And then Bradley talked very cheerfully on other subjects until they reached his home.

It was a strange house to have sickness as a guest—already so overcrowded, that it was with difficulty that a whole bed could be spared for little Martha; usually two other children shared it. There were but two bedrooms (and one of these was open to the stairs) for the father, mother, and ten children. John Burleigh stood in the little room, and wondered how they were all packed in at night. Martha was moaning, and rocking her head from side to side, foam on her lips, and great black rings about her eyes and mouth; and little Mary, with a blanched, terrified, but pitiful face, stood with the great baby in her arms, watching her, and trying to help her mother, who was alternately bathing the child's head and rubbing her hands. Dick and two brothers were having a regular romp downstairs, and chasing each other in and out of the house, jumping over the chairs, and rushing round the garden and in again. "Racing," as they explained to Mr. Burleigh. "Steeple-chasing, yer ken, and those turned-down chairs are fences we're taking."

"Look here, Dick, don't you know little Martha is very ill?"

"Oh, she often has fits strong; she'll soon mend."

"No she will not this time; she is going to God. Is it kind for you to make such a noise?"

"No, sir, we did not think; what must we do,—sit still?"

"No; wash your own face, and your hands, and your brothers', and you shall come home with me. I am going upstairs again to little Martha. I was obliged to come down to see what you were doing; the noise was so great, that it would not let your mother hear my voice."

Dick, much subdued, took his brothers and a jack towel into the back yard.

"Yes, sir, she's going; I'm glad you have christened her. Now she can lie by father and mother. I did not think it would have been so hard—for she's been a handful—to have parted with our Martha; but nature's nature, and I feel it sore." And Mrs. Bradley began to cry, and wiped her eyes with her apron.

Little Mary crept to her mother's side, and the poor woman put her arm round her, and noticed through her own tears that the child was crying.

"Don't fret, my bairn. Patty will soon be better off. Here, give me baby; he's too heavy for you."

"Will Patty be all right, and know us, and be t' same as t' rest on us when she gets to heaven, mother?"

"I expect she'll be like she's allus been, only comfortable like; don't you think so, sir? You know a sight more about such things nor we."

"No, I do not think so." Mr. Burleigh lifted little Mary on to his knee, and the child laid her face against his shoulder and looked up with entire trust—almost adoration.

"What do *you* say, Mr. Bur'y?"

"I think it will be like awaking, Mary. Poor Patty has all this long time had her mind—spirit we call it—asleep; it has been there, but like something locked up in a dark cupboard, which, when you bring it out into light, sparkles."

"Yes, like Granny's silver mug; we have it there," pointing to a corner cupboard.

"Well, Patty has had her real self, her spirit, the thing you look at me with through your eyes, the thing inside you which makes you love every one and everything you see, asleep. Her eyes looked about, but they could not *see* as you do; her ears heard your words, but she did not know what you meant. Was it not so?"

"Yes," said Mary eagerly; "but now, Mr. Bur'y, God has got the key, and He's going to open the door and Patty is coming out."

"Yes, into the sunshine. She will leave her body here, but *she* will be alive as she has never been before."

"Oh, mammy, isn't that nice? Patty will run about and laugh, and sing, and love us all. I've often wished she was like other chil'ens. Isn't heaven a nice place? Tell mammy, Mr. Bur'y, what you telled me—tell her about Jesus walking up and down, and all the chil'ens so happy running by Him. Oh, I wish I was going with Patty; we could go in hand in hand, and He'd smile so kind."

"Oh, hold your tongue, bairn; I can't thole t' thought on it!"

"But, mammy, it's so nice!"

"Whist, I say."

Mary put her thin, small hand up, and drew the Vicar's ear down, and whispered,—

"*You* talk to mammy, Mr. Bur'y."

"Yes, but another day—God is speaking to her now—I am going to pray to Him for her. Kneel down here, Mary."

The Vicar took the boys home as he had promised; he found Rebecca Sugden with all her false colour gone, looking pale and depressed, a depression that threatened to become desperation. Martha was keeping up her respectability by not speaking a syllable to the unhappy girl.

"I am tired, Rebecca," said John Burleigh; "but I daresay I shall be all right when I have dined. Will you amuse these small boys for an hour in the orchard? Their little sister is dying, and they must not go home to-night. I am presently going to see if some of the neighbours will

take them in; but now let them have a good game, will you?"

The Vicar walked in the evening across the fields to Farmer Boothroyd's house—it was a rather large and almost empty one—and asked Mrs. Boothroyd to take in the three little boys for a few days.

Mrs. Boothroyd stared in blank amazement, and then drew herself up.

"*She* never interfered in other people's business. *She* (with a singular glance at the Vicar) was not fond of taking in strange people one knew nothing about, and who were no better than they should be."

"But," said the Vicar, surprised at the refusal of what seemed to him such a simple kindness, "surely, Mrs. Boothroyd, you do not know whom I mean. I am speaking of the family of William Bradley, the brickmaker; they cannot be strangers; you must have known them for many years.

"All my life. I was born in this parish. And decent folk they are. Marget Bradley, before she married William, was servant here for seven years. And a good one, too, though with a bit of temper. Still, I don't see what I have to do with it. Why should I mind three of Marget Bradley's boys?"

"They will be all day at school."

"Yes, but there'll be clean sheets to put on a bed, and their meals to be found."

The Vicar looked round him. The sitting-room, if vulgar, was rich, and through an open door he could see into the large kitchen hung with hams and flitches of bacon.

"I would not have asked you, but the children must remain away until after the funeral. There is literally nowhere for them to sleep. Some even now, I fear, will have to sleep in *that* room when all is over. But my only spare bed is occupied."

"So I understand—and I should like to ask a few questions about that, seeing as how you are our clergyman."

Mr. Burleigh rose, and there "was something about him that haughty I felt quite queer," averred Mrs. Boothroyd afterwards.

"Which questions you must excuse my either listening to or answering, and I desire you to read and pray over the twenty-third chapter of Matthew, remembering the words are Christ's own."

John Burleigh went sadly back to the village. It seemed to him his Lord had been refused shelter in the persons of those children. He stood still when he reached the street, and wondered where he should beg hospitality for them next.

Mrs. Jowett, who, since the Vicar's first call and his strange prayer against her crowded lodgings, had been seen regularly in her seat in church on Sunday, and long since had "noticed" two of her lodgers, who thereupon had gone to live at her sister's house as being next best to staying where they were, saw him and ran out of her house. She had heard the evil innuendoes which Mrs. Pattison had set afloat, and which, light and impalpable as thistle-down, where floating everywhere, and her heart burnt with indignation. She longed to show the Vicar she would "stand by" him, come what would.

"See yer, I believe if Jesus came to Houghrigg, a lot of 'em would treat Him t' same as they do t' Vicar."

"You're right there, missus," said one of the lodgers. "T' Parson's made of a different sort of stuff to these natives, and they can't understand honesty in action; it mun all be in words."

"So t' old cat is agait again, is her?" remarked another, with his mouth full of cold meat and potatoes—"hang her!"

"Why, *there's* Parson," said a third; and on the impulse of the moment, Mrs. Jowett ran out, and then did not know what to say.

John Burleigh's face brightened as he held out his hand.

"Are your lodgers returned? Shall I disturb their supper if I come in?"

"No, sir; they will be proud to see you."

One of the men shoved a chair close to the hot fire, another asked the Vicar if he would have a cup of tea. He felt a warmth and cheer of welcome all about him, and the party fell into a pleasant talk. Suddenly the Vicar looked at his watch and rose. "I had quite forgotten the time; I must hurry home and find somewhere for my three boys to sleep."

"Three boys, sir? Why, how's that?"

Then the Vicar told the listening group how Patty Bradley was gone to God, and of the need of space in the poor home where she lay.

"I shall sleep on the Ilkley couch in my study, and they are going to have my bed."

"No, that they're *not*, sir; begging your pardon, they're a-coming to lie here. There, isn't it so, Curley?"

"Yes, I'se going to be bed-mate with Bob again, and there's a bed here wi' nobody in it."

Bob had risen; he was a man of few words; he put on his "billycock" hat.

"I'll step on with you, sir," he muttered, and never spoke another word until the Vicarage gate was reached; but when the Vicar shook hands with him, and thanked him for his kindness to the boys (who were joyfully receiving peppermint bulls' eyes preparatory to their return with him), Bob found the gift of language.

"Thank *you*, sir; it's something to make a chap respect himself to shake hands wi' the like of you. I've been an awful chap. Happen you wouldn't do it if you knew all."

"I don't want to know all. God does that. We will be friends just as we are, shall we?"

So, with a hand-shake all round, John Burleigh saw his guests depart.

Rebecca Sugden met him in the hall with a brighter face than she had worn for years.

"Have the boys been very troublesome, Rebecca? I was kept longer than I intended. You must be tired."

"Yes, sir, they are real boys; they are just like what my brothers were, years ago. I have liked being with them so much. I think I shall sleep sound to-night. Good-night, sir."

"Good-night, Rebecca; God bless you."

The girl who was "good for nothing," went upstairs saying to herself,—

"He said, 'God bless you.' Oh! if God only would. I wonder if He will—some time."

CHAPTER XI.

IN WHICH SEVERAL PERSONS ARE LED BY A WAY THAT THEY KNOW NOT.

"JACK, at last!" joyfully exclaimed Ralph Hardman, as the Vicar entered his room.

The Vicar came slowly towards the couch on which the young man was laid. It was drawn in front of the window. A glorious prospect of green sward, finely timbered, a belt of forest, and then the sweeping deep blue and faint greenish grey hills lay below, and the brightness of the summer was reflected in the young, handsome face before him; and yet John Burleigh shrank, and did not look at one or the other. It was with a supreme effort, that, backed by a secret prayer, at length he did so; and then he started, and eagerly held out his hand—he felt the electric sympathy of a freemasonry of which the world knows nothing.

"Then you have found Him?"

"Yes, and in Him peace. He has lifted up the light of His countenance upon me."

"And all things have become new?"

"Yes; the very trees have more beautiful colours, the clouds and sky look as they have never done to me before."

"You see God now where you only saw Nature without a meaning, formerly.

> "'The meanest flower of the vale,
> The simplest note that swells the gale;
> The common sun, the air, the skies,
> To you are opening Paradise.'

And you will find this an increasing pleasure. Geology, botany, or astronomy all add to it; but the secret is, when a man knows God, he is able to realise the beauty and freshness of common things. He is able to look upon Nature in all its developments, for they are all steps to God, and are God's makings. You will find the same attraction now, in little children and in simple people. A man who knows Christ as his Friend, has received not only forgiveness, and therefore eternal life; he has also received that secret of Nature, the *sympathy of simplicity*. To be one with Christ is not only to be master of yourself—your body, soul, and spirit—but also in Him to become heir of all things."

"In a dim sort of way I already feel the truth of what you say; but the joy of it all is held in that word, '*Consummatum est.*' I have been all my life long *wanting* this friendship. It has come, and I know already what you mean by being satisfied, and not content and dissatisfied, and yet not unhappy. It is delightful to rest here in all this new peace; and yet, Jack, I long to be well again. I want to go to London."

"May I ask why?"

Ralph Hardman's face burnt.

"You have a right to ask anything, and to have an answer; but yet I should consider it another favour if you will not insist upon an explanation."

"Oh, certainly; another time you may feel more inclination for details."

"Thanks, old friend. Broadly, I want to put right some of my past wrongs. When I have done so, I shall be able to tell them to my big brother." And the young man held out his hand, and tears were in his frank blue eyes.

"Smith," said John Burleigh, as the man attended him down to the hall door, "I trust you have said nothing to your master of the scene in the park?"

"Not a word, sir."

"Remain silent, please."

"Certainly, sir."

With a heart full of thankfulness, the Vicar went out into the Chase.

John Burleigh loved his only brother much, but they were cast in a different mould, and there had never been any sympathy between them. Unconsciously the young man's heart had hungered for such a brother

friend, and now he had found a "brother beloved," bound to him in a stronger bond than any natural one; the bond which Christ Himself had pointed out as superseding all others. "Who is My mother, and who are My brethren?" He asked, and turning and pointing to His chosen twelve, He added, "Whosoever shall do the will of My Father in heaven, the same is My mother, and sister, and brother."

Unreservedly, ungrudgingly, with the joyful self-surrender of a warm first love, Ralph Hardman had given himself up to the service in which John Burleigh had long ago enlisted. The bright hopefulness, the unwavering faith, the joyful assurance of the young recruit, warmed the saddened veteran's heart, and lightened the heat and the anguish of the march to one who comprehended, as his younger comrade did not, the surrounding dangers and the pitfalls of disappointment ahead. Not for the world would John Burleigh have dimmed the sunny prospect a devoted life offered to his friend. "He will better bear disappointment when he has learnt by experience to rest on God."

John Burleigh, happily for himself, had that experience. He had expected Luke Sugden to write quickly, or to come for his daughter; but a week passed before a few well-written lines came. The Vicar had seriously to consider if he should tell Hardman, and arrange with him some plan for the girl's maintenance; but he earnestly longed to remove this thorn from his friend's path without giving him the shame of knowing who had plucked it aside. Yet the Vicar was so poor, that this addition to his household, small as it seemed, was one which he could not afford; and the lessened congregations on Sunday, and the empty seats at the Wednesday evening service—the averted looks of his parishioners, and the short, hard greetings he received, were pain to him—a double pain; first, that his people should be so unlike Christ, and next, the fear that he might after all be injuring the many to save the one, and last of all, as a human creature, fortify himself as much as he would by prayer, his sensitive soul was suffering a daily crucifixion.

A long week passed before the clerkly blue envelope, stamped with the name of the firm at Canal Mills, came to the Houghrigg Vicarage; and already Ralph Hardman was downstairs and out in the gardens, and threatening to have the pony carriage out and call at the Vicarage. In a couple more days he would certainly be able to do so! The strain of enforced patience had at length become unendurable to John Burleigh; but just as the moment came when he could bear no more, so did relief. The letter ran thus:—

"DEAR SIR,—

"Your favour of the 5th to hand. I have to inform you respecting my daughter, Rebecca Sugden, that I shall come for her on Saturday next, 14th instant. As I cannot leave here until after the pay, I shall not arrive until 5.45 p.m.

"I have to inform you that my wife had a stroke on the 6th instant.

"With best thanks for your favours, former and present,

"I am, your obedient servant,

"LUKE SUGDEN."

So that bright, cheery, capable mother had been crushed to a living death under this blow.

Should he tell Rebecca? questioned the Vicar. The girl had grown listless and depressed; sometimes a sullen expression clouded her miserable face, and one day the Vicar had met her a mile from Houghrigg, walking with feverish haste in the direction of the railway station. He had turned a corner suddenly, and come face to face with her, and before he could say a word, she had dropped down on the bank at the foot of the hedge, and covered her face with her hands.

She had walked back with him quietly, and as he talked and interested her in things around, the hunted expression had vanished from her eyes; but the Vicar understood if she were left too much to the silent, reproachful companionship of Martha, she would probably run away—back to the life of horrible excitement out of which he had rescued her; and therefore he had to be constantly finding her distractions, in employment of various kinds, and never left the house for a couple of hours without fear.

The dreadful strain of this life of watching, without appearing to watch, was wearing out both his bodily and his nervous strength, and if it had not been for the precious cheer of Lady Susan's weekly friendly letter, he certainly would have been unable to sustain it. Now relief was near. Yet he knew Rebecca so dreaded the meeting with her father, that he thought if he warned her that it would really take place the next day, she might do something desperate to avert it. "No; I will tell her nothing. God will teach her through her poor mother." So the Vicar folded the letter, and left it on his desk, and went away to the brick-fields.

More than a week ago, Patty had been laid to rest under a Scotch fir tree in the corner of the churchyard, and little Mary, with a happy face, carried the baby there, and while he played on the grass, planted daisy plants as closely together as she could place them on the bare small mound. She dug them up in the fields, and every two or three days brought a few more. The mound was nearly covered now, and the Vicar made Rebecca water them regularly every evening when the sun went down.

"Why do you only bring these?" asked the girl of the little child; "why don't you bring 'pollyanters' and pinks and forget-me-nots, and nasturtiums, and make it look quite pretty?"

"Well," said Mary shyly, "because of something Mr. Bur'y told me."

"What was that? Tell me."

"He said these meant day's eye, because they open when the sun comes up."

"Well, what has that to do with your Martha?"

The child hung her head. She did not like to tell her sacred thoughts to every one, and without knowing it, the old shameful life which had soiled the girl's soul had raised a barrier, whose darkness could be felt between the child-spirit and hers. It was with repugnance the little girl added in a low voice: "Patty was asleep when she was here, but it's morning for her now, and she's woke up and seen——" Then suddenly little Mary caught up the baby and ran away.

"Yes," said Rebecca bitterly to herself, "the sight of Him is for little children, not for such as me." She turned away, and faced the next tombstone. Mechanically she read the inscription. It ended with "Blessed are the pure in heart, for they shall see God." "I'll try no more. I'll go back to London. I heard Martha say Mr. Burleigh had gone to the brick-fields, so I'll be off; and if I make haste, I can be out of the house before he comes back."

She ran excitedly to the Vicarage, put on her hat, crammed all her things into her bag, looked to see that her jewellery, all of which she had brought away with her, and her money were safe, and stole like a thief downstairs. The evening sunshine was streaming through the hop-entwined study window, and fell in a path of light across the cold hall through the open door. The girl stood still.

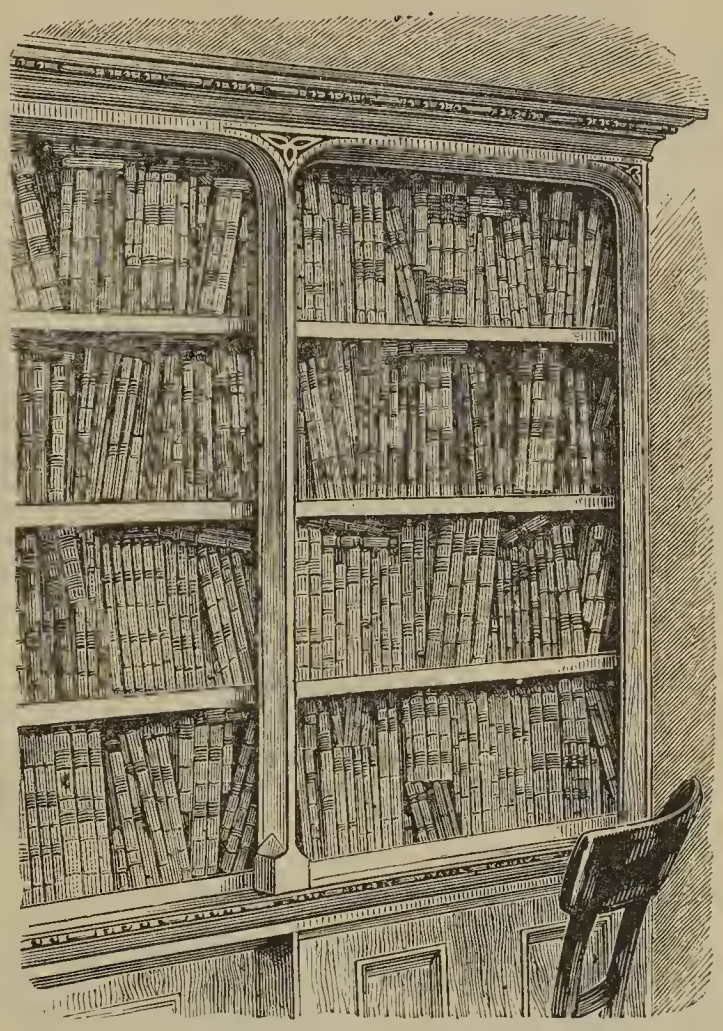
"I'll look round that good gentleman's room and see the likeness of my father and all of 'em again. He's got it framed—he said so—with the rest, and I'll see where he sat, and then I'll go away, *right away*."

She clenched her hands, and put her bag down on the floor of the hall. "I'll not take such as *that* in here," she whispered; and then she was in what was to her imagination a shrine. Many ugly, but to John Burleigh most precious, photographs were on the walls. She walked straight to one group, and stood before it for some moments, with clasped hands and a hard face.

"Yes, all of 'em are there but me. How loving mother looks! I wish I could take it with me; but I can't steal what's *his*. I would from anybody else, but not *him*. He says, 'God bless you,' every night. I've heard that for the last time." Then the girl flung herself on her knees by the chair pushed back from the writing-table, and kissed it, and cried, "O God, bless him, bless him." Then she jumped up, and turned to go. As she did so she saw the letter.

"It's from my father!" She read it through. "Mother! mother!" She moaned, reeled, and fell on the floor.

(*Continued—page* 657.)



A CHAT ABOUT BOOKS.

By John P. Haworth.

LEIGH HUNT said that he always felt inclined to say grace when he began a book. But in his day printed matter, good, bad, and indifferent, was not produced by the cart-load, and the great plague of books had not yet visited the country; but had he lived in our rushing, bustling, busy times, when volumes upon every conceivable subject come pouring out in a ceaseless stream from "the Row," and threatening the unhappy reviewer with despair or premature lunacy, he would in all probability have modified his opinion.

Books, like many other things, may be looked at from different points of view, and used in various ways. They may be the tools of a man's trade. Thus the journalist, the philologist, the lawyer, the historian, or the specialist, has his dictionaries, cyclopædias, treatises, commentaries, and books of reference, which are to him what the saw is to the carpenter, or the saucepan to the cook. They are employed for a special purpose—to clear up some doubtful point, to verify some fact, or to illustrate some theory.

Again, a certain class of people look upon books merely as a necessary ornament, "the proper thing to have about the place, you know." From this low standpoint they are merely things (with pictures in, if possible) to be scattered with studied carelessness on the drawing-room table as refuges for the nervous. Some people, again, seem to furnish what they call their libraries much in the same way as they would order wire fencing—four feet of history, a yard of biography, and so on. But to the true book-lover, a book is neither a "dummy" nor a tool, but a friend; and a good book is one of the best friends that a man can have. It is ever ready at his call to interest, instruct, cheer, or amuse him. It takes him out of himself, helps him to forget numberless worries and troubles, and leads him into new and delightful scenes. It never obtrudes itself when not wanted, nor fails us when required. It will speak or be silent as we prefer, and never reproaches us if we are petulant, and cast it aside for another. Our "silent friends" are ever faithful. "They are the delight of childhood, the strength and incitement of youth, the relaxation of toil, the companions of solitude, the consolations of trouble, the wisdom of all who use them aright, the anodyne of age."

"The companions of solitude."

In the selection of them, the same rules should guide us as in the choice of our human comrades. Those are the worst acquaintances whose conversation is impure, whose tastes are corrupt, and who lead us into scenes of riot and debauchery. So those books, whose whole tendency is to draw us from what is good and pure, and to familiarise us with evil, should not be the chosen occupants of our shelves, or the cherished companions of our leisure hours. This standard will rigidly exclude from our literary visiting list that unhappily too common type of work, generally the novel, which is written in a sparkling and brilliant style, with a certain superficial cleverness, and admirably adapted to captivate the imagination; but whilst doing this, it is also instilling into the mind a subtle poison, and enervating the best faculties. In it vice is represented as a mere social eccentricity, gently to be dallied with rather than sternly condemned, and moral offences are glossed over with specious names. Not to mention the many vile publications which are every week put into the hands of the less educated, there are books in circulation amongst the educated classes of society, in whose every chapter lurks veiled adultery or latent immorality. Of a novel of this class, *The Times* reviewer some time ago said that "many of the characters seemed to have no other occupation than to plan or do what he or she ought not to do." A terrible responsibility rests upon those who thus pander to the worse passions, instead of appealing to the better instincts of human nature.

There is another species of literature which should be avoided. Written in a fascinating and apparently profound manner, it is the work of men undoubtedly clever, and able to clothe their propositions in the most attractive garb. But of how many such authors may it not be said that "God gave them the talents, but the devil gave them the application"! Under the guise of culture, science, research, or "breadth of thought," they would tempt the reader away from that Scriptural truth which he has been taught to revere, and in polished and captivating language, throw covert ridicule upon the most sacred scenes and persons. But while they thus pull down, they are unable to build up, and do but raise tormenting doubts, which they are powerless to allay. Too much of the scientific and philosophical writing of the day is but thinly veiled infidelity, which seeks to substitute humanitarian enlightenment for revealed religion,—the peculiar danger of such works being that the perusal of them often leaves behind it a trail which is most difficult to efface, and that their disquieting suggestions obtrude themselves upon the mind with a painful persistency.

A French writer has said that "there are three kinds of companions—men, women, and books." Now we do not estimate the worth of our human companions by the splendour, or otherwise, of their clothes. Damon may have a somewhat shabby coat, or his hat may not be adorned with the newest curl of brim, but what cares Pythias for that? He knows the true heart that beats beneath. We do not write a man down "*friend*" until we have *got at* his mind, his inner feelings, his way of looking at things; in short, until we understand him. It is evident, then, that the bibliomaniac's method will not serve the true book-lover. The former will give hundreds of pounds for a third-rate cookery book, if it be but a genuine "Elzevir." With him it is a matter of the most sublime indifference whether he can read some pet volume, to say nothing of understanding it; and if it contain certain blunders or misprints, so much the better. The idea of perusing a book in quest of knowledge or recreation is beneath his contempt. He gloats over the long-coveted treasure, and comforts himself with the reflection that he has obtained something which no one else has.

To the man, however, who loves books for their own sake, a shilling English classic will be a continual delight.

Twelve months ago, much was said and written about the hundred best books, and eminent men of all classes were interviewed by enterprising correspondents, and struck their pens through each other's lists. The majority of the selections made, however, were more ingenious than useful; and that of the writer who recently recommended "Whitaker's Almanack" and "Nuttall's Dictionary" as the two best, is as reasonable as most of those mentors. The fact is, that in this respect "what is one man's meat is another man's poison." A. can no more fit out B. with a congenial library, than Daniel Lambert's coat would fit Tom Thumb. We do not in social life make agonising efforts to love a particular person, because we have been recommended to do so by some one else. We only make "chums" of those to whom we are drawn by similarity of taste or feeling, or by their possession of some quality of mind or heart which wins our sympathy, respect, or

admiration. To go on a walking tour with a companion, chosen merely because he was recommended as an irreproachable person, would probably result in a quarrel before the end of the first day's journey. So "Paradise Lost," and Butler's "Analogy," are *per se* most estimable books ; but it does not follow that a man bound for Central Africa, and limited to one portmanteau, would select them.

Whilst, however, it is neither advisable nor practicable to lay down hard and fast lines on this subject, there are certain broad, general rules which young men and women will do well to observe.

Do not skip, for better are half a dozen carefully read and thoroughly mastered, than fifty skimmed over like the evening paper. But do not read on the treadmill system of twenty pages a day, and a good mark at the end of the week. Above all, avoid everything which tends to raise unhealthy excitement, or morbid feelings, which casts a false charm over vice, which airily treats moral sins as mere pardonable peccadilloes, which deadens the spiritual sensitiveness, or blunts the appreciation of, and reverence for, sacred things. The late Bishop of Manchester said that a man's recreations should be of such a nature that he could read the Bible after them. The same standard may equally well be applied to his books. And assuredly there is no lack of good, wholesome literature, which the present system of reprints and cheap editions has placed within the reach of the modest purse. For five pounds—half as much as many a young man spends yearly on cigars and billiards—a library may be bought which will last a lifetime. The standard English classics ever retain their fresh and healthy tone. Guided by the historian, the reader may mingle with the warriors, statesmen, heroes, and saints of past ages, and re-people the deserted halls with a throng of eager, living forms ; in the company of the poet, he may read the parable of nature, and learn to admire her in all her varied moods ; from the contemplation of the wonders of natural history and physical science, which are now made attractive, without the sacrifice of accuracy, he may be led onwards and upwards to admire and revere the Author who "in wisdom hath made them all." The acknowledged masters of fiction may carry him along in profound sympathy with them ; for although, as has been said, "ephemeral literature is driving out the great classics of the present and the past," and though three-fourths of the present-day novels and novelettes ought to be burnt by the common hangman, yet all fiction need not be vetoed indiscriminately. The mind requires an occasional change of diet ; and the light *entrées* of fiction may occasionally be substituted for more substantial joints.

But there is one Book which towers head and shoulders above all others, which has survived the fiercest attacks, which has for centuries been a storehouse of comfort, encouragement, and thanksgiving to every class, and in every kingdom ; a mine of which, the more it is worked, the more inexhaustible are the treasures ; a Book to which every succeeding discovery of true science and reverent research bears additional witness—the Bible.

Do we want poetry? Where shall we find a more sublime epic than the Book of Job? Would we have history? We may here follow the journeys, battles, trials, and triumphs of God's chosen people. Does the scholar wish for closely sustained argument and logical reasoning? Let him study the Epistle to the Romans. Do we delight in stirring scenes or impassioned eloquence? We may stand with Elijah on Mount Carmel, or listen to the burning words of Isaiah or Jeremiah. Would we gaze upon more peaceful sights? We may ascend the hallowed slopes of the Mount of Olives, or listen with the crowd on the shores of Galilee. Where, in the whole range of literature, shall we look for a code of morals which will stand the wear and tear of every-day life, but to the Sermon on the Mount?

Young men and women, of all the books on your shelves, let the Bible be the one most often consulted. Read by the light of the Holy Spirit ; it is the best safeguard against the anti-Scripture 'ologies and 'isms of the day. Heed not the charge of "Bibliolatry." Study it "faithfully, gravely, wisely, lovingly."

THE MUSICIAN'S DAUGHTER.

AN INCIDENT OF TO-DAY.

By M. Butler Gerds.

"OH, father, do listen to this anecdote. I do not believe a word of it," said a beautiful girl to her parent. They were seated in a luxurious drawing-room, in one of the most expensive streets of the West End. The rattle of carriages outside was unheard by them ; the dinginess of the air outside was unseen, for the windows were heavily draped with costly hangings, and the room in which they sat was a blaze of light. The gentleman, one of the first musicians, if not *the* first in the land, was seated before an Erard grand, extemporising in a desultory, self-amusing manner. He turned, smiling, to his daughter, when she spoke.

"Read it then, my Leuchen," he said, with a German accent. And Leuchen proceeded to read in a tone of doubt :—

"A German poet-musician, named George Neumarck, used to get his living in Hamburgh by playing his violoncello. But one day he fell ill, and very soon poverty overtook him. He knew not what to do ; but as a last hope he pawned his beloved instrument for very little money, to a Jew. As he was leaving the shop, he asked, 'May I once more, just this once, play a farewell air?' Receiving a grudging assent, he seized his beloved instrument, the companion from which he found it so hard to part, and played such a tender, pathetic melody upon it, that even the hard-hearted Jew was touched to tears. As Neumarck played, he sang his own hymn,—

'Life is weary ; Saviour, take me ;'

but suddenly changing the key, he sang the more hopeful words,—

'Yet, who knows? the Cross is precious,'

and then, kissing his instrument farewell, he rushed from the shop. As he did so, he found himself face to face with a stranger, who had been listening with rapture to the delightful strains. 'Oh,' said he, 'can you tell me where I can get that sweet song?' 'My good friend,' answered Neumarck, 'it is yours for nothing.' By degrees, the stranger drew from the poet the story of his trouble, and his master being an ambassador from a foreign court, and needing a private secretary, he laid the case of Neumarck before him, and it was not long ere he found an end to all his sorrows. 'This,' he said, gratefully, calling his neighbours around him to listen to the music of his redeemed violoncello, 'this comes of trusting God. I was willing to bear the cross, He gives me the crown, even a crown of rejoicing ;' and, concluding with a rapturous note of praise, he sang his own hymn,—

'Who trusts in God's unchanging love,
Builds on the Rock that nought can move.'"

"There, what do you think of that, papa, mine! you, a great musician, and a good man?" asked Leuchen.

"I believe every word of it, my dear," answered her father.

"Papa!" in a tone of incredulity and remonstrance blended, "do you believe that God *does* help people in this way, really?"

"Yes, my Leuchen, He has helped *me*. Wouldst like my little story—true every word of it, my child?"

"Yes, papa, *do* tell me, for I should dearly like to hear it. You *know* I should," she cried, kissing him.

Then Herr Tonkünstler, who was thought by his admirers to be incapable of anything but fine tones and broken English, told his daughter the following story :—

"Ah, in the days when my name was Schmidt, and when nobody cared for the poor German lad, I made up my mind to come to England, the rich appreciative England, and make some monies, for I was very poor. One Sunday that I so well remember, I was out in the beautiful fields with my violin, and was playing away so as to charm myself, when I said, quite in my heart, 'O God, this is Thy day, they say. If thou art God, be kind to poor Schmidt,

and send him some good.' Then I saw a servant coming down the lane close by, and I wondered if he thought me a beggar, and if he would offer me a penny, perhaps! But he did not—he looked very dignified, and said, 'Hi! you musician, my mistress wishes to hear you play.' I was just a leetle vexed at the man's rude manner; but I followed him to a fine house, and looking up, I saw a girl just like yourself, Leuchen, sitting in a window, and gazing upon me with pity. I began to play her one of my sweetest airs, but she waved her hand dissentingly: 'Not that,' she said kindly; 'perhaps you know Mendelssohn's *Hymn of Praise?* Do play that, please.'

"'Why should I play the *Lobgesang*, when I have no cause to praise Him?' I asked, with some pique.

"'But you *have* cause to praise Him for the wonderful gift He has given you, and to use that gift for Him, too,' she said.

"I was surprised, pleased, if you will; no one had ever spoken in that way of my playing before. I began to think that there was a God, and that He was going to hear my faithless prayer. I played then as I had *never* before played, with all my newly-fired soul in the marvellous music. I was even surprised at myself; the tears were coursing down my cheeks. I was lost; I was praising God with my whole being, and I knew it. When I had finished, I flung myself on the grass at her feet, and wept for joy and sorrow.

"'Oh!' cried the beautiful girl, when I had ended, '*who* are you? You *did* praise God then; I am *sure* you did.' Then, turning to her father, she said, 'Papa, call the stranger in and speak to him,' which he did. He was very rich, and being charmed with my playing, he placed me under the best masters in Europe, so that I was soon equal with the first amongst them."

Here the Herr papa paused. His daughter asked him,—

"And, papa, about *God*. Did you praise Him *after* that?"

"Yes, my child; I never forgot that Sunday prayer of mine, and the rich English girl used to write to me sometimes, saying, that she hoped that I was in the light, and serving and praising God. Oh, my Leuchen, I had gone to a dear pastor who taught me the things of God, and showed me that poor Schmidt had a load he must lose, and where should he leave it? ah, at Jesus' cross! Yes, I left it there, child; so when I returned to England, I could tell the lady that it was even as she hoped with me, and she was very glad.

"But sorrow comes even to the sweetest and best of the Father's children, Leuchen, and great reverses of fortune caused my patron to lose nearly all his wealth. I said to myself a little story all day long: 'Ah, Schmidt,' I said, 'now is *your* time; perhaps you can be of use one of these sad times.' And the monies would keep filling my pockets. I was Herr Tonkünstler now, and I was getting rich. Yes, rich enough to think that it was time I showed my gratitude to my patron's beautiful daughter, so that one day I just told her how good her God had been to me, and how I wanted to thank Him and her, who had first put it into my heart to do so——"

"Papa, you are going to tell me that that beautiful sweet girl was my mother; I know you are!" cried Leuchen.

"Yes, yes, child; it was so. She quite agreed to all I said, and soon I had cause to thank the good God for another gift—that of a dear companion, who made my life one long *Lobgesang*. And when she died, and only you were left to me, I could still praise Him, but alone. So, shall not I believe about George Neumarck? I *do* believe it all, Leuchen, though some men do not know what it is that makes the praise-song so dear to the old Herr; nor do they guess why it is that he will never play anything in which he cannot praise Him—no, for that is a secret between the heavenly and the earthly tone-masters, and only little Leuchen knows."

Then the great violinist, with tears in his eyes, affectionately kissed his fair daughter, who said,—

"*Dear* papa, God *is* good, and I have never thought it! My mother loved Him—so will *I*; *you* can praise Him, so will *I*; so many serve Him, so will *I*; and you shall tell me all I do not know, and that is much, dear father."

The musician's daughter kept her resolve. She learned to love and serve the world's Saviour as her own personal Redeemer, for before this talk she had known Him only as One who came to seek and to save *the lost*, and she never dreamed that this word included herself. In church, though she so often spoke of herself as a "miserable sinner," she never really thought it in her heart; it was part of the service, and happily had to be confessed nowhere but in church! But *now*—ah, she was a new creature in Christ Jesus—she loved Him, and as the test of love is *service*, she set about working in His name at once. It became her delight to help the poor, struggling musicians, of whom she found so many, against their many temptations and sorrows, and to point them to Him who had filled her heart with Himself, and had tuned her life to an endless song of praise.

In Holland the following poetic names for the months are in use:—

January,	Lauromaand,	Chilly month.
February,	Sprokelmaand,	Vegetation month.
March,	Lentmaand,	Spring month.
April,	Grasmaand,	Grass month.
May,	Blowmaand,	Flower month.
June,	Zomermaand,	Summer month.
July,	Hooymaand,	Hay month.
August,	Oostmaand,	Harvest month.
September,	Hertsmaand,	Autumn month.
October,	Wynmaand,	Wine month.
November,	Slagmaand,	Slaughter month.
December,	Wintermaand,	Winter month.

On Circuit.—Recently, the entire court in Cincinnati—judge, jury, crier, clerk, tipstaff, counsel, prisoner, and all—adjourned to the bedside of a man whose broken leg prevented his attendance in court.

The Societies for Prevention of Cruelty to Animals in America (North and South) number 44. Of these 33 are in the United States.

Cheap pork ought to be possible. There are over 2,299,000 pigs in Great Britain!

A Useful Hint.—When a screw or staple wears its hole too large, and falls out, we generally plug up the hole with *wood*. Instead, try plugging it with cork, firmly driven in, and re-insert the screw or staple. It will be perfectly secure.

English-speaking people now number 100,000,000, a seven-fold increase during the last century. At this rate of increase, in 1988 there will be 700,000,000 English-speaking people on the globe.

The Japanese will swell the number, for over 85,000 English books were imported last year into Japan.

The same country received 28,925 watches from Switzerland in 1886. A practical proof that the Japanese are anxious to keep up to time!

The length of railway lines laid down in the United States in 1867 was 2,249; in 1877, it was 2,280; and in 1887, it had grown to 12,724. There is now a total railroad mileage of 151,000 miles.

Nine Cables now connect Europe and America. There are in use no less than 113,000 nautical miles of cable.

The Aborigines of New Zealand are becoming few indeed. In Captain Cook's days these were 100,000 Maoris, now the number is estimated at 45,000—less than half.

Cheese farmers are thriving on the islands, and are making a practical effort to compete with the American market. From the North and Middle Island, last season, the total yield of cheese was 1,500 tons.

The appointment to many livings in the Church of England is vested in the hands of peers. The Duke of Beaufort seems to have in his gift 24 livings; the Duke of Bedford, 25; the Duke of Devonshire, 38; the Duke of Rutland, 25. That is 112 livings in the hands of four Dukes. Two hundred peers have amongst them the right of presentation to about 1,300 livings, including 9 in the hands of the Duke of Marlborough, 11 belonging to the Marquis of Aylesbury, and 43 to the Earl of Lonsdale.

LEAVES FROM THE LOG OF A GENTLEMAN GIPSY.

By GORDON STABLES, C.M., M.D., R.N.,

Author of "The Cruise of the Land Yacht 'Wanderer'; or, Thirteen Hundred Miles in My Caravan," etc., etc.

"Primitive, old-fashioned, little dreamy bits of towns."

The largest pond is quite a resort for web-footed fowl.

LEAF XV.

IN WINTER QUARTERS — RE-FITTING FOR THE ROAD — MILFORD, HANTS, JUNE, 1887 —WOOLMER FOREST—WHITE OF SELBORNE—LIFE IN THE WILDS.

ABOUT the end of October each year the *Wanderer* is put into winter quarters. No ordinary coach-house is large enough to contain her, so she has to be content to bivouac like the gipsy. She is under a huge tent of waterproof canvas raised over a frame.

My birds tell me when spring is coming. The sparrows in the climbing wisteria, the blackbird on the lawn, the thrushes in the apple trees, all give me a hint. Even cock robin himself is in a greater hurry every morning to eat his breakfast and be off, and looks as if he had some happy little secret under his red waistcoat.

In February last year (1887) the birds began to sing, and many of our feathered wanderers came back to wood-haunt and hedge, ere the March winds had been blowing a week.

There was plenty of time before May, but it is such a pleasure preparing for the road, that I like to make it a pleasure long drawn out. There is no joy to equal that of anticipation. The short and the long of it is, that when Captain Cornflower and Polly Peablossom returned from their winter quarters, fat and sleek and bonnie, the great caravan was looking brave and bonnie in her coat of varnish and regilded mouldings. Everything outside and in was ready for the start. Not a pin was forgotten.

We had only to do our usual trial trips for a week or more—the children's own holiday—then up anchor and away to the wilds.

Milford, Hants, June, 1887.—The *Wanderer* has been lying in a meadow here for several days, men and horses enjoying a breath of the fresh sea-air. Since leaving home in bonnie Berks, we have enjoyed what Yankees call "a good time."

The weather has been sunny and dry all along. The route we took was one on which I had been before, and may be again.

We bore away south and by east towards Aldershot. Before one gets there he finds himself in a country of shady lanes, and primitive, old-fashioned, little dreamy bits of towns, that takes him back in imagination to the Middle Ages. He sees some life, though, of a different sort, when he comes to Aldershot, and as he drives through this land of red-coats and camps.

We were fortunate in witnessing a kind of field-day, real soldiers marching and manœuvring, real guns and real gunpowder. Our wise horses looked on as unconcernedly as if in their own paddock. By-and-by we came to Lyss in Woolmer Forest, near the land of White of Selborne.

On two of the most conspicuous heights of this Forest stand two arbours made of the boughs of oak, which the keepers renew annually on the feast of St. Barnabas.

There are in the forest three lakes.

In the hot hours of summer, cattle come from far and near, to stand leg or thigh deep in these ponds—a very pretty picture.

> "On the grassy bank
> Some ruminating lie; while others stand
> Half in the flood, and often bending, sip
> The circling surface."

The largest pond is about a mile and a half round, and is quite a resort for web-footed fowl.

And here is a leaf from my own log, written on the verge of the Forest of Woolmer.

There is one curious effect that all this living in the wood and the wilds has upon me, especially in the spring-time, when I first take to the road, and become *en rapport*, as it were, with nature. I feel that I want to sing, and *can't*. By singing, I do not mean the purely musical performance, but singing as poets do, saying or writing pretty things in rhyme, expressing my feelings in verses.

Now, "to want to sing and can't" is far more tantalizing than to want to sneeze and can't.

There are some birds who seem to suffer in this way, and I pity them. Now the rook yonder can't sing, but he doesn't want to. The starling, on the other hand, will perch on the highest branch he can find, and chirrup and chuckle and choke for an hour at a time, without getting out a single note with more melody in it than there is in a hand-saw or the ungreased wheel of a mill-wagon.

From Lyss we took our way over the mountains, and so away through a picturesque and beautiful country, till we struck the sea at Havant.

Thence away along the south and by Botley, to Southampton and the New Forest, to say anything about which at the close of a chapter, would, in my opinion, be a species of sacrilege.

LEAF XVI.

LYNDHURST — A JUNE DRIVE THROUGH THE FOREST—THE FOREST FLY.

THERE are two ways of seeing the New Forest, which is, without doubt, the most romantic tract of country in England. One plan to "do" it, as tourists say—is to go to Lyndhurst, stop a night, start early, see the church, bring your eye-glass to bear on *the* great picture, say, "Very grand, indeed," hurry out, order your trap, and be driven off to see some of the giant trees, get a morsel of the bark off the biggest, lunch somewhere, then off to Rufus's Stone, and back to dinner. You can leave next morning, with the comforting thought that you have "done" the Forest.

The better way is to live at least a week at Lyndhurst, and spend every day in the solitary wilds. You will go away feeling sorry you could not live there a month or two. I have never left the Forest without the wish to return.

Describe it, did you say? If I were quite certain I should be spared for five hundred years or more, I should take a house in the Forest, and perhaps in half a century I might be in a position to write a book on it. If ever I think about my fellow-mortals at all when in the New Forest, it is to pity those who have never been here. What a deal they miss!

Sometimes in winter, when, over-tired after a long day of brain-work, I find it difficult to get off to sleep when I want to, I have several ways of wooing the gentle goddess; one is to repeat the psalms and hymns I learnt at school, or some long secular poem. "Tam o' Shanter" has stood me in good stead often enough, and I have generally gone off in the dance of witches. But a third plan is to fancy myself amid old scenes on the road, and some such little picture as the following oft-times woos me to sweetest dreamless slumber.

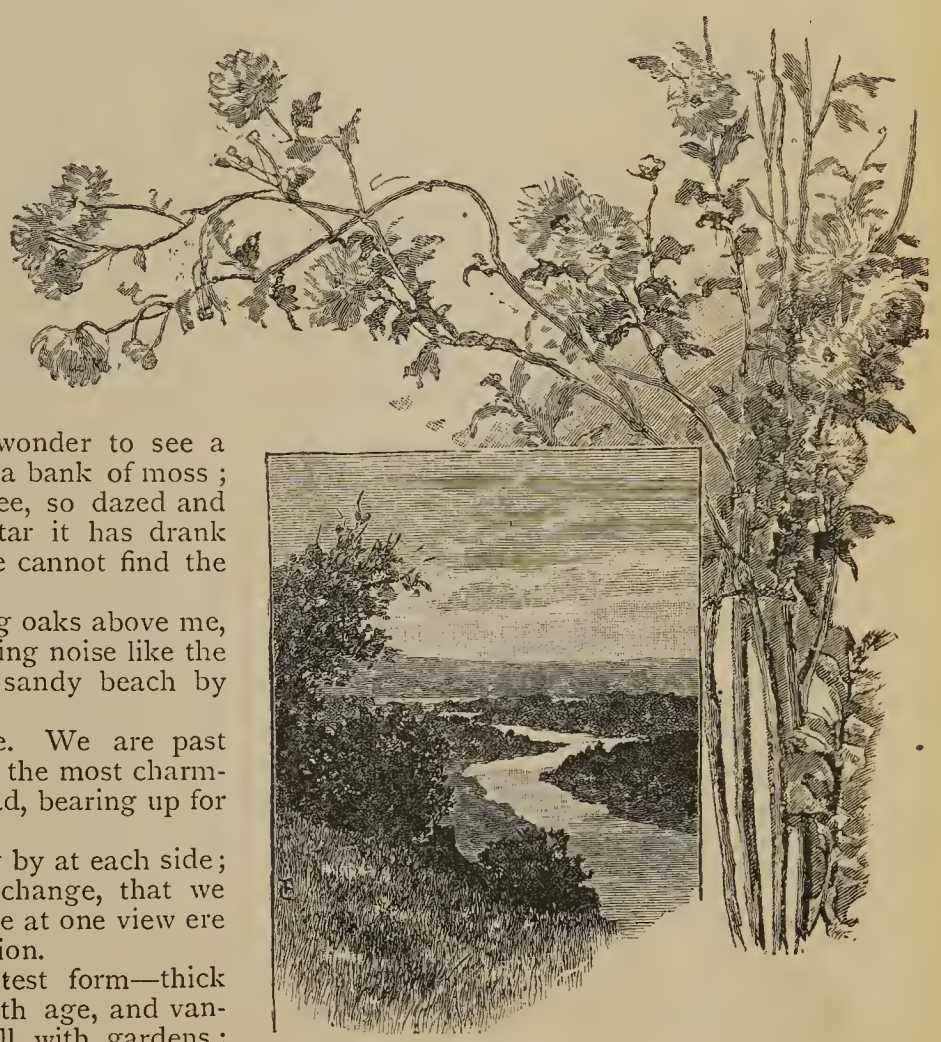
A JUNE DRIVE THROUGH THE FOREST.

Hardly yet in the Forest, for though long avenues of trees, and woodlands, and copses abound on each side of the road, there still are villages and farms. But even here, the ferns and heath fight for every inch of their ancient rights. The day is glorious, the road is good. The air is bracing, and balmy, and exhilarating. The very horses seem to feel the influence of their surroundings, and toss their heads with an air of conscious pride, as they trot airily on—music in their feet, music in the clanking harness.

We pass the Forest hotel with its gardens, verandahs, and flowers, quite a picture in itself, with its background of trees. But now we are in the forest—a long stretch of road sweeping downwards, and rising into a hill beyond. The very first feature that gives a feeling of freedom, is the absence of fencing. The trees here are well back from the road, and sward there is none—only long banks of fern, that go sweeping like a sea as far into the forest on each side as we can look, and form the undergrowth. We stop, and I enter the wood, and make pretence to lose myself—make myself believe there is not a caravan or a house within a hundred miles of me; that I am as much a creature of the wilds as the merle and mavis, whose glad notes make echo ring from tree to tree; or as yonder rabbit that sits upright near its hole, moving its paws like an old lady knitting, and gazing in wonder to see a human biped reclining on a bank of moss; or as this great bumble-bee, so dazed and intoxicated with the nectar it has drank from dewy thistles, that he cannot find the entrance to his hive.

And through the rustling oaks above me, the wind makes a murmuring noise like the sound of wavelets on a sandy beach by night.

But the scenes change. We are past Lyndhurst, and on by far the most charming part of the Forest road, bearing up for distant Lymmington.



The picture goes flitting by at each side; and so quickly does it change, that we have hardly time to glance at one view ere another demands admiration.

Cosy cottages of quaintest form—thick straw, black and grey with age, and vandyked with semi-attics, all with gardens; all embowered in roses—roses yellow, red, pink, or white; standard roses; climbing, creeping, trailing, wriggling roses; roses that will not be denied, that cover the walls, clamber over the thatch, peep in through cosy, wee, prettily-curtained bedroom windows, up over the thatch, and eke around the chimney; roses that storm even the closely-trimmed holly trees, and dispute possession with the ivies that mantle old barns, half-ruined sheds, and crumbling walls; roses everywhere, filling the sunny air with their delicious perfume.

Rhododendrons peeping out almost at every turn of the road, with here and there a laburnum, all a mass of dangling bloom; rhododendrons and tasselled broom, cheek-by-jowl; rhododendrons and holly; rhododendrons and furze hardly yet out of bloom; rhododendrons side by side with greenest laurel; pale pink, red, and crimson rhododendrons; dwarf rhododendrons, and others so tall that they tower high against the stunted oak trees.

Open glades in the forest, through which our road leads, treeless, but covered deep in feathery, waving brackens; shady lanes; lovers' walks; trees that impress one with their evident age, their spreading, sturdy glory of leaf and limb; streamlets, wild as everything else is wild; streamlets of singular independence, that flow rapidly onwards, or wind and laze, and, as the whim seems to strike them, lingering here to toy with the tree; bursting into song as they go whirling over a pebbly bottom; going to sleep long enough in shady nooks for water-lilies to grow and float on them, or forming pools for cattle to bathe in, or the denizens of the forest to drink from.

Animals we, who live not in these woodlands call domestic, half wild here, and all in crowds, as if they knew there was strength in numbers. Ponies in droves, with wee, daft-like foals at their feet, that

"Through a picturesque and beautiful country."

lean against gnarled trees, stand pensive beneath the parent neck, or lie like dead things stretched out in the sunshine ; cattle in mobs ; gaunt-looking geese in droves in the grassy glades ; black pigs countable by the score ; flocks of golden yellow half-fledged ducklings sailing calmly on the ponds, or tadpole-hunting in the quagmires.

With the song of birds falling on the ear, the wail of wood-pigeons in the thickets, the winds talking to the trees, the music of the rills, with sunshine, colour, shape, and shade on every side, who would, on such a June day as this,

"Lose and neglect the creeping hours of time"?

* * * *

Our principal bivouac at Lyndhurst was in a meadow behind the chief hotel,—a very comfortable old hotel, and a very good camp. The one drawback to strangers or visitors residing anywhere in this City of the Forest, is the bells.

Deng — ding — dong — dung — they go every quarter of an hour, once repeated for the quarter past, twice for the half-hour, and soon all the day through.

THE FOREST FLY.

No one who visits the New Forest with horses, or even without, will long remain unacquainted with this gentleman. Naturalists call him the *Hippobosca equina*, and when he applies for his pedigree, he is politely referred to the dipterous family *Hippoboscidæ;* but folks in the Forest simply catch him and kill him. Here are a few particulars about the creature. The body is short, flat, and very coriaceous. The legs are very strong, and terminated by robust curved claws, which are toothed beneath. The head is received into a cavity of the thorax. The young—and this is very strange—are simply nourished within the body of the parent, where they not only acquire their full size, but actually assume the pupa stage, under which form, like very large eggs, they are deposited.

M. Reaumur was the first to discover these curious particulars. Well, there is nothing on earth that a naturalist will not do in search of knowledge, and Reaumur was so anxious to observe the development of the insect from these singular eggs, that he carried them in his pocket by day, and took them to bed with him at night, in order that they might have a uniform degree of warmth. Great was his surprise then, when, instead of grubs, perfect flies were produced !

The Forest Fly is of a dark-brown colour, with large wings and eyes, and moves swiftly, with a crab-like motion, sideways or back. They are said to attack light-coloured horses rather than dark, and strange horses in preference to forest ponies. Before I went to the Forest, I heard heart-rending accounts of these creatures. I was told that when they got news of the approach of strange horses, they came out in clouds to meet them ; that in olden times they were bigger and stronger than they are now ; that three of them had been known to lift a forest foal over a five-barred gate.

It is best not to believe all you hear. But, nevertheless, the Forest Fly is a stern reality. He is not of an amiable disposition. He is a blood-sucker and a parasite, but a good judge of horse-flesh. When he alights on your horse, which he does slowly and deliberately, he proceeds at once to business. He prefers a naked part ; in under the flank is a favourite resort.

The Forest Fly is a stickler, and as tenacious of life as a cat-of-nine-lives. To catch him is easy, but to kill him is quite another matter. You may hit him as hard as you please,—he will be only temporarily inconvenienced. The only way to kill him is to squeeze the thorax sideways. On the whole, I don't respect a Forest Fly, and the only good thing one can say about them is, that they are hippophagists solely, and therefore confine their delicate attentions to our poor horses.

HOMELY HINTS FOR STRUGGLING WIVES;

OR, HOW JOHN AND MARTHA GRIMSHAW MANAGED ON £1 A WEEK.

By Phyllis Browne.

No. IV.

MARTHA GRIMSHAW had enjoyed her chat with her old mistress, Mrs. Jackson, but it was long before she found time to repeat it. When women are busy, have a home to look after, and little children to care for, it is not easy for them to do much visiting. Yet Martha often thought of the talk she had had, and she knew that she had received great encouragement from Mrs. Jackson's sympathy and approval. This made her long for an opportunity for further conversation.

Time passed, however, and she never seemed to be able to get away. Every day brought its duties, but never a one seemed to bring leisure. Once or twice Mrs. Jackson wrote to her, asking when she was coming, but Martha could not say. She was very happy ; busy people who have the consciousness that they are useful, and are doing good work, usually are happy. It is the idle people who are miserable and discontented.

At length one day, just as Martha had finished her household tasks, and was preparing to sit down to needlework, a knock was heard at the door. On opening it, there appeared Mrs. Jackson and a young woman whom Martha did not know.

"How do you do, Martha?" said the lady. "You would not come to see me, so I have come to you, and I have brought a companion."

"It was not that I would not come, ma'am," said Martha, while she dusted and brought forward chairs for her visitors ; though the chairs did not need to be dusted, for everything in the room was as neat, clean, cheery, and orderly as could be. "It was not that I would not come, but I was busy, and——"

"Quite right, quite right, I understand," said Mrs. Jackson. "But now I want your help, and I came at this hour because I thought you would probably have finished work, and would have half an hour to spare before your husband came home."

"You thought rightly, ma'am," said Martha. "I was just going to sit down and look over the clothes that have been washed this week, and mend what needs mending. I generally find that there are a few stitches to be put in, and as every one knows, 'a stitch in time saves nine.' I like to have a set day for mending, as for everything else. I always think it is hopeless if mending gets behindhand."

"Now you are approaching the subject that I wish to speak with you about," said Mrs. Jackson. "When I last saw you, you promised to tell me how you arranged your work. I want you to do this now, and to let my friend here, Mrs. Robins, hear your story. Mrs. Robins, I must inform you, is situated very much as you are in many ways, but she does not find things run smoothly as you do. I have spoken to her of your good management, and I have brought her to see you at her own request, because she thought that if she could find out your methods, she might improve her own."

"Indeed, ma'am, I am afraid you praise me more highly than I deserve," said Martha modestly. Inwardly, however, she was wondering very much who Mrs. Jackson's new friend could be. She had already, as was natural to a woman, glanced several times at the stranger, and to speak the truth, was not very favourably impressed by her appearance. There was an attempt at finery in her dress, which was far removed from Martha's rather strict notions of propriety. She had a fine feather in her bonnet, and a good deal of cheap trimming on her jacket, which made her look as if she aped "the grand," and yet Martha's quick eye took in the fact that her boots were torn across the toe, and trodden down at heel, and her once light-coloured gloves were dirty, and coming into holes. Now it was one of Martha's maxims that if you want to know whether a woman is well-dressed, you should look not at her bonnet, but at her boots ; and judged thus, Mrs. Robins was untidy and shabby.

When, however, Mrs. Jackson said that Mrs. Robins had not found things run smoothly, Martha looked at her again, and then she noticed that though her dress was made up of the worthless finery which Martha disliked so much, her face was very kindly, and also very sad ; and as she met Martha's eyes fixed upon her, her own filled with tears.

"I would really thank you kindly if you would let me know your ways, Mrs. Grimshaw," she said. "Mrs. Jackson has told me much about you, and I can see for

myself that all her sayings were true. One only needs to look round this room, and to peep into the other to know that. I cannot manage as you do. My room is all in a muddle, and I *cannot* keep it clean. I slave and slave, but it seems as if it took all my time and strength just to keep going along. I try (at least," she added, under her breath, "sometimes I try), but oftener I lose heart. Then my husband gets angry, and the children cry and scream; and everything is so miserable, that lately I have been afraid my husband would lose patience, and——"

"I know," said Martha. "My mother used to say, 'Any silly woman can catch a man; it takes a wise woman to hold him.' But where am I to begin to help you?"

"Tell me what you aim at, and what you try for," replied Mrs. Robins earnestly. "Say over to yourself what it is that a woman like me needs to do before she can make a happy home, and then tell me. You know the kind of thing. I am not the only one of my sort. Where are such as I to blame, and how are we to mend?"

"You poor things," said Martha, "I pity you more than I blame you. There are numbers like you, who would do right if they knew how, but they have never been taught, and they get no sympathy from their husbands, and they work to little purpose, all because they work without method."

"I was never taught," said Mrs. Robins. "Before I was married I went out to work, and I never had anything to do with cooking or cleaning. I thought work of the sort was quite easy, but I soon found my mistake. Tell me what I ought to do; tell me where to begin."

"I will do my best," said Martha. "But you must not think you are going to mend matters all at once. Improvement will have to be gradual. You cannot gain in a few minutes what it has taken other people years to learn."

"No, indeed," said Mrs. Jackson. "To make a home happy is not easy, but it is the grandest work that any woman can do. If all the wives and mothers in England were equal to it, this England of ours would be a different place to what it is. There would be less sorrow in it, and less sin, because there would be less drink. Many a man has turned to drink because his home was not happy."

"He is none the less to be blamed on that account," said Martha, rather indignantly. "It is very easy to blame the women, but a man must be weak who goes to the bad because his wife fails in her duty."

"Of course, such men are weak," said Mrs. Jackson. "That is one reason why women ought to be strong, to hold them up."

"But what am I to do? what am I to aim at?" asked Mrs. Robins.

"I should say that what you have to do all the way through is this," said Martha. "Do the duty that wants doing most first of all, then go on to the next duty that wants doing most, and keep on doing this. Your difficulties would soon disappear if you could follow this rule. When you wake in the morning, ask yourself, 'What wants doing most?'"

"I suppose when one wakes in the morning, the duty that wants doing most is to look what the time is, and if it is time, get up," said Mrs. Robins, half amused.

"Exactly so," said Martha. "And mind it's half the battle to begin early. An hour before breakfast is worth two hours after it. To rise and start work betimes is one great secret of home management. Having risen, the first duty that wants doing is to make yourself neat, clean, and tidy. So, if I were you, I should wash thoroughly, brush your hair, and make it smooth and neat, put on a tidy gown, and make yourself spick and span. Do not be content to tumble into your clothes, as so many women do."

"First thing in the morning?" said Mrs. Robins, with an astonished look.

"Yes, indeed," said Martha. "First thing in the morning, and at all other times. Believe me, Mrs. Robins, if a woman wants to begin to keep her home and keep her children, she must first of all keep herself. If *she* is neat, she will want her house and everything about her to match. You never expect that a clean, tidy woman will be found in a dirty home."

"There is another reason for this," said Mrs. Jackson. "Cleanliness means health. When people are clean, and keep everything sweet and pure about them, they are ten times more likely to be strong and hearty. There is nothing like a good wash for making one feel brisk and energetic."

"And there is still another reason," said Martha. "We were talking a minute ago about 'holding a husband.' I am quite sure that one way for a wife to hold her husband is to keep herself neat and clean. When women are being courted, they take great pains that their lovers shall see them at their best. When lovers become husbands, many of them seem to think that he, out of all men in the world, may see them at their worst. And yet married men have eyes as well as unmarried ones; and though men may not be conscious of it, there are few amongst them who do not feel pleased when their own wives are women they can admire and be proud of."

"Having made yourself clean and neat, what is the next thing to be done?" said Mrs. Robins, who was intensely interested.

"If you will forgive my saying so," said Martha, "the next thing to be done is to kneel down by the side of the bed and thank the good God for having taken care of you and yours during the night, and ask Him to help you to do your work during the day as in His sight. You will not get on any the worse for beginning the day with a thought of something beyond what you see."

Mrs. Robins did not answer. She was too much astonished to do so. With her, religion was associated only with going to church and listening to sermons. That a busy woman should make it part of her daily work, and find it a help in making beds and dusting rooms, was more than she could comprehend. However, she continued to listen.

"After this," said Martha, "I should put two chairs at the foot of the bed; take the bedclothes off one by one, spread them over the chairs, double the mattress over, and open the window top and bottom, so that the fresh morning air might blow over the bedding. Then—but perhaps you would like me to go right through the day's work as I should do it."

"That would be delightful," said Mrs. Robins. "Please go on."

"Well, then I light the fire, sweep up the room, set on the kettle, and put the porridge to boil. It is one of my methods to leave the room that we live in tidy overnight, so that in the morning there is little to be done. I never leave any dirty dishes to be washed, and the coal and kindling are always put ready, so that if such a thing should happen as that I should oversleep myself, there may be as little hindrance as possible. And I must tell you," continued Martha, and her voice took a tender tone, "John always gets the coal for me, and does what lifting he can. He says that kind of work is fittest for men. I do not say that husbands ought to do this kind of thing, but only that my John will do it. But then I do not believe there ever was a husband like John. And I like to get beforehand a little, for I know very well that as I leave the place, so I shall find it. It is very disheartening to come down and find everything at sixes and sevens, especially on dark winter mornings. So I cure that difficulty by preventing it."

"An excellent method," put in Mrs. Jackson.

"The fire lighted and the kettle boiling, I lay the breakfast, and then get the children washed and dressed. I sponge them quickly back and front, wash their faces, necks, ears, hands, and arms with soap and water, and brush their hair. I never let them stand about while they are dressing, and I do what I can to train them early to help themselves, and to be orderly and neat in their ways. Also, I need scarcely say, that I hear them say their morning prayer, and try to help them to start the day in the best way. When the children are dressed, we all have breakfast."

"Excuse my interrupting you, but you said you set the porridge to boil. Do you and your husband have porridge for breakfast?"

"Yes, we always have porridge. It is such very wholesome, nourishing, economical food; I believe it is as nourishing as rump steak, and when you get accustomed to it, you like it very much. I learnt to like it when I was in service;" and Martha, as she said this, smiled at Mrs. Jackson; "and after I was married I persuaded my husband to try it, and he got to like it too. Now he would feel quite lost without his porridge. The porridge eaten, he and I have a little weak tea and bread and butter, but not much. I do not believe in tea, and neither does John."

"Well, I must say I like a cup of tea," said Mrs. Robins. "Many a time when I feel quite worn-out, I make myself a little tea, and it helps me along wonderfully. I often have it for dinner, and it saves the trouble of cooking, besides being cheap."

"I have no doubt you do," said Martha. "I could have guessed as much. Your belief in tea is one cause of your difficulty. Tea does not nourish at all; it is only a fillip, and, in the long run, makes people nervous and hysterical. Am I not right, ma'am?" to Mrs. Jackson.

"Quite right, Martha. I agree with you entirely. I agree with every word you say. I believe that the habit women have got into of drinking tea is one great reason why they have so little energy. To keep on drinking tea at every turn is like drinking slow poison. On that subject every word that you say, Martha, is true."

THE SUPERSTITION OF THE SKRAT.

By Andrew T. Sibbald.

SCATTERED about the islands and coast to the north-west of the Gulf of Riga is a population of Swedes, which has frequently attracted the attention of the antiquaries of the Baltic. Ages have passed since their last settlement,—the date of which nobody knows,—and it is a singular fact that, small in number, and living in the midst, or, rather, on the edge of races totally distinct from their own, they have preserved to the present day their Scandinavian nationality. That the Eiboboll, as they are called, will preserve this nationality much longer is very doubtful. Once they had settlements in the comparatively large island Oesel, and on the southern coast of Esthonia, but these have all disappeared ; and in a map which is not more than eight years old, we only light upon them in a few very small islands, and on the northern extremity of the coast. Their pursuits are exclusively maritime, and in their latter days they seem to have been more confined to the sea.

That all sorts of superstitions are rife amongst this primitive people is a matter of course. Wolves and serpents play an important part in their legends, but more curious than any of them is the Skrat—a fiery dragon of a very liberal disposition. Ordinary dragons guard treasures, and have not the slightest notion of parting with the value of a shilling if they can help it ; but the Skrat actually takes the trouble of bringing wealth to those who have earned its powers.

The Skrat commonly appears as a huge fiery shape, with a long tail ; but it has no objection to put on the appearance of a cat, a fowl, or even a man. It floats about in the evening close to the surface of the earth, and sometimes eludes the sight by dropping down a chimney. A ruined edifice will, however, answer its purpose, and it has been known to vanish from a field without any perceptible place of retirement whatever. Not unfrequently its disappearance is followed by a loud noise, like the report of a gun, and a rattling sound, as of falling stones.

Do not imagine that the Skrat is a past institution, with which you have nothing to do, like the witches and furies of the Middle Ages. If you go paddling about the Gulf of Riga, you are very likely to meet a Skrat now. It was only in the year 1846 that two fishermen, quietly returning home to Hapsal from the neighbouring island of Nucko, saw a fiery form approaching them from the shore, which they rightly concluded was the Skrat. The monster filled their boat with fire, and brooded over them so affectionately that they could feel the heat through the fur cloaks with which they covered their heads. Probably the Skrat expected some remonstrance, for when they had remained silent some minutes, it rose up into the air, and went off in a northerly direction ; but not before it had well singed their cloaks.

In the year 1847 the Skrat showed that it had clear notions of right and wrong, and could assume, on occasion, the character of a terrible avenger. Two fishermen from Oesel, by far the largest island in the gulf, came to the little islet Kumara, upon which there is only one beer-shop. They had brought smuggled goods from Finland, and in the plenitude of their innocence—for smuggling is no crime, according to Eibo notions—confided them to the landlord of the mean hostelry. Breaking his faith, the wretch sold the goods, and afterwards assured the fishermen that, in consequence of an unexpected approach of the revenue-officers, he had been compelled to fling the deposit into the sea. The truth was, however, revealed in some manner to the worthy smugglers, and inspired by prophetic power, they said to the landlord, in unison, "Thou hast committed thy last theft." This occurred in autumn.

About Christmas time the landlord was enjoying himself on the continent with a party of friends, when he was suddenly struck with paralysis, and exclaiming, "That was the Skrat!" died on the spot. The body was decently put into a coffin, but on the following morning the coffin was found shivered to fragments, and the body, lacking the nose, lay upon the ground. Another coffin was provided, which was more gently opened than the first, and the body was taken away altogether—of course by the Skrat. The friends of the deceased could not do much under these peculiarly distressing circumstances, but still they did their best. They carried the empty coffin to be buried with all solemnity.

It is with real pleasure that we record the wholesome check put by an honest Eibo man upon a prosaic investigator who had ventured to doubt the truth of this very awful and very moral tale. The Eibo man had told his story to the investigator just as we have given it ; but the latter, instead of receiving it in good faith, proceeded to the church where the funeral had been held, and looked over the registry. From this he learned that the wicked landlord had died a natural death on the first of November, 1847, after an illness that had lasted six months, and that he had been buried on the fifth of the same month, without anything remarkable having been noticed by the pastor. Proud of his discovery, the investigator hastened back to the Eibo man, and detailed the information he had gathered. But the Eibo man was not daunted. "How should the pastor know what was inside the coffin?" This was his question ; and the story of the Skrat remained triumphant.

To those who are lucky enough to secure the services of a Skrat, it will bring money, vegetables, hams, corn, linen, and even milk ; but we grieve to relate that it only obtains these articles by stealing them from less favoured mortals. A farmer's wife in the island of Dago, finding that her cow yielded less than the proper supply of milk, watched one fine night, and perceived that the cause of deficiency was a little child, who sank into the earth as soon as she approached. It is not always that the Skrat gets so quickly out of the way. An old parish clerk of Nucko, returning home from the beer-shop, met a great hulking fellow, who carried on his shoulder two gloves filled with corn, and quizzed him for the lightness of his burden.

"Psha!" answered the churl, "I would not be called Skrat if I could not carry more than this." With these words he flung down the gloves, which instantly swelled into two huge sacks, and thrashed the clerk within an inch of his life. Had not the pastor's dog set up a louder bark than usual, and frightened the Skrat away, even that inch might have been consumed.

A few crosses marked on a doorway, or a few straws laid crosswise upon the threshold, are found efficient against the depredations of the Skrat. This serviceable friend will not only steal for its master, but will jealously guard his property. In fact, its zeal borders on cruelty. A man at Hapsal had a Skrat on his premises which burned off the hair of two light-fingered ladies who came to rob the house, and frightened them, not only out of the domicile, but out of their wits. A woman in the same town had a portable Skrat no bigger than a flea, which she carried about in a box, and which, when she let it out, made the whole room glow as if with fire. This good woman was once robbed by a neighbour of a sum of money ; but the thief, making away with his spoil, heard such a noise behind him that he lost his presence of mind, and bolted into a hole in the ice, where he miserably perished.

For performing the most arduous duties the Skrat only requires his board, his favourite dainties being bread and butter and two or three sorts of porridge, which are .set apart for him in a special vessel. Sometimes this provision is the subject of an express contract, and woe to the man who does not faithfully comply with its terms! A peasant of Kirtil, in Dago, who during harvest-time forgot to give his Skrat the stipulated bread and butter, and consequently found all his straws thrown into disorder, might think himself a very lucky man, for at Nyby, a place on the continent, where an ill-conditioned boy ate up the Skrat's food, and soiled the vessel that held it, the house was reduced to ashes. This awful event took place no further back than the Christmas of 1846. This burning faculty seems to distinguish the Skrat from the Scotch Brownie, with which it has much in common, and renders it particularly terrible.

At Kemis, in the island of Dago, a man saw a Skrat flying through the air like a great burning cat. He tore open the front of his shirt, and bending down, peeped at the animal between his legs. The Skrat at once vanished into a house, from which a small flame was seen to issue. In three days the house was entirely consumed, and during the time of the conflagration the Skrat was often seen running in and out of the house in the shape of a singed cat. We suspect that the grotesque attitude of the man meant malice ; that he had a grudge against the owner of the house, into which he charmed the Skrat, by virtue of the ridiculous posture.

As Skrats can make themselves useful on occasion, we need not be surprised that Skrat-catching is a regular occupation. An old blind beggar woman seems to have had a singular talent in this line. Meeting with a Skrat in the neighbourhood of Trewe (a

place in the northern part of Esthonia), upon a certain midsummer day, she at once detected it as it was running across the road in the shape of a black cat, charmed it with magical words, caught it, and bore it in triumph to a bonfire which had been kindled in honour of the day. Here it was singed a little by the boys, but the peasant to whom it belonged came up to the spot, and successfully implored that it might be restored to him. So clever and lucky was the old woman, that on the very same evening she caught two more Skrats, with precisely the same result. Her singular talent was not overlooked. A man who had been exceedingly annoyed by the depredations of his neighbour's Skrat, invited her aid, whereupon she lured the Skrat into his room, and he had the pleasure of giving it a good thrashing.

Some do not care to catch the Skrat itself, but try to make it give up the treasure it carries. Old Pastor Forsmann, of Roicks, in Dago, was a perfect master at this kind of sport, and he had a fine opportunity for showing his proficiency when, sitting with a party of visitors, he saw a Skrat at no great distance from his home.

"We will see what that fellow is carrying," quoth the worthy pastor; and telling his friends to keep quiet, slipped out of the house, and compelled the dragon to drop his load; but he soon ran in again, for the Skrat, in compliance with the imperative demand, had dropped two large sacks, one of rye, the other of barley, which, if they had lighted on the pastor's head, would have stopped his conjuring for ever. The spoil was put to pious uses, being bestowed on a poor widow in the neighbourhood. Pastor Forsmann's method of dealing with Skrats was a secret, which he would never reveal even to his most intimate friends.

The Skrat does not seem to have been a natural product in all the places inhabited by the Eibo folk. The large island of Oesel, which has now lost its Eibo population, and the small island of Kemis, were the best places for catching them, and, once caught, they were portable.

These islands had, from the earliest times, been the noted abodes of magicians. Once three country fellows went to Oesel for the express purpose of consulting an old wizard as to the best method of catching a Skrat. He asked them to come into his room and take a nap; but only two of them complied with the latter request, for the third kept awake, and, making the best use of his ears, heard the old gentleman slip out of the door, saying something, and whistle. In came the Skrat, which, settling on the foreheads of the two sleepers, sucked their blood, and left a little blue mark as a memorial of the operation. All, however, were awake on the following morning, and the old conjurer, asking from each of his guests a two-copeck piece, threw the three coins into the fire. Those of the sleepers were consumed, but the one belonging to the wakeful man remained uninjured. When they all took their departure, the magician told, not the wakeful man, but the other two, that the Skrat would provide them both with a handsome income for life. From this we may infer that the Skrat does not approve of impertinent curiosity.

Strange as it may appear, the Skrat is not only to be caught, but may actually be manufactured. A tin pipe, stuffed with tow and pitch; a fragment of a pair of scales; part of a plough; a bit of a harrow; a few rags; and two or three other articles, which the vulgar would include in the category of rubbish, have been found, when well mixed up together, to make a very good Skrat. Some, however, prefer a worn-out broom, to which they attach a pair of wooden feet and a long tail of rag, twisting a red thread round the stick, clapping on an old pot for a head, adding a piece of glass for a nose, and making the arms out of a reel, which has been used by a demon, at least a hundred years old. On three successive Thursdays this figure must be set up with many ceremonies in the middle of a cross-way, and on the third the manufacturer cuts his finger, and letting his blood spurt upon the figure, utters the awful words: "Fiend, take my soul, and give me wealth in return!" The compound of inanimate rubbish is then endowed with life—becomes a veritable Skrat, which must instantly be provided with an old lazy horse. The manufacturer has procured for himself as swift a horse as he can find, and gallops off as quickly as he can, for if the Skrat once gets ahead of him, a broken neck will be the result. If all goes right, the Skrat trots obediently after its master, and when both reach the house, it is welcomed with a mess of porridge.

Having secured your Skrat, it is rather difficult to get rid of it. If you hold it by purchase, you must sell it for less than you gave, or it will certainly come back to you; in this intrusive fidelity strangely resembling the Bottle-Imp. Or, it may be torn to little bits and flung into the water, just when the ice is loosened by the early spring. Or, the manufactured Skrat may be carried to the cross-road where it first became an inanimate being, and may be driven from the face of the earth by force of prayer. If, taking none of these precautionary measures, you happen to die with a Skrat in your possession——

All things considered, it is better to have nothing to do with a Skrat.

THE MEANING OF A. 1.

By WILLIAM TIREBUCK.

1.

MY Boyhood had its blithesome dreams,
Scarce knowing why it dreamt,
And leapt from violent extremes
Of longing and attempt.
It tried, it failed, yet dim success
Allured me on and on,
I then could feel but not express
The meaning of A. 1.

2.

My Youth had dreams—how fair and clear
Those dreams by dreams defined!
In dreams I drew achievement near,
In dreams I dimly pined;
In dreams I dallied with success,
But when the dreams had gone,
Alas! I really knew the less
The meaning of A. 1.

3.

But Manhood shook itself awake,
The dreams to deeds it turned—
And still my manhood strives to make
For what in youth it yearned:
It sometimes fails—but oft succeeds,
And life, still luring on,
Now makes it clear, through noble deeds,
The meaning of A. 1.

JACK'S PRAYER.

By HERBERT JAMES.

IT was a cold winter's evening; the wind was keen and biting, and the ground covered with a thick mantle of snow.

Two children, clothed in rags, were walking wearily along the streets.

Jack and Maggie were orphans and homeless; they had no one to care for them, and nowhere to rest.

They sadly missed their mother, who had died about two months before; but they had not forgotten the lessons she had taught them, and they would sooner have starved than have committed a dishonest deed.

Presently Maggie whined, "Oh! Jack, I can't go no further. I'm so sleepy, do let me lie down;" and she pointed to a broad doorstep.

"No, Mag," answered Jack in his bravest tone. "Just walk a bit further, and we shall be 'gainst the shops; p'r'aps I can sell some lights, and get you som'ut to eat."

So they pushed on till they came to the chief thoroughfare, where all the shops were brilliantly lighted up, and the owners were plying a brisk trade.

But, somehow, every one was full of his own business, and Jack's oft-repeated request, "Buy some lights, sir," was unheeded and unanswered.

Jack and Maggie were both staggering from fatigue, when their attention was arrested by strains of music.

A few steps further on brought them to the front of a large and comfortable-looking church.

Cautiously and carefully they made their way to the entrance, as if they were afraid of being discovered, and breathlessly they listened to the beautiful singing. So engrossed were they that they did not notice the approach of the chapel-keeper, and started guiltily when a voice said, "Well, and what are you doing here?"

"Please, ma'am," replied Jack, "we are so cold and tired, and the singin' is just lovely; we won't do no harm if you'll let us stay a bit."

"Well, well," said the woman, "if you won't make a noise, you shall go in;" and to their great delight she led them into the warm church.

The minister was holding a "special service for the young," and happened to look up as Jack and Maggie were brought in.

The two children were entranced by the singing, and Jack summoned up courage enough to whisper in awestruck tones, "I guess we're 'most nigh heaven, Mag; but I ain't seen mother yet."

The minister seemed purposely to bring his sentences down to the level of the two little waifs' understandings, as every now and then he looked their way, and noted their eager faces and rapt attention.

His eye rested upon the two poorly clad children at the back, as he said, "The beautiful mansions which the Lord Jesus Christ has gone to prepare for those who love and serve Him here below are not for the rich only, but quite as much for the poor; and although some even in this church may know what it is to feel cold and hungry, yet the Saviour knew Himself what it was to suffer when on this earth. He loved us so much that He died the death of the cross, that we might obtain an entrance into the heavenly kingdom. If in times of trouble we pray to God, for Christ's sake, to hear our prayers, He will not turn a deaf ear to our requests, but will hear, answer, and bless. We can draw nigh unto God as unto a loving Father, and tell Him just what we want."

Another hymn, a short prayer, and the service was over. A kind voice said, "You have been very good children, and may come again; but you must go now." So Jack and Maggie, all bewildered, went forth into the darkness again.

Jack had left his small store of matches behind, which the good-natured chapel-keeper discovered the next day, and wished she could restore; but little Jack neither cared for nor thought about his lights, as he eagerly dragged Maggie along, saying, "Mag, let's get to a place where we can pray as the good man said."

So hand in hand they went forward until they came to a back yard. Finding the gate open, they stole into the yard, and shut the gate.

Jack spied out a hand-truck, and pulled an old sack under it, and they both crept beneath this shelter. Then Jack knelt down, and Maggie too, and the stillness of the night was broken by Jack's weak voice, as he lisped forth this prayer: "O God, the good man said if we prayed for Christ's sake, Thou would hear us. Maggie and me is so tired, and we haven't no one to love us; but mother loved us, and the good man said Jesus loved us. They are both in heaven. Please take Maggie and me to heaven to be with mother and Jesus, for Christ's sake. Amen."

"Amen," echoed Maggie.

Poor children, they did not know that even on this earth they might hold communion with the Lord, and feel His presence with them.

So they laid down, and, entwining their arms about each other's necks, they fell asleep.

The morning dawned, but Jack and Maggie did not stir; and when the owner came into the yard, he found two children under his truck, locked in a close embrace—asleep, he thought; but when he called, they did not move, and, stooping down, he found they were stiff and cold.

Jack's prayer had been answered.

THE COURTESIES OF DAILY LIFE.

HOW pleasant it is to be brought into contact, even for a few minutes, with courteous, considerate people, and how very unpleasant it is to have to do with rough, uncouth ones.

Like oil to the wheels of a machine, keeping in motion the wondrous mechanism, and causing the necessary movements to be made without noise or friction, so is a courteous manner in the conduct of business or in the discharge of the duties of daily life.

The great social life, in which men of many minds and diverse interests are often clashing and contending, could not go on one single day were it not for courtesy and consideration, even when in competition with each other. Travellers in a railway train, an omnibus, or at an hotel, meeting perhaps for but a few minutes, feel the value and know the power of courtesy. A man does not sacrifice his independence by being obliging; and there is no reason why working men of all stations in life should not cultivate a gentleness of manner and a consideration for the wants and feelings of those about them. Because a man is poor, he need not be uncivil; because he is a hard-working mechanic, he need not be rough and rude, marching through the world with his arms "a-kimbo," by his actions declaring, "I care for nobody, and nobody cares for me."

Courtesy dignifies and exalts true manliness.

RECIPE.

A VERY STRENGTHENING BEVERAGE.

SCRAPE up, or cut up very finely on a plate, so as to lose none of the juice, half a pound of raw beef (a piece of the neck will do). Put it into a jar, with 2 gills of cold water, rinsing the plate with it, so as to get up all the goodness of the meat. Let it stand for a couple of hours; then plunge the jar into a saucepan of boiling water until the juice is just boiling. Beat up a fresh-laid egg in a cup. Stir up the essence of meat in the jar, and pour it over the egg; stir it well, and serve warm. The yolk only can be used, if preferred. The meat that remains can be boiled up with a bone or two, and will make a cup of good broth.

REMEMBER TO—

USE your brains rather than those of others. Think nothing in conduct unimportant or indifferent.

Try to see yourself through the eyes of those around you.

Learn to say No; not snappishly, but firmly and respectfully.

Avoid passion and excitement; a moment's anger may be fatal.

Trust no secrets to a friend which, if reported, would make an enemy.

Work to-day, for you know not how much you may be hindered to-morrow.

Pay your debts while you have the money in your pocket with which to do it.

In private watch your thoughts; in the family watch your temper; in company watch your tongue.

Carry sunshine in your own heart, and, like the perfume of flowers, it will breathe a fragrance everywhere.

Show your respect for honesty in whatever guise it appears, and your contempt for dishonesty and duplicity, wherever found.

CRISP CORRESPONDENCE.

Dover.—We thank you most sincerely for your hearty congratulations as to our Paper,—and warmly reciprocate your desire "that it may be the means of setting many a young man firmly on the Rock, as well as of strengthening your own faith in Him who was your perfect Sacrifice." We are glad that you think it THE Paper for the present day. Specimen copies have been very gladly sent by the Secretary to all the addresses given. Shall be glad to supply these to any other friends.

Irene Stewart.—We regret exceedingly that under this *nom-de-plume* we have received a letter to which it was impossible to reply in our July GAZETTE, as it had already gone to press. It is not our custom to transcribe letters sent to us, but we feel led to give *in extenso* this communication, trusting it may serve as a timely warning to some of our younger readers, not to seek spiritual help from Roman Catholics, nor to be deluded—as, alas! this writer has been—with the fallacious idea that rest of soul can be obtained by union with any Church,—certainly not with so corrupt a Church as that of Rome. The tyranny that would forbid the reading of a Protestant Paper, is of itself too palpable to call for comment. If it were not a dark and corrupt system, it would not fear the light. We can now only pray that our dear sister, through the great goodness of God, may some day be delivered from the terrible bondage under which, even now, she must be groaning. The following is the letter referred to:—

"I wonder whether you remember me; I wrote to you a year ago. I was then very uncomfortable, through the accidental reading of your Paper, A short time after that I went away from home to stay, and during that time became introduced to a number of people belonging to the (so-called) Roman Catholic Church. They soon found out that I was very unhappy about my soul, and brought me to their priest, who is now preparing me to be admitted into the Catholic Church on the sixth of July. I am longing for that day to come more than I can tell you, for at last I shall get peace and happiness. Could you spare me a corner in your Magazine to say you will think of me on the sixth, even though I daresay you will not quite sympathise with the steps I am about to take? This is the last time I shall be able to write to you; and the July number of the GAZETTE will be the last Protestant paper I shall read, as the priest, I know, will not allow me to have any correspondence with heretics."

Recreation.—(1) We think that handwriting is, to a very large extent, an indication of character, though not an infallible one. (2) It would not be right for any young woman in business to encourage conversation with a gentleman during business hours, and in her house of business; certainly not without permission. (3) It is not right or womanly to accept presents from any young man who is not a recognised friend of the family, unless they are rightly and straightforwardly intended to convey something more than ordinary friendship. (4) There would be no impropriety in a young woman having a country walk alone, before business hours, in the summer time, provided it were taken in a neighbourhood thoroughly respectable and suitable.

INQUIRIES.

M. G. asks for mnemonic of the sovereigns of England, in their order, beginning, "When will his stupid head remember," the first letter in each word being the first letter of the name of a king or queen.

Lucy writes to ask the origin of eating hot cross buns on Good Friday, and fish on Ash Wednesday.

BRITISH INDUSTRIES.

By Henry H. Bourn.

NAIL-MAKING AT HALESOWEN, AND CHAIN-MAKING AT CRADLEY.

THE question of female employment is admittedly a difficult one to deal with. It would be an easy task to find women and girls following employments in different localities altogether unsuited to their sex, and which must be expected to produce disastrous results, both physically and morally. In London, thousands may be met with at wharves, sifting ashes; in factories, amidst the injurious fumes of poisonous chemicals; in small, ill-ventilated, or draughty buildings, making sacks; and in open sheds, chopping and bundling firewood; and at scores of other no less unsuitable employments, for which they are inadequately remunerated, and by which their health must be seriously injured.

There is something very significant in the name given to the district extending from Birmingham to Wolverhampton, and from Walsall to a few miles west of Dudley, —the Black Country,—as any person may see who chooses to visit it, and take a stroll between the natural and artificial hills, which abound in every direction, or along the narrow, ragged-hedged lanes, which lead nowhere in particular. The jaundiced canals, crowded with boats; the tramways, almost covered with inky mud; railways, crossing and converging in every direction; blast furnaces, towering sky-wards, and belching forth huge volumes of smoke and fierce, throbbing flames, accompanied by inward groanings, as though the monsters were labouring for breath; the hundreds of chimneys, displaying their brazen crests or sheaves of fiery tongues; gibbeted black colliery wheels; dilapidated engine-houses, and cottages, sinking on one side into the undermined earth; the immense mounds of iron-stone undergoing the process of roasting; and hundreds of smaller mounds of coal being converted into coke; the rattle and whirl of machinery; the hissing and rushing of steam; the shrill whistles attached to innumerable boilers; the shock of ponderous hammer strokes, and many other strange sights and sounds, give the locality a unique character.

The nail and chain-making industries are carried on at the western side of the district, in Dudley, Netherton, Bowley, Lye, Lye Waste, Cradley, Sedgley, Halesowen, and other places in that neighbourhood, which is located near to some of the most beautiful scenery met with either in Staffordshire or Worcestershire. From some points, a range of green swelling eminences may be seen rising, beyond which others may be noticed, rising still higher. Beyond those again, and considerably more distant, and much bolder in the outline, may be seen the lofty range of the trap hills, until one of the number, roughened by the tufted woods, is crowned by the obelisk at Hagley, which is near the far-famed Leaseowes of Shenstone; while, in the far distance, the undulating line of the mountains of Cambria can be distinguished.

Various influences have effected a marvellous change in the lives and homes of many; still, much abject misery and uncomplaining suffering are endured by a large number of families.

Nailers' strikes have been very common, and some of them have been unreasonable; but others have been caused by the impossibility of living on the wages received. There is always a considerable amount of underselling amongst the masters; but, unfortunately, it is at the workers' expense.

Wrought nail-making, and the allied handicrafts of chain and rivet-making, are amongst the oldest industries of the "Black Country," and may be said to be carried on in a manner peculiar to those trades.

In most industries the work-people are assembled in factories, and controlled by overlookers; but in nail-making, the work, which is of hand labour, and done by the piece, is performed at the workmen's own homes—wives, sons, and daughters often assisting. The nail-maker's connection with his employer is a somewhat slight one. Each week the worker receives from the "fogger," as the middle man is called, a certain quantity of iron rods in bundles, and is expected to return a given quantity of nails,—long experience having taught both parties what quantity ought to be returned in the shape of manufactured goods.

What sort of a home the nailer's must be, with the wife and mother toiling in the forge from morning to night, and what sort of children they will be who are left to run wild, may be more easily imagined than described. The same remarks will apply to chain and rivet-makers. The effects of serious interference with female employment in the nail and chain-making districts would, according to the estimate of some people, be absolutely ruinous. The patriarchal character of the system under which the members of a family work together, in their own little shop, under conditions of freedom impossible in factories and workshops, that come under the purview of existing Acts of Parliament, has its admirers; and it cannot be denied that, despite some obvious disadvantages, it has something to be urged in its favour.

It is estimated that there are as many as 10,000 nail, chain, and rivet-making shops in the district, which has Dudley for its centre; each shop having from one to four fires, or, more correctly, anvils, as, in the majority of cases, two or three men and women make use of the same fire, although they work at different anvils. Of those who work in these shops, it is estimated that about one half, or from 10,000 to 12,000, are women and young people, 6,000 men, and 4,000 children—the latter under fourteen years of age. It is appalling to think of such a number of married and single women of all ages, with boys and girls of tender years, being compelled to accept a lot like this, and that for a miserable pittance of three and sixpence, or from that to six shillings weekly.

At a public meeting held in the neighbourhood, it was stated that there were thousands of women in the districts of Halesowen, Rowley, Blackheath, and the Lye, working at the "divers" like men, and working intolerably long hours, making large nails, bolts, and chains; and that the average earnings of the women and girls could not be more than three and sixpence or three and ninepence weekly. It was no uncommon thing for them to be working until ten or eleven o'clock at night. It was found, further, that at the prices paid, a man and his wife had to work hard to keep themselves.

The "diver" is a large striking hammer, weighing from ten to forty pounds; it is kept in a vertical position over the head of the operative by a spring, and is brought down by a sharp and quick step on the treadle, the result being that the entire weight of the body is thrown upon the left leg and foot, while both hands are fully engaged. The strain and jar resulting from such work are altogether unsuited to the delicate and undeveloped physical structure of young women and girls.

Another evil connected with the nail-making business, in some of its lowest phases, is the custom which prevails amongst the most poverty-stricken and drunken, of buying bundles of iron, and, after making the same into nails, hawking them from one "fogger's" shop to another, until a small sum has to be accepted, or an exchange is made for bread and groceries. It often happens that the cost of the iron is scarcely received for the nails which have been made from it.

The knowledge of such facts, in conjunction with others, leads us to observe that one of the greatest evils which nail, chain, and rivet-makers have to contend with, is the "Tommy shop," or the Truck System, in its cruellest and most oppressive forms. In the district there are about two hundred "foggers," or middle men, the majority of whom sell groceries, flour, and provisions generally; some are connected with clothing establishments, and not a few deal in tobacco and intoxicating drinks. In some cases, where public-houses are kept by "foggers," every inducement is placed before those who work for them to spend a portion of their hard-earned wages in strong drink, and, what is far worse, force is frequently employed to accomplish their ends in the following manner.

On Monday morning, those who go to the "fogger" are told that the iron has not arrived. The poor nailers, hearing this, sit down and have some beer on credit. On Tuesday morning, the men make another call, but only to be told that, by some unaccountable cause, the iron has not yet arrived. More drink is consumed, and the score increased, with the understanding that it shall be paid before the end of the week. It frequently happens that the workers are kept out of iron till Wednesday, or even until Friday.

We have seen women and girls making spikes out of $\frac{1}{2}$-inch and $\frac{5}{8}$-inch iron, six, seven, and eight inches in length, and at heavy chain work. As this is followed up from early morning till late at night, it is impossible for such workers to fulfil their mission as women. Notwithstanding the exhausting labour, the extreme poverty, the over-crowding, and the manifold evils which affect nail and chain-makers, it is pleasing to note that the moral condition of the entire district has considerably improved during the last few years.

THE DOUBLE MURDERER.

IN one of the large towns in the North of England, a man was once sentenced to death for the crime of two murders.

Knowing that his time was short, he sent for the Minister of the Unitarian Chapel which he had attended, and said to him, "What am I to do? Tell me! I am a murderer! I have but a few days to live. What shall I do?"

The Minister was speechless. There was no moral life to trust in; there were no good deeds of benevolence, no acts of contrition to point to; he could tell him of nothing. Christ, the good Man, was to him only the model of a pure and virtuous life.

This so pressed upon the Unitarian Minister that he went home in despair, and in great agony of soul set to work to search out from God's Word for himself what he could tell this man to do. Gradually there was unfolded to his heart the precious gift of God to man—the sinner's Saviour—

> "That wonderful redemption,
> God's remedy for sin;"

the only hope set before a guilty, lost, ruined man. This ended in his coming himself as a sinner to the crucified Jesus, and finding in Him life and peace

THE ASTONISHED SLAVE.

A BRITISH merchant, who had taken his passage in a Turkish vessel on the Levant, had his attention drawn, during the voyage, to an interesting slave, a Mussulman. He soon got into conversation with him, and found him intelligent, quick, and of strong, lively affections. He drew from him some particulars of his history, and found that he had been free-born, but had been made captive in war. The merchant was touched with sympathy for this helpless captive. The more he knew of him, the deeper was the interest he felt in his welfare; and he actually began to entertain the thought of effecting his release.

Cautiously inquiring as to the sum requisite for this purpose, he found that it was considerably greater than the mercantile profits of his entire voyage. Still he could not abandon the thought. An offer was at last accepted; but the slave having over-heard part of the conversation between the captain and the merchant, and mistaking the design of the latter, he sprang forward, his eyes gleaming with indignation, and cried out, "And do you call yourself a free-born Briton, an enemy to slavery, and yet purchase me? Have I not as much right to freedom as you have yourself?"

He was proceeding in this strain of burning, indignant invective, when the merchant turned his eyes affectionately upon him, and said, "*I have bought you to set you free.*" Instantly the storm of passion was hushed; the slave burst into tears, and, falling at the feet of his deliverer, he exclaimed, "*You have taken my heart captive! I am your slave for ever!*"

Reader,—When first you heard of One who wished to have you for His own, did you rebel, and oppose His purchase? How little you realised it was out of pure love for you! Does not your heart break, as you think, "to set you free" was the price paid; and can you but say to the One who paid His life for you, "I am your slave for ever"?

"MUST WE NOT WORK OUT OUR SALVATION?"

SUCH a question is often asked by the anxious, as well as the careless. Sometimes it is put in this form—"Does it not say in the Bible that we are to work out our salvation? How then can you reconcile that with the statement that we have only got to believe in order to be saved?"

Wait a moment. When you ask, "Does it not say we are to work out our salvation?" whom do we mean? Do you mean every person—the saved and the unsaved? Look at the Epistle, and see to whom it is addressed. (Phil. 1. 1).—"*To all the saints* in Christ Jesus at Philippi." They were *already saved.* They did not *hope to be saved*, they knew *they were saved.* To them, says Paul, "My beloved, . . . work out your own salvation" (Phil. 2. 12, 13). They were already in possession of it. "Your own" implies possession. They were to "work out" what God had already *wrought in.* This Scripture clearly has no reference to the *unsaved.* The unsaved cannot work out their salvation, but we find a very clear message for them. "*By grace* are ye saved, . . . *not of works*, lest any man should boast" (Eph. 2. 8, 9).

A FALL OF SOOT.

A TOWN missionary commenced his work one morning with a difficult question pressing for settlement. A lady, whose consecrated wealth made her a valuable ally in his work, had told him of the death of an old *protégé* to whom she allowed a small weekly sum of money and other benefactions, and asked him to find, amongst the poor families he visited, a worthy successor.

The choice was difficult, and he was asking for guidance from the "Counsellor" who had so often helped him in perplexing decisions, but the morning passed away without any clear indication.

After dinner, he went into a more respectable neighbourhood, and called upon an old couple whose little home seemed always the very ideal of comfort in its exquisite neatness and the bright Christian contentment of its inmates.

The old woman's face was a little pale that afternoon, and, he thought, a little care-worn; but her husband had his usual bright smile and cheery word of welcome for the missionary, and very soon they were seated to listen to a few words from the Book they loved so well—the selection that day being from the 8th chapter of Romans. But as their friend reached the 28th verse, the old man leaned eagerly forward.

"Excuse me, sir, but to my mind, it is difficult to see how that can always be. Now to-day there was a little thing happened about our dinner; you need not shake your head in that way, Betty, it will be a relief to tell the missionary, for it puzzles me a good deal.

"You see, sir, we had nothing in the house but a few cold potatoes,—for it's little enough that we have to do with,—but Betty, in her clever way, was frying them, and making them quite tasty with a little dripping, and the soot fell and spoiled them, so we had to go without our dinner; and I can't quite see how that's to work for our good."

"Then I can tell you, my dear old friend," exclaimed the missionary with emotion. "I am looking out for a suitable case to recommend for weekly help from a kind lady. I should never have thought of you, supposing you had a comfortable provision, and this fall of soot has been the means of letting me know the truth."

We need not say that the old couple thought the missionary the most satisfactory commentator they had ever consulted, and never again did they come to any problem in the circumstances of their life without remembering the "all things working together" and the fall of soot.

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow," "Corbiestanes," "Our Navvies," etc., etc.

"A simoon might have swept through the place."

CHAPTER XII.

BRIGHTER DAYS DAWNING.

NO one came near. The sunset faded, the room was dim when the Vicar returned, but it was empty. Martha said she had found Rebecca in the hall an hour before, "fum'ling at t' door as if she were dazed, and it was all t' lass could do to stand. She'd her hat on, and her bag were on t' floor. So she, Martha, had taken her up to bed, and made her drink some hot tea."

John Burleigh guessed that Rebecca's bodily misery had touched the kindliness of Martha's nature; and though she had no pity for sin, no sympathy for mental pain, physical weakness did not appeal in vain to her woman's heart.

The girl came down the next afternoon — Martha would not permit it before— looking much shaken, and with the hunted terror gleaming in her brown eyes at every sound, and her glance fixed on the dining-room window. For an hour the Vicar paced backwards and forwards on the garden path, and the sight of his figure and bent head only enabled her to repress screams. At last the rattle of a dog-cart, and the Vicar hastened to the gate. Instead of a jovial, go-a-head, determined man springing down, a man came forward to meet him, whose coat hung upon him with the burden of ten suddenly-added years weighing him down.

He silently wrung the Vicar's hand.

"I must see her at once, sir."

"She is in there."

"This is a heavy trial, and one we never thought to see. Please come with me, sir."

Rebecca was cowering in a chair, grasping the arms with her hands, and with her terrified, ashen face, turned to the door.

The man stood a moment gazing at her, and then opened his arms.

"My bairn, my bairn—my little lass, come to your daddy."

John Burleigh closed the door, and went

to his study. Half an hour afterwards he heard their footsteps, and rose to welcome them.

Luke Sugden held his daughter's hand. and led her as though she was a little child,

"Sir, my girl tells me she has a big box of clothes in London at this address, and—turn out the other things, Beccy."

The girl opened her bag, and placed on the study table bracelets, brooches, necklaces, and rings, in a costly pile.

"Is there anything more, my lass?"

"Only my watch."

"Put it to 'em."

She placed a gold watch and chain beside the rest.

"There, Mr. Burleigh. All my life long I've been striving for brass, and brass's worth. My lass has inherited it from me."

"No! father, no!"

"Hush, my bairn. I've sown the wind, and I've reaped the whirlwind. There's some hundreds of pounds' worth there, sir, and but for you my Beccy would have lost her soul for it. She's coming home to nurse mother. Mother will be glad to see her, though all she can say is 'Beccy.' She's sensible enough. All our folks think I've gone to London to fetch t' lass. Not one on 'em knows but mother and me about her. My lass is coming home, but naught of t' old life is coming with her. I'll buy her another gown as we go through Castleborough. Now, Mr. Burleigh, will you get her things in London sold, and these, and do what you like with t' brass?"

"Yes. I will give it to a lady whom I know—Mrs. Butler. She will use it to save others lost as yet, but whom she is seeking for Christ. But there is one whom Rebecca must save."

"Me, sir? I am not worthy."

"Yes, you, and you only. The girl you lived with. Will you do this?"

"I will, sir." And the girl lifted her head, and there was a gleam of hopefulness in her brown eyes.

"Let us pray!"

And with the touch of Christ's hand upon them, Luke Sugden led his daughter from mad John Burleigh's house, and saw him no more.

Hardman had returned to London and to his old quarters. He did so from mere force of habit, but he had not been twenty-four hours in his former environments before he felt their uncongeniality. His bachelor's rooms, luxuriously furnished, reminded him of a life of self-pleasing and low aims, which made him intensely uncomfortable.

He ordered a fire to be lighted, and employed himself for the rest of the evening with "making a clearance," which surprised and secretly disgusted Smith, who gathered up from the floor maps and papers, and torn notes, invitation cards, boxing gloves, broken foils and guards, statuettes which had cost pounds, and which one sweep of his young master's hand sent shivering to the floor; and who saw dozens of costly photographs cast into the flames. If his master no longer wanted them, why could he not have ordered him to remove them? He could have made a comfortable sum from these perquisites, and now they were worth nothing.

It was ten o'clock before the work of destruction was complete. A simoon might have swept through the place; the old *régime* had passed away, but the new had not yet occupied its place—it was a reign of rigidity. Hardman, who was intensely sensitive to surrounding influences, set his teeth.

"At all events, the place is clean," he said, and then he ordered his brougham.

As Smith gave the address to the coachman, and as he returned to the wreckage upstairs, he shook his head several times and thought aloud,—

"Here's a pretty go! I never saw such a havoc made in a room before, in all my life! Master won't be home in a hurry. I'll just slip round the corner for an hour."

Fortunately for himself, not finding any congenial spirits "round the corner," Smith presently returned, just in time to attend his master, who came in looking pale and worried. He was out constantly for the next few days, and his servant could give no information as to his movements. Invitations poured in, but were disregarded, or at once refused; and yet Smith noticed his master had apparently not a moment to spare.

Lady Susan Stopham was waiting for the carriage to draw up at the steps of St. George's Hospital. She had been visiting one of the servants who had slipped on the polished staircase of Azerley House and injured her knee. Lady Susan found time for many a kindness such as this in all the rush and whirl of her London life, and any such little expedition sent her home with a brighter face than she brought back from a *fête*. A gentleman who was passing waited for her to enter the carriage, and raised his hat.

"Mr. Hardman!" exclaimed the girl, with a gesture of welcome. "I trust you feel no ill effects from your unfortunate accident?"

"My most fortunate one, rather, Lady Susan."

"Why, how so?"

"It has altered the course of my life, which, I grieve to say, was a downward one. I am, and always must be, intensely grateful to Lord Markham for taking me to the Chase,—and still more so for leaving me there."

Lady Susan flushed; she leaned forward.

"Will you not come and see us?"

"Gladly. When may I call?"

"Will this afternoon, at five, do? We shall all be in then, and so glad to hear anything you can tell us of our people at Houghrigg."

And so, with a smile and bow, she drove away, and Ralph Hardman thought he had never seen a sweeter face. He had frequently met the Ladies Stopham, but the eldest sister had hitherto attracted him the least of the three; suddenly he felt himself in sympathy with her, and yet the few "common-places" which had passed between them were not of sufficient moment to account for this mutual interest. Whatever it was which drew them together, this little meeting sent the young man with a lighter heart on his self-imposed and most trying search,—one in which, though the person for whom he sought ever eluded him, others equally needing the uplifting and the redemption of which he was the weak bearer, constantly crossed his path.

In these few days his life had become crowded with interests, and all these outside himself. Being light-hearted, and cheerful by temperament, and enjoying robust health, a life of pleasure, which he thoroughly enjoyed, had hitherto occupied all his time and attention. Yet even in it sometimes he had wearied, and gloomy moments came, and had to be banished in a fresh dissipation. To pass his time agreeably to himself had been the sole object of his existence. Now Ralph Hardman found the world was not such a gay affair as it had seemed. The class to which he belonged, rich and pleasure-seeking, whose most poignant griefs were the consequences of self-indulgence, he found to be, after all, a very small fraction of the great human family which inhabited London. He was brought face to face with many phases of existence of which he had never dreamt. He saw men and women enduring poverty of such a kind as he had not imagined possible, and taking its miseries with the hopeless submission of a life's use. He saw greed and cruelty everywhere pushing the weakest to the wall. He was beginning to comprehend how some tradesmen made their big fortunes, and rose from the lower stratum of society to match with the highest. He went down into the "dregs" of society, the bitter dregs precipitated to the bottom of the cup by the greedy, the ambitious, and the pleasure-seekers. And as he saw the cannibal fight raging around, his heart grew hot within him. His indignation prompted him to curse the blindness of his former perception. How should he redeem the time now gone for ever?

The past was past, and he had, in a hundred ways, helped on the foul wrong. The question was answered—"Thou art the man." Traced to their source, the sorrows of the greater part of the world were the result of sin, of selfishness, the direct outcome of such actions as his own had been. He was humbled. Moreover, he was raised, for he was being drawn out of his own interests into the sympathies of the great brotherhood of humanity. He was already experiencing the fellowship of Christ's suffering; the knowledge was painful, but ennobling.

Ralph Hardman, the man who had spent his time at the opera, the race-course, the theatre, the ball-room,—in yachting, shooting, hunting, and a dozen more questionable ways,—was now rapidly becoming a Communist; but in the only true commune—that of Jesus Christ. He was not a man to sit still and regret. As he became, as weeks went by, accustomed to the darkness, he saw here and there sparks—centres, rather—of light. Others had felt as he did; others had been before him in the work of redemption. Men of his own class, but whom he had not known and seldom seen, men whose names he had always heard coupled with a sneer, he found there; and others of lowlier station, of whom their next-door neighbours, and their own brothers and sisters, know next to nothing. A brave band, battling with vast, but not overwhelming odds, for they were animated by the old faith which made Drake beat the Armada, that it was an impossibility to be vanquished, for stronger was He who was with them than all the combined forces against them. He had found an outlet for his gratitude, an object to be attained, and he threw himself heart and soul into the cause of which the Christ was the Captain. He might have done better if he had not been quite so precipi

tate, quite so sure, quite so trustful. But he had to learn, as well as to conquer, through suffering. The more deeply he loved, the more keenly his heart ached.

So it was that with the relaxation of a loosened tension, he sat that afternoon in the smallest of the beautiful drawing-rooms of Azerley House. The windows looked on to the park. The grand trees and green-sward reminded him of the Chase; no roads or paths were in sight, and the privacy of this corner of mighty London was unique. Palms, gigantic ferns, and almost beds of flowers, made a garden of the room. Some other visitors were there, but Ralph Hardman did not find it very difficult to secure a seat by Lady Susan; they were sufficiently removed from the others to be practically alone.

"You called your accident fortunate this morning. It was a rather singular expression. Am I too curious in asking why you used the word?"

"Not at all; and the answer is very simple. My accident was the means of bringing back to me the friend of my school-days—I may say rather my hero—and now I trust this recovered friendship will last my life. But that was not all."

Lady Susan did not speak, but the flush on her cheek and the sparkle in her eye asked him to proceed.

"That fortunate accident was the means used by a Divine Friend, of whom till then I knew nothing, to show me Himself."

"I am *so* glad."

The happy ring in the girl's voice opened Ralph's heart still further.

"Thank you. Do you know I feel as though I were back with Jack again—Mr. Burleigh, you know, your Vicar at Houghrigg."

"Was *he* your boyish hero?"

"Yes, and my manhood's one too. God bless him. He *is* a grand fellow."

"He is indeed," said Lady Susan, softly.

"Not at all," continued Hardman, with boyish enthusiasm, "like other men though. He is so grand, because he thinks nothing of himself—makes himself less than the least. Jack is so unlike every one else, he is simply magnificent."

"Whom do you say that of, Hardman?" inquired the earl, strolling up with his cup in his hand.

"Your Vicar at Houghrigg, Mr. Burleigh."

"Ah! He is a fine fellow, but not a little mad; totally unlike the rest of the world."

Lady Susan and Ralph Hardman exchanged a quick glance, and then joined in a smile. That smile was a bond of friendship.

From that day Ralph Hardman became a frequent guest at Azerley House. He, like his friend, found it very pleasant to discuss his plans, and clear up his perplexities with Lady Susan. Her clear common sense and love of humour reduced his mountains to molehills, and sent him back to his tasks with a cheerful heart. He was full of enthusiasm, too, and lavishly profuse in his expenditure. Afore time he was cheated out of his money, and threw it away on follies often, and sometimes sins. Now each good cause seemed to him the best possible; and Lady Susan Stopham's wise little head frequently steadied his judgment, and taught him to think before he acted.

The Countess of Azerley threw no obstacle in the way of the two being together, and quietly smiled when the earl remarked,—

"Young Hardman, I hear, is free from all his *embroglio*—given up the turf and everything of the kind. He is constantly about with Inverness, who is a second Shaftesbury. I cannot understand so young a man taking up such fads."

"They certainly are not in some ways to his disadvantage," returned Lady Azerley; "though it does seem absurd to be so over religious. Susan is growing quite *exigante*. I am thankful Charlotte and Di are not like her. However, Mr. Hardman, I suppose, saves his money by it."

"I am not so sure of that. I heard him discussing some wild expenditure with Susie this evening; but in any case he is very rich—he was a long minority. I wish I had a hundredth part of his ready money. By the by, he and Susie seem great friends. I suppose, Diana, you have no objection?"

"Not the least; in some cases it is best to permit young people to manage their own affairs."

"Ah, just so. Well, I must own such an arrangement would be acceptable to me. Hardman would not require any settlements on my part; anything of the kind would be extremely inconvenient just now."

"Besides which," remarked the Countess, languidly, "did it never strike you, Oliver, Susan and Mr. Burleigh were a good deal together at the Chase?"

"Absurd!" cried the earl, starting up and standing with his back to the empty fireplace. "Ridiculous! Why, I have heard, on the best authority, he has given up his heirship to his brother, and that old Burleigh publicly, at the election the other day, spoke of the younger brother as the future proprietor, and urged this as a reason we should support his candidature. I should not listen to such a preposterous idea for a moment."

"Certainly not; yet, if Susie makes up her mind to anything, she will carry it through. Therefore we cannot return to the Chase before we go North, as you wished."

"You are always right, Diana," said the earl, meekly.

He had a hot and somewhat tyrannical temper, the result of having been born a ruler; but his lethargic wife, with her cool temperament, could always, sooner or later, freeze him down to the "reason" point.

Both his friends wrote to the Vicar of Houghrigg pretty often, and he could not but observe how frequently they mentioned each other's names, or fail to notice the warmth of their growing regard. John Burleigh was but a man, and one who loved passionately; it is not in such a nature to wish to be second in any heart it claims as its own. Lady Susan was to John Burleigh the poor man's one ewe lamb; she was more, far more—not only the one girl in the world to him to be loved, and shielded, and treasured—she was his mate, the other half of his nature; his mind and affections alike found their supplement in hers; she completed his being. On earth, in all its shadows, and chills, and its struggles; in heaven, in all its sunshine and victory, she would be his other self; without her he must experience here an ever-present void, and he could not as yet understand how eternity even could fill it. Slowly there was growing in his mind a dull fear, which he hid away in the innermost recesses of his consciousness, and would not permit to show itself, yet a dread which was steadily growing, and threatened any day to burst its cell door, and step forth and face him in the daylight, and confront him in all its ghastly reality. He had a kind of consciousness that no fiery trial could try him, in which he would not come forth more than conqueror by the power of that mighty Saviour, who long ago had also fought and come off victor in a greater conflict; and yet, though the day of struggle had not yet dawned, he shrank, and inly cried, "Let *this* cup pass from me," as his Master had done in the thick of the fray.

The weight of this suppression, and the chill of this foreshadowing, sent John Burleigh about his parish and into the quiet homes of his people with a gleam of anguish in his eyes which no one saw but little Mary Bradley; and she did not understand its meaning, but clung to his hand and ran after him, longing to be with him and to comfort him, though she did not know why. He did not put the thought into words, and yet it was there. Suppose Hardman should love Lady Susan? Suppose her friends should support his suit? It would be his duty to give her up perhaps; but need he do so to one whose past, though forgiven, was stained—his pure, peerless Susan?

CHAPTER XIII.

IN WHICH BOB CHATTERIS MEETS AN ACQUAINTANCE.

THEY were digging out the ironstone in the cutting. The cutting was in the side of the mountain. The men were sitting in groups, eating their dinner. Between them and the village rose the cone-shaped hill, crowned by the ruins of the Castle; beyond stretched the undulating country, and the bosky woodland of the Chase. The glory of the summer was over the land. It was a hot day; the delvers were weary, and ate in silence. Presently they tied up their empty basins, closed their knives, and drew out their pipes. As Bob Chatteris lit his, a voice said,—

"Got a screw to spare, mate?"

He looked up. Where had he heard that voice before? The stranger—a big, powerful man like himself—looked down upon him. Their eyes met, and a flash of recognition leapt from them. Bob Chatteris rose to his feet, his big right hand hung by his side clenched, till the veins stood out like cords on the back.

"Where is she?" he asked in a low voice.

"I don't know, and what's more I don't care," said the stranger savagely. The words were not finished when down he went—crash—on the floor of the cutting. A fight followed.

Suddenly the stranger sprang forward, seized Chatteris in his arms, tripped him up, and flung him.

Chatteris was soon on his feet again.

"Stand back!" cried he; "I've something to say to this chap!"

The men looked at the pale face and gleaming eyes; but the "blow up" just then sounded.

"Come along; it's no use losing a quarter, now they've settled it."

A few moments, and a blow from Bob laid his antagonist on the ground speechless.

Chatteris waited until consciousness returned, and the man, turning over with a groan, sat up.

"Hast thou had enough?" inquired Chatteris.

"Yes," answered the man sullenly.

"Where is she?"

No answer.

"Speak, or we've all this to go over again. Where is she?"

"Dead!"

"Is that a lie?" cried Bob with a gasp.

"No; it's true enough."

"Where did she die?"

"In Castleborough Workhouse."

"What! only eight miles from here, and me never to know?"

The man laughed.

"Oh, I beg yer pardon, sir; I should have sent for yer, only I wasn't there."

"You let her die by herself?"

"What should I have stopped wi' her for? She was a poor creature. I was rare and tired of her, I can tell yer. Catch me taking a woman again for her pretty face."

"When did she die?" asked Chatteris.

"Last Christmas."

"How long had yer left her?"

"Oh, a bit before."

"How long?"

The man looked at Chatteris. He seemed about to refuse an answer, but that glance decided him to speak.

"In August. I left her at Canty New Docks. I told her fair and straight I wanted no more with her, and she might suit hersel'. There were two or three, and one on 'em a ganger, that would have had her—bigger fools for it; but she outs wi' our marriage lines, and started crying; so I gave her something to cry for, and left her."

"You did?"

"Yes, I did, Mister Bob; wasn't she my lawful wife?" with a laugh. "And if that baggage didn't sell all up, and foller me about everywhere. I'd two good jobs to pack, because she came poking after me; but at last she caught me up at Castleborough. She came to my lodge, and said she were my wife; but I told them all she weren't, and down she went in a fainting fit; so I sloped off, and they took her to the Union, and she died there three weeks after."

The man had gone on talking with malicious gusto, for he had seen Bob sit down trembling on a fragment of refuse iron-stone. He prolonged his narrative, for he beheld his enemy cover his face with his hands. The stranger rose stiffly, and walked away. When he had got to a safe distance, he called back,—

"Good-bye, Bob Chatteris; don't forget the directions—Castleborough Union, last Christmas. They'll some on 'em remember her, if you ask after a young woman wi' no shawl on, and no boots to speak on, and a long cut mark on her left cheek, a given her by her own lawful husband. You'll find it all correct."

Bob sprang up, seized a lump of iron-stone, and flung it with deadly aim at the running figure.

THE HARVEST HOME.

By Margaret Scott Haycraft.

I.

AS husbandmen from the harvest field
To the harvest-home come we;
We bring no gifts—we do but yield
Thine own again to Thee.
We tilled the land when Autumn burned
The earlier leaves from the bough;
But Thine, O Lord, were the clods we turned:
We but guided the plough!

II.

The earth lay bare to the wind and snow,
Through many a winter gale,
Till the New Year's sun began to glow,
And the Old Year's frost to fail.
And then we took our lightsome load
And strewed it at every stride;
But Thine, O Lord, was the seed we sowed:
We but scattered it wide!

III.

And nourished soon by the dewier dusk,
And warmed by the sunnier day,
The life unwrapped from its earthly husk
Arose to the heavenly ray:
The blade grew up from the buried grain,
And the grain grew up from the blade;
But Thine, O Lord, were the sun and the rain:
We but waited and prayed!

IV.

And the ears waxed ripe, till the fields grew red,
And the harvest came at last,
And the sheaves were borne to the thresher's shed,
And the tares to the flames were cast:
And the flail rang out till the stack was heaped,
And heaped were bushel and bin;
But Thine, O Lord, was the corn we reaped:
We but gathered it in!

LEAVES FROM THE LOG OF A GENTLEMAN GIPSY.

By Gordon Stables, C.M., M.D., R.N.,
Author of "The Cruise of the Land Yacht 'Wanderer'; or, Thirteen Hundred Miles in my Caravan," etc., etc.

LEAF XVII.

HOW A GIPSY SLEEPS—"SOMETHING OUT OF THE COMMON: A FOREST SKETCH"—THE EVENING STAR—WAKED BY REED-WARBLERS.

ALTHOUGH, thanks to the amount of wholesome exercise a gentleman gipsy gets on the road, and the pure air he breathes, some sleep at night is easily obtained, still, at times, circumstances over which he has no control, arise to disturb his well-earned repose. I have been awakened at midnight by a sensation as if a full-fledged earthquake had been let loose, and opened the door to find a cow under the caravan, trying to lift it. Horses in meadows will sometimes try their heels on the under works early on a summer's morning. Bells and hooters are disturbing elements; but, as a rule, I am allowed to slumber in peace.

There was once a donkey —— Stay, I must tell my story in due form.

He looked a most intelligent and thoughtful and even handsome person by daylight, this donkey did, as he quietly browsed amongst the ferns and furze — well shaped, straight in back, sturdy as to legs, of a pearly grey colour, with zebra stripe and cross, and all complete. Now, I love a decent donkey; he is, as a rule, a badly treated and much maligned animal. He is likewise fond of thistles. So am I. I have the advantage of being Scotch.

Well, every now and then, this amiable ass, who, by the way, was tethered on a bit of common in the forest where I lay, would elevate his nozzle in the air and relieve his feelings with a "haw-hee, haw-hee," and an "ah-hee—haw!" But I thought nothing of that at the time. But lying on the coupé reading, I could not help wondering why donkeys do that sort of thing. Their voices are not very musical at the best, if they only knew it. Is it a lament instinctive for the days for ever gone, when their fathers roamed free, in desert and forest? Is it an appeal cibarious to our better nature and feelings? Is it ——

"Haw-hee! Hee-haw-hee!"

"Leave him alone, Wells. Don't chase or chevy the poor beast. He'll lie down and go to sleep soon, as all good donkeys do."

"Now came still evening on;" the sun sank slowly behind the trees; the blackbird itself ceased to sing at last; the cushant cooed no more, and bats took the place of errant swallows. Stars winked and blinked in the blue of the sky, and presently the moon would rise.

We had had a long day, and retired early, intent on rest and slumber. The donkey had retired too—apparently.

N.B.—I am deaf in my right ear, which is often advantageous, for by turning my left cheek to the pillow, I am to some extent out of the world.

However, I was just dropping off tonight, just forgetting myself in the beginning of a delightful dream, wave after wave of slumber was rolling over my brain like the swell of a sunlit sea, like——

"Haw-hee! Haw-hee—hee-haw-hee!"

I turned my deaf ear uppermost, and smiled defiantly as I tried to sleep again. But ever and anon, through every obstacle, there fell on my brain that wild "hee-haw!" worse to bear than the bells of Lyndhurst. Its very intermittency was its peculiar plague. Never mind, I would read; and, tired as I was, I lit my candle.

All through two weary hours I read and pondered. "Hee-haw-hee!" Did the brute—I called him a brute now—mean to keep on all night? "Hee-haw!" I should feel like a dead dog in the morning. "Hee-haw-hee! Haw-hee!" Flesh and blood could stand it no longer. I sprang from my couch and vowed a vow that the donkey—he should d—— No, not die: not so much as that. I would wander him. To resolve is to act—with me. That is the sort of person I am. I opened the front door, and slid silently off the coupé. There was no need to waken Wells. The moon was rising round and red and shimmering amongst the topmost branches of some dark pine trees, as I left the main road and stole quietly into the forest and through the ferns and past the furze.

No wonder the donkey sprang back in alarm to the full stretch of his tether. A tall apparition, in a robe of fluttering white, gliding towards him in the moonlight, must have been trying even to the nerves of an ass. There wasn't a "hee-haw" left in the animal now. In a few moments more we were wending our way together, amicably enough, down towards the gloomish depths of the forest.

There were two of us, some might be rude enough to remark. Perhaps. But my purpose was a settled one, and I determined to fulfil it, and did. "Go, poor beast," I said at last; "the world is wide enough for you and me too."

That relieved my feelings considerably, and relieved me of the donkey's presence at the same time, for he scampered off in the gloom, and I saw him no more.

I felt happy now. Balmy sleep should at last be mine, and dreamless, well-earned rest. For the life of me, however, I could not help thinking about the snakes as I started to go back. I had nothing on but thin slippers. And I have been told that snakes creep together in knots at night. Suppose I should trip over such a knot. Ugh!

At length, to my joy, I reached my glade in safety. *My* glade? No, it could not be; here were ferns and furze. Yonder were the pine trees, but where was the caravan? Then the terrible truth flashed over me. I was lost, lost in the dismal depths of the forest, lost with nothing on but—— oh, it wouldn't bear thinking about. I wandered about till quite bewildered. I tried to take my bearings from the moon, and got more bewildered still. For an hour and more I walked about, studying the trees, then I sat

Salisbury—the two old Gates.

down. I began to think about all the stories I had heard and read of people lost in the wilderness and prairie, and how they go round and round in a circle till they lose their reason, or faint and drop and die.

Flap, flap, flap—a great bird flew out of a neighbouring tree, and then, oh, joyful sound, I heard the deep-toned voice of Hurricane Bob barking behind the trees. I hastened in the direction, and in three minutes more I was safely on board.

* * * *

We came straight away from Lyndhurst here, but made a mid-day halt at Lymmington. It was jubilee day there, and the romantic and pretty town looked very gay in garlands and bunting, and greenery and flowers. But since I left home it has been jubilee all along, especially at Southampton. That was a wonderful sight, and we got into the very thick of it, and were crowd-bound for hours, but very willing prisoners. They say a man hardly lives to see more than one jubilee. Perhaps they are right, but we have seen four already, and I'm perfectly sure there are more before us. It was partly to get clear of jubilees, I resolved to come off the main south coast road down here. Why, long before we got anywhere near the village, we could see flags dancing crimson above the green of the trees, and presently came to the jubilee field itself.

There were crowds of gipsy caravans on the village green. Their occupants waved us welcome, and said they would make room for us ; but I had already found a field, through the kindness of a farmer I met by chance, and in a few hours we got stabling too, although we were fully a mile as the crow flies from the scene of the carnival.

Milford is only a straggling bit of a place, with rough, old-fashioned houses, and streets that are almost shingle. It is near the sea in some places, in others it is fields and fields away from it.

Long after the sun had gone down last night, I could distinctly see the white cliffs of the Isle of Wight. There was a pale scimitar of a moon in the west, and the evening star shone with extreme brilliancy.

There was not a hush or sound later on, —for the revellers had cheered their last cheer, and gone quietly home,—save the drowsy whirr of the partridges among the corn. Bats went flitting about, and white moths, that looked like butterflies' ghosts.

This morning, long before it was time to get up, we were awakened by the delicious melody of dozens of reed warblers.

LEAF XVIII.

A SKETCH FROM LIFE—LAZING BY THE SEA—ON THE ROAD TO BOURNEMOUTH MORE JUBILEES—SALISBURY—"A GENTLEMAN'S PRIVATE NOAH'S ARK AND PAIR'—OLD SARUM—STONEHENGE.

DOWN yonder, near my camping-ground at Milford, is a lane that divides me from the fields that go stretching away seawards.

Now, as straws will tell how the tide flows, so do the trees that grow around here show how the winds blow at certain seasons of the year. Here is a long row of stunted elms, the very sight of which, rising from the hedge beneath, and bending shudderingly over the lane, depresses one. And all have their backs turned towards the sea. No wonder that the thrush who dwells among their boughs sings, "Weary —weary—weary" all day long ; or that the skylark, who trills his song over the green corn yonder, cannot find it in his heart to fly very high when he looks at them. Why do they appear so bent and decrepit? Is it because, however balmy the June breezes blow, the wild winds that sweep from off the ocean in spring and summer are such that few trees can withstand them? Besides, the ivy, like poor relations who cannot support themselves, has crept up the trunks, and doubtless the snow lies at times deep on their bending backs. No wonder, then, they look weak, weird, and weary.

The hedgerow itself, however, is quite a relief to the eye. Nowhere is it high ; for any bush that grows therein, and has dared to aspire skywards, has been borne down in winter by the merciless winds. But in it is every wild bush, and flower, and trailing thing it is easy to imagine or think of,—all struggling for existence, each on its own account, yet apparently not sorry that its neighbour should live and enjoy the sunlight—a sweet comminglement of foliage and bloom. Stunted oak and elm bushes, and willows, in which the warblers chant their low, sweet songs ; blackthorn in abundance ; brambles not yet in flower, but to which hangs the woody night-shade, with blossoms in clusters of darkest blue ; nettles, dark and green ; tall spikes of the purple stachis ; mauve thistles ; brown-eyed seedling docks, and feathery grasses, with the bright orange of the birds'-foot trefoil peeping out from under ; ferns that give beauty to everything ; and high over all, draping the summit of this marvellous hedge, honeysuckle—bee-haunted honeysuckle, orange, red, and creamy white.

* * * *

The Sabbath day with us is always one of great calm and peacefulness. The very horses seem to know there is no weary drag for them when Sunday comes, and munch their oats or hay with quiet deliberation and lazy relish. They can lie down after breakfast ; that is a blessing. Every night of their lives they rest hock-deep in straw, even if my man has to walk miles for it ; but on the Sunday they have an extra soft shake-up. There is a greater treat than even this in store for them during the day,—a treat which makes them laugh to think about, or neigh, at all events. This is a walk out without the harness, an hour or so among the soft, green grass, and a paddle or roll in the river, or in water of some kind, if there be any within easy distance. It nearly always ends in both Cornflower and Peablossom having a wild scamper across a field or common, or a gallop along the road.

"Here's for off," cries Cornflower, flinging his heels sky-high. "Hurrah!" cries Peablossom, following his motions. And away they go, helter-skelter.

We were awakened early, as usual, by the warblers ; but I slept again, the song of the birds, and the sighing of the wind through the open skylight getting mixed up with my dreams. What a pleasant morning! The sun is obscured with grey clouds that may bring a shower. No rain has wet our roof for twenty days. There is a breeze blowing from the west, and a delicious freshness in the air, but the Isle of Wight is wonderfully clear, and its dark woods and green fields seem very near to us. So do those grey piles of rocks, the Needles.

From the roof of the caravan (a favourite resort of mine) the view all round is charming. The sea is green and ruffled, and steamers and craft of all kinds are passing from east and west. The church stands on the hill-top in a rolling cloud of green. People are already beginning to wend that way, and before long the bell begins to toll.

The day wears quietly away ; the sun sets amongst splendid clouds ; the swallows take their last aërial constitutional ; the birds cease to sing ; then the bats come out, and the big white moths, and the moon asserts herself, and yonder is Venus.

"The day is done, and the darkness
Falls from the wings of night,
As a feather is wafted downwards
From an eagle in his flight."

* * * *

Even a gentleman gipsy cannot rest for ever, and on Tuesday morning, June 28th, we were early up and early off, wending westwards through Hurdle, *en route* for Christchurch. The view is splendid—seascape and landscape ; but the road is rough and narrow, and the horses' feet fling the pebbles behind them as if from catapults.

Passed through Milton, which was radiant with banners and streaming flags—jubilee again. Reached Christchurch next forenoon, the weather continuing very pleasant, and found this also in jubilee. Verily, jubilees get monotonous after a time. Bivouac same night in a field close to the road some miles from Bournemouth.

We passed through Christchurch, which is a charming place, and so away north, and were almost immediately in woods and wilds again. Country sights and country sounds all round us ; romantic little thatched cottages, some almost swamped in roses ; lordly mansions here and there ; farms ; hills away to the right, with now and then a peep of the river winding through the wealth of woodland.

Passed Ringwood—in jubilee.

Bivouacked at Fordingbridge, in a splendid meadow, kindly lent us by a milkman ; only companions, his cows ; nearest house, a quaint-looking Catholic church, with a tiny graveyard attached, containing only one grave, surmounted by a tombstone and cross, and standing right in the centre. Left early ; neither wind nor dust, but the day delightful and air bracing. Went rattling through the old village of Downton in fine style, and so away into a well-wooded and rolling country.

Long before we reach Salisbury we can see the spire, and soon the cathedral itself heaves in sight, sleeping in the sunlight amidst lovely woods,—so it appears from here.

But Salisbury is found to be a big, busy, bustling place, when we do get to it. We made our mid-day halt here, and were visited by many good people—amongst others, by the editors of the *Mirror*.

"Now we'll have some stir," said a waiter to his companion ; "here's a gentleman's private menagerie and pair, coachman in livery and cockade. A case of champagne will be the first order. Hurrah!" I laughed when told this, as I sipped my modest bottle of ginger ale.

We went on through Salisbury, passing many points of interest, notably the two old gates represented in our illustration,

alone worth a visit, up some tough hills and pinches, to the Old Castle Inn, where, through the courtesy of a gentleman farmer, we were permitted to bivouac in the Old Castle Grounds.

What a pity that a sanatorium is not built here, or a large hotel and sanatorium combined! I do not feel equal to the task of describing the site of this ancient city and fort, called Old Sarum. If I use the words of the local guide-books, and tell the reader that it is the Sorbiodunum of the Romans, but was a strong British camp even before then; that it occupies the summit of a very high hill, and originally consisted of a double rampart with a ditch between, and an inner citadel, surrounded by a deep fosse; that in King Alfred's time there was a cathedral within its walls, and that it was, taken on the whole, a city in itself, with a history which would take volumes to unfold, I have done little or nothing to place it before the mind's eye.

The place is hallowed by romance; there seems to hang around it still the glamour and spell of days long gone by, that neither the view of the beautiful town spread out in the valley far beneath, nor the fertile and well-wooded country all around, with its farms and mansions, is powerful enough to dispel.

Next day we were making our way across Salisbury Plain, which is certainly not a plain in the strict sense of the word, but a vast, semi-rolling plateau—a country on a hill-top.

At the bonnie wee town of Amesbury, where we bivouacked, are many quaint old houses, with straw-thatched roofs; and here again, as further south, climbing roses and ivy are made the most of. Amesbury has a very ancient history of its own.

Stonehenge needs no mention from me. Go and see the terrible ruin; you will not talk much, whoever is with you, but—you will marvel.

" . . . Here they stand
In Titian strength, stupendous, wonderful,
The great primeval glory of our land:
And—who can tell how stained with innocent blood?
This Golgotha, this place of many a skull,
Is peopled now with terrors of the past,
Poor ghosts, that howl on every driving blast,"

(*Continued—page* 676).

THE DESK-WORKERS OF NEW YORK.

THE WORK AND WAGES OF CLERKS IN THE EMPIRE CITY.

UT of the nearly two millions of bookkeepers and clerks in the United States, over twenty-five thousand are at work in the city of New York alone. The study of the work and wages of such an army of pen-workers cannot fail to be of especial interest to the young men of great Britain, and it is our purpose, in the following lines, to lay before the young men readers of —"A. 1."—such statements and figures as shall enable them to form an idea of the conditions under which America's young men are employed.

The hours of a New York bookkeeper vary a good deal, according to the business he is engaged in. In Drapery Houses they generally range from 8.30 a.m. to 5.30 p.m.; in some cases from 7.30 a.m. to 6 p.m., and in Provision Houses, from 7 a.m. to 6 p.m., and later.

Wages range all the way from 9 to 35 dollars (a dollar is reckoned as equivalent to 4s. English money, 5 dollars = £1), and as high as 40 dollars a week; but places where the latter amounts are paid are exceedingly rare, and the lower figures are the rule, and predominate. It is asserted, on good authority, that many young men from Great Britain, other parts of Europe, and Canada, although they may be very clever bookkeepers, and entitled to the highest wages, for some reason accept wages as low as 10 dollars a week to start, thus crowding out American labour to a great degree, and keeping wages down. One reason for young Englishmen thus taking what is a low weekly wage in the States, arises, we believe, from the fact that erroneous impressions prevail as to the buying power of the dollar. Because a dollar is reckoned at the rate of exchange as the equivalent of four shillings, many people suppose that a dollar will buy as much in the States as four shillings will in this country. This is a mistake. The buying power of the American dollar is very little more than the English shilling. Food is quite as dear as in Great Britain, and clothes are much more expensive. In a letter written by an English bookkeeper, a resident in New York, to the writer of this Article, he says: "Nothing less than 750 dollars a year—that is between 14 and 15 dollars a week—do I consider a *living* salary. I pay for board 8 dollars a week for two meals a day—except Sundays, when I get three meals—and the extra lunches bring it up to 10 dollars a week. That leaves only 5 dollars for other expenses and clothes, and this last item is a costly one." And in another letter, the same writer says: "No young man should come out here, unless he has a situation to come to, and a living salary."

The hardest worked and the poorest paid clerks in New York are those engaged in the tea and grocery trade. These work from five o'clock in the morning until eight o'clock in the evening, every working-day in the week, except Saturday, when they are obliged to work from 5 a.m. until 12 midnight. The best grocery clerks do not receive over 15 dollars a week, and the average salary is about 10 dollars. The German grocers board their clerks and pay them from 4 to 10 dollars per month, and a case is known of a young German clerk, twenty-six years old, who worked for 4 dollars a month and his board.

In February, 1886, an organization was formed in New York, styled the National Federation of Bookkeepers and Clerks, its object being the bettering of the condition of the workers after whom it is called. It started as a National Union, and Branches were established in Brooklyn, Jersey City, Newark, Boston, Baltimore, Philadelphia, Chicago, Cincinnati, Milwaukee, and San Francisco. A labour bureau was formed, and gained members rapidly. The meetings of the society were at this time held in public, but owing to the action of some firms who sent private detectives to ascertain whether their employés attended these meetings, which resulted in several clerks being discharged from their situations, the meetings were, and are, carried on secretly, and not even the location of the meeting-place is made known. When a specially important meeting is to be held, the members are notified by a sealed letter and signs similar to those adopted by the Knights of Labour. To become a member of this organization, the candidate must be proposed by a member of six months' good standing. A secret committee of three trusted members is then appointed by the executive Board, and reports to the latter within a fortnight.

If the Board is satisfied, the report is indorsed by the Chairman and Secretary, and referred to the Local Union which the candidate desires to join. The Local Union ballots for the candidate, and finally admits or rejects him. Members of the Local Union of New York pay one dollar a month. Seventy cents goes to a sick and death benefit fund, 20 cents for expenses, rent, stationery, and dues to affiliated societies, and 10 cents to the relief fund, to support members unjustly discharged. The Local Union, No. 1, of New York, has 350 members; No. 2, of Brooklyn, 200; and the other Unions have memberships ranging from 150 to 300.

A TOUR IN THE BLACK FOREST;

OR, WHERE TO SPEND A HOLIDAY.

By W. Warren.

A Black Forest Girl.

GOING on the Continent has become such a hackneyed form of amusement to the dwellers in our cities, that the phrase now scarcely evokes any comment.

Last summer, however, I determined to avoid the more or less tourist-invaded localities, and to this end my thoughts went to the Black Forest.

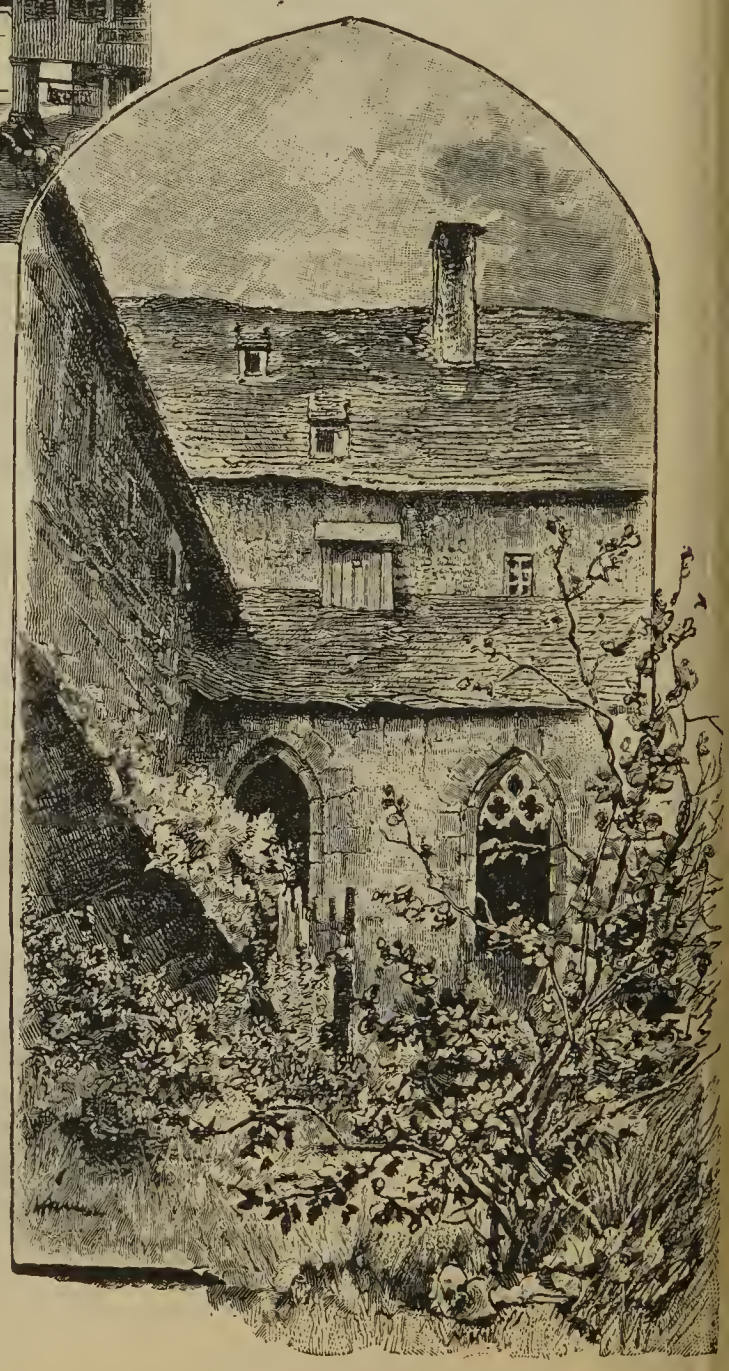
Once this idea was fixed in my mind, I commenced my preparations by paying a visit to Messrs. Cook's Offices in Ludgate Circus, and the information I got there, still further strengthened my resolution. The journey was not a ruinously expensive one, for I found that I could get a return first-class ticket to Stuttgart for something over £7.

I will not drag the reader across the brief horrors of the preliminary journey by sea and rail, but we will at once start from Stuttgart, the capital of Würtemburg, a city, I daresay, not unknown to many English tourists.

From the vineyard-covered hills which surround it, we catch a glimpse of the Neckar as it winds away like a silver ribbon in the distance. Far away we see fertile valleys, mountains whose dark summits tower into the sky, altogether forming a landscape as picturesque as any in South Germany.

Leaving Stuttgart with many a regret, I next took train for Freudenstadt, a place which has some reputation as a health resort. What directed my steps to it was the fact of its being an excellent starting-point for many charming excursions.

Arrived there, I selected what seemed to be a capital hotel, in the immediate vicinity of the station. And *apropos* of hotels, this one was really comfortable; though by no means small, it had a quiet, homely look about it, which was certainly attractive. Around the house were tastefully laid out gardens, ending in a well-wooded park. Good stabling, lawn tennis ground, and the funny little pavilions dotted here and there about the grounds, one would have rather put it down as the mansion of a country squire than the grounds of a rural Black Forest inn. It was with feelings of the most buoyant nature that I sallied in to dinner, and I am not ashamed to confess to the reader, enjoyed the meal greatly, consisting as it did of fresh trout, meat, etc. Being an old traveller, I naturally felt a little curious as to the probable dimensions of my bill, and accordingly, after dinner I sounded mine host on this by no means unimportant point, and as the interview was quite satisfactory, I made up my mind to make it my head-quarters.



The Church in the Market Place, built in the form of a triangle.

After the bustle of city life, it gave me feelings of intense pleasure to find myself amid the quietness and beauty of sylvan surroundings.

Before me was the little sleepy station, behind a beautiful valley, with its background of gigantic fir trees, and in the distance the unfathomable blue of the mountains. After the before-mentioned interview, I started away on my first voyage of discovery. Going down a shady double avenue, I found myself in what I surmised to be the old town, and having beforehand made myself familiar with its history, I was able without much difficulty to find out the principal points of interest. Chief among these must be mentioned the old market-place, fourteen acres in extent. This forms the centre of the town, and the enormous square, with its stone-domed shelters under the houses, reminds one of Bern or Bologna. Also the Lutheran church, built in the form of a triangle, the pulpit being situated at the apex of the triangle. This arrangement prevents people seeing one another—an idea which, by the way, some of our churches could copy with advantage. From the market-place the streets branch out in all directions; long parallel lines of brown houses. The inhabitants are thrifty and industrious, their principal occupations being clock-making and the manufacture of straw hats; the larger factories, however, are in the Badish Black Forest.

In Freudenstadt and its neighbourhood, the chief industry carried on is the hand-weaving of flannels, and the trade in large timber; this latter bringing in great sums of money to the country, especially since the increased facilities for transport afforded by road and water. Formerly, all the timber was floated to its destination; the railway now has superseded the old method; but it is still adopted for getting the timber from the interior of the forests. A great deal of this traffic takes place upon the rivers Murg and Kinzig, and up the Rhine to Holland, where they are made into ships' masts.

The old Monastery Court.

I was up betimes, for I had planned to make an excursion to the Alpirsbach Convent, a somewhat celebrated building founded by Count Adalbert of Zollern, in 1090, and which still contains the remains of this the eldest member of the Hohenzollern family.

Taking the first train to Wolfach, the scenery passed through is romantic and beautiful to a degree, and from the first station, Lossbury, one gets a glimpse of the snow-covered Alps. The next station is Alpirsbach, and at once making my way to the monastery, I spent some very enjoyable hours in rambling over the place. The monastery court with its ruined windows, is a most delightful old place, and the inn, with its stone-cut arms and inscription, "Alexius Abbas, 1520," is worth a visit.

That evening there were new arrivals in the shape of fellow-countrymen of my own, and an excursion to Kinebis was planned for the following day. Accordingly, the next day found us all packed in the landlord's roomy, if somewhat antiquated chariot. The drive was short, and dismounting at the rustic inn, we made our way to the ruins of the priory,—two well-preserved lancet windows, in Gothic style, and a few crumbled walls. These represent the remains of a chapel built in the 13th century to the Virgin Mary, enlarged later into a monastery, which was destroyed by fire in the year 1513. We next pushed on through very diversified country, wild, high moors, and lonely fir trees, till we reached the Alexander Bulwarks, which Duke Alexander of Würtemburg had built in the year 1734, as the link of a long chain of fortifications. Near this is the signal tower called the Refuge. From the top of this a most enchanting view is obtained. Like a panorama the country stretches out before you—the Rhine winding away, then the dome of Strassbourg, which is distinctly visible, and the Vosges, which expands in long, gigantic streaks of light, and the wood-crowned heights of the Hardt. From the Refuge we sent our chariot on to Buhlbach, while we ourselves took the far pleasanter footpath to Allerheiligen, to visit the interesting ruins of Pramonstratensian Monastery. After a two hours' march in delightful forest scenery, through which we caught occasional glimpses of the open country, we descended an easy footpath over some rocks, and found the monastery ruins. There are still traces of its former splendour in its lancet windows, the slender pillars of the church, the spacious gardens, and the artistically-designed terraces. After having admired these venerable remains, we continued our journey, which led us over the so-called Little Stone wall, a pretty point of view, upon which there is a shelter for wanderers to Buhlbach.

In the distance we could see the smoking chimneys, which gave us an indication that it was the seat of some industrial trade. We found this to be a large glass factory, over which we were willingly shown. It is here that the champagne bottles for many countries are made. It was an interesting sight to watch the workmen, blowing with all their strength through long iron tubes, till at last it took its intended shape.

But it is long after sunset and our chariot awaits us, and during the long drive home the charioteer, proud of the knowledge of a few English words, launches out into the narration of an elaborate German legend, with a result better imagined than described.

The next excursion planned was to Rippoldsau. Passing Freudenstadt, we arrived in a short time in the green groves of the so-called Troicswald. Rippoldsau is a charming place, possessing springs of great medicinal virtue, discovered by the Monks of St. Nicholas in the second part of the twelfth century.

After having leisurely walked up and down the shady lanes of the promenade, we enjoyed a good dinner at the hotel, and then continued our way through a narrow rocky valley to the Graswaldsee, situated in a deep, round mountain valley. From thence passing Alpirsbach and Holzwald, we reached the summit of the Kinebis, from which we enjoyed the far-stretching view, and after an easy descent reached Freudenstadt.

The next day, leaving the hotel shortly after two o'clock, we soon reached Christophsthal, and crossing the Varbach on a narrow wooden bridge, wended our way up the forest path, newly constructed by the Würtembergian Black Forest Society.

Passing many points of interest on the way, we arrived at an immense wood on the summit, through which we got a bird's-eye view of Freudenstadt. From there, a short walk brought us to the romantic Sankenbach ravine, through which the waters from the mountain dash, foaming in a deep cataract over almost perpendicular heights of rock. Directly beneath the cascade a vast meadow is outspread, surrounded on all sides by green heights, which to all appearance has formerly been a lake. From here, passing many colliers' huts and smoking charcoal fires, we went through pretty forest and meadow paths, to the village of Baiersbrom.

Notwithstanding a rather gloomy outlook, starting away early, we made our way to Schomberg, and from thence by easy stages to the rural Reinerzau.

Consisting as it does of many rows of farms, pleasantly situated in a deep intersected valley, the stately and picturesque buildings bear entirely the character of the Black Forest, and the inhabitants still wear the customary country garb, in which blue, green, and black are the prevailing colours. Soon the valley gets narrower, and wilder, and more romantic in character, leading on to Varnthal.

Passing the Burgfelsen, we came to the former nunnery Wittichen, founded by the recluse Lurtgardes, in the year 1290, and

Priory Ruins, Kinebis.

The Crown Inn.

Old Mill, Reinerzau.

situated in really attractive environs. At present, though in ruins, the church part is still kept, where they show you a great many of the usual curiosities in the way of "pieces of the true cross," etc.

Schittash was the point determined upon for our next excursion, a small town lying like Wolfach on the Badish territory, in a most beautiful situation. The market-place, with its Stadtlesbrunnen, and a row of stately buildings, gives to the little place a memorable appearance. The inhabitants, also, are quite a feature of the place, the men wearing long green-lined coats or short jackets, with round felt hats; the women, skirts with puffed-up short bodices. After dinner, a very enjoyable meal, partaken of in the quaint old Crown Inn, which figures in our illustration, we made our way to the river, which is a source of much interest, from the amount of rafting done on its waters, a full account of which, amongst other things, I hope to give in my next Article.

(*Continued—page* 680.)

HOMELY HINTS FOR STRUGGLING WIVES;

OR, HOW JOHN AND MARTHA GRIMSHAW MANAGED ON £1 A WEEK.

By PHYLLIS BROWNE.

No. V.

MARTHA was gratified to find that Mrs. Jackson approved her ways, and gladly continued her story.

"When breakfast is over, and John has gone to work, and the children to school, I set to work in good earnest. I make it a rule as much as I can to keep quiet while they are indoors. When a man goes out to work, and only spends a short time by his own fireside, I always think it is very hard if during the little time he is indoors his wife is scrubbing the floor, or upsetting furniture, or, worst of all, hanging wet clothes before the fire to dry. If she would plan her work a little, and arrange to have things comfortable during the dinner-hour, and at tea-time, she would be repaid by seeing him rest. To plan work thus may be more trouble, but it is well worth while.

"My first work is always to wash up the breakfast things, and clear away everything that has been used. Mind you, Mrs. Robins, the best thing you can do to keep the place tidy is to *clear up as you go along*. If you get into the way of doing this, it becomes quite easy. Then I make the beds, and tidy up the sleeping room, if it is not the day for giving it a thorough clean."

"How often, then, do you have the 'thorough clean'?"

"Once a week," said Martha. "My aim is to turn over thoroughly every corner of my rooms once a week. I am sure that is the only way to keep clean. I plan my work out, do a portion every day, and try to divide it as evenly as possible, so that there may be no hurry or fuss; for I do not believe in turning a house out of window and splashing and scolding one day, and the next day standing talking to a neighbour and doing nothing. Constant daily doing is what keeps a home nice."

"But you'll never be done at that rate," said Mrs. Robins.

"Oh, yes, I shall," said Mrs. Grimshaw, "though I hope not yet. I should like to see the children grown up, and help John round the ugly corners he is sure to come to before then. Yet I always think how delightful it would be if when our work was finished we had done it in such a way that we deserved to hear the Master say, 'Well done, faithful servant!'"

Again Mrs. Robins was silent from astonishment.

"So you see," continued Martha, "in telling you my methods, I was first going through the work for every day, and then I was going to tell you how I planned it out for the week. To have a plan and keep to it, prevents so much confusion. Of course I am kept busy from morning till night; but if I have strength to do it, and if I can do it well, I do not at all object. We were not sent into the world to sit with our hands before us."

"No, indeed," said Mrs. Jackson. "But go on with your story, Martha."

"When the bedroom is put straight, I see after dinner. Very often I have to go out and buy a little meat either for to-day or to-morrow (for I always like to arrange one day what is to be the food for the next), and maybe I do part of the cooking beforehand. If we are going to have peas or beans the next day, I put them to soak, and if we are going to have soup, I stew the bones the day before. You can never make a nourishing dinner out of cheap food without taking plenty of time. In good time, also, I like to lay the table, and to take a little pains to have it looking as pretty as I can. Our dinner things are cheap, but there is no reason why they should not be bright and shining; and I rub everything up before it is used. When I can get them, I put two or three flowers in the middle of the table; they look wonderfully cheery. With the flower-boxes outside the window there, we get flowers oftener than you would think. When we lived in the country, we never were without a few flowers or grasses. We got them out of the hedges; there are no flowers more beautiful than buttercups and daisies."

"But all this fiddle-faddling is taking so much trouble for nothing," said Mrs. Robins.

"There I cannot agree with you. Little prettinesses and little refinements about your home are very far from nothing. People who are accustomed to them, and who are taught to admire them, become less rough than they would be, and they learn to take care of things, instead of destroying them. If you will excuse my saying so, Mrs. Robins, I should be inclined to think that you are the one who takes trouble for nothing, when you put all that cheap trimming on your jacket."

Poor Mrs. Robins had not expected this attack, and she looked quite discomposed. She did not speak, however, and Martha went on,—

"When dinner is well on the way, I do as much as I can of the extra weekly work. This 'extra weekly,' of course, has to be done as convenient. I get a little done in the morning and a little in the afternoon, and if I work hard, I generally manage to finish so that I can tidy myself and sit down to needlework. For there's plenty of sewing to do in a family where there are children. In the evening John very often reads aloud to me while I sew, or on summer evenings we take a walk together, and we have such delightful times. There are men, I believe, who would be ashamed to be seen out with their wives, and would think it molly-coddling, but John is not."

"Where do you get your books from, then?"

"Different places. There is a lending library in connection with the Mothers' Meeting I go to. We very often get books from that. Then I do not know whether you have heard of what is called the National Library, that is a collection of some of the finest books that have been written, brought out at 3d. each. John has now and again bought one of these out of the money he takes for dress, and they are the sort of books that will bear reading two or three times over. You must remember, Mrs. Robins, we do not take beer. If John had one glass a day, that would be £3 for beer in a year. We save that, so we are able to buy a National Library volume occasionally. John was hoping that there would be a free library opened in these parts. He said that if there had been, we could have got plenty of books. But I am sorry to say that it is not to be yet."

"The publicans defeated the scheme," said Mrs. Jackson. "They were afraid, I suppose, that if people began to read, they would give up going to the public-house."

"It is very likely that they would," said Martha.

"And a good thing too," said Mrs. Robins. "But now, Mrs. Grimshaw, tell us about your extra cleaning work. We have taken up a great deal of your time, and I can see that you are beginning to be uneasy, but please tell us quickly, and I will not interrupt."

"I am a little uneasy. John will be here before long, and I must not be behind with his tea. But I will go through the week.

"On *Sunday* I do as little work as ever I can.

"On *Monday* I brush and put away all our Sunday clothes. Then I collect the dirty clothes and put them into soak, putting the dirtiest things by themselves. Afterwards I prepare as much as I can for the wash, by seeing that everything is ready. The body linen I put into luke-warm water, in which a little soap has been dissolved, and I soap and rub in the dirtiest parts, such as the inside of the collars; the other things I put into cold water. Flannels and coloured things I do not soak."

"I wonder that you trouble to soak anything," said Mrs. Robins; "this seems to me very unnecessary."

"Then you do not know how the soaking loosens the dirt, so that it comes out easily. When dirty clothes are soaked, washing can be done in less time and with less labour, and be a better colour into the bargain. When washing day comes, I want to get the steam and discomfort done with as soon as possible, so that anything I can do to forward it, I will. Once we lived near a public washhouse, where I could take my clothes to wash, and by paying three halfpence an hour, I got the use of tubs and hot water, and of the mangle also. This was very convenient, for it took the steam and damp quite out of the house; and when the clothes were soaked beforehand, I found I could get them out of hand in three or four hours. Now, when we move to a fresh place (and I am sorry to

say we often have to move, because John's work moves), I always inquire first thing if there is a public washhouse near. If there is, I think myself lucky."

"There is a washhouse near us, but I never thought of using it," said Mrs. Robins.

"Putting the clothes in soak, and making ready, is all I do on Monday," said Martha, "excepting that I arrange Tuesday's dinner as much as I can, for I do not want to leave my suds longer than I can help. But Monday is our Mothers' Meeting, and I don't like to miss it.

"On *Tuesday* I wash and dry the clothes. I light the copper fire first thing, so that I may have plenty of hot water ready; but I do not begin to wash till my husband and the children are gone. I wash the flannels and coloured things first, and put them to dry. Then I pour off the water in which the body linen was soaked, soap it again, and rub it. I give everything plenty of clean water, plenty of soap, and plenty of rubbing, and I work with all my might, and you would be astonished how soon they are done. When clothes are washed every week, the dirt comes out more easily than when they are left to lie for a fortnight.

On *Wednesday* I clean out the bedroom. I sweep the bed thoroughly, and examine it in every part, for fear there should be unwelcome visitors. Then I move all the furniture out, and sweep well behind. To make this easier, I try to lumber up the room as little as possible; and, you see, we have not carpet laid all over the room—we only have strips here and there, which can be taken up in a minute and shaken. One week I scrub the floor, the other week I clean the windows. If it is a damp day, I miss scrubbing the floor, and simply wipe it over, because I do not want the children to get cold. But I am always sorry for this, for I like my boards to look white."

"You have them as you like them, then," said Mrs. Robins. "I never saw such beautiful white boards; and the table and shelves are just the same. May I ask what you scrub them with?"

"With nothing but sand, warm water, and a scrubbing brush. The great thing in washing boards is to change the water often, so as to use only clean water. Go to the far end of the room, wash a little piece first with a flannel and warm water, sprinkle sand on it, and scrub up and down the boards—never across the grain. This loosens the dirt, but it does not get rid of it. To get rid of it you must rinse it, and take it up with the flannel. This done, go on to the next piece. Some people use soap for boards. When they are in good condition, I should say this was extravagant, though, if they were in bad condition, a little soft soap might be allowed. Some use soda, but this tends to make the boards dark. As for dressers, tables, and shelves, I always think it is rather disagreeable to use soap for them, because it might flavour the food. Yet I like white boards, they give such a style to a room."

"You do not iron and air your clothes on the Wednesday, then?" inquired Mrs. Jackson.

"Yes, I do; but the ironing is in the afternoon. I do the bedroom first, because I want to get the floor dry. After ironing I mend the things which want only a few stitches, and put the rest away to do in the evenings. But I always try to finish the week's mending in the week.

On *Thursday* I clean out all my cupboards, drawers, and shelves, scour my saucepans, and brighten my tins, etc., with a little whiting, after washing them in warm water. Bright tins make a place look so comfortable."

"Quite true," said Mrs. Jackson. "I always think that white boards and bright tins tell a tale in a woman's praise."

"On *Friday* morning I get up half an hour earlier, and give the fireplace a thorough clean and brush, and clean out all the flues. Of course I brush it every morning, but on Friday it has an extra brush. I always fancy that if the range is well polished, it is more comfortable."

"Your notion is not mere fancy," said Mrs. Jackson; "it is a fact. A bright range reflects the heat better than a dull one, so that it positively saves fuel."

"I am glad to know it," said Martha, "for I love a bright fire. When I have a boiler to the range, I wash that out on Friday; and I wash the oven shelves, and scrape them if anything has burnt over. Of course I am always very particular to sift the cinders; and I keep this box, which John made and painted for me, by the side of the fire, and into it I put the ashes as I take them up, and also any potato parings, and tea leaves, or vegetable trimmings there may be, and then burn them as I can. If there is anything that will make a bad smell, I burn it when John and the children are away; but it is wonderful what rubbish you can burn, with scarcely any smell at all, if you put it on a bright fire, and cover it with cinders. Even if you had a smell for a few minutes, it is better than throwing the rubbish upon the dust-heap to decay, or pouring bits down the sink to choke up the drain. You see this box has a lid, and inside there are some wires across to make it into a sort of cinder sifter. By using it I am able to use many a bit of rubbish as fuel, and prevent bad smells as well."

"Is that all you do on Friday, then?" said Mrs. Robins.

"Oh, dear no! Friday is my baking day. I make a batch of bread; and when fruit is cheap, I very often make a few pies and a cake for Sunday. If you have an oven, things of that kind cost very little, and they come in very handy, and are always liked.

"On *Saturday* I clean up my room, and make ready for Sunday as far as I can; arrange the dinner, pare the potatoes, and leave them in cold water; lay out the clean clothes; wash the combs and brushes; give the children a good tubbing, and clean their hair. In fact, I look round, and whatever is undone, I do it. For, you understand, my aim is to turn over every corner once a week. If I had three or four rooms instead of two, I should have to plan my work differently, and I know that then I should find it easier to keep clean and orderly, because it is easier to keep straight when you have plenty of room, than it is when you have little room. All the same, I should try to divide the work evenly, and to do everything on its proper day. So now my story is finished, and I hope you are satisfied."

"I am, indeed, Mrs. Grimshaw," said Mrs. Robins; "and I shall go home and try to follow your example."

"That is right," said Mrs. Jackson. "But don't be dismayed if you find it hard work. If you succeed, you will prove yourself to be a thoroughly clever woman. It requires industry, perseverance, patience, energy, health, skill, good temper, tact, intelligence, and any amount of high qualities to keep a home properly; and people who say that it is the easiest thing in the world, talk nonsense, and speak of what they know nothing about. Let me tell you, too, that I hope your husband will help you and sympathise with you. When men sympathise, a woman who is worth anything is encouraged; but I always think that if there is one thing that would almost excuse either husband or wife in going wrong, it is when the person to whom they are tied for life does not pull with them."

With these words Mrs. Jackson and Mrs. Robins took their departure, and left Martha to bustle about and get John's tea.

THE VENTURE OF FAITH.

MANY years ago, when living in the country, I observed several men running rapidly down a wooded slope toward the river near by. Thinking something unusual had happened, I quickly followed, and was surprised to see, on a little rock that rose midway in the stream, a boy of six or eight years, drenched and trembling. He looked timidly toward those who had gathered on the bank, and now and again glanced with alarm on the boiling river he had just escaped from, and which threatened to devour him. How he came there we afterwards learned. The first thing to be done was to save him. A long ladder was speedily procured and pushed out to the rock, and a brave man volunteered to rescue the child. Slowly and steadily he stepped along the ladder, till he reached the rock, and stood beside the boy. So far from gladly welcoming his deliverer, he refused to leave the rock. It seemed as if the rushing stream filled his eye, and kept him from venturing on the strong arm of him who came to save.

"You may trust me, I will carry you safely to the shore."

The boy answered, "No, no, I cannot."

Then said the other, "You will perish if you stay here."

The conflict in the heart of the child could be seen in his face. At length trust conquered fear, and he yielded to the love of his hitherto unknown friend, who, clasping him to his heart, returned with him by the ladder, and landed him safely.

This is an illustration of salvation. The child is a picture of the sinner, miserable and helpless. The ladder is the cross, by which the Saviour finds His way to the sinner's side, to plead for the sinner's heart. The issues of eternity open out before his eye, and he must choose. To abide where he is, in the place of condemnation, is to die; to turn away from the pleading Saviour, is to bring down upon his head a deeper ruin. And yet, can he make the great venture of giving up all he has hitherto confided in and loved, and dare he commit himself entirely and for ever to the Lord Jesus? Christ saves no man against his will; and it is not until the sinner is persuaded and enabled to embrace Jesus Christ, that his salvation is an accomplished fact. There is only one way by which the unsaved sinner can put honour on Christ, and that is by trusting Him..

ANDREW AND ISABEL: OR, HEROES IN ADVERSITY.

MRS. MACPHERSON lived, after she became a widow, in a small house on the south side of Edinburgh—a house of one parlour and two bedrooms, and up three stairs. Once in, all was tidy and even elegant. The view of the Castle and St. Giles's and Arthur's seat was such as only Edinburgh, among British cities, can furnish; and "5, Argyll Terrace," was an address that sounded well in the ears of those who did not know the big factory-looking "lands" of houses lately erected on the south side of the Meadows.

Her married life of twelve bright years had closed suddenly. Andrew, her husband, a good, earnest man, was working his way hopefully into a considerable practice, when a fever cut him off at the age of thirty-eight. Of a good Highland family, but an orphan, and poor before their marriage, Mrs. Macpherson found that only rigid economy could enable her to live and educate her two children.

Her strong, quiet character came out in the quickness and thoroughness of her new arrangements. Within a month after Dr. Macpherson's funeral, the distance of the Bridges and the Meadows had been put between her and the desolate home in Great King Street, and the new life began. One faithful servant, old Flora, a Highland woman, who might be any age between forty and sixty, and so much of the furniture as the three little rooms required, went with her; the remainder of the furniture, and the horse and the carriage (not two years' old), were turned into money, not without a pang, but resolutely and promptly.

Isabel was eleven years old, a thoughtful child, making fair progress with her education, and winsome. But Andrew had been blind from a few weeks of his birth. All his father's skill could not find a remedy for the effects of some slight exposure. His education, too, was far advanced for eight years, but it had taken unusual direction. The raised alphabet had been his toy, and he had soon gained a knowledge of letters, but the only literature he had in that character was the Gospel of St. Luke; for the rest, he listened with quiet eagerness to all that his mother and Isabel read to him, asked questions, sometimes too deep for either to answer, and discussed all manner of subjects with his father at meals. The worthy doctor's one amusement was a small violin, treasured from his lonely student days, and brought out whenever he had a quiet evening to spend in his own drawing-room. Almost before he could walk, the blind boy had evinced the keenest delight in listening to the old Scottish airs, sometimes tearful, sometimes gay, which his father rendered with so much skill and feeling.

When the crash and the change came, you may be sure the violin was amongst the few household treasures carried to Argyll Terrace; even the children and the staid Flora knew it as "the wee sinfu' fiddle," and understood the humour of the story about the doctor's father, a country minister, to whom the instrument had belonged.

It had got rumoured in his parish that the good man was too much attached to vain, worldly music, and a deputation of elders had come to the manse to present a faithful remonstrance. They did not declare their errand at once, but the shrewd old minister suspected it, and entertained his visitors with one psalm tune after another —Coleshill, Old Hundred, Montrose, York —played on a larger and graver instrument. At length one of the elders ventured quietly to open the purpose of their visit.

"But didn't you like these tunes I've been giving you?" asked the minister.

"Ou, ay," said one of the deputation, "we likit them grandly; but it wasna that fiddle we were complainin' o', it was the wee sinfu' ane."

After they were fairly settled in their little home, and Isabel's lessons were resumed, Andrew sorely missed his father's music. Even when his mother could bring herself to play some airs on her piano, he was not satisfied.

Isabel had no great taste for music; but if ever there was a child in whom was exemplified the Christian idea of love—the serving of others—it was she. Untold, unasked, her love taught her how she might help and comfort her mother in a hundred ways; and now she began to make persistent efforts to master the difficult manipulation of the violin.

Her success was by no means rapid. The learner had a stern master in Andrew's keen ear. He screamed, he stamped at every false note; but when, after many a week, Isabel had become able to play the air of "Bonnie Bessie Lee" to her blind brother's satisfaction, she had love's reward. He stroked her cheeks and hair; he kissed her again and again; tears fell through the eyelids that were never lifted.

Thus five years went by. Isabel had become a woman; but the change was chiefly in stature, so douce had the girl been for many a day. Not that she was prudish and affected—as far as possible from that—but the stern nursing of adversity had ripened her pure, loving nature into a sweet wisdom rarely met at any age.

During the long winter of 1863, Mrs. Macpherson was rarely out, except to attend a neighbouring church now and then, and Isabel was her right hand. She shopped; she marketed; she took full share in the household work and in sewing, relieving her mother's busy hands in many an hour which another girl might have spent in amusement. All the while her attendance at the Normal School continued, and it was a very happy day for her, when she carried home her first little earnings as a pupil teacher. But a dark hour was at hand.

When February, 1864, came, the good, patient mother went out for the last time. The cold, which had begun the previous autumn, was now a settled thing. Mrs. Macpherson had never known illness, and treated it lightly at first; but now the constant cough, the thinness, the failing strength, awakened her to a terrible alarm. Might it be that she was not to watch over Andrew till he was a man, and to accomplish her purpose of having his musical faculty trained, so that he might support himself by teaching the art he loved?

Saying nothing to Flora, and leaving Andrew happy at the piano, Mrs. Macpherson went out one Monday morning early in February, soon after Isabel had gone off to school. There was a little deceitful sunshine, but a keen wind met her before she had got into Nicolson Street. For five years the widow had not crossed the Bridges, keeping herself away from the associations of her earlier life, not with any bitterness, but making the self-denial as complete as possible, by which alone she could carry out her plan of economy; and for many a day the wish to walk in Princes Street or shop in George Street had quite disappeared from her heart. The new life was, notwithstanding reduced circumstances, a cheerful one, as every faithful life is; and till now it was lighted up with hope. But the lonely woman's face had a sad, weary, anxious look, as she lingered at the corner of Adam Square till the Newington omnibus came up. In it she sat with her veil down till the Scott Monument was passed; then the wind, sharper than ever, struck her as she went up Castle Street, and made her way to the door of an eminent physician, who had been the friend of her husband.

After Mrs. Macpherson's return, going slowly, and with frequent stops for breath, up the long stairs to her house, she was never out again. Flora said nothing, but brought her milk unbidden, and wheeled the little couch nearer the parlour fire. Andrew talked pleasantly of something that interested him, happily not seeing his mother's face; but when Isabel came in, half an hour later, she could not restrain herself from crying, "Oh, mamma, are you worse?" and the gentle answer, "No, darling; only tired," could not deceive her.

There were, indeed, no worse symptoms; the cough was less frequent, even, but from that hour, Isabel saw an undefined change on her mother's face—not sorrow, nor anxiety, so much as a shade of solemn awe overshadowing without displacing the familiar smile.

Isabel shared her mother's bedroom, and sometimes her bed. About a week after that sad day the girl was gently called.

"Are you sleeping, Belle?"

"No, mamma," she answered, quickly moving to get what the invalid might wish.

"Then come in beside me."

The gas was turned low. The little table, with the medicine she had lately begun to use, and the milk that was now her only food, stood under it. Though there was but imperfect light, Isabel saw more of the strange heavenly solemnity on the tenderly loved face, as she lay down in her mother's arms. But there was scarcely any change in her voice, as she talked a little while about household matters, and then gently glided from these to graver things.

I cannot repeat the words in which the heroic woman fulfilled her last duty of love, with a courage such as martyrs at the stake have not excelled.

She told her child that the half of their income—fifty pounds—was an annuity, and made her understand that it would cease with her life. She explained that the other half had been taken from the sum produced by the sale of the furniture in Great King Street, and named the bank in which the little remainder of that sum was lying.

She talked of Isabel's prospects of passing her examinations, getting a certificate, and becoming mistress of a school in two or three years.

Then she said that Dr. Burton had been very kind when she went to consult him the other day, had spoken like a Christian as well as a man of skill, and had told her quite plainly that she could not recover. (The noble mother did not tell that he had said she would not see the summer;—why should she? It was not by him that her days were numbered.)

Then she dried Isabel's tears, speaking of the great peace which the Lord Jesus had given her in all her trials; of the last words of her husband, which Isabel and Andrew knew by heart, for they were those of the hundred and forty-sixth Psalm; of the comfort she had had in the love and goodness of her children; and of the joy it was to think they knew and loved her Saviour. There was nothing excited in her words or manner; and, after reminding Isabel of something that should be done in the house to-morrow, and of a message to be given to Flora, the mother kissed her daughter, and said they should both try to sleep.

Isabel was wearied, and before long had fallen into the sound sleep of healthy youth, with her arm under her mother's neck, and her mother's arm under hers.

Grey light was coming faintly in at the windows when Isabel woke. A strange, fearful chill ran through her; the arm which was under her mother's head was gently drawn out; she rose and moved about the room, hoping to wake the sleeper; then she called Flora, and too soon found that the sleep was that from which there is no awaking till the Redeemer shall come again.

Dr. Burton came, being called by Flora, without any knowledge of the interview her mistress so recently had with him, and took charge of the simple funeral. He talked kindly with the orphans, and, hearing of "a little money in the Bank of Scotland," made Isabel's way easy for drawing it. But he had been rather deceived as to the amount, by the air of comfort which Flora, cunning as Caleb Balderston, contrived to put on the little house.

Isabel knew the way to the grave in the Grange Cemetery, where both father and mother now lay, and took Andrew there the next Saturday. He tried to comfort her like a man, with hopeful words about what he would do for her when he was a little older. Was he not thirteen already? But Isabel, and he, too, got their best consolation, when he sang beside the grave, the old Scottish version of the Divine words they had loved so long to the tune York, which Andrew knew had been composed by the father of the great blind poet, Milton:—

"The Lord doth give the blind their sight,
The bowèd down doth raise;
The Lord doth dearly love all those
That walk in upright ways.
The stranger's child, the widow's stay,
The orphan's help is He;
But yet by Him the wicked's way
Turned upside down shall be."

The lives of the orphans returned into their old groove, with the sad, sad blank felt every day—Isabel's lessons, Andrew's music, the reading and talking, and sometimes a walk in the dusk. To Andrew the dusk did not matter, and Isabel preferred it.

But when autumn came round, the brave little woman found she had a serious difficulty to face. Her own small earnings of £15 would not be due till Christmas, and there was less than £10 remaining in her hands. Where was daily bread to come from, not to say fuel and rent? Isabel could only fall back on her mother's motto, "Do ye next thynge," and go on working and praying, keeping her trouble to herself. The length that Flora made a pound go in these days surprised her; but the little lady said nothing.

Early in November, she took eagerly to the old violin, and practised "The Flowers of the Forest" till Andrew was entirely satisfied with her execution; then she whispered to him a plan. Not just at once did he apprehend that they were poor, so carefully had he been shielded from the wind; but when the idea took hold of him, that he could do something to help her and himself, he embraced it eagerly, without a thought of humiliation. They kept this secret from Flora, Isabel instinctively fearing opposition in that quarter. It was not an unusual thing for the two to be out for a couple of hours in the early part of the evening, so the trusty servant suspected nothing.

With violin under her cloak, and Andrew's arm in hers, Isabel and he walked briskly across the Meadows and George IV. Bridge, down the Mound, along Princes Street, and stopped under the garden railings in Ainslie Place. There the first effort was made. Andrew sang with all his heart; Isabel played without a fault.

Then came the trial. How were they to seek or take the money? Isabel kept her eyes on the pavement, and controlled her excitement, putting the violin safely into its case. Then slipping her hand into her brother's arm, she turned towards Melville Crescent. The little crowd of listeners—errand-boys, tradespeople, visitors, with one or two gentlemen getting home for dinner—were taken by surprise. This was not a usual performance. The music had been finer than was ever heard on the streets, and the customary appeal for money was wanting.

First, a little boy, with a basket on his arm, who had stopped his whistling as he heard the better music, ventured to put a penny in Isabel's hand, and started off with a louder whistle than ever, to divert attention. Then, as the two slowly moved along, several hands were pushed out to them, and coins passed to one or the other.

Isabel was glad to stop when they had turned the corner, not to count her gains certainly, but to recover her composure. The song was repeated in Melville Crescent, with similar results; and the pair slipped home as quickly as possible.

Two or three times a week, the money-making undertaking was repeated, on nearly the same ground. The excitement did good to Andrew, waking him up; and it did his sister no harm. Ten or fifteen shillings a week Isabel was able to store up against the day of necessity.

That day had come about the first week in December. Dr. Burton was returning to his house in Ainslie Place about six o'clock, when his ear was arrested by the pathetic rendering of the most pathetic of Scottish songs. He was in the shade for the moment, and kept there till he had satisfied himself who the singer and player were. Then he turned back: if he had gone forward, he must have passed in front of them, and Isabel might have recognised him. He lingered on the pavement, and played the spy till he saw them pass along Maitland Street into Princes Street, then walking smartly homeward down Lothian Road.

It was a singular circumstance, and one which Isabel could never trace farther than to the God who filled the widow's cruse, that the next day there came to Miss Macpherson, of No. 5, Argyll Terrace, a formal letter on blue paper from the bank, informing her that £200 had been placed to her credit by "a friend of her father."

And the next week the doctor called. He talked about Isabel's work at school, and answered Andrew's eager questions about men and things, ending by asking if they would not come to spend Christmas time with him, and cheer his lonely house.

The visit went off delightfully, and other visits followed. The old man was alone now, till his only son returned from completing his studies in Paris, and was glad whenever he could induce Isabel and Andrew to be with him. She was nothing loth, but would not suffer the new-found pleasure to interfere with her daily work. The certificate was still the point of her ambition.

But somehow the young doctor, when he came home, reasoned her out of that; and now Dr. Burton's house is full of the beauty and love of fresh life.

Andrew is a busy, happy man, who may be seen threading his way along George Street to the music shops, and to the Asylum for the Blind; or in the front seats at all manner of literary and musical assemblies. Sometimes there is a fair girl with him, about ten years of age, whom he affects to guide, and who most effectually conceals that she is guiding her uncle.

THE SOLDIER'S LETTER.

SEVERAL years ago, and far away under the blazing sun of India, the names of those for whom the mail had brought packets or letters were being called over in the barrack-yard of one of our regiments. Presently a corporal joined the group, and rather sadly listened and watched the distribution.

"There's nobody to write to *me*," he said to a comrade; "yet I like to be here and listen, though there's sure to be nought for Ben Edwards!"

The list was nearly read out, the last address and the last letter were reached, when in absolute amazement Corporal Edwards heard his own name called, and advanced wondering, to receive the unexpected letter.

Trembling with eagerness, he grasped it in his big, brown hand, and waved it joyfully in the faces of a few comrades. At last, at the repeated sound of "Why don't ye open it, Ben?" the rough, honest, and ofttimes lonely soldier sat down, and with slow, careful exactitude, the envelope was opened, and the thin, well-covered sheets of paper were drawn forth.

Ben read a few sentences, but very slowly, from sheer wonder and delight. Then he said,—

"Come on, lads! We'll have it *out* by the side of that old shed yonder. It's a lady as writes; she doesn't know anything of me, and yet she says she's thought a lot about me lately. I can't get at the bottom of it, no how!"

Ben did not count himself a Christian man in those days; he had done so once, years ago, and some of the old yearning desires after a Saviour's love and a Saviour's pardon rushed back into his heart as he read this letter.

"My dear unknown soldier-friend,—Far away from the old country, one *does* like to get a letter sometimes. But I expect you will turn this over and over, wondering who it comes from, and what it means. The name at the end will not tell you much, so I may as well say that I am a quiet woman, very little known in the world, except by some of our British soldiers, who have learned to count me as a friend because of the letters I write to them.

"Is it not pleasant to know that there is *somebody* in old England who *cares* enough for you to send you a word of help and encouragement, and who will try, by God's help, to make your way a little brighter, by reminding you that you have a far better Friend than *I* can ever be?—One who has been keeping guard over you for more than twenty years, lest you should wander too far from rest and safety to find your way to the beautiful home He is preparing for you. *I* know nothing about you but your name; but, Corporal Edwards, the Lord knows you *by name*, and He has been calling you by it all these long years!

"You see, my friend, our dear Saviour *died for you*, and now He *lives* for you, He is pleading for you. You did not heed His 'Come unto Me' long ago, perhaps, and so you are afraid that He would not listen if you *did* come now. But *He will!* And there is greater need than ever for you to come now, because your opportunities are getting fewer, and Satan's power over you is growing stronger.

"Did you ever hear a word like *this*, in the old days when you were a lad at home, 'For God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting life?' I know you have gone astray; *who hasn't?* But you have not got beyond Christ's '*whosoever*.'

"The question is: 'Do you *want* to come and claim Christ's "whosoever"? Do you *want* to be saved?' Then *come*, my lonely brother; come at once. The dear Lord is as willing as ever, and as able as ever. Leave the heavy burden of your sin with Jesus; He has borne that for you. Do not wait to clear off 'old scores' before you come; *you cannot do it*. Come just as you are. Listen to a word He has put into my heart to write to you to-day; perhaps you have never heard it said to you before: '*Fear not, for I have redeemed thee; I have called thee by thy name; thou art Mine.*' It is a grand, glorious, heart-strengthening verse! And there is not a word in it that is not *true for you*."

A little in the background two Christian soldiers had been drinking in every word; and now their emphatic "Praise the Lord!" caused poor Ben to hold his letter towards them, saying,—

"You read it,—it's getting past *me*."

And the kindly, earnest, pleading words were read in a way which touched that little waiting group.

"I remember, one dark autumn night, being on the sea-beach with a group of people, listening to an address from the words, '*I have blotted out, as a thick cloud, thy transgressions; and as a cloud, thy sins; return unto Me, for I have redeemed thee.*' And out there in the dark and the cold, the words of a hymn mingled with the rush of the surging tide,—

'There were ninety and nine that safely lay
In the shelter of the fold;
But one was out on the hills away,
Far off from the gates of gold,
Away on the mountains wild and bare,
Away from the tender Shepherd's care.'

"Corporal! There were tears in many of the voices which sang, as one and another thought of a wanderer whom they longed to see brought back to the fold. I expect you know the rest of the hymn by heart. *You* know how He found His sheep, 'Sick, and helpless, and ready to die,' and you can almost hear the cry of gladness. Oh! *it is good* to know the joy of coming home to the 'Father's' heart! You remember this line,—

'Out in the desert He heard its cry.'

"Is there a cry *now* out of the depth of *your* heart? Let it come; He hears so quickly! And by-and-by for *you* the angels shall echo forth the words, 'Rejoice! for the Lord brings back His own.'"

Only a few months later Corporal Edwards' answer came back to England,—

"*It has all come true! The Shepherd has found His own.* Thank God for that letter, sent to an unknown soldier in India."

ABOUT OURSELVES.

IT is gratifying to observe the many applications we have for Specimen Copies. It indicates an amount of interest on the part of our readers which we much appreciate, and it will surely tend to increase the already large circulation. A post card to the Secretary, 62, Ludgate Hill, London, E.C., will always receive prompt attention, and many a friend will be grateful to be introduced to pleasant reading for the holidays.

A thoroughly practical Article on "Preparing for the Battle of Life," by Phyllis Browne, will appear in our next.

Half the period allowed for our Transposition Competition has elapsed; but there is still time to win a Prize.

RECIPES.

GOOSEBERRY JELLY.

PICK any quantity of ripe red gooseberries, and stir gently over the fire till they have yielded their juice. Pour it off without pressing the fruit, and strain through muslin. Weigh it and boil it quickly for ten minutes. Allow ¾lb. of sugar beaten to powder to 1lb. of juice. Stir the sugar into the juice till dissolved. Boil again for five minutes; stir constantly and skim thoroughly.

VEGETABLE MARROW JAM.

PEEL the marrows, remove the seeds, cut the fruit in pieces half an inch square, and weigh it. Allow ¾ lb. of sugar to 1 lb. of fruit, and 1 lemon to 3 lbs. of fruit. Put the sugar and a small portion of the marrow into a preserving pan, let it boil, then add the rest of the marrow gradually, till all is in. Boil till the pieces of marrow are transparent, and the jam is on the point of setting. Flavour with lemon juice and rind. The rind (free from the white pith) should be boiled with the jam until it is sufficiently flavoured. When taken out, the juice should not be added until the jam has boiled a couple of hours or more. The jam will probably need to boil from three to four hours, according to the quality of the marrow.

CRISP CORRESPONDENCE.

An old B. O. P.—Yes. We have a Serial Story by Mr. Ballantyne just preparing for Press, but it cannot become inserted for some few months.

A Sister of Mercy.—We regret to read your question, and can only express our very fervent hope that you are not entertaining the idea of becoming a Sister of Mercy. Do not be ensnared by the delusion that joining the Church of Rome will satisfy the longing and yearning of your soul: it is terrible deception to teach such a delusion. JESUS ONLY can give you true heart's ease; trust Him now, and you will find that salvation and peace which Rome promises, but can never, never give. "The blood of Jesus Christ cleanseth us from all sin" (1 John 1. 7).

An Anxious Inquirer (Taibach).—We regret exceedingly that your inquiry was most unwittingly overlooked. Wait upon God about entering the Ministry. If He throws open the door, enter without fear, knowing "He is able." It is a great privilege to preach Christ. We thank you heartily for your letter.

A Competitor.—You will find an announcement of this very Competition in our Number for July 28. Glad you can testify to so much help through our Paper. Cheering words are so welcome. Will the many who write them accept our heartiest thanks.

Mary, Berwick-on-Tweed.—Your letter is very welcome. We are glad to know that the Monthly Letters in both our Papers have been so greatly blessed to you. Pray that they may be the like blessing to ALL who read them. Tell the Lord of your burning desire to be a Missionary, and when He opens the way quite clearly, write to Mr. B. Bromhall, China Inland Mission, 4, Pyrland Road, London, W. Till then, wait patiently and prayerfully; study your Bible, and gain all the experience you can in any and every kind of Home Mission work.

Gooseberry Jelly and Vegetable Marrow Jam.—Our correspondent will find these recipes above.

BRITISH INDUSTRIES.

By Henry H. Bourn.

PORCELAIN AT WORCESTER.

PORCELAIN occupies an intermediate position between pottery and glass, being more translucent than the first, and more opaque than the other. It is not known who was the inventor of porcelain; even the Chinese annals are perfectly silent about it. It is presumed to have been earlier than the Christian era. One thing is certain, however, it must have been before the fifth century; for the annals of Teonleam relate that, about the year 442 A.D., the workers in that province supplied the Emperor with some articles made therefrom. Chinese porcelain did not come into Europe till the sixteenth century, when it was brought, first by the Portuguese, and then by the Dutch and Italian traders.

For many centuries the Chinese kept the manufacture of porcelain a most profound secret, and pretended that it was made of egg-shells and sea-shells, with other materials, mixed in given proportions, and burned for eighty or a hundred years. In consequence of such deception, it was impossible for Europeans to produce articles of a similar kind until the year 1712, when the whole process of manufacture was made known, in a letter, by a Jesuit missionary.

The first European porcelains are said to have been made in Saxony and France, and afterwards in England, Germany, and Italy; all of which differed in some important respects from those of China and Japan, but each possessed some peculiar character of its own. In course of time, manufactories were started in Chelsea, Stratford-le-Bow, Derby, etc. These were for several years carried on with difficulty, and at length were closed.

The industry was introduced in Worcester, in the year 1751, by a celebrated physician. In addition to his skill in medicine, Dr. Wall was a distinguished artist, and well taught in chemistry. To him must be attributed the first idea of transferring printed patterns to porcelain.

Having had the privilege of visiting one of these manufactories, we will proceed to describe what we saw, and to give a brief account of the materials used. These are china clay and china stone from Cornwall; felspar from Sweden; fire-clay from Stourbridge; marl from Broseley; flint from Dieppe and Gravesend; calcined bones, both home and American, etc.

The china clay, which is found in Cornwall, is not a pure kaolinic clay, like that found in China, but is simply a granitic rock, partially decomposed, and soft and friable, yet still retaining both quartz and mica, in addition to the felspar, which is the essential base of kaolin. In China the processes of nature have carried the decomposition and sorting of the component parts of granite to a further stage.

The earliest productions of Worcester porcelain were blue and white wares, in imitation of the Nankin. The composition is remarkable, as it was invented before the most important constituents were discovered in England.

Clay is one of the most important articles used. Therefore we will begin with the clay shed, containing immense quantities of clays which do not require grinding. Here are several vats supplied with different materials, having been reduced to a uniform mass, like thick cream, by "blungers," worked by machinery. The "slip," for so the material is called, runs into the reservoirs ready for its reception in the next room, which is called the mixing-room or slip house. Such ingredients as felspar, calcined bones, and flints have to be ground before they are prepared for the mixing-room. The time required for grinding varies from twelve hours to six days. So finely are the materials triturated that, when mixed with water, they pass readily through sieves of silk lawn, containing four thousand meshes to the square inch. This fluid mass, like that from the clay shed, runs into the reservoirs under the floor of the mixing-room. The ground materials are thrown by pumps into mixing pots, in which a shaft revolves, and from which arms radiate, having arranged on them rows of powerful magnets for working through the materials, and removing any particles of iron the mass may contain.

From the mixing vat the "slip" passes through a series of sieves worked by machinery. It is then pumped into the clay press, a machine worked by hydraulic pressure, for the purpose of squeezing all water from the mass enclosed in bags, until it assumes the consistency of paste. It is next taken to a cellar, and well beaten and kneaded to make it tough. After this, the material is ready for other workmen. The usual methods of manufacture are "throwing," "pressing," and "casting"; the former two when the clay is in a state of paste, the latter when in "slip."

Some articles, such as cups, bowls, jugs, and teapots, are made on the potter's wheel, which is undoubtedly the most ancient mechanical contrivance connected with the art of pottery. It is mentioned in the Bible, and representations of it have been found in Egyptian tombs, dating as far back as 3,800 years. The "potter's wheel" is a horizontal table or turning lathe, which revolves on a vertical axis. In Egypt the motion was given by the left hand being directly applied to the wheel, the right hand only being at liberty for manipulating the clay, except at very brief intervals. On the Continent of Europe the motion is given by a treadle, worked by the operative's foot. In England the motive power was formerly communicated by a wheel placed a few feet distant, and turned by a boy. At present the wheel is driven by steam power, and the attendant controls its speed by moving his feet.

The operative is called a "thrower," a name given in all probability because he takes a lump of prepared clay and throws it upon the wheel, pressing it with both hands at the sides, causing it to rise in a cone-like shape. Into the top of this he inserts the thumb of one hand, while with the other he fashions the outside of the article. The rotation of the table aids the manipulation, and the cup, saucer, or bowl is roughly formed in a few seconds. The article is then pressed into a mould made of plaster, which, from its porous nature, quickly absorbs the moisture in the clay, and allows the cup, or whatever it may be, to be lifted away. Being somewhat rough, it is passed on to the turner, who, having fixed it in his lathe, finishes it just as he would a wooden article, by cutting away any superfluous or uneven portions. If the article needs a handle, it is taken to the handler's shop. There the handle, which is made by pressing the clay into a suitable mould, is attached to the cup by a little "slip," applied with a camel hair brush, the "slip" acting as glue. In the subsequent burning the handle becomes a solid portion of the cup itself.

Now, however, most of the articles formerly made on the potter's wheel are more quickly and better made by pressing. This process is in principle very simple. A ball of clay, of suitable weight, is made into a "bat" or thin circular cake, if a plate or saucer is about to be made. The workman, being provided with a mould, places the sheet of clay in it, and with a wet sponge dabs it repeatedly, until the clay is forced into every crevice of the mould, which all the while is kept revolving on a table, and then cuts away all the loose edges. All hollow ware is formed in this fashion in moulds, which are then placed in drying stoves, when the mould absorbs the moisture from the article.

The next process is that of burning, or firing. The manufactured objects being ready for baking, are taken to the placing-house of the oven, where they are placed in "seggars," or boxes or jars of various shapes and sizes. These "seggars" are made of fire-clay, and are very strong. Flat round ones are used for plates, each plate having its own "seggar," and its own bed in it, made of ground flint, very carefully prepared; for the china plate will take the exact form made in the bed of flint. In some "seggars" several articles are placed on china rings, to keep them in shape; such rings being properly covered with ground flint to prevent them adhering to the ware. Calcined flint is used for this purpose, because, being pure silica, it has no melting properties, and will not adhere to the china during the process of firing.

In form the china oven is that of a cone or large beehive. The biscuit oven is generally about fourteen feet in diameter, inside measurement, built very strongly of fire-bricks, and bound with iron hoops. The "seggars" containing the manufactured articles are packed in the oven with

great care, so that sinking may be avoided. The heat supplied to the oven is produced by eight furnaces; the time occupied in firing being about forty hours, and about the same time is required for cooling. It needs great skill and care to keep the oven to the proper heat; and during the process the fireman draws small test cups through holes in different parts of the oven, to enable him to judge whether or not the firing is proceeding in a satisfactory manner. The porcelain, after leaving the oven, is called "biscuit,"—a rather misleading term, seeing that it has only been burned once.

Having had all the flint dust brushed off, it is carried into the dipping-room for the purpose of being glazed. On entering the room, we find it supplied with large tubs of glazes, suitable for the different kinds of ware. In one is a reddish mixture, into which terra cotta articles are being dipped; another contains a white material, which is used for light coloured goods, etc.

The glaze is, strictly speaking, a glass, which is chemically prepared from borax, lead, flint, etc., so that when burned it will adhere to the porcelain, and will not crack. So thoroughly are the constituents of the glaze ground, that ten days are often devoted to the grinding process.

From the dipping-room the ware is taken into the drying-room, where the glaze is dried on the ware.

We will next visit the trimming-room, where several women are busily employed in removing all superfluous glaze, and making all defective places good. Passing on, we see the ware being placed in the "glost oven," where the greatest care and cleanliness are required; for should any dust or foreign substance get on the glaze, it would adhere, and in all probability spoil the article.

The "glost oven" is of the same construction as the "biscuit oven." It takes sixteen hours to fire, during which time tests are made like those previously mentioned. The ware is next removed from the "glost oven," and sent on to the white room, where it is sorted and stored until required for decoration by the painters and gilders.

The decoration is accomplished in several ways. In some instances the designs are printed on transfer paper, which is attached to the ware while in a "biscuit state." The design, printed in colour, is readily absorbed by the clay, after which the paper is washed off, and the design, which has been transferred to the plate or other article, is then burned in. But as the greater part of good class ware is decorated by hand, after leaving the white room, we will pass on to the decorating department.

We soon observe that the colours used are metalic oxides,—iron giving red; cobalt, blue; copper, green; and so on. As the colours need to be manipulated in a certain manner, so the artist has to be specially trained for the work. It is interesting to watch the painters, some engaged on landscapes, others on birds, flowers, or butterflies. Each wash has to be burned in, though the heat required is much less than that of the earlier processes already described. Sometimes, for the less advanced painters, only the outlines of the patterns are printed, the colourings being afterwards put on by hand.

The gold used in gilding is the very finest that can be procured, and comes to the works in brown grains, not unlike ground coffee in appearance. As the elaborate and finely executed patterns in gold are all traced by hand, a special training is required for this department,—correct drawing and clean finish being absolutely necessary.

For the purpose of getting correct circles and speedy finish on circular pieces, a simple mechanical contrivance is used. A small table or stand, with a revolving head, receives the plate, saucer, cup, or basin, which is carefully centred, so as to run truly. The workman then, having filled his pencil with gold, fixes his hand upon the rest, applies the pencil to the edge of the piece, and gently turns the head of the table round; the line is thus formed in the most perfect manner. The gold is afterwards burned in, by the article being placed in an enamel kiln for about six hours. When brought from the kiln to the burnisher and chaser, the gold is of a dull yellow colour, but it soon assumes the beautiful bright surface of burnished gold, after being rubbed with a burnisher of bloodstone or agate.

From the burnishing-room the ware is sent into the warehouse, and then distributed to the various orders for which it has been made. One great beauty of the Worcester porcelain is the wonderful depth and richness of the grounds, the blues, roses, and yellows having a charmingly soft and tender tone, combined with great fulness of colour. The different styles of decoration are perforated porcelain, ivory porcelain, Raphaelesque decoration, bronze and metallic decoration in various styles, jewelled porcelain, enamels on royal blue, etc.

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow,' "Corbiestanes," "Our Navvies," etc., etc.

CHAPTER XIV.

A BROTHER'S HELPFULNESS.

"THANK God, that missed its mark!" ejaculated a quiet voice.

Chatteris turned; the Vicar stood beside him, looking with sympathetic eyes at his blood-stained, tear-bedewed face.

"Come and let me bathe your head in the spring," he said.

The two men then turned the corner of the slag heap, and were alone.

By the spring the Vicar made Bob kneel, and bathed his head with his own handkerchief.

The man washed his face and hands, and then stood irresolute.

"You are not fit to go back to work; come and sit here in the sunshine," said Mr. Burleigh.

Bob obeyed; his strong hands were shaking, and he felt weak and dizzy.

"It does seem strange, with such a beautiful good world as this before us, that one could ever wish to make a devil of one's self, to fling off every restraint, and to rush into destruction, does it not?"

"Why!" gasped the man, "*you* can't know anything about *that*. That's just what I want to do; and I will, too. I've been trying to keep right; but what's the use? There's no nook in heaven for such as me; and if there is, I don't care. I'll take my fling out here, and chance it."

"I know the temptation."

"*You* — why, you're a parson!"

"Yes, *and a man*. It is the devil's own snare —liberty—license —'we will not have this Man to reign over us.' Chatteris, let us make a bargain. Will you help me, and let me help you, to fight this

"'Oh! I'm Bob Chatteris, an ironstone-getter, and a chap that makes it a practice to speak t' truth.'"

battle? I will tell you my trouble, and you shall tell me yours."

"Can you do this, sir, for me? I've noticed gentlefolks expect us to tell them all our hearts and all our concerns, but they never tell us theirs; I never tholed wi' that."

"I can do it, Bob, for you; and then you shall see if you can do as much for me. Listen, I love a young lady, and she loves me; she is all a man needs in a wife. Without her my life must always be a sad one, with her it would be as bright and happy as could be this side of heaven. Well, I did not think of it soon enough; but now I see she cannot marry so poor a man as I am; for in my station I am far poorer than you are—and, indeed, I have not more money from my living than you earn in the quarry. I should bring her into real poverty were I to marry her; and yet, if I told her this, she is so noble and so true, she would come. It is I who must think for her; it is my own hand that must kill my happiness, my life's happiness. Chatteris, tell me how I am to do this thing, or to bear it?"

The Vicar was silent, and Bob was strangely moved. The unutterable sadness of the refined face beside him touched his sore heart with a keen, though unselfish pang. Presently he said respectfully,—

"But, sir, is there no way of getting the brass?"

"Ah, there, Bob, comes the temptation. Years ago I gave up wealth and position; I made them over to my younger brother freely, that I might follow Christ. A word, and I could have them back; but then, like Judas, I should sell my Master. I cannot do it! *I cannot do it!* But I am so weak; day and night this awful argument is presented to me. Pray for me, Bob."

The iron-getter bent his head. A long time went by. The sunshine slanted and cast their shadows before them. Then Bob Chatteris heard a deep sigh.

"Thank God!"—and he looked up, and the pale face beside him was bright and triumphant—"Now, Bob, perhaps I can help you."

"If you cannot, sir, no one can; and I'd as lief die at once. Look yer, sir, I loved as bonny a lass as the sun ever shone on. She were a bit delicate and shy like, and couldn't do as much work as most; but I loved her all the more for that. She'd such a gentle, sweet way wi' her; and though she were nobbut small and slight, she had a real, true, loving heart. I loved her, and she loved me, I thought; and I think she did really down at the bottom of her heart. But though I'd walked her out ever sin' I were a young lad, I'd never mentioned marriage to her. I was saving a bit of brass, and I thought to have all ready for her, and take her to see th' little place, and then ax her, and settle it all at once, so as no one should make fun on her beforehand; for somehow I couldn't abide folks talking to her and of her as they do of other lasses. Well, there was another lad in our place that was allus a bad un, and he 'listed, and we were none of us sorry to be shut on him. But in about four or five years his old mother died, and left him a matter of a hundred pounds, and he bought himself off, and came home. He looked a right smart chap in those days; and he'd been to foreign parts, and talked of all sorts of things I knew naught about. And there, afore I knew where I was, he'd put th' spurrings in wi' my little girl, and they were wed. I'd only been away six weeks harvesting, and there it were *done*. So I left home, and came here. I'd nobody belonging to me; an old aunt brought me up. To-day I saw that man. He's killed my joy."

He stood in the evening light, with his clenched fist raised to the sky.

"If I told you by tramping a hard long road you would find your little girl again, would you dread the way, if you could have her for your own at the end?"

"Oh no! I'd go barefoot over iron cobbles; but I shall never see her bonny face, no never, never again."

"Yes, you will, Bob."

"When?" The man looked sternly at the clergyman—"she is dead."

"And therefore lives for ever. Bob, she made a mistake, and she knows it now. She was faithful to that man, though it must have been impossible for her to have loved him after she found his vile nature out. Our Lord saw how hard the road was, so He helped her to the end soon; the pain is over for her now; she learnt her school lessons and went home for the holidays. *You*, brother, have not learnt yours yet. She learnt by heart forgiveness, faith, and holding to the right, though she died for it; and if you are to rejoin her, you must learn these lessons too. Who do you think taught her?"

"It's not in nature to forgive that chap."

"No, not in nature; but it is in grace. Tell me, Bob, who taught the girl you love her lessons of forgiveness?"

"Oh, sir, you press me hard. She was always a good girl; she loved her Bible, and always went to church, and she used to say 'Bob, we must ask Christ to help us.' Sir, I look to you, because you minded me of her. You talk about Him so friendly like."

"I've no need, Chatteris, to say anything more." They remained silent; then John Burleigh said quietly, "Lord Jesus Christ, I leave my brother in Thy keeping," and went his way.

And so the iron-getter found himself alone with God, and there he remained until all the light faded to a pale dimness, and a faint star came shyly to the sky. Then he rose and went down to Houghrigg, and his "joy" seemed to him walking by his side.

CHAPTER XV.

A WOMAN'S SWORD IS HER TONGUE.

"YES, Mrs. Boothroyd, ma'am, you're right; but I never could have thought that the Vicar would have been quite so bad. I've never all my life thought much of Church parsons, but to have come to this! Dear, dear! he's never made a clear profession, and now it's plain enough he's got no possession either."

"Well, I know it's true, for Mr. Boothroyd himself saw him help her into the dog-cart when she left three months ago, and now you tell me he writes to her?"

"Oh, yes; I allus—that is in general—I look over all the letters that is put in t' box, and he writes regular."

"What, every week?"

"Well, no; but the matter of three times, anyway, since she left."

"The earl ought to be told. We must get him shifted."

"I doubt you can't, ma'am; he's thought a deal on at the Chase, very different to what Mr. Little was. They tell me, for I'd tea in the housekeeper's room only last Sabbath, and she says that Mr. Burleigh behaves as if he was as good as t' best on 'em, when company's there, *he* never sits in corners and keeps hissen back like Mr. Little did. He speaks up whenever he's a mind, and they tell me t' best on 'em listens when he does."

"I don't reckon ought of that, Mrs. Pattison," said Mrs. Boothroyd; "I shall speak to my master to incense the earl about it."

"Well, ma'am, I hope you'll be directed right. I'm sure I wouldn't mind doing it, for I feel for these people's souls; only, when one's in business, one can't speak their mind like folks that is independent like you, ma'am."

Mrs. Boothroyd was pleased with the compliment.

"Well, I can sometimes hardly bide still in the church. As I've said to my master many a time, if it wasn't for example, I'd never go again. Mr. Burleigh preaches that strange; he talks as if the Lord was living here in Houghrigg. I can't do with making religion so common."

The two women were so eagerly engaged in their gossip that they never noticed the shop door open, or that Bob Chatteris, the iron-stone getter, was standing waiting to be served; they both therefore started when a rough voice said,—

"Don't be flaid, missus, either on you, the Lord won't come at *your* ingles if He does bide in Houghrigg. I reckon if He were on t' road through here, He'd choose t' Vicarage as natural as He did Martha's house long sin. *That's* spot He'd choose."

"Who are you to talk so to me? Don't you know I'm Mrs. Boothroyd, of Royd Farm?" asked that lady, with a very red face.

"Oh, I'm Bob Chatteris, an iron-stone getter, and a chap that makes it a practice to speak t' truth."

"You don't know what you're talking about."

"Oh yes, I do."

"You can't, Bob," put in Mrs. Pattison, who had hastily calculated which customer it was most worth her while to side with. "You can't, Bob; you're not a believer."

"In what, missus, in you? No, I ain't; but there are a few things I *do* believe in. I'll mention one, t' Parson."

"He'll not be Parson long here, man; we'll see if we can't get him shifted."

"Who's barn to do it?" asked Bob, with a disagreeable broad grin. "You, missus?"

"No; the earl."

"How do you know?"

"Oh, I know well enough."

"No one can shift him," said Chatteris, sullenly. "I've allus understood while a parson lives, he's as sure of his place as t' biggest lord of them all; and," said Bob, whose faith was a little shaken, waxing warm, and arguing against himself, "I can see what a good job it is that there is a church in every bit of a place, and there's one man anyhow who dare stand up for what he knows is right, please who it will."

"You talk very fine, man," said Mrs. Boothroyd, loftily, "but who gave Mr. Burleigh this living? Wasn't it the earl?"

"Yes, I reckon so."

"Then can't he take it back?"

"Well, I guess so, if he's as mean as you are." And Bob Chatteris went out of the shop with a sore heart, and slammed the shop door so vehemently that the bell jingled for five minutes afterwards.

"He'll go and tell our conversation, ma'am, all over the place, ma'am," said Mrs. Pattison bitterly; for though she dearly loved throwing a stone in the dark, she never did so in the light; and publicity of her opinions upon this point might injure her trade.

"*I* don't care, if he does. I'm going home direct to have it over with my master. I can make Boothroyd do what I like. Good-day, Mrs. Pattison—you need only send two pounds of lump sugar, instead of a stone; I've changed my mind. I reckon I can get it cheaper on Thursday from Castleborough."

"She *is* a mean body, and to call herself a lady, too; she's got meaner ever since her daughter died; she's as hard as a flint stone, too. I wish now I'd sided wi' Bob; his custom's regular, if only small; and I'll be bound he'll never enter my doors again."

The farmer's wife went home brimming over with indignation, determination, and mischief-making. The Vicar should go, and *she* would have the importance of removing him. Ever since he had told her to read the ninth chapter of St. Matthew's Gospel, that of which she had duly done, she had hated him. She could not but see how closely some of the passages fitted into her character, so she was uncomfortable. Nor could she forget she had refused to shelter three little children for a few nights; therefore she was angry. Not with herself—oh, no, nothing of the kind, but with the Vicar. He, and he alone, was to blame. She wished to think evil of him, and she tried so hard to do so, that she succeeded in convincing herself he was a disgrace to his calling; and the next step was easy, as she was righteous, which was to try and convince every one she came across that he was a reprobate. She, however, was destined to meet with disappointment. Her husband declined to be stirred up to aggresive action.

"You're wrong, missus; the Vicar is independent of the earl or any one else. Whatever he does or says is no business of mine, nor yours neither, and I shan't meddle. Many a man's gone wrong besides him; he's not the first, and won't be the last—besides, you can prove naught against him."

"I won't go to the church any more, that's flat; and I won't let the girls go neither."

"Please yersel', I shall go; I've sat in that pew man and boy, and if I stay away, and it's empty, ten to one the Vicar will fill it up. I know he's the right to, and he'll do it, sure enough. I never listen to the sermon; I get a bit of quiet time then to plan the week's work; so it makes no odds to me what he says;" and, disappointed in what she wished to do, Mrs. Boothroyd talked the more; and it is a fact that one needs only to repeat any assertion persistently, and presently it will be believed as the truth.

The evil whispers which had been diligently passed from lip to lip for months past, were seeds sown in soil which, only too soon, gave them life, and bitter fruit they bore. The attendances at the services fell off, and John Burleigh noticed with pain, Sunday after Sunday more vacant seats, and on the two week-day evenings, when service was held, only twos and threes knelt with him in prayer. This experience was new to the Vicar. He had not been used to speak to empty benches. He reproached himself with the idea that his own heart sorrow had made him less diligent, less absorbed in his parish. The averted faces and curt greetings which now constantly met him, sent him in a passion of self-reproach to his knees, and yet things grew no brighter. He grew more humble, more patient, but less cheerful; he was too sensitive to continue giving cheerful words when, instead of their being repaid in kind, or doubled in value by the addition of a loving smile, they were returned in surly monosyllables.

Mrs. Pattison's prophecy of months ago had proved true.

Lady Susan had written a tender little note, saying she should be home that day week; and there was such a tone of gladness in the letter, that John Burleigh could read between the lines that when they met she would withdraw her prohibition of his silence, and he might speak of his hope to her father. In spite of the question which was tearing his heart as to the reasonableness and the advisability of doing this, the very thought that she would so soon be back—that he should see her kind face and feel her hand resting in his—sent such a throb of joy to his heart, that in a moment all his doubts were forgotten, and for four days he was steeped in happiness; consequently he was physically stronger, he forgot to feel weary. "This very love is thy life, the root, the seat, the central point of thy being," says Fichte. Not John Burleigh alone, but all of us prove for ourselves that life is love; that we live only when in union with what we love. Do we not feel it daily?

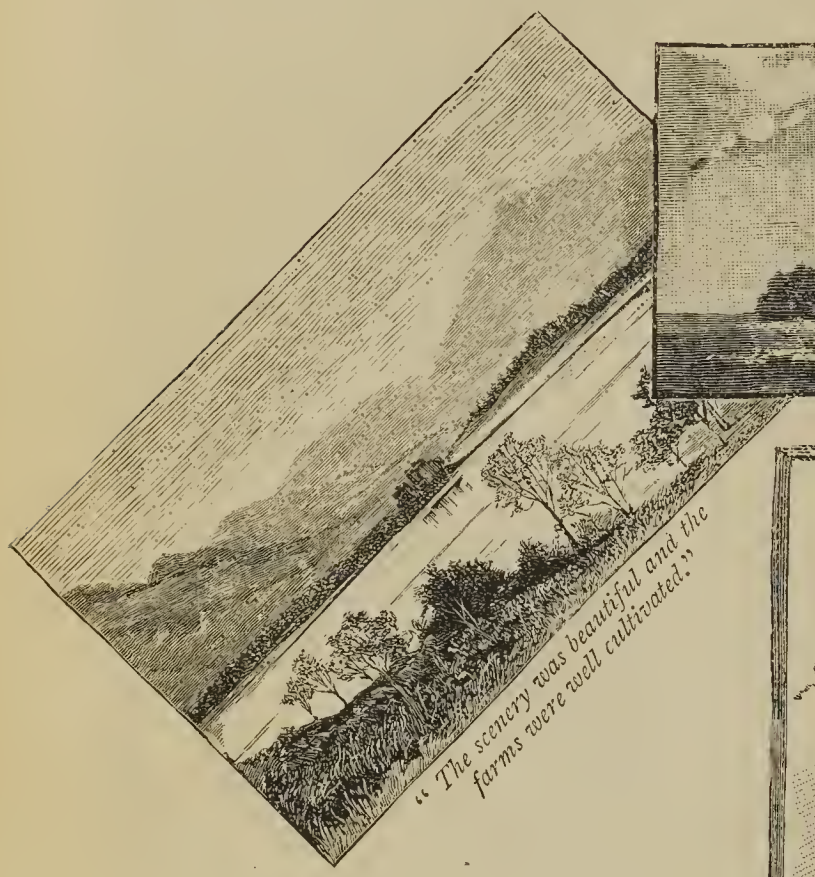
Absence from what we love is not life, but only dull, uninteresting time. "It is but a little part of our life that we live; the whole space of it is not life, but time only."

Nothing is more true than that all life—physical, physiological, and spiritual—is a state of marriage. "The union of two complementary forces, acting and reacting," and all marriage, rightly so called, is life. The bitterest of privations is prolonged severance, the sweetest of delights reunion. God condescends to say, "So will I marry you." Union to God is the highest spiritual life of which man is capable; the second is union to another, whose presence *doubles* our life, because love doubles our capacity of living.

Everything about John Burleigh brightened. His own face was so happy, that the countenances of those he met cleared as they greeted him. Not only nature, but human hearts unconsciously bask and fructify in the sunshine of affection.

But soon there came another letter, and the surprised indignation expressed in it found a passionate echo in his soul. Lady Susan told him her father and mother had announced their intention of going direct from town to Inverben, and of not returning to the Chase until late Autumn. No reason had been given. Lady Susan was deeply hurt; she understood by implication she had in some way been the cause of this change of plans. John Burleigh's first impulse was to have followed the party, and at all costs have come to the explanation he had wished to make long ago; but on second thoughts he knew it would be impossible to intrude thus where he had not been invited. He could not go so far without at least claiming one night's hospitality. He could not do this; no, he must wait.

A chill fell on him like that brought by the evening breeze after the sun sets. His depression came crowding about him again—the averted faces, the empty seats struck him once more with acute pain; for the past week he had ceased to notice them.



He could have borne his disappointment manfully, had he been still in his beloved Canal District, amongst the warm-hearted, outspoken mill operatives. There he found a new interest in every house; here one person in twenty was "a character;" there, the one wanting in a distinct individuality was the twentieth. The people came of the same race, but these had conformed themselves to their environments. Narrowed by their agricultural occupations, though living amidst lovely scenery, they had grown blind to its beauty; never gazing at Nature as a revelation of God's love and life, but only as a commercial speculation of profit and loss. Theirs were limited interests, which, therefore, became self-concentrated and selfish. Inheritors of lives which for generations had been circumscribed within narrow bounds, they were indifferent to all outside interests, as well as to himself; and the Vicar, though he did his duty bravely, and stuck to his work, could not throw his old enthusiasm into it. He reproached himself for his depression, but that sense of failure did not lighten it. Had it not been for his visits to the ironstone tunnels, and to the house at the brick-fields, he could hardly have gone on. He frequently found himself turning his steps to one or the other; if there was nothing more, an affectionate welcome awaited him at both.

LEAVES FROM THE LOG OF A GENTLEMAN GIPSY.

By Gordon Stables, C.M., M.D., R.N.,

Author of "The Cruise of the Land Yacht 'Wanderer'; or, Thirteen Hundred Miles in my Caravan," etc., etc.

"The scenery was beautiful and the farms were well cultivated."

"The houses in the village are extremely quaint."

LEAF XIX.

SAVERNAKE FOREST—THE BEECH AVENUE—MARLBOROUGH—CHISELDON: BIRTHPLACE OF RICHARD JEFFRIES.

ON the 3rd of July, after many delightful drives and pleasant encampments, the *Wanderer* cast anchor in a quiet meadow behind the comfortable, though modern-looking Savernake Forest Hotel, and our next drive will take us through the beautiful forest itself.

* * * *

Savernake Forest—sometimes, I believe, called the Forest of Marlborough—is one of the loveliest in England. It lacks the wild mountain grandeur of the Forest of Dean, and the ancient look and solitariness of the New Forest, but it has a beauty of its own, and a character all its own. It has a very long and very ancient history, which I need not go into here. It is altogether about seventeen miles in circumference, and occupies an area of about four thousand acres, or over. The scenery is everywhere beautiful, and some of the trees, especially the oaks, very grand and majestic. What is called the King's Oak is probably of the very oldest in the kingdom; but, like many of those in Sherwood Forest, it has fallen from its high estate, only the sturdy old hollow trunk, which measures about four and twenty feet round, remaining. The King Oak has fallen among his fellows, many grand trees still surrounding him, fallen as a king should, fighting with his foes—wind and storm, and time, the *edax rerum*.

About a mile from this kingly trunk is Savernake Lodge, formerly the residence of the late Marquis. This mansion is now a ruin, having been utterly destroyed by fire, but gardens and pleasure-grounds around it are still kept up, and permission is given to picnic parties and tourists to visit them. There is another ruin near by, that of a very aged oak. In its day it must have been king of the forest, for it measured thirty feet in circumference and twenty feet around its inside hollow heart; it is called the "Duke's Vaunt," and it was certainly a tree to vaunt about. There is also a Queen Oak, and in Braydon Oak Valley another tree worth visiting.

The public are permitted by the Marquis to make use of Savernake Forest at all reasonable hours, summer or winter; the green grass rides and avenues, however, are only to be used by those on foot or on horseback. There are eight walks or avenues in all, including the grand avenue, which is five miles long, and all these walks diverge like radii of a great green wheel, from the centre of the forest. There is certainly less chance, therefore, of losing one's self in this woodland than in the New Forest; still, one would not care to get too far from a path in a dark night, even here.

As we lay two nights at the hotel, I had an opportunity of visiting the Forest twice, and, in spite of the flies, thought myself well repaid.

Leaving the hotel and crossing the railway bridge, we have a very long, steep hill to ascend, which tries horses severely, and is hardly accessible on the cycle. After a beautiful drive through the woods, we enter by a great lodge-gate, and find ourselves in what might be called a splendidly wooded park. We drive slowly on; it would indeed be a pity to hurry here. Near a great tree yonder is a pond in which cattle wade knee deep, for the day is very hot; high up on the right the roofs of the mansion are seen above the foliage; there is green sward all round, trees in pretty groups; patches of ferns on the sward here and there give the charm of wildness.

The road soon dips down into a grass vale, and we pass a fine herd of deer, that, although full of inquisitiveness and wonder, nevertheless scurry away at our approach. Ferns everywhere, and patches of rhododendrons still in bloom, add much to the general effect; cattle are seen under almost every clump of trees, sheltering from the fierce heat; and the sunshine effects on the quivering foliage of the beeches are very pretty.

The Beech Avenue.

No drive in England that I can call to mind, can compare for stately beauty with this grand and solemn-like avenue. Imagine a broad gravelled road, a rolling road, sweeping down into valleys and rising over braes on either side as far as eye can reach, bordered first by ribbons of soft green sward, and secondly by two seemingly interminable lines of stately beeches, that rise straight, though many branched, to a vast height skywards, and interlace overhead in a canopy of green, through the interstices of which the rays of the summer sun can hardly shimmer. These two chief rows of trees are backed by other rows, whilst all beneath them is sward with no undergrowth of any sort—only the dead leaves of the bygone year.

* * * *

The *Wanderer* goes straight across this noble avenue after her crew have sufficiently admired its beauty, and we continue our journey through the Forest, with spreading elms, ashes, and beeches on every hand; and, by-and-by, emerge at another gate near the Warre House. The scenery gets wilder now, and there are peeps of many a long-vista'd lane or lover's walk, some of these being so wooded as to resemble pathways through a Scottish woodland. But the Forest does not end yet, nor for many and many a long mile to come. Even when we are out, at last, in the main or Marlborough road, we are still in the midst of scenery as beautiful and wild as any one could wish or imagine.

The town of Marlborough—once a city, by-the-bye—is a pretty sight on a summer's day, nestling in its green valley, with fertile hills and plains beyond it. From the top of the long hill which we have to descend in coming from the Forest, we get quite a bird's-eye view of the place. We stayed here only to shop and feed the

horses, but long enough to see the town, which is picturesque as well as pretty; and as to its history, why, from beginning to end it reads like one long, delightful romance.

The thermometer on the coupé quite away from the sun, stood to-day at 91°. As regards caravan travelling, however, we never find the heat very oppressive, as we command such currents of air, and unless the wind is blowing very high, cooking can be done out of doors.

We found the country now very open and comparatively bare, quite a change from the forest lands we had left. Towards evening to-day we reached and bivouacked in a hay-field behind the Patriot's Arms, in the romantic little village of Chiseldon.

Sadness prevailed at the cosy wee inn. The landlord had recently died, and the landlady was lying dangerously ill in bed.

The houses of this village are extremely quaint and picturesque, hung here and there on the braelands and hills. The place has the honour of having been the birthplace of a true genius and true lover of Nature, the late lamented Richard Jeffries. I do not think, however, the common people are yet very sensible of their borrowed greatness. However, one old fellow said to me, "I did used to know Richard purty well. Used to laugh to mysel' to see 'im 'angin' over a pigsty for 'arf-an-hour or more. Didn't know then wot he was a-doin' of." "And what was he doing then, Bill?" "W'y, he were in a brown study, in course. All they geniuses chaps do it."

Later on in the evening it leaked out that I was a doctor. I was forthwith gazetted as a quack, and it was rumoured abroad that I was going to give lectures and sell infallible pills. So primitive is Chiseldon.

LEAF XX.

SWINDON FROM TWO POINTS OF VIEW—CIRENCESTER—CHALFORD: A VILLAGE OF ROMANCE AND BEAUTY—STROUD, STONEHOUSE, GLOUCESTER, AND CHELTENHAM—THE DOG INN: MURDER—WESTBURY-ON-SEVERN.

SHORTLY after leaving Chiseldon, and from the hill-top, one gets a delightful view—though all is bleak and bare enough behind—of a rich and well-wooded plain. The first peep we catch of Swindon from the south is quite imposing. Swindon on the hill-top, in its cloudland of trees, with one spire rising tall, away to the right, and near it a tower which is almost Grecian in appearance, is Swindon from a romantic point of view—Swindon as we gipsy-folks know it. But Swindon down below is a Swindon of another sort. This is the Swindon that people condemned to ride on rails know most about—the Swindon where railway carriages are made, where is more noise than poetry—the Swindon where ten minutes are allowed for refreshments. Let me have Swindon on the hill, and any one else may have the rest, including the "refreshments."

Bivouacked in the grounds of a fine old—old a term of endearment—English gentleman, Mr. Middleditch, of Blumsden, who, though in sorrow, entertained me none the less kindly.

Cirencester is such a bonnie town. And it is worth going all the way from London to see its park. It really is romantic. Situated in the heart of a quiet, agricultural district, the town itself is quiet, almost severely so, and the very air that blows over it, and sighs through the battlements of that beautiful church, is a dreamy air, and seems to conduce to calmness and meditation.

After a splendid drive through a most fascinating country, we creep down a long and dangerous hill to the vale of Chalford, about four miles from Stroud. Many a train-traveller must gaze from his carriage window as he is swept rapidly through the scenery here, and wonder at the wild beauty of the scenery that lies on every side, and at the romantic village that literally clings like a leach to the rocks. We make our mid-day halt here, and, as the horses were feeding, I clambered up to the highest peak of the town to find a photographer, but failed. I've done Gibraltar, and that is steep climbing, but this, I think, beats it. One cannot help wondering that the houses, potato patches, and all do not go tobogganning down the hill-side into the canal.

Refreshed myself with ginger ale at Stroud, bought photographs, and went on. Bivouacked at Stonehouse, where, at the Rev. Mr. White's, Bob and I were kindly entertained. Made the mid-day halt in the streets of Gloucester, thermometer over 90° in the shade, and encamped at a very cosy road-side inn half-way 'twixt there and Cheltenham. At the latter place I lay for several days, and hope to return some other day, for it is altogether a charming town. We returned through Gloucester; but the crowd that surrounded the caravan on stopping with the intention of baiting, was so great, that I thought it better to go on, and get clear. In a short time we drew up in front of one of the loveliest country inns I ever visited. It is called The Dog. The gardens were bright with flowers, and its walls all a-smother with climbers. In the front garden is the image of a great stone dog. I was told that a foul murder had once been committed here, that the perpetrators had been followed to the place by their own dog, and the animal, having been found in the blood-stained house in the morning, led the way to the very door of the murderers.

We are now *en route* for Westbury-on-the-Severn, and thence to the Forest of Dean. On this tour, forests are my fancy. Soon after leaving The Dog Inn, the road branches away to the left, and presently the Severn heaves in sight; far from clear, but prettily fringed by willows. The scenery got wilder the farther we went, but no signs of an inn, nor was there one to be found, tired though the horses were with the terrible heat, till we arrived, way-worn and weary, at Westbury. We could see the steeple of Westbury Church a long time before we reached the place, and some of its houses, half hidden by the greenery of trees, and backed by the waters of the Severn, from which the sun's rays were reflected, as if from burnished steel.

The architecture of Westbury is certainly not remarkable for either quaintness or beauty; yet the village is very old, and the tints are often such as would please the eye of an artist. We got good stabling, and a fine, breezy meadow. It was a fine, breezy night, too, and the wind kept the caravan rocking enough to secure us delightful repose.

The *Wanderer* is lying near a great grey old workhouse, which gives asylum to about two hundred paupers. I can see a row of them sitting yonder at the foot of their potato-garden as I write—weary, silent, decrepit, old men, or invalids. They are out of the battle of life, done with the world, only waiting the call.

The church is a very ancient edifice, while the steeple, which is extremely tall and covered with oak shingles, is quite separate from the building, standing all by itself in that very old graveyard.

It is just in such romantic world-old places as Westbury that a caravanist feels at home, and where people make one really welcome. The first to call on me were friends of the kindly farmer who had given me his meadow, and next day I had the farmers themselves. They all brought flowers, so that we are now very gay inside. Even the village children brought me bouquets.

Small though Westbury village may be, the parish itself has a very ancient history, and is of great extent, with a scattered population of 2,500 souls. Westbury played its part in the great civil war.

Westbury has a lion, a very old lion, namely the place called Westbury Court and gardens. No one goes to Westbury without visiting its lion, and, indeed, I was delighted with the romance, not to say poetry, of the place. The court itself was pulled down in 1806; but the strange gardens are unchanged. They were laid out so long back as 1700, after the style of the gardens in Holland. Their principal features are "two long, canal-shaped pieces of water, one straight, and the other in the form of the letter T, each extending from one end of the gardens to the other, and bordered by neatly-kept hedges of yew. At the southern extremity of the straight piece of water is the Banqueting House, a handsome room built over a portico, and strangely furnished. Here, after the early dinner, the family would adjourn for what would be now termed dessert, then called banqueting stuffs. Here, too, the cup of tea, then a rare and costly beverage, was sipped by the ladies from costly china. At the other end of the garden, and in the T-shaped piece of water, is a statue of Neptune; and near to it, adjoining the highway, is a small summer-house, with a window, now bricked up, but which formerly looked into the road, and at which it was pleasant to sit in summer and exchange a friendly nod with passing neighbours, and learn the latest news from the public coaches or stage-wagons as they passed by.

Altogether, therefore, Westbury-on-Severn is a very interesting place.

And now began our voyage to the Forest of Dean.

(*Continued—page* 700.)

PREPARING FOR THE BATTLE OF LIFE.

HINTS TO THOSE WHO ARE ENGAGED.

By Phyllis Browne.

USUALLY one of the first signs of a girl being engaged is, that she begins to work a pair of slippers for her beloved! When these are finished, she turns her attention to the production of yards of embroidery, and to the manufacture of garments of various kinds — small mats, antimacassars, and other valuables. The first sign of the same event in a young man is a quiet look of satisfaction on the face, a general tendency to be amiable towards all womenfolk, and presently, the gorgeous equipment of the lower extremities.

Perhaps of the two, the masculine way of expressing delight in an engagement is the more reasonable. The feminine way is all very well to an extent, but it is generally carried to excess. Why should a girl think chiefly of what she will *wear* after marriage? Why should she not prepare for the work she is likely to have to *do?* Why not make herself thoroughly acquainted with the details of housekeeping, the management of the home, and by practice gain skill in the art of cookery? If she is ignorant of these things, her marriage will not be a success. She might sew till she was exhausted, she might go to her new home with wearing apparel of every kind laid up for many years; yes, she might have so large a supply, that if she liked, she could open a shop for the sale of ready-made clothing for women, immediately after marriage; but if she were not what is called domesticated, she would not make a successful marriage.

Yet, do not suppose that I should think lightly of being skilful with the needle. On the contrary, I think that it is most necessary for a girl to be able to sew. In household management, to be able to use the needle, both in making and mending, is an accomplishment the importance of which it is impossible to over-rate. A wife and a mother who is quick with her needle, can generally save far more than she could earn, if she were to make money by working. A girl who cannot handle her needle cleverly is sadly deficient, and the sooner she learns the better.

Nor would I like it to be supposed that a girl, whether she is about to be married, or whether she is about to remain single, should not give a certain amount of thought to her dress, and especially to that part of dress which is not seen. It is part of the duty of every woman to make herself as pretty and pleasant-looking as she can, and to take pains to provide herself beforehand with what is seemly and becoming. I only wish to protest against the notion that the chief preparation for marriage is the preparation of what one is to wear, and to insist that it is of far greater importance to prepare for what one has to do. Even in making provision for the future, it is a mistake to spend money and time which are needed for other things—over elaborately-made garments, and an extra number of dresses. The dresses will get out of date; the elaborately-made garments will be an anxiety, because they will need special care in washing and ironing, or they will be spoilt. If the money which they cost were put into the bank, it would always be useful. It is a matter of the greatest importance that a woman, at the head of a household, should know how to cook.

Food that is well cooked agrees with people, and makes them strong; while food that is badly cooked is almost certain to disagree, and to make people ill. But there is more than this to be said: good cookery is one of the greatest foes to intemperance. Mr. Gough, the great temperance orator, once said, that "if all the women in England would say, 'I will neither drink, nor offer intoxicating liquor to any one from this time forth,' drinking would fall into disrepute in six months." If this be true, what a responsibility rests upon women! But, to my mind, women have something more to do in the matter than merely to say that they will not drink, and will not offer drink: they have to provide for their families something that will take the place of drink. In order to do this, they must know how to cook. One of the best friends of the publican is the woman who does all her cooking in the frying-pan.

A young husband and wife once went to a Temperance Meeting, and were very much impressed by what was said. As they were walking home they were very silent. At last the husband said with a sigh,—

"Well?" and also with a sigh she replied, "Well?"

After a minute, the husband said again, "Well?"

She answered, "I will if you will."

Said the husband, "Agreed."

"Agreed," said the wife. "So now, we are teetotalers. When shall we begin?"

"At once," said the husband.

"All right, we will; we'll begin to-night," said the wife.

In a little while the pair arrived at home, and the wife laid the supper out. It consisted of a little cold meat, bread and butter, and cold water. It was a cold night. The pair sat down to their meal. Again there was silence for a time. Then the wife looked up.

"Well?" said the husband.

"Well?" said the wife. "It's rather cold and dry. What shall we do?"

"Suppose we begin to-morrow?" said the husband.

So in a minute a jug of beer was brought in, and things seemed comfortable again. But those two people never began on the morrow. Supposing in this case the wife, instead of setting cold water on the table, had brought on some well-made, scalding hot coffee, or cocoa, how differently things would have turned out. The beer would then never have been missed. Its place would have been supplied.

It is in this way that women can keep temperance—by always having ready something that will do instead of intoxicating liquor. Yet no woman can do this who is not thoroughly familiar with cookery.

In these days it is quite easy for girls to teach themselves cookery and housekeeping. Excellent books on these subjects are now to be obtained at a low price of any bookseller, and the girl who will study these, and more than all, practise what they tell, may learn much in a very short time. A few years ago, good cookery books, and books on household management, were rare, and those which were to be had seemed to be intended only for persons who had a great deal of money, and wanted to get rid of it. There was scarcely a recipe in one of those books which did not order the use of eight or ten eggs at least, while butter and cream were to be used most extravagantly.

Now all this is altered. We can buy books with recipes, in which economy has been most carefully studied, and in which the instructions are clearly and plainly stated. This is a great advantage. With good recipes, and a will to learn, by practice a girl can do anything in cookery and housekeeping. A good book will also help to *accustom* her to economy.

A maid who was about to enter a new place was once asked by her mistress if she was accustomed to economy. "Oh, yes," replied the girl; "I have always boiled it." There are thousands of girls who have quite as little notion of what economy really is.

And yet we make a mistake when we trust to recipes. A good recipe, or a good housekeeping book, is like a guide-post, it only shows the road; it does not lift us over the stile. We must climb that for ourselves. There is an old proverb, which girls who want to learn cookery and housekeeping, would do well to remember. It is this: "Nothing helps you to do things like doing them." The girl who will begin at once, will go down into the kitchen, cook the dinner, the breakfast, and the supper, sweep and dust her own room, clean her own window, polish her own grate, scrub her own floor, and keep this up for a few months, doing everything as well as she can, noting the mistakes she makes, and avoiding them next time, will, when she is married, be much better prepared to rule and manage a household than she would have been if she had made dozens of antimacassars and mats.

Some people seem to think that all girls understand cookery, housekeeping, the management of children, and the nursing of the sick, by instinct; and that neither training nor practice is needed. But this is not so. Girls who are married, and who have no training, have to learn by the mistakes they make, and their husbands and families have to pay the price of their education.

These girls remind us of the story of the pilot, who said that he could pilot a vessel into Boston Harbour. "Now," said he to the captain, "I'll stand midships, and you can take the helm. I know every rock in this channel—every one of them; I know them all, and I'll give you warning when we are near them." By-and-by the vessel struck upon a rock, and the shock threw

everybody down upon the deck. The poor pilot got up rubbing himself, and said, "There's one of them, Captain." So with these poor girls. They are expected to know all the ins and outs of management, but very soon some notable blunder makes their ignorance evident to all.

Perhaps, after all, some one feels inclined to ask, "Then has the girl to do everything that is to be done in the way of preparation for marriage? Has her lover to do nothing?" Indeed, yes. The man's place in this business is to find the home, to make the means wherewith that home shall be kept up. He must therefore be very busy, and plan and contrive that there may be a fair prospect of comfort. Yet it is not easy to tell him *how* he is to do this. That must depend on the kind of business he is in. It is said that there are men who object to marriage, because they rebel very much against the necessity of working to support a home. A man of this kind thinks it is enough if he works for himself, and fancies that in marrying he will be making very much of a sacrifice of himself for the benefit of his partner.

Three-fourths of the bachelors of the world, we have been told, are bachelors because they have been too stingy to marry. If this be true, all that we can say is, that the stingy people have over-reached themselves, as such people generally do. The men who have made their mark in the world, who have achieved success, and have been useful and happy, have almost invariably been found in the ranks of the married. The reason of this is obvious. There is nothing like marriage for compelling a man to exert himself, for taking the conceit out of him, and bringing out the best that is in him. A man who does not marry is only half a human being; his thoughts become centred in himself, and that is the most miserable and unsatisfactory object a man can devote himself to. Bachelors sometimes rejoice that they are free from "encumbrances," that they have no anxieties. As a matter of fact, they are the most anxious set of people in the world, and when any little trouble comes upon them, they are twice as miserable as they would be if they could share their pain. The older they grow, the more lonely and discontented they become, and when they die they are forgotten in a day or two. Taking everything all round, we have to conclude that married men have the best of it. Let young men, therefore, who are engaged, look forward to their work of life with a light heart. As the old poet says:—

"Though fools spurn Hymen's gentle powers,
We who improve his golden hours,
By sweet experience know
That marriage rightly understood,
Gives to the tender and the good
A Paradise below."

"STAND WHERE THE FIRE HAS BEEN."

A DRY sunny day it had been, with a gentle breeze, and everything was going on smoothly in the log hut; the small patch of corn in front had been just gathered.

As the owners of the land gazed contentedly over the long, waving prairie grass for some miles, they looked upon their lot in life with undisguised satisfaction. After an unusually hot day, the breeze had freshened.

Suddenly a long, dark cloud was seen upon the horizon, followed almost immediately by a lurid glare. Miles and miles away it was from the little settlement, but none the less horrifying to the inhabitants, who, even if they had never seen it before, could not be mistaken in the awful sight; and with anxious looks the word went round, "The prairie's on fire!" Yes, there it was, bearing down upon them, coming just in their direction, and coming with a fearful rapidity.

Around the hut, garden, and small field there was what is called a "fire-break,"—a belt of land about the width of a wide road, ploughed up, which serves as a guard against any ordinary grass fire.

All soon saw that with such a wind, which had now increased to almost a gale, and with grass and prairie shrubs very dry by the day's hot sun, their narrow fire-break was simply useless before such a furious and galloping fire—little short of a roaring furnace coming along at ten to fifteen miles an hour. What could stem it? *Nothing—simply nothing.*

Oh, that you, reader, could just be within half a mile of it, and see the roaring blaze sweeping along, and get a view of the *flying multitude* going before it—a run for life indeed.

You would never forget the scene. Bear, buffalo, antelope, and every four-footed animal—a mixed mob—a terror-stricken crowd, alike realizing the value of life in the face of certain death; to prey upon each other never entered their heads in the face of such a mighty foe. No time to think, hardly time to breathe. What a scene! Does it not remind you of the description of the last day (Rev. 6. 15), where it says, "Kings of the earth, great men, rich men, captains, bondmen, and freemen," a terror-stricken crowd, all mixed together, "hid themselves in dens and rocks." If ever *you* see that scene, you will know you are beyond hope. Therefore haste now to a deliverer.

Those who live in the regions of the wild prairies know well that there is only one way, only one means of salvation, from the face of the awful foe we have just been describing. Thank God, there is one, *just one way* of escape, and this is given to man only; no animal can obtain the deliverance.

Is it so? Can a man save himself from one of those awful prairie fires?

Yes, in this way—a man, by a match, just takes some of the same pursuing element, *fire*, and lights the long dry grass at his feet. As swiftly, this new fire flies ahead, consuming all before it; and, before the great fire comes up, he just walks on to the blackened ground, where all has already been consumed. He is safe, quite safe. When the fire comes up to this spot, it finds nothing left to consume, and so it cannot come near him, cannot touch him; and with him perhaps thousands of poor animals, almost breathless, rush in there and stand *safe, quite safe;* for the fire having gone over that place once, cannot do so a second time.

Truly, one understands the oft-repeated words, "*Stand where the fire has been,*" for vain would be the attempt to put out or arrest such a roaring furnace.

This is but a poor picture of the Great Day when the terrible fire of God's wrath comes. Yes, and it is soon coming along. Pity you may the one who is not *then* "standing where the fire has been."

Simple as it is for a man to take a match and light the grass ahead of him, and then "stand where the fire has been," so simple is it to shelter under the finished work of Christ. God spent the fire of his judgment on His beloved Son, and now He has pledged a present and eternal security *to any who will* take their place in Him, *take refuge* in the One Who bore on the tree the sentence for us. "God so loved the world, that He gave His only begotten Son, that whosoever believeth in Him should not perish, but have everlasting life." We said, simple it is to trust Christ and shelter beneath His precious blood—but only by the Holy Spirit can we appropriate this work of another on our behalf; and yet the responsibility is yours if you now neglect this; for then there remains but one alternative for you, and that is, to take your place in the condemned crowd hiding in dens and rocks.

Think!—If God's wrath has fallen upon your Substitute, it can never again fall upon you. Friend, *do* "stand where the fire has been," and then all you have to do is to praise God for having permitted His fiery judgment to pass over and consume *Another*, and to love and live for Him, who thus took your place and died in your stead.

"Christ hath redeemed us from the curse of the law, being made a curse for us" (Gal. 3. 13). "The *unbelieving* . . . shall have their part in the lake that burneth with fire" (Rev. 21. 8).

A TOUR IN THE BLACK FOREST;

OR, HOW TO SPEND A HOLIDAY.

By W. Warren.

Native characters which we saw.

Part II.

I LEFT the reader by the river Kinzig, the centre of the great timber industry. As it is most interesting, I devoted some time to carefully studying its various points of interest. The timbers are here tied loosely with ropes of twisted wood ; six to twelve timbers tied together form a steer, and these steers again joined together form the raft. Upon the first "steer" stands the steersman with a small oar ; the other raftsmen try to direct its course with poles. The raftsmen are for the most part tall, robust-looking men, as will be seen from our sketch here reproduced ; for here let it be remarked, to stand on those smooth, shaking timbers is a somewhat perilous proceeding, when the loosely-tied raft whizzes along in its hasty, irregular course, between large, rocky blocks, and, driven rapidly by the hissing torrent, passes swiftly the dangerous, hanging rocks.

In returning, we passed the picturesque ruins of the former Castle Schenkenzell, through very beautiful woods and fields ; we were very soon in Wurtemburg territory again. The narrow valley became suddenly wider, and the slender and graceful monastery church of Alpirsbach rose before our eyes.

To those with a love for sport, the Black Forest offers many advantages. The mountain cock, one of the largest land-birds of Germany, may be described as the greatest ornament of its forests, and the joy of its hunters. It is a very handsome bird, the crown of the head and throat blackish, the neck dark and grey, the breast bright steel green, the tail feathers black with white spots ; and during the hunting season I am told it affords the keenest sport—a sport I was able shortly to see, if not actually partake in.

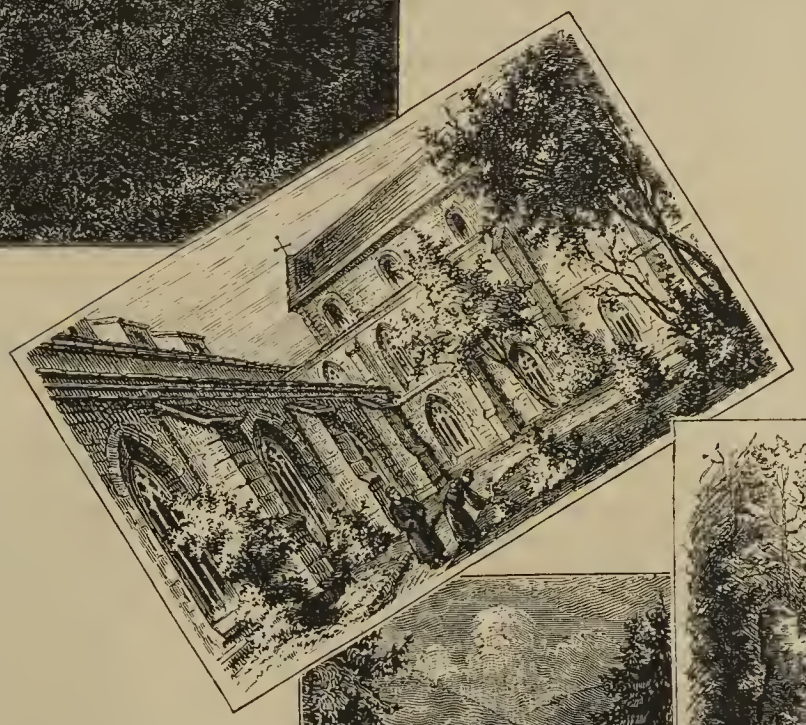
Through the kindness of the proprietor of the hotel, we obtained the services of one of the Prince of Funisburg's gamekeepers, and the next morning, at 8 o'clock, the landlord's conveyance stood at the door, waiting to take us to Grunthal, where we left our chariot, and met the keeper, who for the nonce was to act the double *rôle* of gamekeeper and guide.

In the forests surrounding Grunthal, the mountain cock is to be found in considerable numbers, and we had only just entered the shade of the forest when our guide called out in a suppressed voice, "Stop!" and at the same time pointed to the highest branches of a fir tree, from which, at this very moment, a fine-looking specimen of the looked-for game flew away somewhat clumsily. This sight evidently fired the imagination of the guide, who expatiated at some length upon the scenes to be witnessed in the hunting season, which is at its height in the middle of April. Then we go out by moonlight in the green woods. Should the sky be dim, torches are lit till one comes near the breeding-place ; then the torches are extinguished, and we dimly see fantastic trees all around us, which seem to crowd like sentinel spirits in our pathway. Soon

"The slender, graceful monastery church of Alpirsbach."

The steel and scythe works, as we passed to the North.

these weird feelings are intensified, as the cry of the mountain cock comes borne by the night breeze through the wood. This is the moment of the greatest excitement; a stupid or a false move, and the game will be frightened and fly away; but it generally falls a victim to the hunter's skill, and this is his supreme moment. With what pride does he watch the great bird as it swoops, and if his shot be successful, he loves to decorate his hat with the black, white-spotted, shovel-formed tail feathers.



The days had fled so quickly, that it was with mingled feelings of astonishment and sorrow that I made the discovery that I must return to England shortly, and I determined to go somewhat further afield for my next excursion.

Much has been said and written about the Mummelsea, its legends and its weird beauty, and I decided to visit it; and finding that by far the pleasanter way would be to drive there, I made arrangements with one of my fellow-guests to hire a trap. Starting immediately after breakfast, we passed the already fully awakened town, driving along the banks of the Voobach, passing steel and scythe factories, mill works, spinning and baryta mills, over Christoph's and Fredericstal to Barirshrom, below which place the Voobach unites with the Murg.

Our way led us here down a narrow ravine, through which the Murg has pierced its passage, and from thence upward to Millel and Oberthal, two pretty villages situated in a well-cultivated country. Beyond this the scenery gets very romantic, small cascades rushing down the mountain roads, till they reach their highest point in the Ruhstein, 920 metres above the surface of the sea. Here, on the frontier of Baden and Wurtemburg, we stopped and dined. After doing justice to this meal, we found our way to the Wilden, situated 902 metres above the surface of the sea; a strange, weird place, with dim and dismal surroundings.

It seems as if some awful spell had been cast over the deep, quiet surface of the water, a lonely ruin only enlivening the forest solitude. On our return to the inn, we determined to rest for the remainder of the day.

Starting, however, before breakfast next morning, we arrived at Wolfbrunnen, the last principal stopping-place. Here we refreshed the inner man, and while doing this, our host related to us a quaint legend, which may perhaps bear repeating in his peculiar German-English.

"Langenbach."

"On the place where the wild sea is now lying, stood in olden times a nunnery, but that has sunk and the water has covered it. They say that the road and the tracks in the rocks are still to be seen; the road has no turning, for it led formerly to the cloister where the turning-place was. The nuns were often seen sitting by the sea, after their cloister had sunk, and still sung their songs; but when anybody came near, they sprang into the water.

"There were always twelve of them. They liked dancing very much; and came often to the people in the valleys, but always only one would go, and no one ever saw that they accepted anything to eat or drink. But notwithstanding this the nuns were very happy, but they never answered any questions about their sea. If any one asked such a question, they left that place, and never returned to it again.

"The nuns were much in request at weddings, as they were supposed to bring innumerable blessings and happiness; and therefore it was a common custom for the brides to go to the sea and invite them by calling in a loud voice, 'I have my wedding; come to dance.'" This was always done three days before. If a nun was willing to come, one knew of the fact by the splashing of the water.

"But the betrothed couple had to promise the nun, when she came, to tell her for certain when in the night the clock struck twelve. Then she left the betrothed couple, letting them see her to the door, and then kissing her hand, she suddenly vanished.

"These nuns danced in their own modest way, and not in such a wild and uncultivated style as people do now; they only glided along with light and easy steps. It so happened that once a betrothed couple forgot the hour, and when the nun asked what time it was, found that it was one

Stray leaves from my sketch-book.

o'clock. Sinking to the ground with a loud cry, she begged the bridegroom to go with her to the sea and see her fate. 'The moon shines bright,' she said; 'when I sink down into the sea, if it turns as white as milk it is a good sign, but if it turns as red as blood, it is finished with me.' She sprang into the sea, and directly after it shot up as red as blood. The bridegroom went sadly home, and since that time the nuns sing no more by the sea."

* * * *

It certainly did not look such a tragic place as we approached it on the footpath, and now and again caught a glimpse of it like gleaming silver; but on a nearer approach we pronounced it decidedly uncanny, as the sky had become overcast, and its leaden reflection was cast upon the water, together with the sombre shade of its encircling trees.

We were not exactly sorry to leave this, and walked up the zigzag path through the wood till we came to the stone signal tower on the summit of the Hornisgrinde, the highest point on the northern chain of the Black Forest, 1166 metres above the sea. From the height we caught a glimpse of the famous Hohentwiel castle, which is most definitely a castle with a history. The men of the Swiss lake dwellings, or of their epoch, must have used the rocky heights of Twiel as a place of refuge, for vessels and utensils of that period have been discovered on it; Celtic and Roman remains have also been found on the mount and on its base. Traces of warlike activity on and around it at the time of the migration of peoples still exist. In a later era, the Christian Church set up its standard here, and under Louis the Pious, a monastery is said to have been founded on the mount. But warriors armed with sword and lance soon established themselves by the side of the altar, here, as elsewhere. Disregard of the imperial authority on the part of powerful and ambitious nobles led to bloodshed.

After Hohentwiel had been the seat of various noble families, all of whom gained possession of it by force or fraud, or by the caprice of fortune, it fell into the possession of the kingdom of Wurtemburg at the time of the Reformation, and in the midst of the troublous days of the peasants' insurrection.

In the eighteenth century, Hohentwiel was used as a state prison; in its dungeons languished the patriot J. J. Moser, and the officers, Von Kuobels-dorf and Rieger; the account given of the sufferings of these men, especially of the latter, is perfectly heartrending.

Upon the outbreak of the French revolution, the flames of which were especially apt to devour castles and palaces, Hohentwiel met its fate, being destroyed by the French general Vendamne in 1800. Since that date it has remained a shapeless heap of grass-grown ruins. Immediately behind this we see the plain of the Rhine, eastwards dense forests, Freudenstadt, and further back the Suabian Alp, the Hohenzollern, Hohentwiel, and other mountains of the Hegan. South and southernwards innumerable heights of the Black Forest; westwards the Rhine plain with numberless villages, and the steeple of the Minster of Strassbourgh; northwards the mountains which border the Oos and Murg valley. Slowly we descended to the Eckle, another beautiful point, where we had ordered the carriage to wait for us; from thence we drove back to Wolfsbrunnen, and down the valley home.

This way led us through the picturesque wooded valley of Langenbach.

But now we must bid farewell to the Black Forest. The little station is full of travellers, who will in a few hours be scattered to the four winds on the swift wings of steam, others coming onward to fill the vacancies, and I will leave them with the hope that their journey may be as enjoyable as mine was.

THE 6.18 TRAIN;

OR,

HELEN'S LESSON IN SELF-CONTROL.

"I DON'T suppose she means it, but it makes a fellow feel uncommonly queer," muttered Hugh Darrel, as he took his seat in a first-class railway carriage, and wrapped a handsome plaid about his knees. His brow slightly contracted, as the thoughts which had been passing through his mind on his way to the station found vent in words; but the next moment his good-looking face cleared, as he turned to respond to the greeting of a friend who had stepped in after him, and he dismissed the subject easily from his mind. The words had reference to something which had taken place half an hour previously.

"We shall have to make up our minds about Paris to-day, Hugh, or it will be too late to get rooms," said his wife, as she poured him out his second cup of coffee.

They had been married nearly two years, and Hugh was still as much in love as he had been upon their wedding morning.

The remark perplexed him; the subject had a fortnight ago been fully discussed, and then dropped, and, as he supposed, finally settled.

"I didn't know there was any question about it," he said. "I thought you understood, dear, that I should not be able to manage it."

Helen's fair face clouded. She *had* understood; but she had expected him to change his mind, knowing how much she wished to go. She was too proud now to press her point, but she let him see that she was offended.

"I'm sorry, if you are disappointed," he said, looking at her anxiously; "I don't see my way to do it at all, and I supposed that you had dropped the notion entirely. You know," and he gave a little conscious laugh, "we junior partners must mind our p's and q's; they don't let us have much licence yet."

His wife did not reply; she finished her own breakfast, then turned her chair to the fire, and placed her feet upon the fender. It was not very polite, but Hugh was too indulgent to notice such trifles. He chatted away pleasantly to her back, as though unaware there was anything unusual in her behaviour, inwardly admiring her coronet of golden hair, though he was not quite sure enough of his ground to venture on a compliment.

"I shall see Fred to-day in town," he said, after a time. "Shall I ask him down for a day or two?"

There was no reply.

"Why don't you speak, Nellie? Do you want him or not?"

"What is the use of speaking?" she retorted; "if you want him, I suppose you will ask him, and if not, you won't."

Her husband reddened at the stinging words, but tried to laugh them off.

"I don't know why you say that," he said, good-naturedly; "he's your brother, not mine. However, I shall take it for granted that you want him. *Fred's* pretty certain to do so, at any rate."

"You can always find money when *you* want to go anywhere," she went on, petulantly; "I never hear anything about extravagance by junior partners then; but, of course, *I* am of no consequence."

The tone was that of a spoilt child, and her husband seemed so to regard it, for he made no attempt at self-defence.

"I'm sorry we can't go, dear," was all he said, as he gulped down his last mouthful with undue haste. "I'll just run up and have a peep at baby," and so saying, he disappeared, taking the staircase almost at a bound.

In a few minutes he was down again, making a great demonstration of brushing in the hall. Helen heard him perfectly, but made no attempt to move. He expected her to come out as usual to give him his farewell kiss, but he waited in vain.

He began to feel annoyed. If she liked to sulk, he could not help it, and he even half opened the hall door; but love conquered, and he turned hastily back.

"Good-bye, Nellie."

"Good-bye;" but she did not turn her head.

He came across the room and kissed her tenderly.

"Good-bye, my darling."

She did not turn from him, but she did not respond, and he left the house with a heavy heart; but long before he reached town, the uncomfortable episode had faded from his mind, and he was musing on the happy evening they would spend together.

Helen, much more to be pitied, meanwhile sat on at the fire, nursing her wrath

to keep it warm, and thinking hard thoughts of the husband she loved. She had always been looked upon as a good-tempered and unselfish girl, and no one would have been more astonished than her own mother, if she could have seen her now giving way to sullenness; but it is easy to be good-natured when never crossed.

At home (having been the only girl in a wealthy house), her wishes had always been the first consideration, and when she prettily deferred them to others, it was with the secret consciousness that they would still be indulged. She did not understand Hugh's way of taking the initiative, and judging as he considered best for himself, and her too. Just at first it had seemed easy to yield, but she was beginning now to resent what seemed to her simply a desire of control. She had an idea that he thought her frivolous, and wanted to clip her wings, nor had she sufficient faith in him to take his simple word.

She had never been restricted before for want of money, and his excuse seemed utterly absurd. If it had been anything doubtful she wanted to do, anything he did not quite like (for he was particular in some things, for which she liked him all the better); but this was such a natural, such a legitimate thing—to go to Paris for the Exhibition, where every one was going, as a matter of course. Her father and mother were already there. A letter to her mother lay open on the mantelpiece; she had kept it unsealed to add a postscript. She took it down now, and added, briefly: "Hugh says that he cannot manage Paris this year." She would not complain, but it vexed her all the more to think how natural it would read to them. "Prudent fellow," her father would say; "he's the sort of man to get on in the world," and her mother would laugh, and say: "It is hard for Nellie, though," and then think no more about it. And all the time she believed that it was only because Hugh did not like leaving baby. It was this idea that annoyed her most of all; it was a reflection on her as a mother, she thought, and showed that baby came first with him now, and had usurped her own rightful place. It was very absurd, no doubt, but this foolish young woman was jealous of her own baby! As to her husband, the reason he had given her was his *only* one, absurd as she fancied it.

He had been brought up in a home where pleasure was always made subservient to duty, and he scarcely understood that his wife's *duties* up till now had *been* her pleasures; he had not taken in that fact, or he might have been more careful in refusing one to her. He was a young fellow, and would have enjoyed a trip to Paris as much as any one; but to go just now, and take such rooms as his wife was accustomed to, would be more than he could afford, without a little overdrawing his account at his banker's, and to do that was out of the question. The case for him lay in a nutshell. He never dreamt that Helen could seriously wish him to decide otherwise. If for a moment the thought that baby was going to be left to servants crossed his mind, he dismissed it instantly, for of course Helen would know best. Baby was as yet scarcely more than a bit of Helen to him, and so far from having transferred his allegiance, he had a notion that he was paying a delicate compliment to the mother when he hung rapturously over the baby's cradle, instead of turning over the leaves of her music, which would have been after all much more to his taste. And Helen had not the courage to say, "Do leave baby alone and attend to me," nor had he the sense to see that he was annoying her; and so a tiny drop of irritation was beginning already to steal into their lives, which, small as it was, threatened to spoil the harmony of their home.

That afternoon Helen came in from her drive, and, throwing off her fur cloak, went into the nursery for a cup of tea and a romp with baby before dressing for dinner, and going down to wait for her husband's arrival in the drawing-room. As she was going downstairs, she remembered something he had expressed a wish for at dinner the night before, and which she had forgotten to order. Her feeling of annoyance had passed off, and she had no intention of punishing him by neglecting any of her wifely duties, so she turned at the foot, and went into the kitchen.

She found the servants huddled together discussing something in awestruck whispers, and noticed that the upper housemaid was holding her apron to her eyes. At her entrance they hastily scattered. She proceeded calmly to give her order, and went out again.

"Emma has had some bad news, I suppose," she reflected; "I must ask nurse about it when she brings baby down" (for, like most young housekeepers, she was shy of her servants, and could not feel at home with more than one of them at a time). "I wish she would not make up such large fires, though," she continued, as she entered the drawing-room, ruddy with firelight; "this room is unbearable," and stepping lightly to the window, she flung it wide open, and stood for a moment breathing in the fresh evening air. It was but for a moment. A gentleman was coming along the pavement with a young girl leaning on his arm.

"What is all the excitement about to-night, papa?" she asked, in a clear voice, as they passed; "every one we meet seems to be hurrying."

"There has been an accident, I believe, to the 6.18 train," was the reply, "and——"

Helen heard no more. She closed the window with a jerk, and pressed her hand to her heart.

"The 6.18 train! Hugh's train!" At the same moment there was a ring at the bell, and a gentleman who lived near, entered.

As he caught sight of her standing there, so young and pretty, with a look of helpless terror on her fair face, his heart failed him, and he would have beaten a retreat, if she had not turned to him with an expectant, questioning appeal in her eyes.

"I see you have heard," he stammered; "I just looked in to say as yet it is a mere rumour, and reports are generally exaggerated. I am on my way down to learn the truth, and if I can be of service to you, please don't hesitate to say so."

"Thank you; if you are going to the station, I will come with you," said Helen, in a strange, calm voice, which she scarcely recognised as her own, and before he could remonstrate, she had gone upstairs to put on her things.

"Let me at least order your carriage," he said, depreciatingly, as she reappeared; "you ought not to go out at this time."

"It is but a step," she said, with a little catch in her breath, "and they take so long to get in the horses. Please come on."

He gave her his arm in silence. He had come in merely on impulse, and did not know her well enough to assert any authority.

They found the station crowded with eager inquirers, but as yet no definite information could be obtained. Just as they reached the platform, a barrier was thrown across it, which they were compelled to keep behind.

"There has been a breakdown on the line, and a train has been sent on to bring up the passengers and wounded," was the explanation given by an official. "Stand back, if you please; she'll be in presently."

They waited in silence, Helen clinging unconsciously to the arm of her protector, while he in vain tried to think of some reassuring suggestion.

In reality, it was only twenty minutes they stood there, but it seemed to Helen and to others in that waiting group, an eternity. She tried to pray, but could not. There is no state in which it is so difficult to pray as that of suspense, and all the while, like a wail of despair from her terrified heart came the cry: "Oh! if only I had kissed him this morning!"

Everything had been carefully prepared, so that when at last the train steamed slowly in, there was no unnecessary bustle or delay.

"We shall be glad of the services of one or two gentlemen to help with the wounded," said the station-master, coming up to where they were standing, and looking at Mr. Myers.

He glanced uneasily at his companion.

"Go," whispered Helen, with white lips, loosing her hold of his arm; "I shall be quite safe. You know *he* may be one of them."

He pressed her hand, and in a moment was lost in the busy throng. For a few minutes a scene of confused motion went on, as the carriages were emptied of their bruised and shaken occupants. The stretchers that had been provided were quickly filled, and carried to the waiting-rooms, where the wounds were quickly attended to, and every now and again, as a sufferer was carried past, there would be a pitiful cry of recognition amongst the waiting group, and one or other would slip unreproved through the barrier. But Helen still stood motionless, with straining eyes. "Only *one* killed outright," she heard them say, and presently, amid solemn silence, a tall figure wrapped in a plaid shawl was reverently lifted from a first-class carriage, and laid upon a shutter.

"It is the gentleman from Milford Road," said a porter, standing near, in answer to an awstricken inquiry.

Helen gave no cry, only pressed forward. There was no longer any restraint. The crowd had already dispersed, with thankful or aching hearts. Helen joined herself to the little group of porters who were carrying the silent figure. He was taken straight to a private office apart from the rest.

"You cannot come in here, Madam," said a policeman, politely closing and locking the door after them.

"But," she cried, clasping her hands, "he is my husband. I *must* go to him."

He looked at her doubtfully and replied,—

"At any rate the doctors must see him first; till they have done so, my orders are to admit no one."

"How long will it be?" she gasped, but he shook his head. Stoic as he was, he had not the heart to say that he was already past the need of doctors, and that those who needed them would be attended to first.

In silent anguish Helen took up her position outside the forbidding-looking door. Too well she had heard the words, "Only one killed outright," but her heart refused to believe it. "O God!" she prayed (for with the certainty came the power of prayer), "give me time to kiss him once again. Don't take him from me with the remembrance of my unkind words in his heart."

But the blank door seemed to mock at her entreaties, and fling back her words unanswered. Others might have the consolation of last words, she, who had not known how to use her privileges while they remained to her, would be denied.

The platform just now was almost deserted, except for the stalwart policeman guarding that mysterious room, and each time as he passed, he averted his look, and gave her a wide berth; but she had forgotten his very existence. It was not now to him that she would appeal. The night had closed in, and it was cold and wet. To that, too, she was indifferent. Her thoughts and energies were all concentrated on remaining at her post, as long as that heavy sullen door lay between her and—Hugh.

How long she waited thus, it would be difficult to say, but suddenly she became aware that the station was all alive again with noise and bustle. The 7.40 express, delayed nearly two hours, had arrived, and the platform was soon crowded with cold and hungry men, good-naturedly grumbling at the delay.

"Why couldn't they have told us what was up, instead of keeping us in the dark all this time?" said one, energetically stamping his benumbed feet.

"Do you mean metaphorically or literally?" laughed a pleasant voice in reply. "Physically or mentally, I ought to say, though, eh? Why, good gracious! Nellie, is it you? What are you doing here? Why, what's the matter, darling? Didn't you get my telegram I sent you from town this afternoon?"

But there was no reply. Helen had fainted in her husband's arms.

* * * *

For some weeks after that dreadful night, Helen was low and nervous, giving the doctor cause for anxiety, and Hugh an excuse for lavishing upon her every indulgence he could think of.

"It all comes of punctuality," he said, jokingly; "half the fellows in that train were never missed at home till they walked in safe and sound, and many in the one I came down by, just as often come by the other, but their friends were not uneasy about them, because they always go on the principle, 'Expect me when you see me.'" And (just to keep her out of a bad habit, as he said), he would keep popping in at all sorts of early hours in the day, long before she dreamt of seeing him.

"Still," she urged, "you *might* have been in it, you know."

"And should have been, if it had not been for that brother of yours, as usual, turning up an hour later than he ought to have done. I telegraphed, 'Don't wait dinner,' and then my mind was at ease about you. But that was the telegram our precious domestics thought not fit to deliver, lest it should contain bad news, and then, of course, you had to take it into your silly head that the *only* man killed must of necessity be me!"

"They said the gentleman from Milford Road, and he was covered with a plaid, so I naturally thought that it must be you, but oh! how thankful I am that it was not," she answered, shuddering.

"If you had been a little more familiar with the ways of the line, you might have been pretty certain that there could only be one gentleman from Milford Road of whom a porter would use the definite article. Old Mr. Bridgeman has gone up and down this line for twenty years or more, and never failed each morning to tip the porter fortunate enough to open the carriage door for him. I shouldn't wonder if he will be missed more at the station than at home; for, as far as I can make out, he had neither kith nor kin belonging to him. As to the plaid, there are dozens like it."

Looking at his wife's pale face, Hugh began to reproach himself for not having given way to her about Paris. "Poor darling!" he thought. "I daresay she felt she needed a change, and yet didn't like to plague me about it." And when change of air was ordered by the doctor, he no longer hesitated.

"I have arranged about Paris, after all, dear," he said, one evening; "two or three things have combined to make it quite practicable, and you must have a change."

But to his surprise she flung her arms round his neck and burst into a passion of tears.

"Oh! not Paris!" she sobbed. "Let us go *anywhere* but to Paris. Oh! Hugh, Hugh! *if* you had died that night!"

He soothed and comforted her without in the least understanding her sudden emotion.

"Anywhere you like, darling," he said. "I only mentioned Paris because I thought you wished it."

"Then let it be Bognor," she said. "I want to have you and baby all to myself." And so it was settled, to Hugh's complete satisfaction.

Helen never alludes to the agony of self-reproach she suffered that night, though she has never forgotten it; and it is visible in the self-control she exercises over her hasty tongue. Troubles and worries have come to her as to other married women, but every morning from her heart she prays the prayer of the Psalmist, "Set a watch, O Lord, before my mouth; keep the door of my lips;" and nothing can ever tempt her to let her husband leave her in the morning without a pleasant word lingering in his ears, and a kiss upon his cheek. And if, as sometimes still happens, she is betrayed into making a sharp retort, it is followed almost immediately by a penitent kiss. Hugh little guesses how much of the peace and harmony in his home is owing to "that unlucky 6.18," as he still persists in designating the offending train.

PARLIAMENTARY REPORTING IN ENGLAND.

TO few readers of the daily papers that drop so conveniently into our doors like the hot rolls and letters, does it occur to consider how and when the accounts of last night's debate in the House of Commons are reported, edited, and printed; how vast is the machinery that turns to the motor of public curiosity; and how long and fierce was the battle that was fought before the nation could be legally and accurately informed of the proceedings of its representative chamber. But we, the children of the nineteenth century, should stop to think sometimes which of the benefits we enjoy, are the outcome of the productive past; and not the least one amongst these is the pleasure of reading in the morning the words of our favourite politician, as they were spoken the night before.

Parliamentary reporting is a wide and somewhat loose term. It covers the reporting of the debates for the press, official reporting, or reports of committees; and Hansard's debates, a semi-official organ of the House itself. But before touching on parliamentary reporting as it exists to-day, there is a long period, dating from 1699 to 1803, during which time the reporter—as such, was a person who made his appearance in a very casual way, chiefly to take notes of cases or bills which were intended as references for the use of the House.

In 1699 it is recorded that a shorthand writer was engaged to take notes of the proceedings on a Divorce Bill, which notes were treasured up by the Clerk of the Parliaments, and again referred to before the Bill was passed. Again in 1700, a stenographer was found necessary for a similar purpose. But in 1740, Parliament was left a long way behind the times, by the appointment by a Court of Law of an official shorthand writer, spoken of as "one Gurney." This was the foundation of a long line of stenographers, all writing what is known as the Gurney system. The family has now had for eighty-six years the official reporting of both Houses of Parliament; although, according to Lord Colchester's diary, they had first reported there in 1786, during the Slave Trade inquiries.

The trial of Warren Hastings in 1789, was the next occasion of the public recognition of the need for stenography. The House called the shorthand writer to the bar, and caused him to read from his notes Mr. Burke's statements with regard to the impeachment of Warren Hastings.

In 1802, sixty-two years after the first official reporter had been appointed to a Court of Law, the passing of Mr. Taylor's bill authorized reports to be taken for official purposes; and in 1803 a select committee of the House inquired into the working of the Act, and decided that time was saved, and accuracy gained, by the introduction of the official stenographer.

Up to this period, accounts of debates were given to the public clandestinely—sometimes by members themselves from their own notes, sometimes through the medium of the ushers and door-keepers. The speeches that have been preserved to us in this way, are those of Lord Chatham, Sir Robert Walpole, Mr. Fox, and the younger Pitt.

To Doctor Johnson we are indebted for

the speeches of Sir Robert Walpole and Lord Chatham; but how much of them to Doctor Johnson, and how much to the speakers themselves, it is difficult to decide. The accounts of the debates were contributed by him under a fictitious title to the *Gentleman's Magazine*. He described his method as follows: first, "to fix upon a speaker's name, then to make an argument for him, and to conjure up answer." He added, too, that he "took care that the Whig dogs should not get the best of it." There is a story that fully bears out these statements, telling of a dinner-party where-at Dr. Francis, the translator of Demosthenes, in praising one of Lord Chatham's speeches, said that it was finer than any composition of Demosthenes, when Dr. Johnson, in his stentorian voice exclaimed, "That speech I composed in a garret in Exeter Street."

However, the debates, though extremely popular, seemed to have occasioned some after qualms of conscience to the worthy Doctor, for in later years we find him saying "that the only part of his writings which then gave him any compunction, was his account of the debates in the *Gentleman's Magazine;* but that at the time he wrote them he did not think that he was imposing on the world."

Sir Henry Cavendish, himself a member of the House of Commons, was another of those who did much to save for posterity the debates of the last century; and Lord Roseberry has spoken of it as a disgrace to the nation that these reports, consisting of forty-eight volumes, remain unpublished in the archives of the British Museum. Two volumes only have seen the light, and the last one, unfortunately, leaves off in the middle of a sentence.

About the time of the American War, the demand for free reporting became more pronounced; and in the struggle that ensued, we find the city of London involved, and the Lord Mayor himself imprisoned. But the victory was to short-hand; henceforth reporting was to be free, the only limitation being, that on the exclamation of any member that he saw "strangers in the House," the galleries had to be cleared. This privilege, however, was not often exercised, and in 1871 the rule was altogether abolished. The reporter remains master of the situation.

The shorthand writer practically edits the speeches he gives to the world, giving them artistic touches, which it has been said sometimes make the originators set a high value on what they take to be their own productions.

AMONGST THE CORN.

By G. DE LA PLANTE.

A LITTLE cottage in a cornfield.

It was a study in golden-brown, and I, with my artist eye, stopped to gaze with pleasure on the harmonious tinting of the harvest scene. The walls of the cottage were browned with age; the thatch on the roof was dark, but patched here and there with fresh golden straw; the very pathway to the cottage was brown, and the stones beside it stained with yellow lichen. Then the cornfield lay before, behind, and on either side, setting the cottage as if in frosted gold, while "the lovely laughter of the wind-swayed wheat" ran in soft ripples to the very walls, and lapped lovingly upon them, like wavelets against the rocks. What a picture it would make, could I only transfer it to my canvas!

I was quite alone in the world, and had to "do for myself." I had chosen an artist's life, and, with average talent, and more than average hard work, found it just possible to get on. All the winter, spring, and summer, I had worked in a dreary city, doing whatever came to hand,—now a book illustration, now a manufacturer's design—and I had grown cold and hard, out of sympathy with all humanity. When the autumn came, I craved for fresh air, and a sight of God's earth as made by Him, not as marred by man; so I set off on a sketching tour to quiet country parts, seeking rather lonely, restful places, than the grandeur of mountain, waterfall, or wood.

My cottage looked the personification of peace. I sat on a friendly stone, and drew out my colours; but you who have tried it know how feebly artist fingers could render the harmonies of the scene. The tones for the cottage walls would not blend, and I sat and looked at the bold patches of colour, so distinct, yet so entirely one. Hitherto, the soft, curling smoke had been the only sign of life; but as I gazed, the door of the cottage opened, and a white-haired woman stepped outside. Raising her hands to her mouth, she called, "Ruth! Ruth!"

Far across the cornfield I saw a little band of reapers busily at work, foremost amongst them a tall, slightly built girl, with a broad hat shading her face from the glare. Hearing the call, she stood erect, glancing upward at the hot August sun, to see if dinner-hour had really come; then, laying her sickle on a pile of newly cut corn, she hastened to the cottage.

She reached the door, and then saw me sitting on my stone. She hesitated, and exchanged a word or two with the elder woman within; then she came down the pathway, and said to me,—

"Maybe you're tired, sir. Mother says, will you come in and have a bowl of milk and a bit of dinner with us?"

"Gladly!" said I, and a few moments later I was sitting with them at their homely board.

They were only three: the father, a spare, grave man, with iron-grey hair and dull blue eyes, crippled in hands and feet from rheumatism; the mother, brisk and active, with cheery face and strong, ringing voice; and Ruth, the busy reaper I had seen amongst the corn.

"A lovely day," I said to my host.

"Ay, sir, and grand for the corn."

"You have a splendid crop this year."

"Good straw, well-filled ears, and no disease; 'tis a noble harvest." It was the mother who spoke now, and it seemed to me but natural that one and all should talk and think of corn, when living in such a cornfield.

"'*Tis a noble harvest.*'"

Ruth had finished her hasty meal, and rose to go.

"You are not returning to work so soon?" I asked. "Why, half your dinner-hour is not gone."

"We never think of that in harvest-time," simply answered the girl. "We must work all we can to get the crop in in good time,—harvest weather won't last long."

"I suppose the field is your own, you speak of it so proudly?"

Even the grave father laughed. "Why, sir, what a fortune 'twould be for cottage folk like us! No, no! 'tis the master's field, but, living amongst the corn, we love it like our own, and Ruth is main glad to be a reaper."

"How soon will all the corn be cut and housed?" I asked.

"Depends on the reapers, sir. Some people say the master should have a machine to do a great field like that, but he won't hear of naught but the reaper and the sickle. 'Work away, friends,' says he, 'an' the sooner you've done, the sooner the Harvest Home.'"

Ruth was back at her work by this, bending to cut the ripe ears from the stalks. I took up my knapsack, bid my kindly hosts "farewell," and went my way with a thoughtful heart. I had failed to make a picture, but what a lesson I had learned!

Before, behind, on either side, brushing against me as I stood, had been the Master's golden grain. Had I gone heart and soul with the reapers? Had I been shortening all of my hours of rest, that I might toil for Him the more? Ah, no! But the future was left me—God's harvest was not over yet; and then and there I resolved, by His grace, to think more of the corn round my cottage—the human souls close to my city home. I prayed the Lord of the harvest that He would make me one of His reapers.

A BOY WHO BECAME FAMOUS.

"WELL, I used to think that no one could do two things well at once, but that boy seems to have managed it, and no mistake."

So spoke an English traveller, who was inspecting one of the great cotton-mills in the West of Scotland, not far from Glasgow. And well might he say so. The lad whom he was watching—a pale, thin, bright-eyed boy, employed in the mill as a "piecer," had fixed a small book to the frame-work of the spinning jenny, and seemed to snatch a brief sentence from its pages every time he passed it in the course of his work.

"Ay, he's jist a wonder," answered the Scotch foreman, to whom the visitor had addressed himself. "We ca' him 'Busy Davie' here, for he's readin' like ony minister; but he does his wark weel for a' that."

"And does he really understand what he reads?" asked the Englishman, looking wonderingly at the young student's book, which was a treatise on medicine and surgery, that would have puzzled most lads four or five years older than himself.

"I's warrant he does that," replied the Scot with an emphatic nod. "There's no quicker chiel than Davie i' the hail mill."

And then the visitor passed on to look at another part of the works, and forgot all about "Busy Davie" for the time being.

But he was suddenly reminded of him two hours later, when the mill hands "knocked off" for dinner. Coming back across the yard when his tour of inspection was over, the traveller caught sight of a small figure in a corner by itself, which he thought he recognised.

A second glance showed him that he was not mistaken. There sat "Busy Davie," holding in one hand the big oatmeal "bannock" that represented the dinner, and in the other a soiled and tattered book without a cover, which he was devouring so eagerly that his food remained almost untouched. The Englishman stole softly up behind the absorbed boy, and glancing over his shoulder at his book, saw that it was one written by himself a few years before, describing the most perilous of all his journeys through the wild regions beyond the Orange River in South Africa.

Just as the visitor came up, the little student, quite unaware that the author of the book was standing beside him, read half aloud one of the most exciting passages, following the lines with his roughened forefinger :—

"The progress of our party was necessarily very slow, as we could only march in the mornings and evenings, and the wheels of the wagons often sank up to the very axle in the loose sand. In some places the heat was so great, that the grass actually crumbled to dust in our fingers. More than once our supply of water ran out altogether, and men and beasts staggered onward over the hot, dusty, never-ending plain, with parched tongues and bloodshot eyes, silent and despairing."

At the thought of these difficulties, which he himself was one day to meet and overcome as few men have ever done before or after him, the boy's thin face hardened into the look of indomitable firmness, which was its habitual expression in after life. But it softened into a smile the next moment, as he read as follows :—

"In several of the places where we camped, our chief food was a species of the large frog, called by the natives 'mantlemetto,' which was kind enough to assist us in our hunts for it by setting up such a tremendous croaking, that we could easily find it, even in the dark."

Here the boy turned over a leaf, and came suddenly upon a startling picture of a man lying prostrate on the ground with a lion's forepaw planted on his chest, and its teeth fastened in his shoulder, while several negroes, with terrified faces, were seen making off as fast as possible in the background.

"How would you like to travel through a country like that, my lad?" asked the explorer. "It would be rough work, wouldn't it?"

"I wad like weel to gang there, for a' that," answered the boy; "for there's muckle to be done there yet."

"There is indeed, and it's just fellows of your sort that we need to do it," said the traveller, clapping him on the shoulder. "If you ever do go to Africa, I think it will take more than a lion to stop you."

The whole world now knows how strangely those lightly spoken words were fulfilled twenty-eight years later, when that boy did actually come alive out of the jaws of the hungry African lion which had broken his arm with its teeth, to finish those wonderful explorations that filled the civilised world with the fame of Dr. David Livingstone.

SIMPLE RECIPES.

EEL SALAD.

CUT up a small eel, weighing about ½ a pound, boil it in a little water or milk until you can quite easily remove the flesh from the bones. (The bones, with the head and tail, will make delicious soup, boiled for several hours in water or milk, flavoured with a little mace, pepper, salt, and sugar, onion, lemon peel, and thickened with flour or ground rice. A very small piece of candied lemon peel does well when no fresh lemon is to be had.) Cut up a quart or 3 pints full of salad, such as lettuce, mustard and cress, watercresses, etc. Mix up a teaspoonful of oil (or if objected to, milk), ½ a teaspoonful each of mustard (powder), salt and sugar, ¼ teaspoonful of pepper, 2 teaspoonfuls of vinegar, and finely chopped onion, for each pint of salad. Cut up the eel in small pieces, and mix salad, fish, and dressing thoroughly well together.

White haricot beans well boiled and seasoned with dressing, makes a delicious winter salad. Any meat or fish can be added to green or haricot bean salad. Cold salt pork is excellent with bean salad.

GINGER PUDDING.

SOAK three-quarters of a pound of pieces of bread. Mix together 2 heaped-up spoonfuls of brown sugar, a teaspoonful of ground ginger, and ½ a teaspoonful of nutmeg or allspice, and beat it into the soaked bread, which must be drained as dry as possible. Dissolve a level teaspoonful of carbonate of soda in a tablespoonful or two of milk. Warm a teacupful of treacle, stir it into the bread; when well mixed, add the milk, beat it up, and put it in a well-greased basin, boil or steam for 2 or more hours. An egg or two improves this pudding, and ensures it turning out of the basin in proper form. It is also very good when baked.

ABOUT OURSELVES.

WITH this Number another Monthly Part is completed. The very thing for the seaside!

We venture to think that our next Monthly Part will be considered one of our best. The specimen page of Bible marking was so much appreciated, that another will be given. An interesting series of Articles on the Post Office will appear. Our musical friends will thank us for a charming song, "Flown Away," the music by J. F. Swift (composer of "Sailing"), and the words by Mrs. Haycraft; and the interest in the capital serial, "Mad John Burleigh," will be well sustained.

Our Examiners are preparing for the task that awaits them in the examination of the Papers that are rapidly coming in, in connection with the Christian Evidence Competition. Competitors will please remember that Papers should reach 62, Ludgate Hill, London, E.C., not later than August 31st, and that the cover should be endorsed in accordance with the Rules.

In an early Number we hope to announce a Prize Puzzle Competition.

Our first Volume will be ready early in the season. A more attractive present it will be difficult to find.

ACROSTIC.

MY last's the title, and my first's the name
Of one who has imperishable fame.
Though long ago he ruled, with iron will,
Some not his own, long passed away,—yet still
His form is seen amid the things he made,
And still its glory, not in dust, is laid.

1. Loud ways and rough.
2. Compact and round.
3. Good food enough.
4. To catch the sound.
5. A resting-place.
6. An answered call.
7. The hapless case,
   Of things that fall.

Answer will be given in our Number for September 15th.

CRISP CORRESPONDENCE.

W.T.C.M.—There were *three* sprinklings, but in order to be quite correct, they should have been named as follows: 1. Upon the altar; 2. Upon the book; 3. Upon the people. It was a mistake to use the word "himself," though he sprinkled the blood upon the altar *for himself*, as "representative of God," thereby denoting that he, on his part, "engaged to be faithful in the covenant relation which he now condescended to assume, performing all the promises, and conferring all the blessings, which their corresponding fidelity would entitle them to expect" (*Bush*). At the same time, I believe it could be justified that even on his own person he put the blood, seeing that all priests were dedicated as representatives of God in that way (Lev. 8. 23, 24). In a condensed lesson, such as our space in—"A. 1."—affords, it is sometimes difficult to put all that is needed clearly in one sentence. To have made it quite correct, I ought to have worded it thus: "Upon the altar for himself."

A. J. S.—How to teach a Junior Sunday School Class? We are so glad that you have asked this question. In response to it, you will find in our Number for July 21 an able Paragraph by the Rev. J. H. Thorpe, which we are sure will help many teachers besides yourself.

Anxiety.—The question of inserting notes on the International *Morning* Lesson is under consideration.

INTERNATIONAL SUNDAY SCHOOL LESSONS.

SEPTEMBER 2ND.

The Spies sent into Canaan.—*Num.* 13. 17-33.

GOLDEN TEXT.—*Num.* 13. 30.

INTERVENING HISTORY. Stayed about a year at Sinai; thence journeyed in north-westerly direction to wilderness of Paran. After first march, "halt at Kibroth-Hattaavah; people murmured; God sent quails (Num. 11.) Seventy men appointed to help Moses; this supposed to be the origin of Sanhedrim. Arrival at Hazeroth, the second stopping-place. Aaron and Miriam struck with leprosy. Moses' prayer on their behalf. Kadesh-Barnea, third stopping-place, lies about fifty miles south of Beersheba; central point of encampment for thirty-eight years. (A map would be of great benefit).

COWARDS AND CONQUERORS.

TWELVE MEN TO DO THREE THINGS:—

1. "*Go*" (ver. 17).
2. "*See*" (ver. 18).
3. "*Bring*" (ver. 20).

They went. Where to? Promised Land. To whom promised? Trace their route on map.

They saw. Count up the things they were to look particularly at. The *land*, if it was rich and fruitful. The *cities*, how built. The *people*, whether they were strong or not, and how they lived. It is probable the twelve men separated on reaching the land. Why? To avoid suspicion, and acquire greater knowledge; perhaps Caleb was the only one who went to Hebron (see Josh. 14. 9).

They brought. What? 1. *Fruit.* Get description. Carried in that way to prevent crushing. 2. *Report.* Of all they had seen, especially *the giants.* What else did ten of them bring? Question till the right word is obtained. 3. *Fears.* What of? The giants, fenced cities, and the thought of God wishing them to take the country. What did the remaining two men bring which the ten did not? Get answer from golden text. 4. *Courage.* "Let us go up at once." 5. *Confidence.* "Possess it; we are able." Prove from Scripture and modern history 'tis of "such stuff" true heroes are made.

Two skilful engineers had been sent to explore the path across the Alps, and to do whatever they could to remove obstructions. They returned with an appalling recital of the apparently insurmountable difficulties of the way. "*Is it possible,*" inquired Napoleon, "to cross the pass?" "Perhaps," was the hesitating answer, "*it is within the limits of possibility.*" "*Forward, then!*" was the energetic reply.

(Care must be taken not to encroach upon next Sunday's lesson). The practical lesson to be drawn from the story of these spies is—

HOW TO MEET DIFFICULTIES.

For junior scholars they may be called Giants; such as Giant Temper, Giant Indolence.

How to meet them—

Attired in the Apostle's armour (Read Eph. 6. 14-18).
In God's strength (Phil. 4. 13).
Sure of victory (1 John 4. 4).

SEPTEMBER 9TH.

The Unbelief of the People.—*Num.* 14. 1-10.

GOLDEN TEXT.—*Heb.* 3. 19.

A REVIEW of last Sunday's lesson will serve as introduction; then get class to point out—

I. THE CAUSE OF THEIR UNBELIEF. Causes often complicated. There was—1. The report of the spies—giants, walled cities. 2. The comments of the ten spies. 3. A distrust of their own powers. 4. Forgetfulness of past manifestations of their Leader's (God) power. *Consequence* of all these, *unbelief.* This leads to —

II. THE CHARACTER OF THEIR UNBELIEF. What was it they would not believe? The possibility of obtaining the land of Canaan. Get scholars to study—

III. THE CHARACTERISTICS OF THEIR UNBELIEF. Explain the word to juniors. The marks or distinguishing features:—1. *Murmuring.* 2. *Rebellion.* 3. *Blasphemous reflections on God.* 4. *Opposition plans.* 5. *Credulity.* It has been said, "O infidel, great is thy faith." The Israelites could not believe in God, to trust Him to lead them on into the promised land; but they could trust themselves, and a leader of their own choosing, to lead them back through the great and terrible wilderness, in which they would long ago have perished, but for God's miraculous providence.

IV. THE CONFUTATION OF THEIR UNBELIEF. By silent action, verses 5, 6. By earnest speech, verses 7-9. What gave these men special opportunities of confuting the unbelief? *They had themselves seen the supposed difficulties.* Draw a picture of—

V. THE COWARDICE OF THEIR UNBELIEF, from first part of verse 10. All through they had shown themselves cowards, but the cowardice culminated in the attempt to stone two men who advised them well. For thousands to attack two was a dastardly act. "Unbelief is ever noisy, cowardly, and weak."

VI. THE COMBAT OF THEIR UNBELIEF (ver. 10.) BY THE GREAT GOD. What was His weapon? *Glory.* People blinded with the light; awe-struck; Joshua and Caleb saved. Read Jer. 21. 5. Draw a contrast of when God fought *for* them. Get scholars to give Scripture illustrations of *how* God fought for them. Show how it is still so much better to be on God's side, and that "he that is not with Me is against Me" (Matt. 12. 30).

VII. THE CONSEQUENCES OF THEIR UNBELIEF. Get golden text repeated. Of all that multitude, none entered save Joshua and Caleb and children under twenty years of age. Had to endure wilderness life and discipline till death. Unbelief brings dreadful disappointments. Refer to how they still fought against God in verses 44 and 45, and the consequence. Close by drawing—

VIII. THE COMPARISON OF THEIR UNBELIEF WITH OURS. Like theirs our unbelief is—1. Widespread. 2. Contagious. 3. Open. 4. Without ground. 5. Opposed to past events and reason. 6. Keeps us from a glorious entrance into heavenly Canaan. Press upon seniors the advisability of the study of Christian evidences. What these children of Israel ought to have done we should do—Trust in God and go forward. Conquer the unbelief in our own hearts by its antidotes, prayer and faith, and then fight it in the world.

SEPTEMBER 16TH.

The Smitten Rock.—*Num.* 20. 1-13.

GOLDEN TEXT.—1 Cor. 10. 4.

LESSON introduced by death of Miriam. Question as to her life.

REMARKS DURING READING OF VERSES.

Desert of Zin. After thirty-eight years back to Kadesh. In first month, our April.

No water. When had they made that complaint before? and how was the want then supplied?

Died before the Lord. Doubtless referring to those who perished through unbelief.

And Moses and Aaron went. Though the people chode with them, they did not strive in return. In their trouble they sought the Lord. Give illustrations from Scripture.

Take the rod. Question as to its history.

Speak ye unto the rock. "There still exists at Kadesh a large single mass of solid rock. It is the only visible rock in the whole district, and from it still flows an abundant stream" (*Trumbull*).

A LESSON ON SEVEN NO'S.

No water. Verse 2. There were springs at Kadesh, but either they were insufficient for so great a multitude, or had failed through drought. We have no conception of thirst as in the East. Impress on scholars the beauty of water; luxury of a plentiful supply; medicinal virtues.

No thankfulness. The wants of their bodies may have been many, but the wants of their souls more. Count up some of their mercies.

No fruit. Verse 5. See also Jer. 2. 6. They wanted the blessings of Canaan while suffering the wilderness punishments.

No self-control. Verses 10, 11. Moses told to do three things. "Take," "Gather," "Speak," verse 8. Shows lack of self-control by (1) speaking to the people instead of to the rock. (2) By the anger of his words. (3) By the use of "*we.*" (4) By striking the rock twice.

No sanctifying. Verse 12. He had dishonoured God before the people. He, the representative of God, had shown himself an angry, passionate man.

No entrance. Punishment heavy, because the sin so conspicuous. God obliged to justify Himself.

No lack. Meanwhile the water flowing abundantly. Picture people and cattle drinking. Refer to words, "The rock that followed them."

The well, favourite place of resort. Refer to Rebekah, Rachel, and Christ. Gather scholars in imagination round the waters of Meribah. Picture people leaning in the shadow of rock, and stooping to draw water. Each scholar should be *a drawer of water.*

WATERS FROM MERIBAH.

Beware of judging others. Moses called people rebels—himself a rebel (Matt. 7. 1).

Be sure and guard the tongue well (Ps. 39. 1).

Strive to sanctify God before everybody. Influence others to serve God (Prov. 3. 6).

Make all your wants known to God (Matt. 7. 7).

Be sure He will supply all your need (Ps. 34. 10).

Cultivate a thankful spirit (Eph. 5. 20).

Remember the sad consequences of sin (Num. 32. 23).

Let the rock speak to you of Christ. See golden text.

See Him also in the sparkling water (John 7. 37). (Glass of water in teacher's hand would serve as object lesson). Water like Christ:—

In its origin—comes from above—boundless.
In its nature—pure, beautiful, mighty.
In its use—to cleanse, refresh, strengthen.

SEPTEMBER 23RD.

Death and Burial of Moses.—*Deut.* 34. 1-12.

GOLDEN TEXT.—*Prov.* 4. 18.

BEFORE reading verses, trace wanderings on map. From Kadesh go round southern end of Dead Sea to near Jericho, then southward to Red Sea, then northwards and encamped on plains of Moab, opposite to Jericho. Reason for this circuitous route, refusal of Edomites to let them pass through their country.

INTERVENING EVENTS. Death of Aaron, Num. 20. 28; Punishment of fiery serpents, Num. 21: Balaam's prophecies; Moses' address to the people and song.

Question scholars as to principal events in life of Moses, showing how the life is a commentary on the death. Lesson could be entitled—

LAST MOMENTS OF A GREAT LIFE.

For illustration, teacher might gather up accounts of last moments of other great men. Charles Wesley's last word, "Satisfied." At the time of Humboldt's death the sun was shining brilliantly into the room; his last words, "How grand these rays. They seem to beckon earth to heaven." Contrast death of infidels. Voltaire's, "I shall go to hell." Charles IX., who gave orders for the massacre on St. Bartholomew's Day, "I am lost for ever."

The Last Moments—Full of thoughts of the past. Picture him climbing Nebo, the rough path reminding of the past. Thinks of childhood, of difficulties overcome, what he had hoped to be.

The Last Moments—Lonely. General wish for friends to accompany us to brink of river. No mortal hand to wipe the death dew.

The Last Moments—Sorrowful. Could not forget his sin nor his disappointment. The result of his sin. To come so near, after so many years of waiting, and to leave the glory of entering with his hosts to another! We cannot run away from the effects of sin.

The Last Moments—Full of God's mercies. 1. God takes him to a point where he can see the land stretching before him. Eastern atmosphere more transparent than ours.

2. Work not left in confusion; leader had been appointed (ver. 9). Inscription on the Wesleys' tomb in Westminster Abbey, "God buries the worker, but carries on the work."

3. God was with him (ver. 4) "I."

4. Had glimpses also of the better Canaan.

The Last Moments—Full of peace. God brings good even out of our evil. The Great Alchemist. Moses could not have led the people so well as Joshua, on account of age; had he lived to lose his hold on the people, his heart would have been broken. Angels buried him. Grave hidden to preserve it from idolatrous worship.

"And had he not high honour?
The hillside for his pall,
To lie in state, while angels wait,
With stars for tapers tall.
And the dark rock pines, like tossing plumes,
Over his bier to wave;
And God's own hand, in that lonely land,
To lay him in the grave."

HIS EPITAPH. "HE WAS GREAT." *In learning*; *in leadership*; *in faith*, Heb. 11. 24; *in love*, ver. 8; *in age*, ver. 7; *in reputation*, ver. 10; *in type*, Deut. 18. 15; Acts 3. 22.

SEPTEMBER 30TH.

Review Lesson.

GOLDEN TEXT.—*Deut.* 8. 2.

(For Temperance Lesson.—*Deut.* 21. 18-21).

A MAP of the Wanderings in the Wilderness would add great interest to this lesson. Take the words, "All the way," as the thread on which to string the quarter's lessons.

ALL THE WAY—trace it out on the map or from lessons.

ALL THE WAY, *and its heroes.* Get from scholars principal names.

ALL THE WAY, *and its scenes.* Sinai. Worship of calf. Building of tabernacle. Services in tabernacle. Return of spies. Water from the rock. Death on mountain.

ALL THE WAY, *and its work.* God never plans for people to be idle. Building of the tabernacle. Caring for flocks. Packing and unpacking of tents. Long marches.

ALL THE WAY, *and its blessings.* God's Covenant, Promise, Guidance, Patience, Gifts.

ALL THE WAY, *and its sins.* Idolatry, murmuring, thanklessness, mistrust.

ALL THE WAY, *and its reasons.* Get answers from golden text.

ALL THE WAY, *a picture of the Christian's life* from earth to heaven.

LESSON I. The compact between God and the soul. Conversion. The Egyptian or sinful life for ever behind. Public Confession.

LESSON II. Temptations which assail us.

LESSON III. The Christian's ever present Helper.

LESSON IV. Christian work and mission. Every Christian must be a giver and a worker.

LESSON V. Religious worship. "Forsake not the assembling of yourselves together." Attendance at the house of God, test of character.

LESSON VI. The way to holiness—ourselves a living sacrifice (Rom. 12. 1).

LESSON VII. Jesus our sacrifice and atonement.

LESSON VIII. Thanksgiving for God's mercies.

LESSON IX. The Lord our Guide through the wilderness of life.

LESSON X. Reports and glimpses of heaven, from Bible and dying saints.

LESSON XI. Unbelief a constant stumbling-block.

LESSON XII. Christ our constant Friend.

LESSON XIII. The blessedness of death, in view of the heavenly land.

ALL THE WAY, *and its teachings for us.*

B e faithful to your vows.
E ver trust in God.
W ork heartily.
A cknowledge God in all your ways.
R efrain thy tongue from evil.
E xpect trials.

} OF SIN.

ALL THE WAY, *illustrated from Scripture.*

He preserveth the way of His saints (Prov. 2. 8).
The way of transgressors is hard (Prov. 13. 15).
And a way, called The way of holiness (Isa. 55. 8).
Talked with us by the way (Luke 24. 32).
Just and true are Thy ways (Rev. 15. 3).

C. SKINNER.

NOTES ON THE Y.M.C.A. BIBLE CLASS LESSONS.

SEPTEMBER 2ND.

Nathanael.—*John* 1. 43–51.

"*JESUS findeth Philip.*" Thus is stated the turning-point in his spiritual history. Contrast with ver. 37, where we find two seeking Christ. Here Christ is the seeker and finder. So He always is. He came to seek and save the lost.

"*Follow Me.*" Brief but comprehensive. Imperative. All Christian duty is summed up here. It means, obey My commands, follow My example, keep behind Me, let Me go first and lead the way.

"*Philip findeth Nathanael.*" We are not told that Philip followed Christ. We learn it in seeing how he sought to bring Nathanael to Christ. This was a good way to learn it, better than mere lip profession. "By their fruits ye shall know them."

Note what Philip said to Nathanael: "We have found Him." Philip was an experimental preacher.

Philip seems to have blundered a little in saying, "Of whom Moses, etc. . . . Jesus of *Nazareth.*" He was not prophesied of as Jesus of Nazareth. But it is better to make a mistake in doing something, than to make the greater mistake of doing nothing.

See how Philip met Nathanael's question, "Come and see." He could not argue, but he could invite. Let us do likewise.

Observe how Nathanael received the gospel:—

1. *His Caution.* Like the Bereans. Care is needful. Credulity is not faith. "Judge before friendship, then confide till death."

2. *His Candour.* He is willing to learn, and to be convinced. He comes.

3. *Jesus Sees him Coming.* So He always does; detects first moving of desire. Like the prodigal and his father.

4. *Jesus Speaks.* Words of encouragement. No fear of puffing up. Discerns character. No *guile*, not "no *guilt.*" Free from hypocrisy. "Honest and good heart,"

5. *Nathanael's Surprise.* That Christ knew him. See woman of Samaria, Nicodemus, Zacchæus.

6. *Christ's Answer.* He seeth in secret (see Acts 9. 11). So Christ observes all hearts in their secret devotion.

7. *Nathanael's Confession.* Owns His deity and kingship. In these words accepts Him. How soon an honest heart is convinced! How Nathanael's faith condemned the unbelief of the rest of the Jews.

See what Nathanael gained by receiving the gospel (vers. 50, 51). This is to be understood figuratively, and as referring not to the *distant*, but to the *immediate* future. It promises a fuller unfolding of Divine revelation.

On the expression, "See heaven opened," see Matt. 3. 16; Mark 1. 10; "Opened UNTO HIM," Acts 7. 56.

Christ in His deity and humanity touches heaven and earth, and opens a way of communication between God and man.

JAMES L. STANLEY.

SEPTEMBER 9TH.

The Covenant with David.—*Ps.* 132.; *Luke* 1. 67–72.

I. PRAYER (Ps. 132. 1–10). Earnest prayer (ver. 1); prayer of intention (ver. 2); waiting in prayer (vers. 3–5); hearing of prayer (ver. 6); worship in prayer (ver. 7); invitation in prayer (ver. 8); pointedness in prayer (ver. 9); pleas in prayer (ver. 10); for Jesu's sake we are answered.

II. PROMISE (Ps. 132. 11–18). We have about 230 "I will's" in the Psalms, and in this Psalm we have seven; and around these seven "I wills" cluster the fulness of the Lord's promise to David about David's greater Son and Sovereign.

1. *The "I will" of Purpose.* "I will set upon thy throne. See the seven "shalt's" and "shall's" in Luke 1. 31–33 as a partial fulfilment, and Dan. 7. 14, 27, and Heb. 1. 8 as to its completion.

2. *The "I will" of Place.* "Here I will dwell" (Zion). This is to be taken literally, as Isa. 35. 10; and not in a spiritual sense, as Heb. 12. 22.

3. *The "I will" of Provision.* "I will abundantly bless her provision," etc. I will bless her with provision (see Zeph. 3. 16–20) and so shall be a provider to others (see Zech. 8. 13).

4. *The "I will" of Position and Praise* (ver. 16). Priests clothed with salvation—*i.e.*, accepted in Christ, the Righteousness of God—and as a consequence, joy shall be theirs, and praise shall follow.

5. *The "I will" of Prosperity.* "I will make the horn of David to bud." Horn represents power, and the horn, budding, life and prosperity. It means that Christ, as King, shall flourish and prevail (see Zech. 6. 12, 13; Ps. 48. 2).

6. *The "I will" of Power.* "His enemies will I clothe with shame" (ver. 18). See Zech. 14. and Rev. 19.

Note the following points in connection with Luke 1. 67–72:—

1. *Relation.* "Lord God of Israel." God in covenant relationship.

2. *Regard.* "Visited." Compare with Exod. 3. 16 and Ruth 1. 6.

3. *Redemption.* "Wrought redemption for" (R.V.).

4. *Raised up* a Saviour (ver. 69).

5. *Recounting* the promises. See Jer. 23. 5, 6; Dan. 9. 24.

6. *Release* from enemies (ver. 71). See Jer. 30. 10, 11; Isa. 54. 17.

7. *Remembering* the covenant.

F. E. MARSH.

SEPTEMBER 16TH.

Dishonesty.—*Prov.* 21. 6, 7.

"THE *getting of treasures*" is not condemned in itself. "The Lord thy God giveth thee power to get wealth." The distinctions of *rich* and *poor* are recognized in God's word. Christ does not say (as some in mistake suppose) that the rich cannot be saved, but only that it is difficult.

There is a danger, however, in the getting. The pursuit of riches is liable to have a demoralising effect, inducing covetousness and craftiness.

"Lay not up for yourselves treasures upon earth."

"*By a lying tongue*"—here is the evil condemned: not the getting, but the *means* of getting.

Where *greed* takes possession of the soul, it is apt to make a man unscrupulous. The motto of some is, "Get rich, honestly if you can, but anyhow, get rich."

"He that hasteth to be rich shall not be innocent." Mark the statement. A man *may* get rich rapidly and innocently, through certain strokes of fortune, but it is laid down as a principle that no man can have riches as an ambition, and yet keep a clear conscience.

The competition of the present time renders integrity difficult, but not impossible.

Do men now get treasures by a lying togue? Let common experience answer.

What is meant by it? Who does it?

The buyer who says, "It is naught, it is naught," in order to get a bargain, and then goes and chuckles over his sharp practice.

The man who tells you the article is all wool, when it is half cotton.

The man who assures you that the article in his hand is exactly the same as the one in the window, when he knows it is inferior.

The man who sells you bread as being pure, when he knows it is adulterated.

The man who wins the confidence of a friend to get his money, and then gambles it away in rash speculation.

And so in every similar instance of dissimulation and equivocation.

Observe, they not merely *try* to get, but actually *get* treasures by lying. Yes, lying seems to prosper sometimes. But "fret not thyself because of evil doers." Their prosperity is like that of the mouse which succeeds in getting the bait, but traps itself at the same time. The man who gets a treasure dishonestly pays more for it than he thinks. There will be arrears to settle hereafter.

"*A vanity tossed to and fro,*" etc., or as R.V., "a vapour driven to and fro." It is unsubstantial. "Wealth gotten by vanity shall be diminished." Like a vapour, soon scattered.

"*That seek death.*" They do not this intentionally, but really and unconsciously. Like a will-o'-the-wisp, it leads them into danger, misery, death.

"*The robbery* (or violence) *of the wicked shall destroy them,*" etc., by the law of recompense, "Whatsoever a man soweth," etc. "His violent dealing shall come down on his own pate." The robbery by which they thought to secure themselves, shall become their destruction. This is so in various ways.

1. When dishonesty is discovered and punished in this life.

2. When the consciousness of the sin torments the man and spoils all his pleasure.

3. When dishonesty and all wickedness reaps its final reward hereafter.

"He shall have judgment without mercy, that hath showed no mercy."

JAMES L. STANLEY.

SEPTEMBER 23RD, 1888.

Rich Man and Lazarus.—*Luke* 16. 19–31.

I. CONTRAST BETWEEN RICH MAN AND LAZARUS.

Lazarus.	*Dives.*
1. Poor.	Rich.
2. Naked.	Clothed.
3. Starving.	Feasting.
4. Dogs.	Servants.
5. Dead and carried.	Dead and buried.
6. In the bosom of Abraham.	In hell.
7. Comforted.	Tormented.

II. CONTRAST BETWEEN LAZARUS ON EARTH AND IN HADES.

On Earth.	*In Hades.*
1. At the gate.	In the bosom.
2. Dogs.	Angels.
3. Poor.	Rich.
4. Despised.	Comforted.

III. RICH MAN ON EARTH AND IN HELL.

1. Clothed.	Stripped.
2. Plenty.	Penury.
3. Pleasure.	Pain.
4. Prayerless.	Praying.

In this incident we have a sevenfold answer and illustration of what hell is, and the condition of the lost.

1. *Hell is Conscious Torment* (ver. 23).

The word here rendered "torment" is translated "sorrowing" in Luke 2. 48. "I have sought thee sorrowing"—Mary seeking Christ. "Sorrowing most of all for the words which he spake, that they should see his face no more"—Paul leaving Ephesus. It means to be in intense pain. Trapp says on this: "Having punishment without pity, misery without mercy, sorrow without succour, crying without compassion, mischief without measure, torments without end and past imagination."

2. *Hell is seeing the Bliss of the Righteous, and not being able to share it* (ver. 23).

(1) Ungodly husband seeing his godly wife.
(2) Wicked son seeing his praying mother.
(3) Pleasure-seeking daughter seeing righteous father.
(4) Parents seeing saved children.
(5) Wife seeing godly husband.
(6) Scoffer seeing the companion he laughed at.
(7) Infidel seeing heaven he disbelieved in on earth.

As one has said, "There are no infidels in hell. There, all believe without a doubt, while they tremble without a hope."

3. *Hell is Mercy denied* (ver. 24).

Illustration.—*Virgins knocking at the Door.*

4. *Hell is an Accusing Conscience* (ver. 25).

"Where their worm dieth not, and the fire is not quenched."

"Son, remember."

(1) Remember how you were born in sin, and lived the same.

(2) Remember how you had the gospel preached to you, and neglected it.

(3) Remember how you loved your sins better than Christ.

(4) Remember you are lost because you did not accept Christ.

(5) Remember all the calls God gave you.

Then you will experience the truth of Deut. 28. 65–67

5. *Hell is Loss* (ver. 25).

(1) Loss of earthly pleasure.
(2) Loss of interest in Christ.
(3) Loss of opportunity. "Depart from Me into," etc.

"It was a great trouble to Absalom that he might not see the king's face; but to lose God's smiles, to be banished from His presence, in Whose presence is fulness of joy, how sad and tremendous! That word "*depart!*" says Chrysostom, "is worse than the fire. Sure sin must be the greatest evil, which separates us from the greatest good."

6. *Hell is Separation.* "Great gulf fixed." Think what it means to be separated from and to.

7. *Hell is the Absence of Christ.*

Think of what the absence of Christ means NOW—DEATH-BED—*judgment throne—eternity.* Note the words "cannot" and "fixed."

F. E. MARSH.

SEPTEMBER 30TH.

Nicodemus.—*John* 3. 1–16.

"A MAN *of the Pharisees.*" Though the Pharisees as a *class* rejected Christ, yet believers were gathered even from among *them.* Though personal, social, and religious conditions may form *hindrances*, none are necessarily insuperable barriers.

"*By night.*" Probably *fear* kept him from coming by day. This is the most obvious reason. Better "by *night*" than not at all. The chief point is that *he came.* See Judges 6. 27.

"*Rabbi,*" etc. Thus far and no farther does Nicodemus go. "A teacher." Nicodemus evidently regarded our Lord only as a teacher, and supposed that all he himself needed was *instruction.*

Christ instantly meets his *state of mind* by the words, "Ye must be born again." Christ indicates the deep and true need—a radical change—a new life. Had men only needed *enlightenment*, what need would there have been for Christ's incarnation and death?

Christ startled Nicodemus by the statement. It is needful for men to be startled sometimes. The measures were strong, but in Christ's hands they were safe.

Nicodemus' reply indicates a mixture of ignorance and impatience. Proud human nature revolts at the humiliating truth.

Christ reiterates and explains.

"*Water and Spirit.*" Compare Matt. 3. 11.

"*Holy Ghost and fire.*" Here, fire is not something distinct,—Holy Ghost *as* fire. So in John 3. 5. Spirit, the power and reality—water, symbol. Compare John 7. 38, 39,—"living water. This spake He of the Spirit." Some regard "water" as meaning "*the Word*"; but this is not simple enough, and it is scarcely probable that Christ used it in that sense.

Consider the depth of meaning in the statement "born again." Demolishes all mere morality, religiousness, self-improvement, reformations, etc. What is needed is *renewing.* Only God can effect this. Ver. 6. Like produces like. To every seed his own body.

Observe threefold repetition of the doctrine of the new birth, vers., 3, 5, 7, and the double "verily" in 3 and 5.

Ver. 8. The secret, mysterious action of the Spirit. We cannot see the wind, but we know it by its effects. So we know the work of the Spirit.

Ver. 9. "*How can,*" etc. Human wisdom is baffled here. God's thoughts are higher than our thoughts. The pride of intellect and of religion must be brought down, in order to the reception of Divine teaching. Nicodemus had to learn his own ignorance.

Vers. 11–13. The authority of Christ's teaching—"*We know,*" "*We have seen.*" Christ only could thus speak in the *fullest* sense.

"*Earthly things,*" not earthly in nature or origin, but things which transpire on earth. The new birth is not an earthly thing, but it takes place on earth, and its evidences can be witnessed.

"*No man hath ascended.*" This evidently means no man hath ascended and returned again to tell what he has seen. Enoch and Elijah ascended; but they have not returned as witnesses.

Note the two further references to Nicodemus. Ch. 7. 50; 19, 39. These shed a light backward on John 3. Nicodemus did not hear in vain. See how he gradually grew bolder, and confessed Christ when all the disciples had fled.

MAD JOHN BURLEIGH.

By Mrs. CHARLES GARNETT,
Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow," "Our Navvies," etc., etc.

CHAPTER XVI.

IN WHICH RALPH HARDMAN AND JOHN BURLEIGH BOTH DREAM DREAMS AND SEE VISIONS.

BOB CHATTERIS had a way of lingering when the other men left—of sitting on the slag heap near the opening of the mine; and more than once or twice the Vicar strolled up, and took a seat beside him, and then they talked in a fragmentary way of many things. One day Bob said suddenly,—

"Did you notice, sir, I wasn't at church on Sunday?"

"Yes, I *missed* you; where were you?"

"I went to Castleborough, sir."

"Did you find anything out? Tell me."

"Yes, everything."

The Vicar waited. Bob sat on in silence. His face was grim. At last he began:

"If I'd met yon fellow any time between Saturday and to-day, I'd have been t' death on him. You preached a bit sin' about a man as was possessed by the devil. *I know what it means.* I've never said my prayers sin',—they seem to choke me."

"'The fact is, Burleigh, I agree with you in your estimate of my character, and, solely with a view to self-improvement, I intend to marry.' 'And who is the lady?' John Burleigh spoke slowly. 'Lady Susan Stopham.'"

"I suppose you could not ask to be forgiven as you forgive?"

"Ah! that's t' size on it. I think I could forgive a chap ought but cruelty to a weak bit of a girl as he had sworn to love, and a girl, too, what another man would ha' given his life for. Think of t' honour of it, sir! A lass to trust all she's gotten to yer, and then to pay her back as yon man did. If I only knew where he was! I've a mind to go on tramp and seek him."

Bob looked sideways at the Vicar, to note the effect of his words. He saw the Vicar's pale face flush, and caught the startled anguish in his eyes, and then he turned his head. Silence fell between them, and then Bob said slowly,—

"I only came back to like tell you, sir—I couldn't frame to go without that; but now it's done, and I'll be off;" and he rose hastily. He had gone two or three yards, when he heard a voice crying,—

"Stay, Chatteris!"

The iron-getter turned reluctantly.

"What mun I stay for?"

"Because I *cannot* do without you. You are my only friend here. Don't leave me in my sore need."

Bob looked up; a strange light gleamed in his dark eyes, or was it a tear? The clergyman held out his hand.

"I don't see how I can be of use to you, sir."

"Don't you guess the strength, the help one gets from a kind face, when all others are cold? Don't you know the comfort of feeling a friend is near, when you are struggling with a temptation or a sorrow? I'm asking from you what our Master asked of His friends—'watch with me.' If you can't do it for love of me, do it for *His* sake, will you?"

The hand was still outstretched. Bob Chatteris took it between both his own, tried to speak, gave a great sob, wrung it, and turned away.

John Burleigh did not know what the man meant to do. He had hardly realised, until he sat that night in his lonely study, unable to read, how utter a blank the iron-stone getter would leave behind him. Perhaps at that moment he was tramping through the night, his heart burning with vengeance, and transforming a bitter sorrow into a bitter sin. Next Sunday there would be another vacant place. "Ah, the Master must know I am not a shepherd to be trusted to fold such as these. He is not going to leave him; no, He knows best. He is leading Bob to better keeping." Ah, how the Vicar's heart ached. He stepped through the window into the dewy garden, to get a breath of air. On the garden wall lay a piece of paper, held down by a stone. As he lifted it, he heard footsteps go down the road towards the village. Wondering what it could be, he carried it in to the lamp, and read,—

"SUR,—

"I'll bide with you, if you want me, till death.

"BOB CHATTERIS."

And then John Burleigh trembled, and fell on his knees.

* * * *

"Halloa, Jack. Here I am, you see."

"Why, Hardman, where have you sprung from?"

"I am on my way down to Inverben, and thought I would give you a call by the way. Can you put me up for the night?" asked Ralph.

"Of course. I am delighted to see you, my dear fellow. You look older, and, I think, happier."

"So I am; but what ails *you?*"

"I don't look ill, do I?"

"Not exactly, and yet —— Do you mean to say you have been all these months alone?"

"Why not?"

"Ah, then, that is it. You need a holiday. Look here, come down with me to Inverben. They will all be delighted to see you, and it will set you up."

"I am sure it would, if I only could come; but I cannot, so don't talk of it."

"Get some one to take your duty. Don't you know any parson you can trust?"

"You must not think me so unreasonable. I know just now of an admirable one—my late fellow-curate, Tozer, who would be delighted to supply my place."

"Then let him take possession at once. Telegraph for him, and come on with me to Scotland on Wednesday."

"I wish nothing better, but it is quite impossible."

"But why?"

"There are other reasons."

Ralph Hardman wondered inly what they could be; but asked no further.

"And what are you doing, Hardman?"

"Oh, a hundred things. I say, Jack, one thing I have found out at all events, and that is, that my days are not nearly long enough, nor my head strong enough, for all I have to take in hand. I used formerly to think as I was dressing, 'How can I pass the day?' and now it is, 'How can I get all I have to do into the day?' My danger now is not having too *little*, but too *much*, business. It is really sometimes quite a difficulty to snatch an hour in an afternoon for Azerley House." He coloured as he said this, and paused; but John Burleigh said nothing in reply. "I fear I have been drifting, rather than working with any definite aim. I want you to tell me your ideas. It seems to me, a man ought to have an object for exertion."

"Yes, my ideal for you, Hardman, is a parliamentary career—not one to gain place or power, not to have your name in men's mouths, but to work there for God, to 'defend the cause of the poor and needy.' I admit that you are not yet fitted for it. Forgive me for saying you do not want for ability, or readiness, or force, or, best of all, a warm sympathy; but you do need judgment. This gift can be acquired."

"And I may be an old man before I acquire it," answered Ralph, "if I cannot find some one to balance me."

Again he waited, and again John Burleigh was silent. When he went to bed that night, Hardman felt that he had been rather hardly treated.

"We have talked of everything nearly, except the one thing that I wanted to speak of; four times to-day I have brought it up to the very point, and Jack would not give me an opening. Of course he can't dream of what I wish to tell him, or I should think he did it on purpose. However, before I leave on Wednesday, I am determined to have it out. He'll be awfully glad; they are such good friends, and when we are married, I must get Jack to leave Houghrigg. I'll pension off old Mr. Scoresby—he has long wished to live in Devonshire, near his daughter—and then we shall have Burleigh always with us. My little lady and he are such chums, it will be delightful."

Next day the hours flew by so happily, that it was evening before Ralph Hardman made his opportunity. He had frequently mentioned Lady Susan's name in his conversation, and it had been music in John Burleigh's ears. He had encouraged the younger man to talk of her, and he, nothing loth, had told his friend much about her unselfish, sweet life, which he would never have heard from either her lips or pen. John Burleigh loved her with a more tender admiration every hour.

And now it was late evening; early to-morrow Hardman must go, but he had cheered his friend, and would leave brightness and energy behind him.

"There is one thing more I want to consult you on, old man."

"What is it? I am at your service."

"You said yesterday my danger might be impetuosity and want of a well-balanced judgment; but I think you won't accuse me of either in this case."

"Go on; why are you hesitating?"

"It's not so easy to take this fence," laughed Hardman. "The fact is, Burleigh, I quite agree with you in your estimate of my character, and, of course with solely a view to self-improvement, I intend to marry."

"And who is the lady?" John Burleigh spoke slowly; the room was almost dark in the gloaming.

"Lady Susan Stopham."

A dead silence followed the name.

"Are you surprised, Jack?"

"No," answered a strangely sounding voice from the corner.

"You cannot but congratulate me, then; no one could know Lady Susan, and not see she is everything a man needs in a wife."

"Then you are engaged?"

"No," laughed Hardman; "in fact, I have not said a word either to her or to her people. But somehow I am pretty confident it will all be right. When we are married, you must come to us; I have planned it all beautifully, and mean to take no refusal."

So, in the highest spirits, Ralph Hardman retired, and it never struck him until he was in the train next morning, that Burleigh had not congratulated him.

"I know he does it really, so it's all right; but I wish he had sent some message I could have given my little lady when it is all settled; however, no doubt he'll write. How awfully white he looked at the station, and such queer dark lines about his eyes—I'm afraid he's going to be ill. What a grand chap he is, though."

So came the blow—carelessly struck—which he had been dreading; and John Burleigh received it humbly, and for days did not understand its meaning. He went about his parish; he catechised the children in the schools; he spoke kind words to the feeble old men and rheumatic old women; and yet through all was the numb coldness of the dead joy which he carried pressing on his heart. He only had strength to bear it; as yet, he could decide upon no course of action.

He knew he must wait; but was it weeks or years, or, after all, only days before the letter from Hardman lay on his breakfast-table? The Vicar had been expecting it, and there it was; but he had not the courage

to open it. He turned it over, and then crushed it into his pocket. There were a heap of others, but he did not even look at them. He went out, passed down the village as in a dream, entered the schools, went through the morning lesson as usual, and then, with a desperate courage, he climbed to the old castle, and there, alone, with trembling fingers and shrinking disgust, forced himself to tear open the envelope; and as he did so, Ralph Hardman's *debonnaire* face flashed up in his recollection.

"DEAR OLD JACK,—

"I know you will be expecting to hear from me, and twice already in these four past days I have begun an epistle to you. Both of these I have burnt; now I am determined I will finish this one. I will tell you the facts in all their baldness, and you must imagine the rest. I found the Castle very full. Every one was kind, and the earl specially civil, saying particularly he was glad to see me. Lady Azerley, you know, is not demonstrative, but she also let me understand I was welcome. Lady Susan's reception was as kind as usual. After dinner that first evening, I had a long talk with her about my visit to you, but could gain somehow no opportunity, either that evening or during the next day, of speaking to her upon the subject I wished. So at length I thought—which had not been my intention—that I would go to the earl first. I was able to do so on Friday, and he was as pleasant about it as could be wished, and said many kind things. He gave me leave to tell Lady Susan of his approval, and place my fate in her hands. All Saturday I in vain tried to gain a chance of doing this. On Sunday afternoon, by the kindness of her mother, I got my opportunity. I don't know how to tell you, but in three words *she refused me*. She owned she had a sincere regard for me, but I could not get her to admit anything more. I should have left on Monday, but the earl particularly begged me to remain; and Lady Azerley assures me that if I can wait patiently, and let her daughter become accustomed to the idea, all will be well. It may be weak,—I suppose I ought to go, but the fact is, I love Susan so, that I am wretched when I am away from her; and if years of ever such patient waiting will induce her to change her mind, they will not be wasted. You don't know what she is—the sweetest, dearest, kindest, most thoughtful—but there, some day you *shall* understand her better than you do now. I know you are friends already; I want you to be close, near ones. I am determined I will never withdraw my suit—she *shall* be mine, if any effort of mine can gain her. But I will not go on; you will be tired of all this. So good-bye, old man. Write soon.

"Yours ever,

"RALPH HARDMAN."

John Burleigh read the letter twice over, and then went slowly down to the Vicarage. He would think it all out, but not yet, not yet. So, from force of habit he seated himself at his desk and opened his other letters, calmly answering each as he finished perusing it. He had written five; the sixth was lying face downwards. It was from Lady Susan, and ran as follows:—

"MY DEAR JOHN,"—John Burleigh started, it had always been "Dear friend" before—"Tell me what I must do. Mr. Hardman is here. You know why he has come, for on Wednesday night he gave me an account of his visit to you, and I now understand why he made it. My father favours his suit, but I shall never marry him. I like him thoroughly, *but I can marry but one man.* I see now you were right, and that I ought never to have asked you to remain silent; but then I thought it would not have been for all this weary time. *Let it end now.* Will you think me very bold if I say I hope you will let me come soon? I am afraid you will; and yet, having written the words, I cannot withdraw them. I will write no more. We shall have a long, long time in the future, please God, to *tell* one another our thoughts.

"Ever your own,

"SUSAN STOPHAM."

John Burleigh kissed the letter—his first love-letter—passionately. He read and reread it until he knew the turn of every letter by heart, and then at length he answered it. The pent-up devotion of months found an outlet. He told her in the fondest expressions how he loved her; he forgot his poverty, he remembered no longer his resolve of self-abnegation. All he could think of was her own dear self. His passionate words showed the strength of his affection, its tenderness, its depth. And then the postman arrived, and he had time only to end hastily, and tell her on the following Monday he would come down to Edinburgh, and be with her the day after.

Hardly had the man gone when a revolution of feeling came. He remembered with a shock what he had done; he saw distinctly that her parents would never consent to such a marriage—it could not be expected. He knew, too, that Lady Susan, were she once engaged to him, even though so engaged without her parents' approval, would not give him up. She was true as steel. Was her love for him not only to drag her down from luxury and social distinction, but to separate her from the affection of her family? Was he worth such a sacrifice?—and in deep humility John Burleigh answered, "No." Then he must save this girl, whom he loved infinitely above himself, from making it. If he allowed her, he knew she would part with all for his sake; therefore he must save her from herself. Suddenly the sharp, cord-like pain was drawn across his chest; he ceased to think, and gasped for breath; he felt he must lie down or die. He staggered to the Ilkley couch and fell upon it. Presently the agony passed, the respiration returned, and the numbness he knew so well, came creeping over his frame; it stole with a cold stealthiness into his brain, and he slept, and as he slept he dreamed.

Near Burleigh was an ancient Druidical circle. He had played with Arthur there many a time; it stood on the brow of a hill from whence for miles the peaceful pasture lands swept—a silent, wind-blown, green spot it was.

He found himself here, and recognised the place; but many of the features of the scene were changed. Instead of the open fields the eye wandered over forest lands. And the hill, which was clear of trees, was no lonely, still centre; a multitude of people was gathered there—strange, wild denizens of the woods, clothed in skins, and with waves of unkempt hair falling over their naked shoulders and arms. The men grasped quaint spears, the women wore savage garments, but one spirit animated the great throng; the sounds of mourning floated above them, despair and fear marked every countenance, even the little children cowered as they clung to their mothers' sides, and all eyes were fixed on the circle.

Within the range of its upright stones were gathered men clothed in white garments, and from the circle rose the solemn tones of a dirge sung by many voices. Nearest to the circle stood the chiefs of the nation. One was a white-haired old man; he leaned upon his grandson's arm for support—a noble youth who towered head and shoulders above the surrounding throng. His hand was clasped in that of a young fair girl, whose features seemed to remind John Burleigh of Lady Susan's, but he was too absorbed in the scene to give the thought more than a passing attention. The dirge rose louder, and grew faster; the white-robed priests moved round and round within the circle. The chant became more urgent. A flame shot up and fell quivering down the highest stone pillar; the priests parted right and left, and all the multitude could see the great stone of sacrifice, and the Arch Druid standing by it, the slaughter-knife gleaming in his hand.

"The land is mourning under pestilence," he cried, and his voice rang over the trembling thousands, who bowed their heads and assented with a moan. "For the sins of the people has the pest come; one must die for the many, and so the gods will be satisfied. No war prisoners will slake their anger; this is no year-day sacrifice. We come to-day to offer our best-beloved."

A gasp broke from the multitude, then an awful stillness fell upon it. Each mother thought her child was about to be declared the selected one, and strained the little one closer in her arms, or turned to her stalwart son with anguished eyes.

"Our best-beloved—noblest, bravest, most beautiful, most kindly. He whom all praise, whom all greet with smiles, he who would live to be the chief of all—he, the best-beloved, is the sacrifice chosen, and who is he?"

Once more the shudder of expectation shook the living mass. The blanched faces were all turned upward, the thousands of terrified, burning eyes were fixed on the two rows of priests, who, with hungry eagerness, were waiting the pointed direction of the Arch Druid's hand to spring upon the victim. Slowly the hand was lifted which held the gleaming steel. It pointed at the young chief.

"Who but Hella!" The priests sprang forward. A roar of anger and of despair broke from the multitude; the girl shrieked and threw her arms around him; the old man cried: "Spare Hella, take me instead." The people and the priests swayed in an inextricably confused rush, the flame leaped up wildly towards the sky, and with the din and rush in his ears, John Burleigh awoke, and found himself lying in his study, and the harvest moon shining in through the hop garlands.

"The best-beloved!" he said, "the best-beloved!" and he shuddered.

THE MISTRESS OF THE MANOR.

By F. Burton Irving.

I BEGIN this bit of history by a quotation from one of a bundle of old letters lying in my lap :

"Thompson Saxe died yesterday. Mrs. Saxe lingers, and is likely to, despite the stroke she had last summer. Humanly speaking, one could wish it had been otherwise ; for, to us, it does seem a mystery that the wife should be spared to a sort of death in life, to lie helpless month after month, needing constant attention, a burden to herself and all around her, and that her husband, whose pension was the maintenance of the family, and whose bright Christianity made the light of the home, should be called away after a few days' illness."

There are many such mysteries ! A son and a daughter were left to solve this one. To the delicate, boyish lad a friendly office opened its doors, and he entered as a novice on the pay of a novice. It was not much of an opening from the world's standpoint ; but there was no alternative, and providentially it would necessitate his living at Glenlea, a small coast town, having large attractions for unfashionable visitors who liked quiet and bracing air rather than the piers, bands, and promenade concerts of more stylish places.

It was the acceptance of this situation by Averil Saxe that led to a speedy settlement about the future of the two remaining members of the family.

"You can't go there alone," said Annie, "and as Dr. Erfurt says that the air of Glenlea would be the best thing for mother, we had better break up our home here and take a house there. I could let lodgings in the season, perhaps, and we should all be together, which must be better I am sure than any other way that seems open, especially as the doctor and Mr. McKinnon have promised, if we put this idea of mine into execution, to use their influence to procure us suitable inmates."

Good Thompson Saxe left no debts behind him, neither did he leave any property, save a small sum due from a Life Insurance Society, and the furniture of his home. Not much provision for a bed-ridden wife and two "children" as he called them, though at the time our story opens Annie was just twenty, and Averil had reached seventeen years of age. Not much, truly, but it was something, and enough to start them in the battle of life, though Averil was handicapped by very delicate health, and Annie weighted by the charge of a sick mother.

Homes for Incurables were not common n those days ; probably this brother and isister had never heard of one, or, if they had, possessed neither the knowledge nor the influence to get Mrs. Saxe elected.

Mercifully, Annie possessed a healthy body and a healthy mind, being well dowered with physical power and common sense, to say nothing of indications of intellectual gifts above the average. Hence, after her father's death, her shoulders were fitted for her new, though unexpected, responsibilities, and she, seeing her duties, took them up promptly. She had but few friends ; but the few were wise, and helped her inexperiences by their sage counsel.

Kind Dr. Erfurt, on whose advice they removed to Glenlea, was one of those helpers. College chums had sometimes put their heads together, to try to find out why he was not what they called *richer*. "Can't make out why Ericon Erfurt has not got on ; no man of his year was better qualified, or brought better head and heart to his work, and yet he has never made much of an income." Probably not ; but if the blessing of them that were ready to perish can enrich ; if poor men skilfully tended back to health, and given again as bread-winners to their families, send prayers to God ; if anguish and agony had been relieved by the powers Ericon Erfurt laid on the altar for humanity that could not pay its equivalent, the day will come, here or there, when, in the just arithmetic of heaven, he shall be counted rich and successful.

Kinnon McKinnon, the landlord, was another counsellor. He took his full quarter's rent, but he took the lease off her hands when she found a tenant, saying, "Aye, it's ower muckle o' a burden for ye tae be a factor as weel as luik efter yer mither, wha, puir body, is that doited ye'll hev' yer hands fu' I doot."

And Smithson, the incoming tenant, being a bachelor, was glad to buy the fixtures and such furniture as Annie did not want for the smaller house at Glenlea, especially when she handed him a written list of prices that seemed scrupulously just towards the buyer, full allowance having been made for defects, and more than full for wear and tear. Mr. Smithson had been always used to look after Number One, and it was a revelation to him to meet any person who acted upon a different principle. Though no Shylock, he was not above buying a good bargain, without uncomfortable questionings as who was to lose ; so, after going through the list with Annie, and examining the goods she wished to part with, he said, "I'll take them at your prices, Miss Saxe."

She simply answered, "They are worth what I've asked, for I turned up father's old cash-book, and, after ascertaining the first value, endeavoured to make such deductions as would be fair to any buyer."

"A word of advice, Miss Saxe, a word of advice ! When you've anything to sell, don't you think of the other side too much. You need not be buyer and seller both, you know. Every man for himself is the right rule now-a-days. You should get all you can, and never mind the rest. It's not your fault, but other folks, if they pay too much ; so again, I say, get all you can, for, from what I can hear, you are likely to want it."

He never offered to pay more than she asked, though he knew the things were "dirt cheap," as he said afterwards ; "it was not his business that she was obliged to part with them at a loss, rather than auction or move them."

The removal of her mother, and the transfer of their furniture to Glenlea, was effected by the help of a maternal uncle, who was on a visit to England at the time of her father's death, and who kindly devoted the remaining weeks of his holiday to his poor sister Martha and her bairns, and even insisted on paying Annie for his board and lodging in such a liberal fashion that, while he remained their guest, there was no need to touch the narrow store of money raised by sale of surplus furniture, the only store Annie had, except the insurance money which pertained to her mother.

"I would like to do more for you, dear," said the uncle, when he was leaving, "but I've nothing laid by ; it has seemed a duty to me to live by the day when I knew that I should have a retiring pension as a provision for my old age, and this trip home has fairly consumed the sum the company voted for it. I hope, Annie, that your mother's health may improve, if God will, and that, if not, you may have strength to nurse her. It is a heavy burden, poverty and sickness ; but you have a stout heart for the stiff hill, and God aye fits the back to the burden."

"Never fear for us, dear Uncle," said his niece, with as clear a voice, and as sweet a glance, as if her own outlook were of the brightest; "hitherto the Lord has helped us, and I put my hope where He has put my help, you know. Besides, there is so much cause for gratitude ; we shall have lodgers in the season, and with the library and Averil's pay we shall surely make ends meet."

* * * *

Five years have passed before we need again lift the curtain upon the household at Glenlea. It is nearly the end of September. Lodgers left them yesterday; more are expected to arrive to-morrow, and when they leave, both October and the season will be over. Annie stands at the door looking for some one who does not come, and then, not able to spare time for more than a glance, turns back to her indoor duty. All day long she has been cleaning the two bed-rooms and sitting-room, so that they might be fresh for the new comers the next afternoon. Much of the labour might have been saved, had the lodgers been a little more considerate and sometimes changed their sand shoes for house slippers, or well rubbed their boots on the mat at their many entrances. The Ingmans were tidy and careful over their household gear at home, but "when we are in lodgings, you see, it does not matter," and they ruthlessly crumpled up the long muslin curtains, put their feet on the rungs of chairs, laid dripping sea-weed on clean toilet covers, and scratchy shells on the polished sideboard, without heeding that their young landlady would sigh over the fast wearing of the carpets, and soap and rub covers through many succeeding washings, to get out careless stains, besides standing two or three hours to starch and iron the long white curtains, in order that the house might again look attractively clean.

Annie's views of duty in the sphere of life to which Providence had called her, were very broad, and she put a good deal of unpaid service into her lodging letting. "We never had any one to do such kindnesses to us before," said a sickly woman, who had come, with two delicate children and a work-worn husband, a city curate, for a fortnight's sea-breezes. The remark was called forth through Annie telling the mother "she would put both children nicely to bed for her before she came back, for

she was sure she would not get much good from her holiday, if she were always taking the little ones with her."

Again, when she saw a newly-married man chafing under the ignorance of his pretty bride in regard to her marketing, she offered to accompany the girl-wife to do a week's shopping on the morrow, saying, "You see, sir, every place is different, and Mrs. Keen hardly knows where to go for the best things." Then, when they were out together, she pointed out the most suitable joints for a small family, and in a chatty way instructed her companion in good housewifery, then and at various odd times, until she laid a foundation of thoughtfulness about cookery, upon which Mrs. Keen built all her after-management.

Annie Saxe, too, kept a supply of rag dolls, scrap-books, beads, and patch-work, to lend or give to little folks who must perforce remain in-doors on rainy days.

The Circulating Library, also, was full of novel features, though it was not large. Its basis had been her own books, added to those of her brother and her parents; and from time to time she invested in good second-hand standard works, as well as kept pace with the times by purchasing a few of the best of the new. She had a few shelves of children's books, where "German Fairy Tales" had place with "Robinson Crusoe," and other favourites that cannot lose their charm. Then there was Sunday literature (never seen at the usual sea-side libraries), where the lives of missionaries and philanthropists stood side by side with the best serials. A third section was popular history and science, poetry, biography, and general literature.

Many an idler seeking for something to wile away a dragging hour, found for the first time that there were books full of interest and diversion, not necessarily made up of tainted plots, sinning men, and evil women. Not that Miss Saxe ever pressed any one kind of book, only at times she would be appealed to for "something nice," and then she would scatter the seeds of her bright wisdom. The bow-window of her sitting-room was the only show place for *the library*, as the Glenlea people proudly called it, and the walls of the room, with shelves all round, their only keeping place; yet it did not look sordid, for there were little niches kept for flowering plants, and Averil's artistic fingers had done some dainty wood-carved brackets, and painted views that lent tone and colour, until remarks upon Miss Saxe's pretty room

"My first view of her was at our home farm. . . . I handed her the paper for Graham."

became quite common. There was one chamber in the dwelling that no mere visitor or lodger ever saw, though it was always kept fresh and pleasant, and that was where Mrs. Saxe had been from the time she came to Glenlea, physically as strong as ever, though brain-softening had gone on until all mental power had passed away. Only Dr. Erfurt, when he paid his promised yearly visit, and a few old friends saw the wreck that paralysis and brain trouble had made. None, either stranger or friend, ever heard either Annie or Averil murmur at this burden which God had appointed them.

* * * *

A footstep on the gravel; a greeting between two at the door; a wet coat and umbrella transferred to the sister; a warm dressing-gown and slippers to the brother, and Averil seats himself by the pleasant kitchen fire, where a little table, covered with the whitest of cloths, set forth dainty substantial tea for two.

"Nurse and mother have had theirs," said Annie. "When you did not come at the regular time, I knew you would be late, and did not like to keep them waiting."

Five years had made but little difference in Annie's appearance. She still retained the girlishness of her figure, her bright face still kept its habit of letting light out; but she had the faculty, under a quiet mannerism, of opening out and up on occasion, and surprising those who saw nothing in her save the commonplace useful virtues of tidiness and industry. Generally people who stayed in the house found out before they left that "Miss Saxe is very clever," and that "Miss Saxe is a good woman," and not a few "wish they knew more of her," and some went so far as to express regret "that such a superior person should waste so much of her life in common work." As if caring for a delicate brother and incurably sick mother, and guiding the house so that it was saved all gloom and repining, and giving daily living evidence that no duty, when done from high and lofty motives, could be common work, when done so uncommonly well, was pitiable.

It would strike a stranger that Averil was suspiciously thin, that his skin was painfully transparent, and that a stoop about the shoulders proved his early delicacy had not been outgrown. After a few minutes, he saw Annie's eyes searching into his condition.

"You are worse to-night, I am sure," she said. "Did you do as I asked you to-day, or must I urge that duty on you again?" "I went, Sis." "Well, and what did Professor Atherton say?" "Confirmed Erfurt's diagnosis, and said that nothing will arrest the disease but the voyage, and a lengthened residence in a warmer climate." "Then you must go, Averil, and I must look forward to the arrival of the mail, and your home-coming in a few years as a strong bronzed man." "Unless you join me in the interval?" "Not while mother lives, dear." And then fell a silence in which each heart felt its own bitterness. "You must write to-night and accept the secretaryship." "Certainly; our way is very plain, Annie."

Neither young Saxe nor his sister were rich; but her diligence and his plodding industry, despite delicate health, that often made all work a long day's weariness, had enabled them to provide a respectable home for themselves, with good nursing and other alleviations for their stricken mother. But their expenses were great in proportion to their earnings; so Averil was thankful that the long-desired foreign appointment had come just when he felt that he could not face another English winter, and when this view had been confirmed by Professor Atherton. It would be a wrench to leave such a sister, but he must not make the parting harder for her by showing all he felt; so he spoke hopefully about a good time to come.

* * * *

A voyage, rest, good living, bright skies. By the time young Saxe reached the Cape, he felt a new man, and his letters made Annie wholly to rejoice. Then came what is the great test for all delicate men who go abroad unmarried — the miseries of colonial boarding-house life, the want of attention to diet and hygiene, the loneliness amidst an alien crowd; then a breakdown, from which the stronger may sometimes rally, but from which the weaker too often fall hopelessly, to rise no more.

"'Ericon will drive us there.'"

A year has gone, and the long-stricken mother has passed away. Her daughter passes from the room where suffering has just ceased, to attend to arrangements that must be made for the comfort of the living.

The postman's knock! Two letters: one from Averil, and one inscribed by a stranger's hand!

She opens the first to see whether "he is better." It is scarcely decipherable; the hand that wrote it was just losing its cunning, the words were few—comfort for her and a commission. It ran thus: "I've a call, Annie, to home and rest; if you could only *see* me go, I should be satisfied, but in all things this side of heaven there is something lacking. Though we cannot say farewell, the welcome lies before us, and I will greet you in our Father's house on high. Heaven is near. Till we meet, do for others all you would have done for me. Be to some other friendless lads sister and mother." The sheet was unsigned.

She tore open the next envelope. Perhaps some kindly stranger had written to say Averil was better? Her life had been so bound up in love and hope for Averil! Now the sad truth had to come home to her: he was dead, and buried by strangers amongst strangers. It was too much; the paper fell from her fingers; a mist came before her eyes; she knew no more.

* * * *

"If after the funeral you can come and stay with us, we shall be glad to see you," wrote a kind old friend of the late Mrs. Saxe; "and, in order that the house may be no tie, I will find a tenant who will be glad to take it furnished for two months. A change will do you good, for, though you have known weary days in the past, my own experiences prove to me that a blank in life is ever worse to bear than a burden."

So Annie left Glenlea for a time, and went to stay at an old-fashioned farm, near the town where she had resided during the lifetime of her father, and while there, had invitations to renew intercourse with the family of her good landlord Mr. McKinnon, and spent also many pleasant evenings with gentle Mrs. Erfurt, the doctor's wife, who had a faculty of gathering round her pleasant, cultivated people. Here she received the kindest attentions, at first by reason of her sorrow, but afterwards on account of her own attractiveness and natural gifts. There was a strange charm about her gracious bearing and the pensive sweetness of her face. Mrs. Erfurt's guests, one and all, began to like to converse whenever opportunity offered with Miss Saxe, for she had that fineness of perception which at once gave her the keynote to something that was best in each, and the tact that enabled her to know what to say, what to avoid, when to speak, and when to keep silence. She had read to purpose, too, during the odd leisure of her busy life of lodging-letting, nursing, and housekeeping; and, despite all her past activities, was as full of repose in manner, now that occasion permitted, as if life had been one long rest.

One evening, young Squire Thorndale was amongst the guests, apparently chiefly engaged in discussing the chemistry of agriculture in quiet undertones with Dr. Erfurt, when the latter, with that keen observation which is acquired by the profession, noticed his eyes stray, every now and then, to the other end of the room, where Annie Saxe sat teaching his wife a new stitch in knitting, while several others gathered round the piano listening to one of Beethoven's Sonatas, most admirably played by a young niece of the hostess.

"That lady sitting beside your wife, Erfurt, is as full of sweet harmony as the piece of music your niece is rendering so exquisitely!"

"Indeed! Do you think so? And since when, Thorndale, did you take up the study of faces?"

"That one I've studied at intervals for two months, and now I want to know who she is, and have come here to learn."

"Where did you see her before?"

"Why my first view of her was at our home farm. It happened that I had a number of messages for the factor, and rode over with the list as usual, but not finding him in the house, as I expected, turned to the granary door, which stood open, and there, instead of Mr. Graham, was a lady. At first I was taken aback by seeing such a lady there, for though good in their way, the Grahams and their belongings are plain people. Of course I

lifted my hat and explained I was seeking our factor, when she told me he had just gone to the mill with his wife, and she expected them to return shortly. 'Should she give any message, or would I wait Mr. Graham's return?' Then I handed her the paper for Graham, as my horse would not stand long without a groom, and came away, knowing I had met for the first time the woman I wanted for my wife. I have not spoken to her since, but the more I see her the more I want to, that's a fact, Erfurt."

"Not too fast, Thorndale, till I've answered your question as to who she is. Her name is Annie Saxe; she is the orphan daughter of two of my old patients, and supported her mother for several years after her father's death by letting lodgings and lending out books at Glenlea. Now, will not that information put an end to your wanting to see more of her? Worldly-minded people, who judge after the traditions of men, would not allow that a person in that position could be a *lady*, you know, and Thorndale Manor has been used to have such at its head!"

"But *you* welcome her, and your wife's familiarity of manner shows that she counts her as a friend."

"True; but a doctor in general practice, accustomed to all sorts and conditions of men and women, meeting with little gold and less goodness, does sometimes light upon *worth* in unlikely places, and likes to see how it shines under new aspects. I make a study of character, as well as disease, and take observations where people little dream I am making them, sometimes even amongst my wife's guests; and Gertrude never asks her neighbours' opinion as to whom it is right to invite into her drawing-room, and no one here is ill-bred enough to show a shadow of discourtesy to her guests, e'en though, like Annie, they may not be strictly in the line of folks you are supposed to know."

Thorndale regarded the doctor critically and said, "It is not like you, Erfurt, to be cynical. Why do you depreciate a girl simply because she has not rank to give the 'guinea stamp'?"

"I don't depreciate her, I assure you; but I thought you might, when you knew her former circumstances, and I did not want to let you walk any longer blindfolded about her, that's all. Now if you care to go in and win, I will some day congratulate the Manor on its new mistress; but if you are uncertain of yourself, leave her alone; for, whatever the future may have in store, I know this, that such a daughter and sister,—and I have seen her under all circumstances, you know,—cannot fail to make a place for herself, and fill it worthily."

More talk followed about Miss Saxe's parentage, and her brother Averil, who was buried in a lonely grave abroad; then an introduction, and occasional intercourse; but Annie's reserve towards Thorndale was almost impenetrable. She knew nothing either of his intentions, or his conversation with Dr. Erfurt, and would not presume upon her presence in the house of the latter, to form a familiar connection with one whose position in the county would, doubtless, make him regret he had spoken to her if he knew all. Annie did not feel called to make any explanation about her circumstances. Why should she? But she would not presume upon his supposed ignorance.

The family who had rented her house for two months caught fever, and asked a longer tenancy; so she was compelled to accept the proffered hospitality of the Erfurts, after her visit to the Grahams was over.

Still the days went by, and though Thorndale availed himself of every opening, his cause seemed to make no progress. At last he appealed to the doctor, saying: "Erfurt, you must help me! I am wondering whether my mother could be a new link, and she has asked me to invite your wife with her guest to drive over and see her on your next visit. It must be done very informally, for she is, as you are aware, too frail for company ways."

So, on the following morning, Mrs. Erfurt asked Annie to go with her "to see a sick lady." "Ericon will drive us there, and call for us after his round; the place is a few miles out of town, and very pleasantly situated. I think you will enjoy it."

Thus all unwittingly was Annie Saxe introduced to Mrs. Thorndale, and found a very helpless old gentlewoman confined not only to her room, but to her bed. She fell to pitying her daughterless condition, and the fact that she was, despite her wealth, dependent upon hired attendants.

Her fresh, sweet face and gentle touch, long schooled by experience in nursing, won the old lady's heart, as other graces had won her son's. Mrs. Thorndale asked her to come again; these visits ended in her coming altogether, and in Dr. Erfurt being able at last to "congratulate the Manor on its new mistress."

"She is God's gift to my son," said Mrs. Thorndale, sen., one day to Mrs. Erfurt, "and a truer gentlewoman never trod the floors of this house, though many a richer bride has been brought home to it. Ah, my dear, the old lines are true,—

'Honour and rank from no condition rise;
Act well your part, there all the honour lies.'"

* * * *

Years pass. Old Mrs. Thorndale has gone to her grave in peace, her last years brightened by Annie's sweet ministries of love. Squire Thorndale—no longer the young Squire, for a bright lad of sixteen laughingly claims the title—fills the magistrate's bench, with the universal esteem of the county, and, seconded by his wife, worthily takes the lead in all the philanthropic movements of the time. Both Mr. and Mrs. Thorndale are lovers of hospitality, and entertain largely, not only those who can entertain again, but many guests whom the world counts *nobodies*, but, in the sight of God, are kings, priests, and saints.

MEN shrink more from skin diseases than from any other, and they are amongst the hardest to cure; just as the skin diseases of the soul linger long after the heart is greatly cured. Witness the petulance, fastidiousness, censoriousness, social self-assertion, general disagreeableness of so many good people—all in the moral skin—repulsive exceedingly. I say *good* people; I do not say *very good*, nor do I say Christ-like, for that they are not.

SORROW cannot come until God bids it. Health cannot fade, wealth cannot vanish, comfort cannot decay, friendship cannot chill, loved ones cannot die, until He, in His sovereignty, permits.—*Octavius Winslow, D.D.*

INCONSISTENCIES.—If I want to see the inconsistencies of the Lord's people, I must go through Him to find them, for "He casts all their sins behind His back."

THERE is a limit to the revelations of the Bible about futurity, and it were a mental or spiritual trespass to go beyond it; but while we attempt not to be "wise above that which is written," we should attempt, and that most studiously, to be wise *up to* that which is written.—*Dr. Chalmers.*

"FOLLOW the Christ, the King,
Live pure, speak true, right wrong,
Follow the King—
Else, wherefore born?
—*Tennyson.*

THE shortest way to any heart is round by heaven.

My life hangs by a thread, but that thread is in a Father's hand.—*James Harington Evans.*

NOTHING speaks so loudly as the silent eloquence of a holy and consistent life.

WHAT fossils, what monsters, or what intolerable bores we should become, if we would get rid of the things and persons in our lives we are apt to call hindrances!

THE waters of Bethesda had a healing power, but not until they were supernaturally troubled; and so it is with the waters of life, when troubled, they are doubly healing, and when sanctified become to many sufferers phosphorescent with light from heaven.

EARNEST prayer is the inspired prophet of approaching joy.

"GOD delays to answer prayer," says Archbishop Usher, "because He would have more of it."

BLESSED GOD! Thou hast often taught us lessons in the shade we should never have learned in the sunshine.—*James Harington Evans.*

OUR MONTHLY TALK.

"IS THY GOD ABLE?"

BY THE EDITOR.

DEAR FRIENDS,—

In my last Letter I touched upon the character of Abram, as demonstrating this important truth,—that the men who have most power for God in the world, are not the men who go down into its society and enjoy its pleasures and pursuits, but rather those who walk with God, and keep their garments unspotted from the world.

To-day, may I press home a few words which I want to write to you, by reference to another grand Old Testament hero—Daniel?

Daniel's feet, like the feet of many a young man in these days, were set in very slippery places. The king's approval, and his promotion of Daniel to be over the three presidents, were sufficient to excite the envy of the nobles, who knew little and cared less about reputation based alone on virtue and integrity. The keen and jealous eyes of courtiers were set on Daniel; his whole bearing and deportment, his business ability, his administration of the royal finances—every word and act, almost every look—were subjected to most searching criticism. And with what result? No point in the armour discovered, no unguarded place; and, finally, in despair, his enemies exclaimed: "We shall find no occasion against this Daniel, except it be concerning the law of his God."

If Daniel, amid the less clear and definite teaching of the Old Testament Dispensation, could thus walk blamelessly before men, may we not well blush that so often our uneven, inconsistent, halting gait should cause, alas! too often, the enemies of the Cross to blaspheme? What was possible for Daniel, is tenfold more than possible now, that the Holy Ghost has been given as the Spirit of holiness, to energize in the soul of the believer.

We know the sequel—the den of lions and the king's challenge: "Is thy God able?" And if you and I are followers of the Lord Jesus, it will be proved by this, that though surrounded by the agents of him who as a roaring lion goeth about to devour, they shall have no power to harm, "For I, the Lord, will be a wall of fire round about, and the glory in the midst" (Zech. 2. 7).

"Is thy God able?" Let us not flinch from this searching inquiry. Have you passed through the furnace, and come out unscathed? Have you been to the battle and come off victorious? Have you day by day realised the strength of Christ made perfect in your weakness? Then, truly, thy God is able, blessed be His name! But if you are still enthralled by sin, if you are still led captive by the devil at his will, if you are still the slave of evil habit, of lust, of passion, of vice, why, clearly, thy god is *not* able. It may be a god of self-reliance, or of personal resolution, or of your own effort, but—be it what it may—thy god is NOT able to shut the mouths of lions, and to bring you off triumphant.

When Paul was cast on the island of Melita, and a viper fastened on his hand, the superstitious inhabitants came to the rash conclusion that he was a murderer, whom vengeance suffered not to live. But in a few moments he shook off the venomous beast into the fire, and escaped unhurt. Then the natives changed their minds, and voted him a god. And it is just as we, in the strength of the Lord of Hosts, are seen to shake off vipers,—the vipers of selfishness, of pride, of evil-speaking, and a host of other vipers,—that those around us will believe in the reality of our profession.

There is a promised land, for our immediate possession; now it is possessed by the Canaanite, the Hivite, the Hittite; but under the banner of the Captain of the Lord's host, we can say as did those men of faith—Joshua and Caleb, "We are well able to overcome."

I have written these few words of exhortation, suggested by some sad, despairing letters which have reached me from some whose eyes seem to have been taken off Jesus, and to be turning inwards upon their own wretchedness. Beloved friends, you will never see the sun, looking down a coal mine. The flesh in us is, and always must be, *flesh;* its nature ever unchanged and incapable of any improvement. It was nailed as a cursed thing to Christ's cross; therefore *reckon* it dead, heed not its dictates, recognize not its dominion. Claim the promised strength of the Lord, and victory will be yours, as it was his who exclaimed: "I can do all things through Christ which strengtheneth me." There is the only secret of victory of any child of God; and with this, it is the greatest dishonour we can offer, to go on bemoaning our leanness and our failures.

I need not add that it gives me sincere pleasure to hear from any one to whom a few words of spiritual counsel or sympathy may be of help. "Bear ye one another's burdens;" and if, in His grace, my own shoulders have been eased of the crushing burden of sin, and my own heart filled with peace passing all understanding,—it is that we may speak what we do know, to the comfort and joy of others still struggling with doubts and difficulties.

A few weeks, and we shall be closing our first volume of —"A. 1."— It seems but yesterday that we floated our frail barque. But, through the goodness of God, she has been sped on her way with a strong gale; and if we may judge from innumerable testimonies continually reaching us, she is fulfilling her mission nobly. We should like to add largely to our number of subscribers, with the opening Number of the New Volume—November 3rd.

Our Paper needs no words of introduction; you already know it well. If you appreciate our aim, and the great cost of time, strength, etc., at which we seek to realise its ideal, —"A. 1."— give me your hearty, enthusiastic help, and our present large circulation will soon be doubled.

I fear some of our correspondents may have been disappointed at not finding replies, as quickly as they anticipated, in our special Correspondence Column. This is explained by our having to go to press so early, in order that the Volume may be ready in good time.

Again thanking the many friends who are helping us by the distribution of Specimen Copies, believe me,

Ever your true friend,

M. Jane Menzies.

(*Mrs Stephen Menzies.*)

LEAVES FROM THE LOG OF A GENTLEMAN GIPSY.

By GORDON STABLES, C.M., M.D., R.N.,

Author of "The Cruise of the Land Yacht 'Wanderer'; or, Thirteen Hundred Miles in my Caravan," etc.

LEAF XXI.

THE FOREST OF DEAN: ITS GRANDEUR AND BEAUTY—LYDBURY ON THE WYE—ROSS.

OUR journey to Speech House, the hotel that stands all by itself in the centre of the great Forest of Dean, was a long and a very tedious one, though the scenery was grand and beautiful in the extreme. Probably, however, the horses hardly considered the view which they obtained of the surrounding country from the top of Cinderford Hill, a sufficient recompense for the toil, despite the fact that we had hired the assistance of a plough-hack, which was luckily obtainable.

Probably the peep obtained from the caravan on that hill-top is unsurpassed in England. Far away behind us and beneath lies the vale of Severn, winding through the woodlands, with hills and towns and villages beyond. On the right, as far as eye can reach, vast fertile plains go stretching away to the horizon. Just such a picture this as our greatest English landscape painters delight in, and have doubtless transferred to canvas over and over again ere now. Both Gloucester and Cheltenham are visible from here on a clear day. To the left, and below, is the wide, wild Forest itself, with blue mountains in the extreme distance. Those rolling woods are very beautiful, although their sylvan beauty is somewhat deteriorated by the smoke from the mines.

On ahead is the town of Cinderford. It is well named. We found it dangerous getting down the hill, from top to bottom of which runs the principal street of this strange mining town. So steep is it, that had the wheels been taken off, the *Wanderer* could have slid down easily for at least half a mile. The public-houses in this long street are all too plentiful, and the shops are somewhat peculiar. Some are co-operative stores; others independent, but seem to sell everything. I went into a corner emporium to buy some candles, having to push past a useful, if not gay, assortment of ladies' and children's dresses. Strange that you can buy bread, butter, and bacon at the same counter you buy your boots at, and that while purchasing potatoes you can buy your child a pinafore. But this Whiteley element pervades mining towns. It is the same in Wales, and in Lerwick in the Shetland Isles. I entered a chemist's shop to buy some Spratt's dog biscuits. The druggist was serving a customer with cold-drawn castor oil. "We have no sprats," he said, "but some capital red herrings!"

The industries of Cinderford centre in coals and iron; tips of shell are all around when we reach the bottom, and everything is stained either black or yellow. The very pigs, and the scraggy sheep are stained red or yellow with the iron ore; so I was not sorry when I found myself away up the other hill, and buried in the still, quiet forest.

Five minutes after our arrival and interview with the kindly landlord of Speech House, we were all at home. The horses were capitally stabled; the *Wanderer* in camp across the road among the gigantic oak trees, and close to the finest beech trees in all England; and Wells was cooking the dinner, while Bob and I lay on the green sward—I reading, he tumbling on the grass.

Our host—or say, rather, our horses' host—had taken in the situation at a glance; and when I told him who I was, and that I had come to have a glance at the Forest, he at once assured me that he would do everything in his power for us. Really, when I come to think of it, a good landlord is like a poet in one way—*nascitur non fit.*

Speech House is no ordinary hotel. It is as near an approach as possible to some of our great Highland hotels—at once a hostelry and a home.

This is a Royal Forest, and at one time, in the reign of Henry the Second, is said to have occupied all the land between the Severn and the Wye. Its area at the present day is said to comprise over 22,000 acres, of which 15,000 are covered with trees.

I have often wondered that it is so much the fashion of our time to rush away abroad in search of health and the picturesque, when so much is to be seen at home. Take this very Forest. I can safely say that a fortnight spent among its sylvan beauties, one little quiet fortnight would, in thousands of cases, do more to restore shattered nerves and vital energy, than months of meaningless racing in search of sights up and down the Continent. Rest is the only thorough restorative for the illnesses induced by the struggles most of us have in life, and here such rest may be obtained.

From the spot in the Forest where the *Wanderer* lay, delightful walks could be taken in all directions. The Holly Wood is close at hand, and I am under the oaks, and close by the largest beeches. One of them I measured five feet from the ground, was over eighteen feet in diameter, and one hundred and five yards round the tips of the branches. Even among the beeches and marvellous oaks grow those weird-looking old holly trees, with their strange rectangular, elbowed branches. Many of these were planted in Charles II.'s time.

Depending from the giant limbs of the great oaks here are children's swings, and there are tables and seats everywhere on the sward. During my stay here, swarms of youth and beauty used to appear suddenly amongst these. At one moment, all the place was silent and still; when I looked again, lo! a bevy of pretty children, dancing, jumping, swinging, eating, all well-dressed, evidently on a holiday; in an hour or less they would be gone; it looked as if the great forest had swallowed them up. Whence they came, or whither they went, I never inquired; I was content to imagine they were fairies or pixies, the natural growth of these sylvan solitudes.

Langham Place was within three miles by Shanks' Mare, and from here a nice glimpse of the forest is got, and it is a favourite spot for picnics.

The chestnut, beech, and fir avenues are within a mile, and the Darby beeches within four miles. Another picnic place and splendid natural fernery. Tintern Abbey can be reached in a trap within fourteen miles. Winberry Valley is a delightful walk, and only three miles from us. Pleasant Style, with its glorious panorama of the Severn valley, and Lydbrook-on-the-Wye, are both within hail.

Mr. Boyce drove me to Symond's Yat, on the Wye, a most romantic and beautiful forenoon's drive, which I can never forget. We returned by the high beeches, they are splendid trees. The bushy beeches are dwarfs, kept down by the sheep, and cropped into all sorts of fantastic forms. Every now and then in the woods we note low round towers. These are simply built round the shafts of disused mines, else visitors to the spot might now and then get ugly tumbles.

Ferns and foxgloves, that look so pretty growing together, quite covered the valley in some places.

The best of friends must part, so on the 15th of July we left the Forest, *en route* for Lydbury. The hill to descend from Speech House is a staggerer, and that to ascend is a solid steep drag of fully two miles; but Mr. B. had kindly lent me a sturdy forest horse, and thus encouraged, our nags never said "tired" until we were on the mountain top.

Lydbury, when we enter it, going down another long, dangerous hill, looked smoky, grimy, and grey, though situated in a most romantic wild glen. But ere long we rattled out from under a tall, spider-like viaduct, and, lo! a scene of most entrancing beauty.

The morning shower has laid the dust, but the sun is shining brightly, and we are doing our mid-day halt close to a wide bend of the Wye, which here is broad and shallow, and runs musically over its pebbly bed, singing, as it were, to the hills that everywhere surround us, clad to their summits and over with waving trees.

A man in a punt fishing; a boat with two lovers (they look like lovers) is rushing the rapids; a queer, old-fashioned inn on the right, with a broad causeway in front; a lazy wagoner with lazy horses, eating their lunch lazily; a donkey browsing on the bank; a group of pretty children on the grass amongst the wild flowers.

"Horses finished eating."

"Thank you, Wells. Get ready for off."

And away we go at a canter for Ross.

We had reached the pretty little Prince of Wales Hotel, about an eighth of a mile from Ross, and on the hill above, when a bright flash of lightning was followed by a peal of thunder, which seemed likely to break the caravan into match-wood. I greatly enjoy a good thunder-storm, so we stopped to enjoy this; the bath would do the horses good. I am bound to say the storm did not disappoint me. I had never encountered anything much finer, except when going round the Cape. And the rain came down in strings and stalks as thick as my pen-holder, splashing off the road again fully a foot high. The horses' hides steamed as it struck them, and they evidently enjoyed the novel douche. But we thought they had enough of it at last. Yes, there was stabling at this charming hotel, and a delightful meadow. The view all around here, from the caravan roof, is beauty and romance combined, and the glory of the sunset to-night is indescribable.

I had a visit, among other nice people, from a daughter of Colonel Jackson, a Waterloo veteran, whom I had the honour and pleasure of shaking hands with, next morning, at his own charming villa. He had been with Napoleon at St. Helena, and had many delightful anecdotes to relate of those by-gone times.

The gallant Colonel is about ninety-three years of age, but there is no reason why he should not live many years longer. I found him seated at breakfast, and making an evidently hearty meal on porridge and milk.

LEAF XXII.

ROSS — TO HEREFORD — OUR MEADOW-MATES — THE BRITISH CAMP — THE SWEDISH NIGHTINGALE'S NEST—MALVERN, WORCESTER, ALCESTER — THE OLD-TIME VILLAGE OF FLYFORD FLAVEL: A SKETCH—SHAKESPEARE'S HOUSE—WILLESBOURNE — WASPERTON — RYTON, DUNCHURCH, RUGBY, AND NORTHAMPTON.

WE were on our way next morning early. The morning was glorious, the scenery delightful. The peep from behind us at Ross, with its winding river and that old ivied castle, was a very lovely one.

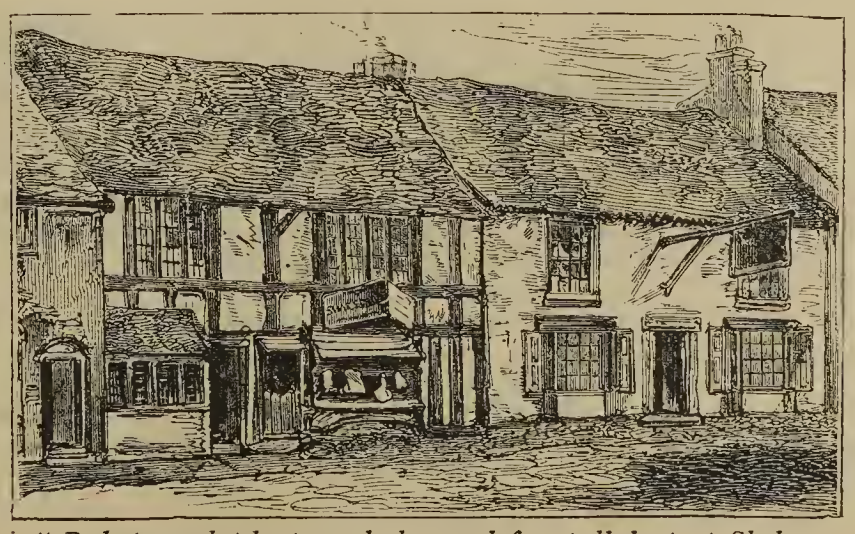
Then came one of the most enjoyable drives imaginable. I must not dwell on it; but at this stage of the caravan journey, it may not be out of place to say that a more romantic and less hackneyed route than I have taken this summer, could hardly be chosen by any thoroughly independent tourist, wishing to see England in a variety of "shows and forms," as Burns calls it.

One word about the fifteen-mile drive between Ross and Hereford. Cyclists, I feel sure, will bear me out when I say that, on a beautiful day in summer, it would be difficult to beat. I do not think I can ever forget the view from the hill-top about six miles from Hereford — a panorama wide and wild, from the spot at your feet, where the daisies and trefoil grow, downwards and away over the rolling wooded landscape to where the bare blue hills of Wales bound its horizon.

We got into Hereford in good time, and met much courtesy and kindness in the grand old town, bivouacking in a meadow, from where, across the Wye, we got a pretty glimpse of the town.

Spent the Sunday in peace and comfort. Our meadow-mates were (1) a short-horn cow, (2) a flock of sheep, (3) three horses, (4) a drove of pigs, that would persist in scratching their necks on the steps, and gobbled up all our cauliflower and potatoes, (5) a regiment of hens and a most gentlemanly-looking Dorking cock.

Monday, July 18th.—Repaired tires and went on. Splendid scenery, more varied even than yesterday. The rolling tree-clad hills, the orchards and fields of hops, remind me of Kent. Beautiful panorama from a hill 3½ miles from Ledbury; road fine, trees and hedgerows leave nothing to be desired. Camped in market stance of Ledbury; fine old-fashioned town; beautiful large church, with steeple and *tower detached*, as at Westbury. Why? Surrounded by motley crew in the evening; little boys and girls rough, but civil; editor of newspaper specially kind and hospitable.



July 19.—Road leads through wooded banks, soon gets more open, winding through among well-wooded hills. Invited to Eastnor Castle, the beautiful seat of Lady H. Somerset. We drove through the gardens and grounds, and over the bridge to the hall door. The castle is charming inside and out, and Lady Somerset received me with great courtesy, afterwards visiting the caravan, and duly admiring Hurricane Bob. Drove through the great park and into a lane, or wooded avenue, three miles long. A more lovely tunnel through a jungle I have never been in. Soon after emerging into the sunshine we found ourselves at British Camp Inn—one of the cosiest wee hostelries in England. Here we are high over the surrounding country, on one side the green mountain, on which the monster stronghold stood centuries and centuries ago.

The view from the camp is even grander and more extensive than that from Cinderford Hill. Far down beneath me yonder, and not far from the lonely inn, is the Nightingale's Nest, as it is here called. It is a quaint little mansion, standing in the hollow of a mountain's side, completely surrounded with trees and shrubs, and covered with climbers and creepers. A little phaeton draws up to the gate, and the great singer, whose notes will never be heard in public again,* drives in, and trap and all is swallowed up in the wood.

July 20.—Left the camp early, making a mid-day halt at Malvern. The editor of the *Hereford Mercury* is proprietor of a hotel here at Worcester, and at his hostelry we stabled, bivouacking within the grounds of Alsopp's stores. John Brown, from Aberdeen, is superintendent of the stores, and was as kind to us as one Scotchman in a foreign land can be to another.

Worcester looks beautiful as we drive away next day for Alcester, with its towers and steeples and great cathedral. The poplar trees in the suburbs give quite a character to the scenery.

July 21st.—The road leads through a somewhat hilly country, but the scenery is everywhere thoroughly English, *i.e.*, mid-English. For nine long miles the drive is a study in trees, orchards, some very large, and laden with fruit abounding. Here and there we catch peeps of fields, however, and notice that oats are being harvested, and that wheat is nearly ripe. We encamp for an hour at Flyford Flavel, on the top of the hill. Perhaps there are human beings in this world who do not know that there is such a place as Flyford Flavel. There is, though, a small scattered village, with a tiny church, the whole well buried in elm-trees and orchards. Flyford Flavel is not a very euphonic name, nor particularly easy to pronounce, but people here do not hurry over anything, and strangers, if so minded, may leave one-half of the name till to-morrow. The one wee inn—called The Boot—is clean and tidy, and the landlord is civil and obliging. But we cannot get the provisions and refreshments we particularly desire. "No cherries, sir. Strawberries and raspberries all burned up." Water itself is scarce—no potatoes, peas, or greens—and we cannot get butter because they "don't churn more'n once a week, sir." But even the promise of fresh butter cannot induce me to encamp at Flyford Flavel. Children thrive here, though; *they* are not burned up, and their faces are both wholesome and pretty. Hark! a kind of sheep-bell begins to tinkle-tankle, and away scuttle our forty or fifty

"Perhaps no hotel upon wheels ever before pulled up at Shakespeare's house."

* Madame Goldschmidt — the people's Jenny Lind — has died since these lines were penned.

brown-cheeked bairns to school, and we are left in peace.

July 22nd.—Arrived at Alcester last night, after a journey of nineteen miles, and camped in a lovely meadow, where we spent a peaceful night.

To-day is a memorable one in the history of the *Wanderer* caravan. We visit Shakspeare's house. Perhaps no hotel upon wheels ever before pulled up at the doorway. However, we stabled our horses at the inn opposite, and dined, before we "did" the house.

Visited by an old friend, by a doctor of science from London, by the Editor of the *Herald*, and last, but not least, by one of the sisters who keep "The House." Her name is here in my visitor's book, Maria Chattaway; she is a dear old soul, and so appropriately named.

Four miles from Stratford-on-Avon is the village of Willesbourne, where, in a field belonging to Mr. Charles, I encamped. This gentleman has recently had the honour of presenting a white collie to Her Majesty the Queen.

July 23rd.—A bright, hot day. The roads, cut up by the long drought, are a mixture of dust and shingle; but the country we pass through is fertile, and like most midland scenery, well wooded. The corn here is all ablaze, and people are busy with their harvest.

Albeit the roads are bad, we see many pretty pictures to cheer us. At the little village of Wasperton, for instance, we cross the river Avon; and a very wimpling stream it is here, bordered by a fringe of pollard willows. Green meadows lie behind, shaded by fine trees; woods forming the horizon at every side, and over yonder a church and spire peeping through the greenery.

We arrive at rustic Ryton, nevertheless, with tired horses, and are glad to get into camp under the shadow of a huge elm-tree.

Drove once more through the splendid avenue of trees mentioned in last year's tour, which leads to Dunchurch. Made our mid-day halt at Rugby, where our arrival created the usual excitement on the street, and entailed the always welcome visits of people who had read about our wanderings.

We baited on the 26th at Northampton, but drove on soon. Too much civilisation about. A pleasant woodland canter takes us into Brayfield-on-the-Green, a quiet old village where one might bury oneself alive. The road leads past it, the country all high, and open, and breezy; olive green fields of ripening wheat; oats turning grey in the sun; fields of peas patched yellow and green; houses, old, quaint, ivied, thatched—saw only one woman in a doorway, and another in a garden picking peas. This is midland English life.

We found ourselves in camp that night at Yardley Hastings, which deserves a few lines all to its old-fashioned self.

(*Continued—page* 708.)

PRIZE TRANSPOSITION COMPETITION.

WE remind our readers that the Prize Transposition Competition closes September 8th.

THE DEFENCE OF LUCKNOW.

WHEN the Indian mutiny broke out in the spring of 1857, the spark of rebellion, once lighted, soon caused its flame to spread with wonderful rapidity throughout Bengal.

On July 1st the Sepoys in Lucknow rose in mutiny, and commenced the siege of the Residency, where the Europeans had taken refuge and entrenched themselves. In spite of constant alarms, they held out bravely till they were reinforced by the first relieving force under (Sir Henry) Havelock and Outram on September 25th.

This force was in turn besieged by the rebels; but they held out for three long months, till they were finally relieved by Sir Colin Campbell. During those three months they had to repulse continual attacks by day and by night; and when the rebels thought that the provisions of the defenders would be running short, they became bolder and bolder. After one unusually severe assault, the rebels were driven back; but not before they had managed to batter down one part of one of the walls of the Residency. The English had continually to be on guard, and there was no time or means to repair the breach. All that they did was to fasten up a large canvas sheet where the gap had been made. A poor defence we might have thought; but strange to say, during the remaining week or so before the relief came, the rebels dared not force their way through that canvas, for they knew that behind it there were a body of brave-hearted men ready to shed the very last drop of their life's blood in defence of the wives and children and fellow-countrymen who were shut up with them in that Residency.

And yet, in the great battle of life, the child of God has a more sure defence than this against the assaults of the world, the flesh, and the devil. He has on his side One who never yet lost a battle. He is not only a Saviour, but a Keeper; and His royal promise is, "The peace of God, which passeth all understanding, shall keep (R.V., '*guard* or *garrison*') your hearts and minds through Christ Jesus" (Phil. 4. 7). "This is the victory that overcometh the world, even our faith." "Who is he that overcometh the world, but he that believeth that Jesus is the Son of God?"

THE MASTER'S LETTER.

"JAMES, I want you to come and see me at six o'clock, after you have left the works.

"Yours faithfully, ———."

Promptly at the time the young man waited on his master, who had written him the above letter. When he entered the room, after a pause the gentleman looked up from his desk, and inquired, "Do you wish to see me, James?"

Somewhat surprised, holding out the note he had received, he said, "The letter, sir; the letter you sent me."

"Oh! I see; you got my letter. You believe I wanted to see you, and when I sent you the message, you came at once."

"Yes, sir, surely; what else could I do?"

"Well, James, you did quite right to come. See, here is another letter for you; will you attend to that?"

At the same time his master handed him a paper which he had written. James took hold of the paper, and read, "Come unto Me, all ye that labour and are heavy laden, and I will give you rest."

As he read, his lips quivered, his eyes filled with tears. Thrusting his hand into his pocket, he grasped his large red handkerchief, with which he covered his face, and there stood, not knowing what to do. At length he said, "Am I just to believe in the same way that I believed your letter?"

"Just in the same way," was the reply.

"If we receive the witness of men, the witness of God is greater" (1 John 5. 9).

That night James saw it all, and went home a happy believer in his Lord and Saviour Jesus Christ. He saw that he had to believe God and give Him the same credit and confidence that he would give to the word or message of any trustworthy or business man that he met with in his daily life.

PRIZE PUZZLE COMPETITION.

£2. 12s. 6d. IN PRIZES.

DIVISION I.

Three Half-Guinea Prizes.

WE announce this week a Competition on somewhat different lines to those recently given, viz.—a Prize Puzzle Competition. We offer three Prizes of Half a guinea each for the best—

1. Puzzle Story.
2. Puzzle Picture.
3. Scripture Puzzle, Enigma or Acrostic.

RULES.

1. A Competitor may send in one of each of the above, but can only receive a Prize in one of the three Divisions.
2. Each contribution must be original.
3. Name and address of Competitor must be clearly written on each contribution.
4. Each Paper must be clearly endorsed outside envelope or wrapper: "Puzzle Competition."
5. A Stamped and Addressed Envelope must accompany each letter of inquiry, outside of which should be written, "Query."
6. The Prize in either Division will not be given, unless Competitions of Merit are sent in.
7. No Contributions can be returned to Competitors.

DIVISION II.

A further Prize of One Guinea

is offered for a Complete Puzzle Page, comprising a central Picture Puzzle or Diagram, with 12 Puzzles—either Puzzle Stories or Word Squares, Acrostics, etc., etc.—the Prize being awarded to the Competitor whose set of Puzzles represents the greatest *skill* and the greatest *variety*. These Puzzles need not necessarily be original, but originality will be taken into consideration by the Examiners. The source of Puzzles which are not original, must be given.

RULES.

1. No contributions can be returned to Competitors except Picture Puzzles, and for these an addressed and fully stamped envelope must be enclosed.
2. No Puzzle must be copied from any similar Competition.

3. }
4. } Same as in Division I.
5. }
6. }

VULPINE STRATEGY.

By Henry W. Elliott.

CURIOUS stories are often related in reference to the power of fascination and mesmerizing, possessed by men and other animals, but the exact definition of the faculty and result of the power has as yet to be satisfactorily given. Much thought on the subject however, is always aroused in the naturalist's mind whenever and wherever he may be at work in the field, observing and collecting.

While watching the peculiar aquatic movements of a herd of sea lions below the brow of an abrupt, lofty cliff on the east shore of St. George's Island, Behring Sea, in June, 1873, my attention was drawn from those pinnipeds to another exhibition, quite as interesting and suggestive.

I saw a blue fox (*Vulpes lagopus*) trip softly up and out to the extreme verge of an overhanging precipice, under the summit of which, and right on the face of the bluff, a few feet below, were the nest, eggs, and forms of two cormorants, or shags (*Graculus bicristatus*).

The fox peered down upon the startled birds beneath, and then, seeming to realise the futility of any attempt to reach them, he drew back from the edge, and also from the view of the cormorants.

In thus retiring, the artful fox knew well what to do. He had aroused the curiosity of the most stupid and inquisitive of all waterfowl, and Reynard was sure that these birds would soon rise on wing to examine the cause of their disturbance. As the shags flew up, the fox threw itself flat upon its back, with eyes closed, limbs limp and motionless, and its tail stiffly elevated, with a slight swaying motion, which the fresh breeze then blowing, seemed to create.

The cormorants, with their long necks craned up and then down, flew in wide circles over and around the inanimate form of their disturber, and in their aërial rotation they gradually drew nearer and nearer, closer and closer, in circling flight, until the pinions of one bird actually touched the brush of the simulating fox, who, at the moment of contact, sprang with electric celerity into the air and seized the inquisitive shag in its quick-snapping jaws.

Then, catching sight of me for the first time, the cunning animal bounded off and away with its foolish victim, in spite of the frantic wing-beatings of that unhappy bird, and in an instant a few feathers whirling in the wind-eddies were all that remained on the scene.

The combination of stupidity and curiosity which characterizes the cormorant's mind, is in marked contrast with the alert sense and indifference exhibited by the gulls and auks that live here in countless numbers. The fox never catches a puffin, an auk, or a gull by any such shallow humbug, and it is only the dull *graculus* which he intuitively marks for such diversion, and with which he triumphantly ends the game.

This peculiar exhibition of vulpine strategy —so odd that its recollection never renders it any the less so—in my opinion, showed nothing more than the power of morbid curiosity over the better sense of the shag, and the quick, keen instinctive appreciation of the fox, which seemed to know that only this bird would be guilty of such rash stupidity. Master Reynard would miserably starve, did he wait for gulls or other waterfowl on St. George, to be capable of such silly indiscretion, and that sagacious animal never attempts to catch them so. They would literally "gull" him were he to try the trick on them.

Another marked illustration of intelligence, verging upon true reason, to say the least, possessed by this fox of the Pribyloo Islands, was given to me in this way. During the months of May to November inclusive, the fur of the blue "peesaich" is faded, shedding and ragged, and hence it is valueless until winter fairly sets in, and then by December the fluffy dress is in prime order up to May again.

In the summer they are therefore never molested or hunted by the natives, but as soon as the winter season has fairly opened, the Aleuts are after their hides with all zeal and skill in shooting and trapping. The foxes understand this rotation of rest and unrest perfectly, so that they hardly keep out of the villages during summer, but bark and chatter everywhere in the faces of men, and actually half invite a frolic of people when strolling to and from the rookeries; but long before the first gun is fired at them in December, they have withdrawn from sight, and they have to be hunted with studied care and alertness.

My thoughts have returned many times, since I beheld this artifice of Reynard at St. George's Island, to the interesting subject of fascination or mesmerization in animals. We are all familiar, more or less, with the curious stories told of the power possessed by serpents in so paralyzing or benumbing the brains of rabbits and birds, as to make an easy conquest of such quarry. Never having myself witnessed this action of the snake and its victim, I cannot say positively that in my opinion fascination had anything at all to do with it, or terror either, but I am strongly inclined to think that the same pure and simple curiosity, which led the shag into the jaws of the fox, also leads birds and rabbits into the mouths of serpents.

Rabbits, hens, canary birds, and dogs can be taken up by a skilful man, and so manipulated in his hands as to be perfectly docile and passive — in fact, mesmerized. But what the fox did, as above related, was very different. Had it given the slightest sign of life while the shag was stupidly gyrating in air over its head, that dull, curious bird would have been instantly satisfied, and its stiff pinions would have carried it away to safety and peace. It was an exhibition of rare strategy on the one side, and of intense morbid curiosity on the other; neither the fox nor the shag was under the influence of the other for a single moment until the jaws of the furry trickster were closed upon the body of the feathered fowl.

LOCK-MAKING AT WILLENHALL.

By Henry H. Bourn.

ALTHOUGH in primeval ages there was no necessity for locks and keys, it is quite certain that, as civilization advanced, they became a necessity. No one can question their antiquity, as there is abundant evidence of their being used as fastenings long before the Christian era began.

Locks and keys are frequently mentioned in the Old Testament. Canticles 5. 5, Judges 3. 23, Nehemiah 3. 3. And Isaiah speaks of the Messiah, "And the key of the house of David will I lay upon His shoulder, so He shall open and none shall shut, and He shall shut and none shall open."

These allusions are sufficient to prove that locks and keys were used at a very early period, although it is impossible to determine their pattern. The most ancient lock ever discovered is that described by Mr. Bonomi as having secured the gate of an apartment in one of the palaces at Khorsabad. Bronze keys have been found amongst the ruins of Pompeii and Herculaneum.

When locks were first made in Willenhall and its neighbourhood, or even in England, we have not been able to discover. This is not of much importance, seeing that it is the present more than the past that we have to consider. The various kinds of locks made at these places may be divided into four classes—1. Brass cabinet and other best locks. 2. Bright and japanned iron cabinet and other common locks. 3. Stock or wooden case locks. 4. Padlocks. Those of the first class, which are very various, are chiefly made in Wolverhampton. The second class also comprises

an almost endless variety of locks, suitable for nearly every conceivable purpose.

For several years past, these locks have been made by cottagers inhabiting the outskirts of Willenhall, as well as at Lane Head, Short Heath, New Invention, and Portobello. Nearly all the country makers continue to make these with the same primitive tools which have been used in the trade from time immemorial, but in the township, several manufacturers have adopted the press and steam power. The locks thus produced are far better looking, and much more reliable than those which are made by hand labour. All kinds of locks of the cheapest description are made in great quantities for the foreign market.

An idea may be formed of the character of some of these locks when it is known that "tumbler cupboard locks" can be bought wholesale for 12s. 6d. per gross, "chest locks" at the same price, and "till" or "drawer locks" as low as 6s. 6d. per gross. We have known very decent "padlocks" to be sold at a still lower rate. Hearing such things during a residence extending over a few weeks in Little London, Willenhall, we were not surprised to find it quite customary for a lock-maker to allow any part of his work to remain on the floor, if, by any mishap, it had fallen from his hand.

The friend of a lock-smith being unacquainted with the custom, was surprised to see a chest lock, which was partially made, allowed to remain on the floor. Mentioning his surprise to the lock-maker, he received the following explanation. "Ah! bless thee, I can always make another before that has done ringing." Whatever number may be dropped, they are as a rule left to be picked up when the shop is swept.

With such dexterity are some classes of locks turned out of hand, that an apprentice will make a gross during a day, or, more correctly stated, will put together the different parts, having first given them the necessary touch with his file.

In the year 1855, the number of master locksmiths in Willenhall was 340. With the exception of the clergyman and the Wesleyan minister, all the inhabitants were engaged in lock-making or some other of the industries for which the town has long been noted. Only a few years before that date, there were neither resident magistrate, lawyer, nor policeman resident in the town, notwithstanding that it then had a population of 10,000. It must not, however, be inferred from this that lock-makers were a sober and law-abiding class. The very opposite would more correctly represent the condition of the people. Their love of brutal pastimes was evidenced by Willenhall being the last place in which bull-baiting was patronised; and their love for various kinds of sport and gambling is still seen in the interest taken in horse-racing, dog-racing, and pigeon-flying.

The numerous public-houses and spirit vaults compel a visitor to conclude that strong drink must be somewhat extensively patronized. It is, however, worthy of note that there are several large churches and chapels in the town, and that with the co-operation of the Salvation Army and Temperance Societies, a marvellous improvement has been effected in the social and moral condition of the people at large. There is, however, much to be accomplished before the desire of earnest Christians can be realized. Like other manufacturing centres, Willenhall suffers through a few evil-disposed men being brought into contact with those of a superior class, and with youths who are far too easily led astray by their conversation and example. This is an evil necessarily connected with factory life, whether few or many are employed, and one for which there does not appear to be any remedy at present.

In 1881, the population of Willenhall was 18,461 ; of that number nearly 400 returned themselves as master lock-makers. Many of them are in a very small way, employing it may be, only two or three men and three or four apprentices. Others, employing apprentices only. These small masters have but little if any capital. Such being the case, they are compelled to sell the produce of one week's labour, like many in the nail-making districts, before they can purchase materials for the next week's requirements. Their capital having been expended, they must sell their wares at any price to a middleman or factor in Wolverhampton. This state of things, taken in connection with the severe competition of foreign countries, tends to keep prices and wages so low, as to produce a considerable amount of destitution.

The lock-smiths have not as yet descended to the low level of the poor nail-makers ; but, unless something at present unforeseen prevents, there is every prospect of their doing so at no very distant date, as masters and men are both becoming more impoverished. Some of the employers, it is true, have succeeded, having erected better premises and introduced different kinds of machinery to such an extent as would have surprised their ancestors fifty or even thirty years ago.

A patent "tumbler lock" is made in immense quantities for the Levant and East Indian markets, and sold at the ridiculously low sum of one penny each. They are sold in large quantities, ranging from five thousand to ten thousand dozens at a time.

Although the principle of division of labour is not carried out to the extent it is capable of, in the manufacture of locks and keys, many of the operations are carried on as distinct trades, such as, for instance, "key stamping," "drilling," "pressing," "casting," etc. The great grandfathers of some of the oldest inhabitants, in their day had to work down thin iron for "lock plates" from bars which were considerably too large for their use. Rolls for rolling sheets and plates were then unknown. We are told that it was the custom with masters at that date to say to their apprentices towards nine and ten o'clock, after having done their day's work, "Now, lads, leave work and come and strike." That was the process employed for drawing bars of iron to the strength and size required for lock-making purposes.

A few years since, the master lock-smiths, with few exceptions, worked at the vice themselves ; and it was a rare circumstance to see one of them in the streets without his apron. Many of them, in fact, had such an attachment to the apron, that they declined to attend either church or chapel because they would not be allowed to wear these useful articles.

The locksmiths, as a class, have always been known as hard workers and hard drinkers. The abominable hiring system which formerly prevailed amongst them to an extent which had no parallel in any other British industry, tended to demoralize them. At a later date, the "Truck system," or "Tommy Shop," was productive of an amount of mischief which it is impossible to estimate. So that, like many others, if lock-makers have been sinners, they have been sinned against.

Is the "Truck system"—the paying in kind, instead of with the current coin of the realm—unknown among lock-makers at the present time? We fear not. If a revelation could be made of the payments which have been given for work done, in flour, groceries, and provisions generally, to say nothing of beer—the worst of all, during the last twenty years, we should doubtless be surprised and ashamed that such injustice and hardship could ever have been brought to bear upon a workman, by one boasting of being an Englishman, and consequently freeborn. Having seen much evil resulting from payment in kind, the short weight received, and the exorbitant prices paid, we cannot find language sufficient to express our detestation of the system. Our hope is that the Act lately passed by Parliament will prove itself equal to the task of at once and for ever crushing the system in all our centres of industrial life, so that it may never lift its head again.

In relation to the physical labour of lock-smiths and key makers, it must be said that the work becomes most injurious from the sameness of the position of the body and action of the arms, and the long hours during which they stand filing at a vice, and the inhalation of fine particles of metal. The right shoulder-blade becomes displaced and projects, and the right leg crooks and bends inward at the knee like the letter K, that being the leg which is hindermost while standing at the vice. The right hand also has frequently a marked distortion. Almost everything a lock-smith takes hold of, he grasps in the same way as he would his file.

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring,"

"Drifted," "Little Rainbow," "Corbiestanes,"

"Our Navvies," etc., etc.

CHAPTER XVII.

MRS. BOOTHROYD MAKES A CLEARANCE.

THREE weeks before Hardman's visit, one evening Mr. Boothroyd returned from market and came in to tea.

"Typhus fever's broke out in Castleborough again, missus," said he to his wife. "They've a Board o' Health—one of these here new-fangled things this Government's put on, just to make the rates heavier—and they're disinfecting and whitewashing all over the shop."

"What do they say is the cause?"

"Well, it's middling hot, you know, just like it was the summer our poor lass died."

The old farmer looked very sad as he spoke. He had loved his only child well.

"They have burnt some bedding," he continued, "and some clothes outside the town. I saw police agait wi' it as I came home; and I've been thinking, missus, happen we ought to do the same, though I should be ill grieved to think of Grace's things being all out of the place. It seems like as if they were a bit of her. Sometimes now, when I come in, I fancy I hear

"'I'm not going to burn good clothes for anybody.'"

her call 'father,' or other times it's 'daddy;' she were allus somewhere in the road when I come in, bless her."

Mrs. Boothroyd took a piece of buttered toast.

"I shan't burn Grace's things. Why, they are all of the best. I had the bed and blankets washed, and they are all right, and have been slept in many a time since."

"Yes," said the farmer, reluctantly; "but some folks blamed *them* for Betty Dunn's dying."

The farmer had often wondered if this really were so. He had got to believe the two had no connection, and yet somehow the ghost of a fear would sometimes lay its hand on his heart, and chill him through and through.

"Suppose it was so?" he questioned.

"All stuff and nonsense," replied Mrs. Boothroyd, sharply; "what had her washing our blankets to do with it? She'd have died then, choose what had happened. Nobody can live a day over their right time, so what's the use of talking so; you're bringing up some of the Vicar's mad notions."

"All the same," repeated her husband, "I think you had better burn our Grace's things. God knows I don't want it done; but they've been locked up now a matter of seven years, and most like moths have got into 'em by now; and, poor lass, they're no use to her. I don't often go into her chamber—I can't bide to—but when I do, there always feels a queer smell to me."

"It's all fancy, I tell you; and I'm not going to burn good clothes for anybody."

"Well, please yourself; I'm only telling you."

Mrs. Boothroyd let her husband go out, and did not discuss the subject again with him; but she could not help seeing in the newspaper, accounts of the measures being carried out to suppress the outbreak, and she was uneasy. She had no wish to die, whatever. If other people did, well, she could not help it, and cared not at all. It was a subject to be kept at a distance,—a personal acquaintance with death was a horrible thought.

Next morning she went into Grace's room. It was a small wainscotted one; she thought it *had* a peculiar odour, and opened the window. Then thoughts of the child who was gone, and who died with such terrible suddenness, came to her; and she wept a few tears as she gazed from the casement.

As she did so, she saw the Vicar approaching. He was coming to the house, evidently. Now he was stooping to unlatch the garden gate.

"What ever's got him to come here?" exclaimed Mrs. Boothroyd, as she hurried downstairs; "he's never been since he told me to read the 23rd of Matthew—such meddlesomeness! However, whatever he tells me to do this time, I'll just do the contrary."

It was very soon evident that the Vicar had an object in coming. He was not long in stating it. He introduced the subject of the visitation at Castleborough, and then told the farmer's wife that he had heard of her sad loss, seven years ago. He spoke so kindly, that even Mrs. Boothroyd's heart was touched.

He listened to her praises of her daughter, and to her rambling and minute account of her last illness, as few had done before; but all her new-born friendliness died out when he said,—

"I hear you still keep your daughter's clothes. Now, no doubt for her sake they are precious to you, and they are doing no harm, probably, locked up; but if they were exposed to the air, the germs of infection would spread, and there is no telling where the evil might end. Therefore, because it is right of you to do so, I ask that the clothes may be carried out in the chest of drawers, in which you say they are all packed, and that the whole, without opening them out, may be burnt. Two of your men could easily do this."

"I daresay they could, if I let 'em; but I'd like to see them dare do anything of of the sort. What, burn a good chest of painted drawers, and every drawer full of clothes! There's a silk dress, and three woollen ones, and cloaks and shawls, and all sorts, besides her summer things; and there's the cloud she was knitting with Shetland wool the day afore she died, with the needles in it yet. Not I, indeed! they're worth pounds."

"If it is only the money value of the things you prize, I will repay you the loss."

"And what should I value 'em for but for what they cost?" asked Mrs. Boothroyd, angrily. "I'm not such a fool as to think clothes are people. Boothroyd has those sort of notions, but they're all nonsense. I'm not going to be told by him, nor *anybody*," she added, significantly, "what to do in my own house."

His interview with Mrs. Boothroyd added an additional weight to John Burleigh's heart; but the farmer's wife, though she persisted in her determination, could not feel quite at her ease, or forget his solemn parting warning,—

"I have told you the consequences; you may endanger life; surely you will reconsider what you have said."

During the following week, she went several times into her daughter's room. She even unlocked the drawers, and looked at the clothes. She did not take them out; the truth was she was rapidly becoming afraid of them. Her covetousness urged her to keep them, her fear made her dread them.

The following Friday she looked in the weekly Paper to observe how the health of Castleborough stood; the death-rate was on the increase. She destroyed the Paper. The next Friday the accounts were worse, and her husband informed her that the Corporation had posted bills on the walls, giving stringent directions about flushing the drains, etc., and that police notices were out, ordering all cases to be at once reported, with a view to their conveyance immediately to the special Fever Hospital.

That night Mrs. Boothroyd could not sleep. Before morning she had settled that she would get some one to take the clothes away, and then she would have the chest of drawers washed with ammonia, and put out of doors for a bit.

The first person to arrive next day was Mrs. Bradley. She had come across to buy some eggs, and one of the servants called their mistress to give her them; for Mrs. Boothroyd kept the eggs, as well as everything else, locked up.

Here was her opportunity; it could not have happened better. Jane Bradley was afraid of nothing, and was known to laugh at infection.

"Jane, I am going to have a right good turn out, and the room that was Miss Grace's cleaned. There is a chest full of her things, and I want the drawers for something else. I thought, as you had a lot of children, maybe they'd be useful to you. You can take 'em away with you now, if you like, for one of the carts is going your way this afternoon."

"Oh, I'll take 'em, and thankful. I can soon fettle 'em up for t' bairns; but if you're only going to give me a few on 'em, I can hug 'em home."

"Nay, come up, and I'll show you. See, there they are; you can wrap them up in that red shawl in the bottom drawer, and there's a cloak in the middle one that will do for the rest."

"Why, you never mean, missus, I'm to have 'em all?"

"Yes, all of them," said Mrs. Boothroyd, hastily pulling open one drawer after another. "The truth is, her father can't bear the thought of them being in the house. You can take them out and pack them up, and one of the girls will help you down with them;" and the farmer's wife made a hasty retreat.

"They smell queer. That's with 'em being locked up so long. I'll hang 'em on t' hedge for a day or two when I get home. I never thought t' old lady had the heart to give 'em away. However, 'better late than never,'—but how queer this bit of a shawl the poor lass hasn't finished does smell, to be sure. Mary will end it off grand when it's been aired a bit."

With the assistance of the servant maids the two great bundles were hoisted into the cart, and Mrs. Boothroyd saw them leave the premises with satisfaction; and with no less delight did Mrs. Bradley trudge after them to the brick-fields.

Somehow she grew tired,—the two miles had never seemed so long,—she felt sick, too, and so faint once, that she had to take a deep draught of water at a way-side cattle trough.

When she reached her home she was so weary that she decided not to "side away" her new possessions until Monday, but with the assistance of the farm-boy, carried the great bundles into an empty out-house, and locked the door. Then she went in and made herself a cup of tea, after which she felt better.

This was on the Saturday evening,—the same evening on which the Vicar had dreamed his vision of the Druid sacrifice. He woke next morning, with the words, "As I have loved you," in his ears, and he lay thinking of them. "As" seemed a mighty word to him,—it grew upon his heart until it over-powered him. "As"—nothing less. "As" I have loved you—perfect self-abnegation, perfect self-sacrifice. "As"—"then I must do it." The Vicar took his bath and dressed, all the time saying to himself,—"*Can* I do it? *As*." "Christ, help me." He forgot his usual custom to kneel in prayer,—his whole being was a prayer. He went into his study; it was still early, and he heard Martha moving about in the kitchen. It was a glorious morning; in the sky was the promise of a hot day. A pungent scent from the hop vine stole into the room through the open window. He sat down

before his desk, and drew some paper forward, and dipped his pen in the ink. He wrote rapidly, "My dearest Susie," and then paused,—a strange trembling fell upon him—his shaking fingers dropped the pen.

"My Best-beloved." O God, is it necessary? Need I give up all? May I not go back a little way?"

"As I have loved you!" came the answer.

John Burleigh covered his face with those white hands of his, and wept like a weary child. The tears forced themselves through his fingers, and blistered the words he had traced. At length his weeping ceased,—the terrible weeping, which both eased and broke his heart.

He was calm enough when he picked up his pen, and on a fresh sheet wrote :—

"My Best-beloved." Nor did he this time either hesitate, but quickly the words grew under his hand; and he wrote on steadily, page after page, a noble, tender letter. Lady Susan has it still, and treasures it as her most precious possession. She reads it over sometimes, and then she feels John Burleigh close beside her.

The Vicar walked to the Houghrigg post, and dropped his epistle in the box before he went to church; he knew it would not go until Monday, but felt a dim desire to bury his dead before he went up to minister in the house of the Lord.

"Ah!" said Mrs. Pattison, "here's the Vicar a posting a letter on the Sabbath. I'll see who it's to. No wonder we see such a lot of Sabbath-breaking, when Church ministers behave like that."

She addressed this last observation aloud to the only passer-by at the moment, unfortunately an unsympathetic listener. She wished she had not said it when Bob Chatteris turned that thoughtful face of his towards her.

"Can't you think well of what you ken nought about, missus? Happen the Parson's letter was like Christ's words, to heal the broken-hearted, or to raise up them that are down."

"You're not to do evil that good may come," retorted the shop-keeper sharply.

"Then I wonder *you* so often does it, missus."

And Bob Chatteris lounged towards the church. He "attended regular now," his landlady observed, and held up his conduct for emulation to the other lodgers. In the opinion of the whole household, Bob was earning heaven at considerable cost.

"I go, I tell you, 'cos I like it. I'm fain to be there; I go for nought else."

No one believed him, but the statement was received without dispute. It was even possible that a man so religious as Bob had become, *might* like church; that thought only added to the wonder and admiration of the other delvers. The first peal was still ringing, and Bob seated himself on the Vicarage garden wall. Presently he looked towards the French window of the study; his friend would soon be coming out. A tender light came into his eyes as he saw the Vicar kneeling with his back towards him.

"He's praying. There's t' second peal. He's getting up. Ay, that's his sermon that he's taking up. Why, he's putten it down again, and opened his Bible! Why, if he hasn't forgot it!"—as the Vicar, stepping through the window, came towards him, with only his Bible in his grasp.

"Bless me!" said Bob, "whativver's up? His face is like what I read about yon Stephen, when they stoned him—it's like t' face of an angel."

"Good morning, Bob," said the Vicar, with a happy ring in his tones, and holding out his hand.

"Same to you, sir," answered the delver, staring strangely, as they turned and walked through the church-yard together, and Bob could no longer look at his companion's countenance. He remembered the forgotten manuscript.

"Begging your pardon, sir, I must mak' free to tell yer, yer've forgot yer sermon; you've left it behind."

"Yes, Bob," returned the Vicar, with something which was not a smile, but rather a swift illumination, "*I've left it behind.*"

"But, sir, what will yer do?"

"God has given me another. I'm going to preach to myself this morning, and to you. I fancy *we* shall understand it." And so the Vicar, with a gesture of farewell, passed into the vestry.

"Ay, 'they saw his face as if it had been the face of an angel.' Was that what I was thinking on?" questioned Bob; "or was it, 'With His stripes we are healed'? I don't know. Like master, like man."

The Vicar generally preached very quietly, almost as if he were talking to his people, but to-day there was a ring of triumph in his voice; it rose clear, vibrating with emotion. "'Although the fig-tree shall not blossom, neither shall fruit be in the vines; the labour of the olive shall fail, and the fields shall yield no meat; the flock shall be cut off from the fold, and there shall be no herd in the stalls: *yet I will rejoice in the Lord*, I will joy in the God of my salvation.' Here," said the Vicar, "here it is! Take freely,—the fulness of Him that filleth all in all. Satisfaction, completion, victory. The best-beloved is gone, and yet God lives—God satisfies; our cravings cease, because——"

At this moment the church door opened with a crash. The speaker paused; every head turned.

Little Mary Bradley came hurrying up the aisle; there was a terrified appeal in her blue eyes.

"Mr. Bur'y! Mr. Bur'y!" she cried, and stretched out her arms towards him. "Come quick!"

"What is it, my child?" returned the Vicar, as he came down to her. She seized his surplice in her grasp, and hid her face in its folds.

"Mother is very bad. Come, Mr. Bur'y! *come quick!*"

John Burleigh put one hand on the shaking little head. "Hush, Mary! I am coming." And the trembling ceased.

Then he raised the other in benediction. "The Lord bless you and keep you, lift up the light of His countenance upon you, and give you peace."

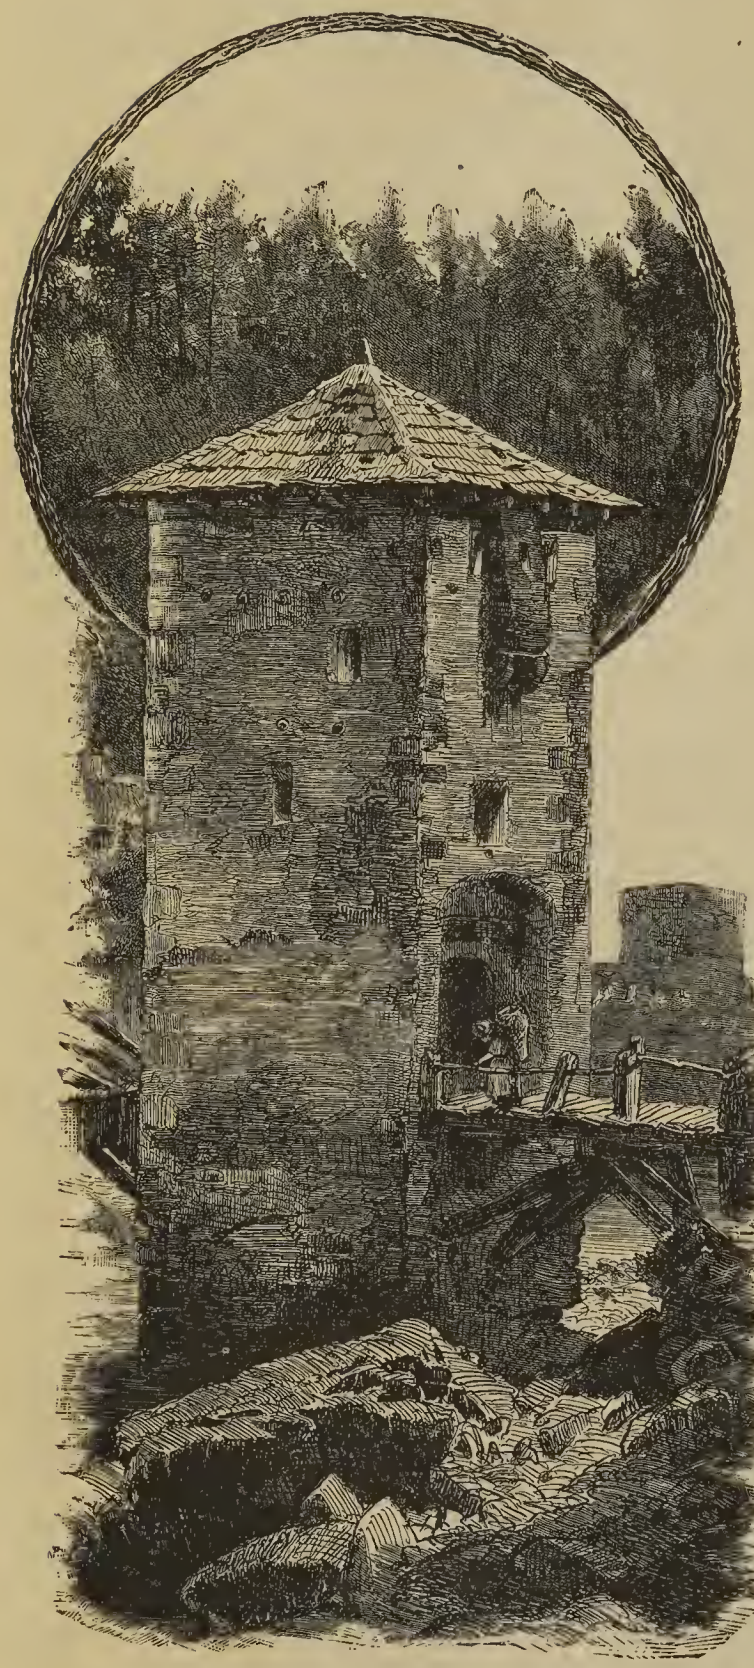
Then he flung his surplice over the reading-desk, and went from amongst his people, leading the little child.

"My peace I leave with you," said Christ; and with the same benediction, John Burleigh went to *his* Calvary,—his Gethsemane was already endured.

Soon it was known by the groups who gathered, eagerly questioning and discussing in the churchyard, that Mrs. Margaret Bradley was down in the fever—the horrible fever which was slaying so cruelly in Castleborough, and which had twice swept through Houghrigg previously. A deadly terror seized the people. Their minds had been alarmed by the newspaper accounts, and the same stupidity which formerly had mocked at infection, now filled them with unreasoning fear. No power on earth would have induced one of them to go near the brickfields. "All that a man hath will he give for his life." Yes, pity, conscience, his very soul, as well as wordly possessions, will a man give for his life.

One and one only of all his flock dared to follow John Burleigh on his mission of comfort. That one was not even Farmer Boothroyd, though he slunk home with a bent head, and shame and fierce sorrow at his heart; for his wife had boasted to him how she had rid the house of the clothes, and he verily believed that poor woman—the mother of ten children, the head and strength of that decent, struggling home—would die for his wife's sin. He believed this, yet he raised no finger to help; and to his dying day, he was a worse and sadder man for his neglect.

The one who followed was Bob Chatteris, the delver, and he walked with his head up, and a glad light in his eyes, to the house of pestilence.



"I'm here, sir. We'll fight it through together, shall we?"

"Yes, Bob. God bless you!" And a hand-grasp sealed the compact.

(*Continued—page* 721).

LEAVES FROM THE LOG OF A GENTLEMAN GIPSY.

By GORDON STABLES, C.M., M.D., R.N.,
Author of "The Cruise of the Land Yacht 'Wanderer'; or, Thirteen Hundred Miles in my Caravan," etc., etc.

"My attention was attracted to a quaint-shaped, four-sided tower."

LEAF XXIII.

YARDLEY HASTINGS AND DENTON—A LOOK AT A BROOK—THE BONNIE WEE TOWN OF TURVEY—DROWNED—THE BEDFORD REGATTA—OLD-FASHIONED ST. NEOTS—THE VILLAGE OF ETTISLEY—CAMBRIDGE FROM THE HILL-TOP.

AND this is the last Leaf proper, the last pleasant day the reader and I will have on the road together, for time presses, and space is a squeeze so we must submit to the inevitable.

We left the *Wanderer* in camp at Yardley Hastings. Now no one, unless possessed of the most elastic of imaginations, could call this a pretty village, nor its wee sister town either—meaning Denton, two miles off,—yet for rusticity, for quiet and for quaint irregularity, Yardley has few superiors in the midlands.

Denton is all "hichts and howes," as the Scotch say. It lies in a rugged little nest of its own. The cottages and houses are either thatched or tiled; no particular style of architecture has been studied; they stand not on the order of their going, for they stand anyhow. If you take a stroll through the village, and are not walking uphill all the time, it is for the simple reason that you are walking down.

I would willingly have bivouacked here last night, for the horses were weary; but lo! there was no rest for the sole of a wanderer's foot. There was a stable at an inn on the hill-side, but neither straw nor hay was procurable, and the worthy landlord explained to me that "We doesn't stable a 'orse once in a year, sir." The village was all *en gala*, nevertheless. No, not a jubilee, but a bean feast, I believe. The gipsy element was in the ascendant, the nomads had mustered strongly, and here was the usual conglomeration of swings and merry-go-rounds, steam circuses and shooting-galleries, with the usual mixture of small-fry folks, who ever move like satellites around the bigger shows, and the usual unmusical medley of singing, playing, screaming, barking, whooping, shouting, and shooting, so that I do not think even our horses were sorry when we got clear away and up the hill again.

The clergyman of Yardley Hastings was from home, but on calling at the bonnie, old-fashioned parsonage, I found that "Miss Maggie" was there, and cheerfully she assented to my laying the *Wanderer* in their little sheltered meadow. My only meadow mate on this occasion was a very ancient-looking chestnut pony, who came near the caravan to gaze and wonder what it was.

Our bivouac was surrounded by hedgerows, tall and unkempt, and at one side a row of lofty elms, pine trees, and poplars, through which all the livelong night the wind surged and sang with a sound like ocean waves.

As usual, we are an object of interest to the villagers. Little children sway on the gate, and gaze as they sway.

I go to have a look at the brook that creeps along through many a pool at the meadow foot. Deep down in a little ravine of its own is this brook, and almost hidden by a wealth of willow trees, elder bushes, and sedges, with all kinds of trailing, creeping, and climbing wild flowers. Here, on a soft bank by the bridge, is a whole regiment of young toads, not one of them bigger than the point of a lady's little finger, but charmingly bronzed all over. They are not over active even in infancy, but some can actually jump and skip. Afloat on the still surface of the pond are swarms of little water beetles—their cloaks shimmering like polished jet in the sunshine—and shoals of big water spiders, who walk the waters like things of life, as indeed they are. Verily there is much to be learned from even a brook pond. But here come Maggie and her little brother to have a peep inside the *Wanderer*.

And now we are up and away once more.

It is the 27th of July, and rain has fallen during the night, making all things fresh and green. The roads are smooth and hard, and the horses shake their manes and jingle their harness as if they quite enjoyed it.

By no means so well wooded a country as we have been used to lately; but seen from the uplands to-day, the landscape seems all alive, for a strong breeze is blowing, that turns the very rooks in their flight; that drives the clouds swiftly before it, their shadows scudding over the ripening cornfields beneath, till they look like storm-tossed seas. The straggling hedgerows are waving their green, ragged arms in the air, and the trees are beautiful as they rustle in the wind, the great willows especially, because they turn the silver backs of their leaves upwards to the sunshine.

We come now to the village of Turvey. This is quite a beauty nook. We do not stop, but just drive slowly through. Slowly enough to note its neat villas and cottages, both old and modern; its flower-clad lawns; its trellis-work, and climbing, flowery shrubs; its fine, densely wooded park; its quaintness of roof; its window gardens and gables; its woods and waters—all combining to make it one of the most charming rural towns that ever I wandered through.

Just three miles from Bedford we come upon a fine level triangular green, in front of a cosy inn, and here make the mid-day halt. Close to the road is a handsome-looking farm-house, entirely draped in green, and with many-gabled out-houses behind, also covered in ivy. But cheerful though the picture be, there is a sadness here to-day, and in all the parish round, for in a deep, dark pool down in the meadow yonder, the farmer's son, aged twenty-three, has just been drowned.

We found Bedford as delightfully gay as if there were no such thing as sorrow in this world. Its lovely river banks were crowded with fashionably dressed men and women, the river itself with boats of every size and shape, for a regatta was going on. Though it is against my habit to bivouac in a town, I could not resist the charms of Bedford, and soon got settled down in a comfortable meadow, where, after the regatta, sports were held.

Would that I had space to say more about Bedford, and the kindly welcome I received from its best inhabitants. I shall never forget it, and I am going there again.

We left Bedford at 11 a.m. next day, and drove on, over firm roads and through a level country, to Great Barford. Although the day was fine and cloudy, with a delicious breeze surging through the trees, the country was somewhat uninteresting. But many quaint, old-fashioned cottages lent a charm to the scene that an artist would appreciate. Then, from the rise of Roxton Hill we look down into the valley of the Ouse, and behold the river, broad and silvery-grey, winding through woods and meadows, where cattle and horses graze ; fields of waving grain ; labourers gathering in the hay harvest ; and many other rural sights. And yonder stands the beautiful red-brick mansion of Roxton Park, while beyond and on all sides are woods—woods—woods.

We cross a bridge at last, with a strangely vandyked parapet at each side—the bridge spans not only the river but meadows as well—and lo ! we are almost at once in the square of the old-fashioned town of St. Neots. Immediately after crossing the bridge, my attention was attracted to a quaint-shaped, four-sided tower, moss-grown and picturesque, the relic of a by-gone age. It was market day, and when we halted to put on the nose-bags, we were almost immediately surrounded by a crowd of onlookers. I should think that St. Neots never changed ; that as it is now, so it was two hundred years ago, and so will be two hundred years hence.

One of the chief pleasures of caravan travelling lies in the little surprises that constantly await one in the shape of incidents, scenery, and quaint, strange old villages. No one who does not travel as I do, with his hotel on his back, so to speak, can see rural England. *I* can stop where I please ; were I in a phaeton or coach, I could only stay where I came across a good hotel.

Of course, when travelling, I am taken for all kinds of concerns. I figure as a lord or duke one day, and as an itinerant photographer the next. Last summer I was taken for Vanderbilt one week, and for Blondin the next. But all this is good fun, and a gentleman gipsy must be a philosopher. I can hardly recall to my recollection any one instance of having been either molested or insulted wilfully.

Ordinary people will of course mistake even the gentleman gip. for a cheap-jack or a tinker.

Here is an instance. I was lying at Ryton, close to a pretty little inn where my nags were to sleep. About ten o'clock, the night being clear and starry, I was leaning over my fence, enjoying the cool breeze, when two people stopped to talk with me, and the conversation ran somewhat as follows :—

"Fine evenin'."

"Yes ; quite delightful after the hot day we've had."

"You're on the road, eh ?"

"Yes ; on the road."

"Humph ! Come Coventry way ?"

"I went close by it."

"Humph ! 'Eard wot those *other* gipsies got for stealin' the 'orse hout of this 'ere." ?

"I did not know of the occurrence. They'll catch it sweetly, no doubt."

"Humph ! Gips is hall alike in my opinion. I wouldn't trust ne'er a one o' 'em furder than I could see 'em. Good-night."

"Good-night."

I could not help laughing to myself, as I looked after the man's retreating figure.

At Chiseldon I was taken for a quack doctor going to lecture ; at another place for a kind of mountebank, and Hurricane Bob for a dancing bear. Bob did not mind that a bit.

At another village, I was lying in a lonely hayfield, which the farmer had let to a carter fellow, who, after mowing it, had stacked the stuff in a corner of the field ; and close to this we lay. The stack had been partly used, and I suppose the carter thought we gipsies would help ourselves freely, and probably put a bit on the roof. Anyhow, he came down in the afternoon, and behaved in a most expressive way. He never said "Good day" even, but walked round and round his stack, photographing its appearance, as it were, on his brain, and giving many a look towards my valet and me, to make sure we saw what he was doing. His looks spoke plainly thus,—

"I know exactly how much hay is here, and the shape of the stack, and I'd miss half an armful ; so just have a care."

Here is Ettisley. No coach and four, break, or dog-cart could stay here a night, for there is no hotel, and hardly an inn to speak of. A tumble-down old village of thatched houses—picturesque enough in all conscience—that go straggling and struggling, like a crowd of badly drilled militiamen, round a huge triangular green. This place can boast of a church and an inn, such as it is ; but life here must be dismal in its very tardiness. There are circles and marks on the grass, which tell us that circuses and show folk come even here, in summer ; but what must the winter be ? Hardy, pleasant-looking people, however, live on this upland flat, and chubby children too.

We lie on the roadside, for the village green is sacred, unless one bows low to some lord of a manor, and my Highland blood forbids.

We start away at ten.

Although wild flowers grow by the wayside, and clamber through the hedgerows —the purple furze or rest-harrow being quite a feature—we cannot but own that the country is bleak and cheerless. The day, too, is grey and cloudy, with a stiff breeze roaring dreamily through the stunted copses.

Uphill we toil for many a mile, till, on emerging from a wood, at the fourth milestone, we have a peep at a scene which quite dispels the gloom.

Many a cosy farm lies there ; many a mansion dots the woods ; with village church and spire, and swinging windmill, all among the green ; and right ahead, the college towers of classic Cambridge are peeping through the trees.

And far, far beyond this, for a score of miles at least, the view extends, as smiling a landscape as one could wish to see.

But time is up, and the readers and I must wish each other God's speed. The *Wanderer* will go back through Nature's varied ways till she reaches the quiet Berkshire village, there to rest until another Spring comes round.

"The labourers were gathering in the hay harvest as we passed."

LACE-MAKING AS A FINE ART

By Andrew T. Sibbald.

LACE is of three kinds: needle-made, or *point;* cushion-made, or bobbin-lace; and machine-wrought; and these three kinds are so distinct as never to be confounded, and to have their separate standards of merit. A fourth place might perhaps be found for that composite class of *application* laces, in which all the three methods are mixed, as when pillow-made sprigs of Brussels, or Honiton, are applied by hand to a ground of machine-made art.

We now propose to speak of needle-made or *point-lace*, which is first in order of value, and also of antiquity, being derived from the practice of needlework amongst the Eastern nations, and which, in parts of Italy and Spain, is still known by its Eastern name of *recami*, or *reccamata*. This is the rarest, the most artistic, and, in many of its kinds, the most lasting of laces, while by means of its varied stitches, numbers of objects can be well represented; thus flowers, fruits, figures, coats of arms, sacred emblems, and the best geometrical designs are to be seen amongst the trophies of the patient needle.

This point-lace is divisible into many sub-classes. Of these are *rose*, or raised point, called in France *dentelle à fleurs volantes*. *Point coupé*, or cut-work; *guipure*, or whipped, *i.e.*, over-headed work, sewed over a rolled stuffing of parchment or cotton. *Punti a maglia*, work darned in upon the meshes of a netted (*reticella*) ground, and called in France *point compté*, because these meshes are counted for the design. *Punti posati* is *over laid* work. *Punti lirati* is *drawn* work, where, as in hemstitch, all the warp threads are drawn out, and the woof ones are drawn together, and oversewed on a pattern. *Punti a stuora* is work on a coarse *mat*-like foundation; *punti in gassi*, on the contrary, was probably on a *réseau* ground. *Punti reali* is, like satin stitch, worked on a close material previously existing, and therefore belonging to a class of the true *recami*. This is the *plumetis* of the French *brodeuse*, and we have seen the robe of a West African savage elaborately covered with designs in this stitch, which were supposed to have a heraldic signification, and which were certainly admirably executed. Chain-stitch, the *tambour* of France and Scotland, is sparingly used in these old designs, where the stitch preferred to all others was that button-hole stitch by which the exquisite Venetian *punt in ære* was formed on the foundation of a single thread.

The grounds of these true *point* laces are of distinct kinds; the best is the *réseau*, when the pattern lies on a net ground, as in the laces of Burano, Alençon, Argentan, and in the other needle-*points* of Angleterre and Brussels. When parts of the design are connected with what look like small, knotted cords, these are termed the *brides*, and the knots, or thorns, called the *picots*, are the test of a good worker.

The second kind of lace is the pillow, or bobbin-made. This also is hand-wrought, and in it, by an ingenious association of threads, a wandering plait, more or less intricate, forms an agreeable design. As the root of all *point*-lace is to be found in needle-work, so the root of all bobbin-made lace is to be found in a braid (*lacet*), or plait, made by weaving and plaiting threads together on a precise pattern or plan. The threads, fastened to small bobbins of bone, lead, or wood, are thrown across the pillow, and plaited around a number of pins; each pin represents a mesh, and in the work the threads, traversing as they do from left to right, and right to left, often weave at once the pattern and the ground. The work is far more laborious than could be imagined by any one who had not tried it, though, by the position of the pillow its fatigue can be greatly diminished or increased. The English worker lays the pillow on her lap, the Bohemian places it on a small stand in front of her, but the peasant of the Vosges sits on a very low stool, and takes what she calls her *tambour* between her knees, while she reproduces with astonishing rapidity those small medallions and sprigs, for every one of which perhaps many dozen bobbins have to be kept in motion. Yet work done in this way, being as it were semi-mechanical, and admitting of a greater division of labour, must be in a measure inferior to true needle-made laces; being less deliberate, less finished, and less purely under the worker's own control, it is by so much a less perfect expression of any man's mind. It is less artistic, less spontaneous, it is more quickly made, and is therefore rather less costly. Not the less, however, do some of the fine cushion-laces, such as the coral pattern of Naples and Lombardy, the *schlangenmuster* of Germany, and the sprigs of Brussels and Honiton, deserve the greatest admiration, while in the modern fabric to which the nickname of "*Cluny*" is given, we have copies on the pillow of some of the best *point* designs of the sixteenth century. From the causes we have mentioned, cushion-lace must of course be less fitted than is *point* for rendering the forms of natural objects: thus scrolls, arabesques, coral patterns, vandyke borders, and flowers of a conventional type have ever formed the staple of its designs, both in past centuries, and in its present fashionable phase of reproduction by tape. One of its most homely forms is the coarse *torchon* lace, to be found in France, Portugal, Galicia, Bohemia, Madeira, Dalecarlie, and the Tyrol, and which, now with one ground and now with another, may be seen edging altar-cloths.

Pillow-laces, especially when they have network grounds, should be judged entirely from these *fonds* or grounds. The old ones, such as Mechlin, have generally a hexagonal mesh; but the *fond* of modern Valenciennes differs from that of the old school, as do the various *fonds*, called of "Mirecourt" (wire-ground), "trolly," and "Ave Maria"; and all these are technicalities which have to be mastered before one is able to judge of Lace, since the local schools sometimes adopted each other's patterns, but never exchanged their methods of working the ground. Some pillow-laces have *brides* and *picots* executed with wonderful success, so as to produce the effect of the *brides* and *picots* made by the needle; sometimes, as in Brussels laces, bobbin-made sprigs are joined by needle-work; and *points* are added, which make a composite fabric; and sometimes, as in the Calvados, the women use a peculiar stitch for fastening together scrolls made on the pillow. To appreciate correctly the age of any piece of lace is no easy task. It is a great matter to be conversant with the best books of design, for these will at least give an approximate idea as to the date *before* which any piece of lace was not very likely to have been executed. But this is not all. Some manufactures (sub-classes of point-lace), such as the Alençon of the Colbert period, had but a brief duration, and others again, like the *dentelles à fleurs volantes* imported from Venice, had one term of life in Italy, and another in France; and he would be a bold man who should undertake to say of any kind of lace that it was never made in England. We believe that every lace made on the Continent has been known and worked here, though it may be but in small quantities, and at dates differing from the time when they formed an actual school in Italy, France, or Germany. This point must be borne in mind whenever the archæological question is put; and the date of the *work*, as recognised from the style, material, and collateral evidences, and distinct from that of the *design*, must be ascertained, before you can tell if the specimen is of English manufacture.

Observation, study, and great experience are required to enable any one to judge correctly of the age of lace, and even with all these it is much easier to guess, or to dogmatise, than to *know*.

Though some laces, like the *copanaki* (cotton) and *bi-beli* (silk lace) of Smyrna, are distinctly local, nothing can, in nine cases out of ten, be less certain than the *habitat* of laces, and yet, oddly enough, it has been (in the absence of the "natural system" of classification) on the geography of Lace that its nomenclature has hitherto been mainly allowed to depend.

The result has been the most admired confusion in our minds and in our cabinets, where laces are called "Greek" if they came last from Malta or Corfu (one piece possibly being *point coupé*, made with the needle, and another a border made on the pillow), and where we have specimens called Venitian, because they were bought in Verona, though they happen, perhaps, to be scraps of pillow-made Flemish, of a date prior to 1750. In the same way, any lace bought in the Ghetto is set down as Roman, or perhaps as Milanese, if "four *braccia* exactly like it were seen last month in a shop near the Duomo!"

And yet, as there is such a thing as a geographical distribution of lace, there must be some clue to this labyrinth, and there is, in the history of the lace-schools, and in the literature of lace.

Let no pedigree ever drive out of our minds the broad distinctions of fact : let us be fully convinced of this, that whatever have been the wanderings of a flounce in the three hundred years that have elapsed since *point de Venise* was in its perfection, no amount of time or space can change needle-made into bobbin-made, convert wandering braids into Guipure, or *fond de Mirecourt* into a *réseau* of Alençon.

The adventures of the flounce have given rise to its many *aliases*, and these adventures would be amusing enough if we could trace them. Let us say that the border in question was worked in some convent in the Euganean Hills for some prelate, who wore it above his purple, and gave it a fine mixed flavour of incense and candle-smoke, and of the close oak chests of his sacristy. After his death a princess bought it, her thoughtless heirs sold it, a servant stole it, a needy mender pieced it, a Jew priced it, and sent it abroad to be rebought, resold, reworn, retorn, remended, and so on, till it reached the pawnbroker's shop in Paris, where the English lady bargained for it, who now laments that her "Spanish guipure" was so sadly torn the other day. If the poor lady's "Spanish guipure," besides having been torn, is challenged, she asks plaintively, how *is* she to know what her lace is ?

She never will know, unless she learns how to distinguish point-lace from pillow-lace, studies the sub-classes of these two great divisions, and abandons the geographical idea, except as far as the schools of lace can be made to serve her purpose. The schools had a geographical distribution. The beautiful geometrical designs of *point coupé* are of Eastern origin—Venice and Zante were their congenial homes. The *réseau*-ground laces of Alençon and Argentan, so well fitted for a courtier's ruffles, grew up round the court of the *Grand Monarque*. Cushion-laces, again, are a fashion of the more northern nations, existing often in poor and mountainous regions, such as Bohemia, the Tyrol, Dalecarlie, and the Vosges. In fact, the girl who plies what Shakspeare called "the bones," will generally be found speaking a *patois*, and living remote from the great centres of industry.

Of all lace-schools, the school *par excellence* was that of Venice, and there, more than in any other place, lace took its place amongst the fine arts during the last half of the sixteenth and the first two decades of the seventeenth centuries.

Many causes contributed to this effect. The period of the Renaissance was one of luxury ; tired of a creed which condemned the body, the Italians of that day were learning from the revival of Greek literature, to worship beauty and fitness. This age, that laughed with Pietro Aretino, and smiled with La Gioconda, sang and supped, studied and doubted, and whether as princes, prelates, or merchants, we see that the Medici, Sforzas, and della Roveres required for their pleasure all the services of all the arts. Miniatures for their books, cups for their tables, pictures for their walls, and domes for their churches—they asked all that art could make, and they were ready to reward it. And of all Italian cities, none had then a richer or a gayer life than Venice. Those senators painted by Tintoret, those warriors of Giorgiones, were not anchorets, and those fair-haired beauties whom Titian drew were possibly not saints, nay, they were so extravagant in their expenditure and attire, that the rulers of the Republic passed sumptuary laws to restrain them. When these laws were passed, the artists of the Republic had long vied with each other in the production of beautiful designs in lace. Every ornament that Venice could produce, these fair ladies had already adapted to their dress ; and not content with these, the manufactures of other countries were sought out and purchased.

The church stuffs and embroideries of Russia have about them much of Eastern splendour and monotony of design. Even the coarse pillow-laces made by the peasants in some of her governments—for example, in that of Moscow—have a semi-Oriental tinge, and suggest rather the border of an Indian vase or shawl than the works of Western Europe. Did this characteristic of Russian art come to her, as it did to Venice, from the East, from Byzantine waters ? or is there not a missing link to be seen in the gold embroideries of Tiflis, and in the needlework of the Tartar women of the Crimea, whose embroideries on crape have a great affinity with those of Upper India ? It almost looks as if Russia, preserving the memory of her Tartar invaders, as we know that she does in some of her customs, many of her idioms, and in not a few proper names, had also derived from them her needlework and embroideries. If this could be proved, the fact would be doubly interesting from the very certain one that it is to her Mahommedan conquerors that India owes her needlework and the rise of her textile arts.

COMPETITIONS.

THE Puzzle Competition announced last week will close November 3rd, and all Competitors must send in their Papers on or before that date.

We shall hope to publish the Prize Winners' Names in the "Christian Evidence Competition" early in November.

CRISP CORRESPONDENCE.

Tun.—Dr. Fitzgerald, Bishop of Killaloe, died on the morning of Nov. 24, 1883.

A Lover of Justice.—Out of some 3,000 Papers sent in for competition in our Spelling Chase, it would be impossible to trace any single one. But as the examination was entrusted to most careful and able examiners, you may rest assured that your paper had due consideration.

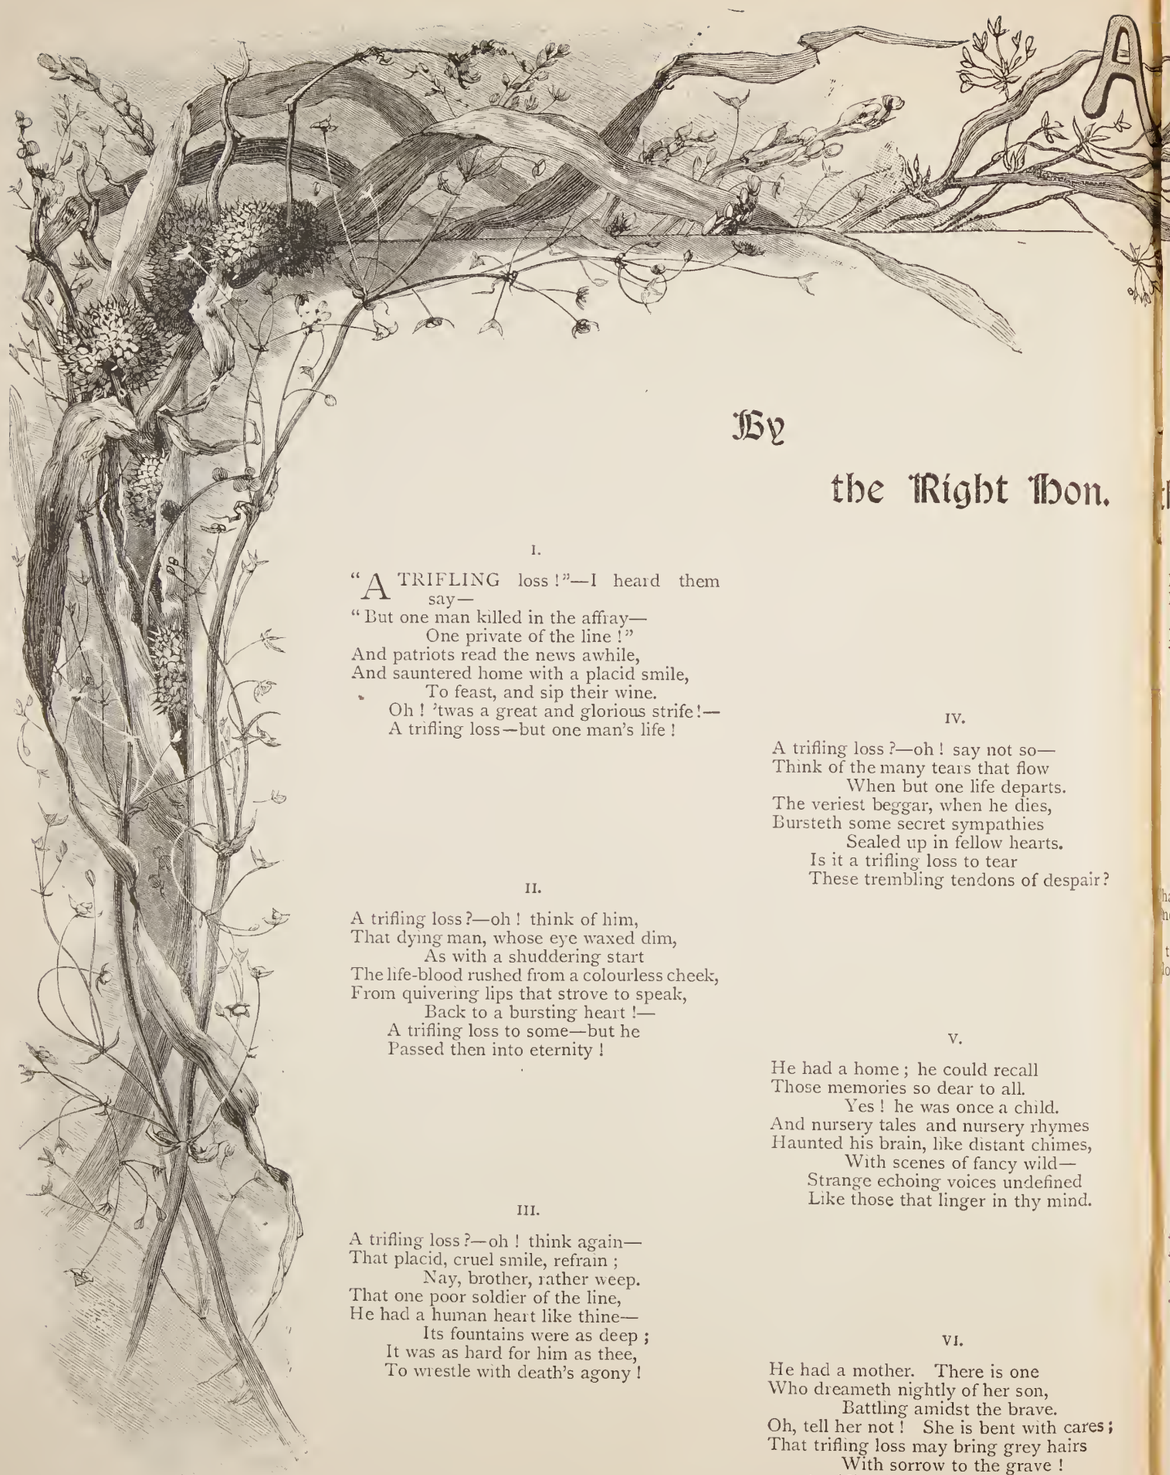
A Competitor.—We fear we could not spare the space to reprint the Prize paragraph, properly punctuated, especially as it is contained in a book to be found in every Free Library—Smiles's "Self Help," at the opening of the chapter on "Character."

"M."—Real conversion is the turning of the heart and life from sin, and from self to God. Assurance of salvation depends on simply taking God at His word—looking, not to our own feelings, but to Christ. "Him that cometh to Me, I will in no wise cast out." *That must be true.* And so, through faith we are saved, but through assurance we are comforted and edified. The witness of the Spirit with our spirit is the cry of "Abba, Father." In Romans 8. 15 that cry is said to be our own—*we cry.* In Galatians 4. 6 it is the cry of the Spirit—*He crieth* in our hearts. Thus there is a joint testimony, yet practically indistinguishable. For "the wind bloweth where it listeth, and thou hearest the sound thereof, but canst not tell whence it cometh, and whither it goeth : so is every one that is born of the Spirit." You do well to give yourself afresh to Christ every morning, for thus believing, you abide in Him. Your sad complaint, notwithstanding this, of never thinking of Him for hours, is what many experienced Christians have to make as regards themselves. The remedy is to watch and pray. The whole tenor of your inquiries shows that the Lord has been dealing graciously with you, for which you may praise Him and take courage. And this being so, you need not feel either "afraid to live, or afraid to die," for your times are in His hand, and "He hath said, I will never leave thee, nor forsake thee."

LIGHT FOR THE NORTH SEA.

By James Runciman,

Author of "Skippers and Shellbacks," "Tales of the Coast," etc., etc.



IN the depth of the bitter winter, I was gazing over a dreary marsh that stretches along by the border of the sea. The wind moaned mournfully, but sometimes there came a savage scream, which rose to mere mad clamour, and died away in low sobbing. The cold was so bitter that it almost had the effect of intense heat, and several times I feared that I must lie down on the frozen grass and give in. Then, with a whistling rush, a snowstorm broke on me, and I struggled on in the gathering darkness, while the hideous dusky trouble closed downwards and blinded my smarting eyes. At midnight I was obliged to let my pony find her own way home, for the immense roar of the gale, and the swoop of the lashing snow-clouds, seemed to stupefy me and numb my very heart ; so I sat on, in chill despondency, until the welcome door opened for me, and the glow from the fire stole deliciously through my being.

For hours after I had gone to my bedroom, and felt the old walls quiver as the blast struck them, I thought of the mad night on the North Sea ; for I had taken a voyage in wintry weather, and it makes my very bones ache only to remember what the fishermen endure. We shore-going folk spend half our lives in complacent ignorance ; most of us are naturally sympathetic, but we lack knowledge. Often and often I had luxuriated in my warm and shining room, when the wind rose to a fury outside ; but I never gave a thought to the poor fellows who abide the sombre rage of the North Sea gales.

My lesson, however, came to me in good time. I saw the fleets during a bad week, and I wish that many more men could have my experience. In great steamers I have often known hard weather, but I never was so impressed with the primitive and barren hardships of a seaman's life as I was when I saw the smacksmen at their business. One constantly learns, and I received an amazingly vivid lesson when a sea made me slip and fall. Within a few minutes I had put on dry clothes, but I knew that my comrades would probably have no such luxury as dry clothing for a week or more. Daily, since that bleak and squalid week, my thoughts have run on the fate of the fishermen ; all through the cruel winter, all through the bitter summer, my heart has thrilled to every tearing gust that rushed over my cottage ; and now it seems to me that I must once more have a little conversation about the luck of our gallant North Sea fishers.

Could my readers only have seen the condition of the steam carriers which ran into London during February and March ! In front of the bridge the ice was a foot thick ; every rope was coated to the thickness of a man's arm ; icicles, like great stalactites, hung here and there, and the deck

[*Continued on page 714.*]

A TRIFLING LOSS.

By the Right Hon. the Lord Plunket, ARCHBISHOP OF DUBLIN.

I.

"A TRIFLING loss!"—I heard them say—
"But one man killed in the affray—
One private of the line!"
And patriots read the news awhile,
And sauntered home with a placid smile,
To feast, and sip their wine.
Oh! 'twas a great and glorious strife!—
A trifling loss—but one man's life!

II.

A trifling loss?—oh! think of him,
That dying man, whose eye waxed dim,
As with a shuddering start
The life-blood rushed from a colourless cheek,
From quivering lips that strove to speak,
Back to a bursting heart!—
A trifling loss to some—but he
Passed then into eternity!

III.

A trifling loss?—oh! think again—
That placid, cruel smile, refrain;
Nay, brother, rather weep.
That one poor soldier of the line,
He had a human heart like thine—
Its fountains were as deep;
It was as hard for him as thee,
To wrestle with death's agony!

IV.

A trifling loss?—oh! say not so—
Think of the many tears that flow
When but one life departs.
The veriest beggar, when he dies,
Bursteth some secret sympathies
Sealed up in fellow hearts.
Is it a trifling loss to tear
These trembling tendons of despair?

V.

He had a home; he could recall
Those memories so dear to all.
Yes! he was once a child.
And nursery tales and nursery rhymes
Haunted his brain, like distant chimes,
With scenes of fancy wild—
Strange echoing voices undefined
Like those that linger in thy mind.

VI.

He had a mother. There is one
Who dreameth nightly of her son,
Battling amidst the brave.
Oh, tell her not! She is bent with cares;
That trifling loss may bring grey hairs
With sorrow to the grave!
A trifling loss! but not to her,
That lonely, sonless sorrower!

VII.

He had a wife—oh! tell her not!
How doth she watch that infant's cot
With constant tearful eye.
No answer from her husband slain,
Yet how she hopeth still in vain,
Still trusting fearingly:
No answer to that letter yet—
She thought not *he* could thus forget.

VIII.

That letter next his heart was pressed!
The evening, ere he sank to rest,
He read it o'er and o'er—
A trembling record of hopes and fears,
Blotted at night by a brave man's tears,
Next morn by a brave man's gore!
They have buried it with him in his grave,
Next to the heart of the shroudless brave!

IX.

A trifling loss?—a thing of nought?
And yet—O God! how strange the thought
Of that one life gone past!
Whence was it? Whither did it tend?
Those years that seemed to have no end,
And yet are fled so fast!
So long—yet moments in the sum
Of the mysterious years to come!

X.

A trifling loss? Stay, let us think
Of that poor trembler on the brink
Of death's dividing stream
Standing beside that rushing tide,
Gazing upon that further side,
What doth the future seem?
Oh! as he wildly looks across,
Is death to him a trifling loss?

XI.

Looking in anguish madly back
On that irrevocable track
Of hour, and day, and year,
Doth memory, like a wintry blast,
Chilled by the ice-wastes of the past,
Palsy the soul with fear?
As he beholds a life gone by,
Is it a trifling loss to die?

XII.

Methinks I hear an answering voice—
"Must it be so? May none rejoice,
Standing beside that stream?
Hast thou not read erewhile of some
To whom the longed-for years to come
With tints of glory gleam?
Are there not some who gaze across,
Yet look on death as 'trifling loss'?"

XIII.

"And in the past a waste of years—
A wilderness of sin and fears?
Must it be ever so?
Can never memory retrace
A well-fought fight, a finished race?
Are there not some that go
Triumphant towards the unseen land,
When their 'departure is at hand'?"

XIV.

Ah! then smile on—ye may be right!
Was he that perished in the fight
A soldier of the Cross?
If so, it was a glorious strife!
If so, that unknown soldier's life
Was but a trifling loss!
A trifling *loss?* Nay, think again,
To him, perchance, "to die" was
"*gain!*"

was covered with a thick slippery sheet, which defied both hatchets and handspikes. These swift vessels gave some indication of what was happening in the North Sea. The steamers could return home at short intervals, but the smacks had to stay out on the terrible sea, just as though their hulls were impregnable, and their crews immortal.

The men had to go about with sacks tied over their feet, to prevent slipping on the glassy decks, and their fingers were bitten with cold, even though they wore several pairs of mittens. Mind, there was no chance for these fellows to nestle warm by a fire ; they had to work while the freezing seas poured over them, and every man knew that if an unlucky wave happened to smash his vessel—as so many have been smashed before—there would be no chance of escape, for the boats were under solid masses of ice. One crew only managed to escape from a sinking smack after they had worked for an hour with axes ; they saw their vessel disappear just as they had contrived to draw away. Amid all this misery and turmoil the steady labour went on.

Nothing impresses the imagination more than that deadly, dogged persistence. With a sort of morbid curiosity I have watched the fleet plunging on into the clamorous darkness. To me, the vast hollow roar of wind and tossing wave, and the ghostly wavering of the smacks, only brought thoughts of Beethoven, or of some weird and tremendous movement by Richard Wagner. We artistic persons are so apt to think of the majestic aspects of Nature as adjuncts to our æsthetic fancies ; but, in those vessels that shear the barren hills of the sea, and wander on all through the loud, dark night, there is nothing but stern effort ; and not one of the darkling hours —nay, not a minute, not a moment—can pass without bringing its new danger.

On an icy evening, when the trawl-beam is congealed to the deck, the gear must, nevertheless, be put over, and the most astounding physical feats are performed on a rolling, pitching platform of ice. When the chill of the desolate morning broods on the grey sea, there is no warm rest for the fisherman ; he has to risk a totally new set of accidents, for the squall boats row to the carrier, and crash and roll as the travelling seas rush past, curling into foam. Only lately I watched for four hours from the deck of a carrier, while the smacks beat up to us, and I confess that I found the spectacle more exciting than ever.

No landsman can help feeling a twinge of the nerves when a boat comes careering on the shoulder of a wave, and looking as if she must inevitably clash down on the deck of the steamer. Then the shouting, straining crowds of men ; the dead-lift efforts ; the leaps that bring one's heart into one's mouth ; the reckless feats of agility and courage, and the constant recurrence of accidents more or less serious—all these things make up a sight which might stir the pulses of the most phlegmatic cynic that ever lived. In that one morning I saw two cases of jammed fingers, and one or two bruising falls. Besides these mishaps, one man had to take a flying jump, and he plumped with his heavy seaboots right on the hand of his shipmate. The accident was unavoidable, as it was ugly ; and I was grieved to see that the wounded man had to use his torn hand in rowing away from us through an ugly sea.

In coal-mines there are many painful petty accidents every day, but the miner goes up when his shift is ended, and his hurts can be easily dressed ; the fisherman even now has to wait an indefinite time before he can be tended. I should only sicken people if I gave, in the driest terms, the ghastly list of bad accidents which happened during the winter. If I were in the humour for sensational writing, I might tell the most haunting stories ; but I prefer to be as quiet and definite as possible. It needs little imagination to understand that among some thousands of men who must labour recklessly amid massy ice, blinding snow, and smothering seas, there are certain to be large numbers of accidents.

And now mark me. It is only lately that a hospital ship has been planned for the relieving of those slaving, suffering seamen in the North Sea. We have collected millions of money through national charity for the hospitals on shore ; there is not a dock labourer, or bricklayer, or any other poor man (or poor woman), for whom a hospital bed or hospital relief cannot be provided with more or less celerity ; our London hospitals draw princely revenues, and own princely properties, and yet, strangely enough, we have never, out of our countless millions so lavishly bestowed —we have never until now thought of the class who, more than all others, are subject to wounds, bruises, and ailments brought on by bitter hardship. I shall be the last to blame the public : they left our men alone because they knew no better, and now, at this date, they are beginning to make reparation for their innocent neglect.

The new ship outward bound.

When I first went on the North Sea, I had a vague notion that one cruising hospital would serve to sail from fleet to fleet. Well, we have got one splendid vessel laid down, and it will be possible to keep eight cots constantly going, in addition to a good dispensary. But alas ! as my knowledge was increased, the magnitude of the problem has almost staggered my imagination. The vast, lonesome stretches of wild water which must be traversed in running from group to group of vessels ; the startling percentage of injured men ; the great population to whom the new vessel must minister—these things have so impressed me, that I am free to say that one vessel can hardly touch the fringe of the immense need which exists. The first vessel ought to be endowed to the extent of £30,000 before she can be made to keep efficient, and the second vessel, towards which one donor has already given £3,500, will have to be similarly endowed. Sixty thousand pounds seems a large amount ; but the history of the Mission is so like a noble romance conceived in a dream, that I am next-door to certain of seeing the whole sum, and more, provided.

Too long we have had a kind of dusky curtain of ignorance drawn between us and that waste, tumbling desert, where the finest men of our hardy breed toil, and endure bitterness, and die ; but the Mission has lifted the curtain. Twelve thousand men have been brought into kindly contact with a civilization which was once but a vague name to them, and the process of enlightenment is going on. Each Mission ship is a shifting centre of helpfulness and civilization, and along each radius of the ever-

New reading from home.

moving circle there are sent messages of hope and gentleness.

Personally, I cannot say I know much about the spiritual work of the Mission, for my life has been a busy and a stormy one; but I can understand the hospital question thoroughly. Others can speak better than I can concerning the very strange and lovely transformation wrought by the teaching of Christianity in the fleets. My own special work in the press, is to let the public know exactly the drift of the efforts made to give temporal aid to the fishermen.

Now let us observe what the hospital ships will be required to do. In cases of slight dyspepsia, or of that fisherman's scourge—toothache—or of bruises and poisoned hands, the doctor could very well treat the men in the dispensary, and let the patients go.

But if a man breaks a leg through getting caught in a bridle of the trawl, or has his skull fractured by a blow from the fall of a winch, or dislocates an ankle, or is crushed under a falling spar or a boat, then it would be obviously impossible to give him rough-and-ready treatment in the dispensary, and it is therefore proposed to keep seriously injured men in the hospital ward. But we must remember that the smacks are not provided lavishly with crews, and if one hand were taken off an ordinary vessel, the strain on the remaining four would very soon become almost unbearable. The Mission, therefore, proposes to carry some spare seamen on each trip; as soon as a patient is taken on board, a substitute is to be found for him, and when a cure is effected, the man returns to his work, while the substitute goes back to the hospital vessel.

It often happens that a poor fellow goes home on one of the fish carriers, owing to an injury which might be set right by a week of rational treatment; he is soon cured, but he has been plunged into the thick of an over-crowded market, and his work is lost.

Few readers can possibly imagine precisely what is the fate of a disabled man, who is condemned to lie helplessly in the reeking cabin of a smack. Alas! pain is ill to bear, even when we have soft and snowy beds, noiseless attendants, prompt skill; but it is far, far worse when the sufferer rests on a rough and malodorous hammock, while the vessel hurls herself with tumultuous violence from crest to hollow of inexorable waves. Life is so bitter, that I never have quite the heart to harrow the feelings of tender and good people by describing any of the horrors which I have seen; but I say with all conviction, that if I chose to give a cold picture in the style of Defoe, and if I remorselessly described the slow drizzle of torture which falls on a fisherman wounded in winter-time, I should produce a book which no British reader, save perhaps a medical man, durst read for the second time.

The Mission has ventured into a dark region of pain, and it seems that a modern miracle—for that Mission *is* a miracle—will have many further developments. The business of writers like myself is to let people know what is wanted; and when information is thus spread, it will pass at second-hand and third-hand, until the hospital ships can traverse the North Sea on their thrice-blessed errand. I have tried to write as brightly as the subject will permit, and I have said not a word that can be interpreted as sensational: the verdict is left with my countrymen.

Transferring the fish.

THE LAWS OF HEALTH.

By A. Stuart Fletcher.

Introductory Paper.

THE subject of health is one upon which young people are often careless. This is not because they have not received advice upon the subject, but sometimes because they have received too much advice, and that too vague to be useful. It is easy to say, "Take care of your health;" but to many the maxim means no more than, "Don't sit in the draught, or in wet boots;" while to many another, taking care of one's health is only synonymous with "coddling."

A little sound knowledge of the structure and working of our own bodies would help us to understand the reasonableness of much that we had put down as arbitrary "laying down the law" on the part of older people, as well as the uselessness of some things that pass as sound advice.

A healthy body is one of the greatest of blessings. Perhaps we need some little experience of illness, pain, or weakness, before we can properly realise this; but even when we are well and strong, and take it for granted that we should sleep the whole night through, get up refreshed, enjoy our food, begin our work energetically, and end it without feeling weary, take a cheerful view of things in general, and feel that it is good to be alive,—even when this is the case, we may realise how much we have to be thankful for, if we imagine ourselves for one day with all this order of things reversed.

Now though we cannot all be Hercules, nor inherit perfectly healthy constitutions, we can all do very much, without anything like "coddling," either to keep the health we have, or to improve it. Too many people acquiesce in a state of semi-invalidism, when a little attention to a few simple rules of health would make them moderately sturdy members of society. They are "so delicate, you know," and apparently never hope or expect to be anything else. I am not speaking now of the people who think it interesting to be in weak health, but of those who would like to be strong, but who from ignorance or carelessness, live lives that make health impossible.

There are other persons, too—I have known them—who, conscious of imperfect health, spend a great deal of money in medicine. In many of these cases, the cheap remedies of fresh air, water, and wholesome food would have been far more effectual than medicine, and the money saved might have procured a country holiday to complete the cure.

Most people know that the duration of life, and the state of health, are largely influenced by the conditions in which we live. Our health depends on the kind of air we breathe, on the food we eat, on the clothes we wear, our cleanliness, the kind and amount of exercise we take, our rest and sleep, our habits, the houses we live in, and the things which surround us, as well as upon what we call our constitutions.

In the following Papers we shall endeavour to show *why* these things affect us, and *how* the conditions of health can be fulfilled.

We have had many illustrations in the history of our own country of the way in which disregard of the laws of health has brought about dire consequences. In the fourteenth century a disease called the "Black Death" spread through England, and left scarcely one-fourth of the people alive. On the Continent of Europe, too, about forty millions are supposed to have died of this disease. It is not difficult to understand why the disease spread, and people were powerless to arrest it, when we remember that houses at this time were provided with no means of ventilation; that the floors were covered with rushes, which were left unchanged for years, while all kinds of filth accumulated underneath; that people wore immoderately warm clothing, which was seldom changed, and that a bath was scarcely ever indulged in, while only a few of the richer people used soap.

After many a minor epidemic, came, in the time of Henry the Seventh, the "Sweating Sickness," which destroyed so many people that it was thought a cause for thankfulness if half the inhabitants of a town escaped. Then there were several recurrences of The Plague, till the Great Plague of London in Charles the Second's reign was followed next year by the Great Fire, which made a clear sweep of thousands of unsanitary houses, and gave the inhabitants of London a chance of beginning again, under new conditions of cleanliness and health.

Contrast the state of things in England up till almost recent times, with the attention which was paid by the Jews to matters relating to health. The directions in the Mosaic law are minute as to personal and public cleanliness, isolation of the sick, and choice of wholesome foods and drinks; and it is owing to the observance of these that the Jews have always been remarkably free from epidemic diseases, and that, on the average, they live longer than men of other races.

The influence of constitution and inherited tendencies upon health is, as most people know, very great. All do not "start fair" in the race of life. Some persons are naturally delicate and weakly, while others are robust and strong. But it is well to remember that while a strong constitution becomes enfeebled by indulgence in bad habits, and neglect of the laws of health, a weak constitution may be strengthened by a careful attention to these laws.

Then, with regard to an inherited liability to certain diseases, as gout, rheumatism, epilepsy, asthma, neuralgia, and consumption, it is important to note that it is the tendency to disease which is transmitted, and not the disease itself. So that the best use any one can make of the knowledge that his father, mother, or grandparents suffered from any transmitable disease, is, not to expect the same himself, but to place himself, as far as possible, in conditions unfavourable to the development of the disease.

Parents, in sending children away to school, should consider their constitutional weaknesses. Thus, a child with a tendency to rheumatism should on no account be sent to a school situated on a clay soil, and where the atmosphere is damp. A child, who in winter has always chilblains on his hands and feet, and shows other signs of a feeble circulation, should not be placed in a cold, bleak situation, but in as genial a climate as possible. Far too many children have hereditary weaknesses of constitution fostered and developed, through neglect of parents on points of this kind, when under more favourable circumstances the tendency might have been checked.

Young people, in choosing a trade or profession, and those who guide them in their choice, should also consider constitutional tendencies. Thus, for a person of consumptive tendencies, feeble circulation, or sluggish liver, to adopt a calling which necessitates his stooping all day over a desk; or for a man with a tendency to asthma or bronchitis to follow one of the many dust-producing trades, such as that of potter, stone mason, miller, or grinder of cutlery, is almost certain to result in premature death. Certainly, in some cases, choice of a calling is not possible; but in many others it is not only possible, but so perplexing, that it would be a relief to have even a definite idea of what one ought *not* to do.

The formation of habits is an important factor in the preservation of health. We may acquire habits which will improve health and prolong life; or, on the other hand, will leave us an easy prey to disease. Habits are easily formed, but not so easily broken. It is seldom too late to form a new habit; but an old one is often a tyrant, which it takes years to quell. It is therefore very important that young people should form habits conducive to health, and should learn to recognise a bad habit as an enemy, before it becomes too strong to be easily conquered.

In reference to eating and drinking, the habit of eating food hastily, and masticating it imperfectly, is certain sooner or later to produce indigestion. The habit of taking pungent condiments, as cayenne pepper, etc., should be discouraged, as these substances produce an unnecessary irritation of the lining of the stomach. Meals should be taken at regular hours, and should be moderate in quantity.

Regular attention to teeth should become a habit. These ought to be brushed at least twice a day with a moderately soft brush; and any that show signs of decay should be at once attended to. People that live to a healthy old age have usually good teeth; and the best preservative of the teeth is perfect *cleanliness*.

The importance of habits of cleanliness of body cannot be overrated; but as we hope to take up this subject more fully in another Paper, we will only mention the fact here. A person who was once complaining of ill-health to me, confessed that she had never had a bath in her life, that she could remember, nor had any of her family since they were children. And this

was not a consequence of extreme poverty, for the persons were what is called "well to do." Unfortunately, this is by no means an extreme case, even in these days of the spread of knowledge, and of means for cleanliness.

The habit of standing or sitting erect is important for young people to acquire. We see daily narrow chests, round shoulders, poking chins, and awkward carriage, that could easily be avoided by a little resolute care on the part of the owners. Most of us know old people who scorn the use of lounging chairs, and carry themselves erect and easily, as the result of a habit acquired in youth.

There is another habit I may mention, which is invaluable as an aid to a happy and healthy life, and that is, the habit of cheerfulness. To quote from Addison: "Health and cheerfulness mutually beget each other;" and Solomon had observed the health-giving power of a cheerful spirit when he said, "A merry heart doeth good like a medicine." The happy faculty of always "looking on the bright side of things," is not inborn in us all; but it can be acquired as a habit, even by those of us who are most addicted to grumblings at the present, and to gloomy forebodings of the future.

Some of us might enjoy better health if we tried as a medicine what good George Herbert asks for:—

> "Thou that hast given so much to me,
> Give one thing more—a grateful heart."

GLOVES IN OLDEN TIME.

By J. Eaton Fearn.

TO trace the origin of gloves, it is necessary to turn the faded page of history back many centuries.

Some have imagined that *gloves* are noticed in the 108th Psalm, where the Royal Poet of Israel declares that he will cast his *shoe* over Edom. The word translated *shoe*, according to certain authorities, meaning *glove*, being explained in the Talmud lexicon as *the clothing of the hand*. If this conjecture be correct, then the old Biblical usage of a man taking off his *shoe*, and giving it to his neighbour as a guarantee of his good faith to complete a bargain, simply was the less quaint custom of giving the man his glove.

Gloves are frequently alluded to in the classics. The immortal Homer describes Laertes at work in his garden with gloves on his hands to secure them from the thorns. Xenophon alludes to the effeminate custom of the Persians, guarding their hands against the cold with thick gloves. Varro, a very ancient writer indeed, gave it as his opinion that olives gathered by the naked hand, were far preferable to those gathered with gloves, which was the method of plucking them in vogue amongst the early Romans.

Athenæus speaks in one of his books of a celebrated glutton, who always came to table with *gloves* on his hands, so that he might be able to handle and eat meat while hot, and thus be able to devour more than the rest of the company! Pliny, the younger, informs us in his account of his uncle's journey to Vesuvius, that his secretary sat by him ready to write down any remarkable occurrence; and in order that the inclemency of the weather might not impede his business, he had gloves on his hands.

So much suffices to show that the use of gloves was by no means unknown to the ancients; and the foregoing instances prove that they were worn more on account of their utility, than as ornamental articles of dress. As men, however, gradually became more civilized, and began to bestow greater attention on their attire, the Romans, the progenitors of culture, adopted gloves as a distinctive feature of a gentleman's dress. Their use quickly became so prevalent, that Musonius, a philosopher who lived at the close of the first century, thought it a duty devolving upon him to protest against the "evil habit," which he did in exceedingly strong terms. But, alas! the world in its fashions heeds not the voice of the abnegating philosopher. His protest was utterly in vain! In the ninth century, even the clergy and monks had so taken to their use, that the Council of Aix, in the reign of Louis le Debonnaire, ordered that the monks should only wear gloves made of sheep-skin!

To-day their use is universal. It would be an interesting statistic to know correctly the amount of money spent in England alone upon gloves. Certainly the amount expended in glove-presents alone would surprise most of us!

At the time of the Reformation, gloves were an exceedingly expensive article of dress, and were only worn by those occupying high stations in life. Some of the oldest gloves extant exist in the Denny family. At the sale of the Earl of Arran's goods, April 6th, 1759, the gloves given to Sir Anthony Denny by Henry VIII. were sold for the large sum of £38 17s. 0d.; while others given to his son Edward Denny by James I. realised £22 4s. 0d.; and a pair of embroidered mittens given by Queen Elizabeth to Sir Edward Denny's lady, fetched £25 4s. 0d.

Gloves have always been favourite objects with lovers, and many a one has earnestly wished with Romeo,—

> "O that I were a glove upon that hand,
> That I might touch that cheek!"

In olden times there were many quaint customs with gloves, as in the ancient ceremonies connected with bestowing property, or in conferring dignities.

The Bishops of Paderborn and Moncerco in the tenth century, were installed into their sees by the ceremony of receiving a glove; and gloves at this period were regarded so peculiarly as a part of the episcopal habit, that the Council of Poitiers forbade the Abbots of France to wear gloves, which they had presumed to do in imitation of their ecclesiastical superiors.

The ancient custom of blessing gloves at the coronation of the kings of France is well known, and, according to Favin, is a relic of an old Eastern practice. Connected with this custom there is a remarkable story. Conradin, who, it will be remembered, was deprived of his crown and of his life by the usurper Manifroy, threw down from the scaffold a glove, as a token of his having been duly crowned. A knight quickly picked it up, and presented it some little time after to Peter, King of Arragon, who, in virtue of this consecrated glove, was afterwards crowned at Palermo.

Formerly, when a person was divested of his office on account of treachery, he was deprived of his gloves as a mark of degradation. Walsingham relates of the Earl of Carlisle, in the reign of Edward II., who was impeached of holding correspondence with the Scots, and condemned to die as a traitor in consequence, that "his spurs were cut off with a hatchet," and his "*gloves* and shoes were taken off."

The old custom of challenging a person to fight a duel by throwing down his glove, is still practised in Germany. All may not be aware, however, that the custom still survives at the coronation ceremony of the kings of England, by his majesty's champion entering Westminster Hall completely armed and mounted.

In the presence of royalty gloves are not worn, the act of taking the helmet off the head, and the gauntlets off the hands, being symbolical of peace.

A pair of white gloves are presented always by the sheriff to the judge whenever the session concludes without any one receiving the severest penalty of the law, and the assize then is called a "maiden assize."

The phrase, "right as my glove," says Sir Walter Scott, "comes from the custom of pledging a glove as the signal of irrefragable faith;" while "to bite one's glove" is the pledge of deadly hatred, as in Scott's "Lay of the Last Minstrel,"—

> "Stern Rutherford right little said,
> But bit his glove and shook his head."

SERMONS IN SHOES.

By Rev. THEODORE L. CUYLER.

THE witty and jovial Lord Peterborough, after visiting at the house of Fénélon, said to him at parting, "If I stay here much longer, I shall become a Christian in spite of myself." It was not any exhortation from the good Archbishop's lips that so impressed him, as the beauty of a cheerful and consistent life. Godly living is what this poor, wicked world is dying for the want of to-day. Pulpits only give forth their utterances for two or three hours on a single day in the week; they reach the limited number who come within their range. But Jesus Christ calls every converted soul into a ministry of the daily life, and bids them preach on seven days of every week. "Let your light shine;" "As ye go, preach;" "Herein is My Father glorified, that ye bear much fruit"—these are amongst His high commissions to every Christian.

Very few people possess the gift of rhetorical eloquence; but it is within the reach of every earnest follower of Jesus to rise to great eloquence in character and conduct. The best preaching, after all, is the preaching of the daily life. No sceptic ever attempts to refute that; it is self-evidencing. Richard Cecil confessed that when he tried in his early life to be a sceptic, his godly mother's life was too much for him. He afterwards added to this that "his first feelings of religion were made stronger by seeing that truly pious people possessed a genuine happiness that the things of this world could not give." Sometimes the pulpit discourse is not clear to the understanding, or impressive to the conscience. But the "living epistle" needs no translation or commentary; every child can understand it.

I have known a poor sick girl to become a "means of grace" to a whole family by her quiet patience, her serene trust, and her tranquil joy under severe suffering. Jesus Christ shone out through her lovely character as a night-lamp shines through a transparent porcelain vessel, and fills the apartment with a gentle radiance. A fearless Christian clerk of my acquaintance makes himself felt in the same way among his fellow-clerks in the store. Without any Pharisaic pretensions or assumptions, he gives them some admirable "object-teaching," almost every day, by his square, manly style of conscientious conduct.

John Angell James, of Birmingham, said in one of his lectures: "If I have a right to consider myself a Christian, if I have attained to any usefulness in the Church of Christ, I owe it in the way of instrumentality to the sight of a companion who slept in the same room with me. He bent his knees every night in prayer, and that roused my slumbering conscience, and sent an arrow to my heart; for although I had been religiously educated, I had neglected prayer, and cast off the fear of God. My conversion followed, and my preparation for the work of the ministry. Nearly half a century has rolled away since then, but that little chamber and that praying youth are still present to my imagination, and will never be forgotten, even amidst the splendours of heaven and throughout the ages of eternity."

This testimony from the author of the "Anxious Inquirer," and one of the foremost ministers of his day, is most impressive. Observe that it was not what his room-mate *said* to him, but simply what he *did*, that wrought so potent an influence. It was genuine *life-preaching*, the unconscious influence of a Christian act. This style of preaching is within the reach of all ages and all conditions of life. Every redeemed man, woman, and child is called of God to this ministry. What are a few thousand sermons delivered every Sabbath, in comparison with the unanswerable eloquence of millions of lives illustrating Christianity from Monday morning to Saturday night, all over the land? And the reason, we fear, why the Sabbath discourses do not make more converts is that there is such an enormous amount of anti-Christian preaching on the part of inconsistent professors.

What can I do for Christ? is a frequent question raised by young converts. The answer is, first of all, *live for Him.* Your conscientious observance of the Fourth Commandment is your sermon for the Sabbath; and your refusal to touch or offer the wine-glass is your temperance lecture; your strict honesty in the smallest item is your rebuke of trickery in trade; your open obedience to your Lord and Saviour is as eloquent in its way as Spurgeon's best discourse is of its kind.

Do you inquire, "Where is my field?" It is all field, wherever you go. Of course there are direct Christian activities that may open to you in mission-schools, prayer-meetings, Young Men's Christian Associations, and elsewhere. But do not compound with your Master for a few hours each week in such special efforts. Preach every day, everywhere, by letting Christ shine out of every chink and crevice of your character; so shall your whole life be full of light. The *sermons in shoes* are the sermons to convert an ungodly world.

FIFTY YEARS AGO.

"WE heard that there was to be a railroad exhibition near Prescot, so we drove there, and found the wonderful locomotive engine flying past. To *us*, who have no turn for these things, and therefore cannot, or do not, realise any description, the seeing of them comes with such novelty of force, and brings such a train of new thoughts. This thing is to convey carriages, people, goods—everything, from Liverpool to Manchester, thirty miles *in an hour*, ruining half the warehouses at Liverpool by making Manchester into a *seaport* town, the goods landed at the docks at Liverpool being henceforth transported at once into the warehouses at Manchester in as short a time as they now take in being carried from the lower to the upper part of the town. The effect of the velocity is, that when you stand on the railroad and watch the machine coming, it seems not to *approach*, but to expand into size and distinctness like the image in a phantasmagoria." Open carriages or cars are very inconvenient: "the noise is deafening, the motion jarring; and besides the Manchester atmosphere you carry with you, which there is no sea-breeze, as in a steamboat, to counteract, particles of iron dust get into your eyes, blind you for the time, and make your eyes weak for a day or two afterwards; however, in the street carriages these evils are avoided. Three open cars have cushions and divisions, and look very inviting empty, but when filled, you are brought into inevitable contact with much that is disagreeable. I was especially so, for I had an intolerably fat neighbour, who was up and down every minute, till at last one of the twenty-four inmates of the car told a story of a man who had been killed the previous Friday by standing up contrary to advice in that very carriage, and had tumbled backwards over the side."

Half a century! how long a space it is! Where shall we be at the end of the next fifty years?

RECIPES.

SHRIMPS ON TOAST.

SHELL a pint of shrimps; put the heads and shells into a saucepan, with a piece of butter or lard the size of a walnut, a blade of mace, a pinch of pepper, nutmeg and sugar, a small onion, ½ a pint of milk and ¼ pint of water; stew them for an hour or longer, strain off the liquor, which ought to be about ½ a pint. Put into the saucepan a piece of fat the size of a nut, stir in a tablespoonful of flour, pour the liquor over, stirring constantly; when it thickens, put in the shrimps, heat for a minute or two, and pour it over some toast, or mashed potato; serve very hot.

AN OMELET: TWENTY RECEIPTS IN ONE.

MIX up 4 tablespoonfuls of flour with a teaspoonful each of chopped onion and parsley, sugar and vinegar, ½ a teaspoonful each of salt, pepper, and chopped herbs, and a pinch of nutmeg. Beat up one egg and stir it in, then gradually beat in ½ a pint of milk or water. Pour it into a pan with some boiling lard or fat in it; when set, double it over, and serve very hot. You can fill the omelet with different ingredients, such as slices of cold potatoes fried in a little fat, in which you have mixed a little mustard, salt, sugar, and vinegar; minced cold meat, or fish heated with a little fat; a couple of bloaters, with heads cut off, nicely fried or boiled; chopped cabbage heated with butter; or indeed any little tastily flavoured material you have to spare. Certainly twenty varieties of this omelet can be made.

SEASONED COLD MEAT.

CUT a pound of cold meat into slices or pieces. Beat up an egg, and mix with it a tablespoonful of bread crumbs, a teaspoonful each of mustard (powder), flour, pepper, oil, vinegar, Yorkshire relish (or any other sauce), ½ a teaspoonful of salt, a pinch of cayenne pepper, if liked hot, and two tablespoonfuls of milk (or water). Dip each piece of meat into this mixture, and put them into the dish they are to be served in; cook in the oven or before the fire, till the batter is set. Serve with mashed potatoes. 20 minutes to ¾ of an hour will generally be enough to cook it. Slices of potatoes or any other vegetables are good dipped in this mixture, and either fried or cooked in the oven.

PAPER-MAKING IN KENT.

By Henry H. Bourn.

IT is admitted by all who have studied the subject, that the Chinese were the inventors or discoverers of paper, some centuries before the Christian era. To this day our finest papers come from China, and other countries in the East. From the Chinese, through the Arabians, the hand process of paper-making found its way into Europe about the eighth century. The earliest paper, both in Egypt and Arabia, was made from the pith of plants being cut into thin slices, and stitched together. That made in China was in part manufactured from silk. But it was the Egyptian papyrus which gave us our word paper. The papyrus is a rush, which grows in still pools to the height of ten or even twenty feet, and is at times as thick as a man's arm, below the surface of the water. Paper was prepared from the bark of the stem, by dividing it into thin plates, each of them being as large as the plant would admit. Of these the sheets of paper were composed. After being separated from the reed, the pieces were trimmed, so that they might fit closely together. In this state they were moistened by water from the Nile, and, while wet, subjected to pressure, which caused the overlapping edges to adhere. They were then exposed to the rays of the sun for drying.

Paper made from cotton, entirely superseded the papyrus in course of time, on account of its being more durable, and better suited for the various purposes to which paper is ordinarily applied. The variety of fibre which can be used in the manufacture of paper, in addition to rags and old paper, includes cotton, flax, hemp, esparto grass, jute, bean-stalks, cocoa-nut fibre, clover, hay, straw, heath, hops, husks of grain, leaves, maize, moss, nettles, pea-stalks, sea-weeds, fresh-water weeds, thistles, wood, tan, wool, leather, peat, and dust.

As the fibres best suited for paper-making are those which have the largest amount of fibrous. material, "cellulose," many of these cannot be profitably used for that purpose. Cotton, consisting as it does of almost pure "cellulose," is the favourite. The manufacture of paper from cotton can be traced as far back as the eighth century.

The first paper-mill in England is supposed to have been erected at Hertford, before the year 1470. The first in Kent was one erected at Dartford on the river Darent, by Sir John Spitman, in 1588. Since then many have been built, so that at the present time several are to be found at Maidstone, while a considerable number may be met with in different parts of the country.

In Kent, paper of all classes is produced in immense quantities, from the celebrated Whatman's paper, to the flimsiest description used for papering cottages. In some mills the turn out is as much as fifty tons weekly. There are many different kinds of rags available for some classes of paper. The white cuttings from the shirt-makers are in requisition for bank-notes, while the cotton ends from the bleaching works in Lancashire are valuable for the best writing paper. In coloured rags there is considerable waste. The "warranted fast colours," so desirable to the wearers, are objections to the paper-maker, in consequence of a probable deterioration of fibre from the dyes which have been used, and involving a still further injury by the chloride of lime necessary to remove the colour.

The process of making paper from rags begins in the cutting and sorting rooms, where large numbers of women and girls are actively employed in cutting the rags into pieces about the size of a hand, clearing them of such things as buttons and dirt, and placing the different qualities into their respective receptacles. The rags are next taken to the dusters. The dusting machines are wire cylinders, not unlike immense squirrel cages, which revolve with great speed in enclosed wooden chests. After the dusting, they are again examined and sorted with great care, and then go back again to the dusting machines. The next process is that of boiling, when they are put into a large elliptical boiler with a strong ley; the whole machine revolving slowly on an axis, so that all the rags get turned over thoroughly, and are thus subjected to chemical action in due course. Some of these revolving boilers will hold a ton of rags.

The rags are next washed in a machine which has two sets of teeth. In the centre of an elongated cistern, a serrated roller revolves in close juxtaposition with the teeth of a horizontal bar, fixed at the base of the cistern. These can be adjusted to any degree of fineness, and the rags made to pass through while being thoroughly washed. The rags, having by this lost their original form and texture, are in the next place passed on to a large circular receiver in the next compartment. Having now been "broken," and become "half stuff," they are passed on to the bleachers.

For some class of papers, chlorine gas is used for bleaching purposes, but for the better class, dilute chloride of lime is preferred. When quite ready, the "stuff" has to be rewashed, so as to get rid of all the chlorine, unless it is neutralized by the use of a sulphite or hyposulphite of soda.

Two or three other processes follow, such as "beating," and the adding of china clay or pearl white. Whatman's paper, prepared for artists, does not pass through the bleaching process.

The "stuff" is next passed through oscillating strainers as pulp into vats, where it is kept in motion by agitators.

Up to the formation of the pulp, the process of paper-making is the same, whether it is to be converted into paper by hand or machinery. We will now, as briefly as possible, describe the process of making paper by hand. One of two men is employed in dipping a kind of frame into a vat. The workman who holds the frame in his hand is called a "vatman." The other man, who takes the mould from the "vatman" for the purpose of placing the sheet between two pieces of porous flannel or felt, is called a "coucher." The "mould" is a square frame or shallow box, covered at the top with wire cloth, which varies in proportion to the fineness of the paper and the nature of the pulp.

Water-mark designs are woven on the wire cloth of the mould. The frame, which has no wire stretched across it, is called a "deckle." The "vatman" places this on the "mould" when he dips it into the vat, for the purpose of retaining the pulp on the wire cloth of the "mould." The superfluous pulp flows over on all sides, and the quantity thought to be sufficient, which remains, is shaken gently from the right to the left, and up and down, until it is equally extended over the whole surface of the mould. The "vatman" continues to dip his "mould," and the "coucher" to place sheets of paper between pieces of felt, until a pile is made consisting of several quires; the heap is then removed, and subjected to a powerful pressure. The sheets, having acquired sufficient consistency, are next pressed by themselves, after the felt has been removed. They are then separated and dried, after which they are sized by dipping in a tub of prepared gelatine, again dried and pressed, and made up into quires and reams.

Machine-made paper is produced in the following manner: After leaving the vat previously mentioned, the pulp flows upon a narrow wire frame at the upper part of the machine. This frame has a motion not unlike that of the "mould" in the hands of the "vatman." Having passed through the "sifter," the pulp flows onward to a ledge, over which it flows in a gentle stream, like a sheet of water over a smooth dam; it is then caught upon a plane of five or six feet in length, and spread evenly over the entire surface. This plane consists of an endless wire cloth, and is constantly moving round properly adjusted rollers. It also has a shaking motion from side to side.

If we touch the pulp at the end of the wire plane upon which it first descends, we find it fluid; if we touch it at the other end, we find it is still soft, but at the same time so completely formed, that the touch will leave a hole, which we can trace forward till the paper is completely made. The pulp is kept to the width required, and prevented from falling over, by straps which are constantly on the move.

After the paper has reached the wheels upon which the straps terminate, it is sufficiently formed not to require any further boundary to define its size. As the paper moves forward, a wire cylinder presses upon its surface. Before it leaves the plane of wire, another roller, which is covered with felt, and upon which a stream of cold water is flowing, subjects it to pressure.

The paper has now left the region of wire, and entered that of cloth. A tight surface of flannel or felt moves onward with the same regular march as the wire; like that, the felt is called endless, because it is united at the ends, like a jack towel. The paper travels up an inclined plane on this stretched flannel. It is next seized between two rollers, and has by this time left the region of cloth for that of heat. The paper is now quite formed, but it is fragile and damp. From the last pair of cloth rollers it is received by a small roller, and guided by it over the polished surface of a large cylinder, which is heated; it then passes on to another cylinder, which is much larger and hotter than the first. Sometimes it will pass over and under as many as six or eight cylinders.

Having been properly pressed and dried, the paper is seized by a roller and passed on to the reel, from which it is cut into suitable lengths by a cutting machine, which may be either connected with the paper-making machine, or be entirely distinct. From the beginning of the process, when the pulp runs from the vat, till the paper is formed at the other end of the machine, and fit for use, less than two minutes is occupied.

In some mills, even where machinery is employed, the old process of tub-sizing is carried out; sheet by sheet being soaked in size made of gelatine and alum, then dried, and afterwards passed between powerful cylinders. In machine-sizing, the web of paper is run through a vat of size, after leaving the first set of driers. It then passes through squeezing rollers, which press the size into the pores, and get rid of the excess. After this it passes on to the other cylinders.

In some mills, where esparto grass and straw are utilised, as many as thirty reels of paper, each being forty inches broad, three and a half miles in length, and a quarter of a ton in weight, are turned out every twenty-four hours. Enormous as this output is, it would not nearly suffice to meet the demands of one of the London daily newspapers.

BEHIND THE TIMES.

ONE has to go to other cities in order to thoroughly appreciate the revolution brought about by the use of the telephone. In many cities in America, all the well-to-do people have telephones in their dwellings, and the useful instruments are made to serve instead of letters, visits, and the employment of messengers. The lady of the house, or any of the family, use them quite as much in the routine of household life as our city business men do.

After breakfast in the morning, a lady who has a telephone is apt to closet herself with it for twenty minutes or half an hour, during which time she finds out what the grocer has to offer, sends her orders, connects with the butcher, and tells him what she wants; rings up her dressmaker, and has a chat over trimmings, etc., etc.; and then calls upon one after another in her circle of lady friends, talks with each, and all precisely as she would if she were making a social round later in the day.

Our English town resident has scarcely any conception of the usefulness of a telephone as it is employed in other cities. Berlin even has ten thousand houses, all connected, which is always increasing in number. We are behind the times in the use of this simple little instrument.

CAN YOU READ?

WE read with great interest an article which appeared in the *Queen* on what was rightly called "the art of reading," —that is, reading aloud. An art it undoubtedly is, and this is why it is so rare an accomplishment. People think that reading comes by nature, that it demands no training, and is worth no exertion, whereas it can be cultivated by practice, and requires the most exact care and attention. Reading is not a showy acquirement, and this perhaps accounts for the little favour in which it is held. A girl who plays the piano moderately well, giggles, and stammers, and stutters over anything she may be called upon to read out at the breakfast-table, or in the evening in the drawing-room. The fact is, she has never practised reading, probably, since she left school, and she is afraid at the very sound of her own voice. Now, although not showy, reading is one of the most indispensable accomplishments, for it comes into play when music and other fine arts are not admissible. Practice, time, and difference in expression, are as important in reading as in playing on the piano. We wish all viewed reading in this light.

THERE are two thousand Protestant girls in convent schools in the Canadian province of Ontario. This is rousing Protestants to the importance of establishing good schools for girls.

MRS. J. H. MITCHELL, of Detroit, has invented the most perfect refrigerator known to butchers and grocers. She was unfortunate, however, in selling her design for a mere song.

A MRS. O'NEILL, of Bar Harbour, U.S.A., is accredited with making £4,000 in the laundry business, at that point, during the past four summers. She enjoys a monopoly of the trade.

IT appears that the number of University students in Germany, which twenty years ago was 13,400, had risen to 17,800 ten years ago, and is now 28,000; during the last five years the number of students has increased 26 per cent., while the increase of population was only 5 per cent.

THE Bengal Christian Alliance is an association just formed for Bengali Christian young men.

SENDING A DOG BY TELEGRAPH.

A TELEGRAPH clerk from Texas gives some amusing experiences of conversations at his desk, some as enjoyable as others were harassing. The most ludicrous, we think, was with an old gentleman who wanted to send his dog on the wires.

He came in hurriedly, and after gazing at a large clock, that was placed where all entering the office could see it, he asked,—

"What time is it?"

"Half-past eleven. Can't you see the clock?"

"Yes. Is it right?"

"Yes."

"Would I have time to telegraph a dog to Squire Johnson, at Madison, before twelve?"

"Telegraph a dog?"

"Yes, send a dog to Squire Johnson?"

"Can't send him; he would be too bulky a despatch."

"A what?"

"I say we don't send dogs by telegraph."

"Yes, I guess you do. Squire——"

"Why, sir, you're off your head. Who is Squire Johnson?"

"He's one of the cleverest chaps you ever saw, young man. He lives down at Madison, and when he was up not long 'go he bought a greyhound from me, an' I was to take it down to-day by twelve, or telegraph him. I couldn't leave my old lady—you know she's down with the rheumatism—so I thought I would come down and telegraph him."

"Oh, yes, I understand you now; you want to telegraph the Squire that you can't bring the dog?"

"No, I want to telegraph the dog to the Squire."

"Didn't I tell you that I couldn't telegraph a dog?"

"Yes; but, young man, don't you think you would have time to get him down there by twelve? I'm needing the money for the dog badly, an' the Squire——"

"I say, old man, I wish you would get through with the Squire. I've got other business to attend to."

"Well, when do you think you can send the dog down to the Squire? Seems like you ought to know, young man, bein' as it is your business; but the Squire's mighty peart, an' he said to telegraph him."

We concluded that our language was a little faulty—he that the wires were.

AN EVIL SILENCE.

THERE is an evil silence as well as an evil speaking. While it is our duty not to speak evil of others, it is sometimes our duty not to be silent about the evil in others; for there is a wide difference between evil-speaking and a dutiful speaking of evil. Many people seem to think that the highest compliment they can pay to a dead friend is to say that "he never spoke against anybody." But men sometimes are wrongly silent concerning the evil in others. He who keeps silent about evil when it is his duty to be outspoken against it, is himself an evil-speaker.

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow," "Corbiestanes," "Our Navvies," etc., etc.

CHAPTER XVIII.

"BONNIE SCOTLAND."

THOUGH in Houghrigg September was a hot month, heavy vapours of the morning clearing off and giving place to a burning noon-tide, at Inverben nature took many tints of crimson and yellow, the moors glowed and burnt, and the kingly year gathered his robes about him to die right royally.

"There is a thought of frost in the air this morning," said the earl, rubbing his hands and turning genially to his guests.

"We have had a really wonderful summer," remarked Major Grahame. "There were some days last month in which I felt the heat more than I have ever done in the Punjab."

"Ah!" said a young M.P., "and we have had a warm time in the House."

"Suppose so," remarked Lord Markham, strolling into the room.

"This is a fearful look-out for the grouse next week," laughed Major Grahame.

"But here come the ladies; so now to business!" cried Lord Markham. "Who takes porridge? Here, Grahame, give that to my father, will you? He's always a Scotchman at Inverben. I wonder he does not make the girls wear kilts. I say, that would not be a bad idea, if you came out with us as Miss Tenby does."

"How dare you compare your sisters with that disgusting woman, Markham!" cried Lady Charlotte.

"Gently, fair sis; she is not at all disgusting; she is a 'very fine figure of a woman.' She is a capital shot, and can jump a five or six feet burn better than I can. She takes a fifteen yards' spin for it, and clears it in fine form."

"I don't believe you. No woman can take pleasure in killing things; and as to the jumping, it is a physical impossibility in petticoats," chimed in Lady Susan.

"My dear Susan, confine your remarks to matters you understand," said Lord Markham, with mock re-

"'Who's going to earn sixpence?'"

proof. "Miss Tenby does her work in a workman—no, work-woman-like manner. She carries a knife, just like McInnes there, in her belt; and she *can* jump burns, for I've seen her."

"It is shameful and shameless!"

"What do you term shameful, and who is shameless, Susie?"

"The thing is shameful, the woman is shameless, and so are you for speaking so of a lady—no, not a lady; no lady could do so."

"I agree with you for the first time in my existence, Lady Susan. Done your porridge like a good little girl; now, what will you have next?" lazily taking away his sister's plate, and proceeding to the sideboard. "Partridge, ham, tongue, potted things, salmon, kidneys—which?"

"I suppose you are one of the party for the Lochabye forest, Mr. Hardman?"

"Is every one going there?"

"No, some of our party are going across to the island."

"Which are your daughters going to honour at luncheon time?"

"Oh," said Lady Azerley, "they must divide; Charlotte and Mrs. Grahame, and Margery and Flora McInnes intend to drive out to Lochabye about eleven. The boat party must go at once, when you gentlemen do."

"Thank you," returned Ralph Hardman.

He was waiting with the other gentlemen on the shore, when five bright girls, under the chaperonage of Mrs. McInnes, appeared. Lady Susan coloured, and, as Hardman assisted her into the gig, could not forbear asking,—

"How is it that you are here, Mr. Hardman? I understood that you had quite fixed to go to the forest last night."

"So I did, but this morning I found *you* were coming here."

"I do not suppose we shall see much of each other; I am coming, not to deerstalk, but to sketch."

And Lady Susan turned from Ralph, and fell into a conversation with Major Grahame, who was a great ally of hers.

Hardman was conscious that he had received a decided snub, and was for the moment depressed; but his natural light-heartedness, the crispness of the waves as they came curling against the side of the boat, the blueness of the sky, the freshness of the breeze, all combined to restore his cheerfulness; and when, with alacrity, he jumped ashore, he felt himself again. He had a strong desire to possess himself of Lady Susan's sketching things, and to hand his gun to a gillie; but for very shame he could not do this.

"I'm bound to wait until after luncheon, but I'll not shoot a shot after then," he said to himself.

There were some ponies for the ladies, and a light cart for the luncheon, waiting in the hamlet—if such it might be called; and, while her friends wandered about, Lady Susan paid visits to several of the cottages. She was known in them all, but this year she had spent every hour she could secure amongst her father's people; for she said to herself, "This may be my last chance for a long time. John perhaps will not be able to leave his work; and where he is I shall be. I do not suppose he will remain in Houghrigg. He told me that in two or three years he hoped to be back again in a large town or a city. How differently he has made me see everything! I used to think that to serve God was to do Church work, to embroider altar cloths and super frontals, to send flowers and go to early celebration, and to as many services as I could. He has made me look away to the spirit of it all—the life. 'The temple of God are ye,' he said, when I spoke of decorating the chancel roof; and yet I never hear such reverend services as in Houghrigg. One cannot but feel that one has got through the earthly clothing of worship, and stands face to face with the spiritual body upon which the other is modelled. I want to be free—free to work hard, to live humbly, to be Christlike. Here every edge is toned down; one is kept wrapt up in cotton wool; one can get a *grasp* on nothing. I wonder why I did not hear from John this morning. Oh! by the bye, there is no post from the village on Sunday; and perhaps he may be coming;" and at the thought the girl blushed happily, and urged her pony into a trot. "Perhaps *he* may be there when we return. He cannot arrive at the earliest until dinner-time."

No happier girl was in Scotland that day than Lady Susan Stopham; but her sketches were not a great success, and Mrs. McInnes declared:—

"My dear! she has certainly seen a wraith, or is she hungry for luncheon, or the gentlemen's society? Which think ye? At all events it is not for mine, for hardly a word will she speak."

"Let us race ponies," cried Lady Di, "to the foot of the hill, where the cart stands."

And away the girls tore, the wind blowing in their faces, and their eyes sparkling. From the edge above, the sportsmen saw them, and hurried down to act as esquires.

Then Hardman had his opportunity. He secured Lady Susan's sketching bag, and, when luncheon was over, declared his intention of remaining with the ladies. He was not singular in his decision, for Lord Markham, partly from laziness, and partly because he found a more interesting occupation in talking with one of his mother's guests, a pretty little heiress who had only arrived two days ago, also remained.

"We will go down to the shore, and I will act local guide. We boast some interesting caves here, Miss Campbell; they are as dark as pitch."

"Then how can you show us them?"

"Oh, pitch is only a flower of expression; besides that, we must have some torches. Old Colin has them close by."

"How jolly! Do let us be off, Lord Markham. But what are you and Mr. Hardman going to do for ponies?"

"Oh, we will walk over the mountain and meet you. We shall be there before you."

"I'm sure you won't," contradicted Miss Campbell, gazing up at the mountain brow. "It is awfully high—quite too high for walking."

"It is pretty tall, as the Yankees say, but I think we can do it."

So the luncheon party was broken up, the ponies clattered away over the stony road, and the young men, at a round pace, sped across the moorland.

"Wrong! Lord Markham. We have been here a good five minutes."

"You have galloped. It is unfair."

"You have run. We saw you doing it as you came down there."

"Nonsense!"

"I appeal to the others. Mrs. McInnes, and all four of you, now did he not run? Why, where is Susan?"

Hardman had asked himself the same question several minutes earlier.

"She was with us before we passed that last farm cottage."

"Oh, Susan is all right; she has seen the caves many times. We will tell one of the men to look out for her, and inform her of our destination. We really have no time to spare. We must row to that promontory, and it will take fully twenty minutes to do so."

"May the Fates forfend if we do not find a lot of tourists in the caves before us. They cross in shoals, sometimes, from Currar. I thought of asking my father to prosecute Cook; he has put them into his Excursionist."

"I will wait for Lady Susan."

"Oh, no, Mr. Hardman, come with us. Susan is so good-natured," cried Lady Di, "she won't mind in the least; besides, she will be perfectly happy with old Peggy. I daresay she is with her now."

Lord Markham had received a little hint from his lady mother. She had said,—

"I am pleased Mr. Hardman is going to the island."

"Why?"

"Susan is going also."

And Lord Markham understood.

"Thanks, old fellow, if you really don't mind waiting for us, that will be best. Come away, all of you. Here, bring that plank for the ladies. Hold her still, you duffer. Take my hand, Mrs. McInnes," and so on, and soon they were off. The boat went skimming over the water, the sail was up, gulls were swooping and dipping. The flecked clouds touched, and then clouded for a moment the big brow of Ben Irrick, and Hardman waited on the shore.

"What graceful lines that boat has. I'll buy one, some day; it might be useful in mission work in some of our ports, or even out to the deep sea fisheries. She is not so very small for even that. I'll do lots of things like that; but, then, as Jack Burleigh so politely told me, I want judgment. Dear old chap, he never spoke a truer word. Now I will find my little lady. I have never had her five minutes since she refused me. The Earl and Lady Azerley are on my side. Surely her mother ought to know; and she says it is only a little shyness, and that as yet the idea is new to her. Well, it shall not be my fault if she does not become accustomed to the situation."

Ralph Hardman waited patiently for what appeared to him a weary long time, and still no Lady Susan made her appearance.

"Where does old Peggy live?" he asked of a red-headed laddie, clothed in a ragged shirt and very short pair of trousers.

"Heigh, mon?" And then a rapid chatter with several more coquins in good Gaelic.

Hardman produced sixpence, and repeated "Old Peggy," until he was tired. The crowd of small boys were most eager to earn the coin, but could not for the life of them make out the gentleman's meaning.

"Mon" seemed the only English word possessed by the company. At length the red-headed boy, who was its proprietor,

turned and bounded over the shingle, threw his head back, clasped his fists to his side, and ran to the hamlet, followed, with a wild cry, by his comrades, but he outdistanced them all.

Ralph stood bewildered at this change of front; but he had not long to wonder. The boy was bringing a big girl back with him, talking to her rapidly, and pointing to the Englishman on the shore.

"Tid ye want me?" she asked.

"No, I want old Peggy."

"Te old oman with te lame leg?"

"Yes, old Peggy. Lady Susan is with her."

"Yiss, te ladie; yiss!"

And the girl, seizing the sixpence, bowed and beckoned. Some coppers made the other children glad, and another sixpence the shock-headed boy triumphant.

In and out behind the buildings of the hamlet the whole company went. At length a full stop was made before a poor little cottage. It was cleaner than most, though it had not, as any English one would have had, a geranium or fuchsia in the window. The door stood open, and Lady Susan was sitting with her back to it.

Taking his courage in his hands, Ralph Hardman knocked. The girl turned with a start. Suddenly it flashed through her mind, "Was it John?" The next moment she felt how stupid she had been, and yet she could not help feeling disappointed. Ralph saw the flash of joy, and then the trouble which chased it from her eyes.

"I beg your pardon, Lady Susan," he said humbly; "I only came to tell you all the others have gone to the caves, and will not be back for a couple of hours."

The girl rose reluctantly. "Good-bye, Peggy," she said, and held out her hand.

"God in heaven bless your bonnie face, my ladie, wha ivaer sees it kens you're one o' His aine. Gude-bye, my bairn."

"I have known Peggy all my life; she cannot read, but she knows the Gospels almost by heart. If I ever am in trouble, or wicked, I come to old Peggy."

"I cannot fancy you ever feeling either."

"Oh, but I do."

"Have you done so to-day?"

"No; I came because——" and she suddenly stopped, but her glowing face said more clearly than words,—"because I am so happy."

Something in that joyous presence made Ralph's heart sink.

They wandered about on the shore. Lady Susan made a sketch of the hamlet, and made it well.

"I wonder if I might venture to beg that painting," said Ralph. "I should prize it very highly."

A troubled look came into her clear eyes.

"I will give you another, a better one than this, which I have at home. By the bye, have you seen my portfolio? I have a number in it."

"No; will you show me them to-night?"

"Yes, if——"

"If what? Please don't deny me such a pleasure; do not say 'if.'"

"I will not repeat it; I was only going to add I *might* be prevented."

What made her so bright as she said so? Hardman tortured himself to imagine. He grew silent, a rare event with him, yet Lady Susan did not apparently notice it. Something in her manner chilled him, made him more hopeless than he had ever felt before, and yet she was as courteous, as friendly as ever. Again and again he struggled with his reserve, and tried to overcome it, and once more urge his suit; but he found it an impossibility.

The boat came in sight, the party returned from the mountains, they were amidst a number of others, and his chance, he bitterly told himself, was gone. Ralph Hardman tried to be patient, but patience was a new lesson to him, and new lessons are not learnt in a hurry.

CHAPTER XIX.

"THE ANGEL OF DEATH SPREADS HIS WING ON THE BLAST."

"I DON'T know whatever's come to me, father. I've got such a headache, and I have shivers down my back; I feel as if I couldn't even wash the children. Mary, you must do the little ones."

"Yes, mother, but won't you go to bed?"

"Well, child, I will."

"But don't you want to hear about what I've done?" asked Bradley helplessly. "You were thinking of nought else this morning; nor, for the matter of that, for weeks past."

"I feel like dazed, I can't think; but tell me, father, I do want to hear. Run out, children; go into t' yard and play."

"Well, wife, it's no use—father, nor uncle, won't help no more."

"They must," cried Mrs. Bradley, looking her old self, and speaking eagerly; "they must, or we shall have to go into t' street."

"They won't, I tell you—not a penny."

"Did you tell 'em how slack time's been, and that there was a good order come in, and if you could have a bit of brass *now*, we could soon pay 'em back?"

"Yes, I told 'em it all, but they said—and true too—we'd been at that game afore. I told 'em we'd been thrown again with Martha dying, but it was no good."

"Then what did they say we were to do, and with all these children too?"

"Why, that I mun get a statal man's place in the brickyards at Castleborough."

"What!" said Mrs. Bradley, "when I put all the bit of wage I've saved into this place, and done all I could to keep our heads up?"

"Yes," said Bradley, who sat a lump figure with his head on his hands, nearly crying, "yes, that's about th' size on it. I see nought else for it. We must sell up."

"I've gone pined scores of times, and I've kept the children as short as ever I could of victuals and clothes, to keep our furniture and to look respectable; it's been hard work, but I've done it; and now, are our bits of sticks to go, after all these years? Nay, father, I can't do it."

"My lass, we *must*," said Bradley; and then, being miserable, he went out into the back yard and vented his anger on the boys. Soon Mrs. Bradley heard a howl of mingled anger and pain, and rose to settle matters as usual, but she felt so faint, she dragged herself instead, wearily to her bed, and, dressed as she was, threw herself upon it.

She could not rest; in a confused way she heard the noise of the children downstairs, and the little ones crying as Mary washed them; she saw her struggle upstairs with each of the three youngest, and kissed them in an indifferent manner before they were laid in the bed beside her own. She said "yes," when Mary asked if she was to boil father two of the eggs.

"There will be eight left for to-morrow, mother; that's one a-piece for dinner, all but for me and you, mother, and us can do without, can't us?"

Presently, a little later, the child returned.

"Mother, there's only better nor half a big loaf left. Must I go to Mrs. Pattison's and get one to last us over to-morrow?"

"No, father has no money," replied her mother; "go away, child, and bring me a drink of water."

She was becoming more and more dazed; she knew her heart was broken, that was all; and what was this strange jangling of bells in her ears? and the loud or low, rapid or slow, eager or indifferent, sound of voices talking, ceaselessly talking, but with no meaning in their discourse? Now and again she was roused out of this whirl by words in her husband's or Mary's tones asking a question, or speaking to her. Then her senses came back, and she answered them a word or two; but the coma rapidly increased, and soon she did not know the night was passing, and that in the room with her, four children were sleeping quietly, and Bradley sitting by her side in helpless misery. She did not know anything at all, no breaks of intelligence lighted up the blank when the distant church bells rang out for service.

Dick had been sent for the doctor; he ran quickly enough to his house in a village four miles from the brickfields, and found him at breakfast. The boy was very hungry, for he had tasted no food that day, but he had been too well brought up to ask for even a piece of bread. He told his errand in a straightforward, and perhaps somewhat independent manner. The doctor remembered very distinctly that he had not been paid his account for medical attendance on Martha. Asking a few careless questions, he made up his mind that nothing much was wrong, and finally sent Dick off with the message that he thought he might be passing next day, and if so, he would look in, but he could not come then.

"Mother's very bad, sir," said Dick, swallowing down a lump in his throat. "Won't you come back now wi' me?"

"No, no! I cannot. There, be off. Tell her to drink some warm tea; or stay, you can carry these pills back with you, and tell her to take two."

Feeling he had done quite a meritorious action, the doctor went back to his stewed kidneys, and perusal of the *Lancet*, and Dick, somewhat cheered, strolled homewards. He heard the bells, and knew that he should be too late for Sunday School. His unusual freedom was a delightful fact; to be wandering about at his own sweet will, on a Sunday morning, was a privilege to be appreciated; so, his fears being relieved by the rhubarb pills in his pocket, he did not exactly hurry home, but spent some pleasant moments in watching a water rat swim over a stream, and lay in wait with a stone in his hand for its return.

The bells had quite ceased when he reached the brickfields cottage. He saw his father standing at the door.

"Where's the doctor?" he called out, as soon as the boy came near enough.

"He'll come to-morrow, and he's sent some pills."

Bradley looked at him.

"He won't come!" he said slowly; "he won't come! That's because we haven't paid him for Patty. It's murder! She'll die!"

"What, mother?" cried Dick, bursting into sobs.

"Yes. Stop that, my lad! She's only a poor woman, but she's all we've got; but nobody cares for that."

"Nobody? Yes, father, Mr. Bur'y does," put in little Mary.

"Not he; it's the black fever, worst sort, she's got; there's never a soul will come nigh us, you'll see."

"Dick, take baby"; and the little girl darted out of the house, and ran away towards Houghrigg, the sun shining on her bare golden head.

Bradley turned and went despondently up to his wife. He stood by her side. They had not been able to undress her, and she lay uncomfortably in her gown, only her shoes were drawn off. Her open mouth was quite black, her skin swollen and purple, her eyes open but senseless; she was sinking down in the bed, and plucking with feeble moans at the bedclothes with her fingers.

There was a little milk in a cup with which Mary had been moistening her mother's lips, and the poor man raised his wife's head tenderly, and tried to make her swallow a few drops, but in vain. He spoke to her, for her strange insensibility frightened him more than her delirious mutterings of the previous night had done, but he could not gain any response, so he brought the baby up, and the child patted her face and cried "Mam, mam;" but the fixed stare did not relax, nor the strange breathing calm.

All the strength of his life was dying out before him. He had always looked to his wife for direction; if she went, he would have no one to lean upon. So Bradley sat by the bed-side and cried.

Dick, having satisfied his hunger with a thick piece of bread, and having sucked one of the eggs to his brothers' admiration, proceeded with them to the back yard, and finding the wood-shed door locked, immediately guessed there was something therein being kept from them. Jerry had seen mother and the man from Mr. Boothroyd's carry two bundles in last night, and mother had said they should see what was in them on Monday. All the six children were now filled with curiosity, but they would never have dared, even headed by Dick, to unlock the door, though Job, the second boy, younger than Dick, ran into the house and found the key, had not at this moment their eldest brother, Sam, who was in their eyes quite grown up, being fifteen years old, and out in place at a farm near, appeared on the scene, as he usually did on a Sabbath morning.

The children informed him of his mother's illness, but did not paint it in sufficiently dark colours to alarm him. They were so much more interested in the bundles in the wood-shed. Sam belonged to a family who had no secrets. He knew all about his father's struggles, and the frequent applications for help which he had carried to his grandfather in Castleborough made him understand that any gift was a piece of good luck. So he was as eager as the younger ones to know what his mother had brought home on Saturday. He speedily, with his brothers' help, pushed the bundles into the yard, and they were all engaged in examining the contents with such interest, that they never knew of the advent of Mr. Burleigh, until Bob Chatteris stood amongst them.

"What have you got there?"

"A lot of things mother brought home on Saturday. We don't know where she lighted on 'em. Most like grandfather sent 'em."

"Well, what have you to do wi' 'em? Why couldn't you let them 'bide where she had put 'em?"

"We wanted to look at 'em."

"Well, shift 'em back again. Here, Sam, I'll do it. When your mother's better, she can side 'em herself. Now, when do you children get your dinner? I suppose now mother's ill, Mary makes it ready for you; but she's been away."

The children looked at each other. Sam said uncomfortably,—

"I'll step up and see mother."

Dick stood his ground firmly, and gave Jerry a warning glance.

"Mother had no time to make it ready yesterday."

But Job, a fat boy of eight, and greedy as all small boys are, called out,—

"There's only a bit of bread."

"Come, my man, you're the chap for me; show me it;" and off Chatteris went, holding the child's hand.

He soon came back, looking grave: "Dick and Jerry, go to my lodge; and tell my landlady to send me by you all my week's prog that I got in last night. And see here, take her this—pulling out all the remains of his week's wages—and ask her to make a baking of bread with it to-morrow, and send us some tea and butter, and a bit of bacon with it, and I'll come and fetch it to-morrow afternoon."

The boys did not need a second bidding.

"We ought to have a woman here," thought Bob. "I'll go this afternoon and see if I can get one."

"Chatteris!" he heard.

"Yes, sir."

"Come up here, will you, and help us?"

Bob went into the bedroom, and started. One glance towards the bed on which Mrs. Bradley lay told him the truth. The Vicar had the baby in his arms, and little Mary was holding her father's hand; she was not crying, but the terrified gleam had returned to her eyes with which she had watched her twin sister die.

"Take this child and Mary out into the garden, Bob, and then return, will you? Here, we must move this bed; is there any out-house where we could put it, where the children could sleep for a few nights?"

"Yes, sir; I think there is—a sort of old office; anyhow, it's been used for that when this was a bigger concern."

So they set to work. Bob was everywhere—feeding the children, arranging on the office floor some boards raised on benches, and making the bed up there. Later on the Vicar came to him.

"Keep the children away from their mother—nothing can be done for her—as much as you can; she is sinking rapidly."

At four o'clock, as Bob was boiling the kettle for tea, he heard a few hasty steps overhead, and then a bitter cry, then the Vicar's voice, then a pause and stumbling steps on the stairs, and saw him lead Bradley down, and seat him by the fire.

"Give him a cup of tea, Chatteris. I am going for some women and a coffin."

Bradley sat crying and moaning in a chair, and Chatteris was alone with him and that awful, quiet presence upstairs.

"Let me see," thought John Burleigh, "Amos Rushton is sure to be in the chapel; I must go and fetch him out."

The Vicar moved forwards; not a moment was to be lost. How this awful infection had been conveyed he had no idea; but here the pestilence was. Where would it end? How could it be checked? He thought of the two bedrooms without fireplaces, with the windows painted down, and the closely crowded beds; and he could not but fear the children might already have caught the infection. He questioned within himself if he could remove them all to his own house; but then, if they had already contracted the germs of disease, he must not bring them into the village. Yes, there, on that lonely battlefield, the foe must be met.

The first thing must be to get the poor woman buried, and then—well, he and Bob must do the best, by God's help, they could; but what an assistance it would be if a woman were with them.

Thinking this, and hurrying on, he presently reached the square Wesleyan Chapel at the extreme end of the village. He heard the preacher's rather loud voice, and paused, unwilling to disturb his listeners by entering; but one thought of the dead, terrible face he had left behind him, drove him forward.

As he entered, the minister came to a dead stop, and Mrs. Pattison awoke from her dose with a start at the unwonted silence. The Vicar touched the village carpenter on the shoulder, and whispered a word in his ear; the man rose, and the two left the chapel together. But the meeting was strangely disturbed; and the worshippers, as they went home, all somehow knew Mrs. Bradley was dead, and that the Vicar had called Amos out to make the coffin. A horror of fright fell on the village. The visitation of seven years ago was nothing to this; no one then had died until weeks of illness had elapsed. This time it seemed you might be taken ill one day and buried the next. Every heart quaked. From door to door the Vicar went, asking if any woman would come to help. Everywhere he met with terrified refusals; and the carpenter, in his shop, worked on doggedly. All the women who usually went out to nurse had refused their help, and the Vicar was turning towards his own house, when Mrs. Jowett ran after him.

"I will come and lay her out, and welcome, sir."

"I cannot give you leave, you have so full a house; you might bring the infection back."

"Then, sir, I must come without your leave."

"Wait a moment, I am going to ask my housekeeper."

Martha, in a hard, cold way, said she "was willing; you could only die once," made up a bundle, and then brought in tea for her master, and, after a bath and changing his clothes, the Vicar went to the evening service at church.

SOMETHING ABOUT SPIDERS.

By the Rev. J. G. Wood,

Author of "Homes without Hands," "Strange Dwellings," etc.

"Whose hope shall be cut off, and whose trust shall be a spider's web."—*Job* 8. 14.

WHAT wonderful beings are spiders, and how little is known about them! How extraordinary is the aversion with which they are generally regarded, and which debars the generality of mankind from observing their singularly interesting life-history! The opening of a well-known juvenile poem well expresses the popular idea of these creatures.

"'Oh, look at that great ugly spider,' cried Ann,
And screaming, she knocked it away with her fan."

Why should she scream, and why should she knock it away? It had no wish to hurt her, and even if it desired to do so, had not the power.

I believe that the popular aversion to spiders is almost, if not wholly due to prejudices contracted in early childhood, and not to any repulsive properties inherent in the creatures themselves.

Spiders are possessed of many accomplishments. They can run with astonishing speed, and some can, moreover, run forwards, backwards, or sideways with equal ease. Some can catch their prey by fair chase, and are in consequence termed "wolf-spiders." Others can leap on their prey like the leopard, while a great majority of spiders entangle their prey in nets.

Some can dig burrows of extraordinary dimensions in proportion to the size of the excavator, and can, moreover, furnish the mouths of the burrows with self-closing doors. They are masters of the water. They can run over the surface without sinking, they can crawl down the stems of aquatic plants, and pick off the insects which cling to them. They can make rafts, and sail upon them for the purpose of picking up any insects which have fallen into the water; while there are some which, although they breathe atmospheric air, pass almost the whole of their lives beneath the surface of the water.

They are masters of the air, and, though they possess no wings, can rise to heights which the condor itself can scarcely reach.

They vary exceedingly in size, some being of the most minute dimensions, and only able to feed on insects which are almost invisible to human eyes, while there are others of such gigantic proportions, that they make prey of small mammals, birds, and reptiles.

They are far more numerous than is generally supposed, more than six hundred species having been found in Dorsetshire alone.

What are spiders?

They are not insects, inasmuch as they have eight legs, while insects have only six. They undergo no external changes as do the insects; so that a spider, as soon as it issues from the egg, is a spider, and not a grub or caterpillar. They have no wings, whereas all insects have four wings, either perfect or rudimentary. Their circulation, respiration, and the whole of their nervous and digestive systems, are absolutely diverse from those of insects. Lastly, the spiders produce silk throughout their whole lives, while the insects can only spin silk while they are larvæ. In fact, the spiders, scorpions, and mites are grouped into a distinct order, called *Arachnidæ* (from the Greek word *Arachne*, a spider), and form a connecting link between the insects and the crabs and lobsters.

Putting aside the foreign spiders, for which we can find no space, let us look at a few of our British species.

Most familiar of all is the common Garden or Cross Spider (*Epeira diadema*), the latter name being given to it because the dark markings on the back are arranged in the form of a cross. This is the creature which spins the beautiful wheel-shaped webs which are so common in our gardens.

Wolf Spider (*Dolomedes*).

Hunting Spider.

It is worthy of notice that these webs are composed of two distinct kinds of silk. The radiating threads which support the web, as well as the cords which attach it to the branches, are called "cables," and are not adhesive, so that if an insect should alight upon them, its course would not be arrested; while, if an insect touches but with a leg or wing, one of the "ratlins," as a sailor would term the threads which run spirally round the web, its fate is sealed, and all it can do is to struggle vainly until the spider darts from its place of concealment, and drives her poison-fangs into the body of her victim.

The microscope, or even a fairly powerful pocket-lens, will reveal the reason why the insect was arrested by the ratlins and not by the cables. The former are not simple threads, like the cables, but each thread is strung with tiny beadlets of gummy material, which cause the insect to adhere to it, so that the more the captive struggles, the tighter is it held, like a bird caught with limed twigs. On an average, there are twelve hundred of these beadlets in an inch of thread, and a web of ordinary size contains from eighty to ninety thousand.

How they are placed on the thread is a mystery. They are not essential parts of the thread, but are so loosely adherent to it, that with the aid of a magnifying glass and a fine camel's-hair brush, they can be removed, leaving the thread perfectly harmless to insects.

That the spider can produce two distinct kinds of thread has now been shown, and there is yet a third kind of silk which is only produced on emergencies.

Sometimes a wasp, or other powerful insect flies into the web, and struggles so fiercely that the net is in danger of being torn in pieces. Should the spider be too small or too timid to cope with such a foe, she rapidly cuts away the bonds which hold it, and lets the captive go free. If, however, she should be courageous enough to cope with such powerful game, she seizes it with her first pair of legs, spins it round and round so rapidly that the eye can scarcely follow the movement, and at the same time discharges over the victim a torrent of threads much resembling floss silk. The captive has no time to resist, its legs and wings being bound tightly to its body, and in a moment it is swathed as completely as if it had been an Egyptian mummy. Thus we see that the spider can produce three distinct kinds of silk, and can employ either of them at will.

Would that I could give some illustrations of the wonderful mechanism by which these different silks are spun, but lack of space is an insurmountable obstacle. Suffice it to say that the "spinnerets" are furnished with countless thousands of tubelets, through each of which is drawn the tiny strand which forms part of the spider's thread. These strands are so minute that four millions of them are scarcely equal to a single hair of the human beard.

Here again man has been a distant imitator of Nature. Any one who visits a rope-walk or a cotton factory, and has seen the spinnerets of a spider, must be struck with the wonderful resemblance between the imperfect work of man, which is always undergoing improvement, and the absolutely perfect work of the Creator.

These delicate fibres are of incalculable value to civilized man, as they furnish the threads which are employed in certain astronomical instruments, and for which no artificial substitute has yet been found.

Now we will pass to the Wolf-spiders, those black-bodied, swift-footed spiders which we may see running among the grass on any hot summer's day.

The chief interest of these spiders lies in the manner in which the female spider carries her eggs with her.

On a fine summer day any number of wolf-spiders may be seen threading their way among the blades of grass, engaged in hunting after prey. Many of them carry under the body a little ball of white silk. This ball contains the eggs, and is guarded with the utmost affection by the mother. Nothing except actual violence will induce the spider to relinquish her eggs. Should the bag be torn forcibly from her, she will haunt the spot for hours, searching after her lost eggs.

Her discrimination, however, is not equal to her affection, for, if a little cotton wool be rolled up so as to bear even a distant resemblance to the lost egg-ball, the spider will pounce on it, fasten it under her body, and go off perfectly satisfied with the substitute.

Now we will glance for a moment at the habits of the Hunting-spider, or Zebra spider, as it is sometimes called, in consequence of the velvety black and silvery white stripes with which its body is adorned. There are several species of hunting-spiders in England, but their habits are practically identical, so that the description of any one species will equally answer for any other.

These spiders always haunt sunny spots, as upon them the flies on which the spider lives, are most apt to settle. Window sills with a southern aspect are favourite hunting-grounds of these little spiders. No sooner does a fly settle, than the spider becomes on the alert, raising itself as high as it can upon its legs, and gazing earnestly at the expected prey.

It then begins to sidle towards the fly, moving round it spirally, and never approaching it directly. When it has arrived within distance, it suddenly leaps on the fly with a movement so swift that the eye fails to follow it, and in a moment, spider and fly are tumbling over and over, the fly trying to escape, and the spider trying to drive her poison-jaws into the body of the victim. There is but one result to the unequal battle, and in a few moments the fly succumbs.

Last year I witnessed a remarkable instance of the leaping powers of this spider. I was watching a sunny portion of my garden-wall, when I saw a fly start from the wall, flutter for a moment, and then fly back again. This movement was several times repeated, and I thereupon watched the proceeding more closely. Then I found that the supposed fly was a hunting-spider, which had actually leaped from the wall, and captured a passing insect on the wing.

Like most spiders, the hunting-spider never moves without trailing a thread behind it, and so the spider in question had sprung from the wall upon the insect, seized it in her legs, and then been drawn back, together with her prey, by the elasticity of the cable-thread.

This spider can run or leap in any direction with equal ease.

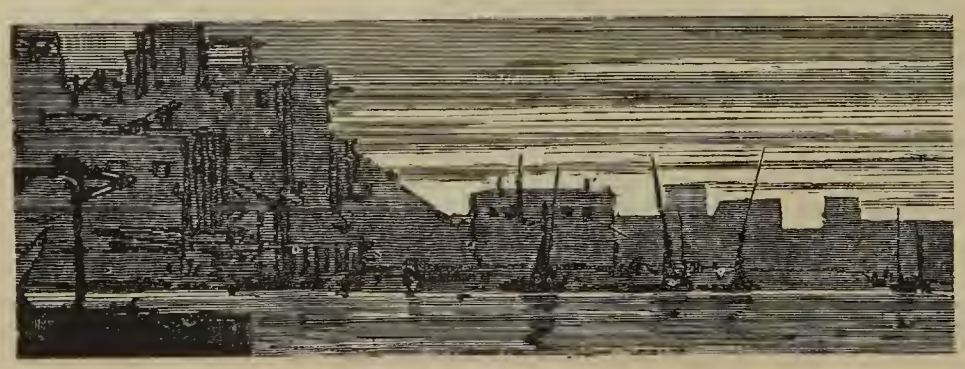
Now we will pass to the spiders of the fresh waters. Putting aside those which make rafts, and those which crawl down the stems of the aquatic plants for the purpose of seizing submerged insects, we will glance at the life-history of the creature which has well earned for itself the name of the Water-spider (*Argyronetra aquatica*). This wonderful being has the art of spinning its webs under water, not for the capture of prey, but as a safe residence for itself and young.

It begins by crawling down the stems of aquatic plants, and attaching to them a number of cables, which are intended as supports for the future nest. Upon these supports it spins a cocoon-like cell, mostly about as large as a small acorn, and very much of the same shape. The lower portion of the cell is always left open. The next task is to fill the cell with air. For this purpose she goes to the surface, holds her long, hairy hind legs in the air, nearly joining them at their tips, and then suddenly dives, carrying with her a large bubble of air enclosed within her legs.

When she has reached the cell, she goes under it, and shakes off the bubble, which immediately ascends into the cell. Time after time she fetches air, until at last the cell is filled, and forms a refuge, where she can be safe from almost any foe. Within this cell she lays her eggs and brings up her young, none of whom are allowed to pass into the upper world until they are able to shift for themselves.

The appearance of this spider, while taking air to her cell, is singularly beautiful. Hundreds of small air-bubbles adhere to the hair-clad body, besides the large bubble which is carried in the legs. All these bubbles look as if they were made of molten silver, so that the spider well deserves the name of *Argyronetra*, *i.e.*, "silvery swimmer."

There is much more to be told of this wonderful creature, but lack of space compels me to pass on to the spiders which exert a mastery over air.



They do not belong to any particular species, as many of our spiders can sail in the air as long as they are very small. They are popularly known as gossamer spiders, and are often called "money-spinners," whom it is unlucky to disturb when they attach their threads to the hat or bonnet, and dangle in front of the eyes.

The mode of their ascent, which I have often witnessed, is as follows: Just after sunrise, the tiny spiders ascend to the top of a post, a fence, a wheat-stem, or similar elevated spot, and await the sunbeams. As the rays of the sun pour upon the ground, they heat the layer of air which lies upon the earth. Being rendered lighter than the cold air, it begins to rise, and, as it passes upwards, the little spiders pour out their threads, which are necessarily wafted with the ascending air.

As the sunbeams become hotter, the air-currents rise more rapidly, and at last are sufficiently powerful to carry the tiny spiders up with them. Countless thousands of these spiders are thus carried into the air, and rise to astonishing heights.

Their webs soon become entangled in each other, and so form a vast sheet of the lightest imaginable fabric, in which are captured the tiny flying insects which are almost too small to be detected by the unaided human eye, but which are just the right size for the little spiders which prey on them.

As long as the sunbeams pour on the earth, so long do the gossamers continue to rise. But, when the sun sets, and no more hot currents are produced, the moisture of the atmosphere begins to condense upon the web, thereby rendering it heavier than air. It consequently sinks during the night, and in the very early morning, it may be seen stretching as far as the eye will reach, every line studded with dew-drops, which sparkle in the sunshine like so many jewels. While it lasts, it is a wonderful sight, but the sunbeams soon dry up the dew, and the nets themselves vanish, and are no more seen.

THE LAWS OF HEALTH.

By A. Stuart Fletcher.

No. 2.

IMPURITIES IN AIR, AND HOW TO AVOID THEM.

A SUFFICIENT supply of pure air for breathing is one of the first things essential to health. People ordinarily exercise far too little care to ensure this. Many persons who take every pains to procure wholesome food, and who carefully filter their drinking water, will yet live in air which is entirely unfit to be breathed.

Air consists of a mixture of two gases, oxygen and nitrogen; but in addition to these it contains water vapour, and minute quantities of ammonia and carbonic acid. Of the latter gas, pure air contains only four parts in ten thousand. When the air of any place where people live and work is examined, we find that it has acquired certain impurities, which render it unfit for breathing; these are of two kinds, gaseous and solid.

When air that has been breathed is examined, it is found to contain less oxygen than ordinary air, but to have in its place a larger proportion of carbonic acid. If the same air be breathed again, it contains still less oxygen and more carbonic acid when it leaves the lungs a second time. As no animal can live in air that has an insufficient supply of oxygen, and more than four parts in one hundred of carbonic acid, it follows that a person would die if compelled to breathe the same air over and over again. This is illustrated by the well-known story of the Black Hole of Calcutta. One hundred and forty-six persons were imprisoned for a night in a room 18 feet square, and in the morning only twenty-three were alive; the others had died of carbonic acid poisoning.

During a storm at sea the captain of an emigrant ship ordered that the women and children should be kept down below, out of the way and out of danger, and that the hatches should be fastened down. When the storm was over, seventy of the women and children were found dead, and the others insensible, as the closing of the hatches had prevented the renewal of the air, and thus caused an accumulation of carbonic acid.

It will be easily understood that, long before the fatal stage is reached, breathing this spoiled air can cause serious injury to health. Sitting for even a few hours in an occupied room where there is no proper provision for the renewal of the air, or in an imperfectly ventilated church or chapel, or in a crowded meeting, causes headache and drowsiness, while prolonged breathing of impure air has more serious effects.

A sallow, bloodless complexion, and a tendency to scrofula and consumption, are common amongst those who live in crowded, badly-ventilated houses; but the ill effects of breathing bad air are by no means confined to the very poor. A lady who sits for hours in a stuffy drawing-room, with carefully shut doors, and sandbags and heavy draperies against the seldom-opened windows; who surrounds her bed with hangings, and sleeps with shut windows, covered keyhole, and closed fireplace; who takes her daily constitutional in a carriage with the windows up, suffers as surely from want of oxygen and poisoning by carbonic acid as any poor girl, whose circumstances compel her to spend twelve hours out of the twenty-four in a close and crowded workroom. Every one should know that, even when the body is properly nourished, cleansed, and clothed, breathing bad air day after day is certain steadily to lower the capacity for health.

In addition to the impurities in air, which are the result of respiration or breathing, in the atmosphere of towns, and all places where people congregate and carry on the business of life, there are always solid impurities. The most common of these is dust. Now, even when dust consists only of finely divided particles of mineral matter, and is free from organic and decaying substances, its effect upon the breathing apparatus is injurious, as it irritates and clogs the little tubes which make up a large part of the lungs.

Persons employed in certain occupations, such as stone-cutting, pearl-cutting, metal-turning, sandpaper making, hemp and flax dressing, fur-dyeing, and mining, cannot avoid inhaling a large amount of dust; amongst such, asthma, bronchitis, and more acute forms of lung disease are prevalent, and premature death is common. The workshops, where dust-producing trades are carried on, should always be freely ventilated; and where ventilation is insufficient to carry off the dust, some form of respirator should be worn. A very simple respirator, containing a little cotton wool, would filter the air inspired, and would do much to ward off disease. Breathing through the nostrils should be habitual, and unnecessary talking, involving the taking of air through the mouth, should be avoided.

Air often contains organic as well as mineral impurities. Some time ago, in one of the London hospitals, certain of the wards had to be closed, because in them patients were slow to recover, and wounds would not heal. When an investigation was made into the matter, the air of the unsanitary wards was examined, and found to contain, besides dust, decaying animal matter, the ova of insects, disease germs, and other organic impurities. These were speedily traced to their source in a number of large dust-heaps on a piece of waste ground in the neighbourhood, and on that side of the hospital on which the closed wards were. There these great heaps of refuse matter had lain, objected to only on the ground of their unsightliness, while every breeze that passed over them had carried into the houses all kinds of unwholesomeness, to be breathed by the inhabitants, and lower the health in the neighbourhood, until the striking results observed in the hospital led to their removal.

There are certain simple tests by which we may tell when air is unwholesome. When water standing in a room becomes covered with a greasy film, the air of that room is not fit to breathe. When metal work becomes quickly discoloured, brass covered with verdigris, silver tarnished, that is a sign that the air is impure. Another simple test is furnished by the sense of smell. If, on entering a room from the outer air, it smells close and unpleasant, that is a proof that the air in it needs renewal. As the sense of smell is soon dulled, and we become quickly accustomed to an atmosphere in which we remain for some time, it is always well to take the opinion of a person entering from the outer air, instead of feeling annoyed at the "fussiness" of those who detect unpleasantness where we ourselves have been quite comfortable.

The renewal of the air, by the removal of impurities and the supply of fresh oxygen, we call ventilation.

There are two general principles which we should bear in mind when seeking to ventilate our rooms. The first is, that it is necessary to provide an outlet as well as an inlet for air; the second, that no draught should be noticeable.

The chimney of an open fireplace forms a convenient outlet for impure air in most rooms, and for this reason should not be closed by a register. When there is no open fireplace, or when this means of egress is insufficient, another outlet should be found at the upper part of the room. This position is necessary, because the air of which we wish to be rid is warmer, and therefore lighter, than the incoming air. The simplest way of providing this outlet is to open a window at the top.

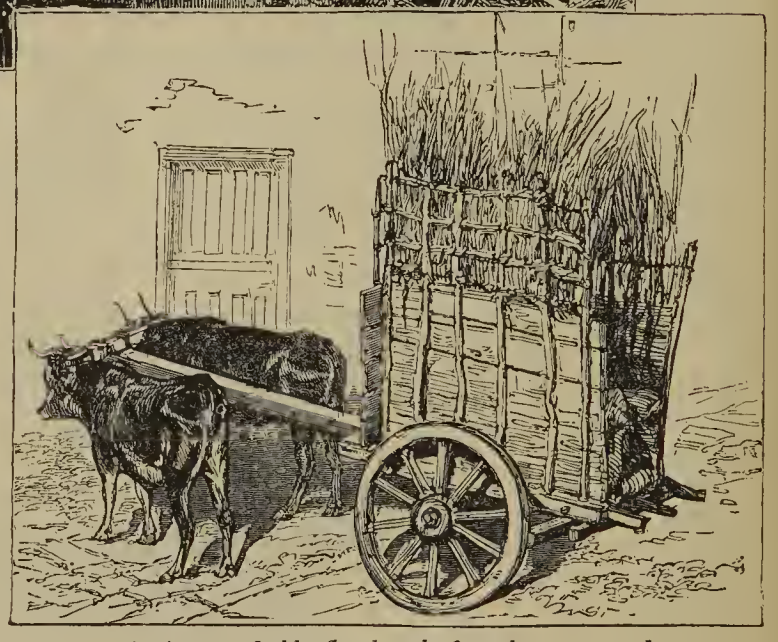
For allowing fresh air to enter without causing the draught which the opening of a window at the bottom sometimes makes, the following plan is simple and effectual. Place a block of wood a few inches deep beneath the lower sash, running from side to side, so as to prevent the air coming in below the lower sash when the latter is shut tightly down upon it. The woodwork of the two sashes is now separated in the middle of the window, the air comes in between them, and is directed upwards by the top part of the lower sash.

While rooms are unoccupied, doors and windows should be frequently thrown wide open, to flush the place with fresh air. This should especially be done in the case of bedrooms. These rooms, where people spend at least a third of their lives, are too often badly ventilated. Doors, windows, and even chimneys are closed, and every aperture is carefully guarded, to exclude fresh air. The effect of this is that sleep is heavy and unrefreshing. To secure refreshing and invigorating sleep, the free escape of impure air, and the admission of fresh air, must be secured. With few exceptions, the doors and upper part of the window may be left open all the year round, except in foggy weather, with perfect safety, provided only that no draught plays upon the face of the occupant. Draught can be prevented by placing the bed in a proper position with regard to doors and windows, or by suspending a single light curtain from the ceiling.

THE CANARY ISLANDS—TENERIFFE.

The Golden Apples.

laden from the beautiful blue seas of the Atlantic, are rapidly becoming what they are so eminently suited to be, a health resort.



In the autumn of 1886, a company which had been formed, opened a large and handsome hotel for the English at Orotava, and supplied a want, which with the difficulties of getting at, and quitting the islands, had been the chief reasons for their being so little visited.

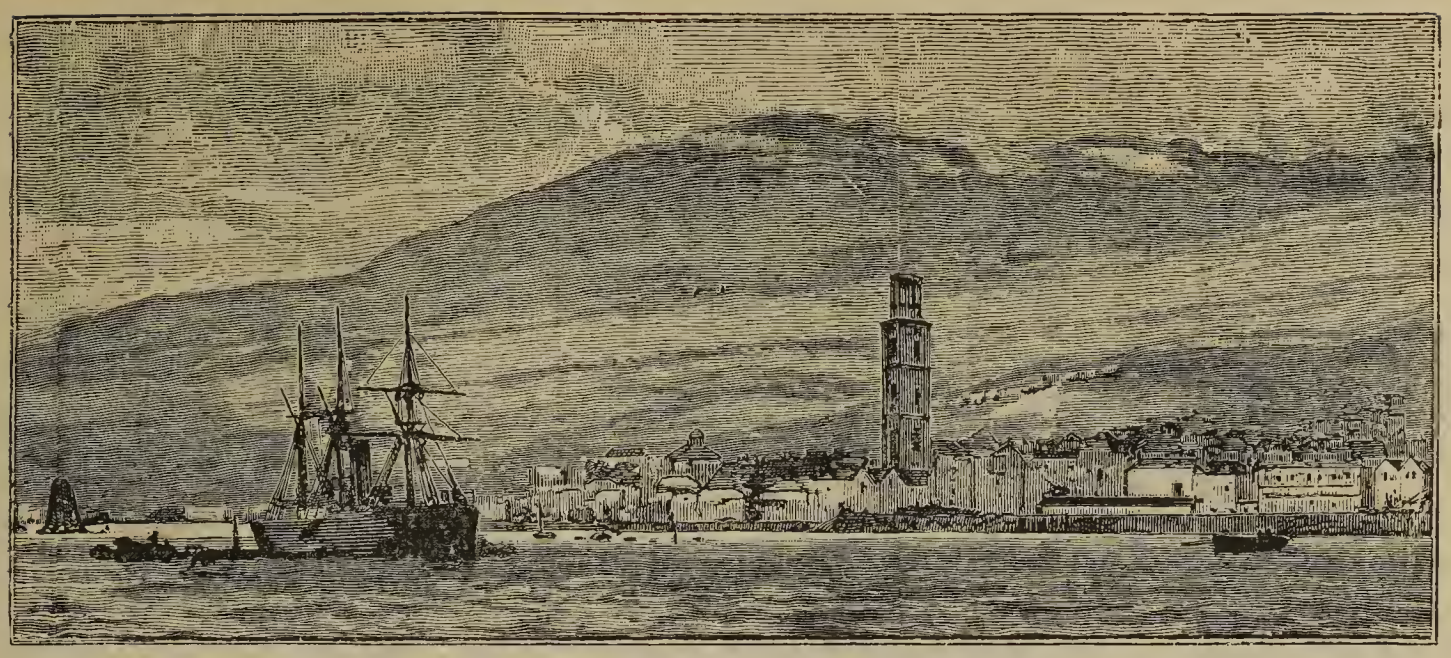
The African Mail Service offers a return passage to Madeira, Santa Cruz, and Las Palmas (the Port of Gran Canaria) for speedily getting into smooth water and a warm latitude.

In the longer passage it is a pleasant break to run ashore at Madeira; in the shorter, the expectation centres on the first sight of Teneriffe, and all hurry on deck to obtain a glimpse of the Peak, which is discernible on the first approach to the islands, if, as is the rule rather than the exception, his majesty is not cloud-enveloped. The northern part of the coast, passed on entering the harbour of Santa Cruz, which lies on the north-east, is a wild, precipitous succession of rocky mountains, not particularly attractive, and certainly not hospitable-looking. Vegetation is represented almost entirely by clumps of *Euphorbia Canariensis*, a grey-green, arid-looking plant, growing like lichen on the serrated, steep slopes. On entering the road-stead, the scene is changed.

"The Garden of the Hesperides."

"A remarkably fine breed of cattle are reared in the neighbourhood."

TWO or three years ago, the average Englishman or woman knew little more about the Canarian group than that they were islands situated in the Atlantic, near the coast of Africa, possessing a favourable climate; that Santa Cruz, the capital of Teneriffe, was a port of call for shipping, and that in that particular island was situated the Peak, and the Valley of Orotava, the one time "Garden of the Hesperides." Readers and students knew, further, that these were the "Isles of the Blest," about which Pliny wrote, the "Fortunate Islands" of the Greeks, the "Elysian Fields" of Homer; and those yet more versed in literature, recognised them as the "Happy Islands" of the Spanish Moors, and the aboriginal home of a noble race called the Guanches, who were dispossessed by the usurping Spaniards, and well-nigh exterminated. But few had any personal knowledge of the islands themselves, beyond a cursory acquaintance with the port of Santa Cruz and a drive into the interior, while their ship remained for some hours in harbour.



History repeats itself. These islands, valued by the Greeks and Romans for their equable climate, for their delicious fruits, for their balmy breezes that swept in, health-laden from the beautiful blue seas of the Atlantic, are rapidly becoming what they are so eminently suited to be, a health resort.

In the autumn of 1886, a company which had been formed, opened a large and handsome hotel for the English at Orotava, and supplied a want, which with the difficulties of getting at, and quitting the islands, had been the chief reasons for their being so little visited.

The African Mail Service offers a return passage to Madeira, Santa Cruz, and Las Palmas (the Port of Gran Canaria) for £15, available for a year. By the New Zealand boats, a charge of £14 is made for the single trip to Teneriffe, which does not include a call at Madeira or Canaria. £3 is deducted for a return ticket, but as a month elapses between the sailing of each New Zealand steamer—the two companies are in opposition — most passengers leave themselves free to return by another Line, if they wish to visit those islands, or take the Spanish Mail to Cadiz, or the French steamer to Marseilles (both of which call fortnightly at Teneriffe), and see a little of those countries. The Castle Line of Donald Currie & Co. call from time to time at Las Palmas, and the steamers of Messrs. Forwood & Co. arrive from London monthly at the port of Orotava. Each firm, on application, gives full information. The larger boats that call at Plymouth, though the more expensive, are the better suited for delicate or sea-sick people, doing the passage in half the time—from four to five days—and speedily getting into smooth water and a warm latitude.

In the longer passage it is a pleasant break to run ashore at Madeira; in the shorter, the expectation centres on the first sight of Teneriffe, and all hurry on deck to obtain a glimpse of the Peak, which is discernible on the first approach to the islands, if, as is the rule rather than the exception, his majesty is not cloud-enveloped. The northern part of the coast, passed on entering the harbour of Santa Cruz, which lies on the north-east, is a wild, precipitous succession of rocky mountains, not particularly attractive, and certainly not hospitable-looking. Vegetation is represented almost entirely by clumps of *Euphorbia Canariensis*, a grey-green, arid-looking plant, growing like lichen on the serrated, steep slopes. On entering the road-stead, the scene is changed.

Santa Cruz, the capital and chief port of Teneriffe, is a pretty white town, built on the shores to the water's edge of a charming bay, with a back-ground of mountain

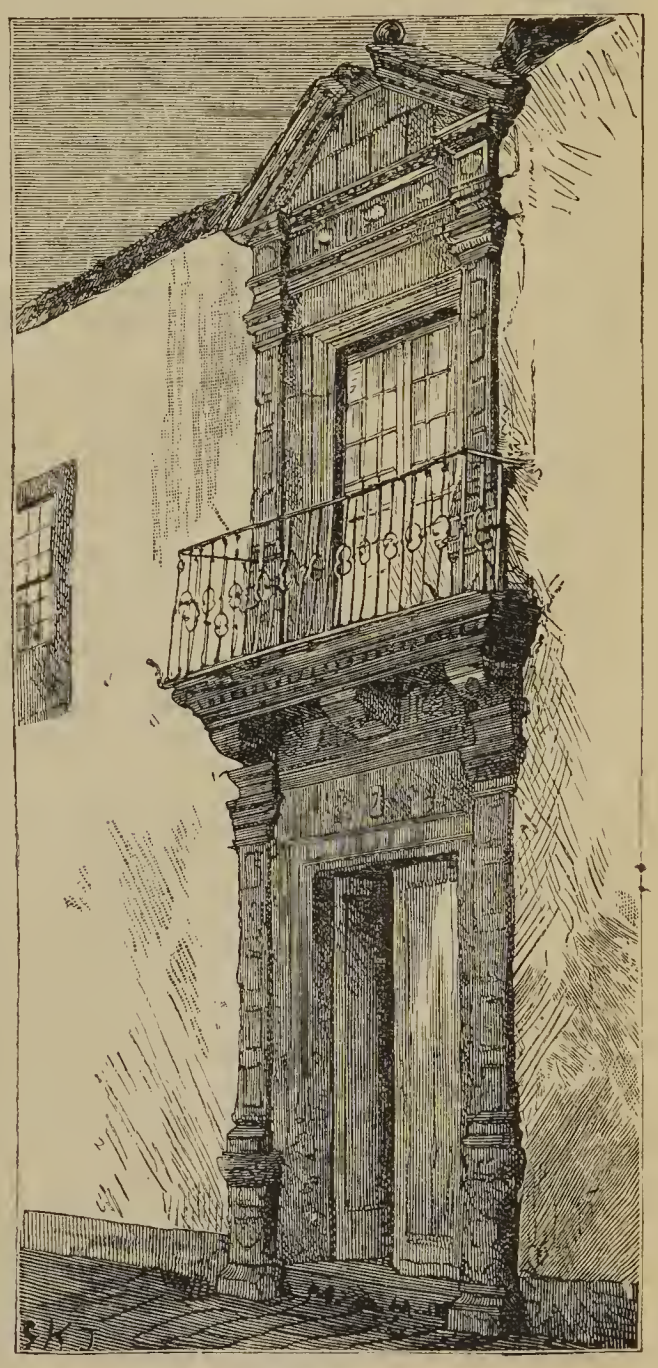
"Santa Cruz, the capital and chief port of Teneriffe."

land, whose lower heights in the near neighbourhood of the little city, are dotted with houses painted white or yellow, and possessing balconies of different colours, sizes and shapes, jutting miradores, and red tiled roofs. It is compactly built, neat and clean, and contains about 12,000 inhabitants.

There are no luggage troubles, for the Canary Isles, which belong to Spain, though geographically African, are free ports, and, with ease and rapidity, landing is effected by boats that convey the passengers off from the ships, when a short walk takes visitors to either of the two English hotels, or the few *fondas*, all near at hand.

It is quite possible to see the special features of Santa Cruz, — its cathedral, where are carefully stored the flags lost by the English when Nelson had his arm shattered; the Mole, which received a mark on one of its stones by the same cannon ball; the two or three bright plazas; the cheerful little shops; the market; the museum, with its Guanche skulls and remains—in a day; but the life of the place, its *patios*—courtyards—more Danish than Spanish ofttimes; its quaint water-spouts for running the rain off the roofs; its doorways and odd bits, reward more than the cursory glance, little as the town can boast of any architectural beauty.

In visiting Teneriffe, however, most people who stay there any time, make Orotava their head-quarters, since it bears the reputation of being the most favoured portion of the island, for beauty of scenery and perfection of climate. It lies on the opposite side, to the west of Santa Cruz, and to get there the visitor drives over a fine, well-made *carretera* (carriage-road) a distance of twenty-six miles, through a country that is full of interest, and that gains in charm as it nears the famed valley of Orotava. A drive of five hours over a hilly country, albeit on a smooth road, proves more or less trying to an invalid.



Laguna was built in 1497, by the conqueror of Teneriffe, and is still the episcopal seat. It has two fine churches, large disused convents and palacios, built of black stone, which give it a heavy and bygone appearance, but its houses are big, square, and comfortable, and it has the air of respectability and quiet, that we at home associate with cathedral towns. It lies five miles up from Santa Cruz, and the wealthier inhabitants of that town spend the summer months there to obtain a cooler and more bracing atmosphere. Behind its plains and amongst its highlands are delightful woods and walks, and almost the only pasturage to be found in the island. A remarkably fine breed of cattle are reared in the neighbourhood, strong and gentle, and such good eating, that the French call, by government contract, twice or thrice a year, to ship droves for the use of their convict settlements. After quitting Laguna, the scenery, which from the port up, is barren and arid, becomes more fertile; and the plains of Los Rodes, passed through on quitting the town, are green with large tracts of waving cereals, and here the traveller generally obtains his first view of the Peak.

At Tacoroute, the next stage, six miles further on, palms rise from the lower slopes; and from the higher level which the village occupies, the sea, which has been lost to view in the drive inland, now reappears, stretching away a shimmering expanse of blue, far below.

The next point is the little village of Sausal, possessed of a dome-shaped church of some pretensions, and the last halt is made at the little village of Matauza, meaning slaughter, this being one of the final points where the heroic Guanches defeated their treacherous invaders, the Spaniards.

Those who do not stay at Laguna, but take the twenty-five miles straight away, alight at Matauza for refreshment. The more important of the two inns is usually frequented by carriageocracy; the latter is the resort of those who travel by the rickety, time-worn old 'bus, whose occupants partake of an excellent breakfast or dinner while there is a change of horses. There is food for the mind as well as the body in the novel *ménu*, novel surroundings and kindly way. Under either roof, the two pleasant Spanish women are frankly interested in your enjoying their dishes and condiments, and press on you their best. It forms a restful break in a long drive, and the conveyance is re-entered with a stimulated appreciation of the many beauties that lie before you.

Again pursuing the way, the gazer is sensible that the beauty of the scenery is becoming greater; and after passing a church standing out like a landmark sharp against the sky, with a luxuriantly tufted pine rearing its head aloft close by, a deep ravine is crossed, and the small, picturesque village of Santa Ursula is reached, and a little more than a mile beyond, the run down the southern descent into the valley of Orotava commences. Orotava now lies

Old doorway in Santa Cruz.

before us, and all are eager to see the lovely spot that travellers have so praised.

The so-called valley occupies an area of fifteen miles in one direction and ten in the other, spreading out as an amphitheatre around.

A short run takes us now to either of the Orotavas, situated about two miles apart—the "villa," or upper town, the "puerto," or port, the lower. The latter is the resort of most visitors, the atmosphere being milder near the sea.

The streets are grass-grown, but the fine houses, with their handsome patios, plainly tell of the wealth that once existed. These houses, solid and comfortable, ornamented with miradores, picturesque tiled roofs, azoteas—flat roofs for walking on—and trellised balconies, show no signs of decay, and many of them are still inhabited by the descendants of the English and Irish families that were attracted to the island when it attained its best days.

Life at the Puerto passes without hurry, bustle, or excitement. Most of the visitors to Orotava have come as lotos eaters, for rest, quiet, and a lovely climate. If any amongst them expect the gaiety of an English colony, and the fashionable life of the Riviera, Nice, or Mentone, they will be disappointed.

The flowers are a constant delight ; their wealth, profusion, colour, and scent do not belie the expectation engendered by the name of the "Garden of the Hesperides."

The giving and accepting of flowers is an agreeable feature in the life of all Spaniards and their visitors, but in no Spanish dominion more than in these gardens of the "Pearl of the Ocean." Here flourish palm, banana, lubiscus, and plants and flowers innumerable, that we seek elsewhere under glass and artificial heat. They grow in all their native luxuriance, in a climate that is warm and tender, but not tropical. Midway between the Orotovas is situated the famous Botanical Garden, stored with treasures of the botanical world. At the upper town, twenty years ago, stood the marvellous Dragon tree, that was at least as old as the Pyramids, and a giant in size ; the object of much of the mythic lore that hung around the isles. The tallest palm in the south of Europe, with a stem rising 100 feet, still waves its feathery head in the same garden that the "dragon" made its home.

The oranges—the golden apples of the "Hesperides," whose luscious balls delighted the epicures of Rome and Greece—have suffered greatly in Teneriffe from disease ; and the large, juicy, refreshing fruit, which is so eagerly sought for and revelled in by the visitor of to-day, is imported from Canaria. But there is no reason why a little care in the cultivation should not reinstate the finer kind again in Orotava.

The excursions to be made from the neighbourhood of Orotava are numerous, and present great variety. They are generally undertaken by carriage or on horseback. Walking, except on the *carretera*, and for the robust, is trying, on account of the mountainous nature of the country, and the glowing sun.

To climb the Peak is eminently the thing to do, amongst our nationality ; and even the ladies get as far as the Cañadas, its basin—a plain of pumice-stone from which the cone rises. Some also attempt the entire ascent, which is rather fatiguing.

In and about Orotava, to and about Icod, the land is terraced, cultivated, and irrigated with extremest care ; and the pretty leaf of the Indian corn, the fresh green of the potato, the tremulous pulsation of the wheat crop, the rustling swaying of the yellow sugar-cane—dotted here and there by tall palms, which grow in Teneriffe with a wealth of feathery plume fronds—the occasional dragon-trees, still peculiar, distinctive, with patches of *Opfuntia tomentosa* (prickly pear, the food of the cochineal insect), and straggling, bushy fig-trees, clothe the sides of the volcanic, rock-strewn mountain slopes.

Icod now boasts an hotel, started for the English. Less than a year ago there was only a primitive Spanish *fonda*. It is the centre of a delightful district. The valley in which the town nestles is thought by some to exceed in beauty that of Orotava.

The language spoken in the Archipelago is Spanish.

The natives are kindly disposed, simple-minded and courteous. Though Spanish in habits and customs, they are brighter, more sociable and peaceable than those of the mainland, their isolated position and their admixture with Guanche blood—supposed to be very marked in some localities—have developed qualities of a more loveable nature than in Spain proper. They are a well-grown, muscular race, bronzed by the rays of their continuous sun, lithe and active when poor and industrious, plump and given to *dolce far niente*, when well-to-do and educated. The ladies retain the graceful mantilla of the Spanish land.

The peasant women have no particular costume. They wear skimpy cotton garments, a coloured handkerchief tied over the head, sometimes surmounted with a little round white straw hat, such as Swiss women adopt in some of the Tyrol districts. On their heads they carry any and everything, weights that we should be sorry to have to transport with the aid of back, shoulders and hands ; but they are unhampered with a superfluity of garments. They often go bare-footed, and they walk for miles with a grace and ease of carriage and a poise of of figure, that the highest lady in any land might envy.

The men among the peasantry work commonly in cotton drawers and shirt, and draw over their shoulders, when evening approaches or labour ceases, a long blanket cloak of Whitney make, almost as picturesque and as general a garment in Teneriffe, as Spanish cloaks are in the Peninsula.

The poor live on a mixture of ground cereals, fruits and dried fish, washed down with native wine. They rarely touch meat, and present a finer physique without, than our own populace with, the more expensive diet. The upper classes live much as on the Continent, and the English are catered for, by liberal breakfasts, dinners, lunches, and teas, a generous allowance of many dishes ; fruit accompanying every meal.

I have but given a cursory outline of Teneriffe and its attractions, but I think that enough has been said to show that there lies within easy distance, and no longer difficult to get at, a group of islands, where we may change the bitter winds, the cold and raw damp of Great Britain, for golden sunlight, soft breezes, and warmth and flowers, and that with a certainty of obtaining what we desire, and with an almost unvarying temperature.

THE STORY OF JONAH.

By the Rev. F. B. MEYER, B.A.,
Author of "Christian Living," "Elijah," "Israel," etc., etc.

PART I.

THE DIVINE CALL.

THE second Book of Kings gives some fragmentary but very interesting details about the prophet who is to be the subject of this series of Papers ; and we will paint the background of our picture with the colours which those details supply. From the time of Jeroboam the kingdom of Israel had been rent by constant revolutions, and its throne filled by vicious and impotent rulers. It was not, therefore, to be wondered at, that its fortunes had reached a very low ebb. The Assyrians had gradually possessed themselves of all the frontier towns, and the adjacent border land ; and the feeling of the inhabitants of those parts is said to have become very bitter. They could call nothing their own ; they were much impoverished by the frequent plunderings of their foes. They lived in a constant state of alarm. There seemed no safety in the towns that were shut up, or the villages that were left unfortified ; the highways were deserted, and travellers walked through bye-paths.

Just at that time, the great prophet Elisha lay upon his dying bed, and this seemed the very climax of misfortune. So long as he lived, he seemed like a chariot and horseman of defence. The anxiety was so great, that the young king Joash left his palace and came down to him, and wept over his face, and said, "O my father, my father, the chariot of Israel and the horsemen thereof." To many it might have seemed that Elisha was the last of the prophets, but such was not to be the case. God may bury His workers, but He will make provision for carrying on their work. Already at Gathhepher, in the very heart of the most troubled district, there was growing up a young man, probably educated in one of the prophetic schools instituted by Elijah, who was to be the link between the great prophet of Horeb and his minister Elisha, on the one hand, and such men as Hosea and Amos and Isaiah on the other.

The name of this young man was Jonah, which means "the dove." If his name was any true index of his character, he was gentle and confiding ; not a man naturally fitted to stand in the breach, or to arrest the torrent of the sin of a great city. His father's name was Amittai, "the truth-seeker," a worthy parentage for a prophet. His earliest prophetic mission was one of comfort in announcing that God would not blot out the name of Israel from under heaven, but that the lost territories should be restored, and that the nation should be saved by the hand of Jeroboam, the son of Joash. This prediction was to be literally fulfilled, but meanwhile another commission was entrusted to the young aspirant for prophetic power. "The word of the Lord came unto Jonah, the son of Amittai, saying, Arise, go to Nineveh."

MARK, FIRST, HIS DESTINATION.

"*Nineveh, that great city.*" *It was great in its age.* Its foundation carries us back to the abortive attempt to build a tower whose top should touch the skies, and

which should be a sure defence against a second flood. From amidst the children of Ham there arose a man, who, even at this distance, looms out gigantic on the mists of the past. That man was Nimrod. He would lead armed forays against different peoples, whom he transplanted from land to land, according to his whim—an example which was afterwards repeatedly followed by the kings of Assyria. He was not content with founding four cities in Babylon; he went forth to Assyria, and founded four cities there, of which one was Nineveh. Nineveh, therefore, was remarkable in excessive age.

It was also great in size. Even God speaks of it as great (chap. 4.). Contemporary writers give the most extraordinary accounts of its greatness. One tells us that its walls formed a quadrangle sixty miles in circumference, a statement which tallies with one of the expressions of this book, in which we are told that there were six score thousand children who could not discern between their right hand and their left; and according to ordinary computations of the proportion of population, there could not therefore have been less than a population of one million. It was a million-peopled city. We are told also that it was a city of three days' journey, either in circumference, or from one gate to another. The existing ruins, consisting of vast mounds that extend over acres of territory, attest its former greatness, and the very stones lift up their voices and cry, "Nineveh was great." Nor is this greatness difficult to account for, for this mighty city stood on the banks of the Tigris, occupying the most convenient position as the emporium of merchandise between Eastern and Western Asia. And this it was that led the prophet Nahum to speak of it as having multiplied its merchants above the stars of heaven, and as revelling in luxury.

It was also great in sin. It is almost impossible to conceive of a great city in which sin does not reach its most prolific growth, and assume its most malignant aspect. Thoughtful men can hardly look at a great centre of population from some commanding eminence, or hear its murmur borne to them upon the breeze, without being conscious of the nearness of tears, like those which filled the eyes of Christ, when from the Mount of Olives He beheld the city and wept over it. What great city is not also a mäelstrom of sin, drawing into itself the evil of the surrounding country? Nineveh! Babylon! Pompeii! Constantinople! London! Paris! New York! If the history of these could be truly written, would it not be filled with lamentation and woe, with the cries of the oppressed, with the wrongs of woman, youth, and child, with the victory of wrong over right, of passion over purity, and of darkness over the struggling beams of righteousness? The causes of these are not far to seek.

There is such *loneliness* in a great city. Men are lost in a crowd. They can elude the pursuit of those who know and love them as completely as if they had travelled to the antipodes, or had built them a home in some desolate waste. Many a prodigal has found his far country within a few yards of his father's home. In his native village a man is kept under a certain restraint by the fact that he is known to every one, and by the certainty that everything which he does will be canvassed and reported; but in a large city he may brave discovery, and may throw the reins carelessly upon the neck of unrestrained desire.

How needful is it, young man, that you remember that the eye of God can track you through the most crowded thoroughfare as easily as in the stillest country lane; and what work could be holier or more fruitful for Christian people with comfortable and spacious homes than to set themselves to seek out those who have recently come into our great centres of population, offering them their hospitality?

May we not also trace much of the evil of our large cities to their *overcrowding*, so that the contagion of sin spreads with virulent rapidity? Bad men are constantly inciting one another to further vice. "They helped every one his neighbour," and every one saith to his brother, "Be of good courage." Men in a crowd will urge one another to crimes which they would not dare to attempt if they lived alone, each vieing with the rest, and each becoming a centre of poisonous taint to the guileless and pure who are forced into their close company.

And the saddest source of crime is one which is almost nameless here, where wealth and rank meet with virtue and poverty. This, in the days of Jonah, was the sin of Nineveh, as it was the sin of Sodom and of Pompeii, and as it is the sin of Paris and of Constantinople. Mark these solemn words, uttered against Nineveh by the voice of the prophet: "Behold, I am against thee, saith the Lord of Hosts, because of the multitude of thy whoredoms." Alas! alas! that our cities should be constrained to bear such tragedies of sin enacted nightly in their streets! Woe be unto our young people that enter them without fixed religious principle. However promising and hopeful they may be as they leave their father's home, a few months will be long enough to bring a withered look on to the face, the heartless tone into the laugh, and the deep-seated cancer into the heart which was made to be the temple of sweetness, purity, and strength.

Such was the sin of Nineveh, and it was great enough to come up before God, rising like the waters of some mighty deluge, until it threatened to touch the very footstool of the Most High. Then said God, "Arise, go to Nineveh, that great city, and cry against it."

SECONDLY, CONSIDER MORE CLOSELY THE REASON FOR HIS COMMISSION.

"*Go and cry.*" Why did God send him? No doubt one prime reason was *God's love for Nineveh itself.* As God looked down upon that great heathen city, He saw that there were causes at work, which of themselves, and without any interposition of His, would ruin it. When a nation gives itself up to luxury and vice and extravagance, it is near its fall. The dry rot has already commenced, and perhaps has almost finished its work. We must not suppose that through those long ages which lie on the other side of the cross, God cared for the Jews alone. His tender mercies were over all His works. Not Jerusalem only, but Nineveh lay near His heart, and as He saw the approach of its inevitable doom, His heart was stirred with pity, and He sought to arouse them to repentance, that that doom might, if possible, be averted. He would at least wait, withholding the thunderbolt of deserved judgment, until He had plied it with every possible argument and entreaty, as if He were determined to postpone as far as possible the evil day, and not to let it dawn until the guilty city had had every reason and opportunity for repentance urged upon it, and had turned a deaf ear to them all. "He is not willing that any should perish, but that all should come to repentance."

We sometimes wonder if God can be aware of all the evil that is being wrought under the sun, and our wonder arises from the fact that He is so still. Did He see the Sicilian Vespers? Did He see the massacre in the vales of Piedmont? Did He see the slaughter of the Huguenots on the dark day of St. Bartholomew? Did He see the horrors of the West Indian Passage? Does He see the enormities being wrought under the British name by the drink traffic on the coast of Africa; by the damning opium trade against the remonstrances of the Chinese; by the license given by the English Government to vice in that country which is the noblest jewel in our crown? If He does, why does He not strike in? Simply because He is God, and not man. He is infinite in His patience; He will do nothing rashly. He will give every man an opportunity of repentance; He will ply men with every motive to a better life; He will hold back the waters of the Deluge that Noah may preach for a hundred years. He will postpone the destruction of the Canaanites for four centuries, because their iniquity has not yet brimmed to its full; and He will delay the downfall of Nineveh, that Jonah may go there to preach repentance. "The Lord is not slack concerning His promise, as some men count slackness, but is long-suffering to usward." "Account that the long-suffering of our Lord is salvation."

Another reason for Jonah's mission to Nineveh may no doubt be found in *God's care for His people Israel.* Israel had broken through every barrier, and been deaf to every pleading voice. It was as if God would try one more expedient. Jonah shall go to Nineveh. If Nineveh refuse him, and be destroyed in forty days, it will be a terrible warning; but if Nineveh, though so hardened, repent so soon as Jonah begins to preach, then it will be a loud reproof to the nation among whom an entire order of prophets had been fulfilling their office for several generations in vain.

It would seem as if God were acting in the spirit of the language ascribed to Him by the great lawgiver: "They have moved Me to jealousy with that which is not God; they have provoked Me to anger with their vanities. I will move them to jealousy by those which are not a people. I will provoke them to anger with a foolish nation." "I was found of them that sought Me not; I was made manifest to them that asked not after Me. But to Israel He saith, All day long I have stretched out My hands unto a disobedient and gainsaying people."

God is stretching out His hands to you. See, they bear the mark of the nail. Run to them as a child just learning to walk stumbles forward to its mother's embrace. Do not be gainsaying, perverse, or disobedient; yet, if you are, He may try some other means of winning you. So rich is He in resources.

(*Continued—page* 746.)

GLENARN; OR, THE MISSING WILL.

By M. F. SPOTTISWOODE.

"His keen pleasure in his boyish haunts was not diminished."

CHAPTER I.

GLENARN lay in a part of Scotland outside the beaten track of the ordinary tourist. No guide-book referred to its straight white walls, so daintily screened from critical eyes by clinging ivy tendrils.

Sometimes strangers said that the river ran too near and the trees grew too close; and it was certainly very far from any railway station.

But whatever others thought of the place, there was one, at the time our story begins, to whom it seemed the only desirable spot on earth, and whose whole heart was penetrated with keenest pain at the prospect of leaving it.

Robert Lindsay had been an orphan almost from infancy, and could scarcely remember any other home than Glenarn, or any other parent than the old laird, his grandfather. Many years before, Mr. Lindsay had been left a widower, with the care of his two little boys. Perhaps he was too much absorbed in his books and his "place" to enter heartily into their pursuits; at any rate their careers, of which he had expected much, disappointed him, and it was with some apprehension that he received his younger son's orphan boy into his home.

The simple-hearted, affectionate child soon made a place for himself in the old man's lonely heart, and exercised undisputed sovereignty in all minor affairs. He passed through his school days with credit in his studies, and renown in his sports; and, after anxious deliberation, his grandfather decided that he should go to Cambridge. When, his first term completed, Robert returned to Glenarn, it was with a pathetic joy that the old laird observed that his love for his home and keen pleasure in his boyish haunts were not at all diminished. Yet he was changed. He was manlier, gentler, more thoughtful and more reserved.

On the first evening after his grandson's return, when the butler had left the dining-room, and the stately old gentleman sat in his favourite chair, he asked,—

"What are all the Cambridge fellows saying and doing now, Robert? Tell me something of their life; not their games, but their thoughts."

It happened thus that the conversation took a graver turn than it was wont when Robert shared it.

The candles burnt low in their silver sockets, and the fire died out unnoticed that night, as the young man told with a grave enthusiasm of a new life of courage, and heroism, and strength, of which he had learned; which owed its source to no science or philosophy, but to Him who fashioned both the human intellect and the human frame.

And thus it came to pass that, throughout the long, cold winter days and damp, showery springtide, Mr. Lindsay, as he sat by the study fire, read less of his favourite classics, and more of an old Greek Testament that he had used when he was a boy.

One bright summer evening during Robert's long vacation, he stood with his grandfather on the bank of the river, watching the sunset.

Neither spoke, but there was an unwonted smile on the old man's handsome face. At last, with a faint sigh, he put his hand on his grandson's arm, and they turned homewards, Mr. Lindsay's tall, venerable figure leaning somewhat heavily on his stalwart supporter.

Next morning all was dismay and confusion at Glenarn. Servants ran hither and thither, and a constant succession of farmers and villagers made their way to the house to "make inquiries."

In one room all was still, for there, with a peaceful smile on his once troubled features, lay he who once had been Laird of Glenarn.

CHAPTER II.

A WEEK had passed. The funeral was over, and the laird slept with his fathers in the old churchyard. People spoke kindly of him, but there was no one besides Robert on whom the sense of personal loss weighed very heavily.

By degrees the startling news spread from homestead to homestead, that the late laird had made no will, and that there was another claimant to the estate.

Mr. Lindsay's elder son had married a widow about ten years before the events first recorded, and had died soon afterwards, leaving his little boy, Norman, to get on in the world as best he could.

Robert Lindsay, almost stupefied by the sudden events of the past few days, replied to the factor's unwilling assurance that, notwithstanding careful search, no will could be found,—

"Then please telegraph to Mrs. Lindsay to come here at once with her son."

The factor looked distressed, and muttered something about "no need for hurry," but Robert interrupted him:

"Do not delay; do it now; I wish it," he said, with the dignified imperiousness with which the sorrow-stricken can command obedience.

And thus it happened that just one week after his pleasant evening stroll with his grandfather, when the world had seemed so fair, and life so sweet to Robert Lindsay, he sat alone in the study of Glenarn, bowed down with grief and bitterness of spirit, a homeless orphan, for he had determined that next morning he would leave his old home for ever.

He had flattered himself that before factor and people at least he had borne himself well, that he had been prompt and just toward his cousin, dutiful and affectionate to his old grandfather.

"And well I might be," he said now; "didn't I owe him everything? My dear old grandfather! And now I'm wretched because he has not given me what another had at least an equal right to. If only he were here again at dear Glenarn!" and he rose and stood at the window, gazing with tearful eyes on the familiar scene.

"What was it Janet said, when she came in a few minutes ago? 'The Lord reigneth';" and then he sank into a quiet reverie, until he became all unconscious of the pleasant room in which he was, and the soft green grass and trees before him.

He seemed to stand again beneath the massive arches of an old cathedral, and as the mellow tones of the organ swelled louder and louder, the choir sang out triumphantly, "Hallelujah, hallelujah, for the Lord God omnipotent reigneth." How his heart had glowed then with ardent devotion, and with his whole soul he had uttered a fervent "Amen." Instinctively, as the recollection overpowered him, he fell on his knees. And there his life righted itself. Henceforth, in bearing the burdens of others, he would seek to fulfil the law of Christ.

CHAPTER III.

IT was a windy, cloudy afternoon, when the roomy, old-fashioned carriage, containing the new laird, drew up in front of Glenarn.

On the door-step, waiting to receive him, stood Robert Lindsay. Erect, stately, with a slight flush on his handsome face and a certain compression of his lips, he only waited to bid his cousin God-speed, and then he would go away for ever.

Mrs. Lindsay was the first to alight from the carriage. An Eastern sun had destroyed the charm of a once pretty face. She looked tired and worn, and silvery streaks were visible in the brown hair drawn tightly backward under a girlish travelling hat.

Robert bowed and held out his hand.

"I suppose you are Robert Lindsay," she said, in a drawling tone. "Your cousin Norman is in the carriage."

As she spoke, a little boy of nine years old appeared at the carriage door, apparently struggling to free himself from an entangling rug. Robert moved forward quickly to his aid, but not in time to save him from a heavy fall on the gravel below.

Robert then suggested tea in the drawing-room, to which he led his aunt. She seated herself in the arm-chair his grandfather had always used on the rare occasions on which he received visitors, and Robert felt that he could not stay in the room. With some slight apology he withdrew, and walked slowly down to the old churchyard in sorrowful meditation.

he had been wont as a child to scamper over the heather, he heard voices in animated discussion.

"Norman, you really mustn't get on the pony," said some one. "You'll only get hurt, and I'll be blamed."

"I'm not going to be ordered about always by a girl," replied a child's voice, angrily, "and I intend to mount her."

"'Oh, how jolly!' said the child; and then added, in a more subdued tone, 'It's beautiful!'"

"My dear Norman, is he hurt then?" said his mother in a tone of vexation.

"No; not a bit. It's only that horrid old rug. It's Louie's fault;" and the pale brow was drawn into a heavy scowl.

Mrs. Lindsay explained that Louie Clifford was the daughter of her first husband, who had been a widower, and that she was her sole guardian.

Little Norman, who appeared at every meal, and talked constantly, evidently liked his cousin, which inclined Mrs. Lindsay to look favourably on her "interloping nephew," as she had often termed him.

Next morning Robert paid a series of farewell visits to his favourite haunts. As he drew near the stable in which the Shetland pony was kept, on whose shaggy back

"Mamma will be so angry. Please Norman, don't," continued the imploring voice.

"I will, so there," said Norman, and a tiny foot stamped angrily on the stable floor.

At this moment Robert appeared in the doorway, and confronted his little cousin, whose pale face was flushed with excite-

ment. Louie Clifford was standing by the pony, her small hand laid caressingly on its rough coat, and her rosy face, with its crown of glossy brown hair nearly hidden in its tangled mane.

There was a ring of pain in the clear voice, which said, as Robert entered,—

"Please, Mr. Lindsay, Norman mustn't ride, must he? He might be hurt, and I don't know what mamma would say."

"I'm sure mamma won't mind," said Norman persistently; "very likely she'll be angry with you for not letting me ride. You know she said you were always interfering."

Louie said nothing, but tears glistened for a moment in the grey eyes, and the little mouth closed firmly.

Robert solved the difficulty at once.

"Norman, go and ask your mother if I may take you for a ride," he said.

In an instant the boy was gone, and Sheila was saddled for the last time by the hands of her old master.

"You'll find poor old Glenarn rather dull, I'm afraid, Miss Clifford," said Robert.

"I don't think so," said Louie, "but it feels strange just now;" then added impulsively, "I'm *so* sorry, Mr. Lindsay, you should have to leave it. I know how you love it and the people love you."

Robert was touched by the warm, girlish sympathy.

"Will you try to make friends of the people, Miss Clifford?" he said. "You'll soon learn to love them and they you."

"I have already made friends with one," said Louie, "Janet, I think you call her. She was so good to me last night. She sang me to sleep with such a quaint Psalm. It began, 'The Lord doth reign.'"

"Janet's heart is full of that, I know," said Robert. "But here comes Norman."

"Louie, mamma says you're to go into the house at once, and I'm to ride," gasped panting Norman.

In a few minutes the pony was trotting gravely down the avenue with her new master on her back, and her old master at her side.

Louie turned slowly housewards, bracing her heart for the snubs Mrs. Lindsay considered so wholesome, with the recollection of the kindly human sympathy already given her at Glenarn.

Robert found his little companion intelligent and interesting, but hardly expected the outburst of enthusiasm which the boy displayed when they stood on the slope of the grassy "brae."

"Oh, it's jolly!" said the child, and then added in a more subdued tone, "It is beautiful."

"It's all yours, Norman," said his cousin.

"Mine to do as I like with?"

"No," replied Robert, "nothing is yours to do as you like with. You must think of other people always, and of God who gave it you, and can take it away in a moment." Norman was silent for a minute, then said:

"Yes, of course God could. Like Nebuchadnezzar's. You should get Louie to tell you stories on Sunday, Cousin Robert. She does it first rate."

Robert laughed and turned Sheila's head homewards. Before they reached the avenue, he was in full possession of the boy's most cherished secrets.

At the gate the pony was stopped.

"Will you say good-bye to your mother and sister for me, Norman?" said Robert, "I'm going to walk to the station. You'll be good to Sheila, won't you?" he added, "and write to me sometimes."

Then, paying no heed to Norman's passionate entreaties to remain, he turned resolutely away.

And so Robert Lindsay went out to meet his destiny in the great world. When he reached the "march burn," or boundary of the estate, he turned to gaze once more on field and rock and tree, with a murmured blessing.

CHAPTER V.

TEN years have passed since Robert Lindsay bade adieu to Glenarn—years in which he has grown humbler, stronger, braver.

It is the anniversary of his grandfather's death, and he sits in the verandah of his bungalow, thinking of home. Presently a servant brings him a budget of letters.

"Business, business, business," he exclaims, as he tosses various long-shaped envelopes on to a wicker-work lounge.

He retains possession of one, addressed in a lady's handwriting. In it were a few scrawling lines from Mrs. Norman Lindsay, which bore the date "Calcutta."

Although Robert had heard of his cousin's failing health, that a tour in the East had been recommended, and that Mrs. Lindsay proposed accompanying him, he was startled by the words he read:—

"Norman begs you to come and see him. He thinks he would die happier if he saw you. You will not refuse his last request?"

Before many days had passed, he found himself in a hotel in Calcutta, by the couch on which his cousin lay, endeavouring to soothe his grief-stricken mother.

"Robert," he said, when Mrs. Lindsay had gone to rest for an hour in another room, "I don't know if I can make a will, as I'm not of age, but you'll take care of mother and Louie. They have some money in the hands of a London lawyer; will you see about it?"

Robert promised, and then the cousins spoke of the things which concern that larger life on which one of them was so soon to enter.

When Mrs. Lindsay returned and laid her trembling fingers on her son's feverish brow, he whispered, "It's all true, mother, what you used to read to me about. God is *so* good." And the tired eyes closed.

In a few days Norman Lindsay was laid to rest under the Eastern sun.

In the space of a few weeks, during which his aunt had returned to England to receive the tender care and sympathy of her orphan ward, Robert found himself once more bound for home.

* * * *

A plain granite slab marks the spot where Norman Lindsay sleeps. It bears the inscription, "The Lord reigneth."

Robert does not find on his return to Glenarn that he reigns supreme in the hearts of the people, as of old, for sunny-hearted Louie Clifford has won no secondary place in their affections. There is no feigned rejoicing, therefore, when, a year later, they celebrate by speeches and bonfires her marriage to the laird.

"They've come for guid," says one poor woman, with glistening eyes, to the old minister, who passes her cottage on the way to offer his congratulations.

"Yes, for *good*," he answers.

And after years have proved it true.

CRISP CORRESPONDENCE.

C. Y. M. C. A.—As you do not mention the neighbourhood in which you are seeking such a situation, it is somewhat difficult to reply to your inquiry. If the neighbourhood of London, you would soon see by glancing through the London Dailies, which would be the best advertise in.

Coin, Exeter.—The value of a Charles II. 5s. piece dated 1676, is 8s.

A. D.—The annihilation of the wicked is not taught in Holy Scripture. Neither is conditional immortality. Both these errors spring from a mistaken interpretation of certain Biblical expressions. For instance, when the wicked are said to be "lost," to "perish," to be "destroyed," the meaning is assumed to be, they are annihilated. But that cannot be the force of the words, for, if it were, it would lead to the most absurd conclusions, as in the following passages:—"I am not sent, but unto the lost sheep"—*the annihilated sheep!*—"of the house of Israel." "The world that then was, being overflowed with water, perished,"—*was annihilated!* "Destroy this temple,"—*annihilate it!*—"and in three days I will raise it up." Every one can see the folly of such interpretations as these, and they are not the less absurd when applied to the future state of the wicked. Moreover, as science teaches in regard to matter, that not a single particle of it can ever be annihilated, so in regard to spirit, we have no reason to think that a different law prevails.

Then as to conditional immortality, we must distinguish between life and mere existence. The wicked shall *exist* for ever. But eternal *life*, in the true and Scriptural sense, shall be enjoyed only by the children of God. Even in this life, "she that liveth in pleasure is dead while she liveth." It is quite true, indeed, that the first resurrection, and the life of the millennial age, are both conditional, and shall be shared in only by believers. But this does not exclude the immortality of the wicked, for at the end of that period, they, too, shall rise again, and be judged according to their works (Rev. 20. 5, 13).

The word hell has not been banished from the Revised Version, as "A. D." seems to think. It is only where "*Hades*," or the equivalent Hebrew word, occurs in the original, that a change has been made. In every case where *Gehenna* is used, it is still translated hell (Matt. 5. 22, 29, 30; 10. 28; Mark 9. 43–47; Luke 12. 5, etc.). The important thing to bear in mind is, that in all these passages it is the Lord Himself—incarnate Love—who speaks. And if *He* warns men against the place of torment, who will dare to say that no such place exists?

As to the next question "A. D." asks, he may make his mind perfectly easy. Theories as to pre-Adamite man, the vast antiquity of the human race, our descent from monkeys, etc., are mere idle speculations, which advancing science and research are showing to be untenable. Until Darwinism can *prove* the transmutation of species, the spontaneous generation of life, and the material origin of man's moral and spiritual nature, we need have no fears as to the result. God and the Bible still hold the field.

In admitting persons to the Lord's Table, there must, of course, be some rules of discipline observed. One denomination may be stricter than another in this respect, but all retain in their hands, more or less, the power of repelling open and notorious evil livers. To judge the heart is God's prerogative alone; and this being the case, we can only fall back on the apostolic rule, "Let a man examine himself, and so let him eat of that bread, and drink of that cup."

"Inquirer."—In John 13. 10, the meaning depends on the different words to express washing, used by our Lord. The first signifies the washing of the whole body; the second, the washing of the hands and feet only. And the lesson taught is this, that, as a person returning to his home after the bath needs not to bathe again, but only to wash his feet from the dust of the way, so he who has once received, in the new birth, the great cleansing from his sins, needs not in this sense to be cleansed a second time, but simply requires that daily purification from the daily defilement of the world, which even the regenerate stand in need of, as they journey to the blessed Home above. This was all that Peter and the other apostles required. But as for Judas, he had never been cleansed in any sense of the word at all.

INQUIRIES.

Country Cousin would like to know: (1) where he can obtain a strong *hand* tricycle (new or second-hand); (2) How to play the game of "Tel-el-Kebir."

"Cloven."—What is its origin or exact meaning? It seems to express almost the height of love and greatest blessing, the "cloven foot" and the "cloven tongues." Is there any same meaning in its use in these two cases?

"Ivy" would be glad to know (1) how to make chocolate or crêmes from cocoatina; (2) how grease can be taken out of boards.

CHRISTIAN KNIGHTHOOD.*

By CHARLES FORD, Author of "What Fruit?" "Work-to-day," etc.

HOW frequently nature's best treasures are found in comparatively valueless surroundings — gold in useless quartz, silver in lead ore, the violet in the barren dell. And so in the fields of classic and historic lore, what exquisite types of character, and model lessons are intermingled with their dust and rubbish. Perhaps one of the best illustrations of this is furnished by Mediæval Knighthood. In an age, conspicuous for its darkness and stagnation, the institution of Knighthood stands out distinguished for its lofty moral ideal of character and conduct. The traditional conception of Mediæval Knighthood, handed down by Poets and Romancers, as for example in the "Morte d'Arthur," which, as an accomplished writer points out, is "an exponent of all that gothic fire and hardihood which Christian faith moulded into chivalry," is simply perfect. "Anything finer (and more impracticable) than the aspirations of King Arthur, in his institution of the round table, is not to be found in literature." The very existence of these "aspirations," "impracticable" as they may have been of actual attainment, shows what lofty moral sentiment Knighthood was, at this early period, the embodiment of. Separated from its accidentals, Mediæval Knighthood exemplifies in a striking manner the highest virtues of Christianity and the New Testament, as seen even in the Biblical sunlight of this nineteenth century; and is therefore no unworthy prototype of that *Christian Knighthood*, that "perfect manhood," which Christ Himself came to reveal and to create, and which the great apostle to the Gentiles is ever urging men to attain.

Do we not sorely need, in these prosaic times, moral stimulus, such as the example of Chivalry affords, to reach the finer traits of Christian character? What stalwart figures those old knights were. What a polish and *aroma* of virtue there was about them. How sadly the average Christian—the so-called "highest style of man"—in these days, lacks this moral "finish." May not even modern Christians learn some lessons of virtue from the Mediæval Knight—be helped to perceive, and incited to acquire, some of his finer qualities. This example should especially appeal to young men. They should be emphatically Christian *Knights;* strong, yet gentle, ever ready to defend the right, and alert to champion all who need service or succour.

To this end—that we may realize more strongly the obligations of that *Christian* Knighthood which the New Testament lays upon us—let us look at some of the prominent relations between the Mediæval and Scriptural conceptions of Knighthood; first at the comparison, and secondly, at the contrast, between them.

* *Knighthood* is here used exclusively in its moral and metaphorical, and not in its legal or technical sense, as referring to the social distinction conferred by the sovereign for public services.

I. THE COMPARISON BETWEEN MEDIÆVAL AND CHRISTIAN KNIGHTHOOD.

This is seen in the identity of their essential virtues. Both alike insist on the two fundamental principles of ethical character—the harmonizing of opposing interests, and the union of contrasting excellencies. The foremost qualities of Mediæval Knighthood were precisely those to which Christianity gives the highest place, and on which it lays the greatest stress—the sacrifice of self to duty, and the union of strength with gentleness.†

1. *The sacrifice of self to duty.* This was the distinguishing characteristic of the Mediæval Knight. He could have no purely personal interests, apart from his honour as a knight, from his obligation to his order, his country, the Church, the lady he loved, or the cause he espoused. However crude his notion of duty, his fidelity to it was immovable. *Duty* was his watchword, and obedience to it had all the solemnity of an avowed creed, all the constraining power of a living faith. And is not this sacrifice of self to duty the primary demand of the gospel? Is not duty, understood as the will and commands of Christ, the paramount law of the Christian life, to which every other interest must bow, and every other obligation be second? As the Mediæval Knight sacrificed everything for military honour, for the service of the Church, or the rewards of victory, so the Christian Knight is called upon to give up all for Christ; to take up his cross daily and follow the Master; to fight in His cause against evil, at any cost; to spend and be spent in His service; and to look to Him alone for the crown at last. A stronger, purer motive force than chivalry ever knew —"the love of Christ," in its simple, spiritual reality, "constraineth him," that he should "not live unto himself, but unto Him that died for him and rose again."

2. *The union of strength with gentleness.* This was another leading feature of the Mediæval Knight, hardly second in importance to the preceding. Strength was plainly most imperative. Not rough, rude, brute force, but trained and cultured power. The Knight was emphatically what Carlyle calls an "*able*" man, one thoroughly qualified and equipped inwardly as well as outwardly for his vocation. This was his boast—though he might not always make it good, when the trial hour came, that he was proof against all comers. And this trained and attempered strength was coupled, as it well might be, with a gentle courtesy. It was through this unique combination of strength and gentleness, that the Knight of the middle ages obtained the traditional reputation of a *Champion*, or defender of the poor and distressed. For though many of the stories of the Knight errantry may only exist, as Hallam says, "in the popular romances" of the time, they could hardly have arisen had not the actual Knightly character been such as to render them, at least, possible. They are probably rather exaggerations and amplifications, than entire fictions. That the traditional conception of Knighthood had a basis of fact, is confirmed by its close association, especially after the rise of the crusades, with religion. In the eleventh century, the creation of the Knight (the third and highest rank of chivalry, and never conferred before the twenty-first year) was preceded by a solemn confession, and a midnight vigil in the church, followed by the reception of the Eucharist. The new Knight offered his sword on the altar, to signify his devotion to the Church, and his determination to lead a holy life. He then took an oath to protect the distressed (especially ladies and orphans), maintain right against might, and never by word or deed to stain his character as a Knight or a Christian.‡

Such was the true Knight, at once brave and noble—"*sans peur et sans reproche.*" And is not this just the kind of character the New Testament enjoins upon us as Christians? Was not the union of strength and gentleness one of the most prominent characteristics of Christ Himself? Is not Paul ever insisting on it as the top stone of Christian morality? What an illustration of its importance is furnished by the Corinthian Church, where weakness and contention went hand in hand. Hence apostles urge us to be strong in order that we may be loving; to have that "*fervent* charity among ourselves" which is both the most powerful and pitiful of graces; to be "able to comprehend, teach, stand," that we may be "able to bear;" to be at once "strong in the Lord, and patient toward all men."

II. THE CONTRAST BETWEEN MEDIÆVAL AND CHRISTIAN KNIGHTHOOD.

While there is a striking analogy, there is also a marked distinction between the Knightly character of the middle ages, and that supreme manhood Christianity demands—there is another side to the shield —both as regards the fields they occupy, and their respective power to realize their own ideals.

1. *Mediæval contrasts with Christian Knighthood on account of its limited field.* The former was associated exclusively with the profession of arms, and its services restricted to a handful of combatants—to picked men, whose social standing and

† These characteristics would be, of course, exhibited in accordance with the genius of the time. Hallam mentions "three virtues" as "essential to the character of a knight"—loyalty (fidelity to engagements), courtesy, and munificence; subsequently adding a fourth, "justice"—an ardent indignation against wrong, and a determination to redress it.

‡ Mediæval Knights may be classified as *Military*, consisting of Knights-bannerets ("the richest and best accompanied"), and Knights-bachelors, who aided kings in war, and brought a certain number of lances into the field; and *Religious* (originating in the crusades), consisting of two principal orders, the *Knights' Templars*, whose duty was to defend the Christian faith and the holy sepulchre against the Saracens, and the *Knights (or Hospitalers) of St. John*, afterwards called *Knights of Rhodes*, and subsequently *Knights of Malta*, who, in addition to military service, took care of the sick, and accompanied pilgrims. Both orders took the three Romish vows of chastity, obedience, and poverty. An order, corresponding to that of the *Templars*, called the *Teutonic* order, existed in Germany, during the crusades. A *Knight-errant* was one who wandered about in search of adventures.

military capacity fitted them for the severe warlike services the Knight had to undertake. *Christian* Knighthood, on the contrary, is absolutely unlimited in its range; its service restricted neither to class, age, nor sex, and its only imperative qualifications the profession of those moral characteristics which more or less distinguished its Mediæval prototype, and which are, in some measure, attainable by all.*

Mediæval Knighthood was fettered by its special form, through consisting of a particular order, or orders of men, having peculiar rules, involving a distinct course of life, like monkery or monasticism, which cuts off its followers from the ordinary avocations of society. *Christian* Knighthood, on the other hand, has no special or exclusive form; it is rather a *spirit* penetrating all ordinary paths of life, and capable of being manifested in each, than a peculiar order separating men therefrom. *Christian* Knighthood, therefore, is not only individually, but socially, superior to *Mediæval*, in at least two respects. First, that service and succour of others are its immediate and perpetual purpose, whereas this was only incidental in the Knighthood of the middle ages, in which personal renown filled far the larger place, and was one of its most fruitful evils. Secondly, Christian Knighthood, being thus universal, and unselfishly benevolent, tends to unite all classes of society, while Mediæval Knighthood, by its exclusiveness and narrowness, tended to separate them. The former has thus the elements of permanence; the latter, inherited decay. Progress confirms the first because it is simply the eternal ideal of Christianity socially embodied; progress destroyed the last because it was at heart inimical, as an institution, to Christian and national development. How little real spiritual force Mediæval Knighthood actually possessed, may be seen from Hallam's remark: "It was the invention of *gunpowder* that eventually overthrew chivalry."

2. *Mediæval contrasts with Christian Knighthood in its inability to realize its ideal.* While the former professed the loftiest *principles* of virtue, its *practice* fell lamentably below them. Its actual excellence was external, rather than moral, its virtue consisting, as we have said, rather in exceptional deeds, than in that supreme elevation of the entire life which Christianity demands. It presents a lofty conception of morality, but lacked adequate motive power to reach it. This is very pointedly exemplified in the "Morte d'Arthur," already referred to. "Nobody," says the able writer before quoted, "can read the 'Morte d'Arthur,' without observing the extraordinary discrepancy between the sentiments it inculcates, and the conduct of those whose doings it records. The character of Arthur,—upright, generous, unselfish, incapable of suspicion as of fear,—is the ideal of all we most revere and love. His history, and that of his knights, may be commended as a parable, teaching men to what lofty aims they ought to soar, teaching them also to what profound depths of sin and sorrow they are prone to sink. Launcelot and Tristram . . . afford warning even as they compel admiration, fallen because of the very qualities that raised them above their fellows, dishonoured in regard to the very honour by which they set such priceless store. Alas for truth when Tristram could deceive! Alas for loyalty when Launcelot rode under shield against his lord! Alas for the lower, weaker natures whom these great hearts drew down in their disgrace! Alas for the flowers of chivalry, that—

> "The trail of the serpent was over them all."

Christian Knighthood, on the other hand, not only presents a lofty ideal, but in harmony with the spiritual interpretation of the New Testament, insists on its application to the entire life, and to every individual. It possesses, too, in the foremost place it gives to the sacrifice and character of Christ, the strongest possible motive force towards its approximate realization. And though the *Christian* Knighthood often falls short of its ideal, failure is recognised and deplored, never, as was too often the case with Mediæval Knighthood, overlooked and palliated. For the discrepancy above referred to seems to be recorded, singularly enough, by the writer of the "Morte d'Arthur," without any sense of its moral inconsistency. The great religious contrast between Christian and Mediæval Knighthood, and the advantage of the one over the other, lies in the fact that the inspiration of the former comes from Christ Himself, while that of the latter was drawn from Christianity as interpreted by the Romish Church—from a *human* instead of a *Divine* source. Hence the greater possibility of reaching the Knight's moral ideal where the power is of God, than where it is of man. While in the onrush of the Tournament and single combat, the Mediæval Knight stands pre-eminent; in the daily conflict and ceaseless struggle with the giant forces of evil, it is the Christian Knight that bears the palm.

How plain it is, from this brief survey of the relations between Mediæval and Christian Knighthood, that though the form of Chivalry has passed away, its spirit and power remain. The instincts of Christian humanity, to succour the weak and deliver the oppressed, can never die. No one who understands the temper of the times, whether national or religious, will conclude, with Burke, that our age is deficient in any of the qualities which constitute the real glory of Knighthood.

That glory did not consist in external splendour, nor even in particular deeds, but in the skill and virtue that lay beneath them. The record of these deeds is mostly lost; could they even be recalled, they would profess but faint interest, but the *spirit* of fidelity and intrepidity that prompted them—the "soul of goodness" that transmigrates through the changing body of the ages—is as prevalent and vital as ever, only waiting to be embodied by us in new forms, and directed, with more intelligent devotion, to higher and wider ends. And certainly if the *spirit* of Chivalry still exists, the *need* for it has not lessened. Never was "the struggle for existence" so keen. Never was there such a universal call for unselfish devotion to duty, and prompt ministration to the distressed. If ever Chivalry was demanded by an age, not indeed in feats of arms, but in battle for truth and right, and in helpful services of mercy, it is now. And how many of the best spirits of our day, amongst all sections of Christians, are conspicuous for their chivalrous devotion to the poor and outcast; battling as fiercely as ever Knight-errant did against seducer or oppressor, with the demons of poverty and vice?

So may all of our young men and maidens grow up inspired with the spirit of *Christian Knighthood*, seeking the happiness of others as the condition of their own, determined to serve God, like the Knights of old, by being unremitting and undaunted in "the service of man."

* Take as an example—though it is only one of many—the following truly remarkable instance of feminine heroism and self-sacrifice. Miss Beatrice Potter, sister-in-law of Mr. Courtney, M.P., worked for three weeks in a sweater's den in order the better to study the system.

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow," "Corbiestanes," "Our Navvies," etc., etc.

"Two ladies stood at the counter, inspecting some diamond rings. He shrank back, he could not help it."

CHAPTER XX.

THE WATCH IS SOLD.

THERE was a very small congregation now. Many of his people still thought ill of their Vicar; and those who had come, wore a dejected or frightened air. But, as the service proceeded, the peacefulness of the prayers soothed their fears; and, as John Burleigh spoke to them of his Master's words—"Let not your heart be troubled; ye believe in God, believe also in Me"—they realised the presence amongst them of a Divine Friend, so able, so willing, to go with them through all trouble, that they took courage, and their hearts were lightened.

When the parting prayer was over, the Vicar spoke again:—

"Stay, I want to talk to you of the fever," he said. "I want you all to look at this visitation, and not to shrink from it. I do not know how it has come amongst us—*that* we must ascertain later on; all that we can do at the moment is to guard against the disease spreading. Typhus fever is both contagious and infectious; and if we do not use all precaution, it will sweep through the parish as it has formerly

done. It is blasphemous to say that 'it is the Lord's will,' as so many do. Sin and disease are *not* the Lord's will; they are the devil's. God tells us what to do to save our souls and our bodies; and if we will not listen to the voice of our Father, we must take the consequences of our wilfulness. You know that you ought to have ventilation in your houses; yet you keep your windows closed, and fasten up your chimneys. You know that you should have no rotting animal or vegetable matter near your homes, poisoning the atmosphere; and yet you have ash-pits touching your houses, and pig-styes at your very doors. You know that you should bathe your bodies frequently; and yet many of you have not taken a bath since you were children. It is no use my speaking to you of drains, for I do not think that there are any in the village. I do not ask you to do impossibilities; but, before God, I charge you to do what you can. I am His messenger to you, and the message which I give you to-day is, Do the will of your Father.

"Take a chisel, force up your sashes, and let the free air blow into your rooms—all day long and all night long, too, if you have no chimneys; if you have, burn the fire-boards, and pull down the straw which now stuffs up the flues; whitewash your walls; have all the floors scrubbed with ammonia; remove your pigstyes to a safe distance, and your ash-heaps too. I will take the responsibility upon me of seeing Lord Azerley's agent to-morrow, and I am sure he will do all that he can to assist you. But wait for no man's help; help yourselves. Fever is frequently conveyed in water; and water, which seems quite pure to the eye and taste, is yet often full of poisonous germs. Therefore I say to you, make filters, and drink only filtered or boiled water. A large flower-pot, a layer of charcoal, another of sand, and a bit of sponge are all that you need—a few pence will do it. I have spoken to Mr. Norgate, our schoolmaster, and he undertakes to make six of these to-morrow, and as many more each day until every house is supplied with one. Those who really cannot pay for them will receive one free. Send in your names to him, and the first who comes will be the first served. I need hardly point out that all your bodies, as well as your clothes, must be frequently washed. As to the brickfields, I ask no one to come near us there; if we need help, I shall come to you, properly disinfected. There are eight children there, besides Bradley, Chatteris, Martha, and myself; remember us in your prayers. You will not hear my voice at the evening prayer in this church. Few of you have come night after night, though the service has been held at so late an hour, that you might have the opportunity of kneeling at Christ's feet in the quiet of this sacred building, for half an hour before you slept in your crowded homes. But *now*, in this solemn time of trial, the bell will still be rung, and Mr. Norgate will take my place; and, as we hear the sound out at the brickfields, we shall know that some of you—I trust many of you—are aiding us by your prayers. It will cheer us and help us. For *yourselves*, I say again, go and do the will of the Father."

* * * *

A week had dragged past, and Lady Susan's letter had laid since Thursday unheeded in the Vicarage letter-box, under a pile of others.

It had been a terrible time to John Burleigh. A panic had fallen upon the neighbourhood; it was "every man for himself." Men and women, as a rule courageous enough, trembled and shrank before this unseen, but only too-well-remembered foe. The Vicar's difficulties were immensely increased by Bradley; he turned, as a weak man occasionally does under a severe strain, doggedly obstinate; no arguments moved him, no representations touched him. His wife came of respectable folk, and should not be interred until a respectable interval had passed. The Vicar had housed the little ones, who used to sleep in that room by their mother, in the old office; but the next compartment of the cottage was almost as bad, for the rooms opened into each other. Besides the old office, and a few small outbuildings, there was only a long shed for drying the bricks on the premises.

"If it keeps up fine, sir, we might put some beds in the shed."

"Yes, but if a storm came, the place would be swamped; it is on a level with that stream."

"I could put up a bit of a wall. If Bradley would help, we might make that upper bit, sir, right enough. You see, the ground stands up a yard there, and it's only like a bit of a wall at the two sides, and there are some boards that would help with the ends."

"But what are we to do for to-night? The children cannot remain in the next room to their poor mother, though I have broken the windows in both rooms."

"They must lie downstairs one night, or two, sir," said Martha, "and then I'll clean down."

John Burleigh went thoughtfully through the upper rooms once more. There he saw Bradley sitting by the coffin, as usual, with the baby on his knee—he would not be parted from the child—and little Mary in the back room, cleaning the floor. He looked at the beds; there were two in this room, side by side. The bedsteads were old wooden ones, the matresses of flock.

He took out his watch and looked at the time; it was two o'clock, and Monday afternoon. He groaned as he thought how much of the day had been already wasted. He had been to the agent in the morning, and since then had spent two hours in trying to convince Bradley to use some common sense.

"Chatteris," he said, "it is no use trying to rouse Bradley. I have spoken to him, and he will not move. You must do the best at the brick shed yourself; make the boys help you. I am going into Castleborough to buy some bedsteads and bedding;" and then the Vicar was off.

As he went on his way, he suddenly remembered that he had no money. He seldom went to the town, and was not known there. He had brought his furniture with him, and as he made it a rule to pay ready money for everything, it never occurred to him to borrow. He spent his money as it came, and seldom had any overplus at the end of the quarter. In three weeks the half of his Fellowship money would be coming to him; but until then?

He took out his purse; it only contained a couple of sovereigns, enough, as he had calculated last week, when he sent £10 anonymously to a brother clergyman, whom he knew to be in sore straits, to last, in his carefully kept house, the month out; but now?

The thought flashed through his mind that he would telegraph to his mother, but he knew that she would, at this season, be away from Burleigh, and he had better explain what he wanted, and why, in a letter, which could be forwarded. But now, at this moment, *what could he do?*

As he put his purse back into his pocket, his wrist stud caught upon his watch chain, and jerked his hand.

He stood still, and drew it out—a valuable, though somewhat old-fashioned gold hunting watch, with his father's arms and initials engraved on the case. The one personal possession that he treasured, the one thing he had felt it sacrilege to let any one else touch, since the day when that dying father had placed it in his boyish grasp. Once Arthur had stretched out his hand to take it, but his brother had quickly covered it with his own. "Not that, Arthur," he had said hastily; and now could he sell it? It was bitter to think of, yet he did not falter, he did not turn back, but went onward with a bent head.

"O Christ," he said, "I did not think that any material thing would have been so hard to give up for Thee. Forgive me, forgive me!"

When he reached the town, he looked for a jeweller's shop, and his attention was attracted to one before which a well-appointed carriage stood.

He looked in. Two ladies stood at the counter, inspecting some diamond rings. He shrank back, he could not help it, but the next moment turned and entered the shop. He went forward to another counter without glancing at the ladies, but one of them saw him, and said a word to her companion, who turned and watched the tall clergyman take his watch from his pocket.

John Burleigh had a singularly penetrating voice; however low its pitch, the words he spoke were heard distinctly.

"What can you give me for this?" she heard, and hastily turned, and concluding her purchase, hurried her companion from the place. She was inexpressibly shocked. What could be the meaning of it? The Burleighs of Burleigh. Why, Arthur Burleigh she had always considered such a desirable party; she had had him as often as possible with them; she had hoped—but what a merciful escape for her girls! The whole family must be in terribly low water. She hoped that Alice Gascoigne had not heard Mr. Burleigh's question.

Alice Gascoigne was an heiress; she, too, knew Mrs. Burleigh, and Mrs. Burleigh's pleasant girls. She had met the clergyman, too, years ago, but not Arthur. She had recognised him, and pointed him out to her hostess, but surely she had not heard those words? Miss Gascoigne gave no sign that she had done so, and did not mention the Vicar's name again; but the next day she rode into Castleborough alone, and came back with an old-fashioned hunting watch tucked inside the bosom of her habit. A week later she had left the neighbourhood; and from London, a registered box found its way to Houghrigg Vicarage, and lay unheeded with a number of newspapers and circulars amongst the letters in the letter-box.

John Burleigh had given his watch, as he had himself and his reputation, freely and unreservedly ; and, once accomplished, he had something else than the sacrifice to think of in those hot, weary days.

The brick shed was not yet ready to be turned into a hospital, though all Tuesday Chatteris and the Vicar laboured hard. That afternoon the iron bedsteads, the mattresses, and bedding arrived, and were stacked in the place, much impeding the progress of the work ; but John Burleigh dared not have them put in the infected house, or even in the office, where some of the children were sleeping. The heat was oppressive, and it was almost impossible now to enter the house, and yet Bradley declared that the funeral should not take place until "a decent" time had elapsed ; so the Vicar at last took matters into his own hands. He walked that evening to the neighbouring farm, where Sam was employed, and asked for the loan of a cart and horse. The farmer, who was a kind-hearted man, promised to bring them, and leave them in the lane by the house that night.

At midnight the Vicar and Chatteris with difficulty carried their sad burden downstairs, and placed it in the cart. Bob led the horse, and the Vicar followed with Bradley, who stumbled along weeping bitterly.

In the half light of the summer's night John Burleigh stood in his white surplice, and uttered the words, "I am the Resurrection and the Life : he that believeth in Me, though he were dead, yet shall he live : and whosoever liveth and believeth in Me shall never die."

The sexton and Bradley, in a dim way, listened to the words, as a promise for the poor body which they were laying to sleep. Bob Chatteris thought of an eternal Home, which came every day nearer to him, and of whose reality Christ had assured him ; and the Vicar, as he lifted up that pale face of his, saw the dying to all that life held most dear—the beginning of a present resurrection, whose possession was the "earnest penny" of the coming inheritance ; and his heart throbbed with an intense longing to be done with dying, and to be clothed upon with life. "Would it be long?" he thought ; then a voice whispered, "Patience. Wait. Your resurrection will soon be complete here, and then——"

They did not all go back to the brickfields. Bradley took the cart back, and the Vicar and Chatteris went to the Vicarage. Utterly worn out, they slept as they had seldom done in their lives. The next morning they were back again at their labour. Martha was cleaning the house, and tumbling things out of the windows, so that Bradley was glad to help Chatteris, to be out of her way.

John Burleigh set off on a begging expedition, to gather together some clean clothes for the children ; the horrible scent of fever hung about everything in the house, and he intended to place them in the make-shift hospital next day. He was very successful, for most people were willing to contribute a garment or two, so long as he remained beyond their threshold, and he was coming home through the last field, with a large bundle in his arms, feeling very weary, when he saw little Mary sitting under the hedge with the four youngest children about her. They were making daisy chains, but she sat with a wan little face, sticking twigs of different lengths lightly into the ground. Then she shut her eyes, and gently struck at them with her thin fore finger. She was so serious, and so intently engaged in her pastime, that she never noticed the Vicar until he was close to the group. Then she smiled up at him. He accepted her unspoken invitation, and took a place upon the grass by her side.

"This is a pretty place to play in, Mary, full of buttercups and daisies, is it not?"

"Yes, Mr. Bur'y ; Martha said I was to take the childrens out of her way, so I brought 'em here."

"And what are you doing ?"

"*They* is playing," said the little girl shyly.

"And you? Are you not playing with those little twigs ?"

"No,—not playing ; I'm trying something. I'm guessing like."

"Will you not let me join too ?"

"Yes," said the child ; "*you* never laughs at me. These bits are us all—father, mother, Sam, Dick, me, all on us. I stick 'em up, and then I shut my eyes, and touch them ever so gentle, and one tumbles down, and then I look and see which it is. Mother went first, father goes next, and Dick, but not Sam."

"Well, what do you think it means ?"

"I asked God to tell me so, which next He was a-going to touch wi' His finger. He doesn't hurt," said Mary, opening her big blue eyes, and looking into John Burleigh's face, "no more nor me touching these bits."

"No," said the Vicar. "Shall we stick up a twig for me ?"

The little maid turned paler, and then murmured resolutely,—

"Yes ; this bonnie one."

She shut her eyes, her finger trembled, she touched the bits again, and then, with a cry, threw herself into her friend's arms.

"Oh, Mr. Bur'y, I tried not to touch your bit ; I did, I did !"

"Be comforted, my little one, you did not touch it, it fell of its own accord ; a breath of air is stirring, that made it fall ; besides, Mary, the finger of God does not hurt."

"Ah !" said the child, stilling her sobs, "I forgot that ;" and, with a child's swift forgetfulness, "what is that big bundle, Mr. Bur'y ?"

"Some clean clothes for you all. Did you not see me throwing your clothes out of the drawers, over the garden wall, this morning, as Martha brought them out ?"

"Yes, and Bob's landlady came and took them away. I asked her what she was a-going to do wi' 'em, and she said, wash 'em. I told her they was all clean, and we had never had 'em on for ever so long ; but she took 'em all away."

"Well, that was right, and these are some more ; and, to-morrow, I hope Martha will be able to wash you all, and make you very nice ; and you will go to live in the brick-shed until the house is thoroughly disinfected."

"What is that ?"

"Made sweet, like a flower is."

"Ah, I shall like that ; there is now such a queer smell, just like in the big bundles mother brought home on Saturday. Oh dear ! Mother won't come any more Saturdays !" and the child sobbed.

A strange, fierce glow came into the Vicar's eyes.

"Hush ! hush ! little one," he said, and gathered the child in his arms ; "here, cry on my shoulder." So presently Mary was comforted, and wiped her eyes herself on John's clean pocket-handkerchief.

"Now, tell me what bundles you mean."

"Those two big uns in the wood-house. Mother brought 'em home, and I heard her tell father that Mrs. Boothroyd had given her them."

The Vicar started, and unconsciously strained the frail child nearer to him.

"There are grand clothes of all sorts, Dick says, in 'em ; I didn't see 'em, I was with mother, but he did, and the other two boys, and Sam ; but Sam was only there a little bit."

John Burleigh kissed the little girl, and produced a cake from his pocket. "See, Sam's mistress sent you this ; eat it here, and do not come home till I fetch you."

Then, with glistening eyes, the Vicar sprang over the stile, and entered the brick-yard. He was met by Martha.

"Dick is complaining, sir ; I reckon the fever is on him. I've put him to bed in the back room, and sent the other two lads for the doctor ; I expect he'll come *this* time. Every one's crying shame on him, and he'll come for fear no one else will have him, and he'll lose his custom."

"Let us hope from a better motive than that, Martha ;" and the Vicar went to the shed. Bob Chatteris was levelling the floor. The end of the shed, and one side, had been built in ; a large tarpaulin hung over the other open side, and was pegged to the ground, and another rick cover was stretched across half the other end.

"There, sir," said Bob, "I reckon that's middling comfortable ; we'll be able to put up the beds to-morrow, I've only this floor to finish. Plenty of fresh air, sir."

"It is capital, Chatteris ; but where is Bradley ?"

"Oh, for the last two hours he's been lying out there ; he says that he's caught cold, he has such pains in his limbs, and cold water like down his back. I reckon it's fancy."

"No ; he's beginning with the fever, and Dick is down too. Martha has sent for the doctor."

Bob struck the earth two or three times with the flat of his spade.

"Well, sir, we're in for it," he said, "that's certain. We must get our back to t' wall."

"Chatteris, do you know anything about some bundles of clothes?"

"Yes ; the boys were pulling about a lot of things that their mother had brought home, and I put 'em back where she had stored 'em."

"Those clothes contain most virulent infection. They have been locked up for years ; every shred of them is infected, and the moment they were exposed to the air, the sleeping fiend sprang into life. We must burn them at once. Not you, Bob ; I will do it alone."

"That you won't ! Let me do it, sir. I'd be glad to die. You are worth a thousand of such chaps as me."

"No ! In a forlorn hope, would you let another man push you into the second place, and take the first himself?"

"But I *have* touched them already."

"Come, Bob, this is no time for quarrelling ; we will share and share alike, as good comrades should ;" and John Burleigh, with his usual sweet smile, held out his hand. Bob hesitated a moment, then placed his

own thick, harder palm in it, and drew the back of his other hand across his eyes.

"Right you are, Captain!" said he. "You give the word, I'll follow; it's my place;" and he went on levelling the floor.

John Burleigh hurried off to the station. It was two miles distant. Night had fallen, and all the men had gone home when he arrived there; so the cart-load of old sleepers, for which he asked, and which the station-master willingly gave, could not be sent out to the brickfields until the following morning. As he returned, John Burleigh, as Chatteris expressed it, got his back to the wall, and faced his foes. The only fact which troubled him was, that he could not meet the danger alone; Martha and Chatteris *must* stay, and more help was needed. But where should he meet with it?

CHAPTER XXI.

IN WHICH JOHN BURLEIGH FACES UNSEEN FOES.

THAT night, to the delight of the children, they slept in the brick-shed. It was a long time before they gave over their merry chatter. They were full of wonderment at their iron bedsteads and spring mattresses; jumping up a score of times in an hour to turn up the clothes, and to put their fingers through the meshes of wire-netting; but at length, even curiosity grew drowsy, and one by one they fell asleep.

"It is plain," said John Burleigh, taking counsel with his two devoted assistants, "that you, Martha, cannot be both nurse and cook, therefore I desire you to go to bed. We have put up one of the new mattresses in the office, and we must take rest by turns. Part of a night's rest will do nothing for any of us. Poor Mrs. Bradley died with dreadful suddenness, but these cases may, and probably will, last for weeks. I shall take this first night's watching. You, Chatteris, will take to-morrow, and before a third comes, we must have a hospital nurse here. You will be none the worse for the walk to the Vicarage; be sure you do not return until after you have breakfasted to-morrow. You are quite worn out, my poor fellow; these three days have been hard ones for you."

"Then what have they been to you, sir? You've done more nor either on us. You go home to-night—I'll stay up."

"No, you won't," interrupted Martha. "I shall, and so nobody need say contrary;" and she gave a defiant, but half-fearful glance toward her master.

John Burleigh smiled quietly.

"Now, both of you know that I am the most obstinate man in the world," he said, "and that you have both promised to obey me. Every one cannot be head, and I shall think that you want to usurp my place, if you will not do as I think is best. Come, Chatteris, remember your promise."

"But you'll kill yourself, sir, and then—"

"Nonsense, man! Off you go!"

Martha lingered. "I *can't*, sir, leave you up; do let me stay, just to-night."

"Don't beg so humbly, Martha; it is unnatural on your part. Now go away."

Left alone in the wide loneliness of the summer night, John Burleigh's heart sank.

The natural anger he had felt when he discovered Mrs. Boothroyd's wicked gift, had passed, and been succeeded by a wave of pity for the wretched woman. He suffered for her, as she was perfectly incapable of suffering for her own sin. He imagined her living on with a burden of blood-guiltiness for ever pressing on her conscience; he pictured the haunting remorse which would be her constant companion, until the perspiration rose on his brow, and he groaned; he never imagined the greater horror of an *unmoved self-justification.*

For an hour he paced up and down the courtyard, praying for a sinner who was not even conscious that she needed such intercession.

The blood was throbbing hotly in his brain, and the vivid apprehension of the night-time crowded about him. He saw the children dying one by one; perhaps the whole family would be sacrificed to those wretched bundles of clothes. He longed for the morning, when he might destroy them. He would telegraph the first thing to Tozer, to send him a hospital nurse; for what would happen should Chatteris or Martha succumb? He remembered Lady Susan, and he prayed for her; and the thought of her suggested another self-torture—had he written tenderly enough to her? He could not recall his words, and the more he invoked his memory to aid him, the more persistently it played him false. He went into the house, and in very self-defence, spent the rest of that long, dreary night within sight of his patients, who were restless enough to keep him constantly employed.

Bradley was lying in one room, and Dick was in the other. Before the following day was over, the baby was there beside them. Mary, and the four others, who were housed in the brick-shed, were kept away from the house, and escaped. Mr. Burleigh had told her never to let one of her charges come near their home, and Mary had many a fierce, but always successful, struggle to fulfil his commands. Never had she found her post so difficult as the following day; for the young ones, already sufficiently excited by their new quarters, were driven nearly wild by the distant view of the great bonfire, in the lower end of the brickfield, and the moving figures of the Vicar and Chatteris passing backwards and forwards to it. They saw the Doctor on his horse standing near, watching, and they did not see any reason why they should be debarred the fun; but, by alternate entreaties and commands, by coaxings and scoldings, their little guardian succeeded in keeping them away.

The doctor was doing his duty now, and came, always once, sometimes twice a day; but, as he frankly owned, he could do little more than watch the course of the disease. Dick as yet did not feel ill enough to wish to stay in bed, and, greatly to Martha's annoyance, was continually making raids downstairs. Bradley, on the other hand, complained of headache, and was dull, apathetic, and forgetful; occasionally he rambled, speaking to his wife or about his work, and then he would suddenly come to himself, moan, complain of his head, and become more senseless than before. John Burleigh had written to Mr. Tozer to secure him a nurse from the Infirmary. It was impossible to get one in Castleborough, and two days had been lost by the doctor undertaking to find one, and a third, in which he was inquiring in the neighbourhood of his own village. The suddenness of Mrs. Bradley's death had scared every one; and the only woman willing to come, was prevented doing so by her friends. So another Sabbath had come, and after taking all the precautions possible, the Vicar was again in his church.

His people saw him changed—he was pale, and weary; even when preaching, his old fire was absent. Once only his eyes flashed and glowed, and that was at the beginning of the service, when Mrs. Boothroyd, handsomely attired, stout and contented, sailed in, and took possession of a comfortable corner in her cosily-lined pew. His glance passed by her husband, who followed with bent head, and fixed itself full on her; she could not avoid it. She coloured and tossed her head. Then John Burleigh's face became still whiter, and he proceeded with the prayers. He gave out his text, and again, for the second time that morning, looked towards the Boothroyds' pew—"If thou hadst known. . . . in this thy day, the things which belong unto thy peace! but now they are hid from thine eyes."

His voice was low and gentle, but incisive in its utterance, beseeching in its entreaty. Boothroyd had an uneasy consciousness that the Vicar was preaching to them, and tried to think of his corn crop, and plan the reaping for next week. His wife, as usual, did not listen at all. The Vicar knew that it was so, that once more his Lord's voice had been unheeded, once more His suffering had been despised.

Never had he felt more sad, than as he opened the door of his lonely house that morning. He had been up the previous night, and ought to have rested now, but there was a tingling and rushing in his brain, an excitement from over-weariness, which would not permit him to sleep. He sank back in his chair, too weary to eat the bread and cheese which he had brought with him, and drew forward for inspection the pile of letters he had taken out of the box.

There was one from his mother, offering to come to him immediately. She had no idea he was himself nursing his poor patients, but thought that she might be of use in the Vicarage with him. It was a tender, motherly letter, and he kissed it as he laid it down. But he answered her at once, begging her not to come on any account—telling her that he had taken no harm, but that he might convey infection to her and to his sisters, and that he hoped a trained nurse would be in charge before she received that letter; and, finally, thanking her for the cheque which she enclosed, and promising that she should often have news, and that he would come "to dear old Burleigh" for a rest so soon as the trouble should be over.

This letter comforted his mother, as he had intended it should, and also allayed her fears; and though she was still anxious, she was not fearful—she little guessed the truth.

He was still writing, when a knock came at the door, followed by Bob's landlady.

"Please, sir, our chaps have made so bold as to send you on a bit of dinner; two of 'em walked into Castleborough to buy it yesterday."

She took the cover off a vegetable tureen in which, in a glory of brown gravy, reposed a fat duck; and, deftly taking a clean cloth from her basket, spread it over a corner of the writing-table. A clean basin contained cauliflower and potatoes;

and there the good woman stood, smiling so happily, that the Vicar could not refuse to gratify her by tasting the well-cooked dinner. When he did so, his appetite awoke, and he made such a meal as he had not enjoyed for weeks. He felt a different being when, half an hour later, he returned to his correspondence. He heard the good woman moving about in the kitchen, and smelt the fragrant coffee. He forced himself to patiently glance at each letter, but his hand trembled and his glance grew tender as he recognised at last Lady Susan's handwriting. It was a long letter, but he read it through before the evening bells ceased to chime for service. And Bob's landlady, when she brought in her cup of coffee and piece of toast, saw the change in the Vicar, and put it down to the good food which she had brought him.

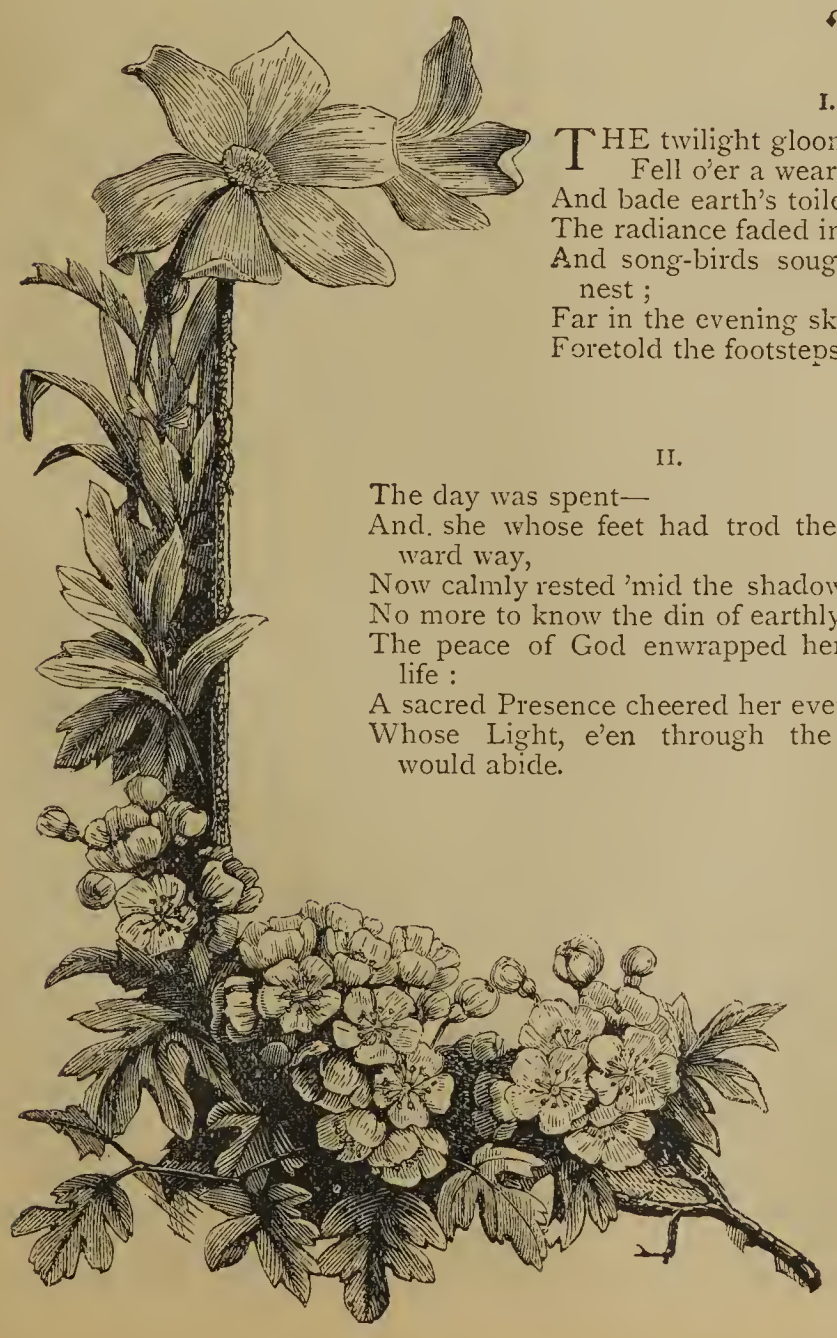
(*Continued—page* 753.)

For cleaning Kid Gloves there is nothing to be compared to benzine collas, which may be used with equal effect for the removal of grease, paint, oil, etc., from clothing of any material; a great advantage in the use of this fluid is that it leaves no odour behind.

No Meal should be eaten hurriedly. Breakfast should not be a very heavy meal, and if a quarter of an hour's rest can be enjoyed afterwards, it will be found a great advantage. In any case, violent physical exertion, such as running to catch a train, should not be taken immediately after breakfast. It is still more necessary to rest after dinner, as that is usually the heavier meal. It is desirable that the repast be taken in a leisurely way, enlivened by cheerful conversation. "Better is a dinner of herbs where love is, than a stalled ox and hatred therewith," is as true in a physiological sense as in a social one.

Rice with Cheese.—Boil a quarter of a pound of Patna rice in water with salt; drain it, toss it up in a stew-pan with two ounces of fresh butter, and a pinch of cayenne-pepper. Put a quarter of the rice on a hot dish, strew over it equally an ounce of grated Parmesan cheese, then put another portion of rice and cheese until all is used. Serve immediately.

Lime Water, beaten up with sweet oil, is an excellent application for burns.



Orange Sauce.—To a tablespoonful of corn-flour, add two tablespoonfuls of sugar, a wine glass and a half of orange juice, and half a pint of water. Stir over the fire briskly till it boils, and pour over the pudding.

Brown Bread Tea-cakes are made of decorticated wheat-flour. To one pound of brown flour, add four ounces of butter, one teaspoonful of baking-powder, two ounces of pounded loaf-sugar, and one pinch of salt. Mix one large tablespoonful of good yeast with two well-beaten eggs and three-quarters of a pint of buttermilk. Stir it all up till quite smooth, dredge a little white flour over, and set to rise in a warm place. When quite light, knead with white flour into ordinary-sized tea-cakes, and bake a light brown. Cut in two, butter, and serve hot in a muffin-dish.

Barley Water.—Pearl barley, two ounces; wash till freed from dust in cold water. Boil in a quart of water a few minutes, strain off the liquor and throw it away. Then boil the barley in four pints and a half of water until it is reduced one half.

Lemonade.—Put the peels of lemons, thinly shred, into cold filtered water which has been boiled, and when it has stood an hour, add lump sugar and the strained juice of the lemons. Take out peel before serving. Citric acid, with a few drops of lemon-flavouring, makes a wholesome and useful beverage.

Gingerbread Aperient. — Gingerbread made with oatmeal or barley-flour is a very agreeable and harmless aperient for children.

"Toward Evening."

By

Marian Isabel Hurrell.

I.

THE twilight gloom
Fell o'er a weary land in robe of grey,
And bade earth's toilers rest upon the way;
The radiance faded in the distant west,
And song-birds sought the shelter of the nest;
Far in the evening sky a misty light
Foretold the footsteps of the coming night.

II.

The day was spent—
And she whose feet had trod the Homeward way,
Now calmly rested 'mid the shadows grey;
No more to know the din of earthly strife,
The peace of God enwrapped her fading life:
A sacred Presence cheered her eventide,
Whose Light, e'en through the Valley, would abide.

III.

Long years ago,
When hope's glad beams illumed the morning land,
She took her part amongst the toiling band;
And pleasant were the songs of praise she sung
Along the way, when heart and voice were young;
But when *night* gathered o'er life's ebbing tide,
She murmured only — "Lord, with me abide."

IV.

Blest evening hour!
When through the darkling shades of earthly gloom,
The soul can look to life beyond the tomb—
To nightless realms above our changeful skies,
The dear and blessed land of Paradise,
Where, when the turmoil of the day is done,
Our hearts may know the peace of victory won.

THE GOAT HORN.

NOT far from the great Imperial road, which, starting at Bâle, and ending at Lunéville, crosses the mountainous district of the Vosges, and then traverses the plains of Alsace, stands the hamlet of Chavingen.

It is one of the many villages of the Vosges, hidden away amidst its foot-hills. The mountain range is the friend of the peasants. In its pine woods the women and children gather their stores of fir cones for the fires which boil the great soup pots and warm the kitchens in the terrible cold of winter. In its forests the charcoal-burners, "schlitteurs," and woodcutters find sustenance; and many a youth who leaves the Vosges for a season's work in the great saw-mills at Valtin, grows weary of the town, and returns to their green shades and hard fare with gladness. But the trees are not everywhere. Large patches of open land are from time to time cleared, and are reserved from replanting to serve as pasture lands to the Commune. Some of the pasturages have belonged to the people for hundreds of years—even in the far-off evil days of the Monarchy—and they do so still. On those nearest the villages a few cows may be seen, round whose necks, by a leather strap, a bell is suspended.

On the more distant uplands the goats are fed. Few cottagers are so poor as not to possess a goat or two; some have several—the widow Duchêne but one. All require a little milk for supper; and when the fête day of St. Martin, the patron saint of Chavingen comes round, it is well to have a bit of young kid to feast one's friends. Therefore it is that a man is employed as a goat-herd. The owners pay him half a franc per week for each goat that he pastures. He calls them together in the early morning by the sound of his long horn; they come of their own accord to him from the stables where they have passed the night, safe from the wolves. He leads them, and his dog guards their rear, until they arrive at the place which he has selected for them, and there they remain all day. At sundown he collects them again, and brings them home through the forests to the village for the night. This is not an easy task—for goats, like human creatures, love to stray, and are tempted hither and thither, following their own will rather than their guide's, and are often in danger of being lost. Yet, if one falls down a mountain ravine, or is carried off by a wolf, the goat-herd is responsible, and the value of the animal is a terrible loss to so poor a man.

It was a raw autumn morning. Masses of mists rolled down from the heights of the Vosges, and swept over the lower hills at their feet, hanging so low over them, that their filmy length crossed the church spire, reluctant to rise and unveil the scene beneath to the caresses of the sun. Nothing more beautiful in nature can be seen than these wooded mountains, rising one above another in the pale heavens, with the vast plains at their feet stretching out of sight; studded by villages, and intersected by straight roads, bordered with trees, drawn as green lines through the golden corn-fields.

Yes, it was as yet a raw, damp morning. So thought Jean Claude Klipfel, as he lay snugly in his old canopied bed in the alcove, an antique image of Saint Michael nailed above his head. He looked into the kitchen, and said to himself that he need not rise for two hours yet, for it would be that time, at least, before his servant maid, Catherine, appeared to light the fire.

Jean Claude was a prosperous man, and he loved to remember that this was so; so he looked with satisfaction around.

The kitchen was a large room, dishes and porringers of metal were shining on the dressers; ropes of onions, bunches of garlic, sides of bacon, and cured hams hung from the brown rafters. The soup-pot stood ready by the open hearth, and a coffee-pot on the table; several loaves of bread were on the shelf; a sword, gun, and tarnished belt and *cartouche* box hung proudly on the opposite wall.

"Ah!" said Jean Claude, aloud, "Margredel was an imbecile. What a different house this is from her poor cottage. An old stove; a few earthen porringers, and little enough save soup-maigre ever in them. A hard life, and all for the sake of that lame idiot, Gaspard Léger—bah!"

And Jean Claude tried to turn over and sleep again; he drew the coverlet of sheep skins about the back of his neck, and shut his eyes; but just then a long, sad, harsh blast rang dully through the air.

"Ah! that beast of a *chevrier!* that miserable Gaspard Léger!" he exclaimed; but he turned down the sheep-skin, and listened. Again and again came the dull sound through the damp air.

Jean Claude tossed about, and finally, as though ashamed of what he was doing, slipped from his bed, and cautiously stepped to the window, whence he could obtain a view of the village green. He saw a man in a poor peasant's dress, but with an old military cloak hanging from his shoulders, blowing the long horn, his dog by his side, and the goats straying to him from different points. The man's face, when he lowered his horn, looked worn, and he limped, using his crook to support his steps as he turned away with his flock; but before he did so, he raised his broad-brimmed old hat, and waved his hand in the direction of the village fountain, and Jean Claude, following the gesture with his glance, saw a woman standing there already, with a basket of clothes, but pausing in her work to watch the goat-herd until he must, as Klipfel knew, have disappeared round the corner of his farm-house. Then she looked up no more, and Jean-Claude returned to bed with an angry heart.

This morning he asked himself an old question—Why had he risen thus to watch the Légers? and how often had he done this same stupid action in the past years? He silenced the inquiry, for was it not a daily action, one which, in fact, had grown into a regular habit? There was but one consolation, that no one suspected his folly; for it was well known in Chavingen he and they were enemies. Did not every one know this, from Baptiste, the shoemaker, to the old widow Duchêne? Yes, for they had lived their lives here, with the exception of the period of the Franco-German war. Both had been to the war of '70, both had returned; but with what different results! Even in all that wild excitement, when victory seemed so certain, and "Berlin" was in every mouth, Jean Claude had been prudent. He sold his farm at a good price, and everything in it. He said to himself, "After all, we Alsacians may have to pay the bill; every man for himself." So he took a pick and shovel into the forest, also a great bag of money, and he returned in the morning, and joined the other conscripts with but a few francs in his pocket.

"Ah! what a fine young man is Jean Claude," said Widow Duchêne, "with such fat red cheeks and ears; they will certainly make him an officer."

Jean Claude did not fare badly as a soldier at first. He always managed to procure something more than the regulation rations. He requisitioned a goose here, two or three strings of sausages there, or, at the worst, some eggs. His comrade, Gaspard Léger, on the other hand, from the beginning was in need. If any good thing fell in his way, even when hungry himself, he shared it with others. Both the young soldiers were in the horrible battle of Borny, on August 14th. In it Jean Claude was wounded, but not badly, or he would have perished, as thousands of others did, for want of help. He managed to leave that ghastly field, heaped with the dying and dead, and taking his discharge as granted, made his way back to Chavingen.

A panic had seized the place; every one was fleeing, and he bought back his farm for a tithe of its purchase-money, and remained on his farm. He was wise. In four more months his old neighbours had mostly returned, poor and desolate. Then it was that he again, for the twentieth time, asked Margredel Hullen to be his wife. Her old aunt, the Widow Duchêne, with whom she lived, urged the match.

"Doubtless Gaspard Léger is killed long ere this; then wherefore wait for him?" she said.

The words brought tears to Margredel's blue eyes, but she only shook her head.

News came in fragments. The villagers heard how this and that fortress had fallen; but that not one had been taken by assault; of the Emperor's abdication; of the defence of Orleans, Strasburg, and Paris. Joseph, the charcoal-burner, told how he had been in Lagny, and had seen eighteen hundred wounded in the church, which had been turned into a hospital; how children, ill with typhus fever, walked many miles for a little soup, for that the enemy had taken everything.

Then Margredel Hullen took a resolution that she would venture to the great road, and herself endeavour to gain some news of Gaspard. She went, and in a week returned, the ghost of her former self. Phalsburg, she learnt, could not hold out much longer; but whether Gaspard was there, or with the army of the North, she knew not.

Margredel told no more, but worked in the fields, or at the washing. One evening, being winter, and the cold very severe,

the neighbours were in the little wine-shop of Christian Sôme—not that he had many casks that year in his cellar, there was but little wine, and still less money to buy it—yet it was at least companionship to meet together, and to smoke a pipe. And sometimes a stranger would approach Chavingen by the old worn pathway called a *schlitte* road, and drop in, seeing the glow of the copper lamp, and bring a little news from the convulsed outer world. They were talking about the winter, which indeed had already come, for it was now November, and Jean Claude Klipfel was saying that it would be very hard, for he had seen large flocks of wild geese, which is a sure sign. A sound fell on their ears, and they paused in their talk.

"Ah!" said Sôme, as the shrill yelp was repeated, "it is but a fox in the valley;" but at that moment, a second sound, the sound of slow footsteps, approached. The door was pushed open, and a man came into their midst. His right knee and foot were swathed in bandages, and his left arm was in a sling tied across his breast; his beard was matted, and though his face was discoloured with blood and smoke, the skin gleamed pallid, and a wolfish eagerness of hunger burnt in his eyes.

The heat of the room overcame him; he spoke no word, but sank down.

"A pint of wine, quick," cried Jean Claude.

"Rather *eau de vie*," corrected Sôme, "and, madame, some soup, even if it be our last."

"I knew thee, Gaspard, the instant I saw thee," said one and another, crowding round the wounded man. It was felt to be a distinction to greet him, an honour to have him address one.

Jean Claude took him home, for Gaspard Léger was an orphan and alone. He had not grieved over this formerly, for he was ever gay, and he earned money enough for all his needs as one of the best woodcutters for miles around; and his kindly disposition made him an universal favourite. His old comrade said, "Come with me, Gaspard. I owe thee my life; twice thou didst save me on that terrible day at Borny, and many a bit and drink didst thou give me in those long marches." And so the sick man went to the farmhouse, and gradually regained his strength, but never his light heart again. Sometimes he would shade his eyes with his hand and shudder, but he seldom spoke of what he thought.

Spring came, and then, old Joseph having died that winter, Gaspard offered himself as goatherd—for his arms were not now strong enough to wield an axe. He trusted that in time all his old power would return, and believing this, and because they loved each other dearly, he and Margredel were married; and from that day forward Jean Claude Klipfel spoke to neither of them again. He had made so sure that Margredel would not care for Gaspard now that he was sad, partly useless, and so very poor, that, when he found that he was all wrong, and that she loved his old comrade but the more for his misfortunes, he felt an insult had been offered to his understanding, as well as a wound to his heart.

It was pain to both Gaspard and his wife to lose this friendship, which had been theirs from childhood, but they said nothing, only Margredel went once to the Pastor, and told him all; and he called Jean Claude into his little room one day, and there, amongst his books, spoke to him and asked Klipfel to love his neighbours as God had loved him. He reminded him that Gaspard had saved his life in the war. But Jean Claude answered that he had repaid that by feeding him all the winter. The Pastor saw that he would not listen.

"Klipfel," he said, "if you harden your heart against your comrade, you will also harden your heart against God. To lose an earthly friendship, which is a true one, is a great loss, and touches a man's life afterwards; but to lose the friendship of God kills a man's true life—the loss lasts to eternity."

But Klipfel would take no heed. He often thought of the Pastor's words, for he went to church each Sunday, and as he sang the hymns, he looked now and again at the Légers. At first Gaspard's face was as glad as Margredel's, but as time went past, and their prospects did not improve, he saw it grow sad again. One little child came, and then a second, and a third; but each soon passed away, and Gaspard carved a wooden cross, with three broken flowers upon it, and cut deeply, "With God," and set it at the head of the little grave. The Pastor told Klipfel that they might have lived had they been a rich man's children, for they needed food their parents could not procure for them. And Jean Claude's heart grew harder and harder, for he said to himself,—

"If Margredel had married me, she might have had her little ones still; but she would not, so she must suffer. It is her own fault." And he replied to the Pastor,—

"Then why does not Léger give up blowing that horn, and making wooden things in winter, and go to his old trade and earn money?"

And the Pastor looked at him and replied,—

"Gaspard is too weak. If he had plenty of good food, and could have the lotion for his arm which strengthens it so much, this might be—nay, would be, please God; but the good God knows that it cannot be, save some one of His other children helps."

But Jean Claude turned away, and the Pastor went into the church to pray for them both. He was very poor, the good man, and his own wine was as thin, and his dish of beans had as little oil with it as the Légers' own.

Gaspard grew rich—the richest man in the village was he, but not the happiest. He envied happy people, but the two whom he envied most were Gaspard and Margredel; for there was something in their faces which told him that they had peace. For a long time they spoke to him when they met him, and offered him little kind services; but he would not respond to their greetings, and ignored their deeds.

The mist, instead of rolling away, settled down that autumn day into rain. And when Gaspard and his flock returned at night, Klipfel observed that they all looked wretched.

"Uncle," said Catherine, "Léger is lamer than ever. He can hardly crawl home." But she received no reply.

Next day early Jean Claude awoke. The rain was beating against the windows. "Surely the horn is later this morning," he thought to himself; "perhaps Gaspard is too lame to come; if so, he will lose his place." But just then he heard the horn; yet it did not sound so loud as usual. He crept to his post of observation. What did he see? Not Gaspard, but Margredel, wrapped in the old cloak, collecting the goats. They came slowly trooping forward, obedient to the horn summons; and then through the mist and rain the flock, headed by Margredel, moved forward and were lost to sight.

Jean Claude stood still. Two voices were in his heart. "Let her reap as she has sown," said one.

"No," cried the other; "this is your chance. Go and help her. God has been good to you, turn not from Him, He bids you help her.

"I will, I will," cried Klipfel, as he hurried into his clothes.

He was soon in the forest, where Margredel was with difficulty keeping the goats together, and leading them onward.

"Stay!" called he.

She waited in surprise until he came up with her.

"Why have you come with the goats?"

She lifted her pale face, and said,—

"My husband is ill."

"But you are not strong enough to climb the mountain, and run after the goats."

"I must try."

"But why not return home? If your husband is ill, he needs nursing."

"Ah, that he does; but if I return, we starve;" and bravely the weak woman turned and faced the upward path.

"Go home, Margredel. I will tend the goats; but call at my house as you return, and take Gaspard all he needs from his old comrade."

Margredel gazed at Klipfel.

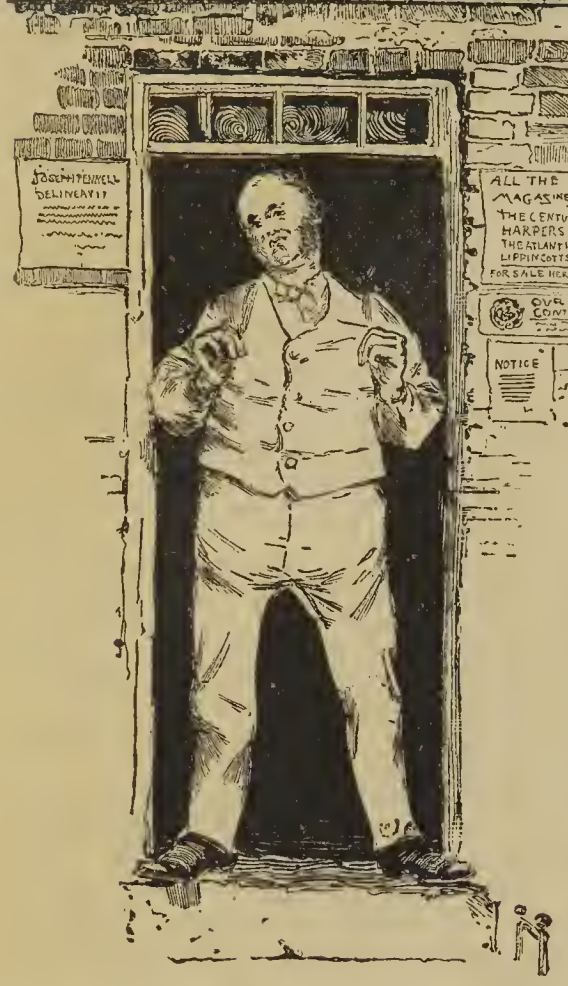
"Go," he urged; "go as I say. All shall be well with the goats. Here, give me the horn and the crook."

As he took them from her hands, Margredel awoke.

"The good God bless thee, Jean Claude," she whispered, and then turned homewards.

And the good God did bless Jean Claude—blessed him with happiness untold. It began that wet day on the Vosges, but it grew with every passing week, and mightily with each succeeding year.

The blessing of self-surrender, the blessing of making others happy, brought the blessing of personal content and joy.



Gaspard Léger is a strong man now, and the prosperous, active partner in the firm of Klipfel & Léger, of the great saw-mills of Chavingen. His children, and those of Jean Claude Klipfel, who for years has been the happy husband of Bertha, the Pastor's sister, often ask him to tell them stories of the great war time; but the narrative that their mother tells, is their favourite one, of how "Uncle Jean Claude" could not bear to see any one toil too hard, or get wet on rainy mornings, and so insisted on driving the goats to the mountains, in the old days when "papa" was a poor man, for him.

"Ah, that is just like him," exclaims their eldest boy. "I hope I shall grow up like Uncle Jean Claude. Did you think that I should, mother, when you named me after him?"

"I hoped so, my son; may our good God grant it."

"Amen," adds Gaspard, as he pats the boy's shoulder.

SHOP WINDOWS.

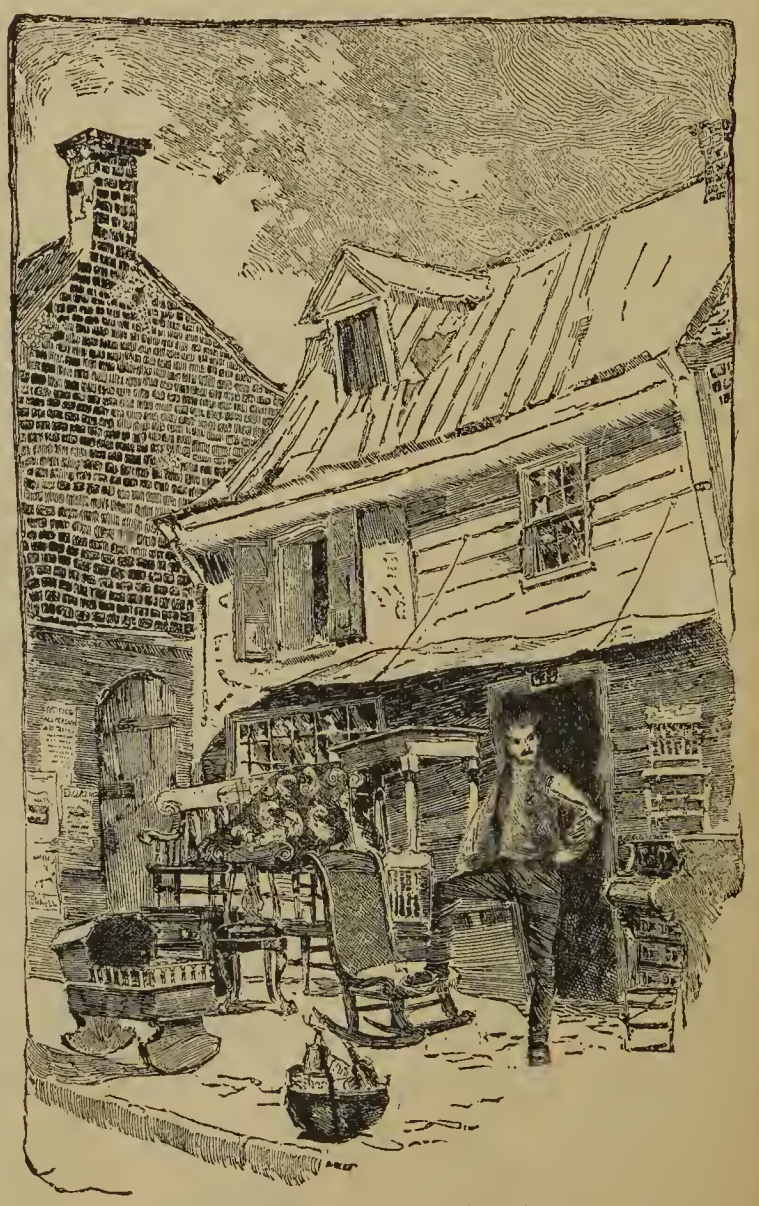
"Well set out—half sold."

PART I.

WHILE the cleanliness of the streets of Philadelphia has, with the wild escapades of the younger Penn and the visits of Kidd and his desperadoes, passed into legend, the city has improved in many other things. Particularly has it become famous for its shop windows.

Extremes often lead to their opposites, and from the chrysalis of neat, simple Quakerism there has sprung an artistic butterfly. The monotony of quiet brick and white shutters is relieved by windows filled with dazzling displays of everything which it has entered into the mind of man to buy or sell.

Forty years ago a gentleman from Europe observed that the shop windows of Philadelphia were by far the most elegant on the Continent, and the only ones that reminded him of those of Paris. This peculiarity, singularly enough, can be traced to a very remote beginning.



Every one who is familiar with the early history of Philadelphia is aware that there was a period during the Revolutionary War, when, despite the high prices, there was an incredible extravagance which has never been equalled, save, perhaps, in the oil times. This was in the days of Robert Morris. It was then that real displays were first made in the shop windows, and the custom has ever since been preserved. Before the present generation of artistic shop-keepers arose, there were only two or three who studied the beautiful in their manner of exhibiting their goods. The success of these houses in fostering a high standard of good taste in this direction, is best certified by the numbers who have followed in their footsteps.

It is not so much from an æsthetic standpoint that shop windows are interesting, as that they are of value in the history of the development of commerce and trade. "*Ex parvis magna crescent*," or as the Scotch saying has it, "Many a mickle makes a muckle;" and it is in the growth of window decorations that the ascent from little to the great in commercial circles is most marked. Window decorations have exerted a strong influence upon the decorators. Through their means, men who were once keepers of small shops, have risen to be at the head of large wholesale establishments.

"Little by little, the bird builds its nest," and little by little the attractive variety of molasses, candy, or ginger cake, daintily laid in the window, has led to elaborate devices in ices and méringues. Photographs of such windows would thus be the biographies of men, or the history of firms. If a man's age can be told by the poetry he reads, the condition of a tradesman's window will, to the keen observer, indicate the exact stage of his trade. There have been other men who, while rising through the influence of their shop windows, have at the same time changed the nature of their business, just as some objects enlarge or petrify into entirely different substances.

There was once a shop whose proprietor was a lover of art and antiquity, but whose business was to sell drapery goods. His own taste and the fashion of the age, led him into dealing largely in Eastern fabrics. The only expression he was able to give to his artistic feelings was in the arrangement of these articles. By draping his India shawls and rich oriental embroideries around Chinese jars, he found he could not only gratify his æsthetic instinct, but also draw custom. In this way he killed his two birds with one stone. But the Chinese jars were like the new andirons of the young woman in *Punch*, which led to a complete refurnishing of the house, and the shop was by degrees remodelled to be in keeping with them. Gradually other articles, equally foreign to his legitimate line of goods, but affording an excellent contrast to them, made their way into his windows. Rich ivory carvings, rare jewels, daggers of antique workmanship, pieces of furniture of quaint device, stole in one by one, until the window, like the magic cave in the story of Aladdin, was constantly revealing some new beauty and curiosity. In the end, æstheticism gained the day. Now his shop contains nothing but bijouteries and antiquities; an occasional shawl, or roll of pongee, or old lace, being the reminder of its original character.

Every trade or art has its legends and traditions. There are several stories current among retail merchants, the purport of which is to prove the great benefit which has resulted to business from tasteful arrangements of windows. Once there was a man—so one of these legends runs—who had had on his hands for many years some goods of which he could not possibly dispose. He grew more and more weary of seeing them, until it seemed to him that

No need of a sign-board.

they were a heavier burden than the Old Man of the Sea, and that he was in sorrier straits than Sindbad. When the burden became greater than he could bear, he shifted it to the shoulders of the auctioneer, a resource from which poor Sindbad was debarred. A few days later, walking up the street, and wondering with what he could fill the space left by the sale of his goods, his eye lit upon a shop window, which impressed him as containing a choice selection of articles of exactly the quality and quantity suitable to his purposes, and he went within to secure them, but found, to his chagrin and amazement, that they were his own despised wares, arranged with some sense of appreciation and harmony.

This story is told in many ways, and with reference to many subjects. In advertising circles the tale is of a gentlemanly Proteus, who fell out of all conceit with his beautiful country house, put it in the hands of a real estate agent, and then fell in love with it again, through the glowing words of the literary Turner, who described its charms for the column of advertisements.

From the simple exhibition of wares, window decoration has developed into a grand study of colour and design. Those who know nothing of the inner working of shops, are apt to think that the white lace laying on the richly-tinted silk, or the Japanese embroidery thrown carelessly over the low couch, came there much as isolated boulders found their way into the meadows and pine woods of New England ; in some upheaval of stock they were brought to the surface. The truth is, that the wise shopkeeper of the present generation gives as much attention to the exhibition of his wares as to the purchase of them. Heine, when he visited London, was struck with the brilliant effect of the shops, and was quick in perceiving that this was due, not so much to the perfect finish of the articles, as to the manner in which they were exhibited. "There is also," he writes, "a peculiar charm in the art of arrangement, in the contrast of colours, and in the variety of the English shops. Even the most common-place necessaries of life appear in a startling magic light through this power of setting forth everything to advantage."

In some cities it is a business or an art in itself, to be adopted and followed like any profession or trade. Paris, as the headquarters of the world's buying and selling, has advantages which other towns have not as yet acquired ; and therefore it outshines them. Boston is fortunate in the ample size of its shop windows. At one time professional decorators in Philadelphia went from shop to shop, visiting each probably once a week. But now the retail establishments have grown so large, and principal firms have each their own artist, who attends to all the decorations. But he is always the designer and director upon whom the responsibility for success or failure lies.

(*Continued—page 760.*)

THE POST OFFICE.

By An Official.

Part I.

It would be somewhat beyond the purpose of these Articles,—which is to reveal to the readers of —"A.1"— some of the inner machinery of the vast and complex organisation of the Post Office as it now exists,—to attempt anything like a detailed history of its origin and gradual development. It is the structure as it now stands that we want to know and comprehend, not how the site was selected, the first foundations laid, the successive stories added to the goodly pile that stands conspicuous amongst the monuments of advancing civilisation. Still, a few words on the past will not be altogether out of place here.

Arrangements similar to what we now understand by post, are mentioned in very early sacred and profane history. For instance, we read in the Book of Esther how Ahasuerus communicated the disobedience of his wife Vashti to his people in every province of his vast empire. Xenophon mentions that Cyrus, when he invaded Scythia, formed regular riding posts for the transmission of news to and from his capital. Herodotus alludes to a similar arrangement between Susa and the coast of the Ægean Sea.

Such posts, however, were wholly confined to the transmission of Government correspondence. This was the case even under the more advanced civilisation of the Roman empire, as well as in China, where the Venetian traveller, Marco Polo, found a kind of arrangement for transmitting official correspondence between the centre of Government and distant provinces.

It was not till a far later stage in the world's history that we find any attempt at affording facilities for the transmission of private letters. In England, something of the kind was in existence before Queen Elizabeth's time. A "post" was then kept up by some English merchants for the interchange of correspondence with foreign parts. This, however, was purely a private enterprise, and it was not till 1551 that we find arrangements both for public and private letters, placed under the superintendence of a functionary of the Government, there and thenceforth, down to the present day, known as "Her Majesty's Postmaster-General."

As an interesting comparison with conditions which now enable a letter posted in London in the morning, to be delivered in Glasgow the same night, it may be mentioned that there is a letter in existence which was sent by Archbishop Parker to Sir W. Cecil. This letter was, in accordance with the custom then, endorsed by every postmaster on the line of route. It was posted at Croydon on the 22nd of July, at four o'clock in the afternoon, and the first inscription on it shows that it reached Waltham Cross at nine o'clock on the following night. It took three hours to get to Ware, and seven hours and a half from there to Croxton, *i.e.*, it did the whole distance of sixty-three miles in forty hours. And this was an official letter, marked "Urgent and immediate."

But in these days we can hardly conceive the condition of the roads, which were then the only means of communication, and the difficulty of travelling on horse or on foot. The news of Queen Elizabeth's death did not reach some parts of Devonshire and Cornwall till the Court of her successor had ceased to wear mourning for her, whilst prayers were put up for King Charles I. in many a country church long after he had passed to the scaffold and the block.

In 1670, a contractor undertook to do the journey between Edinburgh and Glasgow, a distance of forty-four miles, in fourteen hours.

In Charles II.'s time, a penny post was established for the transmission of letters and parcels between different parts of London. This was originally a private enterprise, but its success alarmed the Govern-

Mostly known as a Marine Store Dealer.

ment, and proceedings were taken which ended in its absorption into the royal establishment.

In the early days of the Post Office, it need hardly be said that abuses of all kinds were rife, and amongst them the franking system, under which members of Parliament and others enjoyed the privilege of sending their correspondence free of expense by his Majesty's mails. But the word "correspondence" had a very wide signification. In the vaults of the present Post Office building, there were, till recent years, some old accounts of packet agents, which show the following items :—

"*Imprimis.*—Fifteen couple of hounds going to the King of the Romans, with a free pass.

"*Item.*—Two maid-servants going as laundresses to my Lord Ambassador Methuen.

"*Item.*—Ten bales of stockings for the use of the Ambassador to the Crown of Portugal."

The franking system is now entirely done away with, the only franked letters being those sent out on official business from the various Government departments, the total weight of these being credited to the Post Office in its annual estimates.

Passing over the intermediate stages of development, we come to that memorable epoch in the history of the Post Office, the introduction of penny postage, and the payment of the latter by means of an adhesive postage stamp, which are so closely connected with the name of Sir Rowland Hill. The controversy which raged so long and so fiercely, as to the actual originator of these schemes, has been lately marked by the discovery of some official correspondence, which goes far to show that the suggestion of the adhesive postage originated with a Mr. Chalmers. But though, as usually happens with great reforms, the penny postage system was but the crystallisation of many ideas that had, as it were, been floating in the minds of many, this in no sense derogates from the genius, ability, and courage with which Sir Rowland Hill carried out what was for long considered a daring and dangerous innovation. Before his time, letters were charged according to the post stages travelled. Thus, a letter going fifteen miles was charged twopence, if under one ounce in weight ; thirty miles, threepence ; eighty miles, fourpence, sevenpence, or a shilling, according to weight.

Mr. Hill—he was not yet Sir Rowland—started with the principle that the distance which letters were conveyed, had comparatively little effect upon the cost of their conveyance, and further calculated that the cost of conveying each letter was one-tenth of a penny. From this starting-point he reached the conclusion that the adoption of a low and uniform rate of postage, combined with increased facilities and increased speed in delivery, accompanied by other collateral reforms in the Post Office, would so enormously increase the number of letters, as to swell profits that were small, individually, into a handsome revenue. The public, with a true instinct, literally jumped at the scheme, but the Government and the then Post Office officials stood aghast. However, after a select Committee of the House of Commons had considered the matter, a timid experiment was made by establishing a uniform rate of fourpence. But this failed, and in 1840, the "scheme, the whole scheme, and nothing but the scheme," of a penny postage was ventured on, a step which a leading Journal stigmatised "as weak and rash to a degree, and as one of the most inconsiderate leaps in the dark ever taken." But it did succeed, and the Post Office revenue has more than trebled in the fifty years which have passed away since then, and the number of letters has increased from 76,000,000 to 1,720,955,000.

But it is now time to turn from the history of the Post Office to its work and machinery, and that portion of it which deals with the collection and transmission of letters, newspapers, and parcels.

(*Continued—page 763.*)

THE STORY OF JONAH.

By the Rev. F. B. MEYER, B.A.,
Author of "Christian Living," etc., etc.

PART II.

FLIGHT.

"THE word of the Lord came unto Jonah." It *came* unto him ; like a clarion, ringing out its clear notes upon the sleeper's ear, "Arise!" Some such word as this runs throughout the Bible, and through all human lives—"Arise!"

Arise! Paul, from whose eyes the scales have fallen, a new convert of the Christ whom thou didst persecute ; no longer hesitate about that duty ; arise, and be baptized. Arise! Peter, from thy dungeon floor, and follow God's angel through the opening gate into the free night air. Arise! to understand all that a man's life may mean in such an age as this. Arise! to take up thy cross of daily self-denial, and follow the Son of God in the regeneration of the world. Arise! and shine, for thy light is given. The glory of the Lord is breaking upon thee ; go, shed that light on men who sit in darkness and in the shadow of death.

"*Go to Nineveh.*" Every man has an appointed work in the world. There is a Nineveh somewhere which needs us ; and if we are only quick to hear the voice of God, we shall not be left long in doubt. Our Nineveh may be a very little sphere, far different from the million-peopled city to which Jonah went. It may be a home, or a workshop, or a squalid neighbourhood, or some small mission sphere ; but it will be large enough for our voice to fill. Do you not know what your Nineveh is? Are you bearing no witness? Salt, and not acting as an antiseptic? Light, and hidden under a bushel? A voice, not crying? Ah! it is not because there is no sphere of service for you, but because your ear has been too full of other voices for you to hear the call of God ; or it may be that you have heard and been disobedient to it, and that those souls at the Nineveh of your life shall perish because the watchman warned them not. Will it not be yours to carry for ever the bitterness of poignant regret, and to be held accountable for their blood? Ask God, your Father, to teach you what your Nineveh is ; and be sure of this, that He will appoint you no sphere without making it possible and easy for you to fulfil His commission.

"But Jonah rose up to flee unto Tarshish." How long a time do you think intervened between the summons and that act of disobedience? The casual student of this narrative would say, "Time! There was no waiting time ; it was a sudden impulse, the decision of an instant. The decision was no sooner formed than it was carried into effect." But a closer study of this story will, I think, indicate that probably days, and even months, intervened between the communication of the Almighty's wish and Jonah's final resolution to evade it and to flee.

What were his reasons? *Was it because the journey was long?* It certainly was far to go ; many hundreds of miles would have to be traversed. Canaan must be left for Damascus ; Damascus for Palmyra, in its green oasis, amid the scorching wastes of sand ; Palmyra for the great rivers of Assyria—and these must be tracked for many a long day ere the walls of Nineveh should loom upon his vision. Still, the length of the journey could hardly have been his reason ; for the camel, the ship of the desert, had for many centuries been pursuing its course with as much regularity as steamers do now between Liverpool and New York. Caravans of merchantmen had followed this track from the time of Joseph ; and in point of fact, the prophet contemplated a far longer journey than that to Nineveh when he started for Tarshish, on the coasts of Spain. It could not therefore have been the distance which deterred him.

Nor could it have been natural timidity. A stout heart might well have quailed at a task proposed to him, to go alone into the midst of an idolatrous city, confronting it with its crimes, and menacing it with destruction. This needed no ordinary courage. But there is no trace of this cause being at work with the prophet ; and the whole race of prophets seems to have been so confident of the protection and care of the Almighty, that they were raised above the paralysing effect of that fear which makes the stoutest hearts to quail when called to stand alone. We can hardly suppose that God would have dealt so graciously with him afterwards, if he had permitted himself to be unnerved by so ignoble and unbelieving a motive as this. No, it was not fear which diverted him to Tarshish.

Nor was it national prejudice. It is quite true that this feeling was very strong amongst the Jews. Taught to regard themselves as God's peculiar people, they looked down upon Gentiles with aversion and contempt. In their esteem, all Gentiles were but dogs. "The Jews have no dealings with the Samaritans." Peter needed a distinct revelation before he would go to preach in the house of Cornelius. And yet there are many instances on record of Jewish prophets being sent on Divine errands to heathen monarchs and people ; and in each case the clear Divine command was sufficient to outweigh the deeply-rooted national antipathy to men of another faith. This, therefore, was not the cause.

The true reason is suggested in the closing chapter of this book, in which, at the second verse, Jonah makes a remarkable confession : "Therefore I fled before unto Tarshish : for I knew that Thou art a gracious God, and merciful, slow to anger,

and of great kindness, and repentest Thee of the evil." "I knew Thee!" How did he know it? The tide of the patient love of God had streamed down upon the world from the rent fissures of Sinai, had been the oft-recurring strain of the Psalms, had been perpetually illustrated in the history of his people, and had been that side of the Divine character on which Elisha, from the very make of his temperament, loved to dwell. But why did Jonah find this view of God's mercifulness an impediment to obedience? Did he not argue thus: "God is so merciful; I am sure he will not destroy Nineveh, with its vast population. Why then should I go and tell the Ninevites that in forty days they are to be destroyed? Even if I say it, I am sure that God will not do it; and if He does not do it, I fear three things will happen. First, there may be discredit thrown upon God's veracity, that He has said a thing which He has failed to carry into effect; secondly, I shall lose all credit as a true prophet; and thirdly, my people will go deeper than ever into sin, because they will argue that, if God's threatenings have not been carried into effect in the case of the heathen, they will certainly not be carried into effect in their own."

Reasoning thus, he seemed to say: "Send whom Thou wilt, but do not send me. My judgment is clean contrary to Thine in this matter of Divine government; and sooner than be a party to a piece of mistaken statesmanship, I would rather go to a land where Thine inspiring Spirit perhaps will not speak, and where at least my own people will be utterly unaffected by my mistakes." We cannot excuse this decision. He ought to have done what he was told, leaving results with God; but we can at least understand how it was that God treated him so kindly and gently in spite of all.

Are not there Jonahs living to-day? Is it difficult to find them? Gentle and dove-like in personal character, they are so enamoured of the love and mercy of God, that when they meet with those stern denunciations of sin in which the Bible abounds, they would rather do anything and go anywhere than utter them. They never mention the word "hell"; they avoid preaching on those texts which foreshadow the unutterable penalty of those who persist in breaking God's laws, but which, by God's constitution of the universe, must befall the wrong-doer both here and hereafter. They eliminate from the Bible all mention of the wrath of God; and why do they do this? Not because they are wanting in courage, but because they are fearful of injuring God in man's esteem; fearing that men will think worse of Him if they hear any other side of His character than that of universal love—as if love itself were not sometimes stern! I honour them for their motives, but I cannot acquiesce in their action. Surely, God must know His own business best! He does not need our well-meant screens. His truths need no veneer. These warnings and threatenings are an indestructible part of the Bible. Ah! friend, it is a mistake to take more care of God than God takes of Himself. Do your duty, and leave the responsibility in wiser hands than thine. God will have His message delivered somehow; and if not by you, then in spite of you, whilst you yourself will well-nigh perish in a storm caused by your disobedience. Remember those solemn words: "When I say unto the wicked, O wicked man, thou shalt surely die; if thou dost not speak to warn the wicked from his way, that wicked man shall die in his iniquity; but his blood will I require at thine hand."

Jonah started for Tarshish, a large city on the western coast of Spain, near the Straits of Gibraltar; a very wealthy city, the centre of a great trade with Tyre. We might call it the West Indies of the old world. The prophet selected it because it was the furthest point possible from his own country; but in going there "from the presence of the Lord," he surely could not conceive that God would not be there. He must have known the Psalms of David too well for that: "If I take the wings of the morning, and dwell in the uttermost parts of the sea; even there shall Thine hand lead me, and Thy right hand shall hold me." But perhaps he thought that in some other land than the sacred land of Palestine, the soil and atmosphere of which were specially charged with spiritual influence, he would escape the persistency and urgency of the Divine command.

Some such thought has often inspired men since, and especially young men. Theoretically they are willing to admit that God is everywhere in the world, and yet they seem to think that His presence will be less palpable in lands where the Sabbath bell does not chime, the house of God does not stand with heaven-pointing spire as a rebuke to sin, and where the light of a Christian civilization does not rebuke impiety. To such lands, therefore, they go, that they may be more unrestrained in their indulgence in sin. If any of my readers are meditating such a step, let me tell them it is a great mistake. The only way of getting rid of God, and God's presence, is to destroy every vestige of it in the heart—hushing every whisper of conscience, erasing every record of memory, obliterating every trace of religiousness, cauterising conscience. And when you can do that, you need not go across the seas; you are freer from the presence of God than you could be in hell itself. If you cannot do that, be sure that no Tarshish will be a hiding-place from those eyes to whom the darkness shines as the day.

Let us follow Jonah in his flight. "He went down to Joppa," a little seaport town two or three days' journey from his home. The whole journey would be a going down, for Gathhepher lay among the hills of Galilee, Joppa on the sea-board. Even Peter, in after days, starting from Jerusalem, is said to have gone down to Joppa. Do I strain the text in saying that all sin is a going down from the sunny uplands to the darkling lowland valley; down from happy obedience to the marshy swamp, where the will-o'-the-wisp leads travellers to their doom? Might we not write at the head of the page of many a day's diary, "I have been going down to-day, down into mere money-making, down into pleasure-seeking, down into sins which have left their besmearing stain upon the white robes of my spirit"? "I have lain among the pots." Has that been your case? Then listen to the voice of God, bidding thee return. Hark! how the silver music of His accents bids thee "Come up hither."

We know nothing of the details of that journey, nor where the truant prophet spent his nights, nor at what hour he came in view of the little town with the great sea beyond. It may have been at early dawn, when it lay like a dimpling lake; or at noontide, when it glistened like a sea of gold; or at eventide, when the last beams of the setting sun struck the outlines of distant islands, and flashed from the white sails of Tyrian ships. But at whatever hour he reached his destination, he did not tarry in the busy, crowded streets, filled with sailor groups from distant lands, and ringing with many languages. With hasty steps he made for the port, examining eagerly the vessels shipping or unlading their cargoes. The smaller craft would not serve his turn. He must have something more than a slow coasting vessel. He could rest with nothing short of an outward bound ship, one that could stand the storm, and that could travel swiftly from the spot where God's burthen had met his unwilling shoulders.

"What is that commotion on the quay-side? why those cries, and that excitement?"

"Ah! stranger," says an *habitué* of the place, "it is a ship just starting for Tarshish; and many a month will pass before her sailors again see their homes."

"That will suit me exactly," replies the truant-hearted prophet.

He hurries to the place. The cargo is shipped, passengers are on board, sails set, gangway being lifted; there is just time. He pays the fare, and goes aboard. Do you notice that whenever a man goes contrary to the will of God he has to pay for it?

Jonah came home free. The Almighty bore the cost of his return fare; but he had to pay a considerable price for his outward voyage. If you disobey God, you will have to pay for it. We must not always think that we are in the way of Providence when all our arrangements fit as accurately as this ship fitted Jonah's purpose. Our duty has to be appointed by other considerations than by the fall of a fortunate coincidence. The outward circumstances must always lock with the inward conviction of duty.

The way of transgressors is a very expensive one; they expend their constitution and their money, their time and their strength, their peace and the blessing of God. Before you take that ship to Tarshish, stop and think whether you are able to bear the cost of the passage money, or whether it will not ruin you to bankruptcy. Think twice before you step on board. Count the cost, and, ere it be too late, return to the place from which you came.

THE LAWS OF HEALTH.

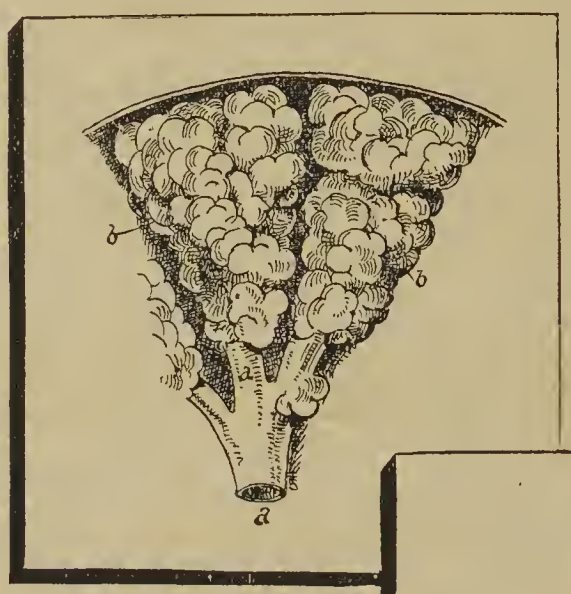
By A. Stuart Fletcher.

No. 3.

BREATHING AND THE BREATHING ORGANS—STAYS—DISEASES OF BREATHING ORGANS, FROM (1) DUST, (2) VITIATED AIR, (3) TAKING COLD—PREVENTIVE MEASURES.

THE breathing in of air containing oxygen, and the breathing out of air containing carbonic acid, is performed by means of certain parts of the body which we call Organs of Respiration. These are the lungs, the wind-pipe, with its branches, and the movable walls and floor of the chest, by means of which air is drawn into, and sent out of, the lungs.

The lungs are in the chest, which, together with the heart, great blood-vessels, and food passage, they entirely fill. They are two in number—the right and left lung—and each is in principle an elastic bag filled with air. But the lung is very complex, being made up of an immense number of exceedingly small bags called air-cells, or air-vesicles, and small tubes by which all these air-cells are connected with the wind-pipe. It has been estimated that there are at least five or six millions of these little vesicles in the lungs, and the wall of each is exceedingly thin and delicate.



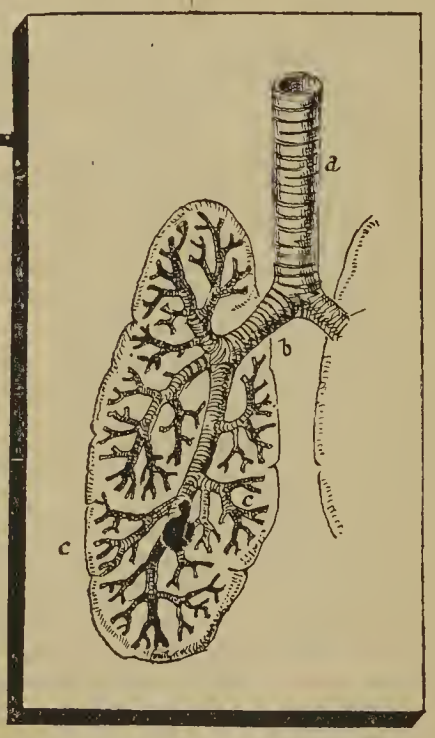
The wind-pipe, or trachea, which can be felt when the fingers are placed on the front of the throat, is a tube whose walls are distended by rings of gristle, so that no bending of the neck can close it. On entering the chest, the trachea divides into two branches, one of which goes to each lung. These again divide into smaller and smaller tubes, called bronchial tubes, which end ultimately in the air-cells before mentioned. The whole arrangement of trachea, bronchial tubes, and air-cells may be compared to a short, thick bush or tree, crowded with leaves. If the trunk and branches, the tiniest twigs and the leaves, can all be imagined hollow and distended with air, that will give some idea of the arrangement in the lungs.

On the walls of the air-cells, very small, thin-walled blood-vessels, called capillaries, are spread, and all the blood in the body is in turn sent through these.

The blood in the vessels which supply the lung capillaries is dark purple in colour, but that which leaves the lungs is bright scarlet. The change in colour from purple to scarlet is due to the absorption of oxygen by the blood from the air in the lungs. In place of this oxygen, the lung-cells receive an amount of carbonic acid from the blood,—the two gases passing easily through the thin walls of the capillaries and air-cells. It will be seen that after a certain amount of this interchange of gases has taken place, the air in the lung-cells is no longer fit to supply the blood with the requisite oxygen, and that it needs renewal. When this is the case, a change takes place in the chest, which leads to fresh air being taken into the lungs.

The floor of the chest is formed by a movable partition, called the midriff, or diaphragm, a great part of which is muscle or contractile flesh. The diaphragm is arched upwards towards the chest. When, however, its muscles contract and become shorter, it is made much flatter, and thus the chest gains in depth.

The ribs, which help to form the walls



a. Two groups of air-cells.
b. Bronchial tubes which open into them.

of the chest, have muscles between them, and when these contract, the ribs are lifted up, and the chest becomes broader.

These changes take place together about seventeen times a minute. As the chest becomes larger, about thirty cubic inches of air rushes down the wind-pipe, and stretches the elastic lungs. The new air speedily mixes with that already in the lungs, and makes it again fit to supply the blood. This enlargement of the lungs and taking in of air, we call Inspiration. Then the muscles of the diaphragm and ribs relax, the chest goes back to its former size, and the extra air is driven out. This process we call Expiration.

The rise and fall of the ribs can be easily felt by placing the hands on the chest or sides, and taking a deep breath. How very elastic the lungs are, can be proved by obtaining a pair of sheep's lungs—"lights," as the butcher calls them—and blowing down the wind-pipe. A pair of rabbit's lungs will do equally well, and are more easily obtainable by some.

It will not be out of place here to speak of the way in which many women, by compressing their bodies with tight stays, prevent their lungs from ever being properly distended. When the body is gripped by a tight corset, the diaphragm can have little action, and the movement of the lower ribs is scarcely possible; in addition to this, the lungs themselves are seriously compressed. The tight-laced person may be surrounded by plenty of oxygen, but with her compressed breathing organs, the blood can get nothing like its proper supply, and she is like a person starving in the midst of plenty. The languor, the unfitness for vigorous exertion, the sensation of lassitude of which many women complain, are due, to no small extent, to this systematic interference with the natural act of breathing.

Section showing branching out of the bronchia in the lungs: a., windpipe; b., bronchia; c., larger bronchial tubes.

Diseases of the breathing organs generally arise from inhaling particles of dust, breathing vitiated air, or taking cold.

When dust is breathed by a healthy person, nature always makes an effort to prevent it settling on the lungs. First, when it touches the wind-pipe, it irritates the delicate lining there, and an uncontrollable cough is the result. If this fails to expel the offending particle, certain little glands in the lining of the wind-pipe pour out a quantity of mucus, or phlegm, which surrounds the speck of dust, and prevents it from irritating the delicate skin. At the same time, certain tiny, hair-like filaments, called *cilia*, are hard at work brushing the irritating substance away from the lungs, and towards the mouth and nostrils. These cilia line all the air passages, and they are continually in motion, waving "like a field of corn bending before the wind," to prevent foreign substances from reaching the delicate lungs. It is owing to the action of the cilia, that breathing through the nostrils is so important a habit, especially in those who work at dusty trades, for much of the dust is arrested by the cilia in the lining of the nose, and stopped before reaching the wind-pipe, or small air-tubes, at all.

If, in spite of coughing and the action of the mucus glands, and the cilia, dust does get into, and remain in, the lungs, it sets up inflammation in the lining of the little air-tubes, and from this cause results the chronic bronchitis and asthma, from which grinders, potters, and others who work at dust-producing trades, so often suffer.

We have referred in a former Paper to some of the general results of breathing vitiated or spoiled air. Amongst these there is no doubt that we may place that form of lung disease which we call consumption. In many cases the tendency to

consumption is hereditary, or may arise from other causes than the one mentioned; but facts bear out the statement that there is no more fruitful cause of the development of this tendency than habitually breathing vitiated air.

The third and, perhaps, most general cause of disease of the breathing organs is "taking cold." A cold is a diseased state brought on by the body being exposed to cold, or having its heat abstracted suddenly by cold air, a draught, damp, or other means. The first effect of these causes is to check the vital processes going on in the part affected, to diminish the size of the blood-vessels, and thus shut off part of the blood supply, and produce paleness, chilliness, and diminished sensibility. Then follows a reaction: the blood-vessels enlarge, and admit too much blood, and there result redness, heat, swelling, and increased sensibility,—a state which we call inflammation.

When cold attacks the wind-pipe, and sets up inflammation there, we call the disease sore-throat, quinsy, or croup, according to the part affected, and the particular form that the disease takes. When the inflammation is lower down, in the lining of the little bronchial tubes, we call it bronchitis. Repeated attacks of bronchitis frequently produce thickening of the lining of the bronchial tubes, which more or less closes the tubes, and obstructs the passage of the air. This produces the feeling of want of breath and the wheezing, which is called asthma.

When a cold settles on the substance of the lungs, the inflammation is called pneumonia; when the pleura or membrane which lines the whole lung, and the adjacent wall of the chest, is attacked, the disease is called pleurisy.

It is much easier to prevent a cold than to cure it, and break the chain of ill-effects of which it is frequently the beginning. The means of prevention are clothing, food, baths, exercise, and avoidance of draughts and damps.

At all times of the year, clothing should be sufficient to keep the body up to a comfortable degree of warmth, and should be varied according to circumstances. The neck, chest, and arms of children and young girls should not be left exposed to cold. A woollen garment ought always to be worn next to the skin—flannel in the winter. The rapidly increasing practice amongst women of wearing woollen underclothing from the neck to the wrists and knees, has, to my own knowledge, prevented many an attack of cold and rheumatism, which, previous to the adoption of this dress, had been customary in the winter, and at all changes of the weather.

The adoption of a thin dress by ladies, and thinner neckties, waistcoats, and boots by gentlemen in the evening, without any compensating change of under-clothing, has been to blame for many a case of bronchitis, pleurisy, and consumption.

Food should be taken regularly, for when a person is hungry, the system is more susceptible to cold, as well as to infection.

The daily use of cold water to the skin, all over, is, perhaps, the most effectual means of prevention. Those who cannot bear, or who do not feel a comfortable reaction after a cold bath, may substitute the daily use of a cold wet towel, or sponging.

Regular outdoor exercise, by giving vigour and energy to the body, is a preventive of cold and the diseases which follow in its wake.

ACROSTICS.

THERE'S a place that is far away,
  Where my first was born in sorrow,
There were two loving hearts one day,
  But one, by a grave, on the morrow.
My second the name will declare,
  Of the father,—my first's the son,—
But two added letters are there,
  Not owned by the heart-stricken one.
There's a grave in a nearer place
  For my whole:—His great work is done.
He rests. His the name and the race
  Of the older father and son.

1. What ought to make charity great?
2. A high foreign title of state.
3. A thing that you never can name.
4. A mocking expression of blame.
5. There's always good hope in its end.
6. A faithful companion and friend.
7. 'Tis not a beneficent wind.
8. Compared to a free, rushing hind.

IT was for my *first* that he hastened to fight,
  For duty had called to defend the right,
And the finger of glory beckoned;
And the glittering sword that hung at his side
Was girt on by the hand of his plighted bride,
  As she mournfully said my *second*.

And she thought of my *third* till her heart grew cold,
For she knew my *fourth* he would lightly hold,
  When the standard of war was flying;
But he fought upon many a field of fame,
And returned to her side with a hero's name,
  And a conqueror's wreath undying.

Answers will be given on page 814.

First.

ARCADIAN shepherd's joy, and milkmaid's treasure.
  The theme of sylvan dreams.
I dwell with scullions now, in basest regions,
  As erst by reedy streams.

Second.

The panting hero, on the eve of battle;
  And other heroes too;
Have heard this word before all deeds heroic,
  And sprung to dare and do.

Whole.

The purple streams that reached us from the vintage
  Of other years, grown old,
Their careful guardian oft his care requited;
  And this was his stronghold.

1. No; never more, I pray.
2. Give this to me to-day.
3. And this, oh, do not say.

DAVID WHIPPY'S SWIMMING FEAT.

By M. C. FOSTER.

THE Rev. R. B. Lyth and a small crew had in April, 1848, left the Island of Viwa, Fiji, in the cutter *Venus*, intending to visit Nandy, on the Large Land, where Mr. Lyth's services as a medical man were urgently needed by the wife of Rev. J. Watsford, who was dangerously ill. The *Venus* encountered bad weather, and put in to the anchorage off the island of Ovalau. The brig *Tim Pickering* was sheltering there also from an evidently impending hurricane, and Mr. Lyth, with several others, accepted the captain's invitation to take safer quarters on board his vessel till the storm should be over.

Both the *Venus* and the brig, however, were driven from their moorings by the violence of the gale, and the larger vessel, with her crew and visitors, were wrecked on the reef. A lad named David Whippy had been left with a man and another lad in the *Venus*, and were seen from the already-grounded schooner drifting broadside before the blast. There was some hope that they might drift near enough to catch a rope which was lowered, but they drove past, and, to the unspeakable disappointment of all on board, she was seen rolling in the boisterous waves towards the open sea, or the dangerous coral rocks. The missionary commended them to God as they passed, and heard afterwards of their fate. When last seen from the larger vessel, Granby, the man, and the two boys were sitting helpless upon deck. After passing the brig they drifted along, hoping in vain to bring up at a prominent point of land near David's home.

Death seemed inevitable, and Granby proposed that they should pray. The few moments were so spent, until the cutter struck a shoal, turned over, was filled, and Granby and the boy perished. David was an excellent swimmer, and, having got hold of part of the cutter, kept himself afloat all that day, notwithstanding the violence of the wind and waves. In the night he struck against something, which proved to be the boat of the *Venus*, but upside down. He got astride her, but found that she would not so bear him, and he was obliged to hold on and drift with her. Soon he saw that he was being borne towards a reef, and fearing to be dashed upon it with the boat, he reluctantly let go. Then, committing himself to the huge rollers, one of them lifted him right on to the reef, where he found footing. The next moment he thankfully saw another huge wave bring the boat also upon the reef, close by.

Now that he could right her, and bale out the water, he launched her again, but hungry and helpless. God gave the waves charge concerning the lad, and kept up the boy's courage. Drifting along the second day, he saw a floating cocoa-nut, and being pressed by hunger, left his boat, and swam to get it, succeeding in returning with his prize, which satisfied hunger and thirst, and gave him new strength. The third day he saw and managed to recover the floating branch of a cocoa-nut palm, which he could use as a paddle, and the day and night were spent sleeping, baleing out the water, or paddling, till at length, on the fourth night, he reached the now well-known Savusavu on the Large Island, about fifty miles' distant from the place where the *Venus* was lost.

His first object on reaching land was to quench his thirst, and then he lay down and fell asleep in the bush. On awaking, he began to realise his danger from the fierce natives, and cast about what to do, especially as he was quite ignorant what island of the group he was cast upon. He saw several natives pass, without himself being observed, but was at last discovered by a man. He went boldly up to him, and would follow him to the town, though the other very much wished him to remain until the chief was informed about him. He knew that this would mean almost certainly being killed and eaten, all whose eyes had "had salt water in them" being, in cannibal custom, lawful prey. Then the Fijian wanted him to walk on in front, but afraid of being killed from behind, he would only follow. As he expected, the people crowded round him, touched his eyes, cried joyfully, "Oh, yes, this is salt water," and were preparing to despatch the lad. But a woman rushed from a house near by, and took hold of him, declaring that none should harm him. Her husband came out after her, and together they succeeded in saving him. They were a chief and his wife, who that morning had arrived from a neighbouring town to beg a whale's tooth. David's father was well known in the islands, and much respected, and the chief who had thus providentially delivered the youth finished well what he had so well begun, taking all care of the shipwrecked boy until an opportunity served for restoring him to his home in Levuka. "All acknowledged," says the missionary whose journal tells the story, "the hand of God in this wonderful deliverance."

"THANK GOD FOR SUCH A MOTHER!"

SEVERAL days after the battle of Williamsburgh, in the American War, a soldier came hurriedly to the chaplain's tent with the message,—

"Chaplain, one of our boys is badly wounded, and wants to see you right away."

Following the soldier, writes the chaplain, I was taken to a cot, on which lay a noble young man. He was pale and blood-stained, from a terrible wound above the temple. I saw at a glance that he had but a short time to live. Taking his hand, I said to him,—

"Well, my brother, what can I do for you?"

The poor dying soldier looked up in my face, and placing his finger where his hair was stained with blood, said,—

"Chaplain, cut a big lock here *for mother*,—mind, chaplain, *for mother!*"

I hesitated to do it. He said,—

"Don't be afraid, Chaplain, it's for mother; nobody will see me after to-morrow."

I did as he requested me.

"Now, Chaplain," said the dying man, "I want you to kneel down by me, and *return thanks* to God."

"For what?" I asked.

"For giving me such a mother. Oh, Chaplain, she is a good mother. And thank God that by His grace I am a Christian. Oh, what would I do now if I wasn't a Christian? 'I know that my Redeemer liveth.' I know that His finished work has saved me. And, Chaplain, thank God for giving me dying grace. He has made this dying bed 'feel soft as downy pillows are.' Thank Him for the promised home in glory. I'll soon be there—where there is no war, nor sorrow, nor desolation, nor death—where I'll see Jesus, and be 'for ever with the Lord.'"

I knelt by the dying man, and thanked God for the blessings He had bestowed upon him,—the blessings of a good mother, a Christian hope, and dying grace. Shortly after the prayer he said,—

"Good-bye, Chaplain; if you ever see mother, tell her it was all well."

CHRISTIAN EVIDENCE COMPETITION.

IN consequence of having to go to press with the closing Numbers of our first year, before the date for the closing of our Christian Evidence Competition, we regret that the award of the Examiners will only appear in our issue for November 3rd. This Number will be the first of our New Volume, and we rely upon the hearty interest of our friends to increase our number of Subscribers.

Specimen Copies always sent free and postage paid on receipt of a post card to the Secretary, 62, Ludgate Hill, London.

RECIPES.

"PIECES OF BREAD" AND APPLE PUDDING.

SOAK for an hour in a colander, standing in a large basin of cold water, one pound of "pieces of bread," see that they are quite covered with the water; take the colander out, put a plate with a weight on it over the bread, and let it drain for an hour; then turn it out into a basin, and beat and braid it up with a fork. Boil ½ a lb. of American dried apple rings and 6 or 8 cloves in as small a quantity of water as possible; when quite soft or in a pulp, add ½ a pound of brown sugar; mix this with the bread. (A little bit of butter and an egg or two improves it, but it is very good without.) Rinse out a basin with cold water, pour in the bread, and when cold, turn it out. It is very nice with a little mock cream.

QUICKLY MADE PUDDING.

CUT 4 thin rounds of bread off a half-quartern loaf. Beat ¼ pint of milk with 2 tablespoonfuls of sugar, a teaspoonful of flour braided up in a very little bit of butter or fat, and a bit of orange peel; when it boils and is thickened, pour it over the bread, baste it, and when quite soaked, spread one round with a little jam, put another round over, spread that also, and so on till all 4 are done; pour any of the milk mixture over, and heat it in oven covered over with a basin, or it may be eaten cold.

ORANGE-FLAVOURED RICE PUDDING.

TIE up in a cloth 4 tablespoonfuls of rice, leaving plenty of room for swelling, and boil in water till quite tender; set it to drain. Cut off with a knife very thinly the rind of a large orange; put it into a saucepan with a pint of milk; when it boils, pour it over 2 ounces of cornflour, previously mixed up with a little cold milk or water; now boil it for 8 minutes, stirring continually, and add to it 6 ounces of sugar, and a piece of butter or lard the size of a nut. Now pour it over the rice, stir and mix it well, taking out the orange peel. Put it into a well-greased pie-dish, with a few pieces of lard or butter on the top, and bake for 30 or 40 minutes. This pudding can be boiled by adding to it 2 or 3 eggs to ensure its turning out of the basin.

The grated rinds of orange peels, which are usually thrown away, make most delicious flavouring for both cakes and puddings.

FACTS ABOUT THE SEA.

THE sea occupies three-fourths of the surface of the earth. At the depth of about 3,500 feet, waves are not felt. The temperature is the same, varying only a trifle from the ice at the poles to the burning sun of the equator. A mile down the water has a pressure of over a ton to the square inch. If a box six feet deep were filled with sea water, and allowed to evaporate under the sun, there would be two inches of salt left on the bottom. Taking the average depth of the ocean to be three miles, there would be a layer of pure salt 230 feet thick on the bed of the Atlantic. The water is colder at the bottom than at the surface. In the many bays on the coast of Norway the water often freezes at the bottom before it does above.

Waves are very deceptive. To look at them in a storm, one would think that the water travelled. The water stays in the same place, but the motion goes on. Sometimes in storms these waves are forty feet high, and travel fifty miles an hour—more than twice as fast as the swiftest steamer. The distance from valley to valley is generally fifteen times the height, hence a wave five feet high will extend over seventy-five feet of water. The force of the sea dashing on Bell Rock is said to be seventeen tons for each square yard.

Evaporation is a wonderful power. Every year a layer of the entire sea, fourteen feet, is taken up into the clouds. The winds bear their burden in to the land, and the water comes down in rain upon the fields, to flow back at last through rivers.

The depth of the sea presents another very interesting problem. If the Atlantic Ocean were lowered 6,564 feet, the distance from shore to shore would be half as great, or 1,500 miles. If lowered a little more than three miles, say 19,680 feet, there would be a road of dry land from Newfoundland to Ireland. This is the plane on which the great Atlantic cables were laid. The Mediterranean is comparatively shallow. A drying up of 660 feet would leave three different seas, and Africa would be joined with Italy. The British Channel is more like a pond, which accounts for its choppy waves.

It has been found difficult to get correct soundings of the Atlantic. A midshipman of the navy overcame the difficulty, and shot weighing thirty pounds carries down the sinker. A hole is bored through the sinker, through which a rod of iron is passed, moving easily back and forth. In the end of the bar is a cup dug out, and the inside coated with lard. The bar is made fast to the line, and a sling holds the shot on. When the bar, which extends below the ball, touches the earth, the sling unhooks, and the shot slides off. The lard in the end of the bar holds some of the sand, or whatever may be on the bottom, and a drop shuts over the cup to keep the water from washing the sand out. When the ground is reached, a shock is felt as if an electric current had passed through the line.

INVENTIONS FROM NATURE.

MOST of the skilful devices invented by men for doing fine work rapidly, can be traced to nature, where for countless centuries they have been operating. The discoverer of each new appliance or mechanism might be shown that his idea was as old as the hills. It is claimed that the inventors of the future will be those who carefully study the natural world.

The buhr-stones of mills are another style of the molar teeth, which grind all the grist that feeds men and beasts. The hoofs of horses are made of parallel plates like carriage springs. The finest file of human manufacture is a rough affair compared with the Dutch rush used by cabinet-makers. The jaws of the turtle and tortoise are natural scissors. The squirrel carries chisels in his mouth, and the hippopotamus is provided with adzes, which are constantly sharpened as they are worn. The carpenter's plane is found in the jaws of a bee. The woodpecker has a powerful little trip-hammer.

The diving-bell imitates the work of the water-spider, which constructs a small cell under the water, clasps a bubble of air between its hind legs, and dives down to its submarine chamber with the bubble, displacing the water gradually until its abode with the fishes contains a large airy room, surrounded by water.

In laying its eggs on the water, the gnat fastens them into the shape of a life-boat, which it is impossible to sink without tearing it to pieces. The iron mast of a modern ship is strengthened by deep ribs running along its interior. A porcupine quill is strengthened by similar ribs. When engineers found that hollow beams were stronger than solid ones, they only discovered a principle that is very commonly seen in nature. A wheat straw, if solid, could not support its head of grain. The bones of the higher animals are porous, and those of birds, where lightness and strength are most beautifully combined, are hollow. The framework of a ship resembles the skeleton of a herring. Aëronauts try to copy the structure and movements of birds.

Palissy, the French potter, studied sea-side shells to learn the best method of fortifying a town. The ship-worm is an admirable tunneler, boring his way through any submerged timber, and lining the round passage with a hard casing. The engineer Brunel took a hint from this animal, and was the first to succeed in tunneling under water. The Eddystone light-house is built on the plan of a tree-trunk, and is fastened to the rock in a manner similar to the way a tree clings to the soil. It is supposed that the first idea of a suspension bridge was suggested by the creepers of a tropical forest.

When plans were wanted for the London Crystal Palace, Joseph Paxton, gardener to the Duke of Devonshire, having noticed the structure of the gigantic leaves of the enormous water-lily, *Victoria Regina*, a plant which had been introduced into England a few years before, adopted the idea of copying in iron the ribs of the leaf, and filling the remaining space with glass. So, by patterning after nature, the obscure florist became Sir Joseph Paxton, the world-renowned architect.

MONEY you earn yourself is much brighter than any you can get out of dead men's bags.

FOOLISHNESS rushes into publicity to draw attention, while intelligence modestly keeps in the background to observe.

IT is the same with a book as with a man. With a good title, the demand for the book or the man will be measurably increased.

IT is one great characteristic of genius to do great things with little things.

A SCANT breakfast in the morning of life whets the appetite for a feast later in the day.

WHO would win must learn to bear.

EVERYBODY sees the cloud on the horizon, but who thinks of the clear blue sky above it?

THAT which is bitter to be endured may be sweet to be remembered.

A COMPANY attitude is rarely anybody's best.

THE winds and the waves are always on the side of the best navigators.

WE should do everything we can for others, if only to dissipate the thought of what they omit to do for us.

A NARROW-MINDED man can never possess real and true generosity; he can never go beyond mere benevolence.

GET but the truth once uttered, and 'tis like a star new born, that drops into its place, which, once circling in its placid round, not all the tumult of the earth shakes.

TO do God's will—that's all
That need concern us; not to carp or ask
The meaning of it; but to ply our task,
Whatever may befall;
Accepting good or ill as He shall send,
And wait until the end.

A MOTHER should give her children a superabundance of enthusiasm, that after they have lost all they are sure to lose, on mixing with the world, enough may still remain to prompt and support them through great actions. A cloak should be of three pile, to keep its gloss in wear.

THE BIRDS' CONCLAVE.

IT was a chilly October day, though bright and clear, when in a forest a vast company met to discuss a most important subject. My readers will ask, Who were the company, and what was their object of meeting? Were they warriors of old, talking over ancient scenes of defeat or victory? Were they politicians? Were they lawyers? No, they were none of these. They were only a mournful company of birds—birds of every kind, from the Java sparrow to the snowy-white gull; every one wore a look of depression and sadness.

"But why this gloom?" You may well ask.

Pause and look for a moment at that curious assembly; see them all with downcast heads and ruffled feathers, row upon row, band upon band,—robin redbreasts, with their beady black eyes, looking wistfully; grey birds; black birds; birds of all sizes and shapes,—all with their eyes fixed towards their leader, a jet-black rook, carrying in front of him a board with these words printed in letters of blood:—

"The latest fashion: birds in ladies' bonnets and hats will be worn more than ever this season."

So now we have solved the mystery of all this gloom; this was, then, what they had met to discuss. It was a solemn little assembly, not a dry eye amongst them. It was a question of life or death they had come to settle, and stouter hearts than the hearts of birds would have quailed. But now the discussion is about to begin.

The rook comes forward and tells the birds to sing, "Who killed cock robin?" and, with heaving breast, each true-hearted little songster swelled his throat, and the sweetest music thrilled the air—cries which seemed to be wrung from breaking hearts, as though they were calling upon God to take up the cause and come to the rescue of the fowls of the air, and not to suffer even a sparrow to fall.

The song being ended, the rook closed the book, wiped his spectacles, and looked at his sorrowing audience, and then said: "Dear friends, we have met this afternoon to consider a most important question. I need not remind you what that question is, as the smallest bird in our company knows only too well; but this meeting is not to discourage, but rather to strengthen and help each other, and to face our condition and difficulties, and to try and settle what is to be done." With these words he seemed overcome, and, closing his eyes, leant on the board he was carrying. He soon recovered himself, and again stood up bravely.

"My advice," said he, turning to the birds with bright plumage, "is this. Try not to attract attention; when the sun shines brightly, keep on the shady side, so that his rays may not shine upon you and add to your charms and beauty; whenever you come to a stream of water, bathe in it, so that your feathers may appear dark and dull. And you singing birds, let me warn you also to cease your singing; let not a note be heard amongst you; your very song attracts attention, and may be your ruin. I have no advice to offer to us larger birds; we must look out for ourselves."

A movement of uneasiness passed through every bird, and the sad note was echoed from the biggest to the least, "What is to be done?" Then out stepped a beautiful cardinal bird, and, after clearing his throat, addressed the meeting.

"Dear friends, I was going to say how pleased I was to see so many gathered together, but when I remember the sad, sad cause, I can only add that I am deeply grieved that there is occasion for anything of the sort; but while cruelty is permitted to prevail, I suppose we must be sacrificed to fashion, and none of us are safe, whether black, brown, grey, or bright, for ladies' tastes differ so. I have seen when flying overhead, ladies and children, young and old, with hats and bonnets trimmed with our dear brothers and sisters, looking so natural, that I have beckoned them to join me, but, alas! to my sorrow, found that they were fastened and pinned. Oh, it is cruel! cruel! But what can we do—we are so helpless?"

Then up stood a snowy white gull, and, in a hoarse voice, said: "I have come a great distance from the seaside, so wishful was I to attend this meeting, and to say what I myself have seen and heard, and to offer my advice. Big as we are, and armed better for earth's conflicts than most of you, thousands of us have fallen victims to this cruel fashion, and in my journey here to-day I have met with ghastly sights—sights that have made my blood run cold. I have seen creatures walking on the earth, wearing on their heads, hats and bonnets, not only trimmed, as our friend describes, but innocent victims torn asunder, some with the head, others with the breast, others with wings, not contented with the whole bird, but tearing it limb from limb." He pauses. "And yet, dear friends, these earth-walkers call themselves a religious people. Can they know the heart-burning amongst us? No, a thousand times no.

"But now let us try and help to bear each other's burdens; something must be done, and my advice is this: we must all help, as there is work for all. We birds who have made our homes on the wild sea-shore, must do our part. Let us work for the sailors; let our aim be, to be of use to them. We can show the sturdy fisherman where the finest fish lie; let us befriend the fishermen, and who knows but that the fishermen will befriend us? And you birds of bright plumage, plume yourselves brighter; let your feathers sparkle in the sun, so as to give pleasure to the eye as you fly from tree to tree. Who can tell but that even fashion will not spare you? Your bright wings may teach them this lesson—You were not meant to adorn bonnets and hats, but to adorn and beautify God's world.

"And now a word to the birds of darker hue—rooks, jackdaws, and crows. You all must work for the farmer. Leave the good seed he plants, but clear the ground of all hurtful things; and, perhaps, when he sees you are helpful to the growth of his crops, he may have compassion on you, and plead your cause. And now," said the gull, turning to the singing birds, "I have a grand work for you also. It is this—sing louder and sweeter than ever. Soar higher than ever you have done before," said he to the lark, "and send down such strains, that even the hardest heart will be moved to say, 'We must protect the singing birds.' Now, dear friends, I must away, but I once more say to you all—go and work."

A murmur of applause echoed from every bird, and a fluttering of wings stirred the forest, as a cry of "We will, we will," resounded in the air; and in a few minutes, nothing remained of the solemn assembly, but the board containing these words:—

"THE LATEST FASHION."

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow," "Corbiestanes," "Our Navvies," etc., etc.

CHAPTER XXII.

"GOD MINISTERS BY MANY HANDS TO HIS CHILDREN."

NEVER was a nobler, or more loving letter written. Perhaps it was rather dictatorial, and certainly it was very determined. Lady Susan refused most positively to be given up; she rejected the proffered freedom, almost scornfully, and would have none of such sacrifice. She referred the Vicar to the twenty-third Psalm, and asked him, "if God pleased to feed him in green pastures, and to lead him beside still waters, what right had he, John Burleigh, to think that he knew a better way?" As to herself, her happiness, in poverty or in comfort, was simply to be with him. As to her parents, a moment comes when you are bidden to leave your father and mother. She would not finish the quotation, but she fully intended to put the whole sentence into practice.

And then followed a long chat about all manner of little things—the lights on the moors, the villagers, the sketches she was making, the guests' doings, and casually amongst these Hardman's name was mentioned.

"I am writing on and on, perhaps on trivial subjects of which you will not care to hear" ("Ah, *no!*" interjected John Burleigh), "just to please myself, just for the delight of feeling I *am* writing to you, my dear, dear husband—that is to be. SUSAN."

So abruptly closed the letter, but, as he folded it up, another sheet of paper, with some verses, fluttered to his feet. There was not time to read them, for the bell was "settling;" but as he walked to the brickfields after service he did so. They ran:—

"Mine to the core of my heart, my beauty;
Mine all mine, and for love, not duty;
Love given willingly, full and free,
Love for love's sake, so I love thee.

Mine! God, I thank Thee that Thou hast given
Some one all mine on this side heaven;
Some one as much myself to be,
As this my soul, which I lift to Thee.

Flesh of my flesh, bone of my bone,
Life of my life, us, whom Thou dost make
Two to the world, for the world's work sake,
But each into each, as in Thy sight one."

"'No one will come; I have tried,' said the doctor indignantly."

As he read these words, he felt the touch of her fingers in his palm, and closed his hand as though holding hers in a clasp of possession. His life was rounded out in this dual existence. He no longer stood alone—completion had come—and for this Sunday evening, at least, he would wander in green pastures, and slake his thirst in still waters.

Carelessly he turned over the remaining contents of the post-box, mostly circulars, tossing them one by one into the waste-paper basket, and thinking all the time of his letter. At length they were all disposed of, save a small square box. He opened it, and there lay his watch before him; and on a slip of paper beneath it was written, "Returned with sincere respect." It was an educated hand, but one he did not know. Evidently the sender wished to remain unknown; well, even so, it seemed to make the gift come more direct from the heavenly Father.

"Even in this He remembers me! How tenderly He loves! 'Still waters,' 'green pastures!'" And he went on his way to the brickfields.

He was intensely happy. He lingered under the cloudless sky, and silently thanked God for His goodness. An infinite trustfulness took possession of his soul. It might be the will of the Father that he was even still to keep his best-beloved. If so, He would find the way; and if not, being His will, it was also well.

God loved him, God loved her. It would be well—all well. And so, with the Christ beside him, John Burleigh opened the door and entered the dwelling, with its atmosphere redolent of fever and disinfectants; and there before him stood Martha, and she said stolidly,—

"The baby died this afternoon, sir; and Bob's begun."

"Where is he?"

"In the office."

The Vicar crossed the yard. There lay the delver with the light gone out of his eyes, and the smile gone from his lips. He tried vainly to summon them back to greet his friend.

"Don't fret about me, sir; it's nothing much, I'll bet. I was going for the coffin, and I expect the sun struck me a bit. I felt sick and giddy like, that's all. I'll be all right in the morning."

The Vicar sat by his side and talked to him, told him of his landlady's kindness, spoke to him of the twenty-third Psalm, and held his hot, working hand in his own cool, white one, till he saw the weary eyes, which had watched so many nights, close in sleep.

Then he left Chatteris, and went for the carpenter. He was very tired, and his heart was sad; but the trust was still with him.

"God loves him," he said to himself, as he thought of the iron-stone delver.

* * * *

Mr. Tozer was an unimaginative man; he could not project himself into situations or see visions.

He objected on principle to hurry; if anything was worth doing at all, it was best to do it systematically. He had received John Burleigh's letter, asking him to send a hospital nurse, on Thursday morning, but he could not possibly attend to it then; that was the day of the Rural Diaconal Meeting. On Friday he took in order the various duties belonging to that day, and added to them a confirmation class, shoved off Thursday into its already overburdened neighbour day. On Saturday he went to the Infirmary, and found that there was then no nurse at liberty. As he did all things thoroughly, though it was a hot day, and he was invited to a garden-party out of town—yet he resolutely set off on another long tramp to the Nursing Institution, only to meet again with disappointment. No nurse was in who could be spared for a fever case; one was expected in on Wednesday, who might do; but her arrival was uncertain, she might be delayed. He inquired the addresses of private nurses, and from the matron received those of half a dozen, living in different quarters of the town. All the bright hours he had hoped to spend in the Danesford Grounds were passed in the streets, seeking first one nurse and then another. Some were disengaged, but declined to go so far away; others were on the point of fulfilling engagements; others were, in fact, at work, and their neighbours could give no news of their whereabouts. At last he was obliged to return home to write his sermon, and a letter to Houghrigg, to say that the only available nurse was one who would return home on Tuesday; then he would see her, and send her at once.

John Burleigh received this note on Monday. He had been up all night, and so had Martha; both were exhausted. It had been a terrible week. The boys were progressing favourably, and the doctor spoke with something like confidence of their recovery.

But with Bradley it was different. "If we had the patients in large, airy, well-ventilated chambers," said he——

"But we haven't," interrupted Martha snappishly—poor woman, she was very tired—"so what's the use of such fond talk? Anybody can see he's as bad as he can be. You only come in t' day-time, and then he's stupid and quiet enough. You should come at night."

"Ah! I suppose the delirium runs high then?"

"Come and see, and let master have a night's rest, can't you?"

"Ah! well, really, I have said you should have a nurse or two."

"Then why don't you find 'em? Neither master nor me can leave for a minute."

"No one will come. I *have* tried," said the doctor indignantly.

"Then try again."

The medical man turned angrily away, and crossed the yard to the office. There lay Bob Chatteris, already more than half delirious, moaning as he tossed about; and there, sitting, a shadowy presence beside him, in the darkness of the room—the Vicar.

"When is this nurse coming, Mr. Burleigh? On Tuesday night or Wednesday? You ought to have two, not one; both your very cross housekeeper and yourself need a long rest."

"Hush!" said the Vicar, and motioned towards Chatteris.

The delirium had left him, and he was looking at his friend with infinite alarm.

"He is killing himself for me; I'm not worth it. Send him to bed, Doctor," he muttered, his baked lips painfully forming the words. "He's like his Master. He'll lay down his life—don't let him, I say;" and Chatteris became delirious again, and spoke in loud, angry tones, "I say I won't have it. I won't have it, I tell you;" and then he forgot himself again. "Yes, you killed her; but t' settling time's come. I'll reckon it all up. Take that!" and he suddenly sat up in bed, and clenched his fist and struck out.

"Lie down, Bob," said the Vicar, and he sank back; then, as his friend wetted his lips and combed back his dank hair, he became gradually quiet again and conscious, his eyes following, with an anxious gaze, every movement of the figure beside him.

"Send him away! He's killing himself! Let me die, but not him," he whispered, as the doctor felt his pulse.

"All right. I'll see to it," replied the doctor kindly; and as he left the room, beckoned to the Vicar.

"He is in for a bad attack, and I should advise you, Mr. Burleigh, to keep away from him, seeing that you excite him."

"On the contrary, it seems to me that I soothe him."

"Yes, but he has now become anxious about you, and the thought, conscious or unconscious, will keep recurring to him that he is killing you."

"But what is to be done? None of the neighbours will venture near, save that poor fellow's landlady. She has been, and offered to remain, but I sent her away immediately. I fear the infection spreading."

"Yes, it is of a virulent type; and in these ill-drained villages, and where, too, the only water-supply is from wells or the open streams, if it once broke out, there is no telling where it would stop. The only hope is segregation. But could you not send for two nurses, instead of one? Perhaps you do not care to incur the cost?"

The doctor put his question with apparent carelessness, but very real curiosity, for many were the speculations and rumours rife in the neighbourhood concerning the affairs of the Vicar of Houghrigg. Some thought him opulent, but stingy. Others said he had been wildly extravagant at College, and had to pay for it now. Others, that he was even poorer than he appeared to be; but these charitable gossips were few in number.

The Vicar thought a moment.

"You are right," he said; "I ought to have thought of that—Martha will be worn out. Would you mind telegraphing to this address, to my friend, Mr. Tozer, who has found the nurse who comes to-morrow, to send a second, even though she be not a certificated one?"

"Certainly I will, and I trust that this will be your final night of watching. I suppose you have not slept much during the last ten nights?"

"Not much," replied the Vicar, with a little smile; "but each day, or rather night, carries its own burden."

"A noble fellow!" mused the doctor, as he rode away; "but mad, yes, most certainly mad, to sacrifice himself in this way, for a set of people like those. Why, if Bradley recovers, he won't have the grace to say 'thank you' even."

Another long night and weary day dragged by. The evening was a glorious one, masses of rose-coloured clouds were massed Alp beyond Alp on the horizon, and the declining sun poured a golden glory on their peaks. The children were

going to bed in the shed below in the brickfield, and John Burleigh, as he leaned upon the gate, gazing at the sunset, heard Mary's sweet little voice rise in the old evening hymn :—

"Glory to Thee, my God, this night,
For all the blessings of the light;
Keep me, oh, keep me, King of kings,
Beneath the shelter of Thy wings."

She sang it once, and then again the second time, supported by the baby voices of the three other little ones.

He waited on, until their silence told that the lesser children were safely in bed. The sun sank behind the highest Alp, and the masses took purple tints, and the vaulted sky blazed behind them; and then swiftly across the brickfield, and up the slope towards the gate, came running a little figure. The child came near, and then the Vicar lifted up his hand, and smiled.

"No further, Mary," he said.

"I was nearer last night, Mr. Bur'y. I came to that blue stone."

"Well, to there then. Well! have the children been good? What have you done all day?"

"We went to t' old castle. I brought you such bonny ivy, Mr. Bur'y; see, this long bit. Catch it."

"Where did it grow?"

"Round that queer old window in t' big court."

The oriel Lady Susan had sketched! John Burleigh kissed the spray.

"You are pleased, Mr. Bur'y. I'm so glad; I'll bring you a big lot to-morrow."

"No, Mary, this is enough. Did Sam speak to you to-night? Did he bring the milk?" For in the Vicar's heart lurked a fear that Sam could not have escaped the deadly contagion; and that morning, for the first time, he had seen the farmer himself, with whom the boy lived, hand the can of milk over the wall to the children."

"Oh, yes, Mr. Bur'y. He said he had been to Castleborough right early, with two calves, but he got back as soon as he could, and he brought us some mint bulls' eyes. We're going to make wine of 'em to-morrow; I'se got a bottle, only we can't find a cork. Can you, Mr. Bur'y?"

"Yes, I daresay I can."

"Mother gave me one last time;" and suddenly the child began to cry. "Oh, Mr. Bur'y, I *do* want mother. Mammy, mammy, I *wish* you'd come back!"

"Dear little Mary, she is with God," said the Vicar, longing to open the gate, and take the child in his arms. His voice thrilled her, for, small as she was, its tones told her his great pity.

"I know," she said; "but God is *such* a long way off, and so is mammy."

"Is He?" questioned John Burleigh; "it seems so!" He looked at the weeping child, and he felt he was like her. God *did* seem a long way off. He longed to feel the Everlasting Arms about him. He longed for comfort as little Mary did. He dared not, for her own sake, take the child to his bosom—was it so also between the Father and himself?

He hid his face in his hands on the gate; he was very lonely, very weak. Presently he looked up. Little Mary's tears had stopped, and she was watching him.

"Mary," he said, "do you believe what I tell you?"

"Yes, Mr. Bur'y."

"Why?"

The child looked puzzled for a moment, and then, with a little laugh, replied,—

"Because you allus tell me true."

"And *I* believe *God*, Mary, because *He* always tells me true. And He has promised, Mary, that you shall have your mother back again."

"When, Mr. Bur'y?"

"I don't know when."

"But you are *sure?*"

"Quite sure."

The child looked at him, and then said quietly,—

"I'll go to bed now. Good night."

She turned to leave her friend, but the sound of wheels arrested her, and she stood, open-eyed, to see a cab stop at the gate which led into the back yard of the cottage in which the Vicar was standing.

"It is the new nurse," he said with a smile; and Mary watched him advance to meet her.

John Burleigh saw a tall, capable-looking woman, in a nurse's bonnet and cloak, come towards him. Another figure moved forward behind her, but his attention was concentrated upon this first one, from whom he hoped so much.

"I fear, Nurse, you will find that we have been but muddlers; however, we have done our best."

"No doubt, sir," she replied pleasantly; "and, after all, one's best is all that one *can* do."

"You are a trained nurse, I presume?"

"Yes, sir. I have had twelve years' training, and for three have been head nurse of the fever ward. I have seen you, sir, many a time, though you may not remember me."

"I thought that your face was not unfamiliar."

"I daresay that you'll know me better in my cap. Dr. Bolby came with Mr. Tozer yesterday, and made such a fuss, that the treasurer said that I might come."

"And you have brought that young woman with you, who is getting the parcels out of the cab. Who is she?"

"Well, sir, I don't know her. It was impossible to spare another nurse from the Infirmary, and the one at the Nurses' Institution did not come back, and this is a young person that Mr. Tozer brought to the station just as I was setting off. Her father came too—a most respectable party he looked—and she seems the right sort to help, willing to be told, and that's all I want."

The Vicar was watching the girlish figure. Presently the stranger turned round. He stepped hastily forward, thinking he had seen her before.

"Rebecca! Rebecca Sugden!" he exclaimed.

"Yes, sir."

"Your father?"

"He said, 'Go, my lass, and God bless you.'"

"I cannot let you do it. This is a nest of fever. You may *die*."

"Sir, you have shown me that there is a better life than this."

"But your mother?"

"She is better, sir, and gets about nicely."

"You *must* go back. I cannot permit this sacrifice."

"Sir, what does 'conformed to His likeness' mean?"

"Have you learnt that lesson already, Rebecca?"

"I don't know it yet. I began to get it off in your house, Mr. Burleigh. I want to learn more of it, and so you see, sir," she added with a smile, "I came to be taught where I knew that I should learn."

"You must go back, now, in the cab. I could not bear to inflict so great a sorrow upon your parents, as to keep you here in danger of this terrible disease."

"I won't face my father if you send me back. He met Mr. Tozer last week, seeking a nurse, and he came home and told us; and all Sunday I could see something was on his mind, and on Monday I said, 'Father, let me go. I have nursed mother well, you say;' and he said, 'There will be a lot of danger, but I can trust you with God, if so be you can trust yoursel' with the fever.' And I said, 'I can;' and he said, 'My brave lass, go, and God bless you.' And, sir, he looked at me as he used *before* I went to London; and I *won't* go back, no, sir, not even for your saying, till I've done my duty by God and my father—that's by sticking to these sick folk and to you."

And, without another word, Rebecca Sugden followed the nurse into the house, and shook hands with Martha, before that respectable old maid knew what she was doing.

(*Continued—page 769.*)

POSSESSIVE PRONOUNS.

I HAVE been told that the Bishop of Bedford, before he was well known in the poor part of London where he worked, was one day walking through the streets when he heard a working man say to his comrade, "I say, Bill, what's that?"

It was, I suppose, the first time in his life that the man had seen a live bishop, and the dress puzzled him.

"Why," returned his friend, "that is a bishop."

Another time the same question was put, "Who's that?"

"That is the Bishop," was the answer.

They were getting on a little. They had begun to know he was THE Bishop of those parts. But he was not content.

"My dear people," he said once, when speaking to them about this, "I shall never be satisfied until I hear you say, 'That is *our* Bishop.'"

It is somewhere said, "A great part of the world is lost for the want of possessive pronouns."

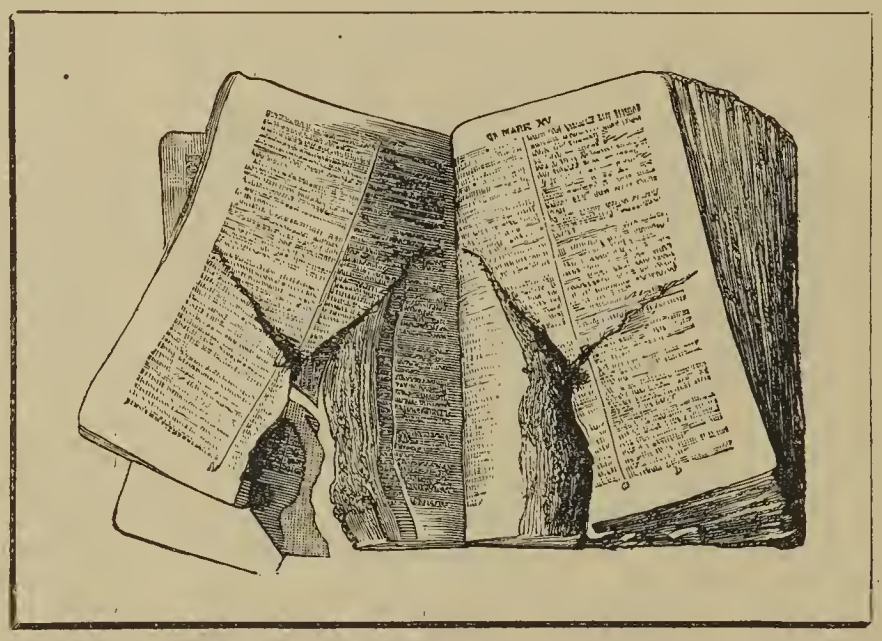
You know the name "*Jesus*" means, in Hebrew — as the marginal reading of your Bible tells you—"*Saviour*" (Matt. 1. 21).

You read about the Lord Jesus meeting Saul, and how Saul's whole heart and life were turned right round, and how afterwards he wrote, "Christ Jesus came into the world to save sinners;" and you cannot help owning that Jesus is a Saviour. He saved Saul.

Perhaps there is some one you know, whose life has been quite altered since he met the Lord Jesus Christ. Perhaps there are some of your friends who you feel are somehow different to the rest of you; they have got something that you have not. Is it, do you think, that they have found for themselves that the Lord Jesus is a Saviour, and are trying to act like His true followers?

"A Saviour!" Somebody else's Saviour. But that leaves *you* still out in the cold. "*My mother's God;*" so men who have lived carelessly have expressed themselves.

You read of the crowds who came to be cured and helped—the sick, and the blind, and the sad—and you see Jesus to be *the* Saviour. You know He hung on the cross for the sins of all; and you know, in a general way, that He is the Saviour of the world. But can you say, with Mary, "My spirit hath rejoiced in God *my* Saviour"? You can, if you go to Him in earnest, and say, "Lord, save *me*" (Matt. 14. 30); and "Cleanse me from *my* sin" (Ps. 51. 2). Would you not like to hear Him say to you, "*Thy* sins are forgiven . . . go in peace" (Luke 7. 48, 50)?



The prophecy was, "Tell ye the daughter of Sion, Behold, thy King cometh unto thee!" But when He rode into Jerusalem, they did not know who He was. "All the city was moved, saying, Who is this?"

What a contrast that lowly procession of the King of kings, and the splendour of the royal procession many of us looked upon last year, when our Queen passed on her jubilee day, and all the nations were gathered together, as it were, to do her honour!

There were many foreigners who were looking on that day, and thought of her only as "the Queen of England." There were some of her subjects, alas! who, in different parts of the country, were feeling they did not care for any queen to reign over them. But the thousands of her loyal people who watched her go by that never-to-be-forgotten day, and thanked God for her, were proud to call her "*our Queen.*"

"*Thy* King cometh unto *thee.*" If you can truly say "my Saviour," you must also say "my King." You will want Him to rule your heart and life.

David claims God in eight different ways, when he says in 2 Samuel 22. 2, 3: "The Lord is my rock, and my fortress, and my deliverer; the God of my rock; in Him will I trust: He is my shield, and the horn of my salvation, my high tower, and my refuge, my Saviour."

A RELIC OF TEL-EL-KEBIR.

DURING the battle of Tel-el-Kebir, Private William Room, of the Highland Light Infantry, had a marvellous escape. In jumping into the trenches, a bullet from the Egyptian ranks struck him in the pouch bag at his side, going through a Testament he was carrying with him. This fortunately changed the direction of the bullet, and saved his life, as otherwise it would have gone through his stomach. As it was, the ball entered his hip, and came out of the inner part of his thigh. Our engraving is taken from a photograph published by Messrs. Hills & Saunders, Grosvenor Fine Art Gallery, who inform us that a copy has been sent to Her Majesty.

George Greedy, of Co. C, 3rd Pennsylvania Reserves, had received a pocket Testament from the ladies of Buckscounty when he took his departure from home. It had these inscriptions—Psalm 91. 11, "He shall give His angels charge over thee, to keep thee in all thy ways;" 1 Timothy 6. 12, "Fight the good fight."

This Testament he always carried in his bosom pocket. In the battle of White Oak Swamp a minie ball passed through his left arm, shattering the bone severely; then, through his coat into the Testament, splitting it from Revelation to St. John's Gospel 11th chapter; passing out, the ball wounded him slightly in the stomach. But for the Testament he would have been killed on the spot. I asked him to give me the book to show to the committee of the Commission. He willingly assented, but added, "I would never sell it, for it saved my life."

WHITE ROBES.

I STOOD in the midst of them, and read part of Isaiah 55. They were Roman Catholics, all but one, the owner of the wretched hovel in the only room of which they were assembled, and *she* was a Protestant occasionally, when it suited her convenience.

It was an Irish wake. I had heard that the baby was ill, and came to inquire, not knowing that it was dead. I found the room full of women, some weeping quietly, but all sober, although a strong smell of whiskey pervaded the place.

In one corner, a mass of snowy whiteness met the eye. A white cradle rested on a white platform; the walls surrounding it were draped with the same hue, which also wrapped its occupant, a lovely infant, and was scarcely relieved by the eyebrows and long, dark lashes of the little waxen face in its frame of purest lace and white satin ribbons, or by the natural flowers which caught up festoons of lace around the cradle.

As I looked at the peace, and purity, and beauty of this corner of the dark room, I thought of Him into whose arms the young child had been taken, and who, to win this rest for her, had once lain an uncradled Infant, the one white spot in this dark world.

After a few words of sympathy, I opened my Bible, as I have said, and after reading the words, "Seek ye the Lord while He may be found," etc., turned to the beginning of the chapter, and read the gracious invitation, to "every one that thirsteth." Then I spoke of death, the wages of sin, that had come so early to this child, and must come to all, closing their day of grace; and of the whiteness that must cover us, when we stand before the great white throne, if we would not die the everlasting death; and of the white robes, washed in the blood of the Lamb, which would be given "without money and without price," to those who seek the Lord while He may be found.

In another corner of the room, a helpless cripple lay in an old tea-chest, the baby's little brother. After I left, he comforted the chief mourner thus: "Don't cry, Mary, she's got white robes now, washed in precious blood;" and from that day forth, the thought of the white robes for *him* has been a fountain of joy.

WORTH REMEMBERING.

IT is an old saying, that it is a common mistake for men who are aiming at perfection, to pay more attention to their daily falls, than to the further pursuit of virtue, and to positive progress in the Divine life.

For though it is a part of virtue to avoid vice, and to know it that we may avoid it, yet to be always contemplating and deploring our sins, keeps the soul down from higher and better things, and retards that holy earnestness whereby it attains great things and climbs rapidly to those heights of virtue, the very atmosphere of which is fatal to the vice we less wisely try to diminish by this perpetual inspection and review of self.

THERE is no grace in a benefit that sticks to the fingers.

SOULS are not saved in bundles. The Spirit asks of each man, "How is it with thee?"

AN abundance of peace shall be multiplied unto him who is in secret heart steadfastly resolved not to suffer from imaginary evils.

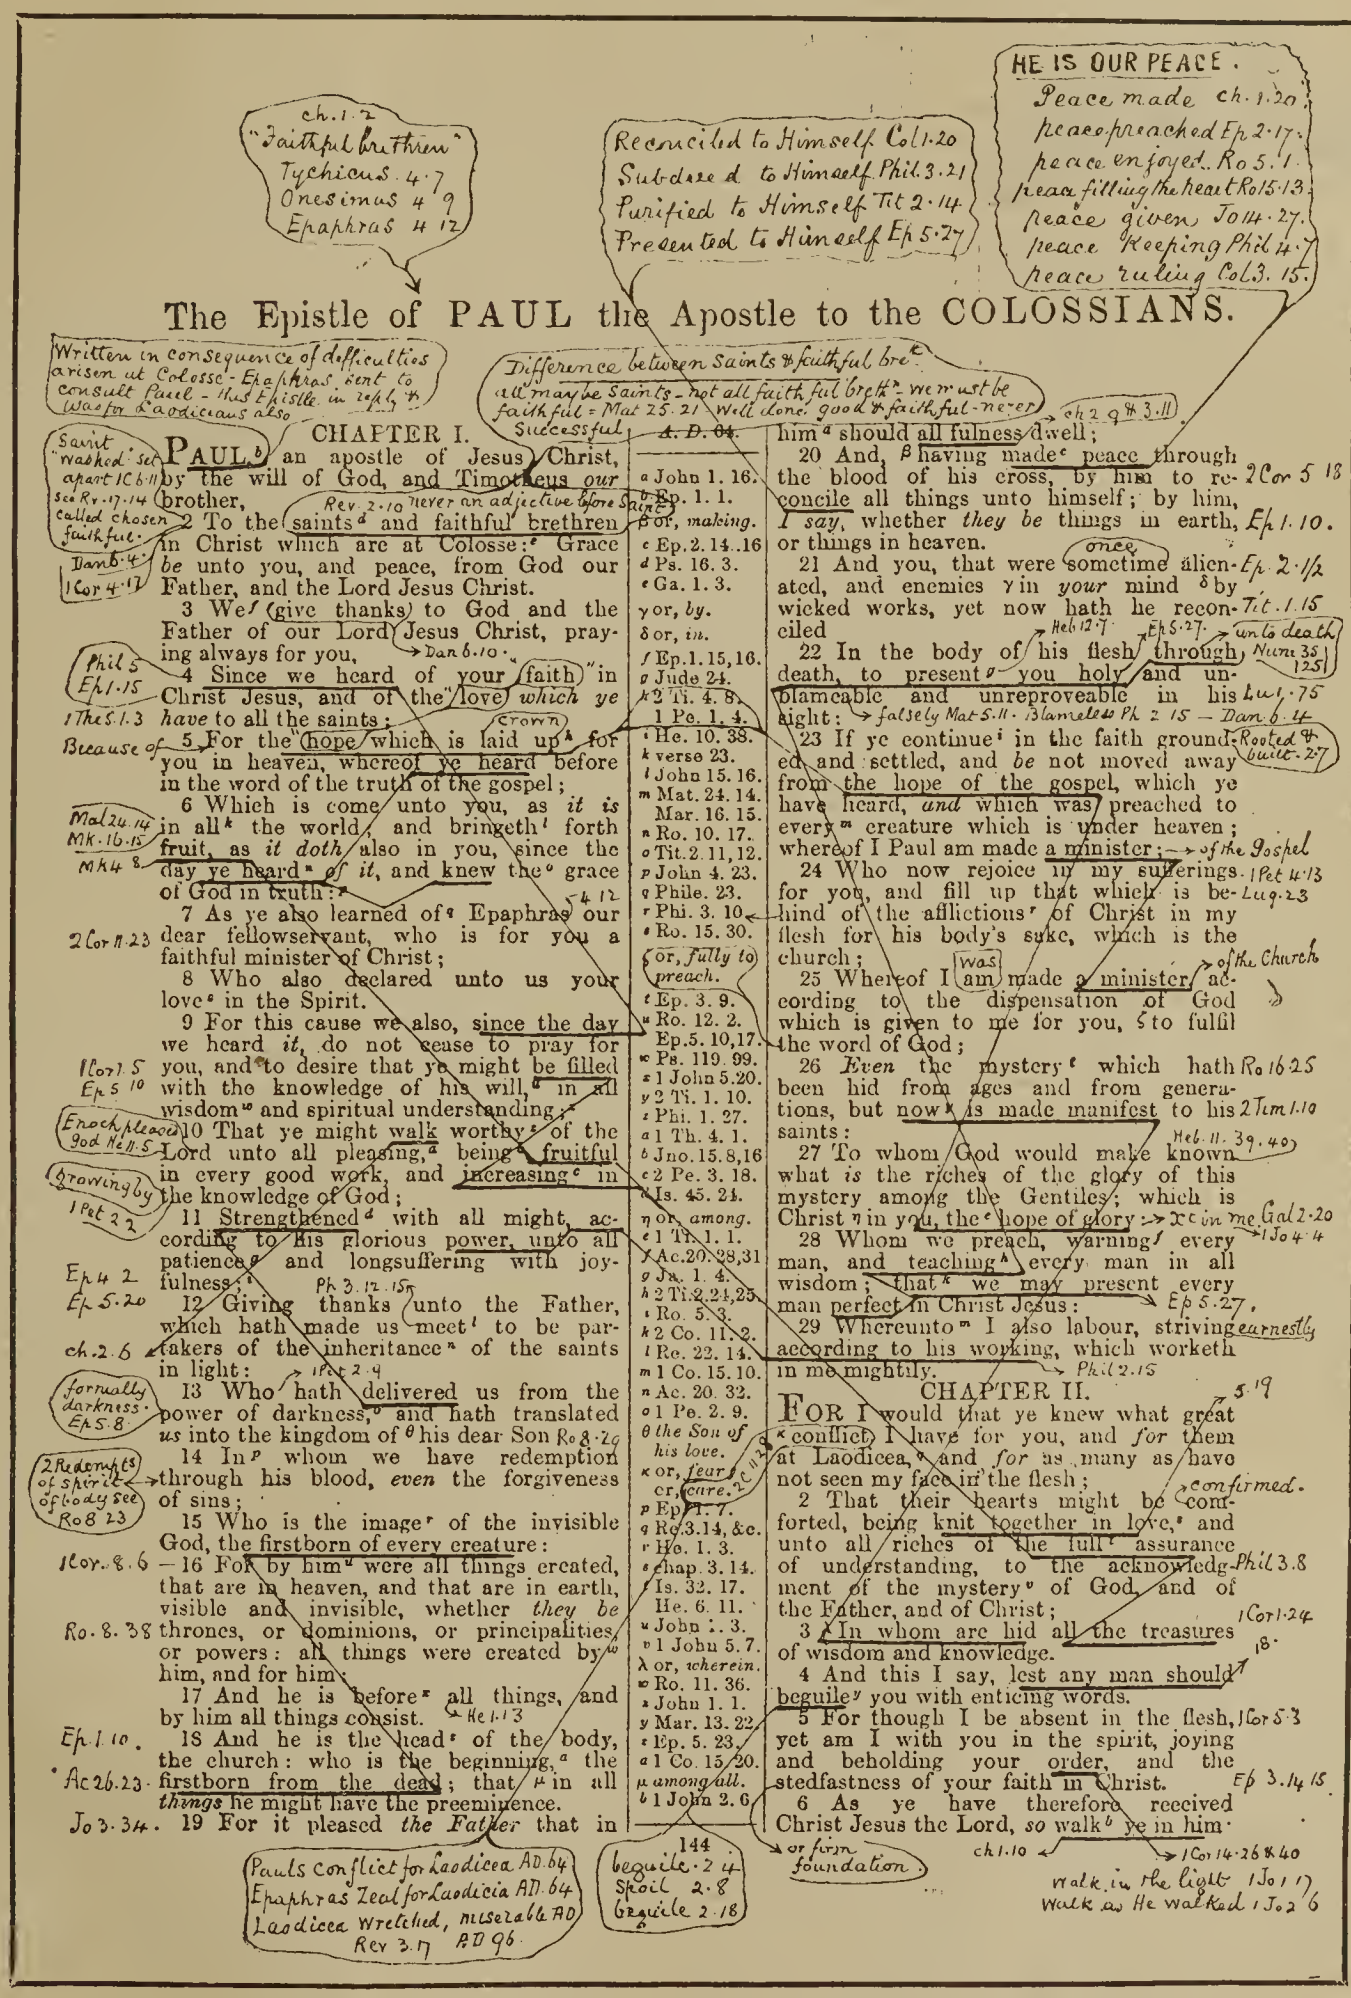
THE reputation of man is like his shadow — gigantic when it precedes him, and pygmy in its proportions when it follows him.

PRESERVE your conscience always soft and sensitive. If but one sin force itself into that tender part of the soul, and dwell there, the road is paved for a thousand iniquities.

CONVERSION is much more than attending to, or even delighting in religious duties, associating with the people of God, and in outward observance of ordinances. This and more may be accomplished by a mere formalist. But let any sinner receive Jesus into the heart, and then a life and unction will accompany every attempt to seek and serve Him.

FAITHFUL prayer always implies correlative exertion; and no man can ask honestly and hopefully to be delivered from temptation, unless he has himself honestly and firmly determined to do the best he can to keep out of it.

INFIDETITY reproves nothing that is bad. It only ridicules and denounces all that is good. It tears down, it never constructs; it destroys, it never imparts life; it attacks religion, but offers no adequate substitute.



FAITH, although weak, is still faith; a a glimmering taper, if not a glowing torch, but the taper may give light as truly as the torch, though not so brightly.

FAITH is the root of all blessings. Believe, and you shall be saved. Believe, and you must needs be satisfied. Believe and you cannot choose but be comforted and happy.

TRIBULATION cannot separate you from the love of God which is in Christ Jesus our Lord. But the love of God will, in the end, separate you from tribulation, and bring you out of it, and give you fulness of joy.

THE way to fill a large space is to glorify a small one. There is no large sphere; the man regenerate and consecrated is the lordliest thing on earth, because he makes himself so.

We must not take the faults of our youth into our old age, for old age brings with it its own defects.

AT HOME BY THE SEA-SHORE.

By C. F. Gordon-Cumming,

Author of "A Lady's Cruise in a French Man-of-War," "Fire Fountains," etc.

EVERY true lover of Nature questions whether any of her very numerous attractions possesses such infinitely varied fascination as the great, blessed, peace-giving ocean, as seen from the dry land. Not that I by any means wish to detract from the charm of a sea voyage—very far from it; but that pleasure, as we all know, has various drawbacks, whereas to sit in a comfortable room (as I am doing at the present moment, looking from Fifeshire right across the Firth of Forth), watching white sea-birds floating in the sunlight, above a perfectly calm, almost colourless sea, which in its wondrous stillness gives scarce an indication of movement, save one gentle ripple breaking on the firm yellow sand, is surely the very ideal of peace.

Looking at that broad expanse of still waters, it seems almost incredible that only six hours ago, looking from this same window, I saw a broad expanse of yellow sand, broken up here and there by ridges of dark-brown rock, offshoots of the wide brown reef, which, in the low neap tide, lay all bare, tempting us to go forth and explore the wonders of the deep, which for one little hour were thus exposed to our inquisitive gaze—wonders of the submarine shrubberies, and colonies of such strange living creatures at home, in clear, shallow pools, as fairly held us entranced, till suddenly we became aware that without a sound the tide had turned, and that we had no option but to wade back across the sands already knee-deep beneath the waters!

No carefully tended flower-bed could be more closely filled with bright blossoms than are many of the pools which thus fascinated us. In those which are daily exposed by the ebbing tide, I find comparatively few sea wonders, and even these only by careful search in crevices, and by raising the fringe of golden weed. But in these more secluded pools, whose inmates deem themselves quite safe from human intrusion, even the very "visible things of the creation" cluster together by scores, while the more minute creatures are incalculable.

Some such pools are literally made brilliant by the number of bright red and lilac star-fishes which cling to the rocky walls, while sea-anemones, varying in size from a finger-tip to that of a large tea-cup, expand their beautiful blossoms, fringed with innumerable delicate feelers, wonderfully variegated in colour. Some are green and gold with veins of scarlet, some of a pale pink or lilac, while others which are deep red, are endowed with a lovely circle of bright blue dots, like a turquoise neck-lace. Add to all these the colours of many growing sea-weeds—deep-red, scarlet, dark olive-green, and gold—some shaped like mistletoe leaves, some bearing clusters of large gold or brown bulbs, and others, of the daintiest patterns. They are equally varied in texture, from the toughest leather to the finest lace, beaded with minute shells. And these marine thickets are coverts for minute fish, and for a multitude of shell-fish—black, white, bright yellow, and scarlet. Legions of tiny blue mussels and white barnacles also encrust the rock, to say nothing of the little crabs and shrimps which nestle among the roots of the sea-weed. So you can form some notion of the charms of such rock pools as these, always remembering how greatly the beauty of all such objects is enhanced by the clear crystal medium through which they are seen.

Where now are all those rocks and zoological gardens of the deep? Not a trace of them is visible, not a break in the smooth surface to indicate the hidden reef, and no two pictures could be more absolutely different than is our outlook at high and low tide. Not that these constitute our sole variety; assuredly our sea-scape knows nothing of monotony. Besides the ever-varying effects of storm and calm, there are days when we seem to be looking across an absolutely boundless ocean (as indeed it is in one direction), but perhaps an hour later we can not only discern the coast of Haddington, and the distant Lammermuir hills, now dazzlingly white in their wintry robes, but can almost distinguish the houses of North Berwick, and the ruins of Tantallon Castle on its dizzy crag.

Beautiful as is this clear, crisp light, there is almost greater fascination in the sunlit mist, which leaves so much to the imagination, the faint blue overhead imperceptibly merging into colourless misty clouds, which so perfectly blend with the ocean, that there is not the faintest indication to show which is sky and which is sea, the latter being only defined by the gentle ripple in the immediate foreground. On such days the stillness is wonderful—only the low murmur of the ripple echoes along the shore, blending with the wild cry of spirit-like sea-birds, or perhaps the muffled, jerking sound of oars from an invisible boat, which draws nearer and nearer, till it becomes faintly discerned through the mist, even its quiet colouring being quite a welcome relief where all around is so grey. Some days the boats fly in cheerily, with their great brown sails swelling in the fresh breeze; but on such days as these, not a breath of wind helps the tired men on their homeward way.

Each morning, noon, evening, and night present such wonders of changing light and colour, that it is difficult to find any hour of the day when we can afford to be off watch! Sometimes we have daffodil skies, with wonderful banks of pearly grey cloud. Sometimes from the first glimpse of dawn the sky is densely red, and then our admiration is alloyed by sympathy with the fishers, who know that heavy weather is coming, and that they will have enough to do to recover their nets and lines. And all too quickly dark banks of leaden cloud sweep upward, and the moaning of winds and waters tells of the coming storm; the ships begin to toss, and the brown-sailed boats seem as though they could not make the harbour. Soon the whole Firth is in wild commotion—white-crested waves and scudding foam in every direction, and magnificent raging billows breaking on the strand in cataracts of gleaming white spray. Perhaps on the morrow calm is restored, and the only trace of the storm is that wide margin of dark sea-weed, torn up from ocean's bed, and cast ashore by the waves—a boon to the farmers, who send carts to collect it, and therewith manure their fields.

Sometimes after such a day of storm, the grey clouds seem drawn aside like a curtain, revealing the purest blue sky, which straightway is mirrored in every patch of wet sand, while the dry sands gleam yellow in the sunlight, the effect thus produced suggesting a broad shield of gold, inlaid with turquoises. In short, there is no end to the scenes of beauty which dear mother Nature seems to delight in exhibiting to our appreciative eyes.

Equally fascinating are such glimpses as we obtain of a few of the great host of fellow-creatures of whom we really know so little—the inhabitants of the water-world. If we go down to the beach to greet the return of the brown-sailed fishing-boats, the chances are that we may obtain some despised marine captives far more interesting in our eyes than the silvery whiting, haddock, and cod, or even the great armour-clad crabs, which are prized as marketable treasures. Unfortunately for the fishers, a large proportion of their carefully-baited hooks have only captured such worthless creatures as the pretty star-fish (with their five red or purple rays, and countless tiny, sucker-like feeders), or large white whelks (whose shells we eagerly claim for the children), or else odd-looking fishes of divers sorts, deemed unfit for human food; so they have suffered the tortures of the fish-hook, without even the melancholy consolation of being of use, and are unceremoniously tossed back into the water or on to the shore, to recover or to die as the case may be.

Amongst the treasures from deeper waters which are sometimes most unintentionally brought in on the fishers' lines, are white, leathery lumps, which at first sight puzzled me exceedingly. It was some time before I could assure myself that these objects, resembling mis-shaped turnips, but having the consistency of wrinkled pork, must certainly be some sort of sea-anemone. Those I first rescued from the fishers' pile of refuse had been so roughly treated, as to be apparently dead. However, I placed them in a large basin of sea-water, and to my joy, on the following morning found that they had apparently quite recovered, and had opened up a flower-like cup, the size

of a very large rose, of a most delicate cream colour, all fringed with countless minute feelers. Thenceforward they have constantly changed from the appearance of transparent gelatine to that of exquisitely carved ivory, forming the centre of attraction in a very primitive aquarium, which receives daily additions of all sorts of strange creatures from the rock pools—creatures which, when seen in their own gardens of delight, appear so fascinating, that sometimes we cannot resist the pleasure of carrying some home for more leisurely inspection, that we may watch them for a while without fear of being ourselves overtaken by the tide, and floated off to the home of the mermaid.

It needs some hardening of the heart, however, to disturb the peaceful beauty of such a colony. Of course, at the first touch, a sea-anemone instantly draws in all its outspread feelers, ejects the sea-water with which it was inflated (and possibly also the remains of a half-digested crab or periwinkle), and in a moment has shut itself up, transformed from the semblance of a beautiful open flower to that of a small lump of jelly, adhering to the rock so firmly that it needs careful and very gentle manipulation to detach the edge of its sucker-like foot. We know, however, from past experience, that within a few hours our captive will expand beautiful as ever in its new home ; indeed, the difficulty is to know when these creatures are dead, or when they are only undergoing transformation. Again and again, when I have found them lying at the bottom of the water, instead of adhering to the rock, they have appeared so dead that I have removed the apparent corpses to a mortuary, giving them, however, a fresh bucket of sea water, and on my return have found that they were all exceedingly lively.

No garden anemones could present more variegated colouring than do these flowers of the sea. I have at present before me no less than twenty, each quite unlike its neighbour. Besides those of which I have already spoken, I have some which internally are of a deep claret colour, while externally they are olive green, and their fringe of feelers is of paler claret. One is partially olive green, on a base of bright gold, and is all covered with golden knobs ; its feelers are barred with delicate grey and claret colour. Some are bright golden green, blending with scarlet, and also covered with knobs, the feelers being crimson and gold, and one blood-red. But the prettiest of all is just the colour of a bed of moss, and its feelers of bright, glistening lilac suggest autumn crocuses.

These feelers are sometimes thin as threads, at other times they are swollen like fat sausages ; indeed, the form of the creatures themselves is constantly changing. Sometimes they are shapeless lumps ; then they open up and resemble a basket of flowers. Perhaps an hour later they have swollen and taken the shape of an hour-glass, almost closed at the top ; and ere long, from the said top the fringe of feelers comes cautiously forth—in short, the more we watch these curious little lumps of jelly, the more marvellous does their organism appear.

Very wonderful, too, are the starfish when thus seen at close quarters, with the aid of a good magnifying glass. Some are of bright reddish gold, some are lilac edged with olive green, but all have a raised pattern in white, formed by triplets of three little fingers set upright, like tiny hands. Beneath the five rays are clustered a legion of delicately ribbed fingers, like transparent jelly, each ending in a sucker. Of these a few dozen are out on duty at a time, feeling around incessantly, in constant motion. Every now and then a ray drops off, and for some time seems to continue an independent life.

But I think the most beautiful of all my captives are two large sea-eggs (*echini*), or rather sea hedge-hogs, bristling with thousands of spines about half an inch in length. They were caught on the fishers' lines, and are about the size of a clenched fist. When I received them, the spikes lay feebly depressed, but soon, under the influence of a fresh supply of sea-water, the creatures revived, the spines stood upright, and from amongst these, through minute perforations in the shell, there arose a perfect forest of long, delicate, bright lilac feelers, clear, transparent, flexible tubes, capable of extending to upwards of two inches in length, each ending in a circular sucker. These reached about in every direction, like tiny snakes, evidently seeking for something. What that was we discovered, when they found the side of the earthenware tub, and straightway proceeded to attach themselves thereto, adapting their length to the curve of the tub, so that those in the centre are barely one inch long, the rest being graduated, till those at each side are upwards of two inches in length. These are so many stays, by which the creature keeps itself moored to the rock. About half the feelers being thus occupied, the remainder lie at rest ; some indeed continue to curl about aimlessly, but the majority sink back among the roots of the spines, only displaying the tiny circular sucker.

Among this legion of spines and long tubes there is a third multitude of curious objects, precisely resembling the three-pronged wooden cannibal fork of Fiji.

These curious little objects, of which there are many hundred, varying from half an inch in length to scarcely visible hairs, are also in ceaseless motion. Through an open circle on the top, edged with mottled red and white, we obtain a glimpse of the interior of the shell, edged with brown feelers, and another circle of large feelers with tiger-like stripes of black and yellow, ending in black suckers. In short, these hedgehogs of the sea are very interesting studies, and tempt me to watch them by the hour.

To the present generation, to whom all such wonders of the deep have become familiar, through the splendid aquaria established in so many of our large towns, as well as those small domestic ones which adorn so many homes, it may seem almost incredible that, until about sixty years ago, the very existence of these inhabitants of our shores was scarcely known. Indeed, for that matter, multitudes dwelling on the sea-board within a stone's throw of all these wonders, have never seen one of them, and gaze with amazement at the strange treasures we exhibit to them in our very primitive aquarium.

It seems to gain in interest when I remember that a solitary sea-anemone (*Actinia Mesembryanthemum*), which in 1828 was taken from a crevice in the rocks off North Berwick (to which I am now looking straight across the Firth), was the pioneer of all the odd sea-creatures which have in the last sixty years been brought to people our aquaria ; and, strange to say, that truly historical zoophyte continued to flourish till the autumn of 1887, when, on the 4th August, she expired, at the Royal Botanical Gardens of Edinburgh, surrounded by a large family circle of her numerous descendants. Of the many children to which she has given birth in the course of her captivity, upwards of six hundred have passed into the hands of various collectors, and, as many of these have multiplied in their turn, the respected grandmother of the clan soon came to be distinguished as "Grannie," by which name she has been familiarly known to all naturalists interested in subjects of this class.

Strange indeed it is to think of all the wise men who, in the course of more than half a century, have done homage to this little, insignificant-looking, leathery, gelatinous lump, measuring barely two inches in height and breadth ! Its captor, Sir John Graham Dalzell, immortalized it with pen and pencil in his book on "The Rare and Remarkable Animals of Scotland," and its portrait in later years was given to the public by Mr. Philip Gosse. On the death of Sir John, Grannie was committed to the custody of Professor John Fleming, and subsequently was passed on from one naturalist to another, till, as we have seen, she found a final home in the Botanical Gardens, where her own album received the autographs of upwards of a thousand visitors, including many names of note in the social and scientific world. She had previously made personal acquaintance with many leading naturalists, having been present at the meetings of sundry scientific societies, including that of the British Association at Aberdeen, when the Prince Consort was its president.

How Sir John Dalzell arrived at his conclusions I cannot say, but he estimated that his prize was fully seven years of age at the time when he appropriated it. Consequently it is assumed that at the date of her death this fine old sea-anemone had attained the ripe age of sixty-seven—a living example of the advantage of regular habits, her strictly regulated diet during all these years having been limited to half a mussel once a fortnight, at which time the sea-water in her bath was renewed. Her death was caused by an attack of *saprolegnia*, the fungoid growth which has proved fatal to so many salmon, and which by some means contrived to reach even the seclusion of poor Grannie's home in the beautiful garden.

SHOP WINDOWS.

The walking shop-keeper.

PART II.

GREAT skill is required to make a successful window artist. The most insignificant display is regulated according to certain principles. The first point to consider is colour. The man who is colour-blind cannot make this his *métier*. There are shades and tints which, beautiful by themselves, are ugly when brought together; and on the other hand, harsh and unpleasant colours can be beautified and softened by judicious management. The artistic decorator values so thoroughly the colour in the fabrics he handles, that he learns to make pictures of them as if they were pigments, and produces effects which may be classified as "symphonies" and "harmonies," and the rest.

Within the past year, one of our best artists in this line, to whom I am indebted for much of my information, gave a wonderful study of colour in a marine view. Out of muslins and linens and handkerchiefs he wrought a ship, whose white sails contrasted well with the "deeply darkly beautifully blue" sea of crêpe. The scene expressed repose; the ship was at anchor, the sea was calm, and jaunty little doll sailors were all arrayed in their Sunday best.

Once, in passing through Boston, I saw a companion piece to this. It was a sea view, modelled in tarlatans and buntings. A vessel was on the sea, gallantly sailing over great waves of blue bunting. In the background were shadowy hills of tulle, which, like the white-towered city in the ballad, rose

> —"on the dim horizon
> As in a land of dreams."

Time deals even more cruelly with these muslin works of art than it does with Turner's brilliant colours. The thing of beauty is not a joy for ever, but is ruthlessly torn apart to be sold by the pieces, and to make room for some newer pageant.

Next in importance to colour is the relation to one another of the articles in the window. He never crowds his window with handsome fabrics, for he knows that quantity would detract from quality. When he feels doubtful as to the best method of working up the materials which are given him to exhibit, he begins as if he were making a decorative design with the pencil. He selects some one point to which he subordinates all the minor details. This is usually the centre piece, and once it is constructed to suit him, the rest of the work is easy. These artists think very little of simple exhibitions of stock. Windows which are without design seem to them very poor. Their designing, however, really requires time, and as the number of changes they are called upon to make is great, they must content themselves with manifesting their talents at the principal holiday seasons. Before working out his design, the decorator makes drawings of it. He corrects, and enlarges or diminishes, as the case may be. He adds a touch here and a touch there, and perfects his idea in coloured sketches on paper, before he trusts himself to less easily managed materials. One of the most beautiful window pictures that has appeared, was the work of the Philadelphian artist to whom I have already referred. From a mass of linen and silk handkerchiefs, he wove a "flowery tale," for there arose in his window, as if by magic, two green plants. On one side was the "white-plumed" lily, tall and slim; on the other the sunflower, with shining yellow petals. One might have thought that the fairies had been there.

A relic of bygone days.

In shops in which a professional decorator is not engaged, the windows are arranged by one of the clerks. Among a large number of employés, there are a few who will show a finer sense of colour and a more natural instinct to good design, than the many. One difficulty is to discover the right person. In a very well-known bookstore in Philadelphia, one clerk after another was entrusted with the charge of the windows. Each did his best, but his work could not be pronounced a success. Finally there appeared the one who had long been wanted. He stepped into the window, and piled up the tempting rows, as if to the manner born, the newest and oldest editions, and threw carelessly forward the latest thing in the way of

Shutting up.

travels, and the freshest in æsthetic illustration. This he did as if he were thinking of nothing less than of the approbation of the public. Yet his taste was so unerring, that his window was attractive to all classes of men, from those who love the graceful curves and strange unearthliness of Blake's pictures, or an edition *de luxe* of Shakespeare, to those who like to laugh with "Tom Jones," or even with "Mother Goose."

Other shops sometimes seem to aim at educating the people; for if a tradesman has a special stock of goods to which he wishes to call attention, he accomplishes this by practical illustration of how the articles in question are made, and his window becomes the work-shop of a wood-carver, a silk-weaver, or a glass-engraver.

Nor do the exhibitors miscalculate the value of their curiosities upon certain minds. The enterprising shopman also makes use of that strong instinct of certain natures to laugh at whatever is great or beyond their comprehension. Shortly after Darwin's death, a tradesman hung in his window an oil painting, representing two monkeys, underneath which was a card with these words, "Darwin's Adam and Eve. All three dead!" As a writer in the *Saturday Review* said lately, the popular conception of the Darwinian theory is something like a line with a man at one end and a monkey at the other. It was to suit this popular conception that the picture was addressed.

There are still other tradesmen who, in their method of decoration, appear to follow traditional or trade rules. The tobacconist always adheres to red and yellow trimmings for the wood-work of his windows, and the only suggestions of ornament in his display of cigars and cigarettes are advertising cards praising the merits of certain brands. The same uniformity is seen in chemists' windows, where the large, coloured bottles are as inevitable as the three balls of the pawnbroker and the striped pole of the barber. It is not generally known, by the way, that these bottles are a legacy from the old alchemists. In many shops they are still of the primitive colours — red, blue, white, and some very dark colour, being intended to represent the four elements—fire, water, air, and earth, on which chemistry was originally supposed to be based. The shops of the importing coffee and tea companies are also very conspicuous. Their walls are lined with Chinese pictures in the popular parasol and fan style. Sea views and city views, palaces and pagodas, ladies with small feet and gentlemen with flowing garments, all painted in the most vivid colours, give the shop an oriental character, intended perhaps to lend additional flavour to the tea. In some of these tea shops, portraits are added to the wall-paper pictures, so that it has the appearance of a gallery.

Aristocrats among business men are susceptible as to their windows. They wish to appear superior to display. They are the *élite* of confectioners, who place a single cake in the window, or, in extreme cases, only a cake dish, that the beholder may divine from this very slight indication that something very superior is to be had within. This may recall to some readers the story of Mr. Tetchy, a London print-seller, famous for excessive sensitiveness and great pride. As he grew richer and dealt in nobler wares, little by little all the pictures disappeared from his windows, until there remained only one exquisite Rembrandt proof, with the inscription, "Mr. Tetchy's Gallery," *in antique Roman.*

In striking antithesis to the aristocratic windows, are the purely democratic varieties to be found in other streets, where the very choicest articles are brought well forward. In these neighbourhoods competition is strong, and success comes to him who can make the largest parade of goods. The efforts to be the successful competitor have resulted in the shopman's filling his windows until they have overflowed to the pavement, thus instituting a new manner of shop decoration. In one walk through any of these thoroughfares, clothes and shoes are to be seen forming groves, as Dickens says, and ornamenting the sidewalks in numbers sufficent, one would say, to clothe the entire local population. Quantity and cheapness are of more importance than quality, and only occasionally is there an aiming at effect. I remember passing an old clothes shop, in front of which was an array of cast-off dresses of every hue and make. Among them, directly in the sunlight, was a faded purple silk, whose former owner, to judge from its present condition, had clung to it so long as it retained the least claim to decency. It looked very ugly and hopeless, and I wondered that it had not been consigned to the more friendly shade of the shop. A few minutes later I repassed, and behold! over the shabby silk attire the shopkeeper had thrown a black lace shawl, thereby giving it an air of respectability and even of elegance, and probably insuring the speedy sale of both articles.

After studying the influence of shop windows upon their owners, an interesting consideration would be the manner in which they affect those who look at and admire them. Few people have thought of the matter from a philosophical standpoint, but almost every one is rich in individual experiences, which, beginning with the first possession of a few cents in childhood, have perhaps yet to be completed. There are certain alluring windows, whose toys are as irresistible to the young as the Holy Grail was to the Knights of the Round Table, and which have been the cause of many a schoolboy or schoolgirl being late for school. Before the confectioners sweets and sugar-plums, youthful pocket-money has disappeared like snow in the sunshine, while artfully draped silks or skilfully arranged antiquities must be held responsible for many extravagances of later and wiser years.

And to sum up this short sketch of a somewhat curious subject,—looking at the matter from a higher standpoint, it must be confessed that shop-windows offer a strong temptation to the waste of time; further, through the eye, they appeal powerfully to some of our weakest points, viz., vanity and love of personal appearance. And we very much question whether the moral influence of shop windows is not, on the whole, decidedly injurious.

Just in proportion as the mind becomes occupied with things unseen, so will its taste for the glittering attractions of shop windows lessen; and many moments, formerly wasted upon these, will be used for more profitable meditation.

It has often been remarked that in a large and fashionable town, looking in at shop windows is one of the little things liable to break our communion with God, for the heart usually follows the eye; and then the steps become entangled. Perhaps the prayer of the Psalmist, "Turn away mine eyes from beholding vanity," may be as appropriate a petition for some in regard to shop windows as it undoubtedly is to huge advertisement placards of street hoardings, especially when these things have peculiar fascination, and the power of resistance is small.

A decoration in dresses, Bainbridge Street.

THE STORY OF JONAH.

By the Rev. F. B. MEYER, B.A., Author of "Christian Living," etc., etc.

PART III.

THE STORM.

"THE Lord sent out a great wind into the sea," saying, "Go forth and bring My servant back." The word rendered "sent out" might be rendered "cast forth," for the same Hebrew word is afterwards employed to describe the eager action of the sailors in casting forth their wares out of the ship into the sea. The phrase brings out into strong prominence God's personal agency in originating this storm, and why should we be so loath to admit God's personal action in the world of nature? We all admit that Jonah had a will of his own, making him act out of his usual routine; why should we not equally admit that God had a will of His own, to which He must give special effect? To say that He cannot, is to limit His infinite power; to say that He will not, is to make an assertion which no one can prove. Of course He will not break in upon the action of those laws which He has made, but if He wishes to attain a certain purpose, there is no reason why He should not balance one law against another, or introduce some higher laws, which shall altogether turn the scale against those with which we are familiar. We are willing, then, to accept literally the statement of the text, "The Lord cast forth a wind into the sea." The storm did not come by chance, nor did it subside because its fury was spent. It came because God sent it. It fulfilled a distinct purpose; it died down when that purpose was realised; and every time we see a storm sweeping through the forest, uprooting the giant trees, we must realise that we are in the presence of one of God's strong angels.

How severe this tempest must have been! It is described as "mighty." So much so, that the ship was like to be broken, or as the margin puts it, "the ship *thought* to be broken," as if for a moment the ship had become a living thing. So that the poetry which made the sailors speak of it as such had become fact; and as each mighty billow came rolling up to break upon its prow and bulwarks, it shuddered and trembled and groaned like a living thing.

Imagine, if you can, the scene. The dense darkness veiling the sky; the winds screaming like the furies about to devour their prey; the mountainous waves that now lifted the ship high in the air, and anon plunged her into their trough; the rattling of the cordage; the helplessness of the sailors to cope with the terrible fury of the elements.

This storm affected three sorts of characters. "*The sailors* were afraid, and cried every man unto his god;" and to their prayer they added measures dictated by prudence, for "they cast forth the wares that were in the ship into the sea, to lighten it of them." There is nothing like a storm to bring men to their knees, and often the boldest blasphemers are the first to cry for mercy and help beneath the violence of the elements which defy all human power, though such an impression will soon wear away when the clouds have passed.

Jonah, on the other hand, had gone down into the hold of the ship, where he lay, and was fast asleep. There are two sorts of sleep. One is the reminiscence of Paradise, innocent and blessed, as God's benediction of honest labour, the bath of care, the couch of refreshment to overstrained muscles and nerves; the other is guilty, for the carelessness and indolence which it manifests, as the sleep of the sentinel at the post of duty while the foe is climbing up the pass; the sleep of the nurse at the bedside of her patient, who requires perpetual nourishment and attention; the sleep of the prophet in the ship, which was imperilled by his guilty presence.

But perhaps no one was more anxious than the captain himself, who was charged with the safety of all on board. He had perhaps noticed the strongly-marked Jewish features of the prophet, as at the last moment he had stepped on board. He had remarked him as a Jew, and he had a kind of feeling that the God of the Jews was the greatest of all gods, and that the Jews were His peculiar people and charge. He felt, then, that the prayers of such a man would probably avail more for their deliverance than the prayers of all his sailors beside, and as he looked round among the bending groups, and missed the man who, of all others, seemed the best qualified to help, he set himself to work to find him, and having found him, remonstrated with him vehemently: "What meanest thou, O sleeper? Arise! call upon thy God, if so be that God will think upon us that we perish not." It was a heathen sailor who aroused the prophet of God. Do not refuse a message because it is not given you by the regular hand; the carrier may be rude and rough, but he may bring your Father's missive. God uses a ram's horn as well as a silver trumpet, a hair-clothed Bedouin as well as a shaven priest. In God's kingdom there are no monopolists. This man, in his earnestness to arouse every one within his reach, sets us a great example. We should hunt up every prayerless Jonah who sails with us over the seas of life. We should earnestly arouse them to a sense of their danger, and to the need of prayer.

Are you a Jonah, and asleep? With only a plank between you and Destruction! With only a step between you and Death! With only a moment between you and Eternity! Exiled from Paradise, and not eager for the Paradise regained! No danger of Eternal Destruction, and not accepting the free offer of Eternal Life! What mean ye? Arise! and call upon your God.

Whether or no Jonah prayed, we cannot tell. Perhaps the words of prayer stood petrified upon his lips, but when the captain and he reached the deck, they found a whole crew swayed by a common impulse, "Come, let us cast lots." It was a superstition amongst sailors then, as it is now, to believe that storms, otherwise unaccountable, were due to the presence on board of some special wrong-doer, and it seemed especially desirable in the present instance to discover the cause of this terrible tempest. It was even then a very old custom to decide things by lot. Indeed, the Pyramids bear witness to it. But God was over the disposing of a lot, and so ordered it that the lot fell upon Jonah.

God points the sinner out. The wrong-doer mixes with strangers, hoping to escape detection. He obliterates his footsteps, crosses the scent, destroys the tell-tale evidences of his crime, but it is all in vain. Sometimes a hidden link is suddenly brought to light, completing the chain and indicating the wrong-doer. Sometimes conscience refuses to be silenced, and forces the utterance of words which supply the missing clue. Sometimes a quick eye, as in the case of the maid who detected Peter, recognizes a face seen long years before. Somehow or other the unerring sleuth hounds of God's justice will run the transgressor to earth. "Though they dig into hell, thence shall my hand take them; though they climb up to heaven, thence will I bring them down."

A hurried colloquy was immediately held amid the tumult of the storm. Jonah was assailed by a volley of questions. "Tell us why this evil is upon us," says the first. "What is thine occupation?" asks the second. "Whence comest thou?" insists a third. "What is thy country?" demands the fourth. "Of what people art thou?" inquires a fifth. Each man thought that the answer to his question would give a clue to understanding why the lot had fallen upon their strange fellow-voyager, and why the sea was lashed to such terrific fury. Very laconic were the prophet's replies—"As to my people, I am an Hebrew; as to my occupation, I fear Jehovah, and am servant of the Almighty God; as to the cause of this evil, I flee from His presence." Then the sailors asked him two questions more: "Why hast thou done this?" and "What shall we do unto thee, that the sea may be calm?" It is a very bitter thing when the innocent sufferers by our sin turn round and ask us why we have acted as we have done, imperilling not only ourselves, but them; and it is a very perplexing thing to be asked to pronounce our own sentence. Leaving their first question unanswered, Jonah resolutely answered the second, and addressing that dark devoted crew he said,

> "Take ye me, and cast me into the troubled deep,
> And the wrath aroused against you will be pacified in sleep."

But nobility ever awakens nobility, and though the sailors had received full permission to rid themselves of their fellow-passenger, they hesitated. Taken with the simplicity and frankness of Jonah's bearing, they thought it a pity that he should perish, if they could do anything to save him; so "the men rowed hard to bring the ship to land; but they could not: for the sea wrought and was tempestuous against them."

It is of no use trying to fight against God. You may do your uttermost to bring your ship to land, but the more you try, the worse your situation will get. "Shall a man strive with his Maker?" "Let the potsherd be content to strive against the potsherds of the earth." No, there is only one thing for you to do. Cast Jonah into the boiling depths. I care not how much the intruder has paid to come on board, nor how innocent it looks. I know this only, that you will never be able to prosper so long as you keep it on board. In God's name put it away.

(*Continued—page* 781.)

THE POST OFFICE: WHAT IT IS, WHAT IT DOES, AND HOW IT DOES IT.

By An Official.

Part II.

SATISFIED as public opinion, whenever it finds expression, shows itself to be with the working and administration of the Post Office as a whole, complaints are sometimes made, where its rules or practice seem to press hardly in individual cases, or to contravene some generally established principle of equity or common sense. But it must be remembered, whilst there is greater elasticity in the Post Office than in almost any other department of the Government, a certain amount of rigidity is always inseparable from State control. The Post Office is not only strictly under the control of the Government of the day, but its duties and actions are laid down and prescribed by special Acts of Parliament. The chief of these Acts were passed in the first four years of our present Queen's reign.

The minister immediately responsible to Parliament and the public for the administration of the Post Office is the Postmaster General. He is always a Privy Counsellor, and sometimes, though not necessarily, a Cabinet Minister. He is appointed by letters patent under the great seal, and has absolute power to punish, promote, or dismiss any Post Office official. His control over the revenues of the Post Office is dependent on the consent first obtained of the Lords Commissioners of the Treasury. Next to the Postmaster-General come the permanent officials, the chief being the Secretaries, of whom there are now three, one being the Financial Secretary. Then come the Secretary's clerk and officers who assist them in the primary administration and control of the whole executive staff and machinery of the Post Office. Subject to the Secretary, but forming part of the headquarter's staff, are the Solicitor and his assistant, and the Receiver and Accountant General and his staff. As will be readily understood, the duties of the latter are to receive and account for the Post Office revenue. Then comes the Controller of the London Postal Service, which covers the whole of the Metropolitan area, and his subaltern officials, such as the Postmasters of the Western district, Paddington, South Western district, etc., etc.

Outside London the country is divided into districts or groups of towns, each under the immediate control of a surveyor, the individual Head Post Office in these districts being under the control of Postmasters, who in their turn have under them Sub-postmasters in charge of smaller offices. In the case of some large towns, such as Manchester, Birmingham, and Liverpool, the Postmasters act as their own Surveyors. In Scotland there is a Surveyor General, and in Ireland a Secretary at the head of the Post Office. In one sense both Ireland and Scotland have distinct and separate staffs; but though the Irish Secretary and Scotch Surveyor General have extensive powers, they are both under the control of the Secretary in London.

Returning to head-quarters, we find in addition to the administrative staff proper, that of the Money Order Office, which occupies a separate building in Aldersgate Street, and is in charge of a Controller; the Savings Bank in Queen Victoria Street; the Returned Letter Office in Telegraph Street; the Central Telegraph Department, with its huge staff of men and women, and its little army of telegraph messengers, in Bath Street; the Medical Department (one of the medical officers is a lady), and the Storekeepers', general and telegraph. Finally, there is the Engineer-in-chief with his staff. Space will not admit of many further details, but the following figures, with the foregoing descriptions, will, it is hoped, give some idea of the hugeness and complexity of the machine, or rather collection of machines, which is comprised in the designation "Post Office," and will be a fitting prelude to a description of some of the processes by which the "Department," as it is technically called, performs its multifarious work.

This work, it should be first explained, includes much that, in one sense, is done for other Departments of the Government, and there seems a growing tendency to take advantage in this way of the organisation of the Post Office. Thus, for instance, it collects money for the Inland Revenue Department, and pays pensions and reserve pay for the Army and Navy. Possibly ere long the familiar postman's knock will herald that far more unwelcome visitor, the tax collector. Should this be so, we fear the public will not be so inclined as it is at present to be generous in the way of Christmas boxes to postmen.

Taking the United Kingdom as a whole, there were at the end of last year 8 Secretaries; 16 Surveyors; 927 Head Postmasters; 16,239 Sub-postmasters and Letter Receivers; 3,571 Clerks and Superintending Officers; 16,238 Overseers, Countermen, Sorters, and Telegraphists; 17,799 Postmen, Porters, etc.; 47,110 Assistants, Auxiliary Postmen, Boy Messengers, Copyists, Commissionaires, etc.; making, with a few Postmasters, Clerks, etc., in those of the Colonies which still remain for postal purposes, under the control of the Postmaster General, a grand total of 101,961.

It is a striking instance of the growth of the Post Office, that whereas in 1782 the total number of officials of all kinds, including postmen employed in connection with the actual distribution of letters in London, was 312, last year it was 21,926.

We will in the next Article deal with the way in which the Post Office discharges its primary duty, the transmission and distribution of letters, comprehending under that head, post cards, newspapers, book packets. The arrangements of the Parcel Post will need an Article to itself. But as we have given some statistics of the *personnel* of the Post Office, it may be interesting to add here a few figures which will give some idea of the amount and growth of the work which it is proposed to describe.

During last financial year it was estimated that the number of letters and parcels delivered in the United Kingdom was *two billions, one hundred and ninety-two millions, nine hundred and sixty thousand.* Of these, over six hundred and fourteen millions were delivered in the London Postal District, or very nearly two million of letters a day. In other words, the average number delivered to each person in the United Kingdom was 40 letters, 5 post cards, 10 book packets and circulars, 4 newspapers, and 9 parcels. The number of registered letters was 10,779,555. At the close of the same year the number of places in the United Kingdom, in which letters could be posted, was 39,380, of which 17,191 are Post Offices. No less than 27,298 letters were posted without any address, and 1,628 of these contained money and cheques, amounting to £4,604.

FOR YOUNG HOUSEKEEPERS.

MEAT is made *tender* by simmering, and *hard* by quick boiling.

Ripe Gooseberry Pudding.—Butter a pint basin, fill with ripe gooseberries; make a batter with two eggs, five ounces of flour, and half a pint of milk; pour it over the fruit, upon which a quarter of a pound of sugar has been laid, until the basin is full; tie in a cloth and boil for one hour and a half or two hours.

Tea should not stand too long: the longer tea brews the more *theine* is extracted from it; and theine is the injurious part of tea. Five minutes ought to suffice before pouring out.

Bacon-Fat is as nourishing as cod-liver oil, and no one will deny that it is much more agreeable to the taste.

Hard and Soft Water.—Many people use soft water to rinse and blue clothes in; this is a mistake, except for woollen materials, which should never be blued. Fresh spring water is far better for the purpose than soft; the blue does not "circle" in hard water as much as in soft, and the spring water clears the linen better from the soap.

Stewing is the most economical mode of cookery which we know. He who roasts throws half his meat into the fire; he who boils throws half into the water; he who stews makes the most of it.

To Clean Sponges.—Butter-milk is excellent for cleaning sponges. Steep the sponge in milk for some hours, then squeeze it out, and wash it in cold water. Lemon-juice is also good.

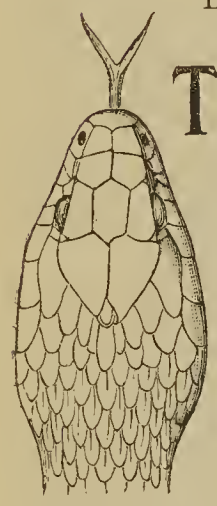
"FAITHFUL UNTO DEATH."

JOHN MAYNARD stood
at the helm, and
steered
The steamer through
waters blue
Of the Western Lakes;
past sunny isles,
And tree-clad hills, where
summer smiles,
They faster and faster
flew.

John Maynard stood at the helm, and steered
'Mid music, and dance, and song;
Through moonlight and shadowy silver
wave,
Past forest, and meadow, and frowning cave,
He steered the joyous throng.

John Maynard stood at the helm and steered,
When suddenly rose a cry
Of anguish and terror; while flame and
smoke,
With crackle and roar, through the strong
deck broke,
And burning death came nigh.

John Maynard stood at the helm, and steered
Till the long, bright day declined,
Till the star of evening shone out red,
Till the moonbeams glittered overhead,
And the rippling water shined.



John Maynard stood at the helm and steered
His eye the landing sought,
His hand was steady, his pale face set,
While the scorching flame advanced, but yet
He quailed or faltered not.

John Maynard stood at the helm, and steered
Till the steamer struck the shore,
And all were rescued, save he who died
To save them; he fell, nor groaned, nor
cried,
The brave heart beat no more.

No more at the helm John Maynard steers;
But above, where his Captain stands,
He standeth too, in the glorious light
Of One who stood by him that awful night,
And strengthened His servant's hands.

SOMETHING ABOUT SNAKES.

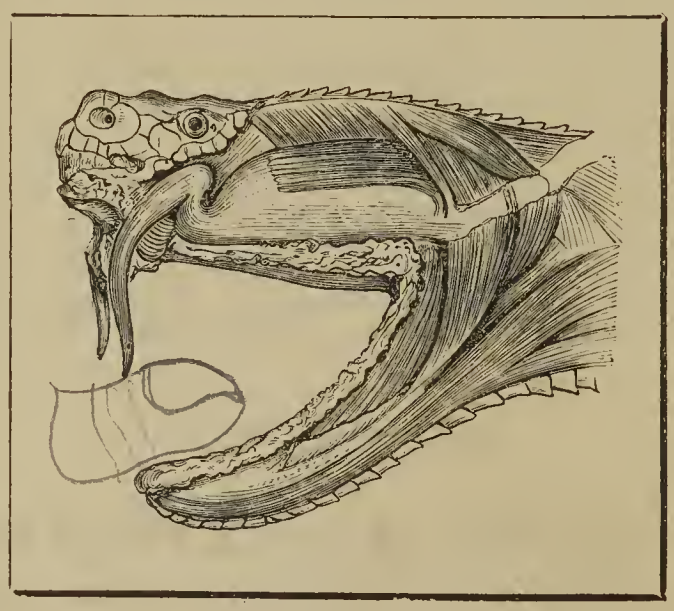
By the Rev. J. G. WOOD, Author of "Homes without Hands," "Illustrated Natural History," etc., etc.

"Head of non-venomous snake."

TAKE away the limbs of any vertebrated animal, and you diminish or destroy its power of gaining a livelihood. What creature, therefore, can be more helpless than one which never had any limbs, and which consists solely of a head attached to a string of vertebræ?

Such, however, are all snakes; and yet they not only possess no limbs, but such would be very much in their way. Limbless, they can perform almost any task for which other animals require legs or arms.

They feed exclusively on living prey, and even catch birds upon the wing. There are snakes which can traverse the ground with such swiftness, that they are appropriately termed "racers." Some habitually live in trees, and can dart from branch to branch with an agility which even the monkey cannot surpass. They are strong and graceful swimmers, and can remain under water for a lengthened period without suffering for want of air. Indeed, there are some snakes which live wholly in the sea, and never come ashore. How can a limbless animal perform these tasks?



The mechanism which is employed is exquisitely beautiful, very simple, and belongs mostly to the structure of the skeleton—the "ball-and-socket" joint being the principal means by which these wonderful results are obtained.

The key to the structure lies in the manner in which the ball-and-socket joint is employed in connecting the vertebræ with each other, and the ribs with the vertebræ.

All vertebræ consist of a "body," to which are mostly attached certain projections called "processes." In the skeleton of every snake, the body of each vertebra is furnished in front with a socket, and behind with a ball, so that great freedom of movement is obtained. (See page 765.)

This freedom is, however, limited to three directions. A snake can bend its body downwards, and to the right or left; but it cannot bend the body upwards, as the upright processes of the vertebræ would come in contact with each other, and effectually prevent it from bending. Artists, therefore, who represent snakes curving their bodies like the letter S, show that they are ignorant of the reptile, and have drawn their pictures from imagination.

So much for the vertebræ—now for the ribs. The base of each rib is expanded and hollowed into a cup or socket. On each side of the vertebræ there is a projection ending in a ball, which fits into the socket of the ribs. The number of vertebræ and ribs is extremely variable, but is always very great. A boa-constrictor, for example, has been found to possess four hundred and four vertebræ, and no less than two hundred and fifty-two of these vertebræ were furnished with ribs.

Head of Rattlesnake.

Now let us see how these ribs are used in locomotion.

Look at any snake, and you will find that the upper part of the body is covered with small scales like the tiles of a house, while the lower half is furnished with horny bands, those in front slightly overlapping those behind them, and being connected with each other by a very elastic skin. The ribs are fitted with muscles that enable the snake to move them backwards and forwards; and as the ends of the ribs are attached to the bands, it follows that when the ribs are moved, the bands move with them. As the snake successively thrusts forward and retracts the ribs, the edges of the bands hitch against any projections, and so force the reptile forwards. On a smooth surface it is helpless.

When it ascends a tree, it does not coil itself spirally round the trunk, as it is almost invariably represented as doing by artists and taxidermists, but presses itself against the tree, and glides directly upwards, its horny bands hitching upon every irregularity of the bark.

As snakes do not possess eyelids, they cannot close their eyes, so that the many stories that are told of the fierce glare of an angry serpent's eyes are without the least foundation. So are the tales which are told of the poisonous breath of the snake. The popular idea on the subject is, I believe, due to Lewis's powerful, though wholly imaginative, tale of the "Anaconda."

Now let us glance at our British snakes, and by watching their habits and structure, obtain some insight into the subject of this brief Article.

We have only three snakes in England, namely, the common grass-snake, the viper, and the coronella. As the first-mentioned snake is very common and perfectly harmless, and easily tamed, we will examine it first.

It frequents hedgerows and ditches; and although it tries to conceal itself, cannot avoid betraying its presence by a peculiar

rustling sound, which is at once recognised by a practised ear. It may be known by its head, which is long and narrow, and, moreover, has a yellow patch at each side, just at its junction with the neck. The colour is grey green, diversified with a number of dark spots. In length, it is, on the average, about three feet.

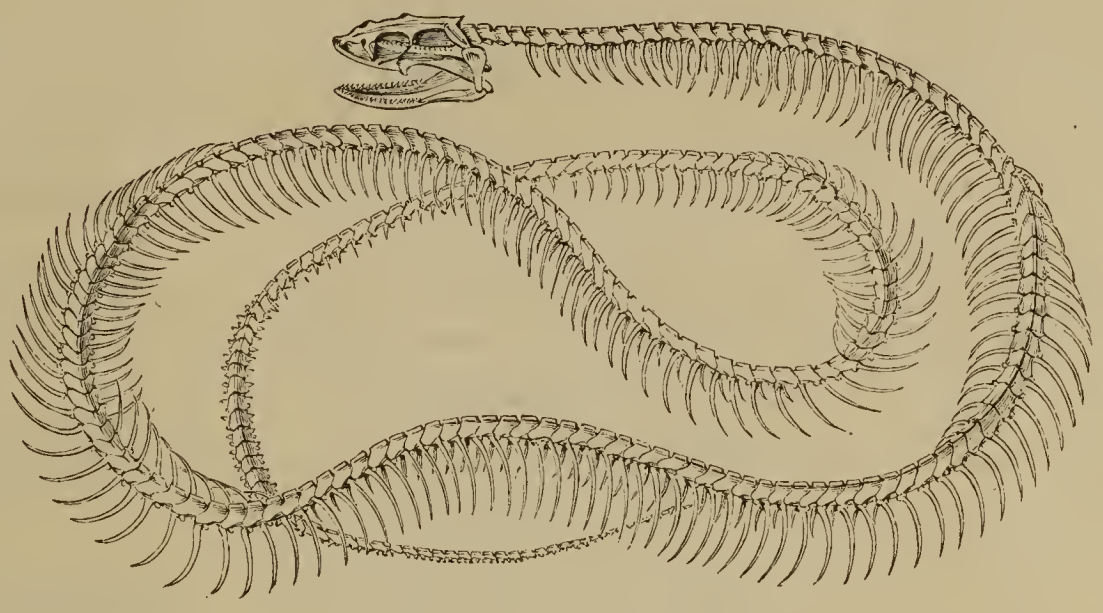
Its food consists almost wholly of frogs, and the manner in which it takes and swallows its prey is well worthy of notice. Gliding after the frog, it gently takes hold of one of the hind feet. The frog tries to escape, but in spite of its struggles, the limb is gradually, but most surely, drawn down the snake's throat, until it reaches the junction with the body.

Now it seems as if the snake were baffled, as the free leg projects at right angles from one side of the snake's jaw, and seems to afford an insurmountable obstacle to further swallowing. But the snake only has to bide its time. With the free hind foot, the frog instinctively tries to push the head of the snake away, and in doing so, is sure to get at least one toe within the snake's jaws. In a moment that toe is seized, and the second leg soon follows its companion down the reptile's throat.

Here we are met by two problems. By what means are the legs of the frog drawn down the throat of the snake, and how is the serpent to swallow an animal which is at least four times the diameter of its own throat? The answer is to be found in the structures which are common to all the snake tribe.

In the first place, both jaws are fitted with small and sharp teeth, all pointing backwards. The lower jaw being continually worked backwards and forwards, the prey is gradually drawn backwards, while the teeth of the upper jaw effectually prevent it from receding.

The key to the passage of so large an object through so small a mouth and neck, is to be found firstly in the skin and other tissues, which are as elastic as if they were made of india-rubber, combined with the astonishing fact that, excepting the mere brain-pan, the skull of the serpent comes to pieces when any large object passes through the mouth.

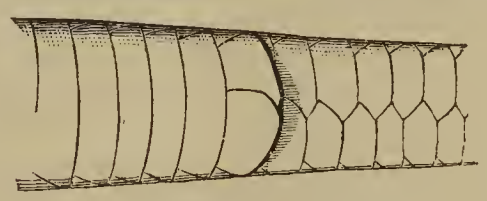


Even the two halves of the lower jaw are separable, so that when the body of the frog passes through the mouth, the parts of the skull are widely separated from each other, the skin which connects them being stretched until it is so thin as to be quite transparent. After the frog has fairly passed through the throat, the elasticity of the skin draws together the separate portions of the skull, and by the time that it is entirely swallowed, the head of the snake has recovered its wonted size and shape.

After making this enormous meal, the reptile is disinclined to move, and lies still until the process of digestion is completed. This mode of eating is common to all snakes, no matter what may be their size or character.

Now we will turn to the viper, as a familiar example of the venomous snakes.

In general structure, the viper resembles the preceding reptile, the chief distinction lying in the head. This, instead of being long and narrow, is short, and much widened at its junction with the neck. It is a much smaller snake, seldom exceeding two feet in length, and generally measuring about eighteen inches.



In colour it is extremely variable, the ground hue ranging from grey, brown, and dull red, to very dark black-grey. But whatever may be the colour, every viper bears certain bold marks by which it can be distinguished from the grass-snake. In the first place, it has on the back of the head a black V-shaped mark, while along the spine there runs a chain of zigzag, black, squared spots that cannot for a moment be mistaken.

Skeleton and vertebræ of snake.

Now we will come to the venomous part of the viper.

The long, forked tongue which the viper

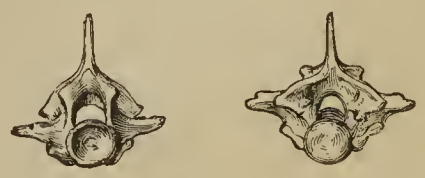
Band plates of snake.

frequently thrusts out of its mouth, and which is popularly called the "sting," is perfectly harmless, and is possessed by all snakes, whether venomous or not. It is simply an organ of touch, and is the only means by which the snake can ascertain the nature of any object.

The offensive weapons of all venomous snakes consist of two long, sharp and slightly curved teeth, called "fangs," which are set one on each side of the front of the upper jaw. They are not set directly in the jaw, but are connected with it by a hinge, which enables the fang to be folded backwards when not in use.

As in striking the prey, the fangs are apt to be broken off, several successive sets of fangs are continually growing, so that when one fang is broken, another moves forward to take its place. These fangs are hollow, and connected with a poison reservoir which lies at the side of the head, and causes the width which has already been mentioned. All venomous serpents have a similarly constructed poison apparatus, so that the illustration, which was drawn from the head of a rattlesnake, will answer equally well for the viper.

The reader will see that when the serpent makes its stroke, and drives its venom fangs into its prey, the poison is of necessity forced into the fangs, whence it issues by means of a small aperture near the point. The creamy-looking liquid is perfectly innocuous when taken internally.



Should you come across a viper, do not kill it, unless you absolutely want it as a specimen. In the first place, it is useful to the agriculturist, as its favourite food is the field-mouse, which, without such checks as the kestrel, the owl, and the viper, might become in this country, as it has done upon the Continent, a terrible plague.

Then, there is no need to be afraid of the viper. Like all serpents, it is timid, and has a special dread of man. I do not believe that any snake ever assailed a human being, unless it had first been attacked. The late Charles Waterton proved this statement in a sufficiently startling manner.

A collection of nearly thirty rattlesnakes was brought to England, and with his bare hands he took the reptiles out of the box in which they had been transported, carried them from one room into another, put them into a glass case where they could be seen by the visitors, and, after the exhibition was over, replaced them in the box.

When I was staying in the New Forest some years ago, I was at first rather alarmed, as it was hardly possible to take three steps amongst the heath without seeing a viper gliding away. But after a few days I realised that they were much more afraid of me than I of them, and at last thought no more about them than if they had been so many earth-worms.

As to the coronella, I have never been fortunate enough to see it at liberty. I did, however, see the remains of a coronella which had been killed in Cannock Chase, after having bitten a boy. The boy in

Vertebræ of snake.
Front, showing socket. Back, showing ball.

question, however, seemed not to have suffered more pain than would have been caused by the sting of a wasp.

England enjoys a remarkable immunity from snakes that may be classed as venomous, and this fact should cause deep thankfulness, when we consider that in India the deaths amount to some thousands *per annum* from snake bites alone.

LETTERS TO PAGANS.

No. 1.

By Edward Butler.

PAGAN FRIENDS,—

There are quite enough of you in Christendom to entitle you to respectful attention. Your influence on the doctrine and practice of the largest section of Christendom, the Roman Catholic, would of itself be an interesting theme. I might point out how the worship of Diana ("Great is Diana of the Ephesians!") survives in the worship of the Virgin Mary, which took its rise at the Synod of Ephesus in 431, the "crescent-moon" being the pictorial symbol of both divinities. And I might trace an old image of Jupiter in the great statue of St. Peter, at Rome, or your old dresses in modern albs and chasubles. But my mind's eye is fixed on some things of a more subtle kind, parasites of the spirit rather than of the body of doctrine or ceremony.

Here is one :—You are beset with the old pagan feeling that the gods envy human happiness, and you are afraid to speak of your joys in tones above a whisper, lest the gods should hear, and the Parcæ should descend with their shears and sweep all away.

> "I never loved a young gazelle,
> To glad me with its dark-blue eye,
> But when it came to know me well,
> And love me——"

the usual catastrophe was sure to ensue; as Thackeray paraphrases Moore. You shake your head when you see people immoderately happy, and, from your point of view, incautious in the expression of their satisfaction. You suspect the quick-eared Mercury will communicate to Olympus that somebody wants to be "taken down a peg," and taught the wisdom of "lying low."

Have you ever watched Punch in the streets, at that crisis of his highly immoral career, when he has a whole row of victims upon the shelf before him, over whom he crows triumphantly? There are Judy, and the Doctor, and the Constable, and the Sheriff lying side by side; if one pops his head up, he receives a crop from Punch's baton, and a "roo-too-too." In like manner you are afraid to lift up your heads, for fear of the prompt baton of your deities. This may be good Paganism, but it is bad Christianity.

The God whom Christians worship is one whose glory it is to be intent upon the welfare of His creatures. But He sees all the road you are to travel; you only see a few yards before you. The ultimate goal is present to His eye; the goal at which your eternal life and blessedness, and His glory and joy in you, meet in one point of light inconceivable. The goal of your limited vision is but a low rising-ground of present happiness. Methinks it may very easily be conceived, even by a dull mind, that His knowledge may lead Him to cross your wishes now and then, destroy your schemes, and reverse your course. But to suspect Him of envying your happiness is mere paganism; for pagan gods did share the weaknesses of their worshippers, and were almost as shortsighted. Jupiter was always a candidate for proceedings in the Divorce Court; Mercury should never have been out of gaol for petty larceny, and lied like a gas-meter; Venus—well, the less said about her the better; and the rest of the court were not too particular in their morals. If they saw you purely happy, I daresay the Punchian instinct arose to crop your heads with the baton. But, believe me, they are gone. Do not be afraid to say out loud that you are happy when you are so. There is One reigning now, who is pleased to hear it. *Au revoir.*

No. 2.

PAGAN FRIENDS,—

I am much entertained by the superstitions with which your life is crowded, and am amazed at their extent and intricacy. The other morning one of you observed to me that bad luck was approaching, for a single crow flopped down on the grass just before the dining-room window; but there was some counteraction of this omen in the fact of an early little ladybird having evolved itself from some corner of the library, and settled on the hand of this watcher for omens; and then there was always the steady protection of a domesticated black cat; so, on the whole, the omen account seemed balanced.

At lunch the salt was spilled, and the debitude of the account mounted up again; but fortunately, in the afternoon, the new moon was sighted in the open air and over the right shoulder, and we went to bed with a credit balance in the luck account.

Then there are lucky and unlucky days. I have an impression that you regard Friday as unlucky, but my information extends no further. I believe also that you consider either April or May, I forget which, an unlucky month to be married in; but I fear your modern pagans are imperfectly instructed. When you have a ringing in the ear or a palpitation in the eye, do you know whether it is the right ear that is lucky and the left unlucky, or *vice versâ?* If not, your education in heathenism has been neglected. Do you know what you should do, if, in commencing an undertaking, you sneeze three times, and how the question is effected by your going on to sneeze a fourth time? Do you perceive the seriousness of Ammian's epigram on the man who had such a long nose, that it was too far off for his ears to hear him sneeze? and do you realise the disadvantages under which that poor fellow lay? Why did Penelope rejoice at hearing Telemachus sneeze?

If the Mayor, going to a Public Meeting, met a weasel, what would be his duty in reference to the Public Meeting? In getting into your clothes in the morning, which limbs, right or left, do you first serve? St. Paul, I observe, had considerable trouble with some of your forefathers, as appears from the Epistle to the Galatians 4. 10; and if he were to perambulate our England of to-day, I imagine he would wring his hands softly but wistfully over the survivals of eighteen centuries.

I would that you were heartily converted to the simplicity of the Christian faith in these matters, and I would subscribe to buy you a celestial besom to sweep your fancy free from all omens, portents, panics (the work of your god, Pan), lucky and unlucky days and times, and astronomical conjunctions, and sights and sounds and dreams, and all the rest of your spider webs. To those who love God in Christ there is no ill-luck; nor any good luck to those who do not. Farewell.

THE IDEAL WOMAN.

THE true woman, for whose ambition a husband's love and her children's adoration are sufficient, who applies her military instincts to the discipline of her household, and whose legislative instincts exercise themselves in making laws for her nursery, whose intellect has field enough for her in communion with her husband, and whose heart asks no other honours than his love and admiration; a woman who does not think it a weakness to attend to her toilet, and who does not disdain to be beautiful, who believes in the virtue of glossy hair, and well-fitting gowns, and who eschews rent and ravelled edges, slipshod shoes, and audacious make-ups; a woman who speaks low and does not speak much, who is patient, and gentle, and intellectual, and industrious, who loves more than she reasons, and yet does not love blindly; who never scolds and never argues, but adjusts with a smile—such a woman is the wife we have all dreamed of once in our lives, and is the mother we still worship in the backward distance of the past.—*Dickens.*

SCRIPTURE ACROSTIC.

1.

A KING, who, in the time of need,
Unbosomed all his grief
In secret intercourse with God,
And found a sure relief.

2.

A steward, who his love displayed
By minist'ring in need
To those who, though despised by men,
Were God's own sons indeed.

3.

She sold what then was often worn
In palaces of state;
While, on God's chosen messengers,
It was her joy to wait.

4.

Something that all God's promises,
In Jesus Christ, become,
To those who have prepared their hearts
To be His Spirit's home.

5.

One who, amid most cruel bonds,
Could still in Christ rejoice;
'Twould more than compensate for all,
That Jesus was his choice.

6.

One who, once false to Christ's great love,
Was by that love forgiven,
And by Divine commission sent
To feed the heirs of heaven.

7.

Son of a sire, whose name descends
With title high and grand,
"*The Friend of God.*" What nobler name
Could earth or heaven command?

8.

As maiden, fair and courteous;
Fond *mother*, yet untrue,
The cause, within her family,
Of troubles not a few.

9.

An exile from his father's home,
He lays him down to die;
When needed help, and near at hand,
Is shown by God most high.

10.

Child of a holy mother, thou,
And *spiritual* son
Of one who ever fought for Christ,
And constant victories won.

Initials of these answers form
The root, from which must spring
All joy, and peace, all love, and power,
Yea, every heav'n-born thing.

The answer will be found on page 823.

INTERNATIONAL SUNDAY SCHOOL LESSONS.

OCTOBER 7TH.

The Commission of Joshua.—*Josh.* 1. 1–11.

GOLDEN TEXT.—*Eph.* 6. 14.

BOOK of Joshua full of adventures. Doubtless the most of it written by its hero himself. *His name* was changed from Hosea, by Moses, which meant "help," a prayer, to Joshua, meaning "The Lord is my help," the prayer answered. The same name in Greek, *Jesus*. Question as to his *earlier* life. First appearance, Exod. 17. 8–16. *Age*, supposed to have been about eighty-four when entering Canaan.

Get golden text repeated by scholars; show that it is part of a portrait of—

"A GOOD SOLDIER OF JESUS CHRIST" (2 Tim. 2. 3).

Make that the central point of lesson.

1. THE SOLDIER'S CALL (vers. 1, 2). The call *personal, emphatic*, demanding *immediate attention*. Give Scriptural illustrations of how God called other men.

The Call of Christ. "Come unto Me." "Jesus stood still and called them." "The Master calleth for thee." "Faithful is He that calleth you."

2. THE SOLDIER'S WORK (vers. 3, 4). Something great and difficult. To cross over a bridgeless river. To be a leader of over 2,000,000 people (Num. 26. 51). To take possession of a great country. Desert of Arabia, its southern boundary; Lebanon, meaning white mountain, its northern; the Euphrates, its eastern: the Mediterranean, its western. *Powerful races dwelling there. Worth gaining*—filled with all kinds of riches. *Christ's call is to service.* "Harvest great, labourers few." We have three continents to gain: one for self, two for Christ. My own heart and the world for Christ; heaven for self.

3. THE SOLDIER'S NEEDS (vers. 6, 7). *Strength, Courage, Obedience*. Needs of Christ's soldiers just the same. How to gain strength? By Holy Spirit (Eph. 3. 16). *The need of courage*—bravery, standing fast. No Christian can do without it. Get examples—John Knox, "There lies he who never feared face of man." Milton in his blindness said he "did not bate a jot of heart or hope, but still bare on, and steered *uphillward*." There was found in a schoolboy's desk after his death, this little prayer, written on a slip of paper, "Lord, help me to be afraid of nobody but Thee." Show how strict obedience is necessary to every army. "Now are ye My friends, if ye do whatsoever I command you."

4. THE SOLDIER'S GUIDE (ver. 8). "Book of the law"—Bible. Prosperity depends upon it. Give as illustrations the fact that Ruskin owns that his study of the Bible has been the most precious and essential part of his education. The Bible must be *read*, thought upon, and talked about.

5. THE SOLDIER'S CAPTAIN (ver. 9). "Have not *I* commanded thee?" Duties towards the Captain:—

(1) Look up to Him for orders.
(2) Trust His judgment.
(3) Be proud of Him, to serve under such a Captain.
(4) Try to please Him. "That he may please Him who hath chosen him to be a soldier." *The Captain's presence*, "I will be with thee" (ver. 5). *The Captain's help*, "I will not fail thee."

6. THE SOLDIER'S VICTORY (vers. 5, 6). Sure. Entire. "They always win who side with God." Struggle may be long, and prolonged through false steps, but in the end, triumph is sure.

7. THE SOLDIER'S REWARD (ver. 3). "To him that overcometh will I grant to sit with Me on My throne." "I have fought a good fight,—henceforth there is laid up for me a crown."

OCTOBER 14TH.

Crossing the Jordan.—*Josh.* 3. 5–17.

GOLDEN TEXT.—*Isa.* 43. 2.

THE JORDAN, meaning Descender, from the rapidity of its flow. Source, from the Lebanon mountains. Its length, irrespective of windings, 136 miles. Its fall is about thirty feet per mile. The swiftest river in Great Britain is the Dee, in Aberdeenshire, falling sixteen feet in the mile. "Barley harvest," during the beginning of April; river much swollen through the melting of snow on Mount Hermon. River at the place where the Israelites crossed was "about one hundred feet wide, and the margin overflowed about four hundred feet, making about five hundred feet in total width." Its ordinary "depth from five to twelve feet."

"There is only one date in history transcending this in importance—the date when across a vaster Jordan, God came in the person of a little babe. The year of the founding of Rome, the flight of Mohammed, the invasion of the Saxons, the irruption of the Gauls into Italy, the Norman Conquest, the War of Independence, the French Revolution,—what date can compare with this crossing of the Jordan? The beginning of the history of Canaan!"

ILLUSTRATIONS.—When in the fourth century the Goths, numbering nearly 1,000,000 persons of both sexes and of all ages, crossed the Danube, which had been swelled by incessant rains, a large fleet of vessels, of boats, and of canoes, was provided; yet many days and nights they passed and re-passed with indefatigable toil, and, notwithstanding the most strenuous efforts of the officers, many were swept away and drowned.

GOD'S HYDRAULICS ARE NEVER FAULTY.—In the West of England there has been considerable discussion about "dockising" the river Avon—throwing a dam across the mouth, that all the river up to Bristol would be one huge dock. The strength of such a dam, its cost, leakage, and right place, are canvassed by all. Here we have the "dockising" for a day or two of a much larger river, whose very name suggests its swiftness; and the dam that effects this is the ark of God!

Ver. 10. *Canaanites*, lowlanders. *Hittites*, descendants of Heth, settled in time of Abraham round Hebron. *Hivites*, descendants of Canaan (Gen. 10. 17); a commercial people. *Perizzites*, villagers. *Girgashites*, a small tribe near the lake of Gennesareth, the country of Gergessa. *Amorites*, mountaineers. *Jebusites*, a tribe in possession of highlands near Jerusalem (2 Sam. 2. 5). Lesson is about—

THE BEGINNING OF A NEW LIFE: A PICTURE AND A PARABLE.

PICTURE—1. *A great difficulty met with*—a swollen, bridgeless river.
2. *Wise preparations*—no boat-building, but sanctifying; taking the ark.
3. *The decisive step*—in faith. Show what depended on it.
4. *The wonderful pathway.*
5. *The safe landing.*

PARABLE—*First Application.*
We are at the beginning of life.
Difficulties we shall meet with.
How to prepare for them.
How much depends on first steps.
God's providential pathways.

Second Application.
We shall some day come to river of death.
How are we preparing?
No bridge, no escape from dying.
God's promise of companionship.
The landing in heaven.

"When the rush of Jordan's waters, breaking on the shore,
Tells the struggling, fainting pilgrim, toil is nearly o'er;
Jesus, ready to receive him, brothers gone before,
Welcome him with songs of triumph, 'Home for evermore!'"

OCTOBER 21ST.

The Stones of Memorial.—*Josh.* 4. 10–24.

GOLDEN TEXT.—*Josh.* 4. 22.

REFER to our *memorial services*—Lord's Supper, services at Easter, Christmas. *Memorial*, "some to preserve memory." Funeral sermons, gravestones, mourning cards, photographs, public monuments, etc., are memorials. Why were there *twelve* stones? Where were they taken from? Who took them from thence? (Vers. 2, 3.) Where were they placed? ("The name Gilgal, '*rolling*,' was given, we are told, in direct allusion to the rolling away of the last trace of the reproach of their Egyptian slavery."—Josh. 5. 9.) Who placed them? What were they for? Where did Joshua place other twelve stones?

A SERMON IN A STONE.—"A proof of gravitation. Shows the force of cohesion. The beauty of crystalisation. If you could melt it, you would find it was only gases knotted and clinched. Convulsions of nature, and probably the grinding of icebergs determined its shape and position. Its colour speaks of the mysteries of light, the fossils it contains, of life. The crystal beads, too, which it contains, have magnetic properties, point to the mystery of electric and polar currents. The 'sermon' in a common 'stone' is woven of all the sciences."—*Condensed from T. S. King.*

"A foundation of stone-work, or a mound of earth, was probably first laid of considerable height, and then the twelve stones placed on the top; for twelve such stones as a man could carry six miles on his shoulder could scarcely have made any observable pile, but, erected on such a base, would be very conspicuous." Gather class round this ancient monument; illustrate by visitors gathering round the Monument in London, the arch of Titus in Rome, Washington's monument in America. Get scholars to repeat the names of tribes of which these stones are representatives. Of what does the number twelve remind us? *Twelve apostles, twelve manner of fruit on the tree of life, twelve gates of heaven.*

Of what other monuments in Scripture do they remind us? *Jacob's pillar, Lot's wife, Samuel's "Ebenezer."*

A BLACKBOARD, OR PAPER PLAN.

What the twelve stones teach.

T he Lord is a great God.
R ighteous are all His ways.
U nto Him will we ascribe everlasting praise.
T he waters saw Him and fled.
H e caused us to pass through the flood safely.

I n the past we have grieved Him.
N ow will we be obedient.

S uch love demands remembrance.
T hey that trust in Him shall never be confounded.
O ut of all difficulties the Lord delivers.
N ever forget God.
E ternity alone will show forth all His goodness.

SHORT SENTENCES FOR SCHOLARS' STUDY.

Christ was compared to a rejected stone. The lessons which these stones taught were afterwards despised (Matt. 21. 42).

These stones were capable of being polished. *We* may become as polished stones (Ps. 144. 12).

These stones were a monument of mercy; so are we (Rom. 9. 23).

These dumb stones spoke of God. We may be living stones in God's temple (1 Pet. 2. 5).

These stones were set up for the children's sake—given to them; there shall be given to us the white stone with the new name (Rev. 2. 17).

OCTOBER 28TH.

The Fall of Jericho.—*Josh.* 6. 1–16.

GOLDEN TEXT.—*Heb.* 11. 30.

LESSON-LINKS. *Renewal of the covenant. Celebration of Passover. The supply of miraculous food stopped. Joshua's interview with his Leader.*

JERICHO. "*The City of Palms*," so-called from a forest of majestic palms, three miles broad, and eight miles long (Deut. 34. 3). The key of Western Palestine, as standing at the entrance of the two main passes into the central mountains. What curse was laid upon the man who attempted to rebuild the city? (Josh. 6. 26). When was the curse fulfilled? (1 Kings 16. 34). What miracles happened outside its walls in Christ's time? What miracle was wrought near this spot in Elisha's time? (2 Kings 2. 21). It must have been a rich city at the time of the siege; for proof refer to the spoils found by Achan.

A BESIEGED CITY.

VIEWS WITHOUT.

Ordering. Joshua had received his orders from God while apparently reconnoitring (chap. 5. 13). We get guidance as we seek for it. See Gen. 24. 27. Joshua not the chief leader; many disappointments arise because we forget we are only subordinates. He passes the orders on to his men. "Do good and communicate." What we receive from God, pass on, as much as possible, to others. Ever wait on God for "your orders."

Marching.
Were to march round walls once a day for six days. Order of procession: (*a*) First armed men. (*b*) Seven priests blowing large horns. (*c*) The ark borne by priests. (*d*) The rearward of Israel, all in perfect silence. Purpose: to exercise Israel in unconditional faith, to show the Canaanites that victory was from God.

Shouting.
On the seventh day they marched round seven times. This must have taken nearly twelve hours. Mark the number *seven*. At the end of seventh march, a great shout was given. Illustrate by sudden burst of orchestra. The mighty resounding echoes.

Looking.
That was all they had to do just then,—all they could do. What did they see? *Walls flat down.* Some try to think this a natural result from vibration. The rule observed by a marching army is to stop music, break tread, and open column. Neglect of this caused a terrible disaster on a suspension bridge at Angiers; but the solid walls of a city are different to a slender bridge. They fell at God's word. "He spake, and it was done." See golden text.

Entering.
Without one effort on their part, entrance effected. Read 2 Cor. 10. 4. Illustrate by other triumphs of faith; its marvellous power. Our possession, if we choose to exercise it. The capture of city, and destruction of inhabitants a judgment of God.

VIEWS WITHIN.

The City's Sins. Not only had they fallen into total apostasy, but into most degrading forms of idolatry. Their cruelty most atrocious, crimes most defiling. The spread of similar heathenism to Rome, 1,500 years later, bewailed as a calamity, marking the utter decay of the times. Were not savages, having splendid commerce, coins, chariots, probably books. Had received repeated warnings and instruction in Deluge, Gomorrah, Abraham; also in the slow advance of the Israelites.

The City's Strength.
Had a high, strong wall. All Asiatics feel confidence when protected by walls, and despair when having to face them. Gates shut. according to the Chaldee paraphrase, "Jericho was shut up with iron doors, and fortified with brazen bolts, so that none came out either to combat or offer peace." Herein lay the city's strength.

The City's Scorn.
Picture the inhabitants looking over the walls, observing the absence of all weapons—the strange procession—how they would laugh! See Eccles. 7. 6; Prov. 19. 29. The talk of the city—the strange doings outside. No signs of repentance, though God held out the flag of truce till the seventh day.

The City's Surrender.
Not willingly, or of themselves. God, in whose hands are all things, surrendered it to its besiegers. Mark the sudden change from scorn to sorrow, from laughter to lamentation, from derision to despair. With walls flat down—nothing to hide them. Refer to the future state of the wicked, as shown in Rev. 6. 16.

The City's Slain.
All perished, save whom? Why was she spared? The fearful effects of sin. Our hearts are like little cities. He besieges them by His goodness and mercy. Do open to Him; do not let Him have to force an entrance.

C. SKINNER.

NOTES ON THE Y.M.C.A. BIBLE CLASS LESSONS.

OCTOBER 7TH.

The Ascension.—*Eph.* 4. 7–12.

I. CHRIST AS THE CHANNEL OF BLESSING TO US. "Unto every one of us is given grace according to the measure of the gift of Christ" (ver. 7). According to what Christ is, is the measure of our blessedness and blessing. It is interesting to note the word "according" in the Epistle to the Ephesians in this connection.

1. The fulness of blessing in Christ, *according* to His choice of us in Him (1. 4).
2. The adoption of children by Jesus Christ, *according* to His good pleasure (1. 5).
3. The measure of our blessing is *according* to what Christ is (1. 7).
4. The *according* of inheritance (1. 11).
5. The *according* of His will (1. 9).
6. The *according* of His power (1. 15).
7. The *according* of ministry (3. 7).
8. The *according* of His purpose (3. 11).
9. The *according* of indwelling (3. 16).
10. The *according* of all-sufficiency (3, 20).
11. The *according* of union (4. 16).
12. The *according* of supply (4. 7).

All the blessings, gifts, and graces come to us by the purpose of the Father, purchased by the blood of Christ, provided in the person of Christ, and enjoyed by the power of the Holy Spirit.

II. CHRIST AS THE FULFILLER OF SCRIPTURE (4. 8). It is a most instructive and inspiring study to note how accurately and fully Christ fulfilled the Word of God. Verse 8 is Ps. 68. 18, where Christ is seen as the ascended One ; and in Eph. 4. 10 we are told that Christ ascended up that He might fill—or as the margin, *fulfil*—all things.

III. CHRIST AS THE MIGHTY CONQUEROR (ver. 8). "He led a multitude of captives." It is generally said that Christ led Satan and sin captive. Did He? No. He put away sin by the sacrifice of Himself (Heb. 9. 26). He rendered Satan powerless by His death (Heb. 2. 14). Who are the captives that He led? We believe that they are the spirits of the Old Testament saints, who, up to the time of Christ's coming, were in Hades, but He took them with Himself to Paradise ; hence, when believers fall asleep in Jesus now, they go to Paradise (the third heaven, 2 Cor. 12. 2, 4), and not to Hades.

IV. CHRIST AS THE GIVER OF GIFTS (vers. 8, 11, 12). There are five different gifts that Christ has given for the edifying of the body of Christ :—

1. *Apostles.* An apostle is one who is sent by Christ, and who has seen Christ.
2. *Prophets.* A prophet is one who comes from God, who speaks of God and things to come.
3. *Evangelists.* An evangelist is one who goes forth with the glad message of the gospel, as Philip (Acts 8.).
4. *Pastors.* Pastor or shepherd is one who looks after the flock.
5. *Teachers.* Teacher is one who unfolds the truths about Christ.

Apostles and prophets are done away with ; they ceased with the apostles ; but the three last remain. The three last may be illustrated by the three divisions the Levites were divided into ; viz., the Gershonites, the Kohathites, and the Merarites, and to whom were committed the different things of the tabernacle, and which bring before us the work of the evangelist, pastor, and teacher. The Merarites had charge of the foundation and boards of the tabernacle (Num. 3. 36), which illustrates the work of the evangelist, who goes forth preaching Christ as the only Foundation. The Gershonites had charge of the coverings, etc. (Num. 3. 25), which illustrates the work of the pastor, who seeks to strengthen and shepherd the young convert, just as the Levite covered over what the other had put on the foundation. The Kohathites had charge of the ark and of the vessels (Num. 3. 31), which illustrates the work of the teacher. The teacher seeks to unfold the person and work of Christ ; and, as we know, the ark and the vessels are all typical of Him.

F. E. MARSH.

OCTOBER 14TH.

Drunkenness.—*Prov.* 23. 29–35.

SIX questions and one answer. Regard the six questions as six branches, and the answer as the *root* from which they spring.

Drunkenness is not the *only* cause of these evils, but drunkenness *will cause* all these evils.

Drunkenness is perhaps the most common and fruitful cause.

"*Woe, sorrow*"—all sorts, personal, domestic, business, social ; poverty, disgrace, sickness, remorse,—all these and many more.

"*Contentions.*" Drink makes a man quarrelsome, excites passions, leads to violence and murder. "Babblings." What a silly fool a man makes of himself. He talks like an imbecile.

"*Wounds*"—in body and in soul.

"*Redness of eyes.*" Wine inflames the blood—tells tales of the winebibber.

"Wine ever pays for its lodging."

"*They that tarry long,*" etc. Those who never tarry *at all* will never tarry long. If you tarry at all, you will probably tarry long. Do not court temptation.

"*Mixed wine.*" After awhile the diseased appetite seeks more pungent potions to stimulate it. Beware of the deadly craving.

"*Look not thou,*" etc. Eve *looked* first, then took. Beware of the *look* which leads to *longing*. There is a bewitchment in the appearance, in the bright, warm colour. It seems to promise pleasure, glow of feeling, exhilaration. "It moveth itself aright," or "goeth down smoothly," agreeably, causing a temporary and pleasurable excitement.

"*At the last,*" etc. If men would only look ahead and consider consequences, how differently they would act. Note the contrast between the pleasure and the pain :—

"Fly the pleasure that *bites* to-morrow."
"Honey is sweet, but the bee *stings*."

The same is true of *all* sin, not this sin only.

Vers. 33–35. Describe the mental aberration resulting from intoxication. The animal passions are excited, the judgment perverted, prudence is gone, the man rushes blindly into danger ; he is insensible to reproof and warning ; driven on by the force of appetite, a helpless slave, he only wakes from his sensual stupor to plunge headlong again into the same vices.

The condition here described is well illustrated by the case of the demoniac whom no chains or fetters could bind.

Consider the duty of Christians in view of the widespread evil. See Rom. 14. 21.

JAMES L. STANLEY.

OCTOBER 21ST.

The Power of Prayer.—*Luke* 18. 1–9.

THE one thought running through this parable is prayer. We see this from the first verse. We cannot do better than give fifty answers to prayer as illustrating its power as found in the Word of God.

THE POWER OF PRAYER, OR WHAT GOD HAS DONE FOR THOSE WHO HAVE CALLED UPON HIM.

1. God spared Ishmael in answer to Abraham's prayer (Gen. 17. 18, 20).
2. Prayer stayed the hand of God in judgment upon the cities of the plain for a time (Gen. 18.).
3. It brought Eliezer to Rebekah (Gen. 24. 12).
4. It brought special blessing to Abram (Gen. 17.).
5. It gave power to Jacob (Gen. 28.).
6. Brought Israel out of Egypt (Exod. 3. and 6.).
7. Stayed the plagues over Egypt (Exod. 8. and 9.).
8. Delivered Israel at the Red Sea (Exod. 14.).
9. It gave Israel manna for their need (Exod. 16.).
10. It gave Israel water out of the rock (Exod. 17.).
11. It gave Israel the victory over Amalek (Exod. 17.).
12. Gave Moses a glimpse of God's glory (Exod. 33.).
13. Gave Israel a remedy when bitten by fiery serpents (Num. 21.).
14. Found out Achan to be a traitor (Josh. 6.).
15. Stayed the sun and moon in their course (Josh. 6.).
16. Strengthened Gideon to cut down the groves of Baal and overcome the Midianites (Jud. 10.).
17. Renewed Samson's strength (Jud. 16.).
18. Samuel given in answer to prayer (1 Sam. 1. 27).
19. Solomon got his wisdom by prayer (1 Kings 3. 10).
20. It restored Jeroboam's withered hand (1 Kings 13.).
21. Restored life to the widow's son (1 Kings 16.).
22. Shut the heavens for three years and a half (1 Kings 18. ; Jas. 5. 17).
23. Brought fire from heaven (1 Kings 18. 36–38).
24. Opened the heavens (1 Kings 18. ; Jas. 5. 18).
25. Restored life to the Shunammite's son (2 Kings 4.).
26. Opened the young man's eyes (2 Kings 6. 17).
27. Delivered Jehoahaz from the king of Syria (2 Kings 13. 4).
28. Gave Hezekiah the victory over Sennacherib (2 Kings 19.).
29. Gave Hezekiah fifteen years to his life (Isa. 38. 5).
30. Made David victorious over Goliath (1 Sam. 17. 45).
31. Caused the shadow on the sun dial to go back ten degrees (Isa. 35. 8).
32. Caused Jabez to be prosperous (2 Chron. 4. 10.).
33. Gave Asa the victory over the Ethiopians (2 Chron. 14. 11).
34. Gave Jehoshaphat the victory over Ammon (2 Chron. 20. 6).
35. Brought Manasseh out of prison (2 Chron. 33. 13).
36. Enabled Nehemiah to complete his work (Neh.).
37. Brought Daniel out of the lions' den (Dan. 6.).
38. Jonah out of the fish's belly (Jonah 2. 10).
39. Cleansing to the leper (Matt. 8. 2).
40. Light to Bartimæus (Mark 10. 47).
41. Liberty to the Syrophenician woman's daughter (Matt. 15. 22).
42. Life to Jairus' daughter (Mark 5. 23).
43. Comfort to the sisters at Bethany (John 11. 21).
44. Joy to the troubled heart of the father with his demon-possessed son (Luke 9. 38).
45. It brought rest to the weary Christ (Matt. 14. 23).
46. Instruction to the perplexed disciples (Matt. 13. 10).
47. Salvation to the penitent thief (Luke 23. 42).
48. Peter out of prison (Acts 12. 11).
49. Paul and Silas out of bondage (Acts 16. 26).
50. The Holy Spirit from heaven and courage to the disciples (Acts 4. 31).

From this we see the power of prayer, but if we would have the prayer of power and answered prayer, then we must observe the following conditions :—

1. Praying in the name of Jesus (John 14. 13).
2. Not anything on our heart to condemn us (1 John 3. 19–22).
3. In faith (Heb. 11. 6).
4. In the power of the Holy Spirit (Rom. 8. 26).
5. Abiding in Christ (John 15. 7).
6. According to His word (1 John 5. 7).
7. For God's glory (James 4. 3).
8. Perseverance (Luke 18. 1–9).

P ray in the name of Jesus.
R emember His work.
A bide in Him.
Y ield all to Him.
E xpect from Him.
R ejoice in Him.

F. E. MARSH.

OCTOBER 28TH.

The Woman of Samaria.—*John* 4. 1–26.

"HE *must needs go.*" Dwell on these words. Deity under necessity! The necessity of love. See Luke 24. 46.

"*Jesus being wearied.*" His true humanity. Subject to all the sinless infirmities of our race. Note His poverty too.

"*There cometh a woman,*" etc. Wonderful meeting. In what unexpected ways Christ meets men and women.

We may look for such meetings and intercourse in the line of our common duties. It is not at set times and in appointed places that Christ only or always meets with us.

See what a great event hung here on what men call chance.

Little did this woman know what she would find when she set out that day.

"*Give Me to drink.*" The Creator stoops to ask a gift of His creature. Unexpected and blessed opportunity for service to Christ. Yet it was not recognised, at any rate at first.

It is commonly supposed that the woman declined to give Christ the water ; but is it so ? Where is the proof? The question of surprise is quite consistent with the granting of the request.

We cannot serve Christ thus *personally* now, but we may serve Him in His members. Christ was in disguise then ; He often is now. Seek perception to discern Him.

Don't let religious controversies hinder you from useful service. Don't be always stopping to ask, "How is it?" and be contending about Jews *versus* Samaritans.

"*If thou knewest.*" How true of men now! What a significant "*if.*" *She* would have been the applicant, had she known. So Christ endeavours to awaken her desire.

"*He would have given.*" Gracious assurance! "Ask, and ye shall receive." Blessed contrast. The Jews had no dealings with Samaritans ; but Christ has dealings with poor sinners.

"*Living water,*" "never thirst," "everlasting life." The gift of salvation satisfies the deepest cravings of the spirit. The soul is never left again to the void of hopeless craving. Contrast Jer. 2. 13.

"*In him a well of water,*" etc. Contrast this with a life of worldliness, in which the poor soul is always looking about for some new pleasure. The true Christian carries his religion and his happiness with him.

"*Springing up into everlasting life.*" Earthly pleasures lose their power to please, and ultimately fade away. The joys of God's people increase as their capacity grows, and ultimately culminate in the eternal bliss of heaven.

Ver. 17. Note the abrupt turn in the conversation. Evidently done to arouse the woman's conscience. How skilfully and effectually Christ can touch the springs of life.

The woman afterwards said, "A Man that told me all things that ever I did." A few touches were enough to open all the cells of memory. Such disclosures are humiliating, but they are necessary, and may be well endured when atonement is at hand. What must it be to have the memory awakened hereafter? "*Son, remember.*"

See how full was the revelation Christ made to this poor woman.

Christ took all this pains over *one* soul. "There is joy in heaven over *one* sinner that repenteth." In heaven they do not wait for the publication of the religious Papers, or the reports of large numerical results.

JAMES L. STANLEY

Have you a Reading Case?

READING CASES.—We have had some very handsome Reading Cases made for our Readers. They are specially designed, in heavy cloth and gold, for Library or Drawing-room Table. Through any Bookseller, or will be forwarded by Parcel Post for 9 Stamps.—S. W. Partridge & Co., 9, Paternoster Row, London, E.C.

9d.

"I said, 'Collar a hatchet, and try it on.' Tom said, 'I shall go to join the dead. Shove her hard a-starboard again as I go, and try to keep the fires up.' Then he sprang up with the carpenter's best axe, and he struck like ten men, although the water was enough to sweep him clear."—*See page 822.*

"A.1."

MAD JOHN BURLEIGH.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow," "Our Navvies," etc., etc.

CHAPTER XXIII.

"THE MAN IS A FANATIC."

THAT night, both the Vicar and his servant slept in their own rooms at the Vicarage, and neither awoke until a late hour next morning.

Days, which seemed interminable to her, elapsed before Lady Susan received an answer to her letter; and then, having read the precious lines, she almost wished that she had not received them. The reality was worse than suspense. The directions, written outside the letter, to fumigate before she read it, had alarmed her; and now, to know that John Burleigh was surrounded by this danger, which she might not share, was terrible.

If they were openly engaged, as they might have been, but for her over caution, nothing, she told herself, should keep her from his side, her relatives would plead in vain; but now theirs was the first claim. Her duty was to them, not to John Burleigh. More than that, because of the unacknowledged relationship in which they stood to each other, for her own sake, and not for the sake of others only, she dared not dream of going even to the Chase. She fancied that she saw the look of surprise in his eyes, as they rested on her, and she blushed in the dark to think of it. She dared not go, or say she wished to go. She might not even hint at her misery; and talk openly and carelessly of the calamity which had fallen upon them both, she could not.

Some days later, Hardman heard, from a mutual acquaintance, that typhus fever had broken out near Houghrigg, and his agent informed the earl that all due precautions were being taken to check the spread of

"'That's very fine, Hardman; but, excuse me saying so, it's very young of you.'"

the pest. She was obliged to listen, and to appear not to heed.

"I hope Burleigh will not be so Quixotic as to go near these poor people," remarked Lord Azerley.

"Most likely he will; he'll never think of himself, if he can do them any good."

"That's very fine, Hardman; but, excuse me saying so, it's very young of you. Infection is carried in clothes, and in all kinds of mysterious ways; and if Burleigh visits these people, he ought to consider himself in quarantine, as far as every one else is concerned. I shall write and ask Stubbs."

Then the conversation drifted off to the cholera in India; and Colonel Maitland became so interesting in his experiences, that every one forgot about the fever at Houghrigg, save one poor silent girl, who lay awake at night, and started at every sound by day; who saw the post-bag opened, with a deadly sickness at her heart, succeeded by an hidden despair when there appeared no letter for herself. She wrote passionately, entreating to hear every day; and then tore up the letter, ashamed of adding to troubles, which she guessed were already a heavy burden. Finally she sent an answer, which was so much less than she felt, that it was almost cool in its caution. There was no answer for several days; then a telegram arrived: "Safer not to write. Pray for Chatteris."

And with this she must needs be content, for after that day there followed a long blank. The visitors came and went. Every day there was some pleasant excursion, or some amusement, and Inverben had never been more gay. One inmate remained, and was now almost one of the family. Hardman could not feel himself *de trop;* for, whenever he proposed to leave them, the idea was quietly ignored by his hostess, and he therefore stayed on as a matter of course. Sometimes he told himself that he would break these silken threads which bound him, and go; but he only said this when a hopeless mood was on him. Then he thought that he had made no progress in Lady Susan's regard, and that the most wise and manly thing was to retire definitely from the field.

But still he never went. His naturally buoyant disposition constantly encouraged him to take the most cheerful view of affairs. The two had many interests in common, which were shared by no one else at Inverben, and each day found them enjoying happy strolls together, and eagerly discussing subjects which seemed uninteresting to others, so that their conversation assumed the character of *tête-a-tête.* Hardman was more sincerely in love than ever; all that he needed he found in Lady Susan. So days, and even weeks, passed, and there was no change in the position of affairs. Sometimes Lady Susan mentioned John Burleigh, and Hardman was always glad to talk of his friend, when his name was brought forward; but from mere inadvertence, he never spoke of him first; and the poor girl, who for hours had been listening through all other subjects for a word of him of whom she incessantly thought, would, in desperation, refer to him herself. It was the one drop of water that she, who was dying with thirst, occasionally permitted herself; while Hardman went on in his kind, genial way, and never guessed the truth.

* * * *

"To-night will decide it, so far as Bradley is concerned," said the doctor. "He will either sink rapidly, or fall into a gentle sleep, from which, after some hours, he will awake sensible and convalescent. He will be very weak; but if no after complication arises, he will mend quickly. He is a strong man, with no nerves to speak of."

"He looks a pitiable object now!" remarked the Vicar.

The man of whom they were speaking was moaning, and gasping between each breath, rolling his head from side to side, and picking nervously at the bed-clothes. His lips were black, his face discoloured and sunken.

"Yes, it all depends, as I say, upon to-night. I suppose Nurse remains with him?"

"Yes, I am with Chatteris."

"You do too much of the night work, Mr. Burleigh."

"It cannot be otherwise. He is, poor fellow, too violent now to be left with Rebecca. In fact, I have kept her here as much as possible. She is a great help, but I almost regret that she has come. If anything happens to the child, I think that, like Jacob of old, it will bring her father's grey hairs with sorrow to the grave."

"Ah, she is a nice girl. I suppose he is fond of her?"

"No day passes in which he does not remember her. Nearly all the good things that we possess come from him."

"May I ask what he is?"

"The under-manager of a mill."

"And he is a friend of yours?"

"Yes."

"*Indeed!* ah, just so! Well, I will come again about midnight. Good-bye for the present."

"That parson has something about him which attracts one," said the doctor to himself, as he left the cottage. "He puts a fellow upon his honour somehow, to show his best side, and do his best. A mill overlooker, and a navvy! *One*, giving his daughter to die for him, and *the other* himself, or I am very much mistaken; and yet, surely this devotion, after all, is not to *him.* No, it's as I said, he supplies a motive, and one wants to do it credit. That must be it."

There was no sound in the cottage at midnight, save the breathing of the sleeping boys. Nurse stood at the head of the stairs, and bent forward with her finger on her lips. John Burleigh and the doctor stood below, and looked up at her.

Presently a low whisper, "He sleeps," fell on their ears. The two men left the house, and stood together in the yard. It had been raining heavily, and the moon was obscured by scudding clouds.

"Thank God! I had hardly dared to hope so much," said the Vicar. "I have had from the first a kind of presentiment that Bradley would die, and I have been continually thinking what could be done for the children. Now, I hope all will go well."

The doctor looked at him curiously, but said nothing.

"What is your opinion of Chatteris?" he continued.

"Oh, he is a very strong fellow," returned the doctor. "He has the fever badly, but I have never feared for the result in his case. He is a well-fed man, and has had neither the anxiety nor the meagre rations which I fear have been Bradley's portion. Yet, in his delirium, he constantly refers to some young woman whom he seems to have lost."

"Yes—he is lonely." The Vicar spoke reluctantly, and then brightened as he added—"After all, Bradley was best off. He had a noble wife."

"You have a strange way, Mr. Burleigh, of regarding people. Now, I should never have called that noisy, determined woman *noble*—brave, perhaps, but certainly nothing more."

"Ah, well, perhaps the manner *did* hide the nobility, but there it certainly was," replied the Vicar.

"You seem to find estimable qualities in every one!"

"I don't find them; they are there."

"I cannot say that I see them."

"Look! you do not see any reflection in that pool at your feet, but wait until that cloud passes. Now see! How it quivers, and flashes silver! A second moon is there!"

"Well, what has that to do with our discussion? I am not a fanciful man, you know, and do not understand parables."

"No parable, but a fact. It only needed a little patient observation."

"Still, what has this to do with—say Mrs. Bradley?"

The Vicar paused. Was he praying? His head was bent.

"Christ came a Light into the world. He took upon Himself our nature, and ever since our nature has been another thing. He brought into this earth of ours an inextinguishable light. Consciously, or unconsciously, His reflection is given back, for all light is His. He is the true Light. Happiest those who consciously reflect Him. I ask you—*How is it with you?*"

The doctor found himself alone. He gazed first at the pool at his feet, then at the moon walking in brightness overhead.

"How is it with me? Ah! that was a deadly parting shot! True enough, I have closed my eyes to the light outside, and tried to extinguish that within, so far as the soul goes. And yet, does not a man want more than scientific light? Is religion, after all, a delusion, when it makes a man lead such a life as this parson does? I've long ceased to believe in Christianity. Christians, as they call themselves, have taught me how to do that. And yet one cannot get over facts, and Mr. Burleigh is a stubborn fact. He's got *Angina pectoris*, or I'm sadly deceived, and he is just laying down his life for these brick-makers and that delver. Certainly the man is a fanatic! Ah! but then what constitutes a fanatic? What is the motive-power which makes fanatics? When a genuine one turns up, what a disturbance he makes! And why? They always impress people, even others who do not believe as they do. And why? Come, I'll go home!"

As the doctor passed the office, he looked in at the uncurtained window. He saw the Vicar sitting sideways to his patient, and holding a book which he was reading in such a way that it shaded the light from the bed. His own countenance was illuminated. It was pale, suffering, almost haggard, but full of peace. Bob Chatteris was watching him, and there was an expression in his glance which the doctor could not understand. It haunted him as he rode thoughtfully home.

CHAPTER XXIV.

IN WHICH BOB CHATTERIS IS SATISFIED.

THE boys were out in the pale autumn sunshine in the front garden, and Bradley was eating with a renewed appetite all the good things that Rebecca brought him.

Martha had become quite friendly with the girl; she was so humble and so cheerful, so useful and quick, and, in this house of sorrow, Martha's own heart had softened so much, that she could not but take her into it. They were much together now, for Nurse had turned over the three patients in the cottage to their care, and spent all her waking hours in the office, and each alternate night, the Vicar taking the other.

"How is he to-day, Nurse?" Martha asked, one afternoon, as the tall, handsome woman came in to tea.

Nurse glanced cautiously round.

"Where is the girl?"

"Out in the garden with the boys; she has taken them some beef-tea."

"Then I'll tell you. That man will never be better in this world; he's poisoned through and through, and I very much doubt if the Vicar isn't too, though it's not taking him the same way."

"Hold your tongue!" cried Martha, passionately. "Never let me hear the like again. I *won't hear it.* Out you go if you say another word."

"It is nonsense talking so. I've not been a nurse for fifteen years to be spoken to in that way. I see Mr. Burleigh is going, and——" but to her astonishment, Martha burst into tears.

Nurse was silenced. She had always regarded Martha as a hard woman, and here was she weeping as though her heart were breaking.

"I did not know that you felt the thought of a death so, or I'm sure I'd never have said a word."

"*A death!*" repeated Martha scornfully, "no indeed! I don't care, let 'em all die, and I'd die too; and yet what odds would it make in t' world? Who'd be t' worse for it? Do you think all these Bradleys and yon Chatteris put together are worth t' master's little finger? If *he* takes t' fever, I'd like to poison t' lot."

"You need not be frightened; he is not going to take it, so far as I can see."

"Then what did you mean just now?"

"Oh, well! He is weak and done up, and I notice that he eats next to nothing, and I guess that he does not sleep much, even on his off night."

"Is that all? Well, I'll feed him up, never you fear, if we only once can get out of this hole, and home again."

"What is going on at that shed, where the children live? I saw two or three men come yesterday, and Mr. Burleigh was speaking to them over the gate, and to-day they have been at work there."

"Master's having a piece more done off, and he's sent for two more bedsteads and bedding, I know; he told me, as soon as the fear of infection was gone, we must burn the clothes and beds here, and send Bradley and the boys in new things there."

"I'm sure I shall be glad when Bradley's bed is burned; it smells of fever."

The Vicar came out of the office, and walked with the doctor to the gate, where his horse was fastened. He came into the cottage with his face illuminated, and his eyes shining with happiness.

"I have good news for you," he said; "the doctor tells me that he has little doubt now that Chatteris will pull through. Yesterday his pulse was 140, to-day it has fallen to 115."

"Ah! you see that you were wrong, Nurse," said Martha, triumphantly.

"Well, I only hope that it will keep up. Anyhow, it will give Mr. Burleigh a good night. He's having a talk with that little girl as usual, before going to the Vicarage."

The sun was shining, and the scarlet leaves of the Venetian creeper were peeping in at his bedroom window, when John Burleigh awoke the next morning. The bells were ringing for service, and Martha was moving softly about downstairs. He awoke with a sense of unutterable peace, and with the words in his mind, "Bless the Lord, O my soul. He satisfieth thee with good things."

"Yes, Bob will recover! Thank God!"

And the lifted anxiety made John Burleigh realise the weight that the burden had been. He loved the man; a tender sympathy bound the two together. In his intervals of consciousness, Chatteris had revealed the depths of a faithful heart, the nobility of a chivalrous nature, and the strength of a thoughtful faith, to a nature very much akin to his own. Since he had given himself to Christ, the man's spiritual life had grown with astonishing rapidity. His soul was like the patch of earth at St. Albans. A heavy stone which had lain there since the time of the Romans, was one day removed; the genial rain fell, the sun shone on the hardened earth, and up sprang strange bright flowers, whose seeds, hundreds of years ago, had been brought to our cold island from sunny Italy—brought and planted here to make a Roman home under British skies. And so it was with Bob Chatteris. The weight of a load of revenge, and of cruel anger, had been lifted, nay, rolled away for ever. The sunshine of the love, the redeeming, renovating love of Christ, had warmed his nature to its very core. The dew of human sympathy had fallen upon him, and all the noble qualities which had been hidden for years, came to light, and throve in the warmth. He hungered for more of this blessed enjoyment. In his conscious moments his eye turned to the Testament.

"Read to me, for choice, the 14th, 15th, or 16th of St. John," he would whisper; "it seems as if He were close by, and saying every word. It's grand! it's like running water! I've been parched for a sight of years, seems as if I could never have enough," he would murmur, as his friend paused now and again, lest he should tire him.

John Burleigh thought of all this, and much more; and his heart went out in a breath of praise, as he thanked God that this friend was to be spared to him. He watched the people going to church, where for the past three Sundays another clergyman had ministered, and then walked happily back to the brickfields, followed by Martha, with a basket on her arm. The doctor arrived at the gate just at the moment that he did, and John Burleigh stretched out his hand in genial greeting.

"I trust that you will find Chatteris much improved?"

"He is sinking."

"What? You said yesterday that he would pull through!"

"Yes, the fever is gone, or nearly so, but he is dying. Like others of these working men, he has been proud of his strength; he has lifted weights that were too heavy for him, and now, weakened to extreme feebleness by this fever, the mischief tells. Internal hæmorrhage has supervened. He will not live many hours."

The doctor had purposely looked away, across the brickfield, to the wooded, undulating distance, as he spoke. The far-off striking of the church clock fell upon his ears, then a strange, gasping sound close at hand. The Vicar was leaning forward, bowed over the low garden wall, with his hands pressed to his chest.

"Ah!" said the doctor, pouring out some brandy. "There, the spasm is passing; drink this."

"I am better now," said the Vicar, after a few minutes; "I can breathe."

"Do you feel an aching, or a tingling, down your arms and legs?"

"Yes, but I frequently have that."

"You must go home, and lie down at once."

"No, doctor, you are very kind; that is my direction;" and John Burleigh pointed to where Chatteris lay.

"You must take care of yourself."

"God will do *that.* My business is to care for the work He has given me to do."

"Then take this with you. Move as little as possible; and, one thing I *forbid*—any bodily exertion, or the lifting of weights. You must promise to attend to this caution, or I will not leave here at all, which would be very inconvenient for the rest of my patients."

"All right," said the Vicar, taking the fiask, "I will obey. Good-bye."

Chatteris held out both his feeble hands.

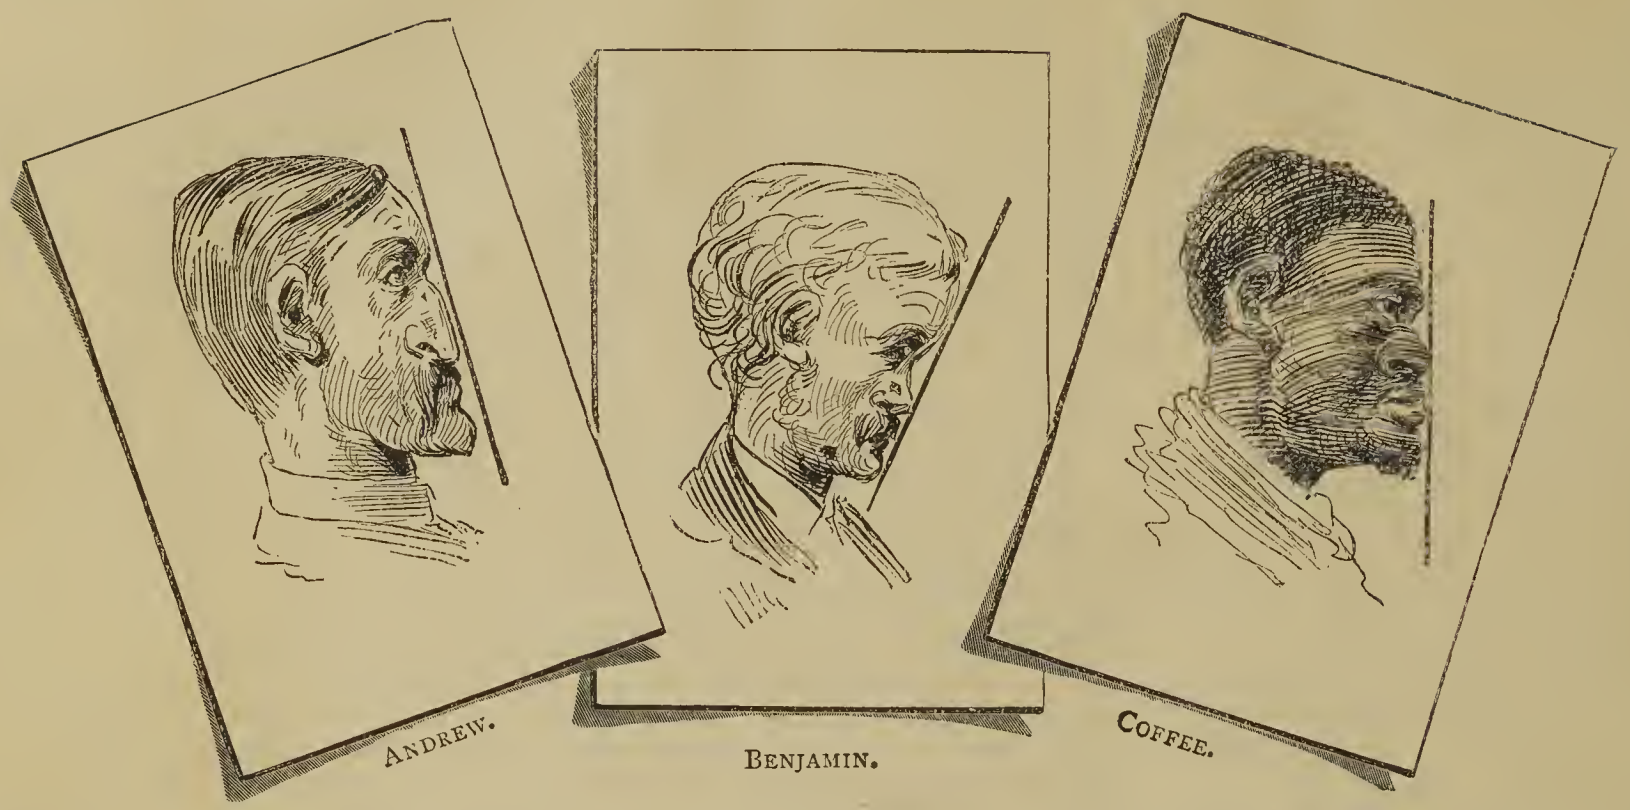
"It's coming, sir," he said; "don't be sorry," as he saw the tears spring to his friend's eyes, and slowly drop upon their clasped hands. "*I'm* not sorry! I've got you here, and it's hard to part, but there's Christ there and Mary. You'll be there, too, some day, and then I shall have got all. I don't think I'll go far from t' gate till you come. Sit down where I can see you, sir. I feel a sinking like, but no pain, and I want to see your face to t' end."

So they sat, and then, now and again, John Burleigh prayed a little prayer, or spoke a Bible word, and the sun passed its meridian, and slanted across the foot of the bed; and Bob Chatteris' face did not grow dim, but was illuminated with an inner light. Now and again he took a spoonful of beef-tea, or swallowed a grape. The nurse came in sometimes, gave a glance, and left the two together.

"It's coming now, sir; everything is dark. I can't see you no longer."

John Burleigh took the toil-hardened hands in a closer grasp.

"'When thou passest through the waters, I will be with thee.' The Lord has said it."



"All right, sir; He's with me." Then, "It's so cold."

Then a long pause, a sudden opening of the eyes, a flash of brightness. "Mary! *and*——," but the last word died away. A gasp, and the delver's head dropped upon John Burleigh's shoulder, and the Vicar's tears fell upon a dead face. But up beyond the evening sky, there was joy in heaven. The ransomed of the Lord had come home, and sorrow and sighing were at an end.

(*Continued—page* 785).

HEADS, HANDS, AND FEET.

By Edward Butler.

Andrew. Benjamin. Coffee.

WHAT an unsearchable mystery each one of us carries, poised on the cervical vertebræ! We see the gates of entrance to the castle of the soul—Eye-gate and Ear-gate—and we detect the private ways of the sensory nerves. We recognise the bewildering velocity with which the vibrations of the ethereal medium are delivered in at the eye, and the dash of the air-waves of sound into the caves of the ear. We trace these multifarious messages to the audience-hall in the brain; and then darkness and silence fall upon us. Microscope and chemical analysis carry us no farther. When, where, and how the mysterious inhabitant converts vibrations of air, and ether, and nervous fluid, into consciousness, none can tell, and none can comprehend.

Many years ago, the world of sight-seers was greatly exercised by the automaton chess-player. Doors were opened in the figure, into which you might peer and convince yourself no living thing was within; but when they were closed, the uncanny little image played chess against all comers with almost unvarying success. And the fact was that a clever little lad did lie there concealed, withdrawing his limbs into some adjoining compartment as each door opened, and returning them as it closed. So is the soul in man's brain. It cannot be hunted down, or cast out, or fixed in its precise chamber, but that is its house. We see, too, that the house and its tenant are so interlocked, that though it is quite inconceivable that the house *is* the tenant,—our common sense revolting against such an hypothesis,—yet it is clear the tenant is largely dependent on his lodging for his powers, and his growth, and his quality.

And so we come to conjecturing of the tenant by the outside of the house (for as long as he is within, we cannot roam through its chambers). I remember, when phrenology came into vogue, that men thought that the new science of bumps on the skull was going to teach marvellous secrets. Thenceforth, a man's character, and the possibilities of his career, were simply facts sealed by fate, and to be ascertained by the expert in bumps. Destiny was god of this life, and the phrenologist was his prophet. After a time it was discovered that, though some useful truths had been dug up, they were plentifully mixed with the earth of

Dick.

Ethelred.

error; the little busts of destiny began to slacken in their sale, and nervous youths, meditating a career, ceased to finger their skulls with trepidation.

I remember well the Bone House under Ripon Cathedral. It was a little dungeon stacked on every side with human skulls to a considerable thickness. There was one skull which the custodian of those days used to show with glee, because the bumps outside were not correlated in any way with the interior surface, and he used to chuckle over the dismay of his phrenological visitors. That gruesome collection has long since been reverently distributed, and phrenology has sunk to its proper place.

Now we have got "evolution" to the front. The same old course is being run. A valuable truth not wholly disclosed, its boundaries not completely ascertained, its qualifying truths not yet fully appreciated,—is forced into anti-Christian warfare by the press-gangs of sciolists and smatterers, and the mighty tribe of the lop-sided and the one-eyed. Have patience! After the usual ebullition, and swelling, and puffing of a new truth, it will settle down modestly into its proper place.

To return to our heads. There is enough truth in the correspondence between the outside of a man's cranium and the inside, to make the shape of the skull a matter of interest; and the correspondence has, at all events, furnished us with a useful list of adjectives descriptive of intellectual character. It enables us to classify a man as square-headed, long-headed, thick-headed, hard-headed; and our conjectures of the state of the interior adorn our vocabulary with fat-headed, muddle-headed, pudding-headed, feather-headed. Probably my readers can extend the list. Now it is a comfort to reflect that we are not responsible for the shape

"Have the hands and feet as significant a character as the head and face? Hardly, and yet a review of the set we here exhibit makes one ponder."

of our heads. With regard to the inside, we may also claim "limited liability." Brain power seems dependent on the complexity of the convolutions of the surface of the brain; and as we had nothing to do with folding our own brains, we are not responsible for any original slovenliness in that behalf. Let us be gentle in dealing with one another's short-comings. Many of them may be due to inheritance, and after our head and its contents have been allotted to us, adverse circumstances may play such tricks with us as are symbolically illustrated by our woodcuts.

Let the lines in those cuts stand for the man's environment, his circumstances, the uncompromising facts that meet him, and with which he has to effect the best arrangements that he can, like a debtor with his creditors.

Note the perpendicular line and face of—let us call him—Andrew. Life seems to present itself to him as a brick wall. He contemplates it with dejection. The nose, so eloquent of research, of inquiry, of "push," has closed itself before the brick wall. But let Andrew's nose recover itself, and become an aggressive nose! The wall may turn out to be a very "practicable" wall.

Next to Andrew comes Benjamin, whose front wall of environment tilts itself so as to make room for his brains, but not enough for his jaw. Resolution, firmness, rising to the glorious incapacity of knowing when one is beaten,—lives in the jaw. It is impossible to contemplate Benjamin's flight without recalling sad stories of overpressure, brain fag, and premature decay. The faulty system of payments by results at present in vogue with great educational departments in the State—a system which makes children's brains a marketable commodity, and the raw material of grants—will, if not vigilantly watched, produce many a portrait like Benjamin's. Benjamin must cultivate strength of will and toughness of resolution; he must take lessons of a bull-dog, bring out his chin and jaw, and rest his hydrocephalous brain.

Next to him stands Coffee, cousin of the gorilla and chimpanzee. It is painfully obvious that he is short of his full tale of convolutions of the brain. But Coffee and his kindred are on the up-grade,—thanks to the Bible Society and Missionary Societies. The bar of his adverse circumstances, tilted up against his intellect, shall gradually, as time goes on, be forced towards the perpendicular. And whatever the shape of the head, there is room for God to dwell in it, and therein to fashion for Himself the lineaments of the glorious immortal spirit.

Number four—Dick, we will call him—is born into an acute angle. His restless, prying, inquisitive nose has had full play from its birth. He has always been "wanting to know, you know." His nursery in earliest infancy soon resounded with "Why?" and "How?" and "What?" He was preordained to be the head of an "Intelligence Department," who would complain of his "poking his nose into things." How could he help it? Such a nose goes before its owner to open up his way in life. It is a never-worn-out "thin end of the wedge."

Compare Dick's congenital advantages of pre-arranged acuteness with the adverse environments of his neighbour Ethelred. His circumstances butt at him like a ram or a he-goat. His nose, which should be aggressive as a boring machine, retreats in dismay.

What shall be done by those of us whose heads are not all that could be wished in outward appearance? To the winds with all dejection! It is the inside, not the outside, that is of real importance. But how if the outside be any index to the inside, and our index point to inferiority? Well, we must remember that a brain that is inferior from one point of view may be superior from another. It is a grievous fault in education to try to force all minds into one mould, and lay out all lives on similar lines. The right thing for a youth to say to himself (and father and schoolmaster should approve the saying) is, "Here I am, with an equipment of some sort, a purpose, a career in life, an ideal; it is my business to find out what I am good for, what is hidden in me; to bring it forth, to set it upon a pedestal, and polish it."

In defiance of Darwin's principle, I steadfastly believe in teleology, in the intention of one beneficent Creator, working to a foreseen end, manifested in the equipments of my four-footed, many-footed, winged, and otherwise distinguished fellow-inhabitants of this planet. And, in the same lines of thought, I hold that every Christian man has a name, a number, a place in the books of the heavenly Father; a work that he especially can do, and have joy and success in doing; a "way" for him to "take," which the Lord knoweth," and which shall end in no *cul de sac*, but bring him out into a large place, into an arena of work for the Lord, and for the men and women on whose behalf He died.

Have the hands and feet as significant a character as the head and face? Hardly. And yet a review of the set we here exhibit leaves one pondering wish—a better understanding upon the skill of a Cuirer or an Owen, who, out of the bones of a foot, could reconstruct the monster of a preadamite age, and rig him out with his complete outfit of organs, skin, and all the rest of his original "stock in trade, plant, and machinery."

Charles Lamb, in one of his delightful letters (quite as appetizing reading as his Essays), says to Bernard Barton, "I am shocked sometimes at the shape of my own fingers; not for their resemblance to the ape tribe (which is something), but for the exquisite adaptation of them to the purpose of picking, fingering, etc. No one that is so framed, I maintain it, but should tremble."

Does not that large hand, laid flat and firm on as much as it can cover, proclaim the love of appropriation and a joy in the legal phrase, "To have and to hold"? Whatever the crest belonging to its coat of arms, the motto surely is, I GRAB ALL. And next it is the feminine counterpart, the first two fingers advancing on some secret errand, and the other two watching for the police. The hand with the thumb and two fingers resting, and the little one in the air, is clearly one end of an arguing animal. The corresponding right hand is beyond doubt gracefully waving and demonstrating.

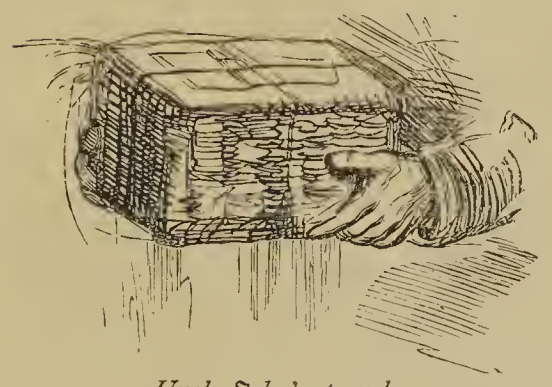
The open palm may be interpreted in

The loafer and idler,—and the possessor of smart and business abilities.

two or three ways, like the trade-mark of a certain great brewer of beer, which may be taken either as a symbol of honesty, or prohibition. It is safest to regard that trade-mark as equivalent to "Don't drink it!"

And then there is the hand of the uncertain one. "Which shall I touch? Which shall I take?" These are days of puzzles and decrees of all kinds. Let each reader, who is also a draughtsman, emulate Cuirer, and supply the rest of the animal to each hand and foot. Let him take the foot of the loafer and idler, the foot of the smart business man, the plantigrade foot of the slow and sure navvy, and all the others, and build the corresponding appropriate superstructure.

For a final thought, at present, in this fertile series of themes, let us bear in mind that it is in the power of us all to invite the operation in our souls of the Great Master Builder of character, the help of Him who will lay in our hearts a new foundation-stone, upon which we may proceed to build, if we will, a glorious edifice of "gold, silver, and precious stones," to be revealed in the glory of the Great Day.



Be our environment, our circumstances, our bodily information, our heredity, what they may, "in Christ" we may become "a new creation." Adverse forces shall then but help us to soar, as the wind the kite. We may—

> —"break our birth's invidious bar,
> And grasp the skirts of happy chance;
> And breast the blows of circumstance,
> And grapple with our evil star,
> And make by force our merit known."

But the strength to struggle, the power to overcome, the faculty whereby "above ourselves we can erect ourselves," is from above. "Born from above," we "receive power from on high," and the completed achievement at the last shall only "make our merit known" in the sense of giving us a crown that we may be able to cast at the feet of Him who hath "made us kings."

THE POST OFFICE: WHAT IT IS, WHAT IT DOES, AND HOW IT DOES IT.

By An Official.

Uncle John's parcel.

Part III.

THE TRANSMISSION OF LETTERS.

THE "circulation" of letters—such is the technical name for the system under which letters find their way from one part of the country to another—is the primary work of the Post Office. It is a system of which little is dreamt, and still less known by the outside public, who for the most part think, no doubt, if they ever think at all, when they find a letter posted over night in some remote village in Cornwall on their breakfast table in the morning, that the work of the Post Office has been confined to putting the letter into a bag at the office where it was posted, and taking it out again to pass it into the hands of the postman. It is, of course, often the case that a letter may be transmitted from postnight destination in what is called a "direct" bag, but more often than not it happens that, as regards the circulation of letters, "the longest road is often the shortest." That is to say, that letters may often get quicker to their destination by a roundabout way, than by waiting for a chance to be despatched by a more direct route. For example, at certain periods, letters from Edinburgh for places in Norfolk and Suffolk go on to London to return to these counties by the mails out of London.

A person not initiated in the ways of the Post Office, might wonder why a letter for Ireland from Edinburgh should, at a certain time of the day, be sent from the latter town to Leeds in Yorkshire. But the fact is that such letters posted late in the day, are sent by the last train to Leeds, whence they go across country early next morning, to a travelling post office on its way from London to Holyhead, and so catch the day mail for Ireland. Instances might be multiplied: but space will not permit of more on this point, beyond the remark that in the travelling post offices, in order to expedite the transmission of letters, they are frequently carried some distance away from their destination, and then sent back in another Post-office carriage proceeding in the reverse direction. And this naturally suggests the question: "What is a Travelling Post Office?" A question, the answer to which may properly claim a few lines to itself.

Most of the readers of—"A.1"—have no doubt noticed in travelling by rail that, attached to certain trains, were carriages bearing the royal crown and initials and other marks, showing that in some way or another they were connected with "Her Majesty's Mails." Through the diminutive windows of these carriages one may see a gleam of bright light shining, and any spectator who peeps in will see frames and pigeon holes full of letters, busy sorters at work, and bags everywhere—on the tables, lying on the floors, or suspended from the walls of the carriage. The carriage is what is called a "Travelling Post Office," or in official parlance, where shortness is necessary, a "T.P.O." The most important of the "Travelling Post Offices," which form the great arteries of Post Office circulation, are the London, North Western and Caledonian, which runs from Euston up to Aberdeen; the Midland, which flies from Newcastle diagonally across England to Bristol; and the London and Holyhead Travelling Post Office, which conveys the mails for Dublin as far as Holyhead.

Other Travelling Post Offices are: St. Pancras and Derby, Birmingham and Stafford, Bristol and Newton Abbott, Bangor and Crewe, Normanton and Stalybridge, London and Exeter, South Western, Bristol and Exeter, South Eastern, York and Newcastle, Great Northern, London and Bristol, London and Crewe, Dublin and Belfast, Midland and Ireland, Belfast and Northern Counties, Great Southern and Eastern, Ulster, Dublin, and Cork.

A glance at "Bradshaw" will explain the route of these T.P.O.s, and what towns get their letters by their means.

These offices do not merely convey bags and bundles of letters from one post town to another, but they sort and re-sort letters during their rapid progress, and actually, as they rush along, both receive bags containing letters which have to undergo this process, and deliver similar bags without perceptibly, if at all, slackening the fierce rush of the mail train.

Among the bags in the carriage, the spectator would no doubt notice great rolls of black or dark brown leather, with huge and very strong straps and buckles. These are called pouches, and are used as a protection to mail bags which have to be delivered from the carriage, or as already said, taken into it by an apparatus. This apparatus consists of two parts. An arm of stout iron is attached to the carriage, in such a way that it can be extended outwards from the side, and a net attached in a similar way to the side of the carriage. At selected points along the side of the railway are precisely similar apparatus, and it is by this means that the T.P.O.s interchange letters with the towns which they "serve;" to use a technical term, which is self-explanatory. The nets and arms are so nicely adjusted, that as the train flies past, the projecting arm is struck in such a manner that the pouch hanging thereto is detached, and drops into the net.

The use of this apparatus demands the greatest care, and the operators in the carriages are guided by certain features of the country they are passing through—a tree, a bit of rising ground, a signal post—and by their estimate of the speed of the train. And it is marvellous how few mishaps take place. But as the blow sustained by the pouch containing the mail bag when the train is running at a high speed, is exceedingly severe, fragile articles do sometimes get damaged in a way which suggests—to use the words of the angry owner of a fractured bracelet—that "amongst the

modern improvements of the Post Office, appears to be the introduction of steam hammers to stamp with."

But to give an idea of the actual process of sortation, we cannot do better than peep into the huge building at St. Martin's-le-Grand about six o'clock in the evening. Casting a glance as we go by at the yawning letter-boxes, down which letters of all shapes and sizes, newspapers, post-cards, and book-packets are pouring by the hundred, and at the counter where a row of persons, three deep, are waiting for their turn to get their letters registered for the outgoing mails, we hurry into what was once the central hall or promenade of St. Martin's-le-Grand, but is now enclosed, and find ourselves at the inside apertures of the letter-boxes. Down come the letters streaming in every shape and colour; tidings of life and death, hope and despair, triumph and defeat; letters from friends, lovers, and lawyers, all jostled and jumbled together. As the large baskets into which they fall get full, away they are carried to tables, where hundreds of men and boys set to work at once, shuffling, stamping, and sorting,—bags and baskets ever and anon disappearing up and down huge lifts, and into different parts of the building.

The first process is to "face" the letters; that is, to turn them into the address and postage stamp upwards; the next is, to impress upon the latter a mark which, while it indicates the place and hour where the letter was posted, defaces the postage stamp, so that it may not be used again. This stamping is done partly by machinery, and partly by hand, and a good stamper will strike about fifty letters a minute. Letters that may be unfastened or torn, are picked out and set apart to be repaired. When the letters have been stamped, they are carried away to be sorted, and are next rapidly divided into what are called "roads."

There the letters for Derby, Nottingham, and Lincoln are placed in one division or road, and those for Bilston, Wednesbury, Walsall, West Bromwich, into another. Further division and subdivision having followed, the letters are tied with string into small packets, and placed in bags labelled with the name of the town, which is their ultimate destination, or sometimes it is a travelling post office, the first stage on the way there.

Registered letters—the peculiarity of which is that they can be traced throughout their transmission, no official being allowed to part with a registered letter at any stage without some kind of a receipt—are made up into separate packets or separate bags, as the case may be, and enclosed with a letter bill or invoice in the bag of ordinary letters.

We must not omit to notice that letters, the addresses of which are imperfect or illegible, are thrown out and taken to what are oddly enough called the "blind" officers to decipher. And it is a marvel what is done in the way of deciphering addresses which no ordinary intelligence could understand, or fathom, and put them in the way of delivery. "Uncle John Hopposite the Church London England." "Keen Victory at Union Castle." "Miss Queen Victory of England," found their way to their destination with comparative ease; but it took some trouble to discover that "E. C—— Seaman H.M.S. Danae Sarlaryton Cape Casle and arels where," was intended to go to Sierra Leone, Cape Coast Castle, or elsewhere; or still more, to translate the following, evidently written by a German:—

"Tis is fur old Mr. Willy wot brinds the Baber in Lang Kaster ware ti gal is. gist rede him assume as it comes to ti Pushtu four."

This, translated into English, is:—

"This is for old Mr. Willy what prints the paper in Lancaster where the jail is. Just read him as soon as it comes to the Post Office."

Letters that cannot de deciphered at all, are sent to the Returned, or as it used to be called, the "Dead" Letter Office.

The clock strikes, and one mail cart or van after the other is laden with bags, and drives off to the great railway termini, where the bags are distributed, some into closed vans to be carried direct to their destination, and some into the travelling post office to undergo another process of sortation.

The foreign mails are now, since the establishment of the Postal Union, to which we will allude more particularly hereafter, simply transferred to the respective foreign authorities at the ports of despatch or arrival, such as Dover, Harwich, Queenborough, etc., like any other mails, with the exception of the mails for India and Australia. These still go in charge of a special officer, under the control of the Postmaster-General, to and from Brindisi.

And now let us glance at the other end, the office of destination or delivery.

Long before the workmen in our large towns are wakened from their hardly earned repose, the Post Office work in the provinces commences as the mail-cart clatters through the silent street to the railway station. The train arrives with the first and principal mail, and a rapid exchange of bags between cart and train takes place. By the time the cart gets back to the Post Office, and deposits its contents at the door, the clerks and postmen are there in readiness, and the bags just arrived, are immediately seized by one of their number, who hurriedly cuts their throats, and then empties the contents upon the huge table in a great heap.

The bundles of letters are quickly taken to the letter-stampers, through whose hands they must first pass. With speed and accuracy which rivals machinery, an agile letter-stamper will soon impress a copy of the dated stamp of the office upon the back of a hundred letters, and this done, they are passed over to the clerks and sorters to arrange them in the different boxes, until the whole are disposed of.

The newspapers and book-packets are taken from the table without being stamped, and sorted by the postmen. As soon as the first or preliminary sorting is over, each sorter will proceed upon distinctive duties; some will prepare the letters for the postmen, by sorting each man's letters together, according to their different number. When this is done, the letters are handed to the postmen, who generally work in a separate room, looking, with its desks, like a small schoolroom, and there arrange them in order to deliver them from house to house. Other officers will prepare the letters for the sub-officers and rural messengers.

When all the letters for a certain village are gathered up, they are counted and tied up in bundles; if any charged letters are sent, the amount is debited against the sub-postmaster of the place on a letter-bill—something like an invoice,—which, as already said, invariably accompanies every Post Office letter-bag despatched from one post-town to another, or from one head-office to a sub-office. If any registered letters are of the number to be sent, the name of each addressee is carefully written on the letter-bill. On certain conditions, persons, both in town and country, can have private or locked bags for the reception of their letters. They are attended to with some care, and are carried to their destination with the other made-up bags. When the mails are ready, they are sent from the Post Office in various ways. Those for one or two country roads are sent to a local railway station, and taken in charge by the railway guard, who drops the bags at the different points on the line according to their addresses; and others are carried by mail-gigs under one or more private contractors, while the rest are taken by country-walking postmen, who make certain journeys during the day, returning in the evening with the letters and bags they have gathered during their travels. Of course the "rural postmen," as they are called, take out loose letters as well; *e.g.*, those for detached dwellings on their line of road.

Such is the last stage in the treatment of a letter posted in London, and addressed,—say to some quiet village at the Land's End, or some other remote region.

"Here and there a glimpse of the river."

ABSCONDED.

£100. REWARD.

A TALE OF TO-DAY.

By WILLIAM HUNT,
Author of "Wanderings in the Western Soudan," etc., etc.

IF Hugh Darrell possessed one gift more than another, it was tact; and a certain faculty of knowing people's wants and wishes before they expressed them. At the time this story opens, Hugh was twenty-five, and it might be said of him that he was on the road to success.

Three years ago his father had purchased for him a junior partnership, in one of the best-known Firms in the Eastern Counties, whose offices were situated in Chelmsford; and the result of this fatherly forethought more than justified expectations.

There were, however, one or two serious flaws in Hugh's character; one was his easy, pleasure-loving nature, which exposed him peculiarly to temptation of more or less grave kind; and another was his extreme ambition for popularity. And being a stranger to the Source whence alone true strength can be obtained, it was not surprising that he should often fall under the seductions of the adversary. Sadder still, he deemed religion a sort of weakness, only to be adopted and believed in by one's sister or mother.

Time passed on. Successes came to him, and from a worldly point of view, if Hugh had been content, all would have been well; but the quiet simplicity of his surroundings grew irksome; a restless longing came over him to improve his already good position, by a removal to a wider sphere, and it was in London that his wishes seemed to centre. Nearly every week Hugh contrived to steal at least a day, and on the shallowest pretext of business betook himself to the metropolis.

There was nothing absolutely wrong in his going to London, only as a straw will tell the direction of the current, so this feverish craving for additional excitement betokened a possible, if not a probable, source of danger. It was about this time that Hugh made the acquaintance of a certain Captain Linton, who can only be described by the familiar phrase, "a man about town." He was not a good companion for a man of Hugh Darrell's ardent and impressionable temperament, and moreover, as the major portion of his income was gathered together in the card-rooms of fashionable Clubs, *il va sans dire*, that many of his associates were not of the most desirable kind. However, to Hugh, Captain Linton was a most agreeable companion. Brought up as he had been, in almost puritanical seclusion, Captain Linton's feverish round of gaieties, and his semi-cynical indifference to everything except the pursuit of pleasure, held Hugh to a certain extent spell-bound.

Captain Linton affected the society of the lesser lights of the theatrical profession. In them he found one touch of nature, which made him feel their kinship; their free and easy manners, and in many cases the elasticity of their moral code, made him pre-eminently at home in their midst.

He deemed it rather a matter of distinction than otherwise to have his name linked with that of an actress who had achieved some specially unholy distinction. It would be idle to deny, as I believe some good people do, the fascination of evil. Evil is repugnant to them, because they have seen the beauty of holiness, but there are periods in a man's life when sin spreads such a specious snare, that the poison seems almost harmless, and unless some higher power intervene, he is sure to fall. It must not be imagined that Hugh was merely a young man of headstrong tendencies, who would be led away by the first breath of temptation. He possessed a remarkably clear judgment, a concentration of purpose, and an amount of energy, which many people might reasonably have envied, but all to no purpose; business-like abilities are poor weapons with which to fight the emissaries of the devil. At the outset of their acquaintance, Captain Linton gauged to a nicety Hugh's capabilities; he knew that the more vulgar aspects of vice would never tempt him, nay, would rather be absolutely repugnant to Hugh's refined methods of thought and feeling.

The reader, perhaps, will naturally ask, Why did Captain Linton take any trouble? and herein lies the reason. Hugh Darrell was good-natured to a fault. If any one in trouble appealed to him, it was sufficient to elicit an amount of practical sympathy which, as a rule, sent them on their way rejoicing.

Financial troubles had been slowly but surely closing round Captain Linton; all his life he had gone on the principle of never paying any debts unless absolutely compelled so to do, and now he was in a fair way of somewhat speedily reaping the result of so misguided a policy. It need scarcely be said that in Hugh's acquaintance he recognised a sign of hope to cheer his financial despondency, and determined to play his cards in such a manner, that Hugh would be in his power.

And so the battle for a human soul commenced.

At their last meeting Hugh had signified his intention of running up to town again in a few days, and in the meantime Captain Linton was forming his plans. A week elapsed without his paying any particular attention, but when the second had nearly run its course without any sign of Hugh, Captain Linton began to wonder what was the matter, and forthwith sent off a letter, reminding Hugh in enthusiastic terms of one or two plans they had arranged when he was last in town. To this there came a reply so enigmatical in its terms, that the Captain could not make it out at all. His disappointment, however, was somewhat appeased by the postscript, wherein it was stated that the writer would be in town in

three or four days. And what as to the object of the Captain's solicitude? At the present moment Hugh is dangerously happy, for in the last few days possibilities have arisen which seem to have completely altered the entire current of his existence.

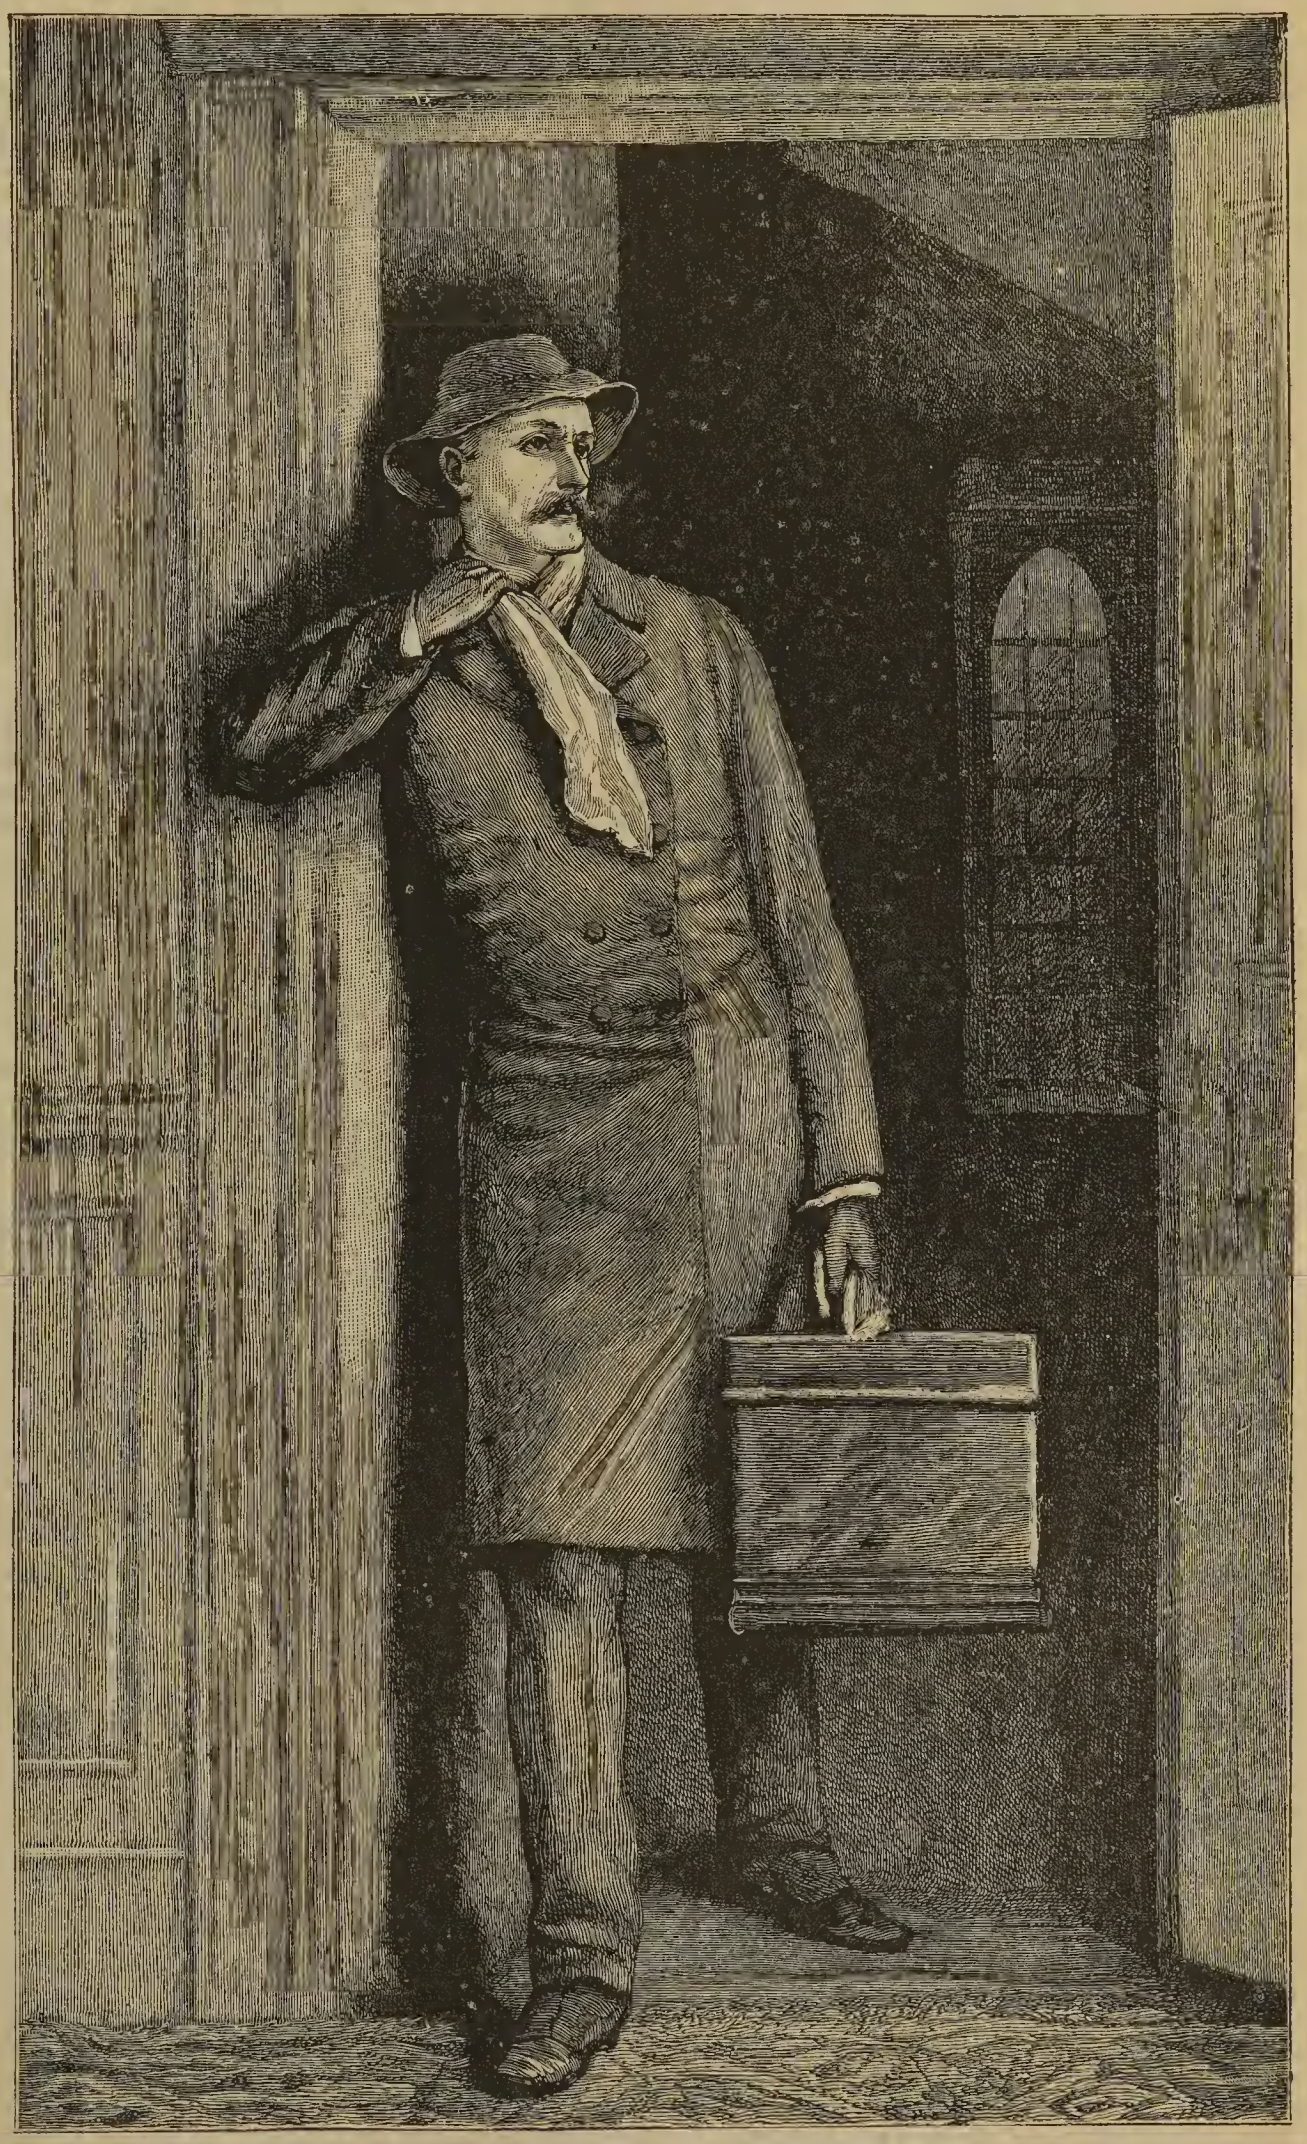
Only seven short days ago he had met Maud Sefton at the house of Mrs. Weston, a mutual friend, and already new thoughts, new desires, and holier aspirations had sprung up within him.

The three days rapidly sped away, and it was with feelings of some expectation that Captain Linton looked forward to the meeting.

After the first few words of greeting were over, he could not help noticing the marked change in Hugh's manner; he was *distrait*, and uninterested in the topics deftly brought to the front. It was an axiom of the Captain's creed that whenever anything went wrong with a man, a woman was closely or remotely connected with it, and in the present case he shrewdly suspected that Hugh had committed, or was about to commit that, to him, crowning act of folly, falling in love.

As they were turning into Captain Linton's club in Piccadilly, he turned suddenly to Hugh and said in his most nonchalant tones,—

"You must have been tremendously busy, old man, not to be able to get away!"



"Oh no, I was not," laconically answered Hugh, thrown off his guard, and turning rather red under his questioner's gaze.

"Having quite a gay time of it, I suppose, on your own account?" airily suggested the Captain, returning to the charge.

"Well, no; that is, not exactly; family matters and all that sort of thing," evasively answered Hugh, *looking*, if not feeling, decidedly ill at ease.

It was quite enough; the Captain had discovered all he wanted, and his knowledge of human nature told him that Hugh would sooner or later, in the fulness of his heart, reveal enough to amply confirm his surmise. And his calculation was correct; it only needed a few skilful questions, and Captain Linton knew almost all there was to be known; how Hugh had met "this impossible she" at lawn tennis, that she lived with her widowed mother, and was, of course, the most glorious creature that had ever clothed herself in the commonplace clay of humanity. It must not be thought that Linton obtained this information as easily as it has been written down; on the contrary, it required the most astute generalship on his part to elicit the meagre details. Hugh was of too sensitive a nature to talk much about the secret joy that seemed to transfigure his whole life; but the Captain was by no means deficient in imagination, and as he sat and watched Hugh, an expression of such fiendish triumph passed over his features, that had the object of his regard noted it, it would have caused him to flee in terror. Affecting, however, not to notice anything abnormal, he gradually, and with easy facility, led the conversation back to the ordinary every-day topics.

As they shook hands that night in parting, at the door of Hugh's hotel, his companion mentioned a dinner which was to take place at Richmond a week hence—a dinner which Hugh himself had been the most eager in planning a month ago.

"*At the door he halted, fancying he heard a sound.*"

"Please don't consider me in the matter at all," Linton said; "because, if you have other engagements, and would rather not come, I daresay I can arrange it somehow."

Hugh was in a dilemma. He could scarcely retreat from his position; as he had ordered the dinner and made the other arrangements himself, it would seem hardly fair to leave Linton in the lurch. And yet how his soul revolted! All that was pure and noble in his nature urged him to avoid this entertainment; he seemed to see clearly the very questionable character of Linton and his associates; he felt that he was doing the pure girl he wished to win, a moral injury. One moment more, and he would have renounced the idea, but in the same instant he caught a glimpse of the half-amused, half-cynical look on Linton's face, the good angel was banished, and far down in hell the devils laughed at another victory achieved.

"That was rather a near shave, though," muttered Linton to himself, as he strolled through the now deserted streets to his chambers. "From what I can see, that young man will need rather closely following just at present."

As to Hugh, in half an hour his conscience was consoled; the specious arguments and theories of his companion were bearing fruit.

* * * *

"*Come home at once, your mother is ill.* —JENNINGS."

Such were the words on the familiar pink slip handed to Maud Sefton, on the day following Hugh's departure for London; and with white, set face, and mechanical composure, the girl was hurriedly preparing to depart.

There was no hysterical display, not even a tear, only a sickly terror seemed to be tightening its grasp around her heart-strings. What if she should be too late? what, indeed? Could anything compensate her if her mother's eyes were closed ere she could hear her last loving message? The train, unconscious of the hopes and the fears it contained, sped on; and in a little less than two hours, Maud arrived at her mother's modest dwelling, situated a mile from Richmond.

That evening, on his return to Chelmsford, Hugh called upon Mrs. Weston to find that Miss Sefton had left some hours before, and that a telegram from her had arrived, saying that her mother was very ill, but conscious.

Scarcely knowing what he said or did, Hugh left abruptly; for, as he received the news, a deadly horror, a sense of some undefined evil in the future came over him. Richmond! Richmond! Maud's mother is dying, and I am going there on Thursday for pleasure! A voice seemed to hiss in his ear.

The first idea that suggested itself to his dazed faculties was to go to the telegraph office, and send a telegram, cancelling his engagement at any cost. Wise indeed would it have been had Hugh Darrell done this; but the ever-ready voice of the tempter whispered, "What a pity to make such an upset about nothing. You intend dropping Linton's acquaintance; why make unpleasantness just at the end? You may be in love with Maud, but her mother is the merest stranger to you;" and once more the tempter conquered.

On Hugh's arrival at home, a letter was awaiting him in Captain Linton's handwriting. Hastily tearing it open, he read as follows:—

"DEAR HUGH,—

"Everything is arranged; the drag is to start from my place at 10.30; we shall get down to lunch at the Star and Garter. As we previously decided, Mdlle. Amari and the Signora will complete the quartette.

"It is too hot even to write.

"Yours,

"PERCY LINTON."

A shudder that was almost disgust passed over Hugh. What were Mdlle. Amari and the Signora to him now? Nothing, except a distasteful dream of highly seasoned stage jokes and stage laughter. "Well, this is my last appearance with any of that crew," he reasoned; and the voice of conscience was again strangled.

Thursday dawned, and Hugh felt in anything but good spirits as he arrived at Linton's chambers, to find the drag waiting, and to receive the effusive handshaking of the trio. However, it was too late now for regrets, and, mounting the drag, they were off. The brilliant sunshine, and the charm of the surrounding scenery, somewhat restored Hugh; but Mdlle. Amari's sallies only received monosyllabic answers, to that young lady's marked disgust.

Arrived at the Star and Garter, they found a luncheon of the most *recherché* and appetising description. Linton never did anything by halves, when Hugh happened to be going to pay for it.

Champagne flowed freely, and in desperation Hugh tried to galvanize himself into a sort of spurious gaiety by its aid, but it was a melancholy gaiety at best.

When they left the Star and Garter, though not positively inebriated, none of the quartette were at all in a fit condition to drive two spirited horses. Hugh essayed this somewhat difficult task. For a time all went well, except that, giddy and stupid as Hugh was, he could not help feeling ashamed of the too boisterous mirth of his companions.

They were racing along now, fields and hedgerows around them, and here and there a glimpse of the river, as it lay silvery and gleaming in the sun. Suddenly, in turning a corner, there was a steep and unexpected descent, and the excited animals dashed down headlong. Some one was crossing the road at the bottom, Hugh could not quite see whether she were man or woman, old or young. The shouts and boisterous laughter caused her to turn her head for an instant. It was Maud Sefton! and thus she and her lover were destined to regreet each other. For a moment she stood as if transfixed, the life-blood leaving her face; a second more, and horses and drag had crushed her to the earth.

They carried her into a quiet cottage by the roadside, her fair face set in the stillness of death, the loose glory of her hair shrining it with its wealth of ruined gold.

* * * *

Night descends, bringing peace to hamlet and home—peace everywhere, except where the defacing elements of a man's sin and passion hold a sleepless vigil.

Hugh Darrell's feelings only One could tell. In the darkness of the night he had fled; and now, like a dishonoured criminal, he crouched in the corner of an ill-lighted compartment in the night express. Ever before his eyes came that hideous vision—the sunlight, the coarse laughter, the sudden silence, and the pale, dead face of his love. Ever and evermore, nearer and nearer, came the shrieking laughter; they were fiends now, these boon companions of his, and in their paint and powder they were casting dice for his soul.

In the dead of the night he arrived; like a hunted animal, he had come to look his last on what was once home. Wearily and despairingly he staggered out of the Stygian darkness of the station. He felt the grasp of a hand on his arm, and turning, stood facing Captain Linton.

"Forgive me," he murmured, "as the unconscious agent of all your sorrow. When you disappeared, I came down here, as I could not rest till I saw you."

"Forgive!" responded Hugh, with a mechanical sound; "there is nothing to forgive; for me there can be neither hope, nor fear, nor sorrow, and I am tired. Goodnight."

Listlessly he then wandered down the now deserted streets, but suddenly turned as if struck with some idea.

"To-morrow I must be away," he gasped. "I must go to the office and get some money.

A few minutes later he entered the gloomy stillness of the building in which the firm of Sprague, Sprague & Darrell had their offices, and cautiously walked up the stairs.

He opened the safe; there were a number of notes, and quite a considerable sum in gold. It was the money belonging to the Firm; but Hugh was blind to everything except the necessity for escaping from his fellow-creatures. He glanced around; there was a square office iron deed box, and opening it, he stuffed the notes and gold into it, and then turned to leave. At the door he halted, fancying he heard a sound; and then stepping forward, was lost in the darkness.

A week later, on every conspicuous hoarding might be seen the words, "Absconded: £100 reward. Whereas Hugh Darrell, etc., etc."

We draw the veil over months and years of concealment and bitter remorse.

He who had been the God of his father had not forgotten the wandering son; and the omnipotent love which faced Gethsemane and Calvary, and is still making glorious conquests, sought and found Hugh Darrell. The prey was taken from the mighty, and the lawful captive was delivered.

Humiliation was followed by deep and sincere repentance, manifested in the confession of his guilt, and in the restoration of all that was due to the Firm. The latter days of his life were spent on the West African Coast, significantly entitled, "The white man's grave." There, while seeking to advance the interests of his employers, he also endeavoured to spread the knowledge of that love, of which he himself was a trophy. To the end, his face wore traces of a sorrow which time could never altogether efface, but, with the consciousness of forgiveness, "at evening time it was light."

"AS SHE CAME RIDING BY;"

OR,

MISS BIRD'S VISIT TO COLORADO SPRINGS.

NEARLY every one in the literary world is familiar with the name of Isabella L. Bird, or Mrs. Bird Bishop, as she is now, the authoress of "Six months in the Sandwich Islands," "A Lady's Ride in the Rocky Mountains," "Unbeaten Tracks in Japan," "The Golden Chersonese," as well as the most distinguished lady traveller we know.

Lady Brassey, Lady Barker, Mrs. Burton, Lady Florence Dixie, Miss Gordon-Cumming, Olive Risley Seward, and Miss Kingsley have all travelled and told their adventures, but it may fairly be doubted if any one of them has faced so many dangers and privations as Miss Bird.

Each of these ladies would, as a rule, have a companion or escort, but Miss Bird's speciality has been travelling alone. She has had neither father, nor husband, nor brother to take care of her, and has had to "rough it" accordingly.

She could catch as well as saddle her horse, for whose shoes she carried a few nails "in her purse." And she could clean and load a revolver. This revolver, however, she dubbed the "plague of her life." Some one had persuaded her to carry it whenever she travelled alone in Colorado, but she found it unnecessary.

This "roughing it" added very greatly to the variety and interest of her letters. Now she describes a marvellous sunset, and then tells the number of "joints" in the rattle of the snake she has just killed; to-day she carefully notes some meteorological phenomenon, or gives an animal or plant its scientific name; and to-night she has a bed of hay or straw on the floor of a rough log cabin, while some wild creature burrows beneath, or the snow comes in through the chinks and covers her; or she relates her ascent of Long's Peak in bits of word-painting so beautiful, that they would be poems if they were only in metre; and presently we read how, in a financial panic, when the Denver banks would not even give her greenbacks for her English sovereigns, she entrusted a hundred dollar bill to her host to get change for her, and he, being "hard up," borrowed it without permission, leaving her so poor that she could not even buy herself shoes, but had to make shift in bitter weather with a pair of slippers and some "arctics."

It was in the course of the "Lady's Ride through the Rocky Mountains," and at its most southern point, that Miss Bird visited me at my home in Colorado Springs. The western half of the State of Colorado consists chiefly of mountains, the eastern half of plains; and it is just where mountain and plain meet at the foot of Pike's Peak, that the town of Colorado Springs is built.

There are twenty-two peaks of the "Rockies" in Colorado, which are more than 14,000 feet in height, and of these Pike's Peak is one of the principal summits, and forms a landmark for the southern part of the State. About six miles to the west of the town is the entrance to the Ute Pass, the great natural highway into that part of the mountain region. Miss Bird was coming down from Denver to us, and then going up by way of the Pass to a "park" or "high-lying valley" in the mountains, which she had been specially recommended to visit. We knew nothing more of her than that she was an English lady, a friend of Miss Kingsley's, and was travelling through Colorado alone.

We had been expecting Miss Bird every day for nearly a week, when our exquisite autumn weather was displaced by a "cold snap" and fallow of snow. The snow was only a few inches deep, but it made travelling bad for the few who ventured out, so we thought that our visitor would wait for a finer day than that bleak Monday.

We knew not her courage and endurance. She had set out on the previous morning, with eight inches of snow on the ground, and broken her own way for two miles. Then a single wagon had passed, "making a legible track for thirty miles; otherwise the snow was pathless." "Everything," to quote her own words, "was buried under a glittering shroud of snow. The babble of the streams was bound by fetters of ice. No branches creaked in the still air. No birds sang. No one passed or met me. There were no cabins near or far. The only sound was the crunch of the snow under Birdie's feet. At last I reached a log-cabin, where I got a feed for us both, and further directions. The rest of the day's ride was awful enough. The snow was thirteen inches deep, and grew deeper as I ascended in silence and loneliness; but just as the sun sank behind a snowy peak, I reached the top of the Divide, 7,975 feet above the sea-level. There, in unspeakable solitude, lay a frozen lake. Owls hooted amongst the pines; the trail was obscure; the country was not settled; the mercury was 90 below zero; my feet had lost all sensation, and one of them was frozen to the wooden stirrup. I found that, owing to the depth of the snow, I had only ridden fifteen miles in eight and a half hours, and must look out for a place to sleep in."

Poor Miss Bird! She was nearly paralysed with the cold before she reached a cabin, but as seventeen snow-bound men were lying on the floor, she had to ride another half-mile to a house where she could stay. And when her frozen feet came to themselves, it was, she said, "with an amount of pain that almost deserved the name of torture."

Miss Bird had no idea that this was the Sabbath day, for, Christian woman as she was, she made a point of resting on that day, even when far from a place of worship; for churches were few and far between in Colorado then. But just now she had lost her reckoning,—a lapse of memory by no means difficult in that country at that time.

The next morning was "grey and sour," but the cold moderated as the day went on, and Miss Bird ought to have reached Colorado Springs early in the afternoon, but unfortunately she turned aside to see the fantastic rocks of Monument Park, and lost her way. Monument Park was a stretch of undulating country, about twelve miles long, much more of a wilderness than a park.

Of all "uncanny" places to be lost in, that, to my mind, would have been one of the worst, for it seemed completely given over to loneliness and terror. The silence was so intense that it made one's ears throb, while the solitude was appalling. A chipmunk or a lizard, a rattlesnake, or even a wolf, would have enlivened the scene; but one might ride for miles and see nothing of the kind. Some of the rocks were worn into a grotesque resemblance of the human form, which was almost startling, while behind and above all towered the "everlasting hills" in their stern magnificence. Many people talk of "worshipping God in nature," but there was nothing in that part of the earth to tell of our loving heavenly Father and Saviour; all was cold, rugged, and forbidding. After retracing her steps for six miles, and then riding forward for eight, "without seeing a creature," Miss Bird came to a long valley "overhung by ghastly rocks," forded the Fountain Creek, and got within sight of our town.

Late that afternoon, as I sat cosily by the fire, absorbed in my work, I was startled by the announcement, "Here's Miss Bird;" and going quickly to the door, I found her outside, sitting on her pony, and framed, as it were, by the wintry landscape. Miss Bird did not alight and allow Mr. L—— to take charge of her horse, but took Birdie to the livery stable herself. For at the end of a day's ride she always saw to her pony's comfort first thing, and dainty attentions she paid to her,—sponging Birdie's nostrils, bathing her back, and looking in while she was fed. No wonder that this wild creature would lick her mistress's face, eat from her hand, and follow her like a dog.

In the meantime I "commenced," as we say "out West," to get the tea. Now boiling the kettle, that simple operation, was one of the curiosities of Colorado life, for as Colorado Springs is 5,943 feet above sea-level, the diminished pressure of the atmosphere allowed water to boil at a lower temperature than 212°, so that we could never make thoroughly strong hot tea.

When Miss Bird came in and sat down with us at table, we took a good look at her, and saw at once that this lady had nothing either wild or showy about her. Her voice and manner were gentle and refined; her dress was heroically plain; and she was so short and slight, that a man who had seen her one day hard at work for a tired friend, said: "Be you the new hired girl? Bless me, you're awful small!" Her face owed little to soft lines or delicate tints, but it expressed truth, purity, and strength; and when she talked on favourite subjects, it lighted up and became radiant. I think it was this evening that our conversation turned on the Indians,—for In-

dians were as much a part of the population of the territory as the sheepmen or the cowboys, the miners or the "heathen Chinese," and we had only just recovered from the excitement of a genuine Indian scare.

About a week or two before this, news had been brought to the town that a party of "hostiles" had left their reservation, and were out on the "war-path" to the east of us. Now the Indians are by no means contemptible enemies. They carry first-rate firearms; they are dead shots; and when out on a raid of this kind, are mounted on their fleetest horses. They will fall suddenly upon the doomed place; burn, rob, and murder with desperate cruelty, and presently be gone as swiftly as they came. The men of the town met, and held an excited meeting to talk over plans of defence; the women prayed, at least I know one who did, and providentially the Indians never came. Perhaps they thought a town of two thousand inhabitants a little too much for them.

Only a month or two before, Bishop Randall, who had three territories—Wyoming, Colorado, and New Mexico—to his diocese, had narrowly escaped capture by hostile Indians, who were raiding in Wyoming during one of his pastoral visits there. So that the Indian element in the West called for watchfulness, if it did not cause actual uneasiness. We might try to treat the Utes in a Christian manner, but they regarded us entirely from a savage standpoint, and we knew that unless restrained by fear or self-interest, they would deal with us accordingly. One of the familiar figures of the place was a man who had been scalped by Indians, and left for dead. I had seen for myself, and not many yards from my home, a Ute brave wearing a necklace of human thumbs! And a lawyer whom I knew very well by sight had had the appalling experience of being taken captive, bound to the stake, and of suffering all the preliminary agonies of death by fire before he was rescued.

During tea Mr. L—— inquired of Miss Bird if she had fallen in with any Indians on the way. For even "friendly" Indians were very insolent to women. I was at the post-office one afternoon, in the earlier days of the town, when a lady who was with me,—a little woman like Miss Bird,—happened to be standing just in the way of a Ute, who was going out. The haughty savage never attempted to pass her, but taking Mrs. C—— by the shoulder, turned her aside as stolidly as though he were only swinging back a gate. Miss Bird, in reply to my husband, proceeded to tell us a recent adventure of her own.

She was riding along rather late one day, when her pony saw or smelt an Indian camp at some distance, and, true to her Indian instincts, set off at once at the very top of her speed, disregarding all attempts to check her, and bolted right into the heart of the encampment, only pulling up when she reached the fire, around which the braves were sitting. I remember how intently I listened, and even now I can recall the anxious thrill with which I said, "What *did* you do?" "One of the braves," Miss Bird continued, "rose from his place without speaking a word, took Birdie by the bridle, led her to the outside of the encampment, started her, and returned." It was all over in a few moments, but it was one of those straits whose peril we gauge by the swiftness of our rescue. The divinity that doth hedge about every thoroughly good woman, delivered her, but I wonder that she could ever trust Birdie again.

We did not talk late that evening, for Miss Bird had been riding ten hours a day for a week in our rarified, exhilarating air, and was very sleepy.

The next day, Tuesday, was fraught with pleasure for me. My guest was rested and ready to talk, and I was ready to listen. I can see her now, sitting in my little rocking-chair by the stove, with a small writing-case on her lap, and putting a few words down now and again for her sister in far-away Edinburgh. She took out of this case one or two of her sketches of Estes Park, the clearest, sharpest sketches I have ever seen. I remember trying very hard once to stop talking to her, in order that she might go on with her letter, and I believe that I was quiet for nearly five minutes, after which we began again, and, as she said herself, we talked "most of that day." To me it was an intellectual revel. Here was a companion, with a mind like a treasure-house, an extraordinary power of observation, and the gift of accurate and picturesque speech; so I questioned and listened with keen interest.

She told me of Edinburgh, and of the curiously-involved courts or closes which she had explored, and the poor suffering people she had found in them. She told me of her home on the outskirts of the city, of the pleasant five o'clock teas which she and her sister gave, and of the literary people who gathered at them. We talked of the two Scotch monthlies, *Good Words* and the *Sunday Magazine*, and of some of their contributors. "Edward Garret" was not an old man, as I learnt with surprise, but merely an assumed name. Sarah Tytler was a most estimable, hard-working woman, keeping school by day, and working at her stories in the evening. What a fascinating transition from school routine to "Citoyeane Jacqueline," or the "Huguenot Family in the English Village." We talked of Canon Kingsley, and his brother, Mr. Henry Kingsley, and of their respective writings. Then Miss Bird mentioned a visit which she had paid to Miss Warner, the authoress of the "Wide, Wide World," at her home in New York State, and how it was the law of the house for the visitors to go down into the kitchen at tea-time, and fry their own cakes! For this was not Miss Bird's first visit to the United States. She had visited the Eastern States, and written the "Englishwoman in America" before the Rocky Mountain region was accessible to ladies, and when the site of Colorado Springs was the Debateable Land of the Indians of the mountain and the plain.

Besides this, she had been to Australia and New Zealand, and taken a six months' voyage with her maid in a steamer partly belonging to an old friend, and not carrying other passengers.

At tea Miss Bird told us of her recent ascent of Long's Peak, the "American Matterhorn," 14,700 feet high, an exploit which was "truly terrible," but which amply repaid her. "For," to use her own words, "it was something to stand upon the storm-rent crown of this lonely sentinel of the Rocky Range, on one of the mightiest vertebræ of the backbone of the North American Continent, and to see the waters start for both oceans." A lady, who two or three years ago unfortunately tried to imitate this feat, lost her life in the attempt.

Miss Bird paid Mr. L—— the compliment of sending him her marvellously written account of this ascent for publication in a magazine which he was editing. It was not published in England until some years later, so that the "Out West" printing-office first gave it to the world.

For six months before coming to Colorado, Miss Bird had been living in the Sandwich Islands, a life of which she spoke rapturously, and with reason, as it had restored her to health and active life. And then she told me, but it came out quite accidentally, that her mother, now dead, had suffered during her last illness from such excessive irritability of the nervous system, that at times only one thing soothed her, and that one thing was being carried to and fro like a child. And this Miss Bird did. Her mother was, I think, taller than herself, but she used sometimes to carry her up and down the room until, thus soothed, she could rest and be calm. Some time after her mother's death Miss Bird's health and strength failed utterly, and Sir James Simpson told her, with merciless candour, that she would be helpless and bedridden for the remainder of her life. And so she might have been, no doubt, if she had accepted this verdict, as so many would have done; but she did not accept it, nor did the Almighty confirm it. Dr. Moir, her medical adviser for many years, seeing her resolution, permitted her to move after a time, and Miss Bird, instead of being shut up in a sick room, has been almost round the world since then.

By the time I had heard this story I loved Miss Bird heartily; she was no longer a stranger, but a friend whom I was prepared to champion whenever necessary, for "we needs must love the highest when we see it." This affliction must have given her the deep sympathy with all sufferers which she manifested. She was the helper of the sick, the overworked, the down-hearted, wherever she went. "I have made the acquaintance," she wrote to her sister, "of all the careworn, struggling settlers within a walk." She helped to save the life of one poor woman who was seized with cholera, and offered a dollar to a lazy darkey if he would only fetch medicine for her patient. She would help with the dishes, or sweep the room, scour the tins, or make the bread. She was helping a child one day to crack a nut, and broke out a good useful tooth; but she did not grumble about it, or indeed about anything done for others. All that day, instead of choosing her own topics, and doing all the talking, her object was solely to give us pleasure, and she was a courteous listener.

In striking contrast to the majority of English travellers in America, she gave herself no airs, although belonging to a very old family, and being very highly connected. Indeed, she never boasted of anything. The only approach to vain-glory which she made was when she told me how young-looking and pretty her sister was, adding, with fond pride, "I like her to look young." Dear Miss Bird! "gentleness, goodness, and faith" enfolded her like an atmosphere. The next morning was our last together; we had a little more chat, but the shadow of parting was upon

us. She told me in what small compass she could pack her belongings ; her black silk dress, which she had worn the day before, was rolled up, and fastened behind her saddle ; other clothing was in a bag hanging at the bow, while her pockets were cleverly packed with smaller articles. She was very much interested in my dress, which was completely English, and said that I was "a credit to my country!" We each of us had a silver watch, and she told me that an American woman on the cars had asked her the time, and on seeing her watch had said : "I should think you'd be ashamed to take out a silver watch," to whom Miss Bird made reply, that her watch was a very good one, kept excellent time, and she was not at all ashamed of it. But in a country where some of the babies begin to wear jewellery and talk plainly at about the same age, silver watches are chiefly left to Englishwomen.

Miss Bird was not a merry woman. I cannot remember hearing her laugh, and she seldom smiled. However, this morning she treated me to a bit of capital mimicry ; still, it seemed to me more the outcome of close observation than of a particularly strong sense of humour. Some of her descriptive remarks were very racy, as when she said of a dissatisfied English family that their life was a "continual shriek," and of a Scotchwoman, that "all her waking hours were spent in a large sun-bonnet."

After lunch we all set off on the way to Maniton, which stands near the entrance to the Ute Pass, and consisted in those days of a few hotels and houses built near the celebrated Mineral Springs. Miss Bird rode her pet pony ; we were in a buggy. Now I had seen so many Indian ponies, with their rough coats, and long manes and tails, that I did not admire this one very much, but Miss Bird, after riding her for six hundred miles, pronounced her "perfection," and the "queen of ponies." Birdie, however, had the vices as well as the good qualities of a wild horse. She would hold her breath while being saddled, and would resent any annoyance by rearing and kicking, by shying, or, still worse, by "bucking," —a mode of dislodging a rider which is, let us hope, unknown to English horses. One of the noteworthy sights in New York is the observant way in which the car horses look about them, and Miss Bird said that her horse looked intelligently at everything. Birdie was also sure-footed, rarely stumbling ; she would gallop up hill and down without a touch from the whip ; and to crown all, was always cheerful, and always hungry, two characteristics not usually found together. She knew a dangerous bridge when she came to one, and refused to cross it, but her sagacity failed her signally one evening, when she took her rider on a frozen lake, and the ice giving way, they both went through into the water, and had a "hard fight to get back again to land." This pony's chief accomplishment was hunting cattle, to which she had been trained. She could double like a hare, and if a cow rushed at her, she would rear and spin round on her hind legs as though on a pivot. It was said that she could thus turn on the small space of a cabbage leaf, and no ground was "too steep or rough for her."

I believe that Miss Bird loved that wilful creature dearly, and only once began to be vexed with her. That once was about a week after Miss Bird left us, during which every mile had taken her further and higher into the mountains. She had alighted to let down a bar, as she had done many a time before, but on looking round, the pony was gone. Birdie had taken an "ugly fit," and would not allow her mistress to go near her. At last, after the loss of an hour, two trappers came by and caught her. Miss Bird's solitary journeys on her wild horse always remind me of Una wandering about with her lion, only the lion never served Una such a shabby trick as this.

To-day, happily, Birdie was on her best behaviour, and cantered gaily. The snow was gone from the plains ; the sunshine was bright, and the air warm. As we drove over the Mesa, or table-land, we had a magnificent view of our mountains, Pike's Peak towering over all like a throned king surrounded by his court, and all, king and courtiers, robed in snowy raiment against a background of brilliant blue sky. We descended soon into Glen Eyrie, when we called upon a lady whose brother and nephew had been treacherously killed by Indians.

After driving through the "Garden of the gods," that our guest might see its famous red gateway, we came to the point where our paths separated, and took opposite directions. What havoc these partings make with friendships ! Miss Bird rode close to the buggy that we might clasp hands for the last time, and Mr. L—— checked his horse that I might watch my friend as long as she was in sight. How slight and girlish the figure of that indomitable woman looked as she rode away ! I did not envy her, full though her life was of variety and adventure. I would not have exchanged my happy home life for all her mountain views, but I "hated" to see her go. And as I think of her and that pleasant visit, I am reminded of St. Paul's exquisite incentive to hospitality, "Be not forgetful to entertain strangers, for thereby some have entertained angels unawares."

PRIZE PUZZLE COMPETITION.

WE would remind our readers that the Prize Puzzle Competition announced on page 702—£2 12s. 6d. in Prizes—will be open until November 3. This Competition will afford pleasant occupation for the shortening evenings of Autumn.

RECIPES.

Sovereign Pudding.

BEAT a quarter of a pound of butter to a cream, add and beat with it four eggs, flavour with a little essence of vanilla or lemon ; stir in by degrees a quarter of a pound of flour and a quarter of a pound of sugar ; mix all thoroughly together, pour into a buttered basin, and bake for twenty minutes. Turn out carefully, and serve with wine sauce.

Lemon Sauce.

Boil a lemon and an orange in a quarter of a pint of water for ten minutes, strain, and if the water has boiled away, make up the quantity. Thicken with a dessert-spoonful of cornflour, mixed in a tablespoonful and a half of cold water ; add an ounce of butter, one tablespoonful of loaf-sugar crushed ; boil, and pour over the pudding.

THE STORY OF JONAH.

By Rev. F. B. Meyer, B.A., Author of "Christian Living," etc., etc.

Part IV.

Prayer from a Strange Oratory.

PRONOUNCING sentence upon himself, Jonah bade the Tyrian sailors cast him into the deep. Having no alternative, they at length proceeded to the performance of his terrible mission ; but before doing so, they prayed very earnestly and submissively that they might not perish for his sake, and that his blood might not be demanded at their hands. "Then they took up Jonah," and, as if they were executing a judicial sentence, they cast him forth into the sea ; and the sea immediately stayed from her raging ; the storm died away, the sun shone out, and those men feared the Lord, and offered a sacrifice, and made vows. "Now the Lord had prepared a great fish to swallow up Jonah. And Jonah was in the belly of the fish three days and three nights."

I am quite aware of all the banter which sceptics have heaped upon this subject, and I am not very anxious to defend the Almighty against these attacks. He has seen fit to allow this story to lie upon the page of Scripture for these many centuries, and in the person of His Son, who spoke as man never spake, He drew the attention of the world to this strange incident, saying, "As Jonah was three days and three nights in the belly of the sea monster [*R.V. marg.*], so shall the Son of Man be three days and three nights in the heart of the earth." In these words the incarceration of Jonah within the fish is used as an express symbol of Christ's imprisonment in the grave of Joseph. To my mind a reference so explicit silences all further debate, and when we once accept the presence of the supernatural and the miraculous in the word of God, it is not difficult to account for any of the manifestations of Divine power amongst men. He who believes in the resurrection of Christ has accepted an incident so stupendous, so Divine, as to carry with it all other of the miracles recorded on the page of Scripture, which dim their rays in its presence as stars in sunlight. If the Son of God could lie without corrupting in the grave, Jonah could lie without dying in the fish ; and the same power that raised the one could raise the other. Dare you affirm that Divine power could bring the shoals of fish into Peter's net, and make one fish yield the silver shekel of tribute, and yet that it could not employ one great fish to fulfil its purposes ?

It has been a common belief from the earliest times that Jonah was swallowed by *a whale*, but there is nothing in the Hebrew to necessitate that idea. It simply says "a great fish," and the word used by our Lord is equally vague. He uses a generic term, which includes the whale, but which may equally be applied to the dolphin, the seal, and the shark. It seems, indeed, highly probable that the white shark is the creature intended. Many specimens of this sea-monster are still found in the Mediterranean, and are greatly dreaded by sailors. Some are found thirty feet long, and quite able to swallow men whole. Captain Basil Hall reports catching one in

which, besides other things, he found the whole skin of a buffalo which a short time before had been cast over his ship's side. There is another authenticated instance, in which a man clad in complete armour was found in a shark. It is then perfectly conceivable that the prophet should have been swallowed by a fish, which, by God's special interposition, had been prepared, and in which his life was miraculously preserved.

Stay for a moment to admire the care of Divine Providence. Many a one has experienced its counterpart. We have been cast forth by men. Our dearest have turned against us. Those who have received our money have flung us overboard. There has been a moment of intense anguish, and then we have suddenly found ourselves landed on something which had evidently been prepared for us by God's wise love. Cast out but found. Cast off but taken up. Cast away but gathered to the bosom of God. He had been watching every step in our headstrong career. He had foreseen what was coming, and though He might fairly have left us to reap the result of our own folly, yet He had prepared a means of salvation. I like the word "prepared"; it looks as if God had been anticipating this sad calamity, and had been making provision against it.

His sorrow led him to prayer. "Then Jonah prayed unto the Lord his God." There were many ways by which God could have rescued Jonah, but He adopted one which shut him away to quiet thought, and it was out of this strange oratory that he offered that pathetic prayer of the second chapter of this Book. "By reason of mine affliction I cried unto the Lord."

Mark the method of Jonah's prayer. He quoted the Psalms at least seven times. If you cannot use your own words, use another's, and above all, use those of the Psalms. If you cannot speak, then look (verse 4). If you dare not look, then bury your face between your hands, and cry, and remember that your cry will go up unto God, even unto His holy temple. Prayer had often ascended to God from city and field, from valley and hill, from desert, cave, and prison, but never before from so strange a closet. But like the flash of thought it cleaved for itself a way out of the "belly of the grave" to the throne room of the skies. There is no place, however peculiar, where we cannot pray; and there is no depth of degradation or sorrow, however low, from which prayer may not climb, as by Jacob's ladder, into the presence of God.

The chief cause of Jonah's sorrow, as expressed in this litany of supplication, is very remarkable. "Then I said, I am cast out of Thy sight." You will remember how eager Jonah had been to flee from the presence of the Lord; but now that he might have supposed that his end was gained, it was the chief source of his misery. So is it with all wrong-doing. In the distance it seems most desirable, but when it is gained, it is the cause of unutterable anguish. The apple is as the apple of Sodom. The egg is full of rottenness. The veiled bride turns out to be Leah. The far country is less desirable than a seat in the kitchen of the father's house. The syren voices sing to you of the smiling island, their white arms and dulcet notes entice you from the wandering life and weary oar; but when you land, you will find the fair form end in the scaly monster, intent on your blood. There is no true joy outside the golden rim of obedience, nor would any light compensate us when the presence of God is withdrawn.

Throughout this prayer, the most casual observer must detect the pulse of Jonah's *sublime faith.* He had gone down to the bottoms of the mountains. The earth with her bars was around him for ever. He knew that he was suffering the results of disobedience. He was in the extreme of helplessness, but, in spite of all, he dared to say, "Yet I will look again toward Thy holy temple." He had often trodden those temple courts; like Daniel, he had often looked toward them when he prayed, and now, in his trouble, he looked again towards them. If some prodigal should read these words, let him imitate Jonah in his prayer. Everything has gone against you; you are cornered in a position from which you cannot extricate yourself. You have but one resource. *Look again.*

When a man gets into this posture of penitence and faith, he is near deliverance. The herald beams of the morning have commenced to steal up in the eastern sky. The imprisonment of the exile on the desolate island has almost come to its close, and the passing ship, attracted by his beacon of distress, is already veering down for his deliverance; and so it came about that when Jonah was able to ascribe Salvation to the Lord, then the Lord spoke to the fish. Its mission was fulfilled, and His servant stood again upon the shores of his native country; sadder and wiser. It is a marvellous story; but when the secrets of all hearts shall be revealed, and all the mysteries of God's ways with men unravelled, I am quite prepared to believe that there will be an opening up of dealings between the Almighty and the individual soul, which shall seem as strange and as mysterious as this.

In any case, we can have no sympathy with the distorted mind, which rejects the myriad flowers of spring, and refuses the benefit of their fragrance, because it finds itself in the presence of some natural phenomenon that baffles its science. And similarly we refuse to sympathise with that man who will not regard the noble, healthy, and healthful teachings of God's word because he cannot understand or explain that one episode on which we have dwelt, and the difficulties of which may be fully explained in clearer light than we now have.

(*Continued—page* 794.)

BIBLE JOTTINGS.

Acts 7. 23, 30, 36.
80 years' training for 40 years' service.

The Lord knoweth

The way that I take	Job 23. 10.
Our frame	Ps. 103. 14.
Them that trust in Him . .	Nahum 1. 7.
What ye need	Matt. 6. 32.
His own sheep	John 10. 14.
Them that are His	2 Tim. 2. 19.
How to deliver	2 Pet. 2. 9.

A Contrast.

The Son of Man came to seek	Luke 19. 10.
The Devil...seeking	1 Pet. 5. 8.

"ALMOST, NOT QUITE."

"ARE you ready, Grace?" said her father at the bottom of the stairs, where he had waited for his daughter patiently, some five minutes or more.

"Almost, not quite, father," replied Grace.

"Then I shall go on. There is no time to lose."

So Grace's father walked on to the station, and just as the train was starting, and he was seated in it, she came running up in time to see it steam away without her.

"How provoking!" she said; "and I was so nearly ready."

* * * *

"Have you finished your letter, Grace?" asked her father. "The post is going."

"Almost, not quite," said Grace, scribbling for her life. But the postman would not wait. He drove off with the bag, just as Grace was affixing the stamp.

"How very tiresome!" she said; "and I had almost finished."

That letter was for the Indian mail, and was too late. It so happened that some news it contained would have hastened the return of her brother; as it was, he delayed, and never saw his mother living.

* * * *

How many people have "almost, not quite," given their hearts to God. "Almost, not quite," yielded their wills to Him. "Almost, not quite," learned to love Him. "Almost, not quite," accepted His great salvation.

It is the whole heart God asks us to give Him; the entire yielding of our wills to His. He requires the complete faith of—"Lord, I believe; help Thou mine unbelief," which alone can prevail.

CRISP CORRESPONDENCE.

Lover of "A. 1."—"A Twenty-first Birthday Ode" appeared in our Number for August 4.

An Unworthy Servant of the Lord Jesus.—We fear that there is no way for any one totally without means to enter the Church, unless he has friends to help him. The cost of the training at St. John's, Highbury, London (board and lodging included), is £70. It may be a little less at St. Aidan's, Birkenhead. There are some "Clerical Educational Aid" Societies, accounts of which may be found in the "Church of England Official Year-Book;" but we strongly recommend any applicant for ordination not to be ordained without some special college training, and not to commence a college course unless he has reasonsonable prospect of being free from pecuniary embarrassment during his period of preparation.

Nox.—The Lord has ordained that the Sabbath be observed as a day of rest. We have no hesitation in saying that the course you propose, even if the motive be true, would be a terrible stumbling-block; and this would be contrary to a plain command. Would it not be far more honouring to the Lord to seek from Him strength to overcome the temptation to drowsiness, and to spend the leisure hours of the Lord's Day in prayer and study?

Windsor.—We fear that you ask for counsel on a matter in which each individual must seek personal guidance. If your friend be a true follower of Christ, we do not see what hinders. Will he not soon be able to free himself from present difficulties? Undoubtedly marriage should only be between those who are closely and mutually attached. But we think that you should scarcely have carried the engagement on up to the very week fixed for the wedding, if you were conscious of a lack of true devotion. If men are called upon to respect the susceptible feelings of young women, we also recognise that a young woman should be extremely careful before she lightly disappoints one whose attentions she has accepted, and with whom she has contracted a definite engagement.

M. G.—(See page 654) asks for mnemonic of the Sovereigns of England. We give it below:—

When Will His Stupid Head Remember
Just How Easy Each Endeavour
Remains Having Had Help.
Eclipsing Every Reasoning Harassing Hazy Egotist's Method,
Elaborately Jumbling Clear Concise Junctures,
With a Great Grand Gravity,
Giving Wit Vexation.

THE TRUE HISTORY OF AN UNKNOWN HERO.

By Mrs. Gregg.

"I CANNOT offer you any other terms; with a fee it would be quite another thing;" and the speaker, a stout, prosperous-looking man, turned away with an air that said, "No more about it."

The person he spoke to was a little middle-aged woman, dressed in neat but shabby black clothes, with a worn look that seemed to extend all over her, from the pale, patient countenance, to the darned gloves and well-mended boots.

She had been good-looking once; the features, now so sad-looking, were regular, and she had a bright colour when she came as a bride to the pretty cottage her husband had prepared for her, just outside the village where his business lay. Everything then seemed to promise a prosperous and happy future.

But all was changed when she stood trying to make terms with Mr. Standing, a house painter and glazier, and induce him to take her son Hugh, a lad of fifteen, as an apprentice.

Had Mrs. Granton been a person of more importance, ready to hand over along with her boy the substantial fee that Mr. Standing loved to get with his apprentices, he would certainly have invited her into the parlour, and probably have told his wife to offer her some refreshment; but politeness or hospitality were needless to a person of no consideration, wanting to do business with him on terms that he called unprofitable. Not, however, that he meant them to be so if he concluded the bargain; for there was plenty of work to do about his place, that he could turn over to a poor lad taken on what he called "reduced terms," and that another, with a well-to-do father to back him, would be apt to refuse.

"It is such a long time to be without earning," said Mrs. Granton, striving to check a sigh that was almost a sob.

"Well, you can think it over and see what suits you. It's all the same to me; you wouldn't have to keep him."

It was the consideration of that last item in the arrangement that finally determined it; for Hugh Granton was such a lath of a boy, so much too tall for his age, and so thin, that the idea of his boarding in Mr. Standing's house, and sharing their comfortable living, out-weighed so much in his mother's mind, that she finally agreed to apprentice him for five years.

During the first three of these, he was not to receive any money for his services; in the fourth, he was to have two and sixpence a week, and one shilling more than this each week during his last year of apprenticeship.

With the fee that Mr. Standing declared he should rightly have received, he would have undertaken to teach him his business in three years.

The fee, however, was an impossible thing. It seemed to Hugh's mother that some fresh distress was continually arising from the poverty that was crushing them; and, unable to obtain any better terms, she went home to tell Hugh as cheerfully as possible what she had done, and to comfort herself by thinking how impossible it would have been for her, strive, and pinch, and manage as she might, to give Hugh the same good, nourishing food at home, as he would have while living at his master's. Just now, too, it was of the utmost advantage, while he was growing so fast, and might, perhaps, keep off the delicacy that had taken her other children away; for Hugh was the youngest of her family, two others having died of decline when little older than he was.

Hugh and his mother lived in a poor little house up a lane leading off the main street of the village. One room and a kitchen, with a sleeping loft over-head, was all the house contained. A sorry change from the pretty cottage with bee-hives in the garden before the door, and a cow grazing in the field that a tall hawthorn hedge sheltered and enclosed.

All this belonged to the past,—to a time that Hugh remembered like some pretty tale he had read in childhood; when his father, and elder brother, and sisters, gathered round a happy hearth; before all those after recollections of change, and sorrow, and death, lasting until he and his mother were left alone. Nor was that all, they were now but poor as well as alone,—so poor! But this he did not know, that often his mother made excuses for leaving him to eat alone, because she had no more food than sufficient for one.

Hugh's father had a good business when he married, but during a succession of years that were bad for trade, it fell off, and he got into some difficulty. Nothing, however, that he might not have overcome, had he not, in an unguarded hour, become security for a relative, whose subsequent failure involved him beyond all he could meet. His home was sold to pay another man's creditors, and, unable to recover himself, he went to America, hoping, on fresh ground, to be more successful than it was likely he would again be at home.

But after landing in New York, he was never again heard of. All inquiries by letter proved in vain; and at length it was determined that his eldest son, who was a very steady, good young fellow, should go out, and endeavour to ascertain what had become of him; and for this purpose money was taken out of the little that was available for the support of the family.

It is sad to tell that young Harry Granton died of fever soon after landing in America, and of his father's fate nothing was ever known; while, after a time, the two daughters, both of whom were in respectable employment, returned home one after the other to die of decline.

All these circumstances were well known to Mr. Standing, and he was in no way ignorant of the fact that Mrs. Granton had for several years been struggling hard to maintain and educate her youngest child, whom he was about to take as an apprentice, on terms more favourable to himself than he was often able to make,—the weekly allowance agreed upon being less in amount, and given for a shorter period, than was customary.

During the first three years, there was not to be any payment; and for all that a working lad requires, except his meals and his bed, for week-day clothes and Sunday clothes, Hugh was still wholly dependent on his mother's earnings, small and uncertain as they were,—for she had no settled trade to pursue, and no support but such as came from her own work.

How she shivered in thin clothing that he might have an overcoat, and wore cheap boots that let the water through, so that Hugh should have his thick and strong, scarcely need be told, for mothers are doing the same kind of thing every day.

Hugh's third year was drawing to a close, when one day the doctor of the place they lived in—his name was Martin—went hurriedly to his wife, who was in her store-room, and said, "I do wish you would go and see that poor Mrs. Granton"—and here the doctor looked quickly round the well-filled shelves—"and take something nice with you for Hugh; he's at home ill."

Mrs. Martin asked what was the matter with Hugh Granton.

"Over-work," said the doctor, "and, very likely, under-feeding. I'll get it all from him after a while. He's broken a blood-vessel, and of course must not speak until we are sure the bleeding won't come back. He ought to have beef-tea or some good broth at once."

"I'll see about it," said Mrs. Martin, who was already putting cake and black currant jelly into a basket.

Hugh had been helping to raise a long ladder to a window, when sudden hæmorrhage came on and almost suffocated him.

"He'll never be well again," Doctor Martin told his wife, shaking his head in the wise-looking way doctors do when they make up their mind about a thing; "but don't tell his mother that; she's bad enough as it is."

There was no need to tell her, or to speak to her of false hope either, for Mrs. Granton had seen her two daughters die of consumption, and when Hugh was brought home to her, suffering as has been told, it was the same to her as if his death warrant had been signed.

Never again was Hugh able to return to his work; never once able to earn the small weekly wage that would soon have been his due—the poor half-crown that he had so often pictured to himself as taken home to his mother, and proudly, joyfully, given to her as his first earning—a foretaste of all that he hoped yet to bring to her, so that comfort and comparative ease might at length take the place of close work and poverty—a poverty deeper and more pressing than Hugh's mother had ever let him know.

After a few days, as the dreaded hæmorrhage did not return, he was allowed to sit up and to speak, and Doctor Martin going cautiously about it, drew from him an account of his life at Mr. Standing's. It so happened that while he was talking to him, a message came from that person, asking on what day Hugh would be back, as they were very busy, and wanted him.

The answer was sent by Doctor Martin.

"Tell your master," he said to the mes-

senger, "that I say Hugh Granton is not going back, and I'll most likely call to-morrow and tell him why;" and presently the doctor went home with a glow of indignation in his honest heart, that might be safely expressed to his wife, but not to Hugh, lest it might hasten the pulse that it was life to him to keep calm; and not to his mother, for Hugh's whole desire was that she should never know the circumstances of which Doctor Martin had induced him to speak.

"That brute, Standing," the doctor said to his wife,—"I beg your pardon, my dear, for using such a word, but really no other will do. I'm not sure but his doings come under the last Factory Act; I'll tell him so at any rate, and that I'm going to look into the matter. Sending that unfortunate lad—and so delicate, too, as he always was—sending him away early in the morning to jobs in the country ever so far off, and not back till near night, and with only a piece of bread in his pocket, and then when he got back, the cold leavings of their dinner given to him, and he sent to the back workshops to grind and mix paint for the next day's work. Half-frozen all the winter, coming back through the snow, and never allowed near a fire, but grind, grind, in the back shop. I promised not to tell his mother, and then I got it all from him. I always knew Standing was a brute."

"And his wife is worse," cried Mrs. Martin. "The boy was living in their house, and it was her place to see that he was properly treated. And you say he'll not get better?"

"Never," said the doctor; "the strength may flicker up a bit, that's all."

"You should have told your mother of the way they treated you," said Mrs. Martin to Hugh, some days after this.

"Oh no, ma'am," he replied; "it would only have vexed her, and if she had interfered, it would have made the master her enemy and mine too. And then I always thought I'd have been able to fight through to the end."

And Hugh had done this, but the end reached was not that which he had looked forward to.

Yet, in losing his life he had found it. The loneliness, the discomfort, the lack of all kindness and consideration led him to look for the knowledge of Him who calls His followers not servants, but friends.

The boy missed his mother's kindness so, that he felt sometimes as if he could scarcely live through the harshness that made all work a labour, the selfishness that stinted him in needful comfort, nearly beyond what could be borne.

In very desolation of spirit, he looked up to our Father who is in heaven, and to the Son of His love, through whom we may draw near, not as aliens, but as fellow-citizens with the saints, and of the household of God.

"Call upon Me in the time of trouble, and I will deliver thee." Surer than the foundations of the everlasting hills is the reality of that promise, and to those who lay hold of it, will the high honour be given them that they shall glorify God.

In the patient fulfilment of duty; in quiet endurance of the wearing sickness, before which his earthly future faded away; in the strong and simple faith that rested on the salvation the blessed Saviour has wrought out, and taking God at His word, believing that there is no condemnation to them that are in Christ Jesus—in all these things it was given to Hugh to glorify God.

His illness, with all the variations that belong to consumption, lasted for several months, and during this time, friends such as they had never known before were raised up for Hugh and his mother, to minister to them of their substance, and supply all the sick lad's need, whilst bringing also into their poor dwelling the cheering consolations of Christian sympathy and faith.

In early spring the end drew near.

Mrs. Granton was alone with her son. It had been a day of mingled storm and sunshine, but at evening-tide the golden light of a brilliant sunset filled the air.

Raised up in a bed, opposite the little window of the room, Hugh could see something of the glowing western sky.

Though there was no visible change, he had felt all day that his hours were numbered.

Mrs. Granton had been arranging his pillows, wetting his parched lips, raising the damp hair from his brow, when he suddenly said,—

"*Kiss me, mother, and go down into the kitchen until I die.*"

He felt that the great change was at hand, and he would fain spare her the suffering of seeing it come.

She kissed and hung over him, and he said again hurriedly,—

"*Go, mother dear—good-bye—go down to the kitchen until I die.*"

His mother felt that she dare not refuse him.

Outwardly calm, but in anguish that words could never tell, she went quietly away, and fell on her knees in the kitchen in an unspoken agony of prayer.

A friend coming in soon after, found her thus, passed softly to the room, and saw that Hugh was gone.

A glory from the setting sun was round his head, and on his countenance a peaceful smile.

There are heroes of whom the world never hears, and it has been truly said there are noble biographies that have never been written. Heroic men have toiled on in their daily duties, and suffered and sacrificed, and kept their integrity, serving God and helping others, and all the time exercising qualities that those in higher positions than themselves would have been honoured by possessing.

Doubtless there is a tendency in genuine piety to promote heroism,—for trust and loving confidence in God is the most ennobling element that can enter man's character; and to possess this, and to rise above self, and live for others, is as truly heroic as to face the ranks of an enemy. Judged thus, Hugh Granton has a place among unknown heroes; forgotten though he may be by all but the writer of this little record, to whom he was well known.

Many years have gone since, with those words of unselfish affection on his lips, he passed from the death he met alone, into eternal life. The rod of the oppressor for ever broken, the burden of the weary laid down, confidence in God, and faith in a living Saviour, become realities amid the new life in the many mansions of a loving Father's house!

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow," "Corbiestanes," "Our Navvies," etc., etc.

"'He'd no call to burn my things wi'out my leave, and I never gave him it.'
"'Ethel,' said Mrs. Burleigh in a low voice, 'do not remind the man of what he owes your brother. John would not like it.'"

CHAPTER XXV.

JOHN BURLEIGH IS COMFORTED, AND BRADLEY SHOWS HIS GRATITUDE.

BRADLEY, stupefied by sorrow, and with all his interest absorbed by his own concerns, heard with indifference of the death of Bob Chatteris. He and the boys, in clean things, removed to the shed; and the following day, while the Vicar was away at the town, making arrangements that his friend should rest in the same grave with the girl he so faithfully loved, the women carried the infected bedding and clothes out of the cottage, and burnt them in the garden.

When this was done, they proceeded to whitewash the walls, and to scrub the floors with ammonia; and when, late in the evening, he returned, John Burleigh noticed that the sickly fever scent was gone, and that the cottage stood all damp and open to the evening air. But his heart was so sad that, though he thanked the willing and now exhausted women gently, he could not smile, but passed alone into the presence of his dead. This man—his very own, whose soul, by the mercy of God, he had been the means of saving; whose life had risen out of ruin before his very sight, and had become noble and beautiful; his son, in a dearer bond than that of human relationship, was gone—gone before him, to possess what he, with a yearning heart, longed for—rest and peace in the presence of his Lord. His body was strangely weak; now and again came that sharp, darting pain, or that long, dull ache, whose meaning he did not understand. But he could not think of himself; he had walked many miles, and had eaten nothing, almost unconsciously. A mist had risen between his vision and all tangible things; one thought drove all others to a distance—"Bob Chatteris is gone." He thought, clearly and distinctly, of all the needed arrangements, and spoke calmly, and gave his directions precisely; but the moment the business was completed, his thoughts circled round and round in a busy, questioning whirl. And then had come on him an intense desire to see his poor friend's face once more; for he knew what must happen that night, and his mind consented, although his heart shrank from the hard necessity.

So John Burleigh had hastened on, and now he was here, in the awful stillness of the poor place where the navvy lay. A great peace was there, and John Burleigh sank on his knees, and thanked God for redemption. And as he prayed, his prayer changed to praise, the mist rolled away, and the glory of God flooded the past and the future.

He no longer questioned; he knew. He no longer asked for an explanation; he saw. He no longer strove to understand; he comprehended. How long he remained, he knew not. He ceased to use words; they were no longer necessary. An indefinable sense of companionship came to him. He was no longer alone, for there, between himself and the bed upon which lay that stiff figure, covered with a sheet, carved as it were in stone, stood, or seemed to stand, in the white light of the autumn night, an over-shadowing Presence. And amid the dimness there seemed to be stretched toward himself two white hands—hands which spoke with a welcoming gesture; and toward him was bent a Face of such unutterable tenderness, which, in its steady gaze, comprehended, and at the same time solved, his every doubt, understood his most secret heart-ache, and comforted his sense of failure for ever. At last he knew what perfect sympathy could be. How long he knelt, for what space of time that silent vision stood before him, he knew not.

The tread of feet sounded outside, and men's voices broke the silence. He hastily stepped to the side of the couch, and drew the sheet from the face he had loved; even in that half-darkness he started back—the change since the morning was appalling. The door opened, there shone in a glare of candle-light, he heard a bumping sound, and the Vicar turned away and tried to steady his shaking nerves.

The doctor came forward.

"I am very glad, Mr. Burleigh, that you have remembered what I said this morning. This pest will go on, so long as it can find anything to feed upon."

John Burleigh could not speak; he bowed. The noise went on.

"Ah!" said the doctor, "not an hour too soon. Now, where is the quick-lime?—a good bag full. That's right! here, I will pour it in. Hallo! what's that?"

A dull, heavy thud sounded behind his back; he turned quickly.

"The gentleman's fainted, sir; shall we carry him out?"

"Not for the world! you'll kill him if you move him an inch. Take the coffin out, and get it away."

And the doctor was by John Burleigh's side, and with a strangely anxious face bending over him. He managed to pour a little brandy between the Vicar's lips, and at length felt a slight flutter in the pulse. "Thank God!" he exclaimed, though he was not a religious man, and hardly thought of what he was saying; still it was a relief *to say* it.

"Lie still, Mr. Burleigh; smell this;" and he poured a few drops from a little bottle upon his handkerchief, and held the corner toward him.

"But—I must go—to poor Bob."

"You cannot; they have left."

"Is it long since?"

"So long that you cannot follow possibly; now, do not move until I return."

Rebecca brought a pillow, and placed it tenderly under his head, and sat down on the floor near to him. The nurse came, looked, and disappeared, so did Martha, with tears running slowly down her hard cheeks. He hardly noticed them, though he knew that they were there.

It seemed a long period to Rebecca, whose heart was throbbing with misery, but only a few minutes to John Burleigh, to whom time had lost its meaning, until there was a sound of wheels outside, and the doctor re-appeared. Then there was a slow drive to the Vicarage; and when the cab stopped at the gate, both Martha and Rebecca were waiting at it, the girl having run there swiftly by the shorter field path.

* * * *

Very restful it was to John Burleigh to lie in his own room, his mother and sisters coming and going; to wake up in the night from some light slumber, and to find Rebecca, with her pale face and watchful eyes, standing beside him, a spoon in her hand, and a tender smile on her lips; to be cared for and loved; to be told that all was going well at the brickfields, that the fever was entirely stamped out, that Mr. Tozer was taking immense care of the parish; it was all very soothing, and yet somehow he could not sleep.

"I have got out of the habit," he said, with a little smile.

His mother smiled back, and told him that all in good time it would return; and then she would go swiftly into the dining-room, shut the door, and burst into tears; and her daughters tried in vain to comfort her, for was he not her firstborn?

"He is dying," she said; "I feel that he is just sinking away. Nothing strengthens him—Martha's essence of beef-tea—nothing does him good."

"I think, mother, that he soon would improve if he could sleep."

"You have tried reading aloud, and singing, Minnie, and both have roused, not soothed him; and that good girl, Rebecca, has fanned him and combed his hair for hours—what an admirable, quiet nurse she is!—and all has been of no avail."

"I think that Rebecca must have a history," replied Minnie, trying to distract her mother's attention from the one subject which she ceaselessly dwelt upon. "There is a something about her that I cannot understand. I have been questioning Martha, but she would only say—because our servants were also in the kitchen, I suppose—'She is a young woman from master's old parish, whose father thought a deal of master, and so he sent her to help.'"

"He is so good, every one loves him," replied Mrs. Burleigh, beginning to weep again; "but he has just killed himself for them."

"They ought to be grateful," said Ethel; "but, dear mother, do not cry; John will see your red eyes, and it will bring on his pain again."

A knock came to the door, and a servant entered.

"A man wishes to speak to Mr. Burleigh, ma'am, and will not believe that he cannot be seen; he has been both last week and this, and I sent him away, but now he will not go."

"Show him in here, Johnson."

A man appeared, whose physiognomy did not prepossess the ladies. He possessed dull red hair, had a vacillating expression, and an awkward, weak manner. He stood before them, twisting his hat round in his hands, and glancing at the dignified lady near the fire, and then away uneasily to the window, against which the rain was driving. He divided his regard almost equally between the occupants of the dining-room and the autumn leaves as they were whirled across the casement.

It was Bradley. During his wife's lifetime he had been a better man than he now found himself. Her strong, honest ways had kept him straight; she had ruled him always, but ever for his good. Secretly he had fretted under the consciousness that he was not his *own* master, much less *hers*. Now that she was gone, he could do as he pleased; but he was as a vessel without a rudder, drifting hither and thither—a wreck in all but name.

"Well, my good man, why do you wish to see Mr. Burleigh? My servant told you that he was not able to speak to you," said Mrs. Burleigh.

The man coughed; he felt over-awed by this great lady's manner. He coughed again, and then muttered,—

"My name's Dick Bradley."

Saying even these few words gave him courage, and he looked at the young ladies, and away from the window.

"What! are you the man from the brick-fields? Are you the man whose family had the fever?" cried Minnie excitedly. Ethel advanced a step toward him.

"You, too, were ill. Will you not sit down and tell us all about it?"

Bradley looked doggedly at the young ladies.

"I did not come about that—that's done wi'. It's somethin' else I want."

In a constrained voice Ethel said, "Indeed!"

Bradley moved uneasily under Miss Burleigh's astonished glance, but returned it defiantly.

"Yes, I've been three times in these weeks past, and I said to mysen and to Bill—that's my man—I'd not leave the Vicarage for anybody this time, wi'out satisfaction. Nor no more I will!"

The ladies remained silent.

"I've been put off by old Martha, and by that man o' yours, too oft; but what's right is right."

"If you have not come to ask after Mr. Burleigh, or to tell us about that terrible illness, and all that he did for you, what other motive could bring you here?" asked Miss Burleigh.

Bradley became angry. It appeared that these fine ladies would not understand him, and he only did not become insolent, because he was afraid to be rude until he had got what he wanted.

"I told you, miss, that's all past. No one axed Mr. Burleigh to come nigh us; he came to please hisself. I daresay we'd have got through wi'out him, well enough; and I hear tell it's not t' fever as *he's* got at all, though it's a sad misfortune he enjoys such bad health, and I'm sorry for it; but it can't be helped. I'm here to get my rights, and I'll have them."

"Yes?" said Mrs. Burleigh wonderingly. She had expected a burst of gratitude, and was exceedingly puzzled. What could the man mean?

"Just so!" cried Bradley, raising his voice, "I see *you* understand, ma'am; so what I say is, give me satisfaction, for satisfaction I'll have."

"Explain yourself, please."

"I'll do that fast enough. You see it's this way. Mr. Burleigh comes to my place, and while we're ill, he goes and burns all t' good clothes Mrs. Boothroyd gave my missus—pounds' worth, as she told me hersen; and not content wi' that destruction, he burns, or anyway he and Bob Chatteris, and afterwards them fond women, burns every bed and bit of bedding in t' place; and my satisfaction for t' damage is twenty pounds,—so there, ma'am."

For a moment Mrs. Burleigh could hardly believe that she heard aright. Here was the man for whom, and for whose family, it seemed that she was to lose her most dearly loved son. Was it for such a wretch as this that his noble life was to be given? She sat dumb with horror.

Something in her face touched even Bradley's conscience, and he muttered uneasily,—

"I will have my rights."

"Did my brother," said Miss Burleigh, "give you no beds? I found a bill the other day for seven new ones."

"Yes, them spring things! But I'd a sight sooner have my old ones; one was a feather one that my missus died on."

"Did my brother not provide the nurses, and keep your whole family for weeks?"

"Yes, but what's a parson good for, if he doesn't give a little relief? He'd no call to burn my things wi'out my leave, and I never gave him it."

"Ethel," said Mrs. Burleigh in a low voice, "do not remind the man of what he owes to your brother; John would not like it. He gave *himself;* we surely can give *this.*"

She went to a desk, took out her cheque-book, and wrote the sum demanded; but so tremulous was her signature, that there was a consultation at the bank before that £20 was paid.

As Bradley went home, he met little Mary running through the rain.

"Where art thou going, Mary?"

"To ax how Mr. Bur'y is. I come every day, father."

"You mun go no more."

"Why, father?"

But her father did not reply.

"Daddy, you've been," said the child, at the point of tears; "did they tell you that Mr. Bur'y was worse?"

"I didn't ax."

"Then what did yer go for?"

"For no business o' yourn. But mind my words, you bide at home and mind t' childer."

"Oh, father, let me come just once a day?"

"No!" said Bradley, "you bide at home. I'll have my rights, and make you know what they is, every one o' you."

CHAPTER XXVI.

IN WHICH LADY SUSAN HAS HER OWN WAY.

"STUBBS writes that Burleigh is seriously ill, and that his mother and sisters are at Houghrigg Vicarage, and his uncle and brother have quarters at the Azerley Arms. It seems that he is not suffering from fever, but from extreme prostration, and that there is something the matter with his heart. I am afraid it is serious."

So spake the earl to his wife one morning, in the privacy of her boudoir.

"Do you think that we ought to return, Diana?"

"No, hardly. You might go, or perhaps we could induce Markham to do so for a few days; but I do not see the necessity for the rest of us."

"You might ask the ladies to the Chase," said her lord.

"If he is as ill as Stubbs reports, I have little doubt that they will prefer to remain with him."

"No doubt you are right there," assented her husband.

"Then there is Susan — she becomes more inexplicable every day. She has grown quite thin and spiritless. I fancied that perhaps Mr. Hardman wearied her, though how so charming a young man can bore any one, passes my comprehension."

"You have quite an ardent admiration for that young fellow, Di; I never knew you so taken before, not even, I think, in *my* young days."

"Now be serious! Where was I? Oh, I remember. Well, since he left, she has only become more depressed, and I cannot but suspect that she is ill from anxiety, and if this is so, what possible cause can there be for it? There is absolutely at present nothing disagreeable occurring. Even Edward is all right."

"Which is a rare occurrence indeed!" interjected the earl. His wife ignored the interruption.

"There is absolutely nothing, as I said, save the reports of this wretched fever, and no one can guess where it will end. I shudder when I remember the last time that it broke out in the village. We were completely cut off from every one! No one will of course come to us, even when we return; so I shall certainly not do that yet awhile."

"You need not dread isolation. All fear even of infection is past. Burleigh appears to have managed admirably; even he himself, you see, is not suffering from the fever, but apparently from exhaustion."

"Ah, yes, that is well!" and then Lady Azerley fell into a muse, and her husband took up a magazine, and idly turned over the illustrations.

"She certainly likes Mr. Burleigh," spake her ladyship. "I recollect that they were immense allies last winter. Perhaps she has heard something of *his* illness! and yet last winter is so long since."

"Yes," assented the earl, tossing the magazine down, "yes, possibly; and yet, as you say——"

His words were stayed by a hurried knock, and in another moment Lady Susan was by his side, holding out a letter. Her eyes were widely opened with a startled misery in them, which was pitiful to see. There was no lassitude now, at all events, in her manner; her face was intensely pale, but her hands were trembling and her lips quivering.

"Father! mother!" she half gasped, "read this."

"Certainly, my dear," replied the earl politely; "but won't you sit down?" and he wheeled a low easy chair round; but his daughter only grasped its back, and watched her mother as she read the letter—it was not a long one—and then handed it across to her father.

"Who is the person who writes?" asked Lady Azerley in her even voice.

"I do not know, and, mother, I care less, for one can see that it is true. *That* is the main thing. I must go immediately; please let me."

"But, my dear child, pray consider how utterly improper it would be. Why should *you* go? Mr. Burleigh is a young man, and though you may consider yourself his friend, he has no claim upon us. If he were a labourer, you might visit him as a charity, perhaps; though I can never comprehend why you enjoy doing such things, still——"

But Lady Susan heard no more of the words which flowed on so calmly; she saw the strong, placid expression steal over her mother's face, which meant immovable resolution. She had but one hope left, and turned to her father.

The earl was turning over the letter hesitatingly.

"Your mother, my dear girl, is right, as she ever is. It is impossible, *les convenances*"—then he looked up—"ah!" he exclaimed, and stopped.

"I am going to be Mr. Burleigh's wife," said Lady Susan to him; "he asked permission, months ago, to come to you, and I would not give it. So we have only been friends. Then he wrote and gave me back my promise, entirely, wholly. Then I knew how wrongly I had acted, and the pain I had given him, and I refused to receive my freedom. I told him that whether he would or not, I held him to his promise, and was *determined* to be his wife."

The girl's face glowed now, and her eyes softened and fell.

"Susan! are you *mad?*" gasped Lady Azerley. "He is *poor*, wretchedly *poor;* he is eccentric, he will never be even a bishop, he is so—so—*je ne sais quoi*."

"Unworldly," said Lady Susan, with a shadow of a smile.

"Oh dear!" groaned her mother, "where *did* you pick up that phrase?"

The earl was looking at his daughter, and there was a tremulous twitch about his mouth. He raised his hand, and stroked his moustache to conceal it. Suddenly Lady Susan turned again to him.

"Father, dear father, it will break my heart if I have not seen him, and John——" She could say no more.

"Put on your bonnet, Susan. I will take you myself."

"Then," said Lady Azerley coldly, "though nothing could well be more inconvenient, we had better all leave Inverben, and go to the Chase. It will only be a matter of waiting a few days."

"Oh, father, I *cannot* wait! Pity me!"

"My girl, don't look so. Run and put your bonnet on. I will order the carriage, and we can telegraph to Stubbs and to Banks from the station. In eight hours they can surely light fires, and have some dinner ready."

Long ere Lady Azerley's offence had died down, the travellers had reached their destination, and during that long journey the father and daughter learnt to understand and to love, each the other, as they had never done before. This crisis of her life had overcome the girl's inherent shyness, and the confiding appeal to his love had warmed her father's affection so thoroughly, that it melted the icy barrier of English reserve in which we all encase ourselves. The two did not talk much about John Burleigh, but each knew that the other was thinking of him; and the words of warm appreciation which fell from her father's lips were very dear to Lady Susan. She now knew that, in his heart of hearts, the earl understood what manner of man he was, who was her beau-ideal of goodness.

As they drove through the slumbering village, and turned into the gates of the Chase, she leaned from the window of the carriage, and saw a faint light gleam out from a bedroom window in the humble Vicarage, and with a sigh of relief, knew that her worst fear was not to be realised, and that she should see John Burleigh once more. Until that moment she had not realised the crushing weight of that load of unacknowledged dread. She took her father's hand in her own, and kissed it.

"My dear father," she said. He put his arm round her, and drew her close to his side, and held her there.

John Burleigh heard the unusual sound of wheels on the still night air, and beckoned to Rebecca Sugden.

"Who can it be?"

"I am not sure, sir, but I think Lady Susan Stopham."

"Why?"

Rebecca hesitated.

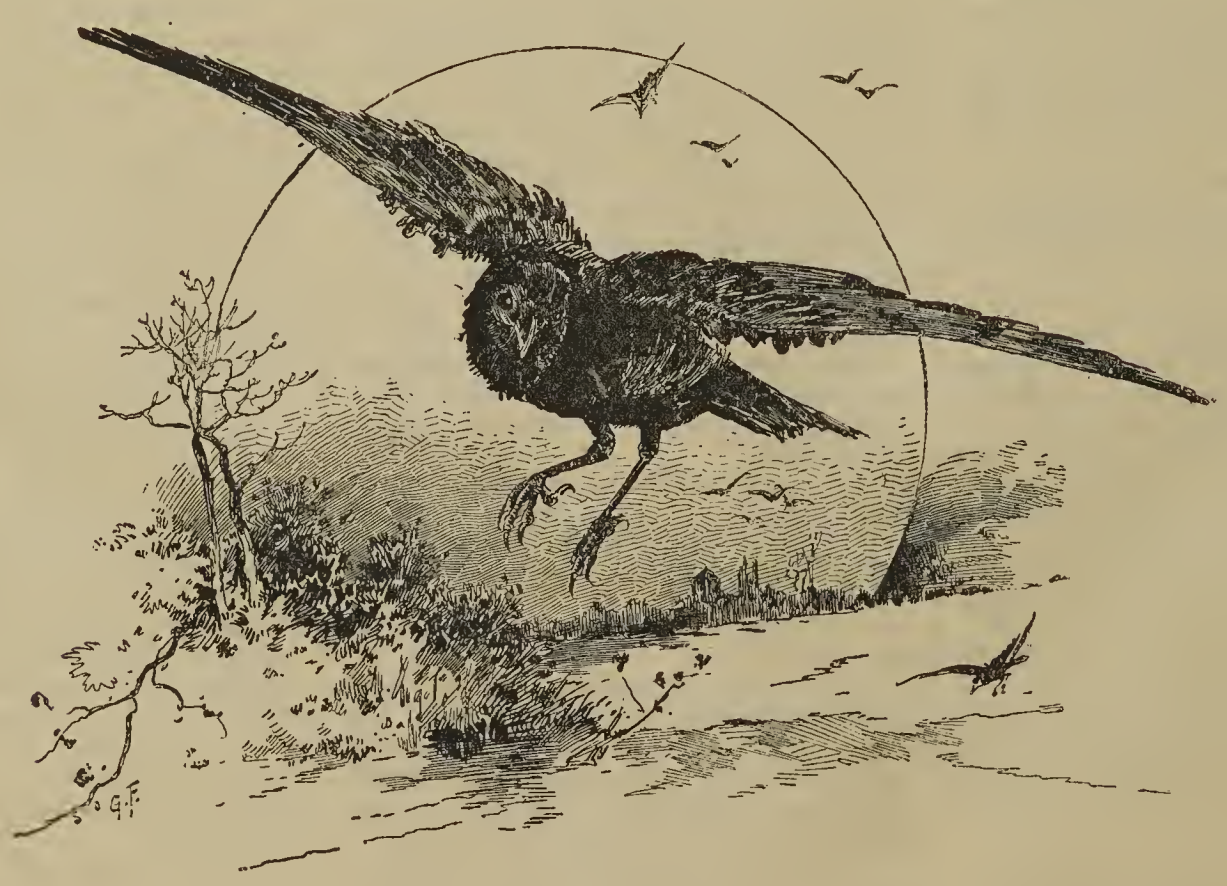
"Why?" repeated John Burleigh.

Before his eyes she could hide nothing.

"Because, sir, I wrote to her. Oh, sir, forgive me!"

"Forgive! I bless you."

An hour passed, and then, as though he had spoken but a few minutes previously the weak voice said,—



"How did you know?"

"Two or three times, when you have slept a little, in your sleep you have said the name, and I saw there was something you wanted, and I thought, and thought, until it seemed to me that——"

"You were right—we love each other;" and then he closed his eyes, and turned his head upon the pillow, and Rebecca sat by the fire, and put on bits of coal with her fingers, that if he slept she might not disturb him. At length she took up Mr. Burleigh's Bible and found the place, "And Jesus, moved with compassion, . . . saith unto him, I will; be thou clean." And then she ceased to fret. Even for her there might still be a future, in her home with her father and her mother, please God. *That*, at least, she might enjoy to the full. And then she drew from her pocket her father's last letter, and read it. Commercial, both in style and writing, underneath there rang a tone of tenderness which warmed her to her very heart's core. She watched through the live-long night, and Lady Susan slept as she had not done for weeks past; but both girls saw the sun rise red and angry above a bank of rain clouds, and both, for John Burleigh's sake, wished that the next three or four hours were passed. He had not slept, though he had been very still all night, and now that the light broke he whispered,—

"Our morning prayers, Rebecca," and she knelt as usual by the bed, and this day he smiled as he asked for the General Thanksgiving.

"I would be drawn much closer."

(Sacred Duet.)

Words by the Rev. H. G. Thwaites

Music by J. S. Mitchell, *late Organist of Queenstown Church.*

I would be drawn much closer Than ever yet I've been,
That neither cloud nor shadow May ever intervene ;
That living in Thy presence, And guided by Thy voice,
I may be faithful to Thee, And in Thy love rejoice.

I would be drawn much closer, Above these earthly toys,
That I may find my pleasure Alone in heavenly joys,
And see in Thee, my Master, Enough to satisfy,
Enough to hush each murmur, To still each earth-born sigh.

I would be drawn much closer, Much closer, Lord, to Thee,
Oh cut the many earth bonds, That keep me still from Thee,
And let me rise up higher,— Higher in faith and love,
Till hope becomes fruition, In Thy sweet home above.

Then shall I be quite near Thee, And never, never sin,
Then nothing shall molest me ; For all is pure within
Those jasper walls of glory, Those palaces of God ;
And I shall walk in whiteness With Thee, the Eternal God.

WORTH REMEMBERING.

A BRETON PRAYER.—When the Breton mariner puts to sea, his prayer is, "Keep me, my God; my boat is so small, and Thy ocean is so wide." Does not this beautiful prayer truly express the condition of each of us?

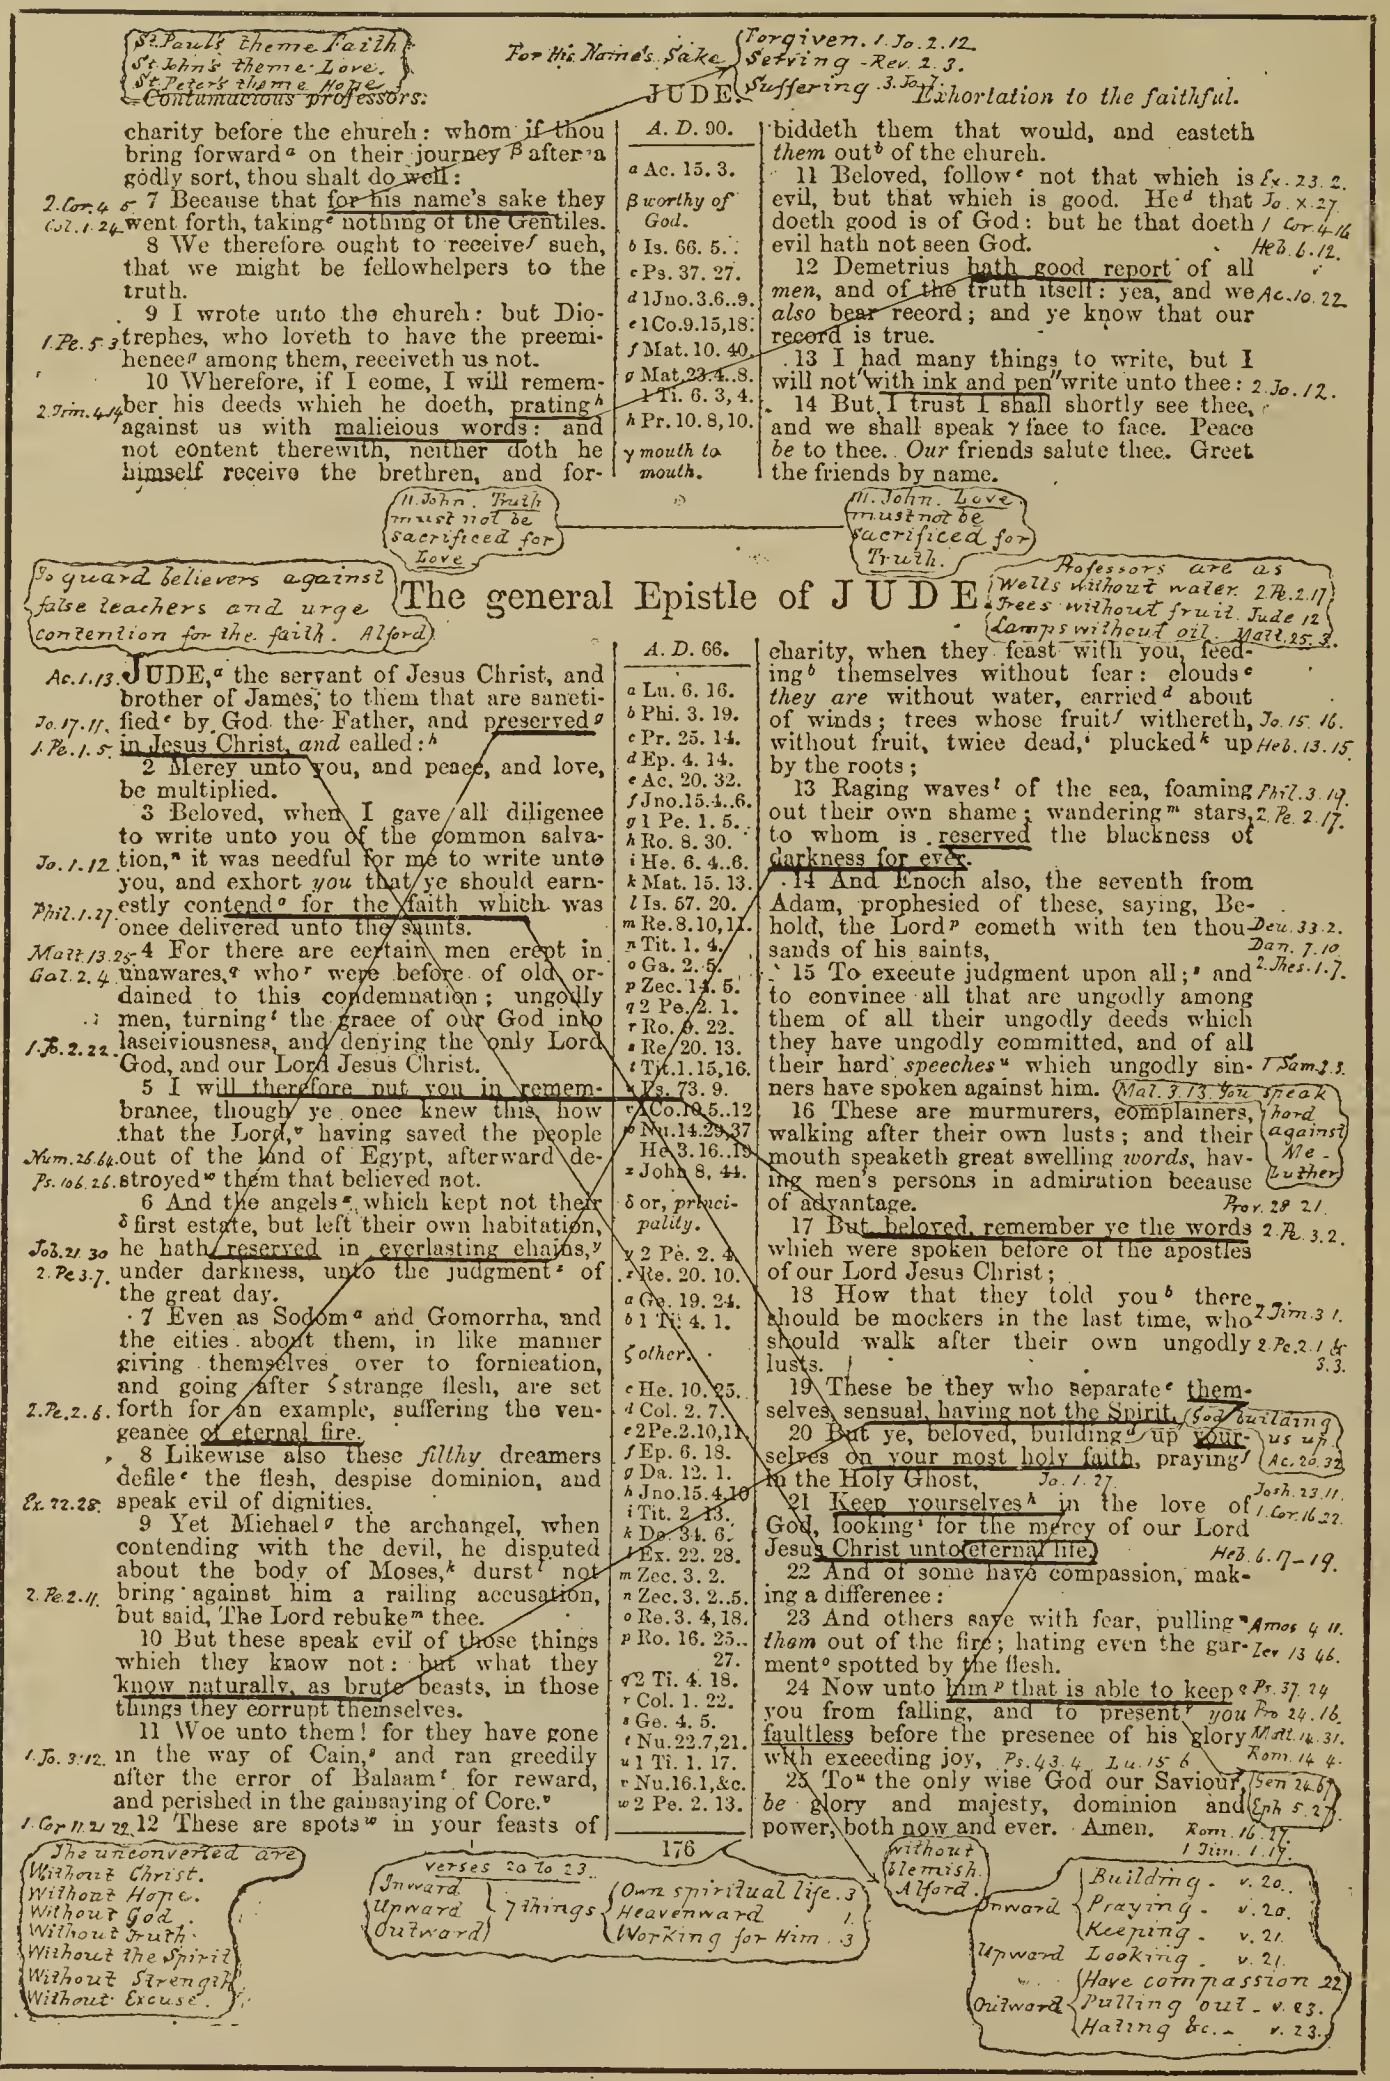
MATTHEW HENRY, in his own quaint and striking way, says, "When Christ was about to leave the world, He made His will. His soul He committed to His Father; His body He bequeathed to Joseph, to be decently interred; His clothes fell to the soldiers; His mother He left to the care of John; but what should He leave to His poor disciples that had left all for Him? Silver and gold He had none, but He left them that which was infinitely better, His peace."

"Peace I leave with you!"

WHEN President Edwards came to die, after bidding all his relatives farewell, his last words were, "And now where is Jesus of Nazareth, my true and never-failing Friend?" and so saying, he sweetly fell asleep. Jesus is a Friend, ever near and ever true; the fragrance of whose Name is as sweet perfume to the saints in heaven and on earth.

THE setting of a great hope is like the setting of the sun. The brightness of our life is gone, shadows of the evening fall behind us, and the world seems but a dim reflection of itself—a broader shadow. We look forward into the lonely night; the soul withdraws itself. Then stars arise and the night is holy.

NEARNESS of life to the Saviour will necessarily involve greatness of love to Him. As nearness to the sun increases the temperature of the various planets, so near and intimate communion with Jesus raises the heat of the soul's affections toward Him. —*Spurgeon.*



THERE will never be a second Saviour to atone for the guilt of rejecting the first. —*Wardlaw.*

A HOLY life spent in the service of God, and in communion with Him, is, without doubt, the most pleasant and comfortable life that any man can live in this world.—*Melancthon.*

HEAVEN is the day of which grace is the dawn; the rich, ripe fruit, of which grace is the lovely flower; the inner shrine of that most glorious temple to which grace forms the approach and outer court. — *Dr. Guthrie.*

A MAN is not disgraced by being unpopular, especially when he becomes so by telling the truth.

CHRISTIAN faith is a grand cathedral with Divinely pictured windows. Standing without, you see no glory, nor can possibly imagine any; standing within, every ray of light reveals a harmony of unspeakable splendour.

SHEEP-EATING PARROTS

By C. F. Gordon-Cumming, Author of "A Lady's Cruise in a French Man-of-War," etc., etc.

"*L'OCCASION fait le larron*" (Opportunity makes the thief). So says an old French proverb; and never has it been more aptly illustrated than in the case of the mountain parrot * of New Zealand, or, as it is called by the Maoris, the Kea, as suggesting its peculiar cry.

Through unknown ages, a small rat appears to have been the only four-footed creature which existed in New Zealand, and during this same period the Kea is supposed to have been, in common with all wild parrots, a most respectable vegetarian, supporting itself entirely in summer on mountain berries, and in winter descending from its remote haunts to feed in the lower forests, but always on vegetable fare. Untried and untempted, it dwelt in peace and innocence in the higher ranges of the snowy Alps of the Southern Isle, nesting amongst inaccessible crags in the ravines where streams and rivers are cradled. It does not seem to have found its way to the North Isle, but apparently exists only in the neighbourhood of the snow-capped peaks and glaciers of the South. There the Keas dwell in flocks, and may be seen flying high in the heavens, uttering wild, shrill cries.

The Kea is by no means a pretty parrot. It is a large, heavy bird, averaging eighteen inches in length, and is of a dull sage-green colour, made more sombre by a certain admixture of black and brown,—the only bright colour being the red under the wing, which only shows when the bird is in flight. Its powerful curved beak, which is about two inches in length, certainly looks as if nature had intended it for a bird of prey, but practically, as I have said, until within the last fifteen years or so, its diet consisted exclusively of fruits, leaves, and young shoots of trees, of which its native forests yield an abundant supply throughout the year.

It was first observed in the year 1856, when it was deemed very rare. At that time it never descended to the low grounds, except in very hard winters, when it came on foraging expeditions. Having never seen man (for the Maoris never explored the interior of the Southern Isle, but only settled on the coast), and having, moreover, the courage of a clean conscience, it was at first singularly tame, and being of an inquisitive nature, would come close to any explorer who found his way to its retreats.

As colonization increased, large sheep-runs were established on the higher levels, and in course of time were extended right up to those elevated regions, hitherto untrodden by any quadruped. Thus temptation in quite a new form was brought very near to the parrot with the powerful hooked beak; but some years elapsed ere it succumbed, or perhaps, ere it discovered how excellent a thing is good mutton, and so its carnivorous tastes were awakened.

It is supposed to have first tasted flesh during some exceptionally severe winters, when the high forests lay deep in snow, and all feathered tribes sought a livelihood on lower levels. Then the Keas, discovering newly-established human dwellings, boldly approached in flocks, and were attracted by a totally new feature, namely, open-air larder or meat gallows, whereon hung whole carcases of sheep ready for the winter use of the white men. The starving parrots tasted this unknown food, and found it so much to their liking, that from that time forward they have eaten meat in preference to fruit, entirely changing their vegetarian character, and have become the cruel scourge of the sheep-runs in the mountain-districts, proving far more terrible foes than even the kites and hooded crows.

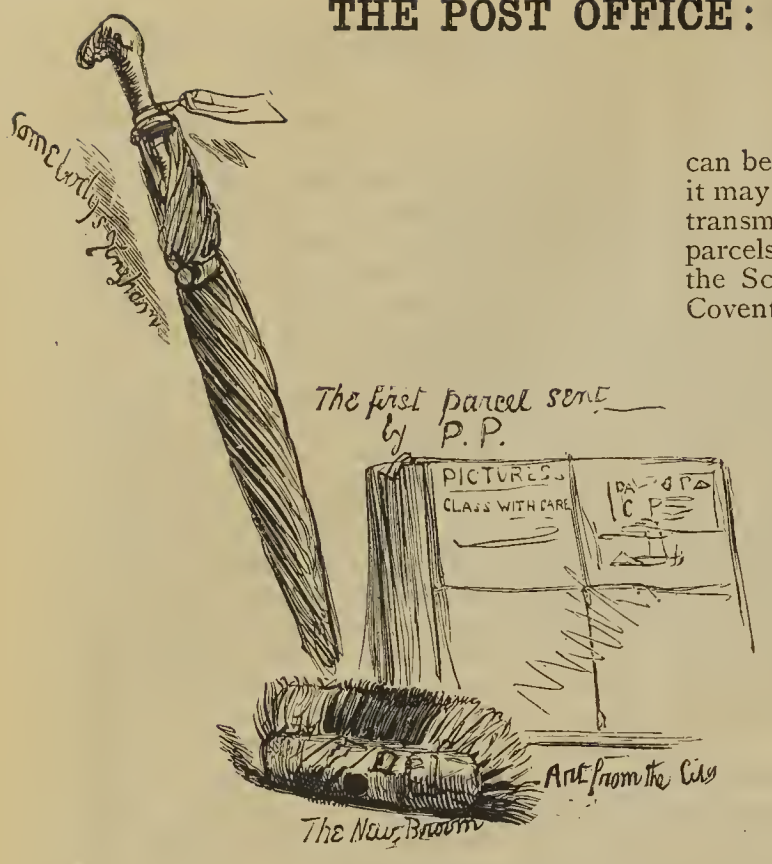
Having once discovered the advantages of mutton, the Keas helped themselves freely to the meat so trustfully exposed; but in a land where the supply is so abundant, no one grudged the night birds their share, nor cared to keep watch to ascertain who were the robbers. The birds seem to have studied the carcases both as epicures and as skilful anatomists, for they not only ascertained that the most delicate fat lies around the kidneys, but also seem to have discovered how to reach it in the living animal, a most remarkable development of instinct.

It certainly is difficult to conceive what process of reasoning could lead a parrot to connect the hideous carcases on the meat-gallows with the flocks on the mountains, and still more to understand how the most intimate acquaintance with the said carcase could suggest the position of the kidneys in a living sheep. Nevertheless, from this time forward, the shepherds on the high sheep-runs began to find their flocks sorely harassed by some unknown foe—many of the finest and fattest sheep having sores on the saddle, just in front of the hips. In every case the wound was in the same place, directly above the kidneys. Some sheep were slightly wounded, and recovered, retaining only a scar; but others were cruelly mutilated, the flesh being torn aside—not eaten—till the skilful anatomists reached the coveted fat about the kidneys. This being secured, the barbarous unknown foe had evidently desired nothing more, but left the sheep to die in slow agony.

The Kea being, like the owl, a night-bird, did all its mischief under cover of the darkness, and so stealthy were its approaches, that for many months no clue could be obtained to the identity of this ruthless foe. Only from the fact that the blood-stained snow around the miserable, wounded sheep never revealed any track or trail of beast, it was evident that the marauder must be a bird of prey. Still, no one dreamt of suspecting the inoffensive fruit-eating mountain parrots of such iniquity; and when at length a shepherd ventured to suggest that they might be the offenders, his idea was scouted as preposterous; for, as yet, the nocturnal habits of the bird were unknown, and no one suspected his midnight raids. Ere long, however, the shepherd had the satisfaction of proving that his conviction had been well founded, for a parrot having alighted on a sheep, and commenced eagerly tearing the wool to get at the flesh, got its own claws so hopelessly entangled, that it was held captive, and was thus taken in the very act of its bloodthirsty attack.

The taste thus acquired spread so rapidly, that the whole tribe of mountain parrots seem to have abjured vegetarianism, and have become the most dangerous foe not only of the sheep-run, but also of the poultry-yard. So terrible is the devastation they have wrought, that the districts within their range now estimate their loss from this cause at four per cent. in every flock; in some cases the per-centage is far more serious. One sheep station had to report within five months the loss of two hundred fine young wethers out of a flock of three hundred, all these being so cruelly injured that they died. Another sheep-owner at Matatapu stated that within one month he had lost nineteen out of a flock of twenty strong Lincoln rams from this same cause.

Those bird-brigands work in parties, and having selected their victim (generally some heavy sheep, exhausted and stupefied by its struggles to make its way through heavy snow-drifts, often burdened with a double coat of wool, the growth of two years), they alight on its back, and commence operations. Fastening their claws in the long fleece, they tear open the flesh with their strong, cruel beaks, and vainly does the defenceless, bewildered sheep writhe beneath its ruthless assailants. There is no escape, and not till the last morsel of the coveted fat has been secured, will these barbarous vivisectors abandon their victim.



As conscience makes cowards of evil-doers, from the time when the Keas took to these wicked ways, these birds, hitherto so bold, seem to have acquired a guilty fear of man, and a dread of just retribution for their misdeeds; and so they became more and more shy, and it is now exceedingly difficult to get within range of them. Of course the settlers now wage a war of extermination against them, and the New Zealand Government voted a sum of £600 to increase the scale of reward offered for their destruction. A shilling a head is now paid for every dead Kea, and a reward which seems small in proportion to the toil involved; nevertheless, it has sufficed to give rise to a new profession, namely, that of parrot-exterminator. These men devote their nights to wandering over the bleakest high mountain sheep-runs, kindling fires to attract these nocturnal birds; and as their range is comparatively limited, there is fair ground for hope that in course of time they may be numbered amongst New Zealand's extinct birds.

Meanwhile one, at least, is now to be seen at the London Zoological Gardens, having been captured alive, after a severe fight, in which it bit and scratched its captor most mercilessly. It shows no wish to return to vegetable fare, but fully appreciates good English mutton.

* *Nestor notabilis.*

THE POST OFFICE: WHAT IT DOES, AND HOW IT DOES IT.

By An Official.

Part IV.

The Parcel Post and the Post Office Savings Bank.

THE Parcel Post necessarily has, to a very great extent, a totally distinct organisation, and in the larger towns is worked by a special staff. It was inaugurated in 1883, under the auspices of Mr. Fawcett, who unfortunately died before it had been proved to be the complete success and valuable boon to the public which it now is.

In introducing it, the Post authorities were at this disadvantage, that, in the care of parcels, the Post Office has no monopoly such as it necessarily has in the case of letters. No one but the Postmaster-General can collect or deliver letters outside the limits carefully prescribed by the Post Office Acts, without rendering himself liable to severe penalties. But in the case of parcels there is no such restriction, and the Post Office has nothing but superiority of organisation and capital, to put it at an advantage in respect of the firms and other persons whose business it is to carry and deliver parcels.

The Post Office system gave the public for the first time the advantage of sending parcels of a given weight, and at a fixed charge, to any part of Great Britain and Ireland. The new service was brought into operation without causing the slightest delay in the delivery of letters. In the first few weeks after the Parcel Post was introduced, the number of parcels carried was at the rate of fifteen millions a year. By the end of 1887 the number had increased to 32,860,154. As showing what can be done by means of the Parcel Post, it may be stated that it is much used for the transmission of fruit and flowers, numerous parcels, for instance, being despatched from the Scilly Islands by market gardeners to Covent Garden Market, where they arrive in time for delivery before eight o'clock in the morning.

Upwards of 14,000 parcels containing primroses reach London on the 18th and 19th April, the anniversary of Lord Beaconsfield's death.

The Parcel Post has been extended to more than sixty Colonies and foreign countries, our largest customers at present being Germany, India, and Belgium.

The size and bulk of parcels, except in a few and isolated cases, render the ordinary mail-bags unsuitable for their transmission; large oblong baskets, firmly fastened and padlocked, are used, and the total weight of the parcels despatched from the General Post Office in one evening alone amounts to twenty-five tons.

The central office and Parcel depôt in London is now on the site of the old Cold Bath Fields Prison; and where once unfortunate prisoners went through their dreary punishment of crank or treadmill, there is now a busy hive of Post Office employés. The name of the locality has been changed to Mount Pleasant.

To add to the boon which the introduction of the Parcel Post has conferred upon the community, and more especially that portion of it which dwells in remote country districts not reached by the railways or the other great carrying systems, the Post Office now virtually makes itself responsible for the safety of the parcels entrusted to it up to a certain value, although by law the Postmaster-General is expressly exempt from all liability. The Post Office pays compensation to the extent of £1

for any parcel which it may lose or damage, provided it contains none of the articles which are prohibited altogether, or specially exempted from the right to compensation. A list of such exemptions is given in the "Post Office Guide," published every quarter, and the "Penny Postal Handbook," both of which publications are sold at all post offices. Amongst such exceptions are very fragile articles, and it is significant of the recklessness of the public, the confidence which they have in the Post Office, and the real care taken by the latter, that thousands of such fragile articles, from eggs to crockery, are conveyed through all the change from mail-van to railways and back again without, in the very large proportion of cases, the slightest injury. Walking sticks, banjos, fiddles, hats, clocks, glass vases, and the multifarious articles of which our artist has given illustrations, all go through this marvellous and omnivorous machine.

One of the unexpected results of the Parcel Post has been the revival of coaches as competitors for carrying with the railways. As will be readily understood, the former affords greater facilities for taking up and setting down along a thinly populated route than a railway, and the mail coach to Brighton, which for parcels was inaugurated last year, has been very successful as an experiment, and so far as the neighbourhood of London is concerned, the system is one likely to be still more widely extended.

The sortation and treatment of parcels differs in principle but little from that which is applied to letters. But the bulk and size of the former of course necessitate different premises and different mechanical appliances, and their transfer from train to train by apparatus, as in the case of letters, is, of course, out of the question. Parcels are for the most part transmitted in large, oblong baskets, secured by an iron bar, that is fastened by a hasp and automaton. As the Department, under certain conditions, holds itself responsible for damage, all possible precautions are taken to prevent undue pressure or friction; and when, as shown in the picture, the sortation of parcels is effected in a floor above or below the counter where they are received from the public, simple but safe mechanical appliances are used for lowering or raising them. But all precautions are in vain sometimes, and the fact, for instance, that "eggs are eggs," is forcibly brought home sometimes to the would-be recipient of a present from the country, or the delicate contents of a band-box are endangered, as in the case of that which our friend in the picture is handling so ruefully.

Some of the different "receptacles" or baskets used for the conveyance of parcels inside and outside of the Post Office, are shown in our illustrations.

At the commencement of the Parcel Post with Belgium, several cages of live birds were received from that country, but the Belgian authorities were requested to prevent any more being sent. On other occasions a live pigeon, a live fowl, and 150 live frogs, to say nothing of snakes and bees, were detected and stopped in transit through the post from different countries.

A somewhat curious incident happened in a post office in Gloucestershire last year, in consequence of leakage from a tin of essence of lemon sent by parcel post. A swarm of bees, attracted by the syrup, entered the office by a window and settled on the spot where the essence was spilt, and although every effort was made to eject them, the bees continued to frequent the office for a fortnight. Another time a packet of live mice was stopped as contrary to Post Office regulations, and the addressee being communicated with, took a journey of upwards of forty miles to obtain the mice.

A box once arrived at Greenwich by Parcel Post, and as the strangest of noises proceeded therefrom, it was opened by the Postmaster, and found to contain a large screech owl, in a very exhausted condition. It was carefully fed, and soon recovered, and was then forwarded to the owner by railway.

The oblong box which has attracted the group depicted in our illustration is no doubt suspected of containing something of more than usual interest; but whether it be "fish, flesh, or fowl," is a matter which the artist has somewhat unkindly left to be supplied by our imagination.

We must reserve to some future occasion a detailed and historical description of one of the two other great departments of Post Office work—the Postal Telegraph system. Of the Money Order Office we need scarcely speak, nor yet of the useful means of remitting money which is supplied by postal orders. But this series of Articles would hardly be complete without a few words to call the attention of old and young amongst our readers to the vast and widespread opportunities for saving, and encouragement to thrift, which are afforded by the Post Office by means of the Post Office Savings Bank.

Every child who has a penny given him, or who can earn and save that sum, has only to buy a postage stamp, stick it on a form which can be got at any post office, and when the stamps so saved amount to twelve, he can open an account with the Post Office Savings Bank, which may, if he continues his course of thrift, develop into quite an important investment by the aid of the Post Office, in consols.

Any person desiring to invest a sum between £10 and £100 in Government Stock can do so through the agency of a Savings Bank at a trifling expense, varying from 9d. to 2s. 3d., and have the dividends collected free of further charge.

Begun in England in 1861, this noble institution has spread and taken root in almost all the principal countries of the world. In Great Britain, during the quarter of a century it has been in operation, the deposits have risen from £1,698,221 to £50,874,338. There are now altogether

no less than 8,351 Post Office Savings Banks open in Great Britain and Ireland.

One of the most remarkable and gratifying features indeed in the history of the Post Office Savings Bank, is the effect which the example of England has had on encouragement to thrift in other countries, and especially our own colonies. Delegates from the latter have visited the Bank, and, by personal investigation, learnt details which they have managed to graft into their own post offices. Canada, the Cape of Good Hope, New South Wales, New Zealand, Queensland, South Australia, Tasmania, Victoria and Western Australia, Austria, Belgium, France, Germany, Hungary, Italy, Sweden, the Netherlands, and Japan,—all have their own Post Office Savings Banks.

It is in a great measure to Mr. Gladstone that we owe the Post Office Savings Bank, though not the originator. The first definite scheme was prepared by Mr. Chetwynd and Mr. Scudamore, Post Office officials. Mr. Gladstone warmly advocated the idea in Parliament, when he was Chancellor of the Exchequer, and succeeded in passing an Act in 1861, "To grant additional facilities for depositing small savings at interest, with the security of the Government for due repayment thereof." For a long period the work was done by temporary clerks, paid in the first instance so much an hour, and ten by the day. Its establishment now consists of controller, assistant controller, 3 chief clerks, 9 principal clerks, 41 first class, 108 second class, 105 third class, 275 lower division clerks, 291 boy clerks and copyists, and 275 female clerks, or a total clerical force of 1,109 persons, exclusive of messengers, etc.

The employment of female clerks was initiated under the auspices of Lord John Manners, in 1875. Candidates were then nominated by the Postmaster-General, who generally gave the preference to the daughters or near relatives of deserving Post Office officials; and the examination, which was a necessary preliminary to appointment, was merely a qualifying one. Subsequently the whole of these appointments were thrown open to public competition, and this ordeal must now be passed by all new entrants. The female staff is controlled by a lady superintendent, who is paid a salary of £215, rising by £15 a year to £400, aided by an assistant superintendent, who receives a fixed salary of £200 a year. The staff itself is composed of first and second class clerks, the respective scales of pay being £120 increasing by £10 per annum to £170, and £85 by £5 to £110.

Every effort is made to bring the advantages of the Post Office Savings Bank to the very doors of the public. During the hop-picking season, when hundreds of the poorer classes are employed in country districts, clerks are sent down to central points to collect deposits on the days when the hop-pickers are paid, and many a shilling is saved, and thus made the nest egg for a rainy day. It has been said that that man is a public benefactor who makes a blade of grass grow where grass never grew before. But they do a far greater work who sow the seed of thrift and self-denial in human hearts.

(*Continued—page* 806).

THE STORY OF JONAH.

By the Rev. F. B. MEYER, B.A., Author of "Christian Living," "Elijah," "Israel," etc., etc.

PART V.

NINEVEH AT LAST.

HEN Jonah reached his home in Gathhepher, a great shadow must have lain upon his soul. Would God ever use him again? He had often been used. His soul had expanded as he listened to the word of God, and drank it in, and gave it forth again to men. It had been his meat and drink to do the will of God; but perhaps those happy days had passed away for ever. Never again would he be employed in that honourable work which he had so shamefully abandoned. He must have felt as Peter did in after days, when he had denied his Lord and forfeited all right to His service. But God does not cast away for one offence or many. He mercifully fetches back the truant, and restores the thrice denier, and uses them again in His work; and so it is written, "The word of the Lord came unto Jonah the second time."

There is a remarkable alteration in the charge given to Jonah. In the first instance it ran thus: "Arise, go unto Nineveh, that great city, and cry against it; for their wickedness has come up before Me." But now it ran thus: "Arise, go unto Nineveh, that great city, and preach unto it the preaching that I bid thee." In the first case he knew precisely the mind of the Lord, and the message he would have to speak when he reached his destination; in the second case, he did not know what he might have to say. He was required to put himself unconditionally into the hands of the Lord, and was treated more as a servant than as a son. This was, no doubt, intended as a test for the completeness of his obedience.

"*So Jonah arose, and went unto Nineveh, according to the word of the Lord.*" It was a long, long journey. Day and night for six weeks he would have to traverse the burning sands; but hard though it might be to his feet, the journey was easier to his soul than that swift flight to Joppa. It is a hundred times easier to go to Nineveh, according to the word of the Lord, than to go to Joppa against it. The one may be a thousand miles over the desert, the other thirty miles down hill, but the latter is the hardest, and the costliest too. At last Nineveh was reached. As we have seen, it was a vast city. The mounds which had hidden it for twenty centuries have lately been opened and found to hide remains of colossal size, fortifications, palaces, and temples, human-headed lions and bulls twenty feet in height—vast tracts of territory littered everywhere with remnants of the mighty past!

How abashed the prophet must have felt as he passed under those stupendous walls, on which two or three chariots could easily drive abreast; soldiers accoutred with armour made familiar to us by the *bas reliefs;* gorgeous equipages and horsemen which rattled through the streets; royal and sacred edifices, covering acres of ground, and rising, platform on platform, terrace on terrace; on all hands the signs of trade and commerce, wealth and luxury, pleasure and wickedness. How insignificant compared with these was the lonely prophet! Had it not been for the memory of the storm and of his miraculous deliverance, surely he would have flinched from the difficult task with which he was entrusted.

He immediately opened his commission, and at frequent intervals his warning voice was heard, rising amid the hubbub of the streets and the murmur of the market-places: "Yet forty days, and Nineveh shall be overthrown!" We must not, however, suppose that Jonah did nothing more than predict coming judgment. This was indeed the key-note of his appeal, but in addition he must have related some of the incidents of his own marvellous experience, for our Lord says Jonah was a sign to the Ninevites; and how could he have been a sign, if they did not know his wondrous story? Besides this, he probably expatiated on the character of God, that He was merciful and gracious, longsuffering, plenteous in goodness and truth; else it would have been unlikely that these Pagans should turn to Him with such hope in His mercy.

Mark the word which depicts *the prophet's manner*, "he cried." His tones were earnest and impassioned. No one could mistake his sincerity; his pathetic accents, his flowing tears, his solemn manner betrayed the intensity of his anxiety. Oh, for many such in this day of smooth speech, to cry and lift up their voice like a trumpet, to show to the house of Jacob their transgression, and to Israel their sin!

For one whole day he prosecuted his work, pausing not for weariness, waiting not to discover the effect of his words, passing through the city like an apparition, come they knew not whence, going they knew not whither.

The effect was marvellous. In a moment the hush of an awful silence fell upon the hum of busy voices; the garlanded processions of marriage and mirth halted in dismay; the tides of human life suddenly stood still,—business, pleasure, politics, everything was left; and around the prophet

the crowds gathered, following him from street to street, not arguing, or disputing, or questioning, but convinced by the warning voice of their own consciences, that this man spoke the truth, and uttered the penalty which their crimes and violence deserved. In that brief interval his work was done. There was no need of him to perambulate the remainder of the city. Like wild-fire spread the news, every man passing to his neighbour the words, "Yet forty days and Nineveh shall be overthrown."

At last the tidings reached the court—"for word came unto the King of Nineveh." Instantly the state council was summoned, and a proclamation was issued by the lips of the royal herald that the whole of the population should clothe itself in sackcloth and fast, and turn from evil, and from violence, and cry mightily unto God; in the hope that God would spare the doomed city. The royal edict was immediately and widely obeyed. Every one put on sackcloth, from the greatest of them even to the least of them. How impressive must that spectacle have been, a whole city arrayed in mourning! Half a million of human beings engaged in prayer!

On this remarkable spectacle of the repentance of Nineveh, our Lord founds one of His most impressive appeals: "The men of Nineveh shall rise in judgment with this generation, and shall condemn it: because they repented at the preaching of Jonah; and, behold, a greater than Jonah is here." The cogency of this argument is evident. Jonah was the servant, Jesus the Son. Jonah spoke one word, Jesus preached for three years. Jonah wrought no miracles, Jesus did more miracles than could be recounted in many Gospels. Jonah was a messenger of wrath, Jesus told of mercy as well as of judgment. Jonah spoke to Pagans without a sacred past, Jesus spoke to people whose past was lit by a long and shining succession of prophets, psalmists, and kings. But the Ninevites repented, and the Jews capped generations of disobedience by the murder of the greatest of their teachers. How much worse will it be for them at the last!

This has a bearing on ourselves. There are Ninevehs to-day, who repent at the preaching of Jonah, whilst there are myriads of our own countrymen who reject all appeals to turn to God and live. Beware! lest you be included in these, and suffer a heavier woe.

There is a remarkable verse at the close of this chapter—"God saw their works that they turned from their evil way." God was on the outlook, on the watch,—as a keen observer He looked eagerly to see if the barren fig-tree would bring forth fruit meet for repentance, and when He saw that they turned from their evil way, He turned and "repented of the evil which He said He would do unto them, and He did it not." Can God change His mind? Is He a man that He should repent? Is He not without variableness or shadow of turning? Certainly. God is always the same, and deals with men on invariable principles, and if He changes His method of dealing with us, it is because we have changed our attitude towards Him. God's dealings with us are precisely conditioned by our bearing towards Him. "With the merciful Thou wilt show Thyself merciful; with an upright man Thou wilt show Thyself upright; with the pure Thou wilt show Thyself pure, and with the froward Thou wilt show Thyself froward." Wouldst thou experience a blessed change in God's dealings towards thyself? See to it that thou turn, and repent, and alter thine entire attitude towards Him. He is keenly observant, and will reciprocate thy first movement of penitence, by an instant outburst of mercy.

HOW PERCY ARMITAGE KEPT THE FAITH:

A TALE OF THE SIXTEENTH CENTURY.

"GOD send thee grace, my son, and make thee true and good, and deliver thee from the errors of popery! Obey thy father, and read thy Bible; so shall we meet hereafter in Paradise."

In answer, the child—a fair, bright boy of six summers—threw his arms round his mother's neck, and embraced her passionately.

They were the last words he heard her speak. The next morning, when he awoke fresh and rosy from his childish dreams, with hushed voices and tear-stained faces, the maidens whispered that the Lady Anne was dead.

* * * *

"Hast heard the news, Sir Richard? They say that at the market-cross a herald has proclaimed that on next Tuesday, being the feast of Our Lady, 'tis her Grace's will that all loyal citizens do attend mass at the Church of St. Thomas."

"The will of the King of Spain more like," muttered the other. "Ay, ay, good Rogers," he said aloud, "I know it well, and methinks 'tis a queer way to test the loyalty of honest men; but I bow to expediency and her Grace's will. Good-morrow to you."

As the speaker withdrew, a lad, seated with his books in an embrasure of the window, looked up in surprise.

"What mean'st thou by expediency, father?" he asked not over respectfully; "wilt go to mass?"

"Ay, Percy, that will I (though 'tis small *will* I have in the matter); 'tis not for Richard Armitage, knighted by the brave King Harry himself, to seem backward in loyalty. And what's more, my son, I'd counsel thee to do the same, if thou sett'st store by that scholarship thou wast speaking of anon; for methinks even in such small things these Spanish priests must have their say."

"So would not have said my lady mother, methinks," muttered the boy, with an angry flush upon his cheek.

"Thy mother was a *saint!* And I fear me, Percy, neither thou nor I have a mind for a martyr's crown," said Sir Richard, fingering the massive gold chain he wore, and eyeing complacently the well-proportioned limbs of his son.

A few days later Sir Richard, with the rest of the corporation in their robes of state, attended high mass in the cathedral church of his native town, across the threshold of which he had not stepped since the popish ceremony of the mass had taken the place of the English service instituted by the late king under the auspices of Archbishop Cranmer.

The fine old edifice was crowded from end to end, till there was scarce standing room; but Sir Richard knelt alone, his son having apparently failed to profit by his well-meant counsel of expediency. And when they met at the mid-day meal, no allusion was made to the events of the morning, for those were strange and fearful days in England! when fathers scarce dare speak on sacred topics to their children, lest they should stimulate in them that dangerous habit—to which youth is ever prone—of thinking for themselves. A fatal error in those perilous times!

* * * *

It was the feast of the Assumption. Here and there in expectant groups the townsfolk stood about in holiday attire, while the cathedral bells rang out a merry peal. Presently the great doors were flung open, and a procession of choristers and white-robed priests filed out, chanting Latin hymns, and bearing on high different symbols of their religion.

Round the market-cross a group of schoolboys in cap and gown, belonging to the grammar school, stopped their boisterous play to watch like the rest, and among them rose the bold, fair face of their ringleader, Percy Armitage.

More than ten years had passed since he knelt for his mother's benediction, and her words (incomprehensible at the time, but engraved in his heart by reason of their being the last), had been little regarded. True he was, indeed, as it was his nature to be; but for the rest—he obeyed his father when it suited him, and if he read his Bible at all, it was only to please good Mistress Margery, who was to him, next to her daughter Bessie, the dearest friend he had in the world.

"Methinks," said Percy in a half-jesting, half-mocking tone, as the long procession slowly passed—a figure of the Virgin, richly dressed in blue and lace, held prominently in view—"that grown men should be ashamed to carry dolls."

"You speak over loud and saucily, young master," observed a bystander severely, "of things which are above your comprehen-

sion! Silence, methinks, would better become you."

"I did but speak my thoughts," said the lad carelessly. "You must be a stranger to the town, good friend, else would you know that we lads of Barminster have yet to learn that an Englishman's tongue is not his own. Come on, boys; we'll to the bowling-green. We've had enough of shaven crowns for one day!" And with a wild whoop the group broke up, following their leader like a flight of swallows, and scattering all before them as they ran.

The stranger looked angrily after them. "Father Bourne is right," he muttered; "'tis time such scandals were put a stop to. Her Grace is well advised to deal more strictly with these free burgher towns! Will the young bantam crow so loud, I wonder, when he stands before the Queen's commissioners? Yet, by the rood! he's a proper youth. 'Tis for his soul's health I'll speak of it; 'twere a sin to leave him in his ignorance."

* * * *

The Town Hall of Barminster is crowded to suffocation, for a special court is sitting, appointed by the Queen to try three men accused of heresy. Upon two, sentence has already passed, and the third, a mere lad, has been found guilty; but the judge's words are arrested on his lips, as, pale and haggard, the portly form of Sir Richard rises to plead in agony, mercy for his only son.

"Surely, gentlemen," he says in hoarse, broken tones, "you would not condemn a mere child for words spoken in careless jest! words which doubtless he did not mean."

"His words were the more contumacious that they were spoken in bravado by one so young," was the cutting reply. "They have not been disproved, nor has he shown any disposition to retract them; otherwise, the Church is merciful, and we might deal more leniently with him."

There was a sensation of relief among the audience at the suggestion.

"Ay, ask him to retract," said more than one eager voice in the crowd, and a murmur of applause followed before silence was again restored.

But Sir Richard did not press the point. One glance at his son's face, set with that obstinate look of determination an unjust punishment always aroused upon it, warned him that more harm than good would be likely to ensue if he did so. He trusted rather to his money and influence to get him a hearing elsewhere, and, almost crushed by the public disgrace thus brought upon his name, he sank speechless upon his chair.

Then on Percy Armitage, as on the other two, sentence was pronounced—sentence of *burning!*

A thrill of horror ran through the assembly. Men looked blankly at one another, as though doubting the evidence of their senses. Women fainted, and more than one shrieked aloud, as though the inhuman order were already being carried out.

Percy alone stood as if entranced, hearing nothing but the dreadful sentence, seeing nothing but the unrelenting face of his judge.

Then, for the first time, terror seized him; he looked round bewildered and amazed, conscious, alas! too late, of the greatness of his peril. Was he mad, or dreaming? What did it all mean?

"Brave lad! Well done! For thee is reserved a martyr's crown."

The words were whispered in his ear, as for a moment he stood huddled up among a group of foreign soldiers in the doorway. He turned and recognised the wan face of one of the other prisoners condemned to the same fate; but ere he could reply, they were separated, and he was conscious of nothing more till he found himself alone in the cell where he had already passed some days in dreary confinement. Up till now, boyish indignation at the unjust restriction of his liberty had upheld him, and he had allowed no fear of worse consequences to make him regret his rash words.

He had, he protested, done many wild and reckless things, and had more than once by his boisterous pranks made himself amenable to the law. For which of these was he now, for the first time, to see the inside of a gaol? A reprimand from his schoolmaster, or a small fine (unmissed from his father's well-filled purse), had sufficed on these occasions to satisfy justice. And now was he to be treated as a *criminal* for a few foolish words?

"Retract!" not he! His tongue was his own, and he would stand on his right as a freeborn citizen to use it as he chose!

So in youthful bravado he talked to the priest who was sent to counsel him; for in those few days before his trial he had not been left without a loophole of escape. And Father Ambrose, who had come to him in a conciliatory spirit, prepared to show him the sin of his blasphemous words, left him in anger.

"This is mere obstinacy," he said. "The judges who will be sent to try you, know nothing of the rights of freeborn citizens. You will be tried on a very different charge. And mark my words, foolish boy! you risk your life for a cause you are quite ignorant of. Thy mother, as is well known, was a heretic, and thy father is esteemed as little better; but as for thee, thou hast no knowledge of the matter at all, else would'st thou know, my son, that a spirit of meekness is inculcated by all religions alike, whether of the true faith or not."

But Percy heeded not his words, his head was too full of his own injuries.

They returned to him now with double meaning as the key creaked in the massive lock, and he was left to contemplate his fate.

"This is mere obstinacy," the priest had said. "Thou shalt have a martyr's crown," said the stranger in the court. Which was right?

A *martyr!* But he had no wish to be a martyr. To *die! He*, the head boy in the school, and the examinations coming on! To leave the merry meetings at the bowling-green! His dogs, his falcon, which was just learning to peck from his hand, and—*Bessie!* No, it was a mistake; he *could not* die. It was too hideous even to think of. He would take back those senseless words. And in his agony he flung himself against the door and shook it, in the energy of despair calling aloud that he would do all that was required of him.

So passed the evening of that fatal day. At length, quite exhausted, he flung himself upon his low, uneasy bed. Then nobler and less selfish thoughts came to him—his mother, the cause she loved, and for which already many a brave man had yielded up his life, and with them a humiliating sense of his own unworthiness. He was not *fit* to die; he *dared not* die. If the sentence of a man was terrible, what would that other sentence be when he should meet his heavenly Judge?

The night was spent in mental torture such as falls, thank God! to few such striplings; and when the gaoler came next morning, he found his young prisoner hollow-eyed and deadly pale, terribly unlike the high-spirited lad of the previous day.

Percy had made up his mind to sue for pardon, and that in itself had cost his pride a fierce struggle. He meant to have entreated the man to gain him another interview with Father Ambrose; but when he tried to speak, his parched lips refused to utter a sound, and before he could make another attempt, the gaoler had gone.

He had let his one chance slip! In the confusion of his mind yesterday, he had not noticed when the terrible sentence was to be executed; even now, for aught he knew, they might be collecting the fatal faggots!

With a groan he sank upon his knees, sobbing aloud in his despair, "God, be merciful to me—a sinner!" Then, too inert for further thought, he flung himself upon the bed, and relapsed into a state of semi-unconsciousness.

He was roused by the key grating in the lock. Starting to his feet, he gazed in horror at the door. Perchance even now they might be come to take him to his doom!

The door opened and closed again, and before him stood (oh, most blessed relief!), wrapped in her mother's long, grey cloak, with the hood drawn closely over her face—Bessie!

In another moment she was in his arms, clinging to him as if she would never let him go, and pressing warm kisses on his cheek. Bessie, who was wont to be so coy, and so timid in her advances! In the bliss of that moment the horror of the past night fled away, and nothing but the present happiness remained.

Although so young, Bessie and he had (after the fashion of those days) been betrothed for many years. And though it was probable no closer tie would ever bind them—for circumstances were altered since the day when, in the presence of King Hal himself, the dainty little daughter of the Queen's favourite maid of honour was betrothed to the fair young citizen, whose father had just been dubbed a knight—they were as brother and sister, and all in all to one another.

Bessie's father had held a high place in the court of the young King Edward; but when, on the accession of his sister, other courtiers strove to win the favour of the new sovereign by concealing their dislike to her religion, he quietly resigned his seals of office, stripped himself of the wealth which would have marked him out for a ready prey, by large donations to different charities, and sought with his wife and child obscurity in his native town, where, unmolested, he might worship God according to his conscience.

Sir Richard had looked askance at such a wilful loss of the good things of this life, but could not on that account forbid his son free intercourse with his former friends, and the headstrong boy had, since his mother's death, found in Mistress Margery a second mother. He was as much at home in her little parlour, where he would watch

her bake and sew, as Sir Richard said, "like any serving wench," as in his father's stately mansion, learning at the same time unconsciously many a lesson of simple courtesy, and yielding to the sweet goodness of her nature, the reverent, passionate homage of his boyish heart.

In the deep emotion and transport of their meeting, it was some minutes before either of the young people spoke; then Bessie exclaimed in eager accents,—

"Oh, Percy! *my* Percy! I am so proud of thee to-day. I knelt to Sir Richard till I got him to bring me, that I might tell thee so. He waits for me without, for his grief is such, he could not face thee. Yesterday, dear Percy, all through that dreadful trial, dear mother knelt and prayed for thee, and when Wilfred came home and told us how bravely you had stood, and uttered no word, nor even sickened when they read the dreadful sentence, she rose and wiped her eyes, and said, 'I thank God my prayer is heard—our boy is true.' And dear father is so encouraged by it. He says he was beginning to lose heart, for all seemed to be forsaking the right way, and now he says he was like Elijah, faithless for nought, since God has shown He can raise up witnesses for the truth, even though they be but wild striplings like thyself! And see, Percy, I have brought thee this book, thy mother's own Bible; thou must hide it well, lest they take it from thee. But first will I read thee the verse dear mother has marked for thee."

And with shining eyes, but trembling fingers, she hastily turned over the leaves to the 2nd chapter of Revelation, and read with faltering tongue these words:—

"'Fear none of those things which thou shalt suffer: behold, the devil shall cast some of you into prison, that ye may be tried: be thou faithful unto death, and I will give thee a crown of life.'

"Oh, Percy!" she said, looking up with loving eyes shining through a mist of tears, "does it not seem as if they had been written for thee? I envy thee, dear Percy; fain would I such words were true of me."

But the boy's face showed no answering enthusiasm.

"Bessie," he whispered hoarsely, "thou knowest not what thou sayest! Martyrs are good and holy men. I could not be a martyr if I would; and I would fain *live*, Bessie. 'Tis hard to die so young."

She looked at him in sorrowful surprise.

"But what canst thou do, dear Percy? 'Tis too late," she faltered, "to think of that."

"No," he said huskily, "not too late *yet*, Bessie. I can retract my words—I can *recant*."

She recoiled from him involuntarily, her blue eyes dilating with a consternation more voluble than words.

"Nay, Percy," she said at length with gentle firmness, "that canst thou not do. They would make thee kiss the crucifix, and go to mass, and confess thy sins to a priest, instead of the dear Saviour. Could'st thou do that, Percy?"

He shook his head. "I had not thought of all that," he faltered. "No, Bessie, that could I not do." And sinking down upon the bed with a despairing gesture, he buried his face in his hands.

"I'm not a coward, Bessie, as thou knowest," he said huskily, "yet am I afraid to die: I am not good, as you would have it. Dost remember how last winter I fired farmer Blake's stack of wheat? And how I helped the lads to duck the miller in his own pond? If I die, it will do no good. Folks would point the finger at a faith that had so poor a champion. And I shall be acting a lie! For how dare I pretend to be a martyr for the truth, when I have never tried to live for it? My condemnation will be all the greater in another world."

Bessie listened in troubled silence, and for some minutes neither spoke. Percy remained crouching at her feet, his face hidden in his hands.

Presently she laid her hand caressingly on his head.

"I have thought of a plan, dear Percy," she said in her sweet, clear voice. "Be not so cast down; I fear me, my mother would think it scarce maidenly, yet we have done it before now in the masks, and thought no shame. I will bide here in thy place; thou canst put on my cloak, and draw the hood, and stoop, as if weeping, and I will put on thy jerkin. In the twilight none will mark the difference; and thy father is outside, thou canst fly with him. To me it will be joy to die for the Faith, and my dear father and mother will not grudge me for thy sake and the dear Saviour's."

She paused for an answer, but none came. A terrible struggle was waging in the lad's heart, and for once he was deaf to her voice.

"Haste thee, Percy!" she urged; "the hour is almost up. *Dear* Percy, do not hesitate! To die for thee were bliss, but for my Saviour! 'tis an honour I scarce dare think of."

Still there was no reply, as with bowed head Percy faced the awful alternative before him. It was not till the steps of the gaoler could be heard slowly advancing along the stone passage, that he sprang to his feet and took her in his arms. His face was deadly pale, but no longer with despair, and his voice, albeit low and tender, had in it a faint ring of triumph.

"Listen to me, my Bessie," he said, "and mark well my words, that you may repeat them to your lady mother, for I would not have you come here again, Bessie. We must say good-bye to-day; 'twould but unnerve me, and I would not have them think thou hadst ought to do with me. Thou must *live*, my Bessie, and be a daughter to my father; for methinks his heart will be heavy, and the house lonesome without his madcap Percy; he has ever spoilt me, and he has not the comfort you have, dear Bessie. Tell thy dear mother I cannot be a *martyr*, for a martyr, methinks, should not die perforce; but I will play the man, and not shame her at the stake. And tell her," and his voice grew low and reverent, "that I am not worthy to die for my religion, but I cannot forswear it. God is just and merciful. If I ever cherished any doubts before of which was best, I have none now. The Romish Church is cruel and blood-thirsty, therefore has it no part nor lot in the religion of Jesus Christ. I have even now given my life to Him—'tis a poor thing to give; but perchance will He accept of it of His great mercy, and look not on my former sin. Nay, weep not, Bessie; I would not have thee weep. Thou wast proud of me before, and did not fear the suffering then. I would I had been the hero you all thought me; but methinks it was but pride and foolhardiness made me speak, when perchance it would have been more seemly to have kept silence. And you would not have me *untrue*, and pretend it were otherwise. Look up, Bessie, and smile on me once more before we part. Ah! thou canst not, sweetheart; well, never mind, but I would fain have seen thee smile once again."

And with elder brotherly tenderness he wrapped her in her cloak, drawing the hood closer over the beautiful girlish face, lest some jealous eye should see the tears upon it, and as the door opened, he drew her gently towards it, whispering,—

"Be brave, dear Bessie, and cheer thy mother. Tell her that verse is not for me, but I thank her for the precious Book; I shall find others there perchance more suited. Ten days, saidst thou? Why, I shall have time to read it through!"

Sir Richard, looking bent and old, was awaiting her outside. She took his arm in silence, and slowly they retraced their steps.

"What says he? Will he recant?" whispered the unhappy father, who, albeit he had seemed averse to it, had hoped much from this visit.

"Oh no!" she answered reassuringly, though her voice was choked with sobs; "he will not do that. Our Percy would not belie his faith."

The father was silent, wondering at the constancy of the fragile child. He did not dare to say to her that he would fain have had it otherwise.

* * * *

There is a strange stir in Barminster to-day. Since an early hour, bodies of soldiers have been parading the town, and keeping clear a space in the market square, where preparations of a mournful character are going on.

Close to the cross, where a few short weeks ago Percy Armitage stood so proudly, a wooden pulpit has been erected, from which close-shaven priests in long, black robes from time to time harangue the populace, trying to excite them by many base and slanderous calumnies to indignation against the heretics. The prison doors are strongly guarded, but the people sway to and fro outside with almost a threatening aspect, and it is a relief to those in charge when at last the fatal hour strikes, and at the same moment the Cathedral bell begins to toll.

There is a rush and craning of necks to see the prisoners as they are led forth, but a guard of soldiers instantly surround them, and it is not until they reach the market-place, and the guard falls back on either side, that the curiosity of the spectators is satisfied.

In advance of the rest, a priest on either side, with a firm, light step and earnest face, walks Percy Armitage, and on him at once all interest centres, for the other two are strangers, but he is well known to most of those assembled, as the son of a wealthy and much-respected citizen.

In the arrangement of his dress may be traced the loving hands of Mistress Margery, who, with tender pride, has decked out her boy that morning for his "chariot of fire," for so, to comfort her, he would have it called, and his fair curled hair falling on either side of his bright young face forms a pretty contrast to his suit of velvet and fine lace ruffles. That he should step so bravely and look so fair, suits well the policy of the

priests, since the death of this lad, which neither wealth nor youth can save from the vengeance of the Papal See, is meant to strike terror to the hearts of all beholders, and at the same time to humble the rich burghers of the town for their insolent refusal to levy troops for the King of Spain.

The small cavalcade stops close to the market-cross, while a priest, mounted in the wooden pulpit, reads their sentence of excommunication.

During the whole of this ceremony, Percy stands calm and motionless, with downcast eyes, apparently unconscious of the interest he is exciting; but when the priest descends, and the boys from the grammar school crowd forward, he shows for the first time traces of emotion.

"I would fain take leave of them," he says to the priest at his side. "May I speak a few words to these lads who have ever been to me as brothers?"

"If thou wilt acknowledge the justice of thy sentence, thou mayest," is the stern reply.

"That will I do right gladly," is the somewhat unexpected answer, as he springs lightly up the steps of the cross.

For a moment, with flushing cheeks, he looks round on the sea of faces in the distance, then, withdrawing his eyes, fixes them wistfully on the little group in front of him.

"Lads," he says in those clear, ringing tones which have so often stirred the hearts of his young admirers, "I am right glad to see you here. You shall see to-day how a Barminster lad can die. I am permitted to speak to you on one condition: 'tis that I acknowledge here, in front of you all, that what they are about to do to me is just. I will show you presently why I am right glad to do so. When my lady mother lay dying, she bade me be true and good, and read my Bible; so, she said, should I one day meet her in Paradise. You lads who know me, are witnesses against me that I never kept her counsel; therefore do I deserve all that has come upon me. I ever led you into mischief; I thought more of fun and frolic than of the things that belong to a man's true life. The Bible, God's own Book, I scarce looked into. I pray you follow me not in this——"

"'Tisn't for those things they're burning you," shouted a gruff voice from the crowd, and a tall butcher fellow, who owed him a sound thrashing, lost all control over himself, and cried,—

"Maun we stan' here like a flock o' silly sheep, an' see the likeliest lad i' the town made matchwood of?"

"A rescue! a rescue!" shouted the schoolboys, and pressed forward; but at a sign from their officer, a party of Dragoons rode forward and dispersed them quickly with their long pikes, while the intrepid young orator was dragged ignominiously from his prominent position.

Then the prisoners were hastily bound and fastened to the three stakes prepared for them, dried faggots being placed on every side.

"Wilt thou confess to a priest, my son?" were the last words addressed to Percy ere the pile was set on fire.

"Nay, that have I already done," was the fearless reply. "My Priest dwelleth in the heavens."

And then he smiled, for his eye fell on Bessie pressing forward with wistful face on her father's arm. And when he smiled, she answered him with one of her brightest, and his last wish on earth was fulfilled!

He did not see what the effort cost her, as she fell back fainting in her father's arms, and was carried through the crowd; for the flames were already hungering for their prey.

Rome, in her cruelty, had been merciful that day, for round the lad's body they had fastened a small bag of gunpowder, and his bright face had scarcely lost its smile of joyful recognition before his spirit was with God!

"THE RIBBON OF BLUE."

IN a recent Periodical, the following lines appeared, "from the pen of a Clergyman":—

"The ribbon of blue, the ribbon of blue,
And what, O Christian, is that to you?
Is it you wish the world to see
How self-denying you can be?
Then why not wear a ribbon of black,
To show that on sin you've turned you back?
And why not wear a ribbon of white,
To show to the world you're a child of light?
Nay, why not wear ribbons of every hue,
To show that no evil clings to you?
Christian, live Christ in every act,
And you'll need no badge to show the fact."

We are glad to insert the following lines as an answer:—

"The ribbon of blue, the ribbon of blue,
Much, O Christian, is that to you!
It is that the tempted soul may see,
It will find a helper and friend in thee;
It is that the tempters all may know,
You will shun their wiles as a hateful foe.
To strengthen the timid brother's heart,
To show to the weak that you take their part;
It speaks of the principles you hold fast,
It is *nailing your colours to the mast;*
That's why you wear the ribbon of blue,
That, Christian, is what it is to you."

LETTICE DOWNING.

WELL WORTH READING.

THE more you read God's holy Word, and the more you meditate upon it, the more you will be astonished with it. He who is but a casual reader of the Bible does not know the depth, height, length, and breadth of the mighty meanings contained in its pages. There are certain times when I discover a new view of truth, and I put my hand to my head with astonishment, saying, "Oh, it is wonderful! I never saw this before in the Scriptures." You will find the Scriptures enlarge as you enter them; the more you learn them, the less you will appear to know of them, for they widen out as you approach them. Especially will you find this the case with typical parts of God's Word. Most of the historical books were intended to be types, either of the Dispensations, or experiences, or offices of Jesus Christ. Study the Bible with this key, and you will not blame George Herbert when he calls it not only the Book of God, but the god of books.

A GOOD LIGHT.—If you are looking at a picture, you try to give it the advantage of a good light. Be as courteous to your fellow-beings as you are to a picture.

DOWN THE THAMES IN A DOUBLE CANOE.

SUMMER in England is very beautiful, but, alas! how all too short; and in this delightful season, old Father Thames is the playground of thousands. From where the spires of Oxford rise amongst the meadows at the confluence of the Isis and the Cherwell, down to Battersea, where, on its now swarthy bosom, pleasure yields the place to toil, the locks, the reaches, the quiet backwaters of the noble river re-echo through sunny weeks to mirth and merry-making. No other nation gets so much fun out of any other river. The streams bisecting other capitals may be lovelier, nobler, fuller of historical associations, but none are enshrined in the hearts of the people as is the Thames in the breasts of Englishmen—ay, and of Englishwomen too. We are an aquatic nation, and we take to the water as naturally as ducks, directly the fine weather sets in, and the gentler sex with almost as much avidity as the stronger. Nowhere, but on English rivers, and on the Thames in particular, does one see so many little active girls pulling about for sheer amusement, clad in the most workman-like of costumes, and totally regardless of sunburn and freckles.

We had spent many happy hours on the river in rowing boats and launches, had made merry at many of its regattas, and picnicked in some of its loveliest nooks. But one beautiful August, when back again in old England, after wanderings in other climes, the gipsy fit came strongly upon us, mingled with an intense desire for quiet English scenery. Naturally our thoughts turned towards "the river." But the means of locomotion?—we were vagrantly inclined,—and felt as probably feel the dwellers in the East London slums, when they pour out in thousands on their annual picnic to the Kentish hop-fields. A rowing boat was too cumbersome for only two; a launch was too prosaic, and lacked independence, as it necessitated a stoker; a sailing boat unreliable, considering the variableness of our English climate, for inland sailing; a house-boat too stationary and slow. Then some one or other suggested: "Paddle your own canoe."

Now Tom *had* paddled *his*, for years, with the magic initials R.C.C. inscribed upon her bow. I, too, had once gone in for "canoodling," as we called it, on a far-off tropical lake, and had actually started, and been ignominiously defeated, in a quarter of a mile canoe race for ladies. So I did not hail the suggestion with much alacrity, until I was informed of the existence of such things as double canoes, with sailing gear attached, in which my share of the work would be optional.

Thus it was that we became the proud possessors of the *Albatross*. The little craft was built of mahogany and teak, some twelve feet long by three broad; I cannot remember the dimensions quite accurately She carried a lateen sail forward, and a little mizzen aft. She was so arranged that the legs of the person seated forward, went under a hatchway at the bows, and those of the person behind, extended to the former's back-board, or even on either side of it. In a locker under a lid aft, we placed a waterproof bag containing a change of clothes, and our cooking lamp and provisions. A little shelf ran round under the edge of the bulwarks, and formed a convenient resting-place for maps, and books, and tumblers. After some experience of camp life in more reliable climates, I declined to sleep under canvas on the river bank, even during August in England. But, except that we were to put up at riverside inns for the night, the expedition was to be a perpetual picnic. We took with us some tinned soups, bacon, potatoes, biscuits, a bottle of Harvey sauce for flavouring, and tea, laying in daily a fresh stock of bread, milk, meat, and soda-water, for the weather was hot. Our little cooking lamp was fed with methylated spirits, and our utensils consisted of a soldier's regulation tin canteen, with tray lid; a little tin kettle, and a few iron plates. I further armed myself with a very shady hat, and a mackintosh cloak, and sheet for spreading on my knees, and protecting me from the everlasting drip of the paddle. For food for the mind, I had a book or two tucked away on the ledge by my side. One of them was the "Memoirs of Madame de Remusat," lady-in-waiting to the Empress Josephine. And here I may mention what a mistake it is, on a journey where space is an object, to take light reading which is unreadable for the second time. Something solid is needed as a stand-by, and now-a-days all the best English and foreign classics are published in cheap commodious form, within every one's reach.

Salter's men pushed us off from the stage of the boat-building yard of that name, at Oxford, and launched us fairly on the bosom of Father Thames. Past the Norman tower of Yfley, past Sandford, picturesque mill and lock, along under the leafy woods of Nuneham. Ah, what memories of cheery picnics in the May term does not the name awaken! Then came the rain, and drove us for shelter to share the railway bridge at lunch time with some navvies, and necessitated brewing hot coffee for the inner man.

Then on again we went, and the rain went on too. The old-world little town of Abingdon looked damp, and sloppy, and sleepy; all the bustle and life, what there is of it, of these river-side towns, lies toward the station; the river is no longer the highway, and the very coal-sheds and wharves seemed to yawn upon us. The summer's evening dragged out to its weary end, all tears. Misty were the meadows and the woods; wet through were we, the water running down us, till we verily sat in pools. Past Dorchester, with the Abbey ruins to the left amongst the trees, past the mouth of the brook which gives the Thames its name, till, oh! joy, we shot under lofty Shillingford Bridge, and saw the lights of the inn gleaming on the hill above, and betokening warmth and dryness. We put the *Albatross* safely to bed in a shed.

The next morning was lovely, and we brewed ourselves some coffee in our room, and were off very early. The lock-keepers were hardly up, and some miles further down, the early bathers at Wallingford were enjoying their morning dip. There was a battle at Wallingford in Stephen's days, when the Empress Matilda was taken prisoner. Tradition says that she escaped by crossing the frozen river at night, dressed all in white, the sentries taking her for a white cat.

We landed and cooked our breakfast on the bank, coffee and eggs and bacon. Stress of weather last night had driven us to partake of tea at the Shillingford inn, but never again, during our cruise, were we guilty of a meal under a roof. As the haze lifted over the river, a breeze got up, and we set sail, not to be furled again, as it turned out, all through the long day. So, as our fairy bark sped down the stream, we had leisure to survey the scenery.

Hills loomed on either side, bare, bold downs, and gradually closed in till they overhung the river in the beautiful gorge between Streatley and Gomig, a spot beloved of riverside artists. It was glorious, lying back idly on cushions, to watch the fleecy clouds sail by as stately overhead in the deep blue sky as did the *Albatross* in the broad stream which mirrored the green woods. All this stretch of the river is as beautiful a one as can be found in its course, and less hackneyed and crowded than the lower Thames.

The very name of Pangbourne recalls its loveliness. But in this hilly country there occurred constant locks, which meant a rousing up and a little paddle work. The *Albatross* was too heavily laden to be carried; it might strain her back, and it is only the more frequented locks in the neighbourhood of London that are provided with rollers. So, as we approached, the lock-keeper's children playing on the brink (how comes it that whole families are not drowned?) called their father, who set a vast machinery in motion for the benefit of our tiny craft. The great gates yawn, but stifle their yawn. We slip in through the opening, they close behind us, and we "sink with all we love below the verge." Woods, houses, meadows disappear; the world grows all blue sky and green oozy walls. And then, released from her slimy prison, with sheets tightened and paddle stowed, away speeds the *Albatross* once more.

Past Mapledurham, with its tumbling weir, its osier-covered islets, its quaint red-brick mansion peering through the trees; and then Reading Plain opens before one. The biscuit manufactory towers on the

horizon, and the breeze blows true. We lunched at Sonning, on a cozy little island, within earshot of the music of the weir. The breeze freshened, and we sped under the Shiplake heights and down the famous Wargrave reach in our best style. Wargrave is haunted both by artists and the gilded youth from the great army crammer's in the village. The signboard at the inn, of St. George and the Dragon, is the work, the passing freak, of an R.A.

We were now on familiar and classic ground. At the Temple Island we passed on to the course over which so many spurs have been won at Henley Regatta. But how different the old town looked! The river bank was deserted, save for lovers taking a twilight stroll; the bells were silent in the church tower; no carriages and coaches blocked the bridge. Where were the riverside garden parties, the close phalanx of house boats and launches? Nevertheless, Henley was far from being asleep, as we found to our cost. It was the eve of Bank Holiday Sunday. Excursionists and boating men crowded the streets. The landlady of the Red Lion would not look at us, as we had not telegraphed for beds, and we had a good hunt for lodgings, feeling very thankful indeed that the galley of the *Albatross* rendered us independent of dinner.

The next day was Saturday, and we started, as usual, early. It was already hot, and there was no breath of wind. Evidently we were to do our full share of paddle work that day. Here let me observe, however, that one of the great advantages of canoeing is that paddling is not nearly such hard work as rowing, for a continuity—at least, so I have always found it; and I attribute this to the fact that the backboard to the seat is such a support to the spine, whereas in rowing you have no such rest. Also, in a canoe you sit much nearer the water.

We breakfasted in the Medenham meadows, opposite the picturesque ruins of the Abbey, where Wilks and his boon companions, the monks of Medenham, made merry in the last century. After passing through Temple lock, with its green islands and lawn, we soon found ourselves at Bisham. Here there is an old Manor-house close to the church, which is said to have a ghost. But this latter statement we had no time to verify, and indeed I should be inclined to fancy that the crowd of Bank Holiday makers on the river have long ago scared it away.

The river is broad at Marlow Bridge. The reach at Cookham is one of the most beautiful on the Thames. Wooded islets divide the stream into a labyrinth of arms; it is often difficult to know which way to take. On the right, the lovely woods of Cliefdon rise tier above tier. We landed and lunched in their shade — lunch, a salmon cutlet, with an omelet to follow, all concocted over the spirit lamp in the little tin pannikin by him who was—

> "The mate and the captain bold,
> And the *chef* of the *Albatross*."

I think we both felt inclined for a noontide *siesta* in the Cliefdon woods, but it was out of the question, if we were to reach Staines that evening. So we buckled to again to our paddles, despite the heat, past Taplow and Maidenhead, and Bray Church, memorable for its vicar in the song. It was at Bray lock that an accident occurred which very nearly made an end of the *Albatross* and its crew. It happened in this way. The weir stream diverges from the lock stream, only a very few yards from the lock. The summer had been a wet one, the river was very full, the weir gear was up, and the current running very strong. I was deep in "Madame de Remusat," when, on looking up suddenly, I was horrified to perceive that the stream had taken us to the wrong side of the "danger" board, stuck in mid-stream, and that we were rapidly being carried down towards the weir. I hastily threw aside my book, my mackintosh, and the hatchway over my feet, so as to be prepared for a flying leap as we went over, and set to work with all my small strength, paddling on the same side as Tom. But we might as well have sat still and done nothing. We could not make the smallest headway against the current, which was running like a mill-race, and the weir roar came nearer and nearer.

There was yet a chance. On a spit of land, jutting out into the stream, sat three fishers, whom our shouts aroused to our perilous position. If we could by any chance run the nose of the canoe ashore on to the point, we were saved. We redoubled our efforts. Before, we had thought ourselves tired with our long day's work, and were taking things easy. Now, we paddled as we had never paddled before, and we just managed it. The fishermen caught the nose of the canoe as she tore past them, and hung on like grim death, while I, in obedience to Tom's orders, took a flying leap ashore. When the canoe was thus lightened, they were able to tie a rope to her bow, and tow her round the point into the lock stream. But so strong was the current, that it took her twenty minutes to go up the distance, down which she had shot in a few seconds.

It was a nasty place, that entrance to Bray Lock, and ours not the first accident that had taken place there. One, at least, to my knowledge, had ended fatally, for I knew some of the party in the boat, and another had occurred but a few days previously to ours, for the lock-keeper showed us the shattered remains of the skiff on the bank. The occupants escaped by clinging to the weir piles. I believe that now the authorities have done something to warn people of the danger, and to make them keep less in mid-stream.

At Monkey Island, Tom found himself once more on the pleasant watery playground of his youth. Boveney, Surly Hall, Athnes, the bathing-place, and Brocas Clump in the meadow — all these are classic grounds to the Etonian. And now the stately towers of Windsor rose before us in the summer evening glow, and the watery highway became more and more crowded with craft, as we slipped under Windsor Bridge. Getting through the locks was a matter of time, though most of the boats were going up stream, and we in an opposite direction. At one lock Tom got out in search of refreshment at a riverside inn, and left me to take the *Albatross* through. I soon discovered that behind the lower gates was a dense jam of boats, waiting till I emerged. Very slowly the water lowered, and I went down into the nether world in my little craft. Suddenly, on the verge of my Dantesque vision, appeared an impatient Frenchman, who thus shouted back to his companions in the throng below,—

"Vat do you tink ve are vaiting for? Von lady in von canoe!"

Except Magna Charta Island, with its associations, there is nothing of much interest on either bank after Windsor. The Bells of Ouseley is a quaint sign for a riverside public-house, picturesquely situated at a ferry, and I have often wondered at its origin. "The shades of night were falling fast" when we reached Staines, having that day again accomplished our thirty miles, this time all "collar work," as they say of horses.

We passed a quiet reach, thick with waterlilies—this is my sketch of it.

The following Monday, being Bank Holiday, the river below Staines was in full Bank Holiday saturnalia. It was very fine weather, and the people were enjoying themselves to their hearts' content, making the most of river, woods, meadows, green trees, fresh air, ginger-beer, and oranges. The launches and row boats were laden, and even large steamers, crowded with passengers, came swooping along, swirling the banks, and uttering gruesome hoots of warning at small fry like ourselves, with their steam whistles. When one watched the oarsmanship in most of the boats which impeded these leviathans' path, one marvelled that the most dire catastrophes did not ensue. Merry 'Ampton was at its merriest and our half-day's journey lay, as it were, through one long carnival procession — boats of every size, shape, and build, with as much diversity in their occupants. It needed quite an amount of skill to avoid a collision. I must say we were not sorry to bring the *Albatross* to an anchor at the Royal Canoe Club landing-stage at Twickenham.

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow," "Corbiestanes," "Our Navvies," etc., etc.

CHAPTER XXVII.

IN WHICH THE BURLEIGH FAMILY AGREE TO HUNT THE SUNSHINE.

OLD Mr. Burleigh felt cramped and ill at ease in the small rooms of the Azerley Arms, and his digestion was upset by the inferior *cuisine*.

He had no interests, no occupation—the time hung heavily upon his hands; and yet, though he was completely wretched, he could not tear himself away and go home. He did so once for a couple of days, but the anxiety that he endured taught him better for the future. The fact was, he was suffering a very torment of remorse. Arthur suited him infinitely better than John. Arthur was a reproduction of himself; for that reason there was a strong sympathy between the two, and also something of an antagonism. Mr. Burleigh often found fault with his younger nephew, often disagreed with him, and yet withal they were excellent friends. He was often doubly vexed when Arthur did anything which he called "stupid," because, nine times out of ten, he reproduced one of his own old mistakes; and he told his nephew to maintain a tranquil temper, to be careful in his expenditure, to be calm in his judgments, just because the advice which he administered was that which he himself required.

Toward John he felt very differently; he never knew what the fellow was thinking, he never could be certain how he would act. He had no fellowship with him. And yet he had never had a disagreement with him save one—when John per-

"'You are mistaken, Char, I shall be tremendously rich.'"

sisted in ruining all his prospects by becoming a parson. How bitterly he regretted that one, no one save himself could guess. Each heart knows its own bitterness, and Mr. Burleigh's ached and ached all day long, and every day, with sad regret; for, though he did not understand his eldest nephew, any more than he had understood his twin brother, all the intense love which he had borne that unpractical, romantic brother of his—that brother who had looked up to and gloried in him, all through their school and university days, that brother, who had been to him the poetry of his life—he had, from John's boyhood, transferred to his orphan son. He loved him as he would never love any one in this world again. Mr. Burleigh knew it; he did not deceive himself. If John passed away, a something would perish in his old uncle which would never live again. He knew that *he* should not die—he would live on to all outward seeming the same; he would hunt, and shoot, and ride about his estates, and take the chair at political meetings, and his place on the magisterial bench, as usual; but he would be an old, sad man from that day forward. And here was this precious life slipping away, and as he said angrily to Arthur,—

"For no reason. Dying for nothing, and of nothing."

"I do not agree with you, sir. Jack has done enough to kill two men. Why on earth could he not have let me know what he was after? I'd have gladly come."

"Yes, my boy, of course you would; only you were yachting, you know."

"I could have come back, I suppose," returned Arthur, sullenly.

"Yes, yes, and you would have done so; but what is to be done now?"

"Ah, sir, that is it! If one only *could* do anything! It maddens me to see him sinking away like this. Don't you think we might get him to Burleigh?"

"I wish to God that we could; but Sir James, as well as this country fellow, said that the only chance for him was to keep him perfectly still."

"Perhaps they neither of them understand him. Cannot we have some one else down?"

"Ah!" said his uncle, brightening, "that is a good thought. I'll ride to Castleborough, and telegraph for Gull. We will see what he says. Ring for my horse, my boy."

"Here is the earl, uncle," said Arthur, as he rang the bell, "passing the window; no doubt coming to beg us again to go to the Chase."

"I think, if so, Arthur, that you had better accept; it is churlish to refuse, now Lady Azerley has come back; but for myself, I really could not endure it."

"And am I to leave you alone, sir? besides which, until Jack is better——" And Arthur stopped abruptly.

His uncle put a hand on the young man's shoulder for an instant, and he did not see the ugly wall paper quite so distinctly as usual for two or three minutes afterwards.

Sir William Gull came and went, as Sir James had done. There was nothing to be done. Hope was standing with fluttering wings on the very threshold of all their hearts, ready to depart. One person only never dreamed that John Burleigh was dying. "Why should he not recover?" Lady Susan asked herself. Certainly he had without doubt this *Angina pectoris*, but some people had it even to old age; Sir James had distinctly said so, when she questioned him. She did not very clearly comprehend what it was—of course it had to do with the heart, but, excepting that, John was only weak. Both the great authorities had agreed that if he regained his strength all would be well, and both had said that the conditions were favourable for this, and she persistently shut her eyes to the fact that the longed-for accession of vigour did not come.

They were very happy together. All day she was with him, reading, talking cheerily, sitting by him—his hand in hers—doing for him a hundred little services, and when they were alone, kissing that dear face, which she did not see grow more and more shadowy. He talked gently to her of the things he loved—of Bob Chatteris, of little Mary, of his people, of the kingdom of Christ, and oftenest of all of Christ Himself. Once he spoke of being with Him; but a look of terror came into the eyes which were fixed so lovingly on his own, and as his mother came in at the moment, Susan made an excuse to leave the room. When she returned, he looked anxiously at her, and saw that she had been crying. He motioned to a chair on the other side of the bed, and under the bed clothes stretched out his hand, and took hers in a close, tender grasp. He never spoke of parting again, and she persistently banished the thought from her mind.

It was best so. The depression which his mother and sisters could not resist, would have settled down in the Vicarage, and made the sick-room a sad place; whereas now it was always bright and cheerful. By day Lady Susan irradiated it with her presence; at night, Rebecca Sugden, with calm, cheerful courage, took up the task. Neither would she believe that Mr. Burleigh was going to die. She knew it, as Lady Susan did not, as a fact; but as a fact which was a foe, and might be beaten, and should be struggled with to the very end. Rebecca Sugden was constantly praying, too, not as Lady Susan did, with a determination to trust the great Healer, but with a desperate grasp—a crying out, "Though He slay me, yet will I trust in Him;" and so, even in extremities, He must respond and save. Something drew the women together, and they became close friends without knowing why.

Three more weeks passed. The attacks of pain were neither so frequent nor so violent. The Vicar was taking a little more support; he slept more, he even sat up for hours in an easy chair; but the cold east winds of November were with difficulty excluded from his room, and he felt every change of temperature keenly.

"I have been thinking of the oleanders reflected in the blue waters of Lecco, and of the vineyards near Lugano. I suppose, even now, there will be sunshine there," he said one day.

"Would you like to go to Italy, my boy?" asked Mr. Burleigh, eagerly.

"Yes; I feel as though I longed to be soaked through with sunshine."

"Algiers would be better at this season for that. What do you say, Susan? Our patient could not do without you."

There was hope in the old man's voice as he turned to her. Lady Susan always cheered him. The girl's eyes sparkled.

"Certainly; why could we not all go? John would soon grow strong, 'soaked in sunshine.' What fun it will be. I have never seen an inch of Africa. Think of the Moors, and the donkeys, and the cactus, and all the bright colours—the glow of the whole thing!"

"If I grew strong there, we might go on to Palestine. I have always longed to see it."

"Ah, so we will; and your mother and the girls must come, and Arthur will take all the trouble off their hands. I shall look after *you* myself. I will go and talk it over with them downstairs; we must get out of this changeable climate as soon as possible."

"Oh, John, won't it be delightful?"

"It would be, my darling; yes, it would be—the Holy Land—and to see it with *you*."

"Don't say *it would be;* say it *will be*, dear."

He looked at her lovingly, and then held out his hand and drew her fingers to his lips, and kissed them."

"Not my hand! I grudge my hand your kisses." And she bent her head down to him.

"My wife!" he murmured, as he pressed her lips.

"John, I'm going to say a very strange thing, but you know circumstances change cases. I have been thinking of this ever since I came home, and now that you are a little bit stronger, and we hope are going to get well quickly, I want to say it."

"Then say it, my darling."

"Ah! that is easily told."

"You are blushing; what is it, Susan?"

"Let me whisper it."

"Well?" he said, inquiringly, as she seated herself on the broad arm of his chair, and nestled her head upon his shoulder. "Well?" as he stroked her golden hair.

"John, will you marry me, and then I can indeed go with you as your wife?"

"Your father and mother?"

"I have spoken to them, and they will not refuse."

"You are certain?"

"*Yes.*"

"I ought to say no, but——"

"But it is no use."

"Useless or not, it is *impossible.*"

Then silence fell between them. Time passed noiselessly by, dusk filled the room; then the darkness, which was broken only by the leaping of the fire-flame. The murmur of voices in the study below, came to them; but to be thus close together was enough for them, and they did not stir or speak until the door opened, and Rebecca Sugden said, in her round Yorkshire intonation,—

"I have brought your dinner, sir."

Lady Susan slipped from her perch, and brought forward the little table.

"What is it, Rebecca?"

Rebecca's face flashed into one smile; it was the first time that the Vicar had asked such a question.

"A bit of grouse, sir, and Martha's made the bread sauce with cream."

"How nice! I feel quite hungry."

"Ah, there is the carriage—how tiresome! I cannot stay and see you eat it. Good-night, John;" and Lady Susan bent her head for her good-night kiss. No one, save Rebecca, had ever seen her receive one; but then Rebecca was different from

other people. With a light heart she ran into the study.

"Good-night, Mrs. Burleigh; good-night all! Do you know, Mr. Burleigh, the prospect of the Algierine sunshine has made your nephew hungry; he is actually enjoying his dinner!"

"My dear, you are his sunshine; even Algiers would be gloomy if you were not with us," said the Squire gallantly, as he handed her into the brougham.

"A charming niece!" said the old man to himself, as he watched the carriage roll away.

"Gloomy without me," said Lady Susan to herself, with a happy laugh. "I should think so! No, Mr. Vicar, no more of your self-denial, 'Whither thou goest I will go. . . . thy people shall be my people, and thy God my God.'"

"Where thou diest I will die," corrected her memory, but she would not listen.

"Markham has come from Town, and whom do you think he has brought with him?" said Lady Charlotte, as she warmed her feet at her sister's fire, waiting for her, until she had finished dressing.

"I am certain that I could never guess; he has such a multitude of friends."

"But this one is a friend of yours—Mr. Hardman."

"Poor Mr. Hardman," said Lady Susan, with a laugh. She was very happy as she took her sister's arm, and they tripped downstairs.

"John is wonderfully better."

"I am glad to hear it," said her sister kindly; "but, oh, Susie, what a fool you are! You'll be as poor, as poor can be—what a fate!"

"All a mistake, Char; I shall be tremendously rich."

"You don't mean it!" said her sister, stopping half-way downstairs, and facing her.

"Oh yes, we shall——in love."

"My dear, what folly! For the moment I really imagined that you meant that you would be well off."

"So I do. Not in your way, but in my own."

"Well, I prefer mine, in this prosaic world."

"And I mine, because the world *is* so prosaic."

"How well Lady Susan looks! pardon my saying so, but she is perfectly radiant, and, may I add, more lovely than ever."

"I am glad that you think so, Mr. Hardman."

"It is a great happiness to me to be here. I am very grateful to you, Lady Azerley."

"We are always pleased to welcome you."

CHAPTER XXVIII.

"THE RACE IS WON."

It was an unwholesome, disagreeable, offensive, blustering day, asserting itself in gusts of petulant, yet cold showers, and a chilling east wind—a day to make the least sensitive man take a gloomy view of things in general, and of his own affairs in particular.

Therefore, it was partly on account of the weather that Ralph Hardman thrust his hands deeply into his pockets, and walked with bent head down the long drives of the Chase towards Houghrigg. Partly, but only partly so, for he felt as dispirited internally as chilled externally. He had left Inverben discouraged, but not hopeless, and during his eight weeks' absence, his naturally buoyant temperament had asserted itself. He had been engaged busily in many good objects; they had warmed his heart and commanded his attention. He had been used to receive his income from his agents, to spend it carelessly, and to think no more about it. But, since he had become possessed by the thought of union with God, he felt that He had a prior right in everything; so Ralph Hardman had resolutely set himself to the difficult task of taking the beam out of his own eye before he removed the mote from his neighbour's. Schemes of philanthropy and missionary enterprise presented fascinating attractions to his mind, which the cleansing of air-excluded courts, the reinvestment of money paying a high, but not a righteous interest, had not.

Yet the thought of Lady Susan Stopham's sweet and helpful companionship never quitted him, and he often found that in this or that difficulty he could have asked her counsel.

At first he was shamefully cheated, and it grieved him when he found it out, and the disgust that he experienced discouraged him. He found that the very people for whom he was sacrificing so much, and for whom he thought and planned, turned again to rend him.

Still, Ralph Hardman knew that he was doing the right thing, and that in time his reforms must tell, so that he was well content to go on. Yet he longed for sympathy, and for a sight of the face he loved. He had gone about law business to London, and there encountered Lord Markham at the Club—heard of Burleigh's illness, and gladly accepted an invitation to come down to the Chase for a few days.

And here, the first day, he was met by disappointment. Lady Susan had disappeared immediately after breakfast, and no remark was made. He had lingered about all the morning, but she had not reappeared, even at luncheon. Then, from a word that the earl had dropped, he gathered that she was at the Vicarage. Still, no one seemed surprised. Naturally she would call to ask after her friend, but why so early in the day, and why remain so long? Ralph had hoped to walk down to the village with her; now, perhaps she would permit him to bring her back, and they might still have a long conversation. He had a hundred things to tell her, and there was always *the* great plea that he so desired to urge again. Thinking of her he quickened his steps.

John Burleigh had slept more the previous night than for weeks. Every one was cheered, Lady Susan was greeted with happy instead of sad smiles. She found old Mr. Burleigh studying a Bædeker and maps which he had telegraphed for the day before, keeping Arthur and both his nieces busy, making out routes, writing letters, and arranging lists of necessities. Mrs. Burleigh was with her son. She had read to him the ninety-third Psalm, and was straightening the things in his room, and tidying his medicine bottles, with a subdued gladness on her face.

He was watching her with an almost amused expression, but very tenderly. Into all this gentle happiness Lady Susan came, and perfected the harmony.

"We expect great things from you," she had said, as she brought him his luncheon, and he had smiled.

"Not too great," for there was a larger morsel of boiled chicken than they had as yet dared to offer to him upon his plate, "or I may disappoint you."

"Ah, don't say that, it is too cruel," his sister had replied; "do be *quick*, Jack, in getting strong; we do so long to be in the sunshine before Christmas."

"Uncle has set his heart upon it; he is quite absorbed in plans."

And then the rest came up, and there was a family conclave; but it did not last long—a little weariness stole into the sick man's face, a listlessness into the droop of his head. His mother saw it, and caught an appealing glance in Susan's eyes.

"Come downstairs; John has had news enough for to-day; he must sleep now;" and so the two were left alone, and John Burleigh did sleep, and woke refreshed. Susan was sitting on a hassock by his feet, gazing into the fire, and the light flickered on her bright hair and sweet face.

"What is my darling dreaming of?" he asked, as he touched her hair with his thin fingers.

She turned with a quick, loving smile. "You, just you, John."

"My wife, how you love me! I am not worthy—you do not know me—you think too well of me. I dread your awakening some day."

"Don't imagine that *my* love is blind—far from it. I well know that you will never be a Bishop."

"Susie! I find that you can tease."

"Forgive me, dear."

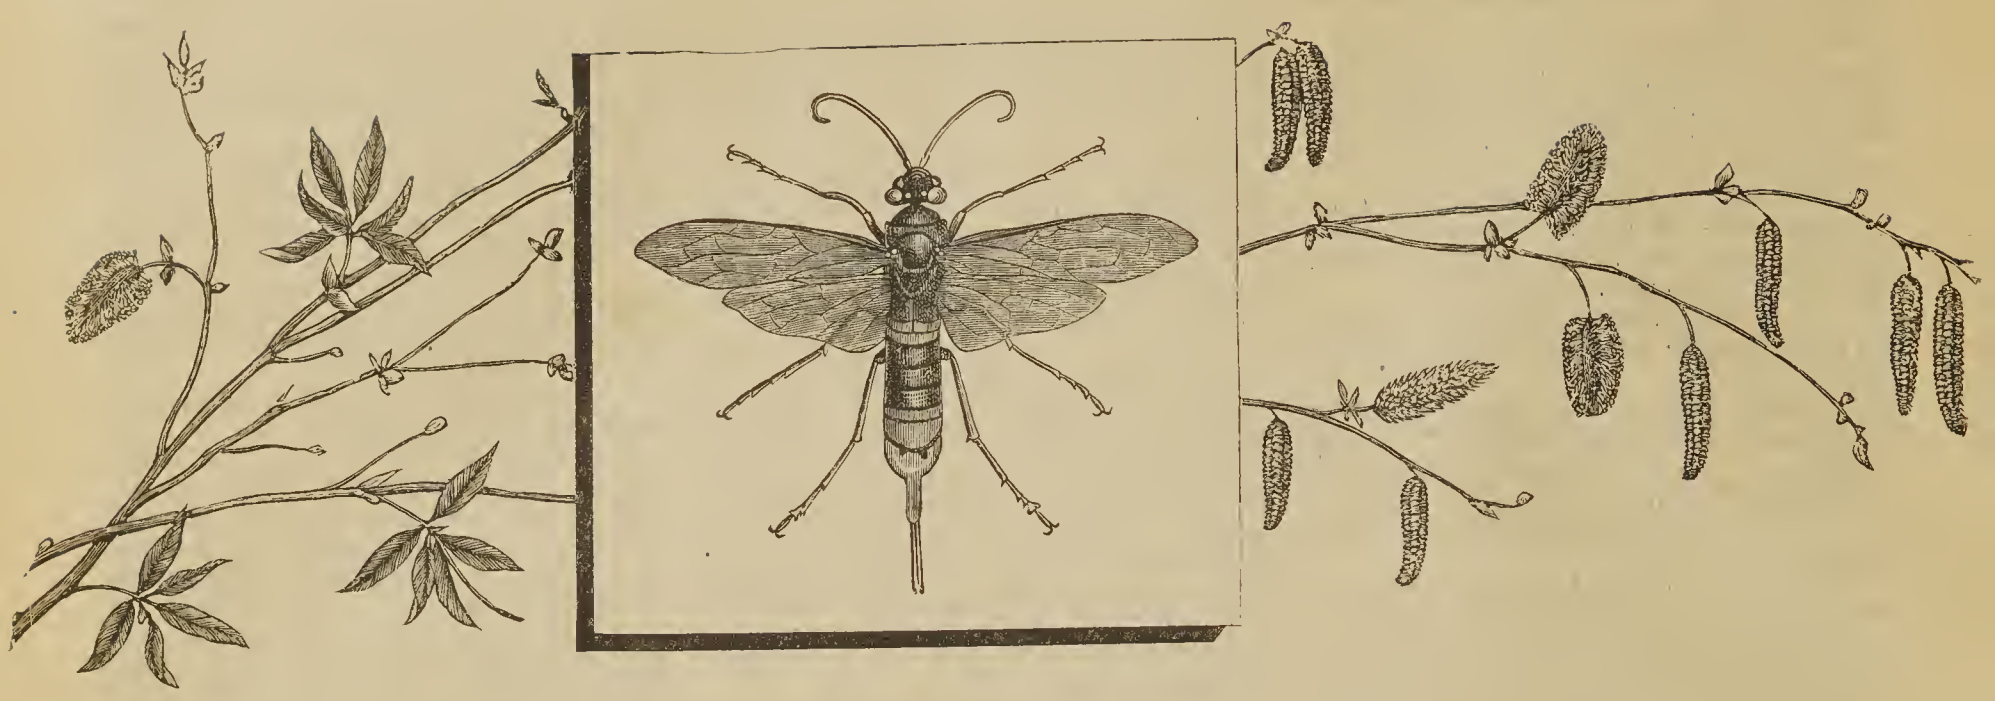
"I don't mind it. In fact, I rather like it." Then, after a pause he added, "How good God is! Loving-kindness and tender mercy have followed me, they have indeed. And to think, Susie, He gives us so much when He had so little. And yet He says, 'Ye are My witnesses;' 'as My Father hath sent Me, even so send I you;' 'I in them.' We are to share in His redeeming work, and yet, in all comfort, in all joy, 'the servant *is* above his Lord.' It is too much—too much."

After that, they sat on in the twilight, silently. Once again John Burleigh spoke.

"To think, Susie, that we are after all to be one!"

"Are we not that already?"

"Yes, my darling; but to be together every day, always. I can hardly believe it—and heaven beyond—with Christ, seeing His face—and one still, always one, always together, even there; it is too much."



"John, I don't think that even heaven would be complete happiness to me without you."

"Hush! God knows best, His compensations and satisfactions are beyond our comprehension; but," he added gently, "it seems to me, too, that the joy could not be *complete* without you." Then he added—"Two made one, the completion of being the one to the other."

"John, you will find me a very wanting half," said Lady Susan sadly, "even on earth."

"No, I shall not; you fill up all my cavities;" and for the first time for many a week, the Vicar laughed.

(*Continued—page* 817.)

A FALLEN TREE.

By the Rev. J. G. WOOD, Author of "Homes without Hands," "Strange Dwellings," etc., etc.

IN the Book of Ecclesiastes there is a very familiar passage, which, like many other portions of Scripture, has been strangely misapplied by neglect of the context. Here is the entire passage: "If the clouds be full of rain, they empty themselves upon the earth: and if the tree fall toward the south or toward the north, in the place where the tree falleth, there it shall be. He that observeth the wind shall not sow; and he that regardeth the clouds shall not reap" (Eccles. 11. 3, 4). . . . "In the morning sow thy seed, and in the evening withhold not thine hand: for thou knowest not whether shall prosper, either this or that, or whether they both shall be alike good" (ver. 6).

What does this passage mean? Why is a tree introduced into a corn-field? and why should not a tree fall to the east or west, as well as to the north or south?

Moreover, no tree lies where it falls. If man finds it, he cuts it up and carries it away for his own purposes. If not, as soon as a tree dies, it is weakened, so that it can be blown down, and when it has fallen, it is removed as speedily as possible, in order to make way for another tree to grow in its stead.

Stripped of its context, the fall of the tree has been interpreted as an authoritative statement of the condition of man after the death of the body—an interpretation which, as we have seen, is not even justified by the metaphor.

I was puzzled with this passage for many years, and came quite unexpectedly upon its true meaning. While I was engaged on my "Bible Animals," I was greatly assisted by some of the leading Jewish scholars of the day, who lent me a number of works which threw a new light on many obscure passages of Scripture, the present being one of them.

The opening of the chapter gives the key: "Cast thy bread upon the waters: for thou shalt find it after many days." The writer here alludes to Eastern agriculture, the ground being watered either by artificial channels, or by the natural rise of certain rivers, or by rain, which might or might not fall. On these waters the "bread," *i.e.*, the future seed, is cast, sinks into the softened ground, and then springs up to mature a future harvest.

Why, then, should a tree and the direction of its fall be interpolated? What business has a tree in wheat ground, and if there, why should it fall? The Jewish Bible supplies the explanation. The word which we translate as "tree," the Jewish Bible renders as "stick," or "splinter," or "rod," and gives the following interpretation.

The whole passage is a rebuke to the superstitious practices of the Jews, who then, as afterwards, were always seeking for signs. Therefore they sought for lucky days for sowing their seed, sometimes drawing their signs from the clouds, sometimes from the winds, and sometimes from the rods—these being used as a means of fortune-telling. A number of small rods or sticks were gathered loosely together in the two hands, set upright, and then suffered to fall, the direction in which they fell constituting the omen.

We may mention that the Chinese of the present day use a precisely similar mode of divination, strips of bamboo being employed for the purpose, and the character of each slip being written upon it.

The writer's argument is briefly as follows. Put no trust in omens, whether of the clouds, or of the rods, or of the winds; but sow your seed at the proper time, and trust it to God.

Now we will pass on to the fallen tree, and see why it must not lie where it falls.

Were it to do so, it would be imperishable, and would be a cumberer of the earth, permitting no other tree to grow in its place. No forest could grow were such a law in force, and the whole face of the earth would be choked up with fallen trees.

So, when a tree has nearly run its appointed course, innumerable agencies are employed for the purpose of removing it, in order that it may make way for a new tree or fresh herbage. Most of these agents belong to the insect races, especially to the beetles, the moths, and the *hymenoptera*. I need only mention the Termites, which make so speedy an end of all dead vegetable matter, and will only give a few examples from our own country.

One of the most conspicuous of these agents is the great stag-beetle. In its perfect state it is not a wood-eater, and in fact, can only lick sweet juices with a sort of little brush. The huge jaws possessed by the male are not used for eating wood, nor, as far as I know, are they more than a personal adornment of the male sex, like the mane of the lion, the beard of man, or the train of the peacock.

They do not even seem to be used for fighting purposes, though I have seen the insect using them as a kitten uses her paws when playing with a little ball of thread.

Conspicuous as is this fine insect, and large as the larvæ must necessarily be, very few persons have seen it, except in its perfect state.

The mother insects deposits her eggs underground, just at the junction of the root and trunk of a tree which has received its sentence of death. When hatched, the young grubs begin to bore their way into the interior of the tree, the size of the burrows necessarily increasing according to the growth of the larvæ. For three years the grub is incessantly driving its tunnel through the wood, and of course, weakening the tree just below the surface of the ground.

When arrived at its full growth, it is a great, white, fat-bodied grub, about as thick as a man's thumb, and having a pair of singularly sharp and powerful jaws. It is not pleasant when these jaws seize a human finger.

Even one of these grubs makes great havoc in the tree trunk; and as six or eight of them are often found in the same tree, the extent of the weakening can easily be imagined.

In those districts which the stag-beetle frequents, I have noticed that when a tree is attacked by this larvæ, branches at its top begin to die. The reader may remember the pathetic prophecy of Swift, when, foreseeing the loss of his intellect, he pointed to such a tree, and said that like it, he should begin to die at the top.

I do not believe that it ever attacks a healthy tree, but that the insect knows by instinct when the sentence of death has been passed on a tree, and therefore lays her eggs at its root. Naturally thinking that the stag-beetle is the cause of the death of trees, landowners have tried a variety of devices for killing the insect, the most ingenious consisting of a long steel wire which was introduced into the burrows, so as to pierce their inmates. I cannot, however, find that a tree when attacked by the stag-beetle, has ever recovered.

To another set of beetles is intrusted the task of separating the bark from the trunk. Chief among them is a little beetle which has no popular name, but is well known to naturalists as the *Scolytus destructer*.

It was first brought into public notice about a century ago. The elm trees in the public parks were found to be losing large pieces of bark. The bark was not taken away, but was found at the foot of the trees, so that the destruction was thought to be the result of pure spite, or perhaps of frolic, according to the prevalent ideas of the time. Sentries were therefore posted, but the destruction went on without diminution, and the sentries themselves were suspected, and placed under arrest.

At last some pieces of the fallen bark were seen by an entomologist, who at once pronounced the *Scolytus* to be the real delinquent. The task is achieved as follows, and, as is usual amongst insects, it is done by the female.

She first nibbles a little circular hole through the bark, into the trunk or wood of the tree. She then turns off at right angles, and with her powerful little jaws, nibbles a tunnel from three to four inches in length. Then she backs her way out again, depositing eggs as she proceeds. Just as she has reached the entrance, she lays her last eggs, and dies, her body blocking up the opening, so as to guard against insect-eating intruders.

The eggs are soon hatched, and produce a number of little white, soft-bodied, strong-jawed grubs, which immediately begin to eat their way between the bark and the trunk, always starting at right angles to the channel which their mother had bored. As each grub increases in size, the tunnel which it makes naturally becomes wider, so that the bark is almost wholly separated from the trunk.

Then, as soon as the grubs have attained their perfect state, and become beetles, they gnaw their way out, and, after a short enjoyment of life in the open air, the males die, and the females employ themselves in carrying out the work for which they were created.

The reader will now see that the beetle does not at all deserve its name of "*destructer*."

Another large beetle is equally zealous in the perforation of trees. This is the Musk-beetle (*Aromia Moschata*), which, for gorgeousness of colour and grace of form, is unrivalled amongst the British beetles. Moreover, it exhales a most delightful perfume, which can be perceived at an astonishing distance, and though it has a character peculiarly its own, bears some resemblance to that of the sweet briar.

Soft-wooded trees, especially the willow, are the favoured haunts of this insect; they sometimes collect in such numbers, that the tree is completely honeycombed with the burrows, so that the wood can be crumbled to pieces between the finger and thumb.

Far smaller, but equally powerful agents in the work of removing dead wood from the earth, are the little beetles which produce the well-known burrows found in "worm-eaten" wood.

There are few woods, as the upholsterer knows to his cost, which can withstand the teeth of these tiny burrowers. Curators of museums always dread the first grains of yellow dust which denote the presence of the borer beetle, which has a special love for savage bows, spears, paddles, and clubs.

The wood-destroying moths are best represented by the goat moth, which burrows into soft-wooded trees. The jaws of this larvæ are almost incredibly powerful. I have known one of them make its way through a plate of perforated zinc by grasping two contiguous perforations in its jaws, and bending them backwards and forwards until the metal between them was broken, and repeating the process until it had made an aperture through which it could force its way.

One of these larvæ proved a very expensive possession to the captor. Not knowing its proclivities, he put it into a tumbler, and then inverted the tumber upon a cottage piano, placing a heavy weight upon the glass. Next morning the glass was empty, a large hole in the wood betraying the mode of escape. Taught by instinct, it had burrowed into the piano, and, before it was discovered and recaptured, had enjoyed itself immensely among the wood-work of the interior.

Only one more of these agents for reconverting death into life can be mentioned in our limited space. This is the *Sirex*, an insect which has no popular name.

It is a large and powerful insect of formidable appearance, looking much like a flattened hornet, with yellow wings, and a long, straight spike projecting from the end of the body, and resembling a sting. It is, however, perfectly harmless, the spike in question being a powerful augur, with which the female penetrates the trunks of fir-trees, and deposits her eggs in them.

The larvæ, as soon as they are hatched, begin to perforate the tree, on the wood of which they feed. Their jaws are so powerful, that they have been known to gnaw their way through a plate of lead that had been fastened to the tree.

They sometimes cause great alarm by suddenly making their appearance in rooms. The fact is that they have undergone their changes within the timber of which some part of the room has been constructed, and have gnawed their way into the open air. I have known ten or twelve of these formidable-looking insects to appear in a single day in one room.

THE POST OFFICE: WHAT IT IS, WHAT IT DOES, AND HOW IT DOES IT.

By An Official.

Part V.

THE ROMANCE OF THE POST OFFICE.

WE have hitherto dealt with the prosaic side of Post Office work, and have found no little difficulty in condensing into space, necessarily limited, that which after all is a very incomplete description of what the Post Office does, and how it does it. But it is a still more difficult task to describe its poetry. Scarcely a day passes but what some incident occurs—now in London, now in some country office—calculated to surprise, amuse, or sadden. Glimpses of inner lives, the secret of many a mystery, the beginning and the end of many a romance, flash into the purview of the Post Office official, amongst the complaints and applications which he has to deal with from the writers or addressees of letters.

It is a well-known rule of the Post Office that a letter once posted, must not leave the custody of the Postmaster-General until it is delivered to the addressee, and a Post official returning a letter to the writer on any ground, would be liable to severe punishment.

Some years ago, a gentlemanly-looking man called at a post office in the country, and said that he was afraid he had enclosed two letters in wrong envelopes, of which he gave the addresses. His request to have the letters back to correct his mistake was refused, but in the course of his urgent entreaties, he revealed the fact that his error had ruined his future prospects, inasmuch as the letters disclosed plans which he had adopted to serve two mercantile houses in the same business, whose interests clashed at every point. But a still more interesting case occurred. A tradesman's daughter who had for some time been engaged to a young miller in a neighbouring town, heard from some one whom she and her parents believed to be worthy of credence, that he was on the verge of bankruptcy. Anxious to lose no time in breaking a bond which seemed to link her and her small fortune to penury, a letter, breaking off the engagement, was written to the girl's lover. Hardly had it been posted, when the same informant called upon the young lady's friends, to contradict and explain his previous statement, which had arisen from some misunderstanding. The poor girl and her friends rushed at once to the post office, but the tears, the wringing of hands, the united appeals of father, mother, and daughter, were in vain. The rule admitted of no exception. The Post Office ruthlessly did its work, and the young lady had to repent at leisure of her own and her parents' haste.

A very small selection from the mass of curious letters, on all kinds of subjects, addressed to the Post Office authorities, would fill a large volume; and the wide idea which prevails as to the powers and functions of Her Majesty's Postmaster-General is sometimes more embarrassing than flattering to that august functionary of state. The old designation of "Dead Letter Office" has now fallen quite into disuse officially, but there is still a vague belief existent that it has some connection with mortuary records, and inquiries for deceased persons frequently come addressed to the "Dead Letter Office." Thus, for instance :—

"We heard in the paper about twelve or fourteen months back Mary Ann ——, the servant girl at London, was dead. Please send it to the Printer's Office by return of post whether there was a small fortune left for——"

So also a man wrote to ask if the Post Office would find out whereabouts in Australia his mother and sisters were, begging for a reply by return of post, and "also your charge at the lowest."

The present writer remembers receiving in his official capacity a letter from some gentleman in the United States, asking to be informed in what street in London the Bank of England was, as he wanted to address a letter there.

A conscientious member of the public wrote, enclosing seven sixpenny stamps, and eighteenpence to pay for an advertisement in the *Daily Telegraph* acknowledging their receipt, and asked that it might be accepted as conscience-money, as he considered he owed that amount, "having enclosed some weeks ago three letters to India within a cover to a friend." The writer goes on to say that at the time he thought he was doing no wrong, as the three letters were merely messages that he did not like to trouble his friend with, but now "he thinks differently," and sends the stamps to quiet his conscience.

The following, from a person who lost a letter containing something of value, is a mild specimen of the comminatory effusions addressed to the Post Office :—

"I got no redress before, but I trust I shall on this occasion, or else there must be 'something rotten in the state of Denmark.' Judas Iscariot was a thief, and carried the bag, and it will be a pity and a great scandal if he has found a successor in some branch of the Post Office."

People are very fond of trying the resources of the Post Office. Letters infinitesimally small are often found among the correspondence; others with addresses designedly made as quaint and difficult as possible.

A year or two ago, some person, who might have certainly been influenced by motives of economy, but who was probably actuated by a spirit of fun or mischief, wrote a letter containing twenty-six words on the back of a postage stamp, and posted it. It was properly sorted and duly delivered. Emboldened by success, the person repeated the experiment, but on a third attempt with a halfpenny stamp—the halfpenny postage stamp was then much smaller than it is now—the sender overreached himself, as the diminutive document became liable to the charge of one penny as an insufficiently prepaid letter, and this penalty was duly enforced.

Amongst the traditions of the Post Office which record the simplicity of the public, and the shrewdness of Post Office officials, there is one which tells how a rustic once came to the counter of the *Poste Restante* at St. Martin's-le-Grand, and asked the clerk if there was a letter for him "from my mother." The clerk looked at his interlocutor for an instant, and then promptly replied in the affirmative, handing him at the same time a letter which some wiseacre had addressed, "To my Son, London." Tradition is silent as to whether the clerk's guess was correct; but not to spoil a good story, it is always assumed that it was.

Complaints of lost letters are few, compared to the vast amount of correspondence conveyed through the Post Office, and notwithstanding the special temptation to which Post Office sorters are exposed by thoughtless persons who send money and valuable articles by post, without taking the precaution of registering, the standard of probity and sense of duty of the force, as a whole, is very high. Still, the record of our courts of criminal law unfortunately show many a sad case of dishonesty and its punishment.

The theft of a post letter used to be one of the offences punishable by death, and there is now an official in the Post Office who can remember a postman being hung. But the maximum punishment was changed to transportation for life; and though there is no instance of so severe a sentence having been inflicted, a Post Office official who steals a letter is still liable to penal servitude for life. But it must be a post letter—that is, it must, at the time, be in the custody of the Postmaster-General. After a letter has once been delivered at its address, the Postmaster-General has no further power over it.

Of the complaints received of the loss of letters, a very large proportion turn up on investigation—and every complaint, however trivial, is very thoroughly investigated—to be unfounded, or to be due to the fault of the public, or to some other cause beyond the control of the Post Office. Sometimes a careless man forgets to post his letter, sometimes letters delivered into a house-door letter-box fall into the hands of children, magpies, monkeys, or rats. Once a letter containing a cheque for a large amount was found by a ploughman in a field ten miles from the town where it was said to have been posted, and inquiry elicited that it had dropped off the writer's table into his waste-paper basket, and thence had got, by way of the dustman, to where it was ultimately found. Letters often get into the folds of newspapers and large packets.

In one curious case, half a sovereign had been enclosed in a pill-box, which it exactly fitted, and then in a letter, but could not be found when the letter was opened by the addressee. The envelope and pill-box were sent to the two or three post offices in different parts of the country through which

it had passed, and a thorough inquiry made, but no clue to the mystery could be obtained; but just as an official at St. Martin's-le-Grand was preparing a polite letter of explanation and regret to the complainant, he found that the upper lid of the pill-box had been accidentally pushed down to the lower, so as to make a false bottom, and that the half-sovereign was lying *perdu* between the two.

Among other mysterious cases, is the return to England of two packets which had been addressed to Australia, and had been forwarded thither, and which on being opened were found to contain, the one a hundred sovereigns, and the other fifty sovereigns, without a letter or other document to show to whom they belonged. They were never claimed, nor was the mystery ever solved. It is supposed that they may have been sent by some person who was going to Australia, so that they should be there when he arrived, and that he died on the voyage, or else that the ship was lost.

Some of our readers may remember the incident of the tomtit's nest, which appeared in the newspapers in 1884. The occupier of an old Hall, near Nantwich, had a letter-box in his gate at the roadside, and one day found there a letter, which should have contained a cheque, mutilated, and the cheque gone. The Post Office authorities and the police were at once appealed to; but on examining the box, it was found to contain a tomtit's nest, and the birds had no doubt, either to use the paper or to get it out of the way, pecked the letter to pieces. In a similar case which occurred in Scotland, the birds, through the soft-heartedness of a postman, with which our readers will fully sympathise, were not disturbed, and the parent birds, who got so tame as not to move when the box was cleared of its letters, brought up a fine family of seven young nestlings.

There is a body of officials at St. Martin's-le-Grand who are specially selected and specially trained for the investigation of all serious cases of loss or fraud upon the Post Office, and the records of this department contain, no doubt, many a strange or curious history, which would be interesting if revealed.

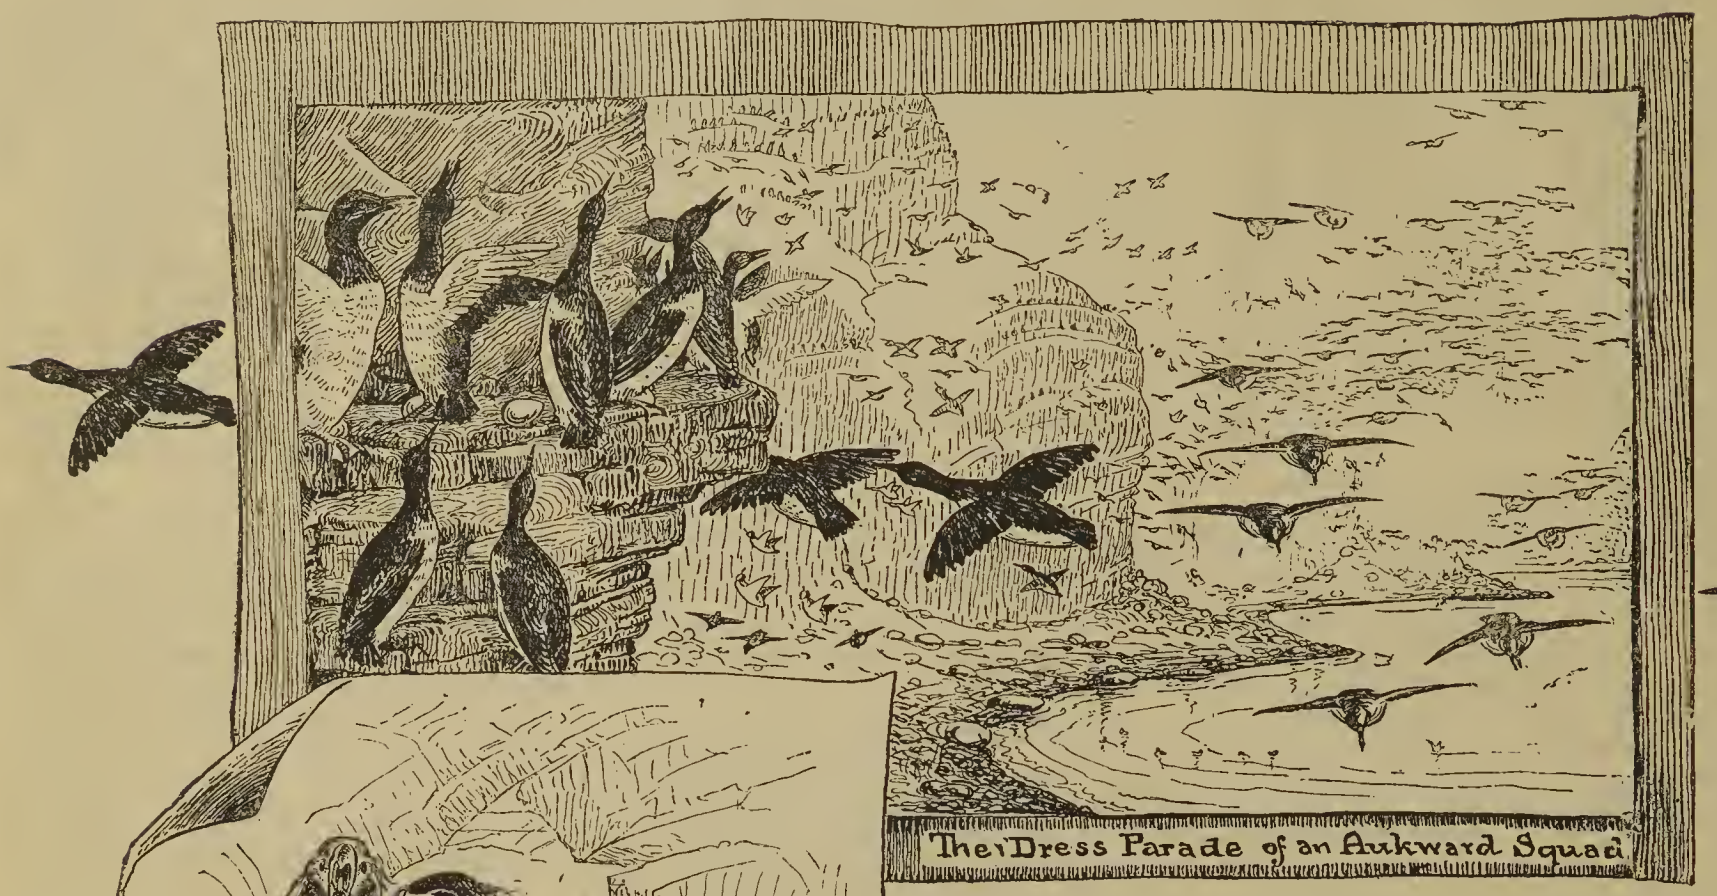
There have, of course, been many daring robberies or frauds committed or attempted against the Post Office. The principal of these in later years have been as follows:—(1) A great fraud committed by means of some money order forms stolen from a country post office, the criminal in this case being sentenced to twenty years' penal servitude; (2) the robbery from the Hatton Garden Branch Post Office, in which a gang of thieves managed to turn out the gas at the busiest time, and in the darkness and confusion to carry off registered letters containing diamonds to the value of £15,000; (3) the robbery of the mails from London to Gibraltar, which by the aid of English Post Office officials was brought home to the Spanish Postmaster of San Fernando, near Cadiz; and (4) the theft which was committed two years ago upon the mails from London to Berlin and St. Petersburg. In the last case, the thieves are supposed to have clambered from a first-class carriage to the van containing the mail-bags, to have then opened the latter, and sewn them up again so neatly, that nothing was discovered till the bags got to Berlin. One of the members of the gang was captured, and brought to justice.

During a very long trial, it was attempted to prove on his behalf that the precautions taken by the English Post Office were such, that it was impossible for the robbery to have been effected until after the mails had been transferred to the care of the Belgian Postal authorities.

If this had been proved, the case would have been out of the jurisdiction of an English court of law, and as at that time an Englishman could not be extradited for trial in Belgium on such a charge, the culprit would have escaped scot-free. So that the Post Office authorities were in the curious position, that they had to show they were guilty of negligence, which it was urged they could never be capable of.

It is a singular coincidence, that another robbery was committed the very same year on the mails despatched from London by the same route. A gang, supposed to consist of five men, managed to break open the locked van of the mail-van, attached to the train between Ostend and Cologne, and to rifle the mail-bags. The thieves were artful enough to replace the bar on the van, and to insert a false padlock in the place of that which they had forced, so that at Brussels and Ghent, where the train stopped, the watchful eyes of the guards and other officials did not detect anything wrong. The perpetrators of the robbery escaped arrest, in spite of the combined efforts of the Belgian and English police. The precaution taken with the mails have been since greatly increased, and it is very unlikely that such daring attempts will ever be repeated.

But nothing has occurred in England like the robberies which have been effected abroad, where postmen have been known to be murdered almost in the open street, as occurred at Vienna some years ago, for the sake of the valuable enclosures of the registered letters carried by them. In some countries, too, postmen take out money for money orders, and collect money for bills, so that they often have a very considerable amount of specie in their possession. So great is the tendency to make use of the machinery and organization of the Post Office for work which, though it seems foreign to the proper scope of a Post Office, it is found it can do well because it is the Post Office, that we may reasonably anticipate seeing our postmen become our tax-collectors.



And now space, or rather, the want of it, compels us to bring this series of Articles to a close. It is hoped their object has been attained, and that the readers of "A. 1." have gained a real insight into the machinery and work of an institution which may be said without exaggeration, to be one of the marvels of civilisation. And more—the Post Office is an important factor of civilisation and progress. The facilities which the Post Office gives for the interchange of thought is a strong incentive to education; without it, trade and commerce would stand checked mid-way in their career of successful progress; by its means, the poor man is taught and helped to be thrifty and saving. And it has a higher mission still.

The common interest that all nations have in postal work is a powerful element of international harmony, and the establishment and development of the Universal Postal Union, with its formally recognised principle — that, for one purpose, at all events, every country belonging to the Union is one and the same territory—may, perhaps, be looked upon without presumption, as a step taken, under higher guidance than human genius or human intellect, in the direction of universal brotherhood and "goodwill among men."

THE AWKWARD SQUAD.

By Professor HENRY W. ELLIOTT.

THE ALCIDÆ, OR AUKS.

THERE are vast expanses of hyperboreal watery wastes and desolate shores thereof, which owe their sole attraction and enlivenment to those "birds of a feather which flock together" there—to the subjects of our sketch, the Auks. The gloomy surroundings and the frigid winds, which are so characteristic of the haunts of those queer waterfowl, seem to have eliminated all song or melody from their throats, and nature has, instead of musical endowment, given them a sense of rare good fellowship, so that at regular periods of the year they gather together, from broad scatterlings over thousands of marine leagues, in order that millions may meet each other by close bodily contact and appreciation.

These seabirds of the North must have the fullest enjoyment of a purely physical existence; they have an unlimited supply of food, and they have few natural enemies; and as they assemble by their own ordering in those mighty incubating congregations of their kind, they seem to our eyes to fairly revel in the numerical wonder of their vast aggregate numbers, and to gregariously exult over it with harsh cries of comfort and energetic beating of pinions.

I say that they have few natural enemies—fewer than other birds, and I think it is a correct statement; but they have a climatic foe which taxes their powers of endurance, and checks them from boundless increase and diffusion in the Arctic and Subarctic waters of the earth. The *Alcidæ* are confined to the boreal waters of the North, and represent or take the place of the penguins (*Spheniscidæ*) of the Antartic.

Some ideas of the vast numbers of this latter species may be gathered from a story related by a retired American naval officer.

"I never see one of those birds," he said, pointing to a large penguin in a museum collection, "but I am reminded of one of the most dismal and curious experiences of my whole life. It is an innocent-looking creature—no wings to speak of, stupid, and easily knocked over; but yet I have seen a man driven stark staring mad by them, and a party of able seamen nearly killed.

"When I was a midshipman, I was assigned to a convoy of the South Atlantic Squadron, that was ordered to a group of small islands, then newly discovered, that lay off the Coast of Africa, about twelve hundred miles or so from the Cape of Good Hope. It was supposed that England was about to claim them, and it was suggested by the Navy Department that we look the matter up, and if the place was valuable as a coaling station, or could be of any use to our whaling interests, that were then important, we were to plant the flag; but if otherwise, it was to be let alone, and no impediment placed in the way of foreign claims. We crossed over from Rio, under easy sail, in about twenty days, and one morning sighted the place at daylight. It looked like a huge rock rising directly out of the sea, about which a long reef stretched away, and on which the sea thundered so violently, that there appeared to be no ap-

proach. We sent a boat's crew out ahead, however, who before long found an entrance, and by night we were alongside a sheer cliff, at least eight hundred feet high.

"When we came to anchor, we began to hear an indistinct noise, as if ten thousand dogs were barking in chorus a mile away. Finally, the wind shifted off shore, and the uproar became unbearable. You could not even hear yourself think. Exactly what it was we did not know, but as night set in, we saw it was penguins. They came off to the ship in tens of thousands, covering the water, leaping along like so many porpoises, and appearing exactly like them. As the water was extremely phosphorescent, every move seemed to set it on fire, and there was a continuous rush of fire bodies. There was very little sleep aboard that night, I can tell you, and about all hands had concluded that, if a station was to be made there, the birds would have to be killed off first. In the morning the boat was lowered, and a crew pulled in. We skirted the island for a mile without finding a landing ; but finally a waterfall was seen, dropping some two hundred feet straight into the sea, and near it the cliffs had caved in and rocks rolled down, forming a landing that was, however, preoccupied.

"The boulders were covered with penguins, going up in groups, pairs, and singly ; others coming down, sliding, hopping, and screaming, as if their lives depended on it. It was our only chance. So the cutter was run ashore, and leaving her in charge of a boatman, eight of us struck up the slippery walk. The very stones had been worn smooth by the feet of the millions of birds. They fairly blocked the way, massing in platoons, lying in groups or singly, so that it was with the greatest difficulty that we made our way. About a hundred feet from the rocks we came to a patch of high grass —above five feet high—that stretched away nobody knows how far, and here was the great centre of the penguin colony. The rocky pathway was merely an entrance, and led directly into the grass by a road about four feet wide, made by the birds. We pushed in amid the deafening noise, and found that from every side of the main walk extended innumerable avenues, lanes, and paths, literally packed with birds, nests, and eggs. They stood in a solid front in some places, and threw themselves at our legs, while hosts of gulls, that also laid here, whirled about in the air, striking at our heads with their wings. We had worked in about a hundred yards, when one of the men was struck by a big bird, and slipped and went down, his leg sinking into the soil, and actually into a bird's nest, showing that not only were there birds overhead and on the surface, but that they had perforated the underground. The man that was struck seemed bewildered, and called to me that he would go back. I nodded to him, and he turned and dashed off by the very way we had come, while we pressed on.

"The place was as hot as an oven. The guano, collected in years, was a foot deep, and we left a track of broken eggs after us like a trail. Not a man but was bleeding from the attacks of the ferocious throng, and momentarily it was growing worse and worse. Finally, I gave the word to run, and off we started, whirling our sticks, knocking down the birds in hundreds to the right and left, now falling, up again, rushing on, sliding, slipping, and gasping, while the heat increased almost to suffocation, and the uproar was something terrible. I fell on my face, and was pecked in a dozen places before I could get up, and nearly lost my eyes. On we rushed, now knowing it was a case of life or death, and finally, in the headlong flight, we came out upon a clear grassy spot, and threw ourselves on the turf in utter exhaustion. Five minutes more of such work, and we never would have got out. Three dogs that came with us were never found. You may be sure we did not attempt to go back the same way. After we had rested, we kept up on the cliffs, and found it a barren, useless spot. On the return we discovered a path leading around the shore to the westward, and after a terrible march, reached the boat.

'Where is Gilley?' shouted the boat-keeper, and we suddenly remembered that he had left us in the bird colony. Three men volunteered to go in search, but I decided we would all go. I had in the boat a long sounding-line, and taking it, we made it

An Awkward Concert.

fast, and started in again, hauling it after us, so that we could follow it back. We must have gone a hundred yards, walking and sliding over the dead and wounded birds, when we became aware of an unusual commotion ahead. Ten or fifteen large skuas were hovering in the air, darting down and up; and suddenly we came upon a partial clearing, and there was the sailor, standing in a regular sea of birds,—his eyes staring, clothes torn, his face and body bleeding, waving his arms about, stark, staring mad. We made a rush for him, and after a struggle, secured him with the rope and got him on board. But he was incurable, and made crazy by the birds. We were glad enough to get away, and it is enough to say that the Government never made a station there."

Several species of the auk family occur in the North Atlantic, in swarms of exceeding number, or are of circumpolar distribution; but a large majority of the group inhabit Behring Sea, the Okhotsk, and the North Pacific, ranging as far south in some instances as Lower California during winters. They are waterfowl pure and unexceptionable, all of them, and live largely in the Northern Oceans upon amphipodons, the crustaceæ, small fish, etc., which are so common there.

I have been thrown in contact with enormous numbers of this branch of the aves, and take from my portfolio the foregoing sketches, which represent the salient features of three species of that family. In the first picture you see the "murres," or "arries" (*Lomvia arra*) as they flock up from the sea to the lofty mural precipices of St. George's Island, Behring Sea. They actually flock over fifteen miles of these bluffy walls, here black and white with their fluttering forms.

They drop their large pyriform eggs, coloured gaily with green and bluish grounds, mottled with deep brown and black suffused blotches, upon the cold, bare edges of the cliffs, and straddle them in incubation as a boy does a hobby-horse.

The second sketch introduces the reader to a great scold and brawler,—the tufted puffin (*Fratercula cirrhata*), a bird of all birds which seems to have been especially fashioned with an idea of the fantastic and ridiculous. It possesses the queerest countenance and the worst temper of all the auk tribe. When it pokes its odd, lemon-yellow and crimson bill out from the secure shadows of its rocky, nesting caverns, and blinks and nods in your face with an air of combined amazement and impudence, the impulse for laughter could not be more strongly aroused by any other object.

This tufted puffin, the "taw-porkie" of the Alaskans, is a great brawler in his own household; he growls, screams, and scolds at his wife with an incessant impetuosity which is difficult to describe, but which she handsomely, and with infinite spirit and relish, promptly returns in kind.

On the north front of St. George's Island, Behring Sea, these tiny auks settle for incubation.

No experience of the writer among the hosts of Arctic and Subarctic waterfowl is more curious and attractive, than is his recollection of many long June days during 1873, which he passed in the society of overwhelming numbers of these brave, sturdy, little *phaleridæ*. Seated on the boulders, or stretched out full length upon the grassy and mossy carpet between them, you can watch, and be watched, within an arm's length of these tiny, fluttering, fearless sea-parrots. They will almost perch upon you, or, swiftly flying, fairly strike your head with their strong, short pinions; they will peer into your face with their small "wall eyes," with an expression of profound astonishment. As they ogle, they chatter, and they chuckle with lugubrious accent, while ever and anon a cloud of them, a swarm of hundreds or thousands, will gather over your head in mid-air, so thickly interlacing their flying, circling bodies, as to fairly hide the sky from your view; and their combined outcry more than renders you deaf, and strikes you dumb.

They have selected this site on St. George, for the secrecy and safety of those multitudinous tiny caverns which they find all fitted up for their habitation. They are strictly monogamous, and conduct all their extravagant billing and cooing under the rocks in these interstices just mentioned; and their harsh discord defies analysis.

Men whose lines of life are cast in circumpolar regions, have abundant reason to rise often and call the auk blessed. It alone of all birds, gives them delicious eggs, and a vast abundance of them; it gives them sweet, fresh meat for roasts and pot-pies; and their breast-feathers soften and warm his couch.

The eggs of the first bird which we sketch, and the rotund, plump, juicy bodies of the *simorhynchus*,—the "choochkia"—go far to render human life enjoyable in Behring Sea, whilst these birds' cousins of the North Atlantic are equally prepossessing and serviceable to this end.

MONT BLANC.

THE "great white mountain" stands almost in the centre of the Alpine range, a paragon among the mighty hills which surround it, not only on account of its great magnitude, but because of the singularity of its appearance; for, being almost devoid of any rocky or verdurous covering, its snow-clad summits and sides shine with an intense and dazzling glare when viewed from afar. So marked is its peculiarity in this respect, that at twilight, and more especially at sunset, the mountain becomes veritably transfigured, and glows with a weird, phosphorescent light, presenting a spectacle at once grand and awe-inspiring. Goëthe, in describing a visit to the Vale of Chamouni from Geneva, graphically depicts this strange phenomenon, which he noticed one evening while rambling in the neighbourhood of the Alps. The stars were rising, when he observed behind a distant range of mountains, a strange light, much like that of the Milky Way, but fuller and more luminous. As he approached it, the apparition grew more defined, and gradually assumed the pyramidal form that at once identified it in the mind of the observer with Mont Blanc. The mighty dome of St. Peter's, when illuminated for some religious festival, viewed from the Pincian Hill, has been referred to as a sublime sight; but the spectacle would only convey a faint conception of the aspect of the "sovran" of the Alps, when viewed by starlight, and more especially by the light of the setting sun.

A flying visit to Neuchatel, some years ago, gave me the opportunity of obtaining a glimpse of the mountain under the latter conditions. A breezy walk from the town brought me to the verge of the blue lake, whose wide expanse was wimpling in the evening winds. It was the late summer-time, and all the lower landscape was redolent of the season; only the snow-covered higher peaks of the green table-lands spoke of a co-existent winter, as though in mockery of the scene below. Looking across a luxuriant vineyard near by, over a stretch of checkered country, my eye roamed along the snow-capped ranges of the Swiss and Savoy Alps, spreading with a sweeping curve along the horizon-line. Slowly and silently, "like the host descending," the sun sank behind the Jura, and the gloaming tints deepened on the lofty peaks around. Duskier and duskier grew the hills; but when every summit about was clad in monkish grey, the Colossus of the Alps stood out in majesty, its summit attired in glorious robes of pale crimson and lustrous white. There is always an element of awe in the grandeur of the huge mountain, but viewed at such a time, it presented a scene that was ineffable in its majestic beauty.

From where I stood, on the outskirts of the town, Mont Blanc must have been distant about eighty miles; but the finest view of the mountain is to be obtained from the Col de Balme. Viewed from this place, the whole of the stupendous object may be taken in at a glance, while the observer is sufficiently near to distinguish every detail of the picture. Ascending the Breven from here, the traveller is conscious of a strange delusion. It appears as though the mountain were about to fall down upon him, and every glance he takes at its pyramidal summit intensifies the sensation.

Strange as it may appear, the first known ascent of Mont Blanc was not accomplished till so late as the year 1786. After several abortive attempts had been made to perform the feat, a young man named Balmat, who had lost his way on the mountain, and was compelled to spend the night upon its slopes, discovered a route which seemed to him to afford the long-sought access to the summit. The illness and exhaustion induced by his exposure to the thin, frigid mountain air occasioned him being placed under the care of a doctor, to whom he in confidence imparted the fact of his fortunate discovery. This doctor, naturally anxious to be the first to attain the long-sought goal, set off soon afterwards, accompanied by his patient, who had now recovered; and, after a long and fatiguing expedition, the pair reached the highest peak of the White Mountain, and stood "where the foot of man had never rested before." Their sufferings, going and returning, were intense; the laborious journey, the extreme cold, and the rarefied air of the higher altitudes being the greatest opposing elements. Their eyes, too, were greatly affected by the snow; in fact, Paccard was nearly blind for some weeks afterwards.

As a recognition of his discovery, Balmat received a present from the King of Sardinia and a subscription was raised for him; for the account of the enterprise had evoked great excitement and enthusiasm in the public mind.

THE STORY OF JONAH.

By the Rev. F. B. MEYER, B.A.,
Author of "Christian Living," "Elijah," "Israel," etc., etc.

PART VI.

THE LESSON OF THE GOURD.

A DAY'S preaching had brought a whole city to its knees. At first the general movement was confined to the lower orders, ever the most susceptible to deep and mighty emotions ; but from them it spread upwards to the court, until the king himself left his throne and laid aside his robe, and covered himself with sackcloth, and sat in ashes. And then, at the royal command, every house, yea, every stable, became a temple, and every living thing suppliant ; for with the mighty pleadings of men and women were mingled children's voices and the piteous lowings and bleatings of cattle deprived of their wonted food—the business of the city replaced by the exercises of religion ; gaudy colours by sombre black ; orgies of sin by diets of devotion ; whilst from one to another the inquiry ran : "Who can tell, God may turn and repent?" And as we have seen, the city was saved. So ready is God to forgive.

"*But it displeased Jonah exceedingly, and he was very angry.*" The word in the Hebrew is "hot." "He was very hot." Such a condition of mind startles us. A good man ought surely to have rejoiced in a saved city! Why should Jonah be displeased and vexed with an event that was calculated to fill every rightly regulated mind with joy? Many explanations have been given, with which I will not trouble you, but will content myself with giving you an explanation that seems to meet the case, and relieves him from the suspicion of being a monster in human guise, more anxious for his own reputation than for the lives of the men of Nineveh. His own words are the best clue, in which he tells God that it has happened as he expected it would before he left his home, and that God's mercy had proved too gentle to inflict the fate which He had threatened.

But why should this have been a source of regret to him? Should not the true lover of God rather rejoice when the Divine character is relieved from the necessity of vengeance, and shines in the benignant light of mercy and pity? Granted ; but you must remember that Jonah was a Jewish prophet, compassionately attached to his country, and yearning for its reformation. Israel was in a last stage of degeneracy. All efforts to summon the people back to their allegiance to Jehovah had failed. Universal dissoluteness and profligacy of manners prevailed. In spite of all that Jonah and his brethren could do, the people were rushing headlong in courses of rebellion. Often he had longed for some visitation of judgment to startle them from their false security. "Oh for some awful scene, some second flood, some destruction like that of Sodom. Anything, anything to arouse them from their evil ways." Then the summons came for him to go to Nineveh and announce its destruction ; and as the commission came, his heart leapt for joy, because he hoped that the fate of that great heathen city might startle his own people into repentance. But the first glad outburst of joy had been checked by his conviction as to the mercifulness of God, and he had feared that even if destruction should be announced, it would never be carried into effect ; and if it were not, would not his people be encouraged still further to sin with impunity, because the tender pity of God would secure them against the infliction of a justly deserved penalty?

By Divine compulsion, however, he had been compelled to go to Nineveh, announcing its destruction within forty days, and it had turned out as he expected. Nineveh had repented. God had turned away from His performance of wrath. Now Jonah found himself doubly grieved. First, because the weapon by which he had thought to bring his own people to repentance, had been wrested from his hands ; and secondly, because he thought that the Jews would never again heed his voice, whether raised in threatening or in comfort ; and so it seemed as if his life-work was at an end, for there was nothing left to live for ; and rather than see the disaster which he felt must be imminent, he asked that he might die. We cannot vindicate this state of mind ; it was doubtless the offspring of human infirmity. It arose from partial views of God's purposes, and from a hasty judgment respecting the outcome of his acts ; but it was the infirmity of a noble mind, and one that burned with zeal for the Divine glory, and for the spiritual welfare of His people.

God dealt very gently with him. "Doest thou well to be angry?" It is of no use chiding an angry man, but a soft answer will turn away his wrath. Do we do well when we are angry? Our anger seldom springs from even so noble a motive, as that which filled the heart of Jonah. Jonah had not remained in the city. He might have been munificently entertained there, but the prophets were never found in the palaces of kings. He therefore retired to an eminence on the eastern side of the city, and built for himself a booth, weaving green branches into a slight protection from the scorching wind and heat. "And the Lord God prepared a gourd, and made it to come up over Jonah, that it might be a shadow over his head, to deliver him from his grief. So Jonah was exceeding glad of the gourd."

Whilst we sleep, God works for us, preparing many things undeserved by us for our luxury as well as for our need. Many gourds greet the purest life as the soul steps out each day to its work, though we do not always hail them with the exceeding gladness which they demand. But let us not make too much of the gourd, for it may suddenly fail us when we need it most, and He who had prepared it for our comfort may now prepare a worm for its destruction, and then prepare a vehement east wind to read us some deep lesson which shall become the heritage of our life.

How transient are human joys! A few months of life, and a silver cord is loosed. A few quaffs of pleasure, and a golden bowl is smashed. A few hours in Paradise, and then expulsion by the flaming sword. A day's enjoyment of the gourd, and it is withered to the ground. A very little thing, small as a worm, may deprive us of our fairest boast.

God has many agents for the discipline of our lives. Now it is a worm, and then again it is a simoon sweeping across burning desert sands, tinging the clouds with flame, enveloping us like a sheet of purple-coloured smoke. Nothing is left to chance. All that comes to us must, in the ultimate working out, be attributed to the direct agency of God.

As he sat fainting beneath the scorching heat, Jonah again asked that he might die : "It is better for me to die than to live." And again the gentle voice inquired, remonstrating with him as it so often does with us, "Doest thou well to be angry for the gourd?" And the Almighty lover of souls did not seem shocked when his weary servant answered, "I do well to be angry, even unto death." How well this brought out the contrariety of the prophet's nature. He was angry at the sparing of Nineveh, and would have welcomed its destruction. He was eager for the sparing of the gourd, and was displeased for its withering. God wanted to show him that he should have been as pleased that the great city was yet standing, as he would have been pleased if the gourd had still cast its shadow over his tent.

The gourd is a beautiful but common plant, and surely man is better than a gourd, and a city of men better still.

The gourd seemed necessary for Jonah's comfort, but the city of Nineveh was equally necessary to God, and had an intrinsic value of its own altogether, and apart from the fate of the Jewish people. It was the mistake of the Jews to think that God only cared for them, and that the great world of men lived, flourished, and died only with a reference to their national history. They had no conception of the far-reaching purposes of God, and that He loved them as men, and had purposes of mercy towards them, irrespective entirely of their bearing upon His people.

The gourd was the child of a night, easily produced without a stroke on Jonah's part, or any of the kindly care which endears to man plants and animals to which he gives time and thought. But Nineveh had taken years to grow to its mighty size. It had cost God time, and thought, and care. It had become a matter of deep concern to God that it should continue to exist, and in addition to other reasons, the number of little children who played about its streets, and who were too young to tell their right hand from their left, as well as the presence of the multitudes of dumb cattle—these were also elements in the question which moved the heart of God with pity, and made Him glad to spare it still.

But Nineveh did fall, not long after this. Its walls were taken by assault ; its buildings consigned to flame ; its splendour levelled to the ground. Having disregarded the warning voice of the prophet, and the many other appeals made to it from the page of history, as well as from the record of conscience, it was so utterly destroyed, that until recently it was difficult to tell its site. But Israel still lives, found in every land, yet at home in none ; the nation of the wandering foot, the objects of stern judgment, but the heirs of a wondrous future.

"Behold, therefore, the goodness and severity of God : on them which fell, severity ; but toward thee, goodness, if thou continue in His goodness : otherwise thou also shalt be cut off."

THE LORD tells us to carry our cross and cast our care ; but we try to cast our cross and carry our care.

THE ETNA OF THE ANTILLES.

GEOGRAPHY, like history, repeats itself, and a comparison of the western hemisphere with the territories of the Old World, offers analogies which have often suggested the topographical nomenclature of our continent.

The sea-world, too, abounds in such parallels, the most remarkable of which is perhaps that between the Mediterranean and the Gulf of Mexico, the "midland ocean" of the West. Their similar area, their great average depth, the natural division of either sea into two large basins, their volcanic islands, the vicinity of an ocean-dividing isthmus, combine to distinguish the two great gulfs of the Atlantic from all other waters of the globe. Their climate, and the ethnological characteristics of their coast-lands, afford a further analogy. We need not leave the Monroe side of the Atlantic to hear a Spanish boat-song, or to see the citrons bloom in mid-winter. The shores of our midland sea have their maritime Alps and their Strombolis, eternal snow-fields and perpetual flames, with no lack of earthquakes or traces of their Titanic power.

The Souffrière, or the *Infierno de St. Vincent*, as the Spaniards call it, is in more than one respect an exceptional volcano. It is the only active burning mountain in Eastern America. Like the crater of Mount Hecla, on the solitary island of the Northern Atlantic, the gate of the Infierno seems to constitute the only vent for a vast region of subterranean and submarine furnaces. The Volcano of St. Vincent, with its double chimney, its abysmal gorges, hot springs and littoral geysers, form the focus of all the plutonic forces that have agitated the Atlantic shore of America, from Pernambuco to Cape Hatteras; and one of its eruptions was felt throughout a region whose area exceeds that of the entire Western Continent.

"The only active burning mountain in Eastern America."

During the month of March, 1812, Eastern America was visited by a flood-tide of successive earth-waves. Missouri, Ohio, Arkansas, Eastern Mexico, the Eastern Antilles, Honduras, Panama and Venezuela were repeatedly, and often simultaneously, shaken by volcanic forces that seemed to struggle for an outlet. The upheaval of the valley of New Madrid deflected the course of the Mississippi; the Cerro de Playa, in the island of Porto Rico, overwhelmed the coast with an avalanche of rocks, and for three weeks in succession, the mountains of Eastern Venezuela were convulsed by daily earthquake shocks. After a short pause, in the first week of April, these shocks recommenced with increased violence. The city of Caracas was destroyed by an earthquake that was felt all over Venezuela, and the convulsions spread northward to Cuba and the Bahamas, and westward over Jamaica and Eastern Mexico to the headwaters of the Trinity river, in Central Texas, but as yet without any actual eruption. The focus of the disturbances was a mystery.

Before the end of the month, on the evening of April 29th, 1812, the hidden furnace revealed itself. About an hour after the sunset of a sultry day, the citizens of Bridgetown, in the island of Barbados, felt a shock like the explosion of a deep-seated mine; the western sky became lurid and gradually flaming red, and an echo of distant thunder rose to a hissing and rushing noise that was at first mistaken for the approach of a hurricane. But the faint night-wind died away, and as the glare and the noise continued, an excited crowd on the terrace of the Governor's villa speculated on the possible cause of the strange phenomenon. Its volcanic origin became more and more evident, but its location seemed wholly inexplicable. The conflagration appeared to rise from the sea, at a distance of twenty or thirty miles due west; but the nearest land in that direction was the island of St. Lucia, more than sixty miles from Bridgetown.

One of the Governor's guests thought that the noise reminded him of the rush of a distant cloud-burst, and the Captain of Her Majesty's ship *Galatea* suggested that the glow might be the reflection of a volcanic outbreak on the coast of Central America.

"I have heard and seen the same thing in 1784," said his Mestizo pilot; "it's the Infierno of St. Vincent broke loose again."

St. Vincent, which has, so far as I know, the only volcanic twin peak in the world, is about one hundred and thirty miles west of Barbados. The eastern trade-winds were prevailing at the time, and a little after midnight, a cinereous substance began to fall, and at day-break the streets of Bridgetown were covered with a four-inch stratum of volcanic ashes. On May 2nd, ship-load after ship-load of terror-stricken fugitives arrived in Barbados and Martinique, and the Mestizo's conjecture was then confirmed; the island of St. Vincent had been reduced to a mass of smoking cinder heaps. After an occlusion of eighteen years, the hell-gate of the Souffrière had burst, and 40,800 houses, including the Government buildings of Kingston, had been destroyed, and 1,800 human beings had perished in a fire-deluge of lava and burning scoria.

The catastrophe which attended the birth of Mount Turullo, in 1759, furnishes the only parallel to the violence of that terrible explosion. There had been an omen of the approaching event, but like the smoke column which presaged the fate of Pompeii, the warning had been disregarded, or misunderstood. About seven miles north-east of Kingston, a spur of the Rabacca Hills projects into the sea, in the form of a low reef, with several detached rocks at its eastern extremity. Near one of the rocks, known as the *Pointe aux Loutres*, or Otter Cliff, the sea began to heave and toss in a curious way on the afternoon of the 28th of April. Dome-like billows, or bubbles, rose and fell, like the foam of a seething cauldron, and the settlers of the eastern shore noticed that the water at the mouth of the Cascade River rose ten or twelve feet above its usual level, without any apparent cause. The majority ascribed these phenomena to the influence of the trade-winds, a few to the subaqueous accumulation of driftwood. Hardly any of the planters seem to have suspected the real cause, though a local tradition says that one long-headed old Creole rode into Kingston that afternoon, for the purpose of selling certain title deeds, and actually succeeded in raising a considerable sum on one of his river farms.

On the following morning the ridge of the Rabacca range and some of the northern mountains were veiled by a slate-coloured cloud, that gradually spread eastward and downward, while the sky assumed a singular murky hue. A certain plateau of the Cascade Mountains was suspected to be the haunt of a gang of runaway slaves, and a party of mountain rangers started from Fort Duvernette, to stop the progress of what they supposed to be a forest fire.

They had already reached the head waters of the Cascade River, when they became cognizant of the fact that their hats and saddle-blankets were covered with a thick layer of gritty ashes, and nearly at the same moment they heard from the direction of the fort, the boom of a large gun, which was only fired as an alarm signal to rally the militia, or when a ship was in distress. The mist had darkened till it veiled the noontide sun, and, seized by a sudden misgiving, the troopers turned back, and had hardly reached the valley, when the hills behind them echoed the fall of a huge cliff, that had descended like an avalanche from the ridge of the upper Sierra. As they galloped toward the fort through the lowering clouds, they met a party of mounted farmers, who told them that the city (Kingston) had been shaken by an earthquake, and that a large tidal wave had torn the anchored ships from their moorings.

It is a moot point whether there is such a thing as absolute darkness in open air, but the testimony of numerous intelligent witnesses leaves no doubt that on the afternoon of the 29th of April, the island of St. Vincent was visited by a protracted and total eclipse of all natural light. At 11 a.m., fine, whitey-brown ashes began to fall in the streets of New Edinburgh, six miles north of Kingston. At 2 p.m. daylight had waned to a faint gloaming, and two hours later people groped their way from door to door, or hurried to and fro with lanterns and tallow-wood torches. The burghers of Kingston lighted a great fire on the wharf, to guide the harbour boats, but its glow was reflected from the ash-clouded air as from a screen, and in the suburbs a man, standing in the middle of the street, could not distinguish the doors and windows of a cottage from its walls.

The first subterranean commotion was of that vibratory kind which the Spaniards call a *tierra-temblor*—an earth-tremor—a faint, jarring reverberation without any perceptible noise ; but after a heavy shock, a little before noon, the concussions became audible, the earth strained and heaved with a hollow sound, like slow-rolling thunder. Toward evening the shocks increased in violence, and about an hour after sunset the foundations of the island seemed to burst with a sudden crash ; the gates of the Infierno had opened, and at the same moment the air resounded with a hissing screech from the mountains, the scream of the rising fire-fiends. The sky turned lurid, and a minute afterwards the ash-rain changed into a hail of stones mingled with flakes of a flaming bituminous substance. Houses, cattle, and piles of boxes and furniture on the wharf were then abandoned, the burghers rushed to the landing, jostling and trampling each other in the press for precedence, while the terrible voice of the Souffrière drowned the shrieks of the wounded and dying.

Taking advantage of the fitful land-wind that accompanied the eruption, sixteen or twenty vessels put to sea, most of them keeping a southerly course, in the hope of escaping the stone shower that came like a cannonade from the Northern mountains. For many leagues in every direction, the sea was lighted up with the reflection of the volcanic fires which at first crowned the summit of a single mountain ; but toward midnight a deluge of burning lava rolled over the crater, and, descending in several streams, set the green wood afire, as a torch would ignite a heap of pitch faggots. In less than half an hour the densely-wooded ridge of the Souffrière was a mass of flames, and no grander beacon ever guided the course of distressed mariners.

There is abundant evidence that the shock of the first eruption was not only felt, but heard, at Williamsport, in the Bahama Islands, more than fifteen hundred miles from St. Vincent. In St. Lucia the concussion sounded like a distant bombardment, and here, as well as in Fort Antigua and St. Christopher, the troops were under arms all night, supposing from the continued noise that Admiral Duckworth had engaged the French fleet. The earthquake was felt as far to the westward as Cape St. Lucas, on the Gulf of California, and raised a tidal wave which reached to the coast of North Carolina and the estuary of the Francisco River, eighty miles south of Pernambuco. Ships in mid-ocean were strained as if they struck on a rock. A hundred miles east of the Bermudas the sea rose and fell in mighty waves, though the night was one of the calmest in the year. The area convulsed by that shock has been variously estimated at from two to three million square leagues—considerably more than the surface of the entire Western Continent.

Some six hundred mountain farmers and negroes had reached the harbour too late, and most of the latter perished by following a troop of horses, that galloped madly toward the southern end of the island. A few managed to survive the stone fall in rock cellars and caves, and even under the ruins of their houses. But, on the last day in April, when the eruption was at its height, the most disastrous convulsions on the coast of Venezuela suddenly ceased, and at nearly the same time the earth-waves subsided in Eastern Honduras, and in the valley of the Mississippi. The subterranean forces had found a vent. A great majority of the fugitives had put to sea in open boats, but by good fortune the weather was neither stormy nor absolutely calm, and all who did not perish in the first night were either picked up by cruisers and fishing smacks, or reached the neighbouring islands in safety. Relief societies were formed in Trinidad, Jamaica, Barbados, and even in the French colonies ; and in the month of of September, a British transport ship anchored near the rock that had been the breakwater of Kingston Harbour. According to the first report of the Government Commissioners, it seems they regarded the condition of the island as hopeless. All landmarks had disappeared. Trees, creeks, fields and houses were buried under hillocks of glowing cinders and rapillo ; the plain of Kingston was a smoking ashpile. The committee only recommended excavations on the site of Kingston, St. George, and New Edinburgh, in the hope of recovering some undamaged valuables, implying that the rest of the cinder island must be abandoned to its fate.

But they had underrated the recuperative vigour of a tropical vegetation. Large tracts of woodland had been buried with their underbush, rich vegetable mould and hidden springs ; the ashes were loosened by rain showers, and before long, trees and

" The ashes were loosened by rain showers, and before long trees and grasses sprouted up."

grasses sprouted up through the fissures of their cinder grave. The creeks, too, reappeared in the steep ravines, and widened their channels from day to day; and at the end of the next rainy season it became evident that the mountain forests, coffee gardens, and some other arboreal plantations would spring up again under their crumbling encumbrances. Some forty planters landed, with a large force of labourers, and the majority of the free citizens returned in the course of next year. Kingston rose, not altogether like a Phœnix, from its ashes, for the large Government buildings have never been restored, and the surviving plants of the Botanic Gardens were removed to Barbados; but a little town park, and a row of comfortable hotels testify to the energy of the burghers, and to their confidence in the future good behaviour of their Inferno. The north coast, however, seemed quite irreclaimable. Not ravines and creeks only, but broad valleys, had been buried under the avalanches of rapillo, and several large lava streams had spread themselves over the plains, and covered the ash-fields with a vitreous crust, that resisted the disintegrating influence of heat and moisture for many years. One of these fire rivers, taking a northerly course, had overflowed the valley of the Rio Cascadas, and, following the river bed, finally reached the sea, where it formed a vast reef of solid lava, which remains as a striking monument of the most dreadful volcanic eruption of our century.

Kingston Harbour can now be reached from New York in six days, and deserves to become a popular *rendezvous* for naturalists and winter emigrants. The volcano of St. Vincent is the West Indian Etna, the ever-burning beacon of an island whose plains and table-lands are a favourite playground of the Phlegrean Titans. No other volcanic region of our continent unites on the same space so many indications of the restless activity of a subterranean Gehenna. Within an area of one hundred and forty square miles, the island can boast of two glowing craters, sixty-eight hot springs, three intermittent geysers, three pitch wells, and a great number of fumaroles, or smoking fissures, in the northern ravines of the Cascade Range.

In September, 1879, one of these ravines became the centre of a disturbance; the fumaroles emitted jets of bituminous fluid, and at the foot of the glen, volcanic gases burst from the ground, with a noise that was heard at Fort Duvernette, on the western shore. At the same time, new fissures, some of them of considerable extent, split the trachytic felspar that forms the surface rock of the Val de Cascadas, and the principal river of that valley disappeared for two days, when it welled up in a dry ravine, in the form of a torrent of steaming mud. The Infierno itself has observed a "menacing neutrality" for the last eight years. Its western cone exploded a quantity of white ashes in 1869, and three years later seemed on the point of resuming business on a large scale; but the islanders got off with a good shaking and a bad scare. Smoke explosions, however, and local *tremblors* are of rather frequent occurrence, and at such times the nocturnal sky is often reddened by the reflection of the fire-tide that rises in the spacious crater. The Northern coast mountains connect with the Rabaccas Hills by a basaltic range that forms the backbone cañons, and recall the bold outline of the Neptunium Mountains in Western Sicily. According to various reports, this range, known as the Sierra Prieta, or Laurel Ridge, seems to ensconce a third crater, whose precise location has never yet been discovered. The little village of Dorchester, on its southern slope, was repeatedly visited by showers of pumice-stone, that could not have emanated from the Infierno.

Once during the progress of an ash-rain, that seemed to come from the steep crags of the Upper Sierra, a flock of English ducks, which had been domesticated on the creek, suddenly rose with loud screams, and came flopping and tumbling into the garden of the hotel, apparently much frightened. A young Mestizo ran out toward the creek to investigate the cause of their alarm, and came back breathless with the news that "the whole valley was ablaze and steaming like a sugar mill." It appears that a superheated thermal spring had burst out somewhere at the bottom of the creek, and had raised the temperature of its waters to the boiling point for a distance of half a mile. The steam clouds soon cleared away, and an hour afterward the creek was hardly lukewarm; but a mile below the hotel, the bars of a floodgate were clogged for days with dead fish, crabs, and water insects.

A similar phenomenon has been frequently observed at the mouth of the Rio Fardo, half a league southwest of the above-mentioned lava reef. At ebb tide, when the sea is low enough to expose a shell bank near the mouth of the creek, bathers and fishermen have often noticed a curious commotion amongst the loose sand at the edge of the bank; shells, sand, and water are tossed up in jets, as if moved by an intermittent impulse from below, and at the same time, currents of steam and sulphuric acid gas are forced up through the water with a strange sibilant noise.

As a compensation, perhaps, for the explosive characters of the mountains, the Eastern Antilles have been blest with a most genial climate. There is no winter in St. Vincent, and the summer is tempered by the perpetual sea-breeze of the Atlantic. The north-eastern trade-winds set in about the end of March, and reach the West Indies with all the freshness and moisture of the happiest latitudes; there is but little difference between the mid-summer temperature of the Azores, and of the Windward Islands, as our sailors call the lower Antilles. Some of our earliest banana cargoes come from Kingston harbour. The fruit gardeners of the Vega have two harvests a year—the first in March, two months after the end of the rainy season, and the second in April, when the grapes ripen, and the mangoes and wild tamarinds are in full bloom. The southern terrace land is a veritable Garden of the Hesperides. Even on the north coast, twining evergreens have begun to soften the stern aspect of the lava rocks and volcanic gorges; nay, along the water-courses the lava crust itself is giving way before the steady progress of arboreal vegetation.

The recuperative vigour of a virgin soil is, indeed, wonderful; and only the hand of man, by long persistent outrage against the vegetable kingdom, could ever permanently mar the work of the Creator, and inflict irremediable sterility upon originally fertile portions of the globe. Neglect alone cannot impair either the beauty or the fertility of our mother earth, and even where the tillers of the soil have entirely disappeared, the spontaneous bounty of Nature proves that it is the axe rather than the sword that has desolated the Eastern Paradise.

OUR BOUND VOLUME.

NO one should miss an opportunity of securing our Bound Volume of —"A. 1."— We venture to say that it will be one of the most attractive Annuals this year. Of all Booksellers, handsomely bound in cloth, 8s.

RECIPES.

STEWED BEEF.

PUT about ½lb. of beef (any lean part—neck will do) into a saucepan (or a jar), with a pinch of pepper and salt (a scrap of onion, a clove, and a carrot sliced, if allowed), a pint of hot water, and simmer very slowly for two or three hours, or until the meat is quite tender; serve it with a little of the liquor thickened with rice or flour; the rest of the broth can be served in a cup with a bit of toast.

SPONGE PUDDING.

SLICE a penny sponge cake into 3 pieces, lay them into a small firepan, which you have rubbed with a bit of butter or suet. Pour a few spoonfuls of milk over them, out of half a pint. Beat up an egg with a teaspoonful of sugar and a half teaspoonful of flour (a pinch of ground cinnamon or a scrap of lemon peel, if allowed). Mix it up with the rest of the milk, and pour it over the sponge. Bake for about ¾ of an hour. This pudding can be steamed or boiled.

SMALL BATTER PUDDING.

MIX a heaped-up teaspoonful of flour with a gill of milk. Beat it up with an egg for ten minutes. Pour it into a well-buttered jam jar, or large cup; cover it over, and stand it in a saucepan of boiling water; cook until it is set, about ¾ of an hour. Serve with butter and sugar, or a spoonful of good gravy.

LEMONADE AND ORANGEADE.

PEEL a lemon very thinly; cut the flesh into thin slices, removing all the pips; now put the rind and slices into a jug, with a tablespoonful of sugar or honey. Pour a quart of *boiling* water over, cover it up closely till cold; then stir it, and strain it through a cloth. Orangeade is made exactly in the same manner. A very nice pudding can be made of the remains of the lemon or orange, thus: boil the peel and slices until quite tender, then pound them quite smooth, and mix with sugar, boiled rice, bread, or flour, an egg or two, if you have them to spare, and some milk. One lemon or orange will flavour a quart or 3 pints sized pudding.

SPECTRUM ANALYSIS.

By M. H. Birkbeck.

WE all know that the white light which comes to us through a series of ether waves from the sun is made up of an infinite number of coloured rays. By refraction with a prism of glass or crystal, we can separate these rays from each other, and arrange them in the series of colours which constitute the solar spectrum. The rainbow is an imperfect or impure spectrum, produced by the drops of falling rain; but by prisms, we can unravel the white light into pure red, orange, yellow, green, blue, indigo, violet. The prism pulls the waves asunder ; they are retarded, but in different degrees ; the shorter waves suffer the greatest retardation, and, in consequence of this, are most deflected from their straight course. It is this property which enables us to separate one from the other in the solar spectrum, and this separation proves that the waves are by no means inextricably entangled with each other, but that they travel independently through space. Red glass, for example, is red, because it is so constituted that it destroys the shorter waves which produce the other colours, and transmits only the waves which produce red.

Let us endeavour to form a definite image of the waves of light. They are generated in the ether by the swinging atoms of luminous bodies, and are of different lengths and amplitudes. The amplitude is the width and swing of the individual particles of the waves. The waves of the sun may be divided into two classes—one competent, the other incompetent, to excite vision. But the light-producing waves differ markedly among themselves in size, form, and force.

Turned into their equivalent of sensation, the different light waves produce different colours. Red is produced by the largest waves, violet by the smallest, while green is produced by a wave of intermediate length and amplitude. The red waves are to the blue much in the relation of billows to ripples.

This is not all. As there are sounds in nature which we cannot hear, so there are rays in the sunbeam which we cannot see. There are dark rays before we get to the red, and other dark rays after we leave the violet ; the former, heat rays, the latter, chemical rays ; and this accounts for the three-fold action of the sunbeam—heating power, lighting power, and chemical power.

We owe the discovery of the prismatic spectrum to Sir Isaac Newton, but the beautiful colouring is but one part of it.

In 1802, Dr. Wollaston discovered that there were dark lines crossing the spectrum in different places. They were afterwards investigated with profound skill by a German optician, who mapped the plainest of them with great care. They were called by his name, Frauenhofer's lines. We shall observe the lines most clearly if we make our sunbeam pass through a spectroscope. This is an instrument in which several prisms are mounted in a most careful manner, and it does the work of the prism in sorting and sifting the light waves more thoroughly, and with greater delicacy.

The spectrum is a multitude of overlapping images, varying in colour from violet to red. We want to prevent the overlapping of these images by drawing out our spectrum horizontally, and we find that by increasing the refracting angle of the prism, or by using many prisms, the images are made so narrow as not to overlap, and we can then see the dark spaces, the black lines, and the gaps in our spectrum, which we can compare to silent notes on an organ.

There is an immense number of these lines which intersect, and almost appear to make the solar spectrum dark. Frauenhofer employed the letters of the alphabet to designate some of the principal lines, beginning with A in the red, and passing over to N in the violet.

Many of these lines are as fine as the finest spider's web, so that they occupy but a small portion of the whole area of the spectrum ; that is, the portion which is filled with light is far greater than the portion filled with these shadows, although the number of these shadows is exceedingly great.

Frauenhofer ascertained that these lines are present in every kind of sunlight, and found that the relative distances between any given lines remained constant, whether he took direct sunlight, or sunlight reflected from the moon or planets. Another important observation was made by Frauenhofer, namely, that the light from the fixed stars, which, as we know, are self-luminous, also contains dark lines, but different lines from those which characterise the sunlight, the light of the planets, and that of the moon ; and hence, in 1814, Frauenhofer came to the remarkable conclusion that whatever produced these dark lines—and he had no idea of the cause—was something which was acting beyond and outside our atmosphere, and not anything produced by the sunlight passing through the air. He imagined that these lines were caused by some absorptive power existing in the stars and in the sun.

The exact mapping of the lines is a matter of very great importance, and since the time of Frauenhofer, the best maps which have been made of these solar lines are those of Kirchhoff and Augstroïn.

What is the meaning of such dark spaces ? Where are those pulses of light which should be speeding their way to us through the almost infinitely elastic substance with which space is occupied? What has happened to those rays "which the dark lines in the solar spectrum tell us are wanting—those rays which were arrested in their path, and prevented from bearing their message to us ?"

It was in seeking to interpret these dark lines, it was in carrying out this inquiry, which seemed so hopeless, that Kirchhoff lighted upon the noblest method of research yet realised by man.

We read that "there is in the human intellect a power of creation which is brought into play by the simple brooding upon facts."

Can we not picture to ourselves the way in which these observers brooded over these dark lines, these failing rays, till the truth being in the air, as the American Emerson would express it, "the most impressionable brain announced it first"?

Let us, then, following humbly in their steps, brood a little over the meaning of the dark lines, the silent notes, in the solar spectrum, till, with one of those bright flashes in the world of thought, a leap of the imagination, we unravel the mystery, and bring all our facts into complete unison one with another.

And first, we must understand a little more about the spectra of incandescent solids, liquids, and gases.

An incandescent solid or liquid gives out a continuous spectrum. "The bright bands of a metal are," says an eminent scientist, "characteristic of the metal ; we can, without seeing the metal, declare its name from the inspection of the bands. The bands are, so to speak, the voice of the metal declaring its presence."

A glowing vapour gives out *not* a continuous spectrum, but a broken one, and we have a series of brilliant lines, separated from each other by spaces of darkness.

"Every different chemical element in the state of gas, when heated until it becomes luminous, gives off a peculiar light. The spectrum of every element in the state of glowing gas, is totally different from that of any solid body, inasmuch as, instead of giving a continuous spectrum, it presents a broken or discontinuous one, containing bright bands or lines, indicative of the presence of the particular elementary gas in question. Further, when a body becomes gaseous, the light which it gives out is of a particular kind, and does not alter where we increase the temperature."

"If we can, by any method, get the vapour of a chemical element so hot as to become luminous, we find that the light emitted by it is peculiar to itself, and is distinctive of that special body, whether under the ordinary circumstances the element be gaseous, solid, or liquid."

Thus, sodium vapour gives off light of one degree of refrangibility only, and the spectrum is confined to one very narrow yellow band. It is a prevailing element in the atmosphere that all bodies exposed to the air, show, when heated, the yellow soda line.

Lithium vapour gives a beautiful red line, together with a paler orange line. The spectrum of hydrogen, seen under the ordinary atmospheric pressure, consists of three bright fine lines.

"When light from a solid or liquid, passes through a gas, the gas absorbs those particular rays of light of which its own spectrum consists."

We know that the sun consists of a solid or liquid mass of exceeding brightness, surrounded by an atmosphere composed of the vapours of the bodies which are burning in the central orb.

It follows, therefore, that this atmosphere, which wraps the sun like a flame, will cut

off those particular rays of the nucleus which it could itself emit, "the lines of Frauenhofer marking the position of these failing rays;" and we should, therefore, expect that the bright lines in the spectra we can observe here, would be found represented by dark lines in the solar spectrum, supposing that any of the same substances exist in the sun, as are to be found in our earth.

So carefully have the dark lines in the solar spectrum been mapped out, and so entirely do they correspond with the position of certain of the bright bands in the spectra we can observe here, that the chances against the hypothesis being right, are said to be something like 300,000,000 to 1.

We see now what was the meaning of the silent notes; we understand what befel those rays which "were arrested in their path and prevented from bearing their message to us. Before they left the regions of our incandescent sun, they were arrested by those particular metallic vapours and gases in his atmosphere, with which they beat in unison," and their message is sent to us therefore by their *non-arrival*. This message, which the genius of Kirchhoff has enabled us to read is, that iron, calcium, magnesium, sodium, chromium, and other metals are constituents of the solar atmosphere.

The spectroscope, which was first successfully used to examine the red flames, as they are called, or red prominences, in the Indian eclipse of 1868, showed that they were composed of hydrogen.

The spectra of the nebulæ, instead of resembling that of the sun and stars, consist of a few bright lines, but the spectra of the stars which have been lately mapped down, tell the same history as that of our sun.

In all, "we find an atmosphere sifting out the rays which beat in unison with the metallic and gaseous vapours which it contains, and sending to us the residuum, a broken spectrum, abounding in dark spaces."

"FIRE, IF YOU DARE!"

WE do not remember a more striking illustration of the sheltering value of the Saviour's blood than the following incident, which occurred a few years ago:—

"In one of the Spanish-speaking towns in South America, a British subject was arrested for joining in some local riot. He was condemned to be shot, and brought out before a file of soldiers for that purpose. The British and American consuls protested against the act. Suddenly, just as the officer was about to give the word "Fire!" the British consul rushed to the side of the condemned man, wrapped him in the British "Union Jack," and exclaimed, "Fire, if you dare!" The American consul also wrapped around him the "Stars and stripes," and stood on the other side. The result was that the arms were grounded, and the man delivered over to the British protection.

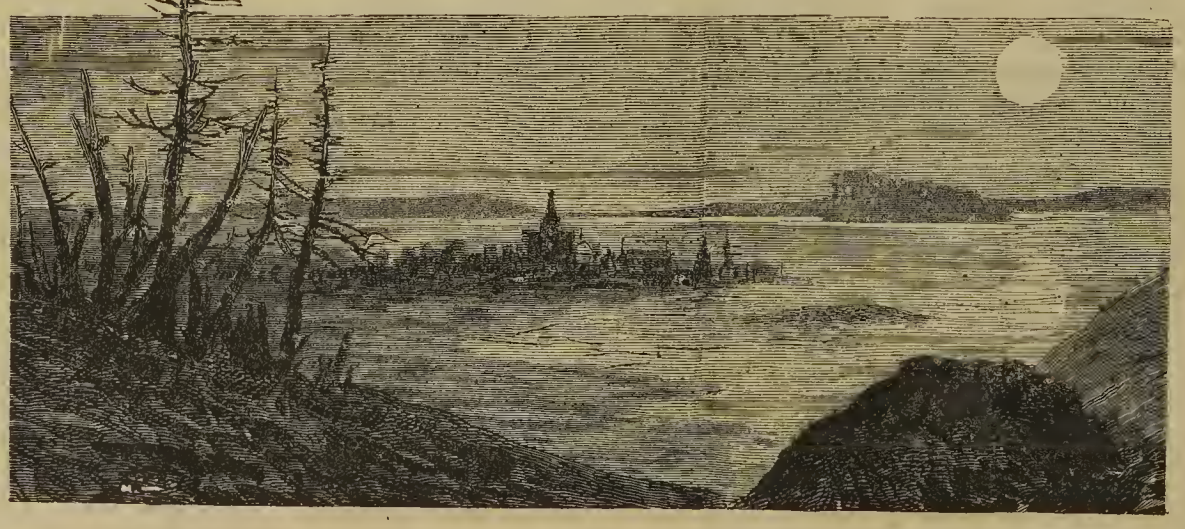
The sinner who believes in Jesus is saved by being covered with the robe of Christ's righteousness; for there is "no condemnation to them which are in Christ Jesus." He is redeemed with the precious blood of Christ, and protected as one of God's children.

WHAT MAKES A SOLDIER?

NOT the dress, however gay; not the drill, however severe; not the name, however grand; but the simple acceptance of the Queen's shilling, the having given one's self up to the service of the country. A man may have no regimentals on, but he may be a soldier for all that; he may not have begun to train, but he is just as much a soldier as the oldest veteran in the army. He may be an ignorant, untried, raw recruit, only yesterday enlisted, but, nevertheless, he is as truly a soldier as the commander-in-chief of the grandest army.

So it is with the Christian. What makes a Christian?

Not dress, position, attainment, intelligence, service; it is having accepted Christ as his Saviour, enlisted under His banner. Though he know not a letter in the Bible, nor have done a single bit of service for his Master, he is a Christian; for *simple faith and nothing else* makes a Christian; all else—drill, armour, service, knowledge—are only accessories that help to make the man a more efficient and valuable soldier of the Cross.



KNOWING IS THE ROOT—FEELING IS THE FRUIT.

A GARDENER will tell you that it is roots that bear fruit, not fruit the roots. The character of the fruit depends upon the condition of the root. If the one be good, the other will be good also; but if the root is bad, no fruit can come forth. What we see in the vegetable world, we also find in the spiritual.

"Do men gather grapes of thorns, or figs of thistles?" We know they do not; neither can that which is evil bring forth that which is good.

My ground of confidence for the future is not that I feel happy or comfortable, but that I know that what God has said must be true. Feelings depend very much on outer things, and the condition of surrounding circumstances; but *knowing* depends on a firmer, unchanging foundation, even the truth of God's word. If I know that God says my sins are forgiven, it matters not if I be destitute of every comfort, or even be in a depressed state of mind; nothing can alter the fact of Christ's love for the sinner, or the truth of God, on which alone my eternal safety rests.

Knowing I am saved by the precious blood of Christ is the *root* and ground of my happiness, and it produces the *fruit* of present peace, and an assurance of eternal joy.

MAD JOHN BURLEIGH:

A STORY OF HEROIC SELF-SACRIFICE.

By Mrs. CHARLES GARNETT,

Author of "Her Two Sons," "Eric Olsson's Minde Ring," "Drifted," "Little Rainbow," "Corbiestanes," "Our Navvies," etc., etc.

CHAPTER XXIX.

A TOUCHING FAREWELL.

REBECCA SUGDEN did not know the meaning of that laugh, as she entered with afternoon tea and a fresh muffin; but for very joy of heart she joined in the laugh. There was isinglass in the Vicar's cup, though he never suspected it. Her face shone with happiness as she arranged the little table.

"Shall I light the lamp, sir?"

"No, Rebecca; put another log on the fire."

"You need not go," said Lady Susan, as she saw her linger; "have you no village news to tell Mr. Burleigh?"

"Thank you, my lady;" and Rebecca stood still on the hearth.

"Little Mary has been, sir. The child says that her father forbid her coming some time since, but that now she may come again. I fancy she has fretted until that Bradley was frightened."

"You say '*that Bradley*' quite savagely, Rebecca; no doubt he had some good reason."

Neither Rebecca nor Lady Susan made a remark, but their hearts burned within them.

"The child, anyhow, was glad to come, and she brought you a new laid egg; she says that she has a hen of her very own now, and that she shall bring you every egg that is laid."

John's eyes dimmed, for he was very weak, as he said,—

"The next time that she comes, I should like the child to see me."

"Very well, sir, I'll remember; she will be rare pleased. I heard from father to-day, sir, too. He says mother is fast getting back

"'*But I can tell you, Tom, that you will never be what you were before you came here.*'"

the use of her leg, and she can do almost anything with her hand. He sent his respects, sir."

"Susan, you must write for me to Luke Sugden, and tell him that I can *never* be sufficiently grateful for the loan of his daughter; tell him that a dozen times a day I thanked God for her, at the brick-fields, and since."

"Hush! John, you must not talk so much. Rebecca, remember!" for Lady Susan saw that the girl was on the point of bursting into tears; but at that word, "remember," she became still and composed; but the face which she turned upon them in the firelight shone like an angel's.

After that they were very still and very happy. Voices murmured below. A step was heard on the stairs; Lady Susan recognised it.

"Oh, I forgot, John. Another friend is coming to see you; he came to the Chase last night."

Rebecca was removing the little tea-table, and the Vicar took Lady Susan's hand fondly in his own.

"Who is it, my darling?" He was not thinking of his question, but of her; she looked to his sight very lovely, as she stood beside him, looking down at him, and as he stroked her hand, he whispered,—

"My wife!"

Another moment, the door opened, and Ralph Hardman came in.

"I'm so glad to hear that you are better, old fellow!" he exclaimed.

Lady Susan stood between them, and on the instant John Burleigh did not recognise the voice, but Rebecca did, and turned with a stifled cry, and crouched down, raising her arm as though to ward off a blow. All the happy bloom disappeared from her face; it aged and blanched visibly—a stricken, frightened animal, rather than a woman, crouched in the corner of the room. A flame leaped up from the wood logs and illuminated the place.

Ralph Hardman started and glanced in the direction of that strange cry of pain. The terrified countenance was lifted to his, the protecting arm was still raised, and the brown eyes, filled with an agony of recognition, chained his own.

"Rose! Rose Maydew!" he gasped.

"No!" John Burleigh's voice was no longer feeble, the old ring was in it, the old musical pathetic inflection. "No, *that* name no longer exists! The waves of God's mercy roll over the past. *Your* sin and *hers* made her what she *was*. *His* grace has made Rebecca Sugden what she *is*."

As he spoke, the horror died out of the girl's face, and her arm fell to her side; she bent her head, and hiding her face in her hands, sobbed out,—

"And you."

John Burleigh had risen to his feet, his hand was raised in blessing, a glory illuminated his face. They gazed upon him, and as they gazed, he swayed backwards, his hand went to his heart, and a strange cry, which might have been an echo of Rebecca's, pierced the stillness. Hardman caught him and placed him in his chair.

"Go!" said Lady Susan, and Hardman never forgot that look which drove him from her presence for ever.

The others, in the room below, had heard the sounds, and were already on the stairs. He passed them, and went out into the darkness of the tempestuous night.

They found John Burleigh leaning back in his chair with a peaceful face, and a surprised smile on his lips, the pallor of his cheeks hidden by the glow of the firelight, Lady Susan holding his hand, and looking at him with a stony gaze, and Rebecca Sugden lying at his feet, sobbing broken-heartedly.

CHAPTER XXX.

"LIVING ON."

On a moor in Yorkshire, a mile inland from the edge of a cliff, below which the Northern Ocean races and foams, swirling round the point, and flinging at high tide sheets of spray upward, so that the brine encrusts the windows of the fishermen's cottages built on the sides of the ravine beyond the point, stands a small hospital.

It is an ugly building of grey limestone. It has a garden at the back, where, protected by high walls, a few flowers and shrubs grow, and the convalescents—fishermen, and iron-stone delvers from the mining village still further inland, or their wives and children; for there are wards for all—sit in the sunshine. They are almost glad to be ill, to get admitted there. If grey and sombre outside, inside it is bright enough—gay with pictures, and warm with open fires and thick curtains.

An organ stands in the long corridor, and the patients love to listen to the music made on it. They know that so long as Miss Sugden is there, they shall want for no comfort, for no nourishing food or cooling drink, or brisk, helpful kindness; and they are content to trust her entirely. But Lady Susan, who comes in her soft, black silk dress, so quietly into the ward, who sits by them, and talks so sympathetically to them, who always understands them so well—it is she who embodies the rest, the peace, and the music of the place to them. Rough men—dog-fighters, hard drinkers, swearers—come in, and go away changed and softened.

"I never knew that the Lord Jesus cared for working chaps 'till I came here," said one.

"And do you think that He cares now?"

"Yes, my lady! At least I don't reckon to have head-piece enough to study much on anything; but somehow He seems like one on us. I trouble about one thing though."

"What is that?"

"I don't want to go back to th' old life again; and yet I mun when I go out of here. It seems like to me I'll lose my chance if I do."

"You cannot stay here; your broken leg is mending wonderfully."

"Yes, a deal too fast."

"But I can tell you, Tom, that you will never go back to the mine to be what you were before you came here."

"Think not, my lady?" responded the man, his downcast face brightening. "But why? I shall be among th' old lot and th' old temptations."

"Yes, but Christ will go with you."

"Nay, never so!"

"He said Himself, 'If a man love Me, he will keep My words. . . . and we will come unto him, and *make our abode with him*.' It won't be 'coursing Tom' going back, it will be *Christ* and Tom. Dare you not go with Him?"

"Ay, anywhere!"

Another day he asked,—

"When me and *Him* goes home, what must I do?"

"Live like Him, to save others."

"That's how you do, my lady; lots on us thanks God for this hospital. All the country side's changed since you built this place."

"Hush! don't talk so, Tom; you do not understand. I came here, years ago, very desolate, and very hopeless, and you all have comforted me. I am in debt, if debt there is, to you, not you to me."

And the man was silent.

But in the pit village, by many a great coal fire, Lady Susan Stopham's name and Miss Rebecca Sugden's were named together in blessing. In many a fisherman's cottage tales were told of the light kept burning by ladies' hands, all night long in the tower at the house, to warn the cobbles off the jutting Brig rocks. So time went by, but a change came at length. From the education of constant companionship with her friend, Rebecca Sugden had acquired, not the manners only, but the intuitions of a lady. John Burleigh's library occupied the book-shelves in Lady Susan's own room—books of many ages and many interests—books which Rebecca read at first, that she might look at the printed words which her dear master's eyes had followed, that she might touch the cover which his hand had held; but as she read, her keen intelligence awoke and grasped the subject matter, and made the noble thoughts her own; she grew to love the study, for its own sake, which she had commenced from love of him.

Before the hospital was finished, and during the time that she was yet in her father's house at Benford, a letter had come to her from Ralph Hardman—a penitent, broken-hearted letter, in which he asked her to become his wife; a letter which made her shrink and start with pain; one which she answered by a prayer for forgetfulness, and a plain denial.

From time to time he wrote, asking for news of Lady Susan, and sending through her the ample funds which the earl's purse could hardly have supplied to meet the every want of the hospital. Possibly Lady Susan knew whence the rolls of bank-notes came, but she never asked the donor's name. Rebecca would lay them quietly down, and say—"These have come in memory of Mr. Burleigh," and Lady Susan would bow her head and take them. But years had passed,—ten, since he left them, nine, since the first patient came into the hospital. For as Lady Susan slowly struggled back to life, after weeks of illness, they brought her to this secluded village to regain strength, and with health came the desire for occupation, and the opening for it. Again and again she visited the spot, to watch the grey walls rise, and her father and mother were glad to see some of her old brightness come back. "It is the happiest thing for her, Di, she will never forget poor Burleigh; let us do what we can to make her life bearable to her. After all, she will not be thirty miles from the Chase, and as both the villages are mine, I feel that we ought to do something for the people."

"You are spending as much as you can afford in Houghrigg already."

"Ah! one cannot forget that Burleigh gave his life—such a devotion as *that* makes a man see his duty."

"Well, for the present, I do not object to Susan's plan, though it is strange, and every one will wonder at our permitting such a sacrifice."

"My dear, do let us cease to refer to others. Surely it is enough if the child is happy!"

"I only trust that she will soon tire of her fancy. If she does, no harm will be done, for it is impossible for her to go into society looking as she does."

"I do not think that she will tire, but we shall see."

Lady Susan did not weary, though each year she was brighter, more absorbed in her work. She was frequently at home for a couple of days, and always spent an hour or two in the great court of the castle, and then went down to the churchyard and stood by a green grave. At first, she wept passionately, during these visits; now, she only lingered till the very last possible moment; but from the beginning she came away with a great peace resting on her heart, and a comfort of communion which lasted for days afterwards.

Another place she visited, and was there the worshipped guest. At Burleigh she was even more at home than at the Chase; and when Lady Charlotte married Arthur Burleigh, to the old Squire's intense delight, and a son was born whom they called John, it became to her still dearer.

Again the strange "calling back," which is so unaccountable, showed itself, and the boy, as he grew older, became "his uncle over again." Other children quickly followed—a fair band; but the old Squire would look quickly across at Lady Susan, as some intonation of voice, some unstudied movement or attitude, or the intensity of gaze of the boy's dream-like eyes, caught their notice. She would smile a little smile of comprehension, but the recognition brought a dimness to his vision and an ache to his heart. Between the unwedded wife whom he had left behind him, and John Burleigh, there was no misunderstanding, and no sense of wrong; but his uncle still grieved when he remembered what had been, and what might have been.

Rebecca Sugden also had her holidays, when she invariably went home. Her father had ventured all his savings in a small mill of his own. For two years he had hard work to keep his head above water. A chance of introducing a new manufacture had come; he was the first in the field. It seemed to many an unusual speculation, but the result justified Sugden's far-sightedness, and his resolution and immense business talent did the rest. The tide turned, he was swimming with it, and was first in the race. Money flowed in, but the passion of conquest was on him; he did not store capital, but daringly spent as quickly as he made, in building factories, and introducing new machinery. He was proud to be at the head of the trade, and determined to keep there. He succeeded, and now was rapidly becoming a capitalist as well. He was mayor of his native town. He had educated his younger girls, and "pushed his boys on," but, in his heart of hearts, he thought Rebecca worth them all. His wife had died quickly, under a second seizure, a year before he became mayor; and now a general election was on, and he begged Rebecca to come home during this busy week or two.

The mayor gave dinners every night, and the senior candidate—their old member—remarked to his chairman,—

"I had no idea that Sugden had such a charming daughter, such a perfect lady, and so bright and conversational."

"Yes, she has had great advantages; she lives with one of Lord Azerley's daughters. They manage a hospital together somewhere in the North Riding."

The junior candidate of the party arrived next day. He was Ralph Hardman; a name, already well known as that of a man who never feared to stand for the right, regardless of party considerations—one, alas! of the few, who in the House of Commons dare to confess themselves devoted to the good of their fellow-countrymen, especially of those who can least defend themselves, for Christ's sake.

So they met at last, and two months later were married; and Ralph Hardman took with him to London, when Parliament opened, a wife whom he was conscious was his other self—his complement, giving to him all that he lacked.

Before they went up to Town, they paid a visit to the hospital, at Lady Susan's invitation. She wished Mr. Hardman to know how his wife was loved and valued. Rebecca desired him to know all the poor people whom she esteemed so highly.

Hardman showed to Lady Susan a tender, respectful devotion, and she to him a kindliness which told him that he was forgiven. They only stayed a week, but during that time Rebecca kept Lady Susan away from the Cove as much as possible, and Ralph Hardman let the ladies walk to the pit village alone.

They were to leave on Saturday. On Friday, quite unexpectedly, the earl and all the Burleighs arrived; and then, for the first time, Lady Susan suspected that some great event was about to take place. They took her to the Cove; the place was in a tremendous excitement—the fisher-folk, in their Sunday clothes, were making holiday, the cobbles were anchored, the fishing-boats drawn high and dry on the shore; men, boys, and women were hurrying in from the pit village and the farm-houses.

The visitors turned the corner of the rocks and entered the second little bay, and then Lady Susan saw a magnificent life-boat, ready to be launched; the men all ready in their cork jackets, smiles on every face, and cheers on all their lips.

"Ah!" cried Lady Susan, "*this* is the *one* thing that I have longed for."

"Rebecca!" said Ralph Hardman, and suddenly, with all her old passion, the elegant lady by his side turned and flung herself on her knees by Lady Susan.

"For *his* sake who, under God, saved us both, body and soul, take it. Dearest friend, we can never express half our love and gratitude to you. This is nothing, but for his sake take it."

Lady Susan drew her up, and kissed her friend. She was very pale, but she looked across the heaving ocean, and a light came to her eyes as she stepped forward.

"Christen this splendid boat, Susan," said the earl.

"What name?"

"Look!" said Ralph Hardman.

On the silver background, in blood-red letters, the name shone out—"The John Burleigh."

Then, in a clear voice, which all could hear, she spoke his name, adding,—

"God bless you, and may you do *your* work as *he* did *his*."

THE END.

THE TROUBLE ON BOARD THE "HALICORE."

By James Runciman,
Author of "Skippers and Shellbacks," "Tales of the Coast," etc., etc.

Not a man in the ship was more sailorly and smart than Tom Finch.

WE looked very smart when we hauled out and went away down past New Brighton; for the men were as particular as I was, and we had spared nothing to keep our ship smart. The new-fashioned war-vessels, with their stump of a mast, and their general air of business, were not to our taste, by any means, and we preferred the *Halicore* to any of them. If it came to mere steaming, they could all best us easily, and I am quite sure that the *Iris* and the rest of the new lot could have run away from us; but when it came to regular bull-dog weather, we held our own always. We had the screw, but I was very glad when it was disengaged, because I had been brought up in the old school, and I liked to work the vessel under canvas. Mind you, I don't deny that it is very pleasant to have steam when you have to put a vessel's head to the sea in such a place as The Bay. One of the old windjammers can hold her own when the big steamers are being drowned, but, in a smart, small vessel, the propeller gives you a pull, and you can keep her facing a heavy south-westerly breeze at times when one of the old merchantmen would have to lie down to it.

We had got the *Halicore* in lovely order, and I was very glad when the captain decided to sail, and the fires were banked.

We knew that we were bound for the West Coast of Africa, and the only chance of a trifle of pastime would come if we fell in with a slaver running north.

People think that the slave-trade on the West is done away with altogether, but they never made a bigger mistake in their lives. Of course, in the old days the thing was carried on as easily as might be. There was a chase, and an occasional burst-up; but I reckon that in nine cases out of ten the cruisers were too slow for the slaving schooners, and I think that the old yacht, which beat the best of the Cowes schooners, was about the last that ever our fellows took. Usually the rascals from Cuba and the Brazilian ports gave our people the slip, and I do not know of any reasoning which expresses the sense of triumph and contempt better than that lyric—that immortal lyric of scoundrelism—"It's Time for us to Go."

How the lines ring! What rascal poet wrote them?—

"We had a quick run to the West,
And when we made the Bight,
We kept the offing all day long,
And crossed the Bar at night.
Six hundred niggers in the hold
And seventy we did stow,
And when we'd jammed the hatches on,
'Twas time for us to go.

We hardly had got off the coast,
Before we spied a sail;
So we packed on every stitch would stand,
Although it blew a gale.
And she walked along at fourteen knots,
For the vessel she did know
As well as ever a soul on board,
'Twas time for us to go.

Then yard-arm under she did plunge
In the trough of the deep seas,
And her masts they thrashed about like whips
As she bowled before the breeze.
And every yard it buckled up,
Like to a bending bow,
But her spars were tough as whalebone, and
'Twas time for us to go.

So we carried away our royal yard,
And the stunsail boom was gone;
Says the skipper, 'Let them stand or go,
I'm blowed if I don't crack on.'
So we'll round the weather braces in,
And the trysail set also;
And we'll keep the brig three points away,
For it's time for us to go.

We dropped the cruiser in the night,
And our cargo landed we;
And ashore we went with our pockets full
Of dollars on the spree.
And when the liquor it is out,
And the locker it is low,
Then to sea again in the ebony trade,
'Tis time for us to go."

I had been on the coast before—worse luck—and I knew what sort of life we should have: flaring mornings; sultry, putrid noons; long, sweltering afternoons; and mysterious nights, full of stars and full of vague unrest. The sea is phosphorescent, the waves all seem like dark, speckled serpents, charged with venom, and the kiss of the air, as it catches your cheek, seems like some evil touch. Yes, we were bound for the country of misery and disease, and I found myself praying in a way that I would have laughed at in the days before I learned how God can care for the worst of us. I never used to pray at all, until a sneering, sceptical old rip said to me, "My lad, I'm past praying, but believe me, if you ask for anything, you will have some kind of an answer, even if it seems wrong to you; and your answer will come to show you that there's some kind of a personal Master that's resolved to let you know when He's there, and when He's got command of you, as He has on all of us."

So from the time when that old joker said that word to me, I never missed praying; and on the night when we were slipping out from the Mersey, I thought of the dismal coast and the rolling sea, with all its hideous jumble of corruption, as it sways along the shore of the murderous Bight, and I prayed—oh! so hard. Some of our chaps would have thought me an idiot, had they known what was in my mind; but I had one man in my watch who knew more than most of them, and I always made up to him. When we got nicely clear, I said to Tom Finch, "There's something on my mind, Tom Finch;" and he replied, "Yes, sir. I suppose it's one of these yere what-you-call-ums—a forebodin', sir, as I may say." I made answer, "Yes, Tom; I don't like the look of things. I and Ferrers must be answerable for the vessel. Have you noticed the captain?"

"'Tain't for me to say, sir. I may, or I may not, sir; but I go as far as this, and I says, sir, without any way puttin' you in for it, sir, I wish as he was more steadier, sir, and pulled hisself together just one little bit."

I knew that our captain was not quite right, and I could see that the brandy disappeared far more rapidly than was right. As I said to Tom Finch later on in the watch, "If he goes on like this as we're knocking about in the Bight, he'll get fever for certain; we shall have to put him over the side, and then either I, or Mr. Fitch, must run the boat home. I'm uneasy, and I wish our three years were only at an end."

Captain Mostyn came up on deck just about dawn. Now you know what sailors are like; one of our marines was up forrad, and the look-out men were very steady in their places, for there was no sea to speak of, and we had crept in right out of the track of steamers. Tom Finch said to me, "We're a good mile clear, sir; what do you say if you and me does a pray, sir?"

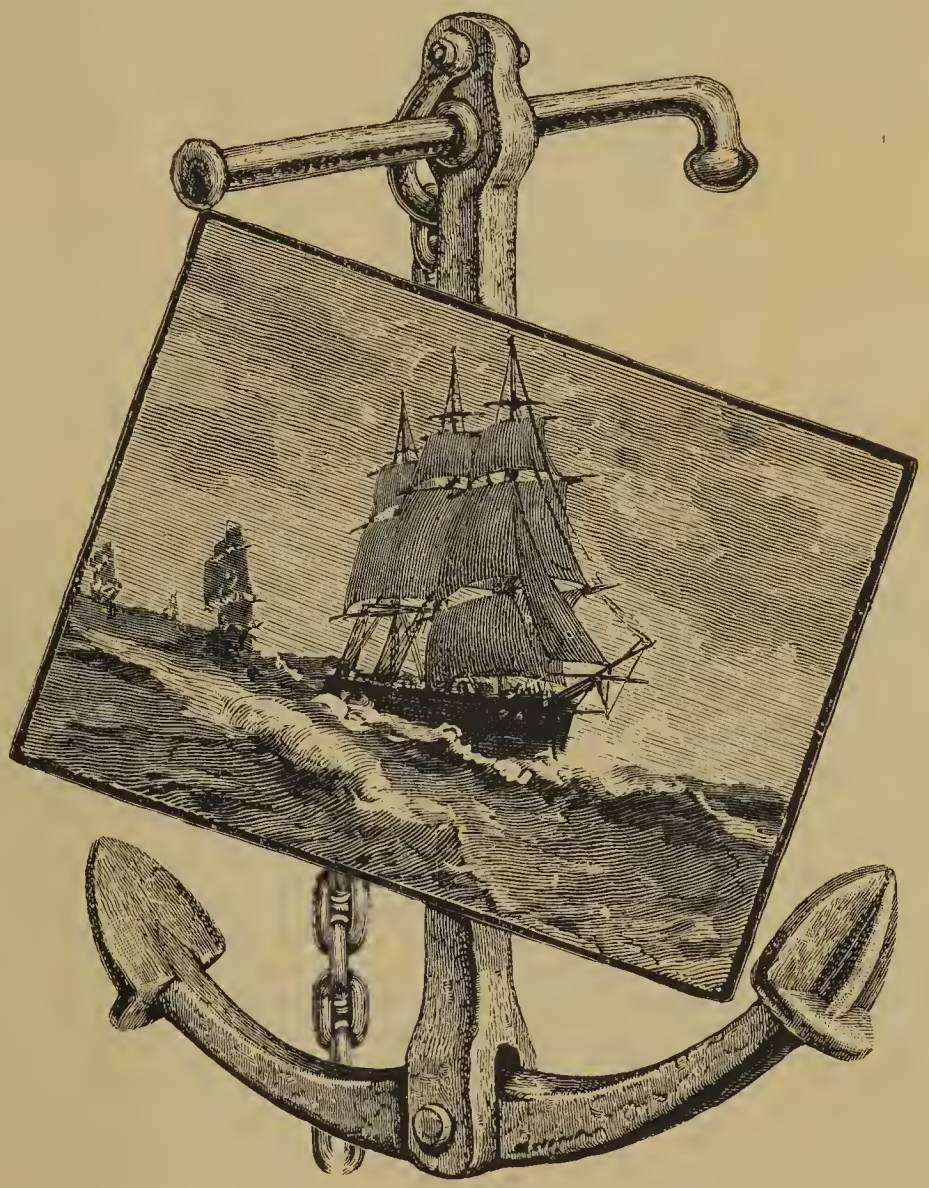
I allowed Finch a great deal of liberty when we were together at night, and Mr. Forrest, our second lieutenant, used often

to say I should spoil the man, so that he would have to be brought to his senses. I ran the risk of bringing ridicule on my uniform, and we did what Tom called "a pray"; and in the middle of our "pray" the captain came upon us. He spoke very sharply, as was his right, and I felt the faint scent of alcohol in the air.

"Do you, see, sir, a green light broad on your port bow?"

I merely saluted, and answered, "Yes, sir, and he showed his red just now, and his green before that. It's only a tug, and he knows how to clear us."

"Then don't be praying there, and let the boatswain's mate go. I heard you, and I'm a little surprised at your notions of discipline."



I took the snub quietly, for I knew we had deserved it, and I only wanted to save Tom from any trouble; but if the captain could only have understood what the blue-jacket and I were saying, he would have spoken differently. It is not often that an officer goes the way that I have gone, and I am called an eccentric; but I took a strange little blue-eyed man as my model, and what is good enough for him is good enough for me. He sailed with us once, and I have always associated his name with the name of Jesus ever since. He would get the men together in the dog-watches, and pray a little, and I think that God shed a light on his face, for indeed I have never known anybody like him. He was no milk-sop, and he always had the strangest smile on his face—it was not humorous, it was not sad,—it was a smile full of mysterious knowledge, and it made you know that you were in presence of one who had been in the presence of the Most High. The twinkle of that man's humour played over everything; his angelic, quiet kindliness made the commonest business of life significant; he was religious every moment of his life, and never sanctimonious for an instant. His name was Charles Gordon, and he died at Khartoum. His sweet smile is the one thing that I shall remember most clearly when I have to die, and his quiet words, spoken with that strange, quick, low voice, will stay in my ears until my time comes.

It was the little, blue-eyed, saintly Charles Gordon that persuaded me to influence the men in my watch. It is not counted very good form in the service, but I preferred following the saint rather than the old school men.

Well, I took no notice when Captain Mostyn made a sort of jeer at me next day; for, after all, my work was done as smartly as anything that could be seen, and I am free to say that my fellows were as good as any in the navy, though we were such a small craft.

We ran towards Ushant, and I always had Tom Finch with me in the middle watch, and I need hardly say that he never took the faintest liberty. He knew that we stood almost alone in the vessel, but he never presumed on our spiritual companionship; and there was not a tearing, swearing Portsmouth man in our company who could have been more sailorly and smart when it came to the pinch.

When the 17th of January came, we were a shade southward of Ushant; and then came the breeze that all the world remembers. Our propeller was disengaged at about four in the morning, and at six it came on to blow. By eleven in the morning we had taken everything off, and we were under storm canvas; at three in the afternoon the snow began to fall, and no man on earth could have seen so far as our bowsprit end. The vast roar of the gale began to grow more and more intense, and poor Tom and I could not have held our little prayer meeting if we had tried. You may laugh at the notion of holding a prayer meeting in such an hour if you choose, but I assure you that was the one thing I should have liked to do.

"I had been brought up in the old school, and liked to work the vessel under canvas."

Our captain seemed to have no notion of the trouble we were in, and he slept quietly on, even after the *Halicore* began to take green water on board. We could keep no look-out, and the men who were passing fore and aft actually did not know each other when they happened to be thrown together, as the vessel lurched through the mad, yellowish tumult of the snow. Does anybody still care to remember that ghastly storm of January 18th, 1881?

On shore it was said that strong horses put down their heads, and sullenly refused to travel in the teeth of the shrieking wind. But what was the gale like at sea? The Brixham trawlers are nice seaboats, and yet two of them were dismasted and swept.

Captain Mostyn looked grave when he came on deck after his sleep, and with a kind of dubious jocularity, he said,—

"We shall need some of you praying members before the night is gone."

I knew he meant to jeer at me, but I made no answer, except to say, "You can't stay on deck without your oilskins, sir," which was a very cool remark to make. Oilskins were really of no good, for the snow gathered and caked and froze on you. We were trying to run on the port tack, and every man on deck had a sheet of ice on his right side. As the gale gathered force, the swift seas swept away the loose snow; but when we were for a single minute clear of green water and foam, the frost caught us, the snow became lumped into queer masses, and our rigging would soon have been like a set of stalactites, but for the enormous wash of the seas that swung over us ever and again.

That was a gloomy day, that horrible 18th. At dawn on the 19th, the wind began to come round. I took the responsibility of trying to sail the *Halicore* a little on the port tack. It was of little use; as soon as I let her go, she made most fearfully heavy weather, and last of all, she kept us all holding on where we could, while the westerly sea came clean over her; and one of our guns, which broke adrift, crashed round and rolled over a poor seaman. It took us half an hour to secure that gun, and then the wind had risen so badly, that we resolved to connect the propeller, and put the *Halicore* with her head to the sea.

In column upon column the rushing seas came down upon us that night; we were only making a small number of revolutions, and that was too little to make the ship hold her own. At two o'clock the captain came up, and said,—

"Your praying powers may be wanted soon, if this goes on. How's her head?"

He spoke in jest, but he was very nearly right.

Tom Finch and I had the morning watch; all the men were at their posts, but somehow I never can think of them as being anything but machinery. Tom was the human soul that attracted me. I said,—

"Easier work if the snow were gone. We shan't be able to move a block soon, if it lasts. Run forward, Finch, and see if we can get the jib clear, should I decide to give her any more."

Finch came back, and said,—

"We shall have to keep to the steam, sir. Glass going hard down, and she's got to do all she knows to keep it from slopping over her. One of the bad lot, sir, asked me to try a prayer."

All this time the wind was evidently growing more severe. A collier nearly came into us, and I saw that his starboard bulwarks were gone, two boats smashed, both masts gone, and I could dimly see that his hatches had been swept off, for the men were very busy with them, and every man was lashed to the port rail. A pretty go for us, I thought.

When the dawn came up, the water was coming at us in hills as big as Liverpool Exchange; and we shuddered and stopped under the squelch of each sea. The captain looked up again and again, and always made some joking remark about the duty of praying; but I was more intent on seriously asking my God to care for me than in listening to any jokes.

I think it must have been about 6 o'clock when Tom Finch came to me, and said: "We shan't do much good in this, sir. There, you see, that one took us; and something must go. There's a gull forrad, sir; you can't get him away from the foot of the winch. That's bad, bad, bad, sir. You and I are safe, I hope, sir; but it 'pears to me as some souls has to go."

That was doleful enough, but the savage yelling of the wind that followed was more doleful still. The blast seemed of a sudden to attain the consistency of a solid body, and there came at last such a tearing squall, accompanied by a strong sea, that the *Halicore* could stand up no more, and I saw to my horror that she was hove down as flatly as if she had been a small fishing-boat. I saw our foremast dip, and then the rush of the sea flowed over us, and our starboard side heaved up until the deck was absolutely perpendicular for me. We had storm canvas, but each sail was full; and I heard the flap, flap of the propeller, varied by a sharp, shrill whirl as it raced. We were on our beam-ends, and the weight of the wind would not let us come back. Tom Finch was hanging on like me; and when he found that we could not rise, and when he heard that the engines could only do us harm, and not good, he said to me,—

"That foremast's doin' of her. The Lord gave His life for men; and I reckon I can save you if I go over the side with that there mast."

We were all in a pretty trouble; and I expected that we should capsize. Captain Mostyn was praying; the men forrad were watching for the return lurch of the loose gun.

I said, "Collar a hatchet, and try it on."

Tom said, "I shall go to join the dead. Shove her hard a-starboard again as I go, and try to keep the fires up."

Then he sprang up with the carpenter's best axe, and he struck like ten men, although the water was enough to sweep him clear. I hung on as well as I could, and I heard Tom say, "Lord, I give my life for men; you gave your life for men; meet me, Lord, when I come."

Our hulk strained and reeled so much that Tom had hardly cut four inches into the mast when everything went; the great spar described an awful arc, and the starboard rigging went like tow. Tom Finch went with the wreck; and I am sometimes half sorry that I let him give himself away. The *Halicore* was saved by him; for he caused her to right in far less time than I take in writing this. Tom was a good man, and God knows His own.

IN AN INDIAN HOSPITAL.

By Arthur Montefiore, F.R.G.S.

SOME years ago, when in the Madras Presidency, I was unfortunate enough to contract a severe attack of dysentery. Being quite a stranger in the country, I applied for admission to the Government hospital of the town in which I was staying, and, my application having been courteously received, I was soon located in what was called the "officers' ward." After a time, when convalescent, I saw a good deal of the inner life of the hospital, and learnt much that was worth recording.

The Government hospital was a large, airy building, whitewashed within and without, roofed with immensely thick thatch, and having a thatched verandah, some fourteen or fifteen feet broad, running completely round it. The building lay east and west; and toward the south looked out on the sandy plains that stretched right away to the coast and the swamps of the Godavery. On the south side there was a large "compound," which is the name given to the private enclosure or grounds about an Indian house, and on the north side an irregular courtyard, having high walls and great wooden gates. Against these walls the bath-rooms and operating rooms were built. The western, and larger half of the hospital was devoted to natives, and the eastern half to Europeans.

The wards were lofty, well-proportioned, and pleasant. Latticed doors, which were wide and high, and were kept closed during the heat of the day, led through the rooms, and opened out on the front and back verandahs. The ceiling and walls were whitewashed, and the furniture consisted of iron beds and bamboo chairs. All washing apparatus was relegated to the bath-rooms—a necessity in a tropical climate. The floors were bare of matting or carpet, but highly polished. Hour after hour, in the intense heat, there prevailed an absolute silence and repose, that was only broken at intervals by the stealthy movements of the blind-mice and lizards, the buzzing of the mosquitoes, or the occasional visits of a mina, the Indian mocking-bird.

The English doctor in charge was a civil surgeon, who had seen long service in India, and drew the very handsome salary of £100 per month from the Government. He called every morning about eight o'clock, and remained for an hour or more. The resident surgeon was a Eurasian, and lived in a bungalow in the compound. He did nearly all the work, but his pay was only about 100 rupees a month—one-tenth of the English doctor's!

We had frequent visitors at the hospital in the shape of the native police. They are a semi-military force, armed with rifles and bayonets, and having English officers to drill and control them. Their uniform was simple and picturesque—a blue tunic of thin material, white trousers, and a scarlet turban. They used to come to the hospital in couples or trios, in charge of some ruffianly native who required medical treatment, it being a common practice of the Indian criminal to "bash" himself about, or even attempt suicide, rather than undergo his sentence. These pleasant members of native society used frequently to be squatting about in the verandah, guarded by the attendant policemen.

Every morning, from seven till after ten, the courtyard on the north side would be full of the maimed and suffering, old and young—the out-patients of the hospital. It was of unfailing interest to sit under the verandah and study their appearance and costumes, and actions generally. They were marvellously patient, awaiting their turn for hours in the hot sun with docility and apparent contentment. Young women and children would often bring bottles to be replenished for some sufferer at home, and many of these young women were remarkably handsome. Their neatly-shaped heads—well-poised and well-proportioned; their blue-black hair, very long and thick; their exquisitely shaped and rounded shoulders, slender hands, and well-arched feet; light, graceful walk, and simple, but elegant dress—clinging in one place, and voluminous in another—made them strikingly handsome and picturesque figures in the ever-changing scene in the courtyard. The voice and manner of these Indian girls were very pleasing—soft and winning, yet full of reserved dignity and grace. The one thing distasteful to an Englishman was the inevitable trinket suspended from the pierced upper lip. But, by way of compensation, they laugh musically!

As it was the height of an exceptionally hot season, there was of course a good deal of sickness and death. Every morning early, as I sat out in an easy chair under the verandah, enjoying the most enjoyable part of an Indian summer's day, I used to see the native porters of the hospital carry out across the compound from the native wards, the dead bodies of men and women—the night's work! These they carried with little ceremony on a light stretcher,

which was formed of a piece of coarse matting, fastened to a couple of poles, and of so insufficient a size, that frequently the legs, from the knees downwards, dangled from one end, while the head and arms did the same from the other. They trotted them off, quite coolly, to the partially reclaimed swamps a mile or so away, and then, scraping a shallow grave in the sand, left them. In the night the yelling and barking of the jackals told one how shallow that grave was, and why that dreary cemetery ran little danger of being overcrowded!

Cholera and small-pox were claiming many victims; the mortality from the ravages of these two scourges amounting on one day to as many as two hundred souls out of a population of about twenty-five thousand. One morning, going out early—about five o'clock—I found a good-looking young Eurasian lying back in my chair. He looked ill, but, rising politely, apologised for taking the chair. On telling him to keep it, he replied, "Thank you; I am not feeling well, and have come to see the doctor." Early in the afternoon of that day I saw the coffin that enclosed his dead body pass out of the gates towards the Christian burial-place.

At another time, the only other occupant of my ward—the chief officer of a ship in the roads—was suddenly taken ill in the night. The lazy "sweepers" and male attendants took little notice of his moans and cries, and so I did what I could for him for two or three hours. Then, luckily, the doctor-in-charge came in from his house in the compound. He had my bed removed at once, and took me away to his private room, where he dosed me with some physic, and scrutinised me too closely to be altogether comfortable every time he came from the patient. The poor fellow, who had come ashore with some trifling ailment of the feet, was stricken with cholera. In a few hours all was over, and nothing remained but a livid corpse, bearing the marks of an agonised death. The doctor was very angry with the attendants for not having called him, and he told me that had he been there before, the man might have been pulled through. But these native nurses are, as a rule, absolutely unreliable and negligent. I never guessed what it was till the doctor arrived, which is not surprising, as it was my first experience of nursing a cholera case.

The great sport of the people round about seemed to be cock-fighting. Marriages, too, were frequently celebrated.

Indian girls are betrothed when infants or children of five or six years of age, to men who are then in their prime. Many high-caste Hindoos, who are impecunious, make a habit of going about the country consenting to betroth themselves to girls for a consideration. The parents, who are perfectly aware that a marriage can never be consummated with such an ubiquitous suitor, are well pleased at securing for their daughters an alliance—however slight—with one of good family. The unfortunate girls, once betrothed, can never marry another person, and consequently are treated as widows. There are many thousands of such widows—hapless maidens who have never been wives. In the cases where marriage takes place, the bride is generally eleven or twelve years old, while the bridegroom is frequently grey-headed.

Low-caste Indians are often tremendous drunkards. Their favourite beverage is rum-arrack, a spirit of extraordinary strength distilled from a variety of the palm-tree. They make light of the strength of our brandy, and at one time I witnessed a man inhale ten ounces of chloroform—I noted it in my diary at the time, and believe it to be perfectly correct—before he was rendered sufficiently unconscious to undergo an amputation! The doctor told me this was owing to the use of the strongest opiates—opium, Indian hemp, and opiated tobacco, as well as indulgence in arrack.

Upon one occasion a lad was brought to the hospital and laid down under the verandah in a ghastly stupor from having taken Haschish, or Indian hemp. It appeared that his father was in the habit of taking it as an opiate—as millions of Hindoos, Arabians, and Turks do—and that the lad stole some for his private delectation, with the result of taking an overdose. He fell into a stupor from which he never awoke, for it was found impossible to shake it off him, and he died an hour after he was brought in.

One habit of the natives much impressed me; it was the great care with which they washed their teeth. I used to watch them in the early morning performing these ablutions, with a chatti (an earthenware jar) of water in one hand, and the twigs of the oleander tree, which they used as a brush, in the other. They would devote quite a quarter of an hour to this portion of their toilet.

When convalescent, I was in the habit of supplementing my hospital fare with imports from the native bazaar, and found the cost of food, when bought direct from the producer, exceedingly trifling. As a rule, one pays well above the actual commercial value of the goods to the rascally Eurasian dealers, who take advantage of English ignorance at every turn. But, in reality, food and light clothing are absurdly cheap, as also are fruits, and other native produce. For chickens I paid four annas—about sixpence—apiece; and eggs I bought at three annas—about fourpence halfpenny—a dozen. Necessaries of all kinds are cheap; luxuries—chiefly European imported dainties—are dear.

But in addition to cheap living and clothing, Indian life and Indian manners are intensely interesting, and I really think I should be now living somewhere on the palm-fringed coast of India, did I not distrust my constitution, and dread another sojourn in an Indian hospital.

ANSWER TO SCRIPTURE ACROSTIC

Given on page 766.

1. H ezekiah—2 Kings 19. 14-37.
2. O badiah—1 Kings 18. 3, 4.

"Holy Spirit."—Luke 11. 13.
Gal. 5. 22, 23.

EDITORIAL.

WITH this Number we close our first year. Our chosen title was "A 1." We do not affirm that our ideal has been realised; but this we *can* say—that it has ever been steadily kept in view; and if we may judge by the hundreds of complimentary reviews by which the Press has continually kept our name before the public, we have cause for encouragement, if not for congratulation.

Perhaps a still more cheering testimony has been borne to our Paper, through innumerable letters, many of which have told of real help through its columns.

In all this success in the past, we thankfully own the blessing of the Lord, and the hearty co-operation of His people; and relying still upon these, we expect that our second Volume, opening with the next Number, will sustain the reputation achieved.

As hitherto, we shall endeavour to meet the tastes of all classes of readers. Our serials will be: "The White Lady of Hazelwood," which has been written for—"A. 1."—by that talented and charming writer, Emily S. Holt; "Eagle Cliff," a characteristic tale, by the popular author, R. M. Ballantyne; and "N.B., or His Responsibility," an original and ably-written serial, by Agnes Giberne.

Amongst our short series of Articles may be mentioned—"Eastward Ho! Reminiscences of Travel and Personal Experiences in the Holy Land."

Autograph Letters of Celebrated Men (with facsimile productions of the letters); and "The Ghost of the Lavender Room," by the Hon. Mrs. Greene.

Facsimile-drawn Bible-marking pages, with Bible Jottings, etc., etc., for Bible students.

Papers on Botany, and another series on Practical Gardening, for those who cannot afford expensive resources, such as greenhouses, etc.

Chess, Athletics, etc., etc., will also find their place; whilst those who have a special turn for mechanics will not be forgotten.

A succession of novel and entertaining Prize Competitions, with handsome money Prizes, will be kept up with spirit.

This is only a bare outline, which we shall hope to fill in shortly, of some of the attractive features of next year's Numbers. But it will suffice to prove that *progress* is to be the order of the day, and *that*, not only with the matter, but also with the illustrations of forthcoming Numbers. And in return, we do not think our appreciative readers will think we are asking too much when we suggest that if they would order one additional copy of our next Number for some friend, it would probably result in our starting the year with a still larger list of subscribers. Where this is not convenient, the address on a post-card will secure a Specimen Copy, free.

CAPITAL!—A shoemaker in a country village, basing his claim to patronage on the honesty of his intentions, put up as his motto over the door, "Mens conscia recti." An opposing knight of the awl, fearful that his neighbour's sign would draw away his customers, forthwith painted over his stall, "Men's and women's conscia recti."

AN ALASKA LEGEND.

THE WRITER'S NARRATIVE.

DURING the season of 1874, the author was cruising in Alaskan waters, and while in Oonalaska, he met a fur-trader who had a very wide personal knowledge of the Aleutian Islands. This hardy mariner, in return for a petty favour, offered to secure and give to the writer for the Smithsonian Institution, a lot of mummies of which he knew the hiding-place. Certain parties had been hunting for these relics of Aleutian types unsuccessfully for many years, and he had enjoyed their discomfiture. The writer gladly encouraged the undertaking, and Captain Hennig, in the service of the Alaska Commercial Company, of San Francisco, secured in a "fire-cave," on Kaygamil Island, thirteen mummies, which have been used for scientific examination and comparison, and placed on examination by the Smithsonian Institution. They are the first Aleutian mummies ever found in Alaska, and with the exception of a single one from Prince William Sound, also given to this Institution by the Company above named, they are the only examples of their curious burial which have been given to us. These mummies are not embalmed, as are those of Egypt, but are really desiccated, like the Peruvian specimens of the same class. The hot walls of the volcanic cave in which they were found accomplished this preservation.

The legend which accompanied the mummies, and forms the basis of this sketch, declares that these bodies of Kaygamil are about one hundred and fifty years old, since they were placed in the cave on the north-east side of the island, during 1724 or 1725. Kaygamilyak is the largest of the group—the "Cheetiery Sopochnie," or the "Four Mountains," a small but abruptly rising cluster of volcanic islets in the Aleutian chain. A number of grumbling, smoking peaks and hills still complain and labour here.

THE LEGEND.

A rugged archipelago, known to us as the Aleutian Islands, reaches away out into Behring Sea, almost to Asia, from its initial point on that volcanic Aliaska peninsula, where it baffles and breaks the mighty billows of the great Pacific. Upon this forbidding isolation, geographers and hydrographers always love to rest their eyes; and also, in their closets with maps unrolled, to indulge in endless speculation over its influence with and relation to the New World, as compared with the Old. Few, indeed, of their number know ever so little of the wild, weird scenery of this rocky upheaval, or of the simple inhabitants thereof. Both landscape and people are as sealed books to most of us, and will doubtless remain so, far into the future.

Before the fur-hunting Russians discovered these islands, and overpowered the natives in their passionate, indomitable search for fine peltries, the Aleutes were a brave and numerous people. They possessed nothing in common with the nomadic Esquimaux to the northward, nor with the treacherous, indolent Koloshians to the eastward and south. They steadily refused to treat with these savage neighbours, and repelled with blows and bloodshed any attempt on their part to visit the Aleutian land. Each group of islets or islands in the Archipelago, was ruled absolutely by its chosen Töyone, or chief, who was invariably a man selected by acclamation on account of his personal prowess and skill.

Conspicuous amongst the Aleutian chiefs was Katháya Koochák, of Kaygamilyak, whose indomitable will, coupled with matchless skill in the chase and home industry, made him feared and respected throughout the nation. The Töyone was a man very small in physical stature, spare in flesh, but yet possessed of great nervous strength and endurance. He was, moreover, so superior in understanding and address above all others of his countrymen, that they gladly hailed him chief and rendered ready, prompt obedience, both in peace and in war. He had an only son, called Egadahgeek, or The Sleeping Seal, whom he fondly loved. When the boy had passed his thirteenth year, it became necessary that he should learn those arts of hunting and fishing which were so important to the worldly advantage and even existence of every Aleute. He must begin to make journeys out to sea alone, to plunge into rolling surf with his bidarka, to find his watery paths though fogs both thick and thin, to throw his seal and bird spears with unerring aim and telling force, and to outwit the extraordinary cunning of the sea otter.

Fully realising the imperative need of this experience and discipline for his young son, Katháya-Koochák made for the boy with his own skilful hands a bidarka, the skin cover of which was so beautifully stretched and sewed over its slender wooden and whale-bone keel and frame, as to call out the astonished praise of the best boat-makers in the village. The devoted parent then ornamented the little vessel with fantastic and superstitious paintings, executed with red ochre and green clays; and into its tightly sewed seams above, he deftly wove the tiny blue and white feathers of certain gaily-plumaged sea parrots. No less care was taken

The flight of Kâhegan.

with the seal and bird spears, and the rest of the young prince's outfit.

When all had been made ready, the unwilling father pushed the youthful hunter's boat out from land, and consigned him, unaided and alone, for the first time, to the perils of the sea and the ardour of the chase. Unable to watch his son as he paddled out from the land, the old chief withdrew to his banabora.

Egadahgeek, flushed with honest pride, and spurred by roseate hopes and ambition, swiftly propelled his tiny craft toward the famous kelp beds of Kugamil, where the hunters often found the otter as it slept upon the floating gardens of sea-weed. Thick fogs soon closed down, as usual, over the landmarks, and he had nothing to guide him on his course, except the wind ripples on the water, and the regular heaving of the southerly swell, as it rolled from the great Pacific, and dashed in futile fury upon the black, iron-bound reefs and cliffs of the "Four Mountains." Swiftly and noiselessly Egadahgeek paddled his light bidarka, until he began to grow weary, and his suspicions were aroused at not finding the rocks that he was in search of.

Doubt and distrust of himself finally arrested his hands, and he laid his paddle across the bidarka, and peered eagerly into the grey darkness around him. Suddenly a whirring sound struck his ears, and simultaneously a heavy-headed bird arrow splashed into the water by his side. This was the greeting of an enemy, not a friend, and the young hunter seized his paddle and desperately urged his bidarka over the waves and away; another arrow followed the first, and struck upon the wake of the flying boy with an angry thud that nerved him to fresher, wilder desperation; so that as he forced his paddle through the brine, it snapped short off, and precipitated the youthful argonaut into the dark, cold waters beneath, the frail bidarka turned over on him, and he drew his last breath on earth as he sank.

A few moments after this misfortune, the form of the pursuer emerged from the dark gloom of the grey fog. With a cry of anguish he seized upon the overturned bidarka of Egadahgeek, and as he righted it, he drew out of the water the lifeless form of the unfortunate boy. Wild, piercing notes of sorrow were uttered by the wretched Aleute, who had caused the untimely death of the young Töyone, and who was none other than the unhappy boy's brother-in-law, Káhegan, who loved the Prince as a brother, had secretly followed Egadahgeek with the sole object of shadowing the boy's progress and of protecting and assisting him, were he to get into trouble. His idea of startling Egadahgeek and stirring him to flight, was merely in the nature of a good-humoured jest.

Káhegan held the lifeless body clasped in his arms, while he implored forgiveness, and bedewed the cold face with scalding tears. Night was coming on, and the angry combing of the surf gave unerring warning of approaching storm. What should Káhegan do? He did not dare to face the grief and wrath of the Töyone, and he could not endure the thought of leaving the body of Egadahgeek to be food for marine monsters and hobgoblins. His resolve was quickly formed, and with the corpse laid across the bidarka, he rapidly retraced his course, until near to Kaygamil village. Here Káhegan tenderly deposited the body on a large mass of floating sea-weed, and arrayed it with great care, so that it should remain there securely afloat. It could be easily discovered and give no clue to the cause of Egadahgeek's death. Then he turned the prow of his bidarka seaward, and disappeared in the darkness, breathing as he went into exile, a prayer of love and remembrance for his wife and unborn child.

Meanwhile Töyone Kathâya Koochák, as night drew near, came out from his "casine" and anxiously looked for the return of his son; the whole village joined him; they scaled the highest rocky points over the settlement, and lighted many lamps of seal oil and moss wicking, to serve as guiding stars.

Sleep did not close the eyes of the chief that night; he stood for hours, fixed like a statue on the rocky shingle where the booming roar of the surf drowned his cries and words of encouragement. Gesticulating and hoarse with continued shouting, the unhappy father summoned at the first dawn of light his best hunters, and started out upon the sea in search for the missing son. The body was quickly found on its floating bier. The Töyone was nearly dumb with grief; he preceded the sad procession to his öolagamuh, and ordered the funeral ceremonies to take place.

Under the constant supervision of the old chieftain, the body of his son was eviscerated and tenderly filled with scented grass; it was placed in a sitting posture, with the arms folded around the knees; a priceless charm or amulet was taken by the king from his own neck, and strung round that of the dead; then a baldric of beautifully woven grass cloth that the skill and patience of many months had fashioned, was placed over the features and head of the deceased; then the whole body was wrapped tightly up and over in another mat of coarser make, yet of intricate pattern, with tasteful feather ornamentation; then a fine bird-skin "parka," or coat, was put on, the neck and lower portion being tied up with the arms, so that the contents were inclosed in a complete envelope; then another exquisitely fine woven mat of grass fibres was laid upon the breast, which was a marvellous specimen of beau-

The living King to the Mummy Prince.

tiful weaving; then around these in turn, were sewed the precious skins of richest sea otter, and finest fur seal, and a funeral cradle was neatly made of whale baleen and driftwood timber, deftly cut and bound together.

It had always been the habit of these simple people, when death took the living from their ranks, to bury their bodies in the earth, and heap rude, rocky cairns upon the newly-made graves; but Kathâya Koochák surprised his servants when he declared that the great fire-cave of Kaygamil was to be the sepulchre of Egadahgeek. Word was swiftly carried to all the natives of the Four Mountains that the Töyone's son had perished, and that he was to be buried with honour and grief by the whole people; so, as the light of day dawned, they quickly gathered in from their little villages surrounding Kaygamil. When the shamans of the villages had completed their weird incantation and death dance, and when the grief-smitten parent gave signal, the mummy-bier was gently raised upon the shoulders of four stout Aleutes, and carried slowly down to the beach, followed by the king, who stooped, as he walked, from utter prostration. His sympathizing people, with uncovered heads and tearful eyes, filed after in a long procession, and filled the air with a solemn, sad chant, which set forth the virtues of the youth, and the courage of the dead.

The big "bidarkah," or boat made of sea-lion skins, received the body, and the strong arms of the boatmen soon urged the vessel to its landing, where, under the beetling brow of a mighty bluff, and flush with its mural face, was the entrance fissure to that cavern of sepulchre which was hot from volcanic heat and subterranean fires. With great difficulty the peril of meeting smoothly the heavy surf swells, was safely overcome—such waves as fall on the rocks with the weight and fury of an avalanche, and sound as booming cannon. The remains of Egadahgeek were deposited in this strange sarcophagus, with a large selection of the choicest furs and the best implements of the chase, bedewed with the tears and accompanied by the chanted lamentations of his people.

The old chief, after he had returned to the village, stood up on his öolagamuh, and solemnly directed his subjects to do to him when he should die, exactly as he had done to his son, and to treat every member of his household in the same way; so that when death had ended his kith and kin, they should all be grimly gathered together in the dark recesses of the Kaygamil cavern.

The Töyone did not long survive his loss and grief; his orders were faithfully carried out by his obedient Aleutes, and in the lapse of a few decades, the last of the blood of Kathâya Koochák was laid away in this manner; all of their wealth, their sea otter and fur seal skins, their household goods, wooden dishes, arrows, spears, and other weapons—all their earthly goods left behind them, were deposited as were those of the Mummy Prince in the same cave with their remains.

Soon after—in 1758–60—the first white men who had ever appeared before the eyes of the people of Kaygamil, landed from a Russian schooner, seeking and trading for sea-otter skins. They took shameful advantage of the unsuspecting natives, oppressed them, robbed them, and sowed the seeds of disease and death amongst them, so that the Four Mountains rapidly diminished in population, and eventually became uninhabited. But the mummies of Kaygamil and their costly wrappings were undisturbed until 1874. Now the wasted body of Prince Egadahgeek and the king, his father, rest in their singular cerements beside Peruvian Incas and those of Egyptian birth, within the museum of the Smithsonian Institution at Washington.

What a strange blending of the old World with the New, were the mummified remains of the children of Cheops to suddenly renew their life, and step out and forward to clasp hands with a simultaneous resurrection of the Chief and Prince of Kaygamil! They might and doubtless would appear to us as much alike in life as they do in death, despite that vast geographical abyss which yawns between them.

THE TWO BROTHERS:

A STORY OF THE AUSTRALIAN GOLD-FIELDS.

By Lady Hope.

TWO brothers played together by the flowing brook that skirted the beechen woods. Their home was the little cottage that stood in its own garden close by. Hoops, pegtops, marbles, balls, — these were the humble toys that occupied them in the pleasant sunset hours, when they were not inside the village school, conning their tasks of A B C, and summing up long lines of 1, 2, 3.

The cool, soft light of an autumn evening was shining through the interlacing boughs of many an old tree in the sloping wood. The beech coppice on the hill-side was well known to all the villagers; and these two brothers made its pathways their constant playground. As the red sun, like a fiery ball, made its distant "Good-night" signs from the line of hills on the horizon, the boys were busy with their fishing-rods. But in vain they cast their lines upon the water.

"It is the fishes' bedtime! They will not come!" the eldest boy said. His name was Elna,—shortened from Elnathan in the big old family Bible.

"Oh dear! oh dear!" sighed Alfred, the younger one. "I wish we could have some real fun. This is awfully dull work. Couldn't we have some better play than this? Come into the copse, and leave the old stream behind, then, Elna. Let us pretend that the sun is a fire, and we have got an encampment in a foreign land. We will make some tents of sticks and leaves."

"Huts! you mean," Elna rejoined, throwing away his fishing-rod with his usual impetuosity, and turning down a narrow path that led to the interior of the wood. "We will build two huts for ourselves, and then chase the wild animals and bring them home to eat. What a capital game!"

"One hut is big enough for two," said Alfred. "It is better to be close together. Then we can talk over our plans, and pretend to be men who are in search of discoveries."

"What shall we discover?" Elna asked.

"Unknown lands!" Alfred suggested.

"Mines!" said Elna.

"Precious stones!" said Alfred.

"Gold!" exclaimed Elna.

And this suggestion settled the choice. Quite an hour of busy work followed, for the boys were gathering heaps of stones and twigs, and counting every pebble one by one.

Oh! how exciting it was.

How earnestly they enjoyed their game! They loved one another heartily, and were always happy when together.

* * * *

Ten years passed away, and they were men in earnest—tall, strong fellows, hardened by their country life, and ready for work and pleasure too. They both loved sport, but they were industrious young men, and knew how to dig and delve, and toil with their hands as well as their heads.

One evening they were sitting by the casement window. Their father, in the prime of middle life, sat reading the local newspaper. Mrs. Dudley, their mother, hemmed a large white apron with deft fingers and a quiet, restful face in the chimney corner.

"Here you are, boys! Suppose you try it," said the father. "I knew I had seen the column here. Day after day I see the accounts of these gold-fields. You say you want excitement and adventure. Fortunes can be made in these foreign parts, they tell me, as fast as men can gather stones in England. What do you say to it, boys?"

The tall young fellows laughed, and talked together, and one of them said,—

"Give us the paper, father."

Then they studied it together, two heads bent closely over the exciting column.

"I am ready if Alfred is!" said Elna.

Alfred smiled, an honest, trusty smile, into his father's face, as he replied,—

"You won't go without me, old boy, I suppose?"

"Without you? never!" Elna replied. "Why should we not go together?"

The agricultural depression was at its height; the farms in their own neighbourhood offered but small scope to their eager talent and ambition. So, after many a long discussion, the brothers sailed away in a great ship with its white wings to Australia.

There their work began in good earnest. They built themselves a hut—*really*, this time, not in play,—and secured a square of ground where they could make their search, digging the clay and stones with spades and pickaxes, and washing each shovelful in the wide, shallow stream that flowed beside them.

More and more eager their search became as days went on, until their hearts were filled with only one absorbing theme, the love of gold! It became a passion to them, a thirst. They could not control it. Days of success and failure were alike in busy toil for them.

Often at first they talked of home, and unclasped the tiny pictures that they carried of their father and their mother, that they might look fondly at the well-loved features and think of them. But when the other passion came—the greed for gold—their early memories began to fade, and evil, covetous thoughts possessed their minds.

Such was the power of these grains of gold upon the two young men, that every other instinct seemed to succumb to it. They were straining every nerve to make a fortune; and the fortune was coming to them bit by bit, in ebbs and flows, like the tide upon the shore. Each was measured by its "luck." Sometimes luck failed, and then it came again, till the excitement grew to fever heat.

And then the brothers began to have suspicion. One thought that the other had secreted gold, that he was amassing fortunes for himself. Suspicion turned to envy and distrust, and then came hatred, bitter anger, between these two, and every evil thought.

"Who can stand before envy?"

A hue and cry was raised one night that one of the Dudley brothers was missing.

It was the elder one. His hair had grown quite grey of late, through anxiety, or some sorrow gnawing at his heart.

Nowhere could they find him. High and low the diggers searched, and questioned his brother as to where he could have gone.

Alfred seemed strangely bewildered, and said he must have gone to look for some other run. At length one evening, at the sunset hour, an axe was found buried in the earthen floor of the hut; upon its blade was found just ONE GREY HAIR!

This token tracked the murderer! For it was true. Poor Elna had been killed, and men were sent to look for the evil-doer, that he might be punished for his crime.

But Alfred was not there!

His gold lay in large heaps beneath his floor; his clothes were there, his tools,—but nothing more.

And where was he?

Tramping through the bushes in disguise some forty miles away, Alfred was in search of some new resting-place, where he could hide himself and work alone, and far from those who knew his brother.

But oh! poor fellow! even there the hand of misery pursued him.

At length, one night a weary man was seen approaching Bolter's Common, as they called it—a lonely, half-deserted place upon the coast. Deadly malaria held its sway amongst these bushes, and many families had fled from it. The few now left behind would soon be on the move; and great was their surprise to see upon the unbeaten track, a man approaching!

"What news, friend?" they asked, eagerly clustering round him. "Where do you come from? How is the gold?" For they knew by the red clay on his gaiters that his work lay at the diggings.

"I HATE the gold!" he exclaimed, and no other reply could they get from him.

The stranger worked so well, and showed such amazing strength, that he was made thoroughly welcome to his shakedown and scanty board. But he was taciturn always, seemed to make no friends, and remained a problem to his observers.

One evening, as the sun was sinking far away, he left the hut where other men were sitting, and wandered out again.

"The damp is abroad," they said, "and brings the fever chills. Lots of our chaps have died of it."

"It cannot hurt me now; I *have* the chills," he said. "And fever makes one restless. Do not keep me here; I want to be alone."

They could not stop him, so he walked away across some hillocks of wet sand, until he was quite out of sight.

An hour later they found him kneeling there, with his head bowed low in the light of the setting sun. His hands were clasped together, and his lips were moving.

"O God!" he said, "forgive the man—the man that killed his brother! . . . Oh, that I had sought the *heavenly* gold! . . . that I had claimed the gift of Life, and left this thirst to others!"

His lips moved; he was still praying when his mate discovered him.

"I did not know you were religious, Benjamin," he remarked with no little surprise. For in those godless wilds a man was rarely seen upon his knees. (Benjamin was the nickname given to the last visitor to the camp.)

"Man!" said Alfred, suddenly rising to his feet and facing him, "what does religious mean? I wish I had known God and served Him long ago. He is the better Master of the two, depend upon it! I wish I were a Christian, that I do! God, give me gold of heaven! that is all I ask."

The fever and the death chills seized poor Alfred Dudley on that very night. And when he lay there, sinking in deep weakness, his cold hand was stretched out, pointing towards the distant west.

"Pardon, brother, pardon! Tell them that!" he was murmuring to himself.

Charles Carter seized the poor hand in both his own, and raised it upwards, pointing to the sky.

"God pardons sinners for Christ's sake," he said in a broken voice. "They told me so in the Sunday School."

A smile, the *first* for many a long year, crept over that wasted face.

"You are right, Charlie," came the answer; "Jesus Christ *has* pardoned me. But say it again; I like to hear you speak the words."

The crisis was drawing near.

Dudley fell asleep, and never moved for hours. Then he raised himself, and opened his wondering eyes.

"Have I been up to heaven, and come back again?" he said; "back to this poor old earth, so full of trouble as it is, and so full of sin!"

Then he paused.

"Charlie, I must get me back to the town and tell my story. I am a murderer. I killed my brother for his gold."

Carter gazed in horror at the patient he had nursed, and wondered if he spoke the truth.

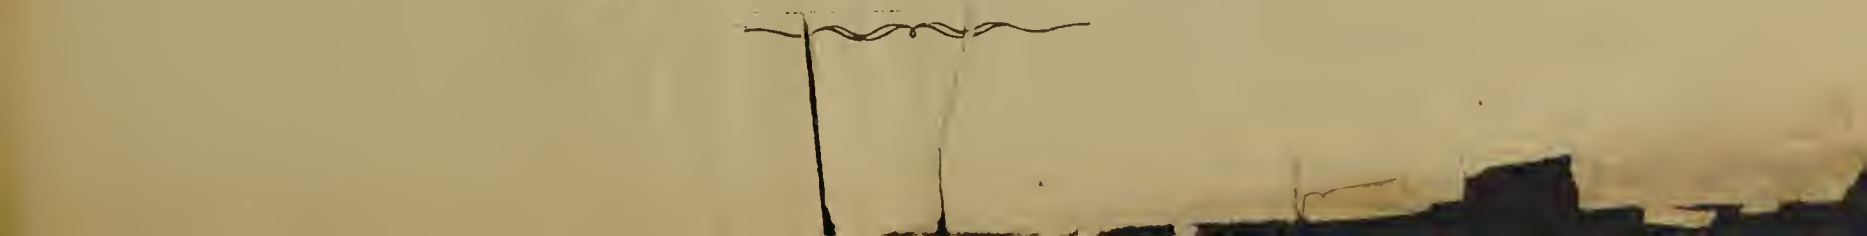
And when recovery had conquered the disease, nothing could stay the man from sallying forth again on his long, long journey, "to tell the truth," as he said, "and go before the judge."

Then a strange story was opened up, that had lain still for years.

The trial went on before a crowded court, and breathlessly the people listened to his confession.

"My friend," said the judge, with a strange look upon his face, "you must have been the victim of some dreadful dream. Another man has made confession that he killed Elnathan Dudley in a desperate struggle late at night. He said that you were sleeping soundly all the time in the back part of the hut. We took his evidence and confession, and he was executed for the crime quite two years ago. Nor was his guilt unproved, for here, in our Museum, is kept the boot he wore upon his foot; it fitted exactly to the red clay mark beside the hidden hatchet. Spots of blood upon the leather sole were found, and so strong were the tokens of his guilt, that no doubt has ever been expressed about it."

Dudley sat spell-bound as he listened to these words, and though they offered him the chance, he still refused to speak.



"Two men cannot be punished for one crime," said the judge. "So, Dudley, you are free."

The strong man buried his face in his hands, whilst hot, burning tears trickled down between his fingers.

"I *hated* him," he said at last, rising to his feet. "I hated him for the sake of gold. 'He that hateth his brother is a murderer.' The stain was on my heart, and I *thought* it was on my hands. God pardons me; Christ cleanseth with His blood. And my lord the judge says that my hands are innocent. God bless poor chaps who come to these wild parts! I thank Him I am free, and pardoned too! Good-bye, Australia! all my mates, good-bye! I don't want your gold any more. I am going home to comfort my poor father, and my aged mother; and in the dear old country I shall feel at home. God helping me, I will be an honest labourer, and a better son than I have been a brother!"

There were many tearful eyes in that colonial court as Alfred Dudley took his seat.

But there was an honest look of manly earnestness and firm determination on one brown, swarthy face amongst the crowd that stood upon the deck of the next ship homeward bound!

INTERNATIONAL SUNDAY SCHOOL LESSONS.

NOVEMBER 4TH.

The Defeat at Ai.—*Josh.* 7. 1-12.

GOLDEN TEXT.—*Ps.* 119. 36.

THIS is a contrast to last lesson. *Victories*, pleasant; *defeats*, disagreeable. Which do we know the most of in our lives? True answer must be "*defeats.*" To-day we may learn how to change them into "glorious victories."

Our lesson is a story in five parts.

PART I.—LOOKING AND TAKING (ver. 1). Back to Jericho. Picture a man secretly searching amid ruins of city. His name. Comes across three things. Name them. The plain of Shinar had its manufactories when God destroyed Jericho. How they glittered in his eyes! Never seen such before. How grand he would look in the garment! How the gold and silver would help him on! *The steps of his sin.* (*a*) He looked; (*b*) he wished; (*c*) he coveted; (*d*) he took; (*e*) he hid. *The nature of his sin.* It included *theft, lying, disobedience, selfishness, impiety. The extent of his sin.* The sin of this one man reacted upon the whole nation: "Israel hath sinned" (ver. 11). "The nation is a unit, a body made up of individuals; and whatever is done by individuals, and permitted by the nation, thus becomes the sin of the nation." Thirty-seven men died through one man's sin. We cannot sin unto ourselves only.

PART II.—RUNNING AWAY. Victory at Jericho made them over-confident. Notice, they went up without asking or receiving God's guidance. Ai, next city, fifteen miles distant; its capture would put them in possession of main road running north and south. Its name, "a heap of ruins," suggested its weakness. So confident were they, only a small number were sent to take it. Ai, mentioned as early as Gen. 12. 8, inhabited down to the captivity (Ezra 2. 28). Lieut. Conder gives a very vivid description of the site, now called Et-Tel, "the heap." There are huge mounds of broken stones and shingle, ten feet high. The first and only defeat of Joshua's army. Picture the difference between their boastful approach, and their ignominious flight; the roll-call when reaching camp; thoughts on the missing ones.

PART III.—PRAYING ABOUT IT. Best thing to do in time of trouble. Notice *place* of prayer, also *posture.* First words of Joshua's prayer seem to sound like the old murmuring. "The effect, not the cause, seems to have filled his soul: the defeat, not the reason of it." Actuated by *pity, shame, jealousy.*

PART IV.—THE SECRET OUT. God, who knoweth the secret of every heart, tells it (Heb. 4. 13). Why did God not tell the man's name? To further show forth His power, to make it more manifest to the people, to give Achan further time for confession and restitution. The solemn assembly casting lots (refer to 1 Sam. 10. 20). This probably done by stones, on which names were engraved. The gradual centering of the suspicion. There he stands before all the tribes—*Achan, the thief.* What must those feel who, at the last day, will be condemned before the angels?

PART V.—MEETING HIS FATE. He confessed. Proofs of guilt brought. How would the shining garment look in his eyes now? Had shown no signs of true repentance. Taken into a valley and stoned to death. Some have thought that his family perished with him, the spoil being in the tent implying their complicity; "but the words do not seem to require this."—*Geikie.*

ECHOES FROM THE VALLEY OF ACHOR.

"Thou God seest me" (Gen. 16. 13).
"Be sure your sin will find you out" (Num. 32. 23).
"The way of transgressors is hard" (Prov. 13. 15).
"Cleanse Thou me from secret faults" (Ps. 19. 12).

NOVEMBER 11TH.

Caleb's Inheritance.—*Josh.* 14. 5-15.

GOLDEN TEXT.—*Ps.* 37. 3.

LESSON LINKS. Capture of Ai. Taking oath of allegiance on Mounts Ebal and Gerizim. Standing still of sun, and Joshua's consequent victory.

Time had now come for dividing the land. Six years since the crossing of Jordan. Amongst the claimants there comes

A GRAND OLD HERO,

and in his story we find

THE SECRET OF A SUCCESSFUL LIFE.

I. THE HERO'S NAME. Caleb, "a whelp." "Some regard this as an index to his faithfulness, for as the dog follows his master, so did Caleb follow the Lord with true purpose; some regard the name as indicating the special glory of Judah, for 'Judah is a lion's whelp.'"

II. THE HERO'S DESCENT. "Son of Jephunneh the Kenezite." Thought by many to be a descendant of Kenaz (Gen. 36. 11), or one of the mixed multitude (Exod. 12. 38). "Kenaz, the name of his father or brother, an Edomite name; and the expression in ver. 14, 'Hebron became the inheritance of Caleb,' and in chap. 15. 13, 'Unto Caleb he gave a part among the children of Judah,' are expressions which suggest that he was associated with the tribe, rather than sprung from it. If not by birth an Israelite, he is an instance of the converting power of the truth" (Rom. 2. 28, 29).

III. THE HERO'S HISTORY. He is first mentioned as one of those sent to spy the land (Num. 13. 6). Appointed one of the twelve to superintend the division of the land. Gives his autobiography in vers. 6–10.

IV. THE HERO'S CHARACTER. A man of *faith*; others had perished because of their unbelief. Note the words, "As he said," in ver. 10. A man of *courage* (Num. 13. 30). A man of *obedience* (Num. 14. 24, ver. 8 of lesson). A man of *devout spirit* (ver. 12). A man *jealous for God* (Num. 14. 9). A man of *patience*; waited in the background all those years for fulfilling of promise; waits until others had received their inheritance.

V. THE HERO'S DESIRE. He asked for the mountainous region in which Hebron was situated (ver. 12). Hebron the highest city in Palestine. Why? It had been promised by Moses (Num. 14. 24: Deut. 1. 36). The home of giants—too much of a hero to ask for an easily-won possession. How was he going to win it? "The Lord will be with me."

VI. THE HERO'S STRENGTH. Eighty-five years old, yet as strong as ever. What element in his nature so conducive to strength? *Cheerfulness* (see ver. 8).

VII. THE HERO'S REWARD. Joshua's public blessing. Hebron, a special portion. "There is no account of a special assignment of land to any other individual." His blessing a blessing to all, though conquering the Anakim (Judg. 1. 20). The land had rest from war. To be able to make others happy, the best of rewards.

WE MAY ALL BE HEROES, OR HEROINES, if we *find out,* and follow out,

CALEB'S SECRET.

What was it? (Get scholars to give answer.) "*I* WHOLLY *followed the Lord my God.*"

Our inheritance (1 Pet. 1. 4; 1 Tim. 4. 8).
Our "Anakim" (Eph. 6, 12; 1 John 2. 15, 16).
Our means of victory (1 John 5. 4).
Our secret of success (Rom. 12. 1).

NOVEMBER 18TH.

Helping One Another.—*Josh.* 21. 43-45; 22. 1-9.

GOLDEN TEXT.—*Gal.* 6. 2.

JOSHUA now at Shiloh, where the tabernacle remained during the time of the Judges. Point out—

I. THE FAITHFULNESS OF GOD (21. 43–45). Everything had happened according to God's promise: nothing failed. All the land given; enemies subdued; rest gained. "Faithful is He that had promised."

II. THE FAITHFULNESS OF FRIENDS (1–3). Before the children of Israel crossed the Jordan, Reuben, Gad, and the half tribe of Manasseh got permission from Moses to settle on the east of Jordan, relinquishing all claim on the other side. (An unwise choice.) This granted on condition they went over with rest of Israel to help. Faithfully they promised (Num. 22.). When at Jordan, Joshua reminded them of it; faithfully they performed it, and for seven years, if no more, they fought for an inheritance which they were not to share. What prompted them? God, through Moses and Joshua, and "the law of kindness." What did it cost them? Ease, loss of life, personal profit, long absence from home and loved ones. Kindness that costs nothing is worth little.

III. THE FAITHFULNESS OF LEADER (vers. 4–6). Faithful to his promise to let them go back. Faithful to his duty concerning them; gave them wise advise. They were to do *six things:*—

Take diligent heed.
Look unto the Lord.
Walk in His ways.
Keep His commandments. } Verse 5.
Cleave unto Him.
Serve with all the heart.

IV. THE REWARD OF FAITHFULNESS (vers. 6–9).

1. *Joshua's Blessing.* Probably the words in Numbers 6. 24–26.

2. *Much Riches.* "Some idea of the amount of these riches can be obtained from the amount of spoil taken from the Midianites west of the Jordan (Num. 31. 26–54). These included "675,000 sheep, 72,000 beeves, and 61,000 asses." Illustrate by Moses dividing the spoil (Num. 31. 27; David, 1 Sam. 30. 21–25.

3. *People's Appreciation.* Picture their departure—march of forty thousand warriors. Illustrate by Paul's departure from Miletus (Acts 20. 37).

4. *A good Conscience.* The joy of knowing they have done their duty.

A LESSON ON BURDEN-BEARING.

All have got a burden,—some small, some heavy. Get scholars to give names.

All can share in burden-bearing.

The Way to do it.

Unostentatiously (Matt. 6. 3). "Almost every day I have occasion to go past the shop of a cobbler, in whose window there hangs a neatly printed card, bearing the inscription, 'Invisible patching.'" Help should often be given in an unseen way.

Willingly.

Sweetly. Unless the word has a kind tone, it will fail of effect.

Quickly, or the opportunity may be gone.

Without stint. Just as much as you can.

Advice to those who wish to join the Help Society: Be on the look-out for opportunities.

Encouragement for Burden-sharers: "When I dig a man out of trouble, the hole that he leaves behind him is the grave where I bury my own trouble."

NOVEMBER 25TH.

The Covenant Renewed.—*Josh.* 24. 14–28.

GOLDEN TEXT.—*Josh.* 24. 24.

HISTORY OF THE COVENANT. Read and ratified by blood (Exod. 24. 3–8); renewed in the field of Moab (Deut. 29. 1); again renewed (Josh. 8. 30–35).

This is one of the most impressive scenes in the Bible. A similar one, Elijah at Carmel (1 Kings 18. 19–39).

Description of scene: Valley of Shechem, probably between slopes of mountains Ebal and Gerizim, same place where covenant was renewed twenty-five years before. (City of Shechem oldest in the world. Its streets narrow and dark, with overhanging houses. Population about 5,000, chiefly Mohammedans.) Imagine the aged and beloved leader, bent with the age of 110 years, standing where all could see him, and all in that clear atmosphere could hear. "In the early morning we could not only see from Gerizim a man driving his ass down a path on Mount Ebal, but could hear every word he uttered, as he urged it; and in order to test the matter more certainly, as on a subsequent occasion, two of our party stationed themselves on opposite sides of the valley, and with perfect ease recited the commandments antiphonally."—*Tristram.*

After the conquest, Joshua had retired to his home near Shechem for rest. "The closing years of his life, like the waning of the moon, when darkness grows ever deeper."—*Geikie.* During this time, eighteen years, he had been watching the people and their sinful tendencies. Feels his days are numbered, hence calls

A SOLEMN ASSEMBLY.

Hark to his voice as he gives

SOLEMN WARNINGS (vers. 19, 20). Wrong to suppose he wished to deter them from serving God. Verse 19 needs to be read in connection with preceding ones. He had been asking whom they would serve, but they could not serve God in their own strength, or in conjunction with other gods. Gives reasons why they should serve God. Gratitude (vers. 19, 20); vows (ver. 18). If they forsook Him, He would be to them just contrary to what He had been. The same unchanging sun is in the east or in the west, is cheering or consuming "according to our relations to it; brings malaria from the marshes, or gives colour and flavour to fruits, according to what it shines upon."

SOLEMN PROMISES (ver. 11). Unanimous. Hark at its trumpet tones between the hills. They were impressed with the solemnity of the scene. Afraid they had thoughtlessly promised, he gives list of

SOLEMN DUTIES (ver. 23). The words imply that even in his day some were secret idolators. Perhaps possessed and worshipped teraphim and such-like images, as Micah did (Judg. 17. 5). What would be Joshua's most vivid memory with regard to idolatry? *Worship of golden calf.* The love and worship of God must come from the heart. This elicited

SOLEMN VOWS (vers. 22. and 25). A reiterated promise, making it more binding than the former. A vow. A *written* pledge. Moses wrote the covenant, now Joshua, and afterwards Samuel. There were of these vows,

SOLEMN WITNESSES (vers. 22 and 26). The *object* of these witnesses, to warn and to help. Four. 1. Themselves. 2. The roll. 3. The stones. 4. The oak-tree, supposed to have been the same oak under which Jacob hid the teraphim (Gen. 35. 4). "This is more than poetry; this is indeed the greatest of realities. We are accustomed to regard Nature as a silent and unresponsive quantity, but it is never so regarded in Scripture." "The habit of appealing to Nature very common in Scripture, and may have a far deeper meaning than we know."

THOUGHTS TO CARRY HOME AND PONDER OVER.

1. We are all called upon to make a choice between God and the world (Matt. 6. 33; Rev. 3. 20).
2. Everything worth having is on God's side (Rom. 2. 4).
3. Now is the time to make the choice.
4. We each are witnesses against ourselves. "Every place at which we have kneeled will be a witness against us. Every time we have handled the Bible, we have marked down a witness in our favour or against.
5. A public profession called for (Mark 8. 38).
6. Our GREAT JOSHUA calls out before an assembled world, "Come unto Me."

C. SKINNER.
